 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL KDER and KDSH - U-Bolt-Type Pipe and Rod Grounding and Bonding Clamp :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [ABB, Electrification Business]
 - b. [America Fujikura Ltd. (AFL); Fujikura Ltd.]
 - c. [Arlington Industries, Inc.]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - f. [ERICO; brand of nVent Electrical plc]
 - g. [Galvan Industries, Inc.; Electrical Products Division, LLC]
 - h. [Greaves Corp.; Essex Products Group, Inc.]
 - i. [Harger Lightning & Grounding; business of Harger, Inc.]
 - j. [ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]
 - k. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - l. [Panduit Corp]
 - m. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - n. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [America Fujikura Ltd. (AFL); Fujikura Ltd.]
 - c. [Arlington Industries, Inc.]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - f. [ERICO; brand of nVent Electrical plc]
 - g. [Galvan Industries, Inc.; Electrical Products Division, LLC]
 - h. [Greaves Corp.; Essex Products Group, Inc.]
 - i. [Harger Lightning & Grounding; business of Harger, Inc.]
 - j. [ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]
 - k. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - l. [Panduit Corp]
 - m. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - n. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
5. Standard Features:
 - a. Clamp Material: [Aluminum][Brass][Tinned brass].
 - b. Listed for outdoor use.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- D. UL KDER and KDSH - Strap-Type Pipe and Rod Grounding and Bonding Clamp :
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - e. **[Panduit Corp]**
 - f. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - e. **[Panduit Corp]**
 - f. **<Insert manufacturer's name>**
 - 3. Source Limitations: Obtain products from single manufacturer.
 - 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 - 5. Standard Features:
 - a. Clamp Material: **[Aluminum][Copper][Tinned copper][Galvanized steel]**.
 - b. Listed for outdoor use.
 - 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced

- (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL KDER - Beam Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Anderson; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Panduit Corp]**
 - d. **[Penn-Union Corp.; subsidiary of Nesco, Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Anderson; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Panduit Corp]**
 - d. **[Penn-Union Corp.; subsidiary of Nesco, Inc.]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
5. Standard Features: Mechanical-type, terminal, ground wire access from four directions; with dual, tin-plated or silicon bronze bolts.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- F. UL KDER - Exothermically Welded Connection :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[ALLTEC LLC]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[ALLTEC LLC]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 5. Standard Features: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

G. UL KDER - Raised-Floor Signal Reference Grid Clamp :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
5. Standard Features: Mechanical-type, stamped-steel terminal with hex head screw.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.4 GROUNDING AND BONDING BUSHINGS

- A. Description: Bonding bushings connect conduit fittings, tubing fittings, threaded metal conduit, and unthreaded metal conduit to metal boxes and equipment enclosures, and have one or more bonding screws intended to provide electrical continuity between bushing and enclosure. Grounding bushings have provision for connection of bonding or grounding conductor and may or may not also have bonding screws.
- B. UL KDER - Bonding Bushing :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 5. Standard Features: Threaded bushing with insulated throat.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER - Grounding Bushing :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
5. Standard Features: Threaded bushing with insulated throat and mechanical-type wire terminal.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 GROUNDING AND BONDING HUBS

A. UL KDER - Grounding and Bonding Hub :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Greaves Corp.; Essex Products Group, Inc.]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Penn-Union Corp.; subsidiary of Nesco, Inc.]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Arlington Industries, Inc.]**
 - c. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Greaves Corp.; Essex Products Group, Inc.]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Penn-Union Corp.; subsidiary of Nesco, Inc.]**
 - h. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
5. Standard Features: Insulated, gasketed, watertight hub with mechanical-type wire terminal.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.6 GROUNDING AND BONDING CONNECTORS

A. UL KDER - Pressure-Type Grounding and Bonding Busbar Cable Connector :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
5. Standard Features: Copper or copper alloy, for compression bonding of one or more conductor directly to copper busbar. Listed for direct burial.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL KDER - Lay-In Lug Mechanical-Type Grounding and Bonding Busbar Terminal :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[ABB, Electrification Business]**
 - b. **[Chatsworth Products, Inc.]**
 - c. **[Greaves Corp.; Essex Products Group, Inc.]**
 - d. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Chatsworth Products, Inc.]**
 - c. **[Greaves Corp.; Essex Products Group, Inc.]**
 - d. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - e. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 5. Standard Features: Mechanical-type, **[aluminum][copper rated for direct burial]** terminal with set screw.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL KDER - Crimped Lug Pressure-Type Grounding and Bonding Busbar Terminal :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - c. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[ABB, Electrification Business]**
 - b. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - c. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - d. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 5. Standard Features: Cast silicon bronze, solderless compression-type wire terminals; with long barrel and two holes spaced on **5/8 or 1 inch (16 or 25 mm)** centers for two-bolt connection to busbar.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL KDER - Split-Bolt Service-Post Pressure-Type Grounding and Bonding Busbar Terminal :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Panduit Corp]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Panduit Corp]**
 - b. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

- a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
5. Standard Features: Bolts that surround cable and bond to cable under compression when nut is tightened after assembly is screwed into busbar opening.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL KDER - Crimped Pressure-Type Grounding and Bonding Cable Connector :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[allG Fabrication (formerly ALT)]**
 - c. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[allG Fabrication (formerly ALT)]**
 - c. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Crimp-and-compress connectors that bond to conductor when connector is compressed around conductor.
 - a. **[Copper][Copper alloy][Tinned copper]**, C and H shaped.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- F. UL KDER - Split-Bolt Pressure-Type Grounding and Bonding Cable Connector :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[allIG Fabrication (formerly ALT)]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **[Greaves Corp.; Essex Products Group, Inc.]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[allIG Fabrication (formerly ALT)]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **[Greaves Corp.; Essex Products Group, Inc.]**
 - e. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 5. Standard Features: Bolts that surround cable and bond to cable under compression when nut is tightened.

- a. **[Copper][Copper alloy][Tinned copper].**
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- G. UL KDER - Signal Reference Grid Grounding and Bonding Connector :
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[ERICO; brand of nVent Electrical plc]**
 - e. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[ERICO; brand of nVent Electrical plc]**
 - e. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - f. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 - b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 5. Standard Features: Combination of compression wire connectors, access floor grounding clamps, bronze U-bolt grounding clamps, and copper split-bolt connectors, designed for the purpose.
 6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.7 INTERSYSTEM BONDING BRIDGE GROUNDING CONNECTORS

- A. Description: Devices that provide means for connecting communications systems grounding and bonding conductors at service equipment or at disconnecting means for buildings or structures.
- B. UL KDSH - One-Piece Intersystem Bonding Bridge Grounding Connector :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - b. **[Madison Electric Products; business of Southwire Company, LLC]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - b. **[Madison Electric Products; business of Southwire Company, LLC]**
 - c. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 - 4. Standard Features: Zinc-alloy one-piece construction; six terminating points; gangable.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced

- (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL KDSH - Two-Piece Intersystem Bonding Bridge Grounding Connector :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.
 4. Standard Features: **[Zinc-alloy][Copper]** body and polycarbonate cover; four terminating points.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.8 GROUNDING AND BONDING BUSBARS

- A. Description: Miscellaneous grounding and bonding devices that serve as common connection for multiple grounding and bonding conductors.
- B. UL KDER - Equipment Room Grounding and Bonding Busbar :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[allG Fabrication (formerly ALT)]**
 - b. **[Chatsworth Products, Inc.]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - i. **[Panduit Corp]**
 - j. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[allG Fabrication (formerly ALT)]**
 - b. **[Chatsworth Products, Inc.]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - e. **[ERICO; brand of nVent Electrical plc]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[ILSCO; brand of ECM Industries LLC; division of nVent Electric plc]**
 - i. **[Panduit Corp]**
 - j. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
 5. Standard Features:
 - a. Bus: Rectangular bar of annealed copper.
 - b. Mounting Stand-Off Insulators: Lexan or PVC.
 - 1) Comply with UL 891 for use in 600 V switchboards, impulse tested at 5000 V.
 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability

- report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
7. Other Available Features Required by the Project:
- a. Dimensions: **[1/4 by 4 inch (6.3 by 100 mm)]<Insert dimensions>** in cross section; length as indicated on the Drawings.
 - b. Predrilled Hole Pattern: **[Complying with BICSI N3 and TIA-607][9/32 inch (7.14 mm) holes spaced 1-1/8 inch (28 mm) apart][Suitable for installing specified grounding and bonding connectors].**
 - c. Mounting Hardware: Stand-off brackets that provide **[2 inch (50 mm)][4 inch (100 mm)]<Insert dimension>** clearance to access rear of bus. Brackets and bolts must be stainless steel.

C. UL KDER - Rack and Cabinet Bonding Busbar :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Chatsworth Products, Inc.]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **[Hoffman; brand of nVent Electrical plc]**
 - e. **[Panduit Corp]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Chatsworth Products, Inc.]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **[Hoffman; brand of nVent Electrical plc]**
 - e. **[Panduit Corp]**
 - f. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features:
 - a. Bus: Rectangular bar of hard-drawn solid copper.
 - b. Horizontal Mounting Dimensions: Designed for mounting in [19 inch (483 mm)][23 inch (584 mm)] wide equipment racks or cabinets.
 - c. Vertical Mounting Dimensions: Designed for mounting in [72 inch (1827 mm)][36 inch (914 mm)] high equipment racks or cabinets.
 - d. Predrilled Hole Pattern: Accepts connectors for grounding and bonding conductor sizes 14 AWG to 2/0 AWG.
 - e. Mounting Hardware: Stainless steel or copper-plated, for attachment to rack.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.9 SIGNAL REFERENCE GRIDS

- A. Description: Means for providing low-impedance path to ground over a large area, approximating an equipotential plan, while simultaneously mitigating large current spikes from faults or lightning.
- B. UL KDER - Mesh-Type Signal Reference Grid :
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.

4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
5. Standard Features: Conductive metal wire mesh for field-fabrication of grid.
 - a. Wire Size: **[8 AWG][6 AWG][4 AWG][2 AWG]**.
 - b. Wire Material: **[Copper][Copper-clad steel]**.
 - c. Spacing: **[4 inch (102 mm)][8 inch (203 mm)][12 inch (305 mm)][24 inch (610 mm)]**.
 - d. Welded or brazed intersections.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER - Tape-Type Signal Reference Grid :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - b. **[ERICO; brand of nVent Electrical plc]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - b. **[ERICO; brand of nVent Electrical plc]**
 - c. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - d. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Conductive copper tape for field-fabrication of grid.
 - a. Copper Tape Dimensions: **[16 mil (0.4 mm) (26 ga.) thick by 2 inch (51 mm) wide][40 mil (1 mm) (18 ga.) thick by 1.6 inch (40 mm) wide]<Insert dimensions>**.
 - b. Spacing: **[24 inch (610 mm)]<Insert dimension>**.
 - c. Welded or brazed fittings for intersections.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.10 GROUNDING (EARTHING) ELECTRODES

A. UL KDER - Rod Electrode :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[allG Fabrication (formerly ALT)]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[ERICO; brand of nVent Electrical plc]**
 - e. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[allG Fabrication (formerly ALT)]**
 - c. **[Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **[ERICO; brand of nVent Electrical plc]**
 - e. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - f. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

- a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
- 5. Standard Features: **[Copper-clad][Zinc-coated][Stainless] steel[, sectional type]; [3/4 inch by 10 ft (19 mm by 3 m)][5/8 inch by 8 ft (16 mm by 2.4 m)]**.
- 6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL KDER - Chemically Charged Rod Electrode :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[allIG Fabrication (formerly ALT)]**
 - b. **[ALLTEC LLC]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[allIG Fabrication (formerly ALT)]**
 - b. **[ALLTEC LLC]**
 - c. **[ERICO; brand of nVent Electrical plc]**
 - d. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
- 5. Standard Features: Copper tube, straight or L-shaped, charged electrode enhancement material.
 - a. Termination: Factory-attached 4/0 AWG bare conductor at least **48 inch (1200 mm)** long.
 - b. Backfill Material: Electrode manufacturer's recommended material.

6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Other Available Features Required by the Project:

- a. Electrode Enhancement Material: **[Nonhazardous electrolytic chemical salts]<Insert enhancement material>**.

C. UL KDER - Plate Electrode :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ALLTEC LLC]**
 - b. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ALLTEC LLC]**
 - b. **[Galvan Industries, Inc.; Electrical Products Division, LLC]**
 - c. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
5. Standard Features: **1/4 inch (6 mm)** thick, hot-dip galvanized.
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.11 GROUNDING ELECTRODE ENCLOSURES

- A. Description: Enclosures designed to protect grounding electrodes from damage while providing access for inspection and testing of the grounding system.
- B. Grounding Electrode Access Well Enclosure :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ERICO; brand of nVent Electrical plc]**
 - b. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - c. **[Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ERICO; brand of nVent Electrical plc]**
 - b. **[Harger Lightning & Grounding; business of Harger, Inc.]**
 - c. **[Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated]**
 - d. **<Insert manufacturer's name>**
 - 3. Source Limitations: Obtain products from single manufacturer.
 - 4. Standard Features:
 - a. Well Material: **[Concrete][HDPE][Schedule 40 PVC]**.
 - b. Cover Material: **[Cast iron][Concrete][HDPE][Plastic][Steel]**.
 - c. Cover Strength: **[Sidewalk or turf use][Driveway use]<Insert rating>**.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Material Reuse: Product is salvaged, refurbished, or reused.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

- development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Round:
 - 1) Nominal Diameter: [8 inch (200 mm)][9 inch (230 mm)][10 inch (250 mm)][12 inch (300 mm)][13 inch (330 mm)]<Insert dimension>.
 - 2) Nominal Height: [10 inch (250 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (760 mm)][36 inch (910 mm)][48 inch (1220 mm)]<Insert dimension>.
 - 3) Slotted sides for installation after grounding connections made.
 - b. Rectangular:
 - 1) Nominal Width: [2 inch (50 mm)][12 inch (300 mm)][13 inch (330 mm)][17 inch (430 mm)][36 inch (910 mm)]<Insert dimension>.
 - 2) Nominal Length: [10 inch (250 mm)][12 inch (300 mm)][13 inch (330 mm)][17 inch (430 mm)][18 inch (450 mm)][24 inch (600 mm)][36 inch (910 mm)][42 inch (1070 mm)]<Insert dimension>.
 - 3) Nominal Height: [12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (760 mm)]<Insert dimension>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine facility's grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of electrical system.
- B. Inspect test results of grounding system measured at point of electrical service equipment connection.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with connection of electrical service equipment only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF GROUNDING AND BONDING PRODUCTS

- A. Grounding and Bonding Conductors:
 1. Provide solid conductor for [8 AWG]<Insert wire size> and smaller, and stranded conductors for [6 AWG]<Insert wire size> and larger unless otherwise indicated.
 2. Custom-Length Insulated Equipment Bonding Jumpers: 6 AWG, 19-strand, Type THHN.
 3. Bonding Cable: 28 kcmil, 14 strands of 17 AWG conductor, 1/4 inch (6 mm) in diameter.
 4. Bonding Conductor: 4 AWG or 6 AWG, stranded conductor.
 5. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick.

6. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; **1-5/8 inch (41 mm)** wide and **1/16 inch (1.6 mm)** thick.
7. Underground Grounding Conductors: Install bare **[tinned-]**copper conductor, **[2/0 AWG]<Insert wire size>** minimum.

B. Grounding and Bonding Connectors:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

C. Grounding and Bonding Busbars: Provide in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated on the Drawings.

D. Substation Signal Reference Grid:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with IEEE C2.
 - a. Install **[8 AWG][6 AWG]<Insert wire size from fault calculation>** bonding conductors below grade in a grid pattern on **2 ft (600 mm)** centers. Bond grid conductors with exothermic welds where they cross each other.
 - b. Grid must fill entire area inside equipment yard fence, and extend minimum **6.5 ft (2 m)** outside fence, so someone walking or running outside yard may not touch fence or open gate without first stepping inside grid.
 - c. Bond each metal fence post and gate post to at least two grid conductors.
 - d. Inside grid, bond equipment reinforcing steel inside bases and sidewalks to at least two grid conductors.
 - e. Bond underground metal pipe and conduit passing under grid to nearest grid conductor at both ends.

E. Signal Reference Grid Tape Mesh:

1. Install tape mesh under floor finish with the following features:
 - a. Tape mesh, **2 inch (50 mm)** by **16 mil (0.4 mm)** solid copper, **[12 inch (300 mm)][24 inch (610 mm)]** spacing.

3.3 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR COMMUNICATIONS

- A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.4 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR TOWERS AND ANTENNAS

A. Special Techniques:

1. Ring Electrode: Buried at least **30 inch (760 mm)** below grade and at least **24 inch (610 mm)** from base of tower or mounting.
2. Bond each tower base and metallic frame of dish to ring electrode, buried at least **18 inch (460 mm)** below grade.
3. Bond ring electrode and antenna bonding conductors to equipment room PBB or SBB, buried at least **30 inch (760 mm)** below grade.

4. Bond metal fences located within **6 ft (1.8 m)** of towers and antennas to ring electrode, buried at least **18 inch (460 mm)** below grade.
5. Special Requirements for Roof-Mounted Towers:
 - a. Roof Ring: Meet requirements for ring electrode except conductors must comply with NFPA 780.
 - b. Bond tower base footings steel, SBB in equipment room, and antenna support guys to roof ring.
 - c. Connect roof ring to perimeter conductors of lightning protection system.
6. Special Requirements for Waveguides and Coaxial Cable:
 - a. Bond cable shields at point of entry into building to nearest SBB and to cable entrance plate, using 2 AWG bonding conductors.
 - b. Bond coaxial cable surge arrester to ring electrode or roof ring using bonding conductor size recommended by surge-arrester manufacturer.

3.5 INSTALLATION OF GROUNDING AND BONDING

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:
 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
 2. Electrical Maintenance: NFPA 70B.
 3. Electrical Safety: NFPA 70E.
 4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 5. Communications Work: BICSI N1.
 6. Work in ITE Rooms: NFPA 75.
 7. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
 8. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
 9. Work in Confined Spaces: NFPA 350.
 10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
 11. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
 12. Consult Architect for resolution of conflicting requirements.
- C. Special Techniques:
 1. Grounding and Bonding Conductors:
 - a. Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
 - b. Underground Grounding Conductors:
 - 1) Bury at least **30 inch (750 mm)** below grade.
 - 2) Duct-Bank Grounding Conductor: Bury **12 inch (300 mm)** above duct bank when indicated as part of duct-bank installation.
 2. Grounding and Bonding Connectors: Make connections so possibility of galvanic action or

electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.

- a. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 - b. Make connections with clean, bare metal at points of contact.
 - c. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
 - d. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
 - e. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
 - f. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
 - 1) Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate adjacent parts.
 - 2) Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
 - 3) Use exothermic-welded connectors for outdoor locations; if disconnect-type connection is required, use bolted clamp.
 - g. Grounding and Bonding for Piping:
 - 1) Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use bolted clamp connector or bolt lug-type connector to pipe flange by using one of lug bolts of flange. Where dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 - 2) Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with bolted connector.
 - 3) Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
 - h. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install **[tinned]** bonding jumper to bond across flexible duct connections to achieve continuity.
 - i. Grounding for Steel Building Structure: Install driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than **60 ft (18 m)** apart.
3. Grounding and Bonding Busbars:
- a. Install busbar horizontally, on insulated spacers **2 inch (50 mm)** minimum from wall, **6 inch (150 mm)** above finished floor unless otherwise indicated.
 - b. Where busbars are indicated on both sides of doorways, route bonding conductor up to top of door frame, across top of doorway, and down; connect to continuation of horizontal busbar.
4. Electrodes:
- a. Ground Rods: Drive rods until tops are **2 inch (50 mm)** below finished floor or final grade unless otherwise indicated.
 - 1) Interconnect ground rods with grounding electrode conductor below grade and as

- otherwise indicated. Make connections without exposing steel or damaging coating if any.
- 2) Use exothermic welds for below-grade connections.
- b. For grounding electrode system, install at least **[three]<Insert number>** rods spaced at least one-rod length from each other and located at least same distance from other grounding electrodes, and connect to service grounding electrode conductor.
 - c. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and must be at least **12 inch (300 mm)** deep, with cover.
 - 1) Install at least one test well for each service unless otherwise indicated. Install at ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
 - d. Ring Electrode: Install grounding conductor, electrically connected to each building structure ground rod and to each **[steel column][indicated item]**, extending around perimeter of **[building][area or item indicated]**.
 - 1) Install tinned-copper conductor not less than **[2/0 AWG]<Insert wire size>** for ring electrode and for taps to building steel.
 - 2) Bury ring electrode not less than **[24 inch (600 mm)]<Insert dimension>** from building's foundation.
 - e. Concrete-Encased Electrode (Ufer Ground):
 - 1) Fabricate in accordance with NFPA 70; use minimum of **[20 ft (6 m)]<Insert dimension>** of bare copper conductor not smaller than **[4 AWG]<Insert wire size>**.
 - a) If concrete foundation is less than **[20 ft (6 m)]<Insert dimension>** long, coil excess conductor within base of foundation.
 - b) Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.
 - 2) Fabricate in accordance with NFPA 70; using electrically conductive coated steel reinforcing bars or rods, at least **20 ft (6.0 m)** long. If reinforcing is in multiple pieces, connect together by usual steel tie wires or exothermic welding to create required length.
5. Grounding at Service:
 - a. Equipment grounding conductors and grounding electrode conductors must be connected to ground busbar. Install main bonding jumper between neutral and ground buses.
 6. Grounding Separately Derived Systems:
 - a. Permanent Generators: Install grounding electrode(s) at location of permanent generators having switched neutral connections. Electrode must be connected to equipment grounding conductor and to frame of generator.
 7. Grounding Underground Distribution System Components:
 - a. Duct-Bank Grounding Conductor: Bury **12 inch (300 mm)** above duct bank when indicated as part of duct-bank installation.

- b. Comply with IEEE C2 grounding requirements.
 - c. Grounding Manholes and Handholes: Install driven ground rod through manhole or handhole floor, close to wall, and set rod depth so **4 inch (100 mm)** will extend above finished floor. If necessary, install ground rod before manhole is placed and provide 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from **2 inch (50 mm)** above to **6 inch (150 mm)** below concrete. Seal floor opening with waterproof, nonshrink grout.
 - d. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields in accordance with manufacturer's published instructions with splicing and termination kits.
 - e. Pad-Mounted Transformers and Switches: Install two ground rods and ring electrode around pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than 2 AWG for ring electrode and for taps to equipment grounding terminals. Bury ring electrode not less than **6 inch (150 mm)** from foundation.
8. Equipment Grounding and Bonding:
- a. Install insulated equipment grounding conductors with feeders and branch circuits.
 - b. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
 - 1) Feeders and branch circuits.
 - 2) Lighting circuits.
 - 3) Receptacle circuits.
 - 4) Single-phase motor and appliance branch circuits.
 - 5) Three-phase motor and appliance branch circuits.
 - 6) Flexible raceway runs.
 - 7) Armored and metal-clad cable runs.
 - 8) Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
 - 9) X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.
 - c. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
 - d. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
 - e. Isolated Grounding Receptacle Circuits: Install insulated equipment grounding conductor connected to receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.
 - f. Isolated Equipment Enclosure Circuits: For designated equipment supplied by branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install separate insulated equipment grounding conductor. Isolate conductor from raceway

and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.

- g. Poles Supporting Outdoor Lighting Fixtures: Bond insulated equipment grounding conductor to equipment grounding terminal inside pole base.
- h. Metallic Fences: Comply with requirements of IEEE C2.

- 1) Grounding Conductor: Bare[, **tinned**] copper, not less than **[8 AWG]<Insert wire size>**.
- 2) Gates: Must be bonded to grounding conductor with flexible bonding jumper.
- 3) Barbed Wire: Strands must be bonded to grounding conductor.

9. Fence Grounding:

- a. Grounding Method: At each grounding location, drive grounding rod vertically until top is **6 inch (150 mm)** below finished grade. Connect rod to fence with 6 AWG conductor. Connect conductor to each fence component at grounding location.
- b. Fences greater than **100 ft (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground fence at maximum intervals of **[1500 ft (450 m)]<Insert lesser distance if grounding resistance is high>**.
- c. Fences within **100 ft (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground fence at maximum intervals of **[750 ft (225 m)]<Insert lesser distance if grounding resistance is high>**.
- 1) Gates and Other Fence Openings: Ground fence on each side of opening.
 - a) Bond metal gates to gate posts by connecting bonding jumper between gate post and gate frame.
 - b) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use 2 AWG wire and bury it at least **18 inch (460 mm)** below finished grade.
- d. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of power line crossing and at maximum distance of **150 ft (45 m)** on each side of crossing.
- e. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground fence and bond fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

3.6 FIELD QUALITY CONTROL FOR GROUNDING AND BONDING

A. Administrant for Electrical Power Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
- 2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
- 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
- 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

- 1. **<Insert requirements>**.

- C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- D. Tests and Inspections:
1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
 2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with calibrated torque wrench in accordance with manufacturer's published instructions.
 3. Test completed grounding system at each location where maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal[, **at ground test wells**][, **and at individual ground rods**]. Make tests at ground rods before conductors are connected.
 - a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - b. Perform tests by fall-of-potential method in accordance with IEEE Std 81.
 - c. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.
 4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to record of tests and observations. Include number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- E. Nonconforming Work:
1. Grounding system will be considered defective if it does not pass tests and inspections.
 2. Remove and replace defective components and retest.
- F. Collect, assemble, and submit test and inspection reports.
1. Report measured ground resistances that exceed the following values:
 - a. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: **[10 Ω]<Insert ohms>**.
 - b. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: **[5 Ω]<Insert ohms>**.
 - c. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: **[3 Ω]<Insert ohms>**.
 - d. Power Distribution Units or Panelboards Serving Electronic Equipment: **[1 Ω][3 Ω]<Insert ohms>**.
 - e. Substations and Pad-Mounted Equipment: **[5 Ω]<Insert ohms>**.
 - f. Manhole Grounds: **[10 Ω]<Insert ohms>**.
 - g. **<Insert application and maximum ground-resistance>**.

3.7 PROTECTION

- A. After installation, protect grounding and bonding cables and equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

SECTION 26 05 29 00 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Support systems.
2. Mounting, anchoring, and attachment components.
3. Installation of fabricated metal supports.
4. Installation of concrete bases.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 033000 "Cast-in-Place Concrete" specifies concrete materials, reinforcement, and placement requirements referenced by this Section.
5. Section 055000 "Metal Fabrications" specifies site-fabricated metal supports referenced by this Section.
6. **[Section 099113 "Exterior Painting"]****[Section 099123 "Interior Painting"]****[and]****[Section 099600 "High-Performance Coatings"]** specify cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal referenced by this Section.
7. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration controls, seismic restraints, and wind restraints referenced by this Section.

1.2 DELEGATED DESIGN SERVICES

- A. Delegated Design Professionals: Engage qualified structural professional engineer to design hangers and supports for electrical systems.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
 - a. Slotted support systems, hardware, and accessories.
 - b. Clamps.
 - c. Hangers.
 - d. Sockets.
 - e. Eye nuts.

- f. Fasteners.
- g. Anchors.
- h. Saddles.
- i. Brackets.
- j. <Insert product type>.

2. Include rated capacities and furnished specialties and accessories.

B. Shop Drawings: For fabrication and installation details for electrical hangers and support systems.

- 1. Hangers. Include product data for components.
- 2. Slotted support systems.
- 3. Equipment supports.
- 4. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Delegated Design Submittals: For hangers and supports for electrical systems.

- 1. Include design calculations and details of hangers.
- 2. Include design calculations for seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.5 REGULATORY AGENCY APPROVALS

A. Delegated design submittals and shop drawings requiring approval by authorities having jurisdiction must be signed by qualified structural professional engineer responsible for their preparation. **[Obtain approval by authorities having jurisdiction prior to submitting for action by Architect.]****[Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.]**

1.6 QUALIFICATIONS

A. Structural Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in structural engineering, including design of seismic and wind controls, equipment hangers and supports, and concrete foundations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Prepare design calculations in accordance with criteria specified in Section 260010 "Supplemental Requirements for Electrical" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame Rating: Class 1.
2. Self-extinguishing according to ASTM D635.

2.2 SUPPORT SYSTEMS

A. Steel Slotted Support Systems :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Atkore Unistrut]**
 - d. **[CADDY; brand of nVent Electrical plc]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Flex-Strut Inc.]**
 - g. **[G-Strut]**
 - h. **[Gripple Inc.]**
 - i. **[Haydon Corporation]**
 - j. **[Metal Ties Innovation]**
 - k. **[MIRO Industries Inc.]**
 - l. **[Rocket Rack; Robroy Industries]**
 - m. **[Wesanco/ZSi-Foster; an Ideal Tridon Group Company]**
 - n. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Atkore Unistrut]**
 - d. **[CADDY; brand of nVent Electrical plc]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Flex-Strut Inc.]**
 - g. **[G-Strut]**
 - h. **[Gripple Inc.]**
 - i. **[Haydon Corporation]**
 - j. **[Metal Ties Innovation]**
 - k. **[MIRO Industries Inc.]**
 - l. **[Rocket Rack; Robroy Industries]**
 - m. **[Wesanco/ZSi-Foster; an Ideal Tridon Group Company]**
 - n. **<Insert manufacturer's name>**
3. Standard Features: Preformed steel channels and angles with minimum **13/32 inch (10 mm)** diameter holes at a maximum of **8 inch (200 mm)** on center in at least one surface.
 - a. Referenced Standard: MFMA-4 factory-fabricated components for field assembly.
 - b. Material for Channel, Fittings, and Accessories: **[Galvanized steel][Plain steel][Stainless steel, Type 304][Stainless steel, Type 316]**.
 - c. Channel Width: **[Selected for applicable load criteria][1-5/8 inch (41.25 mm)][1-1/4 inch (31.75 mm)][13/16 inch (20.64 mm)]<Insert dimension>**.
 - d. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.

- e. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
- f. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
- g. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Aluminum Slotted Support Systems :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Unistrut]**
 - c. **[Eaton]**
 - d. **[Flex-Strut Inc.]**
 - e. **[Haydon Corporation]**
 - f. **[MKT Metal Manufacturing]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Unistrut]**
 - c. **[Eaton]**
 - d. **[Flex-Strut Inc.]**
 - e. **[Haydon Corporation]**
 - f. **[MKT Metal Manufacturing]**
 - g. **<Insert manufacturer's name>**
3. Standard Features: Extruded-aluminum channels and angles with minimum **13/32 inch (10 mm)** diameter holes at a maximum of **8 inch (200 mm)** on center in at least one surface.
 - a. Referenced Standard: MFMA-4 factory-fabricated components for field assembly.
 - b. Channel Material: 6063-T5 aluminum alloy.
 - c. Fittings and Accessories Material: 5052-H32 aluminum alloy.
 - d. Channel Width: **[Selected for applicable load criteria][1-5/8 inch (41.25 mm)][1-1/4 inch (31.75 mm)][13/16 inch (20.64 mm)]<Insert dimension>**.
 - e. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
 - f. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
 - g. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Nonmetallic Slotted Support Systems :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Allied Tube & Conduit; Atkore International]**

- b. [Atkore Unistrut]
 - c. [Champion Fiberglass, Inc]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Fabco Plastics Wholesale Limited]
 - f. [G-Strut]
 - g. [Haydon Corporation]
 - h. [Seasafe, Inc.; AMICO, a Gibraltar Industries Company]
 - i. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Allied Tube & Conduit; Atkore International]
 - b. [Atkore Unistrut]
 - c. [Champion Fiberglass, Inc]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Fabco Plastics Wholesale Limited]
 - f. [G-Strut]
 - g. [Haydon Corporation]
 - h. [Seasafe, Inc.; AMICO, a Gibraltar Industries Company]
 - i. <Insert manufacturer's name>
3. Standard Features: Structural-grade, factory-formed, glass-fiber-resin channels and angles with minimum **13/32 inch (10 mm)** diameter holes at a maximum of **8 inch (200 mm)** on center, in at least one surface.
 - a. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
 - b. Channel Width: [Selected for applicable load criteria][1-5/8 inch (41.25 mm)][1-1/4 inch (31.75 mm)][13/16 inch (20.64 mm)]<Insert dimension>.
 - c. Fittings and Accessories: Products provided by channel and angle manufacturer and designed for use with those items.
 - d. Fitting and Accessory Materials: Same as those for channels and angles[, **except metal items may be stainless steel**].
 - e. Rated Strength: Selected to suit applicable load criteria.
 - f. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Conduit and Cable Support Devices:
 1. Standard Features: [Steel][Steel and malleable-iron][Stainless steel][Glass-fiber-resin] hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- E. Support for Conductors in Vertical Conduit:
 1. Standard Features: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs must have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body must be made of malleable iron.
- F. Structural Steel for Fabricated Supports and Restraints:
 1. Standard Features: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.

2.3 MOUNTING, ANCHORING, AND ATTACHMENT COMPONENTS

A. Powder-Actuated Fasteners :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hilti, Inc.]**
 - b. **[ITW Ramset/Red Head; Illinois Tool Works, Inc.]**
 - c. **[MKT Fastening, LLC]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hilti, Inc.]**
 - b. **[ITW Ramset/Red Head; Illinois Tool Works, Inc.]**
 - c. **[MKT Fastening, LLC]**
 - d. **<Insert manufacturer's name>**
3. Standard Features: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

B. Mechanical-Expansion Anchors :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - b. **[Empire Industries, Inc.]**
 - c. **[Hilti, Inc.]**
 - d. **[ITW Ramset/Red Head; Illinois Tool Works, Inc.]**
 - e. **[MKT Fastening, LLC]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - b. **[Empire Industries, Inc.]**
 - c. **[Hilti, Inc.]**
 - d. **[ITW Ramset/Red Head; Illinois Tool Works, Inc.]**
 - e. **[MKT Fastening, LLC]**
 - f. **<Insert manufacturer's name>**
3. Standard Features: Insert-wedge-type, **[zinc-coated][stainless]** steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

- C. Concrete Inserts:
 - 1. Standard Features: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
- D. Clamps for Attachment to Steel Structural Elements:
 - 1. Standard Features: MSS SP-58 units are suitable for attached structural element.
- E. Through Bolts:
 - 1. Standard Features: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M, **Grade A325 (Grade A325M)**.
- F. Toggle Bolts:
 - 1. Standard Features: **[All][Stainless]** steel springhead type.
- G. Hanger Rods:
 - 1. Standard Features: Threaded steel.

PART 3 - EXECUTION

3.1 SELECTION OF HANGERS AND SUPPORTS

- A. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and ERM as **[required by][scheduled in NECA NEIS 1, where its Table 1 lists maximum spacings that are less than those stated in]** NFPA 70. Minimum rod size must be **1/4 inch (6 mm)** in diameter.
- B. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted **[or other]** support system, sized so capacity can be increased by at least **[25]<Insert number>** percent in future without exceeding specified design load limits.
 - 1. Secure raceways and cables to these supports with **[two-bolt conduit clamps][single-bolt conduit clamps][single-bolt conduit clamps using spring friction action for retention in support channel]**.
- C. Spring-steel clamps designed for supporting single conduits without bolts may be used for **1-1/2 inch (38 mm)** and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.2 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Hot Work: NFPA 51B.

3. Work in Confined Spaces: NFPA 350.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Installation of Steel Conduit: NECA NEIS 101.
6. Installation of Aluminum Conduit: NECA NEIS 102.
7. Installation of Metal Cable Tray Systems: NECA NEIS 105.
8. Installation of Nonmetallic Cable Tray Systems: NECA NEIS 111.
9. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Raceway Support Methods: In addition to methods described in NECA NEIS 1, **[EMT][IMC][and][ERMC]** may be supported by openings through structure members, in accordance with NFPA 70.
2. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination must be weight of supported components plus **200 lb (90 kg)**.
3. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
 - a. To Wood: Fasten with lag screws or through bolts.
 - b. To New Concrete: Bolt to concrete inserts.
 - c. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 - d. To Existing Concrete: Expansion anchor fasteners.
 - e. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete **4 inch (100 mm)** thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than **4 inch (100 mm)** thick.
 - f. To Steel: **[Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts][Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69][Spring-tension clamps]**.
 - g. To Light Steel: Sheet metal screws.
 - h. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate **[by means that comply with seismic-restraint strength and anchorage requirements]**.
4. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

D. Interfaces with Other Work:

1. Provide **[vibration][and][seismic]** controls with hangers and supports.
2. Touchup Finishes:
 - a. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1) Apply paint by brush or spray to provide minimum dry film thickness of **2.0 mils (0.05 mm)**.
 - b. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of

- shop paint on miscellaneous metal.
 - c. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.
- 3. Installation of Fabricated Metal Supports:
 - a. Provide site-fabricated metal supports.
 - b. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
 - c. Field Welding: Comply with AWS D1.1/D1.1M. Submit welding certificates.
- 4. Installation of Concrete Bases:
 - a. Provide concrete bases of dimensions indicated, but not less than **4 inch (100 mm)** larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
 - b. Use **[3000 psi (20.7 MPa)]<Insert value>**, 28-day compressive-strength concrete.
 - c. Anchor equipment to concrete base as follows:
 - 1) Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 2) Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 3) Install anchor bolts according to anchor-bolt manufacturer's written instructions.

END OF SECTION 26 05 29 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 29 00A - VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vibration controls.
2. Seismic and wind controls.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.

1.2 DEFINITIONS

- A. Designated Seismic System: An architectural, electrical, or mechanical system and its components for which the component importance factor is greater than 1.0 when determined in accordance with Section 018123 "Facility Seismic and Wind Criteria."
- B. OSHPD: Office of Statewide Health Planning and Development (for the State of California owned and regulated medical facilities).

1.3 DELEGATED DESIGN SERVICES

- A. Delegated Design Professionals: Engage qualified structural professional engineer to design seismic and wind controls.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Prepare and submit catalog cuts, brochures, [**diagrams**,] [**schedules**,] and performance data illustrating size, physical appearance, and other characteristics of product.
 - a. Include rated load capacity for each seismic- and wind-restraint device.
 - b. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic- and wind-restraint component used.
 - c. Annotate types and sizes of seismic restraints and accessories, complete with listing markings or report numbers and load rating in tension and compression as evaluated by

[ICC-ES product listing][UL product listing][FM Approvals][an evaluation service member of ICC-ES][OSHPD][an agency acceptable to authorities having jurisdiction].

- d. Annotate to indicate application of each product submitted and compliance with requirements.

B. Shop Drawings:

1. Detail fabrication and assembly of equipment bases.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
3. Show coordination of seismic and wind bracing for components with other systems and equipment in the vicinity, including other supports and seismic restraints.

C. Delegated Design Submittals:

1. For each seismic-restraint device, including **[restraint - rigid and cable type],[restraint accessory],[and][concrete anchor and insert]** that is required by this Section or is indicated on the Drawings, submit the following:
 - a. Seismic Restraints: Select seismic restraints complying with performance requirements, design criteria, and analysis data.
 - b. Post-Installed Concrete Anchors and Inserts: Include calculations showing anticipated seismic criteria. Include certification that device is approved by qualified testing laboratory for seismic reinforcement use.
 - c. Seismic Design Calculations: Submit input data and loading calculations.
2. For each wind-restraint device, including **[restraint - rigid and cable type],[restraint accessory],[and][concrete anchor and insert]** that is required by this Section or is indicated on the Drawings, submit the following:
 - a. Wind Restraint: Select wind restraints complying with performance requirements, design criteria, and analysis data.
 - b. Post-Installed Concrete Anchors and Inserts: Include calculations showing anticipated wind criteria. Include certification that device is approved by qualified testing laboratory for reinforcement use.
 - c. Wind Design Calculations: Submit static and dynamic loading calculations.
3. Seismic- and Wind-Restraint Detail Drawings:
 - a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
 - c. Coordinate seismic-restraint details with wind details required for equipment mounted outdoors.
4. Product Listing, Preapproval, and Evaluation Documentation: By **[an evaluation service member of ICC-ES][UL][FM Approvals][OSHPD][an agency acceptable to authorities having jurisdiction]**, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

D. Field quality-control reports.

1.5 REGULATORY AGENCY APPROVALS

- A. Delegated design submittals and shop drawings requiring approval by authorities having jurisdiction must be signed by qualified structural professional engineer responsible for their preparation. **[Obtain approval by authorities having jurisdiction prior to submitting for action by Architect.][Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.]**

1.6 QUALIFICATIONS

- A. Structural Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in structural engineering, including design of seismic and wind controls, equipment hangers and supports, and concrete foundations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Prepare design calculations in accordance with criteria specified in Section 260010 "Supplemental Requirements for Electrical" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Seismic and Wind Restraint Device Ratings: Devices must be tested and rated in accordance with applicable code requirements and authorities having jurisdiction. Devices must be listed by a nationally recognized third party that requires periodic follow-up inspections and has a listing directory available to the public. Provide third-party listing by one or more of the following: **[ICC-ES product listing][UL product listing][FM Approvals][an evaluation service member of ICC-ES][an agency acceptable to authorities having jurisdiction]**.
- C. Consequential Damage: Provide additional seismic and wind restraints for suspended components or anchorage of floor-, roof-, or wall-mounted components so that failure of a non-essential or essential component will not cause failure of any other essential building component.
- D. Fire/Smoke Resistance: Seismic- and wind-restraint devices that are not constructed of ferrous metals must have a maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested by qualified testing laboratory in accordance with ASTM E84 or UL 723, and be so labeled.
- E. Component Supports:
 - 1. Load ratings, features, and applications of reinforcement components must be based on testing standards of qualified testing laboratory.

2.2 VIBRATION CONTROLS

- A. Elastomeric Isolation Pads :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Ace Mountings Co., Inc.]**
 - b. **[CADDY; brand of nVent Electrical plc]**

- c. [California Dynamics Corporation]
 - d. [Isolation Technology, Inc]
 - e. [Kinetics Noise Control, Inc]
 - f. [Korfund]
 - g. [Mason Industries, Inc.]
 - h. [NOVIA; a division of Carpenter & Paterson]
 - i. [Vibration Eliminator Co., Inc]
 - j. [Vibration Isolation]
 - k. [Vibration Management Corp.]
 - l. [VMC GROUP]
 - m. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. [Ace Mountings Co., Inc.]
 - b. [CADDY; brand of nVent Electrical plc]
 - c. [California Dynamics Corporation]
 - d. [Isolation Technology, Inc]
 - e. [Kinetics Noise Control, Inc]
 - f. [Korfund]
 - g. [Mason Industries, Inc.]
 - h. [NOVIA; a division of Carpenter & Paterson]
 - i. [Vibration Eliminator Co., Inc]
 - j. [Vibration Isolation]
 - k. [Vibration Management Corp.]
 - l. [VMC GROUP]
 - m. <Insert manufacturer's name>
3. Standard Features:
- a. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
 - b. Size: Factory or field cut to match requirements of supported equipment.
 - c. Pad Material: Oil and water resistant with elastomeric properties. Neoprene rubber, silicone rubber, or other elastomeric material.
 - d. Surface Pattern: Smooth, ribbed, or waffle pattern.
 - e. Infused nonwoven cotton or synthetic fibers.
 - f. Load-bearing metal plates adhered to pads.
 - g. Sandwich-Core Material: [**Resilient**][**and**][**elastomeric**]**<Insert compound>**.
- 1) Surface Pattern: Smooth, ribbed, or waffle pattern.
 - 2) Infused nonwoven cotton or synthetic fibers.

2.3 SEISMIC AND WIND CONTROLS

A. Restraints - Rigid Type :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [Atkore Unistrut]
 - b. [CADDY; brand of nVent Electrical plc]
 - c. [California Dynamics Corporation]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Hilti, Inc.]
 - f. [Isolation Technology, Inc]
 - g. [TOLCO Incorporated]
 - h. [VMC GROUP]
 - i. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Atkore Unistrut]
 - b. [CADDY; brand of nVent Electrical plc]
 - c. [California Dynamics Corporation]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [Hilti, Inc.]
 - f. [Isolation Technology, Inc]
 - g. [TOLCO Incorporated]
 - h. [VMC GROUP]
 - i. <Insert manufacturer's name>
3. Standard Features: Shop- or field-fabricated bracing assembly made of ANSI/AISI S110-07-S1 slotted steel channels, ANSI/ASTM A53/A53M steel pipe, or other rigid steel brace member. Includes accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

B. Restraints - Cable Type :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [CADDY; brand of nVent Electrical plc]
 - b. [Cooper B-line; brand of Eaton, Electrical Sector]
 - c. [Gripple Inc.]
 - d. [Loos & Co. Inc.]
 - e. [VMC GROUP]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [CADDY; brand of nVent Electrical plc]
 - b. [Cooper B-line; brand of Eaton, Electrical Sector]
 - c. [Gripple Inc.]
 - d. [Loos & Co. Inc.]
 - e. [VMC GROUP]
 - f. <Insert manufacturer's name>
3. Standard Features:

- a. Seismic- and Wind-Restraint Cables: **[ASTM A1023/A1023M galvanized or ASTM A603 galvanized-steel][ASTM A492 stainless steel]** cables. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for seismic-restraining cable service; with fittings attached by means of poured socket, swaged socket, or mechanical (Flemish eye) loop.
- b. Restraint cable assembly and cable fittings must comply with ASCE/SEI 19. Cable fittings and complete cable assembly must maintain the minimum cable breaking force. U-shaped cable clips and wedge-type end fittings do not comply and are unacceptable.

C. Restraint Accessories :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Atkore Unistrut]**
 - b. **[CADDY; brand of nVent Electrical plc]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Hilti, Inc.]**
 - e. **[Loos & Co. Inc.]**
 - f. **[Mason Industries, Inc.]**
 - g. **[TOLCO Incorporated]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atkore Unistrut]**
 - b. **[CADDY; brand of nVent Electrical plc]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Hilti, Inc.]**
 - e. **[Loos & Co. Inc.]**
 - f. **[Mason Industries, Inc.]**
 - g. **[TOLCO Incorporated]**
 - h. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Hanger-Rod Stiffener: **[Steel tube or steel slotted-support-system sleeve with internally bolted connections][Reinforcing steel angle clamped]** to hanger rod. Non-metallic stiffeners are unacceptable.
 - b. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to **[rigid channel bracings][and][restraint cables]**.
 - c. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
 - d. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
 - e. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

D. Mechanical Anchor Bolts :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atkore Unistrut]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Hilti, Inc.]**
 - d. **[Mason Industries, Inc.]**
 - e. **[Powers Fasteners]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atkore Unistrut]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Hilti, Inc.]**
 - d. **[Mason Industries, Inc.]**
 - e. **[Powers Fasteners]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength for anchor and as tested according to ASTM E488/E488M.
 - b. Prequalify post-installed anchors in concrete in accordance with ACI 355.2 or other approved qualification testing procedures.
 - c. Prequalify post-installed anchors in masonry in accordance with approved qualification procedures.

E. Adhesive Anchor Bolts :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atkore Unistrut]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Hilti, Inc.]**
 - d. **[Mason Industries, Inc.]**
 - e. **[Powers Fasteners]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atkore Unistrut]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[Hilti, Inc.]**
 - d. **[Mason Industries, Inc.]**
 - e. **[Powers Fasteners]**

f. **<Insert manufacturer's name>**

3. Standard Features

- a. Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488/E488M.
- b. Prequalify post-installed anchors in concrete in accordance with ACI 355.2 or other approved qualification testing procedures.
- c. Prequalify post-installed anchors in masonry in accordance with approved qualification procedures.

F. Concrete Inserts :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Atkore Unistrut]**
- b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
- c. **[Hilti, Inc.]**
- d. **[Mason Industries, Inc.]**
- e. **[Powers Fasteners]**
- f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Atkore Unistrut]**
- b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
- c. **[Hilti, Inc.]**
- d. **[Mason Industries, Inc.]**
- e. **[Powers Fasteners]**
- f. **<Insert manufacturer's name>**

3. Standard Features:

- a. Provide preset concrete inserts that are seismically prequalified in accordance with ICC-ES AC446 testing.
- b. Comply with MSS SP-58.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive seismic and wind control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for reinforcement and cast-in-place anchors to verify actual locations before

installation.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF VIBRATION AND SEISMIC CONTROLS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by **[an evaluation service member of ICC-ES][OSHPD][an agency acceptable to authorities having jurisdiction]**.
- B. Hanger-Rod Stiffeners: Install where indicated or scheduled on the Drawings to receive them and where required to prevent buckling of hanger rods caused by seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry static, wind, and seismic loads within specified loading limits.

3.3 INSTALLATION OF SEISMIC AND WIND CONTROLS

- A. Provide seismic and wind control devices for systems and equipment where indicated in Equipment Schedules or Seismic and Wind Controls Schedule, where indicated on the Drawings, where the Specifications indicate they must be installed on specific equipment and systems, and where required by applicable codes.
 - 1. Install equipment and devices to withstand the effects of earthquake motions and high wind events.
- B. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."
- C. Installation of seismic and wind restraints must not cause any stresses, misalignment, or change of position of equipment or conduits.
- D. Equipment Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds **0.125 inch (3.2 mm)**.
 - 2. Install seismic-restraint and wind-restraint devices using methods approved by **[an evaluation service member of ICC-ES][OSHPD][an agency acceptable to authorities having jurisdiction]** that provides required submittals for component.
- E. Raceway, Cable, Wireway, Cable Tray, and Busway Support and Hanger Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds **0.125 inch (3.2 mm)**.
 - 2. Install seismic-restraint and wind-restraint devices using methods approved by **[an evaluation service member of ICC-ES][OSHPD][an agency acceptable to authorities having jurisdiction]** that provides required submittals for component.
 - 3. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds **0.125 inch (3.2 mm)**.
 - 4. Install seismic-restraint devices using methods approved by **[an evaluation service member of ICC-ES][OSHPD][an agency acceptable to authorities having jurisdiction]** providing required submittals for component.

- F. Install cables so they do not bend across edges of adjacent equipment or building structure.
- G. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- H. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- I. Post-Installed Concrete Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Mechanical-Type Anchor Bolts: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors must be installed with sleeve fully engaged in the structural element to which anchor will be fastened.
 - 4. Adhesive-Type Anchor Bolts: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 - 5. Set anchors to manufacturer's recommended torque using a torque wrench.
 - 6. Install zinc-coated steel anchors for interior and stainless steel anchors for exterior applications.
- J. Accommodation of Differential Seismic Motion: Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where connection is terminated to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.4 FIELD QUALITY CONTROL

- A. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- B. Special Structural Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test no fewer than **[four]<Insert number>** of each type and size of installed anchors and fasteners selected by Architect.
 - 5. Test to 90 percent of rated proof load of device.
- C. Nonconforming Work:
 - 1. Seismic controls will be considered defective if they do not pass tests and inspections.
 - 2. Remove and replace malfunctioning units and retest as specified above.

- D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

END OF SECTION 26 05 29 00A

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 29 00	05 40 00 00	Cold-Formed Metal Framing
26 05 29 00	05 50 00 00	Metal Fabrications
26 05 29 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 33 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 33 13 - CONDUITS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Type EMT duct raceways and elbows.
2. Type ENT duct raceways and fittings.
3. Type HDPE and Type EPEC duct raceways and fittings.
4. Type ERMC duct raceways, elbows, couplings, and nipples.
5. Type FMC duct raceways.
6. Type FMT duct raceways.
7. Type IMC duct raceways.
8. Type LFMC duct raceways.
9. Type LFNC duct raceways.
10. Type PVC duct raceways and fittings.
11. Type RTRC duct raceways and fittings.
12. Fittings for conduit, tubing, and cable.
13. Joint compounds.
14. Solvent cements.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 078413 "Penetration Firestopping" specifies firestopping referenced by this Section.
5. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
6. Section 260529 "Hangers and Supports for Electrical Systems" specifies conduit hangers and supports referenced by this Section.
7. Section 260543 "Underground Ducts and Raceways for Electrical Systems" specifies exterior duct banks, manholes, and underground utility construction.
8. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels.
9. Section 270528 "Pathways for Communications Systems" **and Section 271100 "Communications Equipment Room Fittings"** specifies additional requirements for installation of conduits for communications cabling.

1.2 REFERENCES

A. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.

4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit (thin wall).
7. EPEC-A: Type A electrical HDPE underground conduit.
8. EPEC-B: Type B electrical HDPE underground conduit.
9. ERMCM: Electrical rigid metal conduit.
10. ERMCM-A: Aluminum electrical rigid metal conduit.
11. ERMCM-S: Steel electrical rigid metal conduit.
12. ERMCM-S-G: Galvanized-steel electrical rigid metal conduit.
13. ERMCM-S-PVC: PVC-coated-steel electrical rigid metal conduit.
14. ERMCM-SS: Stainless steel electrical rigid metal conduit.
15. FMC: Flexible metal conduit.
16. FMC-A: Aluminum flexible metal conduit.
17. FMC-S: Steel flexible metal conduit.
18. FMT: Steel flexible metallic tubing.
19. FNMC: Flexible nonmetallic conduit. See "LFNC."
20. HDPE: HDPE underground conduit (thick wall).
21. HDPE-40: Schedule 40 HDPE underground conduit.
22. HDPE-80: Schedule 80 HDPE underground conduit.
23. IMC: Steel electrical intermediate metal conduit.
24. LFMC: Liquidtight flexible metal conduit.
25. LFMC-A: Aluminum liquidtight flexible metal conduit.
26. LFMC-S: Steel liquidtight flexible metal conduit.
27. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
28. LFNC: Liquidtight flexible nonmetallic conduit.
29. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
30. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
31. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
32. PVC: Rigid PVC conduit.
33. PVC-40: Schedule 40 rigid PVC conduit.
34. PVC-80: Schedule 80 rigid PVC Conduit.
35. PVC-A: Type A rigid PVC concrete-encased conduit.
36. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.
37. RGS: See ERMCM-S-G.
38. RMC: See ERMCM.
39. RTRC: Reinforced thermosetting resin conduit.
40. RTRC-AG: Low-halogen, aboveground reinforced thermosetting resin conduit.
41. RTRC-AG-HW: Heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
42. RTRC-AG-SW: Standard wall, low-halogen, aboveground reinforced thermosetting resin conduit.
43. RTRC-AG-XW: Extra heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
44. RTRC-BG: Low-halogen, belowground reinforced thermosetting resin conduit.

B. Definitions:

1. Conduit: A structure containing one or more duct raceways.
2. Direct Buried: Installed underground without encasement in concrete or other protective material.
3. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
4. Duct Raceway: A single enclosed raceway for conductors or cable.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.5 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- D. ERM-C-S-PVC Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by ERM-C-S-PVC manufacturer prior to starting installation.
- E. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site communications testing supervisor must have **[BICSI Technician (TECH)]<Insert certification program>** certification and documented training, and be experienced with testing communications equipment in accordance with **[BICSI]<Insert code enforced by authorities having jurisdiction>** testing standards.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. **<Insert additional performance requirements for the Project>**.

2.2 TYPE EMT DUCT RACEWAYS AND ELBOWS

A. UL FJMX - Aluminum Electrical Metal Tubing (EMT-A) and Elbows:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC]**
 - b. **[Patriot Aluminum Products, LLC]**
 - c. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC]**
 - b. **[Patriot Aluminum Products, LLC]**
 - c. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN FJMX; including UL 797A.
4. Standard Features:
 - a. Material: Aluminum.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:

- a. Colors: As indicated on the Drawings.
- B. UL FJMX - Stainless Steel Electrical Metal Tubing (EMT-SS) and Elbows:
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Calconduit; Atkore International]**
 - b. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Calconduit; Atkore International]**
 - b. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V]**
 - c. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN FJMX; including UL 797A.
 - 4. Standard Features:
 - a. Material: Stainless steel.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
 - 6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.
- C. UL FJMX - Steel Electrical Metal Tubing (EMT-S) and Elbows:
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. **[Allied Tube & Conduit; Atkore International]**
 - b. **[Calconduit; Atkore International]**
 - c. **[Emerson Electric Co., Automation Solutions]**
 - d. **[Picoma; Zekelman Industries]**
 - e. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - f. **[Topaz Lighting & Electric]**
 - g. **[Western Tube; Zekelman Industries]**
 - h. **[Wheatland Tube; Zekelman Industries]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Allied Tube & Conduit; Atkore International]**
 - b. **[Calconduit; Atkore International]**
 - c. **[Emerson Electric Co., Automation Solutions]**
 - d. **[Picoma; Zekelman Industries]**
 - e. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - f. **[Topaz Lighting & Electric]**
 - g. **[Western Tube; Zekelman Industries]**
 - h. **[Wheatland Tube; Zekelman Industries]**
 - i. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN FJMX; including UL 797.
4. Standard Features:
- a. Material: Steel.
 - b. Exterior Coating: **[Zinc][Alternate corrosion-resistant coating]**.
 - c. Interior Coating: **[Zinc with organic top coating][Zinc][Organic coating]**.
 - d. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- 6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.

2.3 TYPE ENT DUCT RACEWAYS AND FITTINGS

A. UL FKHU - Electrical Nonmetallic Tubing (ENT) and Fittings:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Cantex Inc.]**
 - c. **[JM Eagle]**
 - d. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Cantex Inc.]**
 - c. **[JM Eagle]**
 - d. **<Insert manufacturer's name>**
- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN FKHU; including UL 1653.
- 4. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- 5. Other Available Features Required by the Project:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade**

- size 3/4)].
- b. Fittings:
 - 1) Mechanically Attached Fittings: UL 1653.
 - 2) Solvent-Attached Fittings: UL 651.

2.4 TYPE HDPE AND TYPE EPEC DUCT RACEWAYS AND FITTINGS

A. UL EAZX - Schedule 40 Electrical HDPE Underground Conduit (HDPE-40):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN EAZX; including UL 651A.
4. Standard Features:
 - a. Dimensional Specifications: Schedule 40.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

- standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
- B. UL EAZX - Schedule 80 Electrical HDPE Underground Conduit (HDPE-80):
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN EAZX; including UL 651A.
 - 4. Standard Features:
 - a. Dimensional Specifications: Schedule 80.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

- standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
- C. UL EAZX - Type A Electrical HDPE Underground Conduit (EPEC-A):
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN EAZX; including UL 651A.
 4. Standard Features:
 - a. Dimensional Specifications: Type A.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
 6. Other Available Features Required by the Project:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

D. UL EAZX - Type B Electrical HDPE Underground Conduit (EPEC-B):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN EAZX; including UL 651A.
4. Standard Features:
 - a. Dimensional Specifications: Type B.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

2.5 TYPE ERMCDUCT RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. UL DYWIDAG - Aluminum Electrical Rigid Metal Conduit (ERMCD-A), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [ABB, Electrification Business]
 - b. [Allied Tube & Conduit; Atkore International]
 - c. [American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC]
 - d. [Appleton; Emerson Electric Co., Automation Solutions]
 - e. [Calconduit; Atkore International]
 - f. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - g. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - h. [Patriot Aluminum Products, LLC]
 - i. [Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]
 - j. [Republic Conduit; Nucor Corporation, Nucor Tubular Products]
 - k. [Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V.]
 - l. [Topaz Lighting & Electric]
 - m. [Western Tube; Zekelman Industries]
 - n. [Wheatland Tube; Zekelman Industries]
 - o. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Allied Tube & Conduit; Atkore International]
 - c. [American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC]
 - d. [Appleton; Emerson Electric Co., Automation Solutions]
 - e. [Calconduit; Atkore International]
 - f. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - g. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - h. [Patriot Aluminum Products, LLC]
 - i. [Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]
 - j. [Republic Conduit; Nucor Corporation, Nucor Tubular Products]
 - k. [Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V.]
 - l. [Topaz Lighting & Electric]
 - m. [Western Tube; Zekelman Industries]
 - n. [Wheatland Tube; Zekelman Industries]
 - o. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DYWV; including UL 6A.
4. Standard Features:
 - a. Material: Aluminum.
 - b. Protective Coating: Provide protective coating for [use in concrete][direct burial][use in severely corrosive environment].
 - c. Minimum Trade Size: [Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability

- report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Colors: As indicated on the Drawings.
- B. UL DYWV - Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Calconduit; Atkore International]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Calconduit; Atkore International]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DYWV; including UL 6A.
 4. Standard Features:
 - a. Material: Stainless steel.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Colors: As indicated on the Drawings.
- C. UL DYIX - Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Allied Tube & Conduit; Atkore International]**
 - b. **[Calconduit; Atkore International]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - g. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V.]**
 - h. **[Topaz Lighting & Electric]**
 - i. **[Western Tube; Zekelman Industries]**
 - j. **[Wheatland Tube; Zekelman Industries]**
 - k. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Allied Tube & Conduit; Atkore International]**
 - b. **[Calconduit; Atkore International]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - g. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V.]**
 - h. **[Topaz Lighting & Electric]**
 - i. **[Western Tube; Zekelman Industries]**
 - j. **[Wheatland Tube; Zekelman Industries]**
 - k. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

- a. UL CCN DYIX; including UL 6.
4. Standard Features:
 - a. Exterior Coating: Zinc.
 - b. Interior Coating: **[Zinc with organic top coating][Zinc][Organic coating]**.
 - c. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.
- D. UL DYIX - PVC-Coated-Steel Electrical Rigid Metal Conduit (ERMC-S-PVC), Elbows, Couplings, and Nipples:
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Bluesteel Services LLC]**
 - c. **[Calbond; Atkore International]**
 - d. **[KorKap; Robroy Industries]**
 - e. **[Perma-Cote; Robroy Industries]**
 - f. **[Plasti-Bond; Robroy Industries]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Bluesteel Services LLC]**
 - c. **[Calbond; Atkore International]**
 - d. **[KorKap; Robroy Industries]**

- e. **[Perma-Cote; Robroy Industries]**
 - f. **[Plasti-Bond; Robroy Industries]**
 - g. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN DYIX; including UL 6.
4. Standard Features:
- a. Exterior Coating: PVC complying with NEMA RN 1.
 - b. Interior Coating: **[Zinc with organic top coating][Zinc][Organic coating]**.
 - c. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Colors: As indicated on the Drawings.
 - b. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
 - c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.

2.6 TYPE FMC DUCT RACEWAYS

A. UL DXUZ - Steel Flexible Metal Conduit (FMC-S):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **[International Metal Hose Co.]**
 - e. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**

- f. **[Topaz Lighting & Electric]**
 - g. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **[International Metal Hose Co.]**
 - e. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - f. **[Topaz Lighting & Electric]**
 - g. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXUZ; including UL 1.
 - 4. Standard Features:
 - a. Material: Steel.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
 - 6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.
- B. UL DXUZ - Aluminum Flexible Metal Conduit (FMC-A):
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**

- b. [Anaconda Sealtite; Anamet Electrical, Inc]
 - c. [Electri-Flex Company]
 - d. [Topaz Lighting & Electric]
 - e. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Anaconda Sealtite; Anamet Electrical, Inc]
 - c. [Electri-Flex Company]
 - d. [Topaz Lighting & Electric]
 - e. <Insert manufacturer's name>
- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXUZ; including UL 1.
- 4. Standard Features:
 - a. Material: Aluminum.
 - b. Minimum Trade Size: [Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)].
- 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- 6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.

2.7 TYPE FMT DUCT RACEWAYS

A. UL ILJW - Steel Flexible Metallic Tubing (FMT):

- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the

following]:

- a. **[Electri-Flex Company]**
 - b. **[International Metal Hose Co]**
 - c. **[Liquid Tight Connector Co.]**
 - d. **[Southwire Company, LLC]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Electri-Flex Company]**
 - b. **[International Metal Hose Co]**
 - c. **[Liquid Tight Connector Co.]**
 - d. **[Southwire Company, LLC]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN ILJW; including UL Subject 1652.
4. Standard Features:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.

2.8 TYPE IMC DUCT RACEWAYS

A. UL DYBY - Steel Intermediate Metal Conduit (IMC):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

- a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Calconduit; Atkore International]**
 - d. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - e. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V]**
 - f. **[Topaz Lighting & Electric]**
 - g. **[Western Tube; Zekelman Industries]**
 - h. **[Wheatland Tube; Zekelman Industries]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Calconduit; Atkore International]**
 - d. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - e. **[Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V]**
 - f. **[Topaz Lighting & Electric]**
 - g. **[Western Tube; Zekelman Industries]**
 - h. **[Wheatland Tube; Zekelman Industries]**
 - i. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN DYBY; including UL 1242.
4. Standard Features:
- a. Exterior Coating: **[Zinc][Alternative corrosion-resistant coating]**.
 - b. Interior Coating: **[Zinc with organic top coating][Zinc][Organic coating]**.
 - c. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

- a. Colors: As indicated on the Drawings.

2.9 TYPE LFMC DUCT RACEWAYS

A. UL DXHR - Steel Liquidtight Flexible Metal Conduit (LFMC-S):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **[International Metal Hose Co]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **[International Metal Hose Co]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXHR; including UL 360.
4. Standard Features:
 - a. Material: Steel.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate

scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

- a. Colors: As indicated on the Drawings.

B. UL DXHR - Stainless Steel Liquidtight Flexible Metal Conduit (LFMC-SS):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Anaconda Sealtite; Anamet Electrical, Inc]**
 - c. **[Electri-Flex Company]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXHR; including UL 360.
4. Standard Features:
 - a. Material: Stainless steel.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

- a. Colors: As indicated on the Drawings.

2.10 TYPE LFNC DUCT RACEWAYS

A. UL DXOQ - Layered (Type A) Liquidtight Flexible Nonmetallic Conduit (LFNC-A):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[AFC Cable Systems; Atkore International]**
 - b. **[Electri-Flex Company]**
 - c. **[Topaz Lighting & Electric]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AFC Cable Systems; Atkore International]**
 - b. **[Electri-Flex Company]**
 - c. **[Topaz Lighting & Electric]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXOQ; including UL 1660.
4. Standard Features:
 - a. Type A conduit with smooth seamless inner core and cover bonded together with one or more reinforcement layers between core and cover.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Markings: **[80 deg C dry][90 deg C dry][105 deg C dry][70 deg C oil resistant][Sunlight resistant][Outdoor][Direct burial][Complies with flame test in cable trays]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.
- B. UL DXOQ - Integral (Type B) Liquidtight Flexible Nonmetallic Conduit (LFNC-B):
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Cambridge Resources]**
 - c. **[Electri-Flex Company]**
 - d. **[Superflex Ltd.]**
 - e. **[Topaz Lighting & Electric]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Cambridge Resources]**
 - c. **[Electri-Flex Company]**
 - d. **[Superflex Ltd.]**
 - e. **[Topaz Lighting & Electric]**
 - f. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXOQ; including UL 1660.
 4. Standard Features:
 - a. Type B conduit with smooth inner surface with integral reinforcement within conduit wall.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Markings: **[80 deg C dry][90 deg C dry][105 deg C dry][70 deg C oil resistant][Sunlight resistant][Outdoor][Direct burial][Complies with flame test in cable trays]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project

- site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
 6. Other Available Features Required by the Project:
 - a. Colors: As indicated on the Drawings.
- C. UL DXOQ - Corrugated (Type C) Liquidtight Flexible Nonmetallic Conduit (LFNC-C):
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[HellermannTyton]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[HellermannTyton]**
 - c. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXOQ; including UL 1660.
 4. Standard Features:
 - a. Type C conduit with corrugated internal and external surfaces without integral reinforcement within conduit wall.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Markings: **[80 deg C dry][90 deg C dry][105 deg C dry][70 deg C oil resistant][Sunlight resistant][Outdoor][Direct burial][Complies with flame test in cable trays]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

- standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

- a. Colors: As indicated on the Drawings.

2.11 TYPE PVC DUCT RACEWAYS AND FITTINGS

A. UL DZYZR - Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[NAPCO; Westlake Chemical Corp.]**
 - e. **[National Pipe and Plastic, Inc. (Oldcastle)]**
 - f. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[NAPCO; Westlake Chemical Corp.]**
 - e. **[National Pipe and Plastic, Inc. (Oldcastle)]**
 - f. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZYZR; including UL 651.
4. Standard Features:
 - a. Dimensional Specifications: Schedule 40.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Markings: **[For use with maximum 90 deg C wire][For directional boring applications]**.
5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- B. UL DZYZR - Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[National Pipe and Plastic, Inc. (Oldcastle)]**
 - e. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - f. **[Topaz Lighting & Electric]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[National Pipe and Plastic, Inc. (Oldcastle)]**
 - e. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - f. **[Topaz Lighting & Electric]**
 - g. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZYZR; including UL 651.
 4. Standard Features:
 - a. Dimensional Specifications: Schedule 80.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Markings: **[For use with maximum 90 deg C wire][For directional boring applications]**.
 5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL DZYZR - Type A Rigid PVC Concrete-Encased Conduit (PVC-A) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Southern Pipe, Inc.]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Southern Pipe, Inc.]**
 - b. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZYZR; including UL 651.
4. Standard Features:
 - a. Dimensional Specifications: Type A.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

- development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- D. UL DZYZR - Type EB Rigid PVC Concrete-Encased Underground Conduit (PVC-EB) and Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[JM Eagle]**
 - b. **[Southern Pipe, Inc.]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[JM Eagle]**
 - b. **[Southern Pipe, Inc.]**
 - c. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZYZR; including UL 651.
 - 4. Standard Features:
 - a. Dimensional Specifications: Type EB.
 - b. Minimum Trade Size: **[Metric designator 53 (trade size 2)][Metric designator 78 (trade size 3)][Metric designator 103 (trade size 4)]**.
 - 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.12 TYPE RTRC DUCT RACEWAYS AND FITTINGS

- A. UL DZKT - Heavy Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-HW) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZKT; including UL 2515.
 4. Standard Features:
 - a. Additional Characteristics: Type AG-HW.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- B. UL DZKT - Standard Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-SW) and Fittings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZKT; including UL 2515.
 4. Standard Features:
 - a. Additional Characteristics: Type SW.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL DZKT - Extra Heavy Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-XW) and Fittings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Champion Fiberglass, Inc]**
 - b. **[FRE Composites]**
 - c. **[United Fiberglass of America (UFA)]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Champion Fiberglass, Inc]**
 - b. **[FRE Composites]**
 - c. **[United Fiberglass of America (UFA)]**
 - d. **<Insert manufacturer's name>**

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZKT; including UL 2515 and UL 2515A.
 4. Standard Features:
 - a. Additional Characteristics: Type AG-XW.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- D. UL DZKT - Low-Halogen, Belowground Reinforced Thermosetting Resin Conduit (RTRC-BG) and Fittings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Champion Fiberglass, Inc]**
 - b. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DZKT; including UL 2420.
 4. Standard Features:
 - a. Additional Characteristics: Type BG.

- b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
- 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.13 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. UL EBMB - Duct Fittings for Hazardous (Classified) Locations:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - b. **[Power Feed-Thru Systems and Connectors LLC]**
 - c. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - b. **[Power Feed-Thru Systems and Connectors LLC]**
 - c. **<Insert manufacturer's name>**
- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN EBMB; including UL 1203.
- 4. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project

- site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL DWTT - Fittings for Type ERMCM, Type IMC, Type PVC, Type HDPE, Type EPEC, and Type RTRC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Konkore Fittings; Atkore International]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Southwire Company, LLC]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Konkore Fittings; Atkore International]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Southwire Company, LLC]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DWTT; including UL 514B.
4. Standard Features:
 - a. Material: **[Steel][Die cast]**.
 - b. Coupling Method: **[Compression coupling][Raintight compression coupling with distinctive color gland nut][Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable]**.

- c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL FKA V - Fittings for Type EMT Duct Raceways:
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - d. **[Calconduit; Atkore International]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Southwire Company, LLC]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - d. **[Calconduit; Atkore International]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Southwire Company, LLC]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN FKA V; including UL 514B.

4. Standard Features:
 - a. Material: **[Steel][Die cast]**.
 - b. Coupling Method: **[Compression coupling][Raintight compression coupling with distinctive color gland nut][Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable]**.
 - c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL ILNR - Fittings for Type FMC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Fittings Corp. (AMFICO)]**
 - b. **[Liquid Tight Connector Co.]**
 - c. **[Southwire Company, LLC]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Fittings Corp. (AMFICO)]**
 - b. **[Liquid Tight Connector Co.]**
 - c. **[Southwire Company, LLC]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN ILNR; including UL 514B.
4. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts

- of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- E. UL DXAS - Fittings for Type LFMC and Type LFNC Duct Raceways:
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arlington Industries, Inc.]**
 - b. **[Liquid Tight Connector Co.]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arlington Industries, Inc.]**
 - b. **[Liquid Tight Connector Co.]**
 - c. **<Insert manufacturer's name>**
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN DXAS; including UL 514B.
 - 4. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.14 JOINT COMPOUNDS

- A. UL FOIZ - Electrically Conductive Corrosion-Resistant Compound for Threaded Conduit:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN FOIZ; including UL Subject 2419.
 4. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.15 SOLVENT CEMENTS

- A. UL VBEW - Solvent Cements for Nonmetallic Duct Raceways and Fittings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Solvent Cements: UL CCN VBEW; including UL 340.
 - b. Solvent Cement Compatibility with PVC Conduit Fittings: UL CCN DWTT; including UL 514B. Follow solvent manufacturer's published instructions.
 - c. Solvent Cement Compatibility with Rigid PVC Conduit: UL CCN DZYR; including UL 651. Follow solvent manufacturer's published instructions.
 - d. Solvent Cement Compatibility with Rigid EPEC and HDPE Underground Conduit: UL CCN EAZX; including UL 651A. Follow solvent manufacturer's published instructions.
4. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

PART 3 - EXECUTION

3.1 SELECTION OF CONDUITS FOR ELECTRICAL SYSTEMS

- A. Unless more stringent requirements are specified in the Contract Documents or manufacturer's published instructions, comply with NFPA 70 for selection of duct raceways. Consult Architect for resolution of conflicting requirements.
- B. Special Instructions Regarding HDPE Conduits: Although Article 353 of NFPA 70 permits use of HDPE conduits where encased in concrete aboveground, UL CCN EAZX listing requirements state that HDPE[**and EPEC**] underground conduits are intended only for use where direct buried with or without being encased in concrete. Specified Type HDPE[**and Type EPEC**] underground conduits are not permitted to be used aboveground on the Project.
- C. Outdoors:
 1. Exposed and Subject to Severe Physical Damage: **[ERMC][IMC]**.
 2. Exposed and Subject to Physical Damage: **[ERMC][IMC][Corrosion-resistant EMT]**.
 3. Exposed and Not Subject to Physical Damage: **[ERMC][IMC][Corrosion-resistant EMT][PVC-80][RTRC-AG]**.

4. Concealed Aboveground: [ERMC][IMC][EMT][PVC-80][PVC-40][RTRC-AG].
5. Direct Buried: [PVC-80][PVC-40][HDPE-80][HDPE-40][RTRC-BG].
6. Concrete Encased Not in Trench: [PVC-80][PVC-40][PVC-A][RTRC-BG].
7. Concrete Encased in Trench: [PVC-80][PVC-40][PVC-A][PVC-EB][HDPE-80][HDPE-40][EPEC-A][EPEC-B][RTRC-BG].
8. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): [LFMC][LFNC-A][LFNC-B].

D. Indoors:

1. Hazardous Classified Locations: [ERMC][IMC].
2. Exposed and Subject to Severe Physical Damage: [ERMC][IMC].
3. Exposed and Subject to Physical Damage: [ERMC][IMC][EMT].
4. Exposed and Not Subject to Physical Damage: [ERMC][IMC][EMT][PVC-80][RTRC-AG].
5. Concealed in Ceilings and Interior Walls and Partitions: [ERMC][IMC][EMT][PVC-80][PVC-40][RTRC-AG].
6. Damp or Wet Locations: [ERMC][IMC][RTRC-AG][Corrosion-resistant EMT].
7. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): [LFMC][FMC][LFNC-A][LFNC-B].
8. Circuits Operating Above 60 Hz: [EMT-A][ERMC-A][RTRC-AG]. Provide nonmetallic sleeve where aluminum duct raceways pass through concrete.

E. Duct Fittings: Select fittings in accordance with NEMA FB 2.10 guidelines.

1. ERM and IMC: Provide threaded-type fittings unless otherwise indicated.

3.2 INSTALLATION OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Type EMT-A: Article 358 of NFPA 70 and NECA NEIS 102.
11. Type EMT-SS: Article 358 of NFPA 70 and NECA NEIS 101.
12. Type EMT-S: Article 358 of NFPA 70 and NECA NEIS 101.
13. Type ENT: Article 362 of NFPA 70 and NECA NEIS 102.
14. Type HDPE and Type EPEC: Article 353 of NFPA 70 and NECA NEIS 111.
15. Type ERM-A: Article 344 of NFPA 70 and NECA NEIS 102.
16. Type ERM-SS: Article 344 of NFPA 70 and NECA NEIS 101.
17. Type ERM-S: Article 344 of NFPA 70 and NECA NEIS 101.
18. Type FMC-S: Article 348 of NFPA 70 and NECA NEIS 101.
19. Type FMC-A: Article 348 of NFPA 70 and NECA NEIS 102.
20. Type FMT: Article 360 of NFPA 70 and NECA NEIS 101.
21. Type IMC: Article 342 of NFPA 70 and NECA NEIS 101.

22. Type LFMC: Article 350 of NFPA 70 and NECA NEIS 101.
23. Type LFNC: Article 342 of NFPA 70 and NECA NEIS 111.
24. Type PVC: Article 356 of NFPA 70 and NECA NEIS 111.
25. Type RTRC: Article 355 of NFPA 70 and NECA NEIS 111.
26. Expansion Fittings: NEMA FB 2.40.
27. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. General Requirements for Installation of Duct Raceways:

- a. Complete duct raceway installation before starting conductor installation.
- b. Provide stub-ups through floors with coupling threaded inside for plugs, set flush with finished floor. Plug coupling until conduit is extended above floor to final destination or a minimum of **2 ft (0.6 m)** above finished floor.
- c. Install no more than equivalent of three 90-degree bends in conduit run[**except for control wiring conduits, for which no more than equivalent of two 90-degree fewer bends are permitted**]. Support within **12 inch (300 mm)** of changes in direction.
- d. Make bends in duct raceway using large-radius preformed ells except for parallel bends. Field bending must be in accordance with NFPA 70 minimum radii requirements. Provide only equipment specifically designed for material and size involved.
- e. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- f. Support conduit within **12 inch (300 mm)** of enclosures to which attached.
- g. Install duct sealing fittings at accessible locations in accordance with NFPA 70 and fill them with listed sealing compound. For concealed duct raceways, install fitting in flush steel box with blank cover plate having finish similar to that of adjacent plates or surfaces. Install duct sealing fittings in accordance with NFPA 70.
- h. Install devices to seal duct raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal interior of duct raceways at the following points:
 - 1) Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - 2) Where an underground service duct raceway enters a building or structure.
 - 3) Conduit extending from interior to exterior of building.
 - 4) Conduit extending into pressurized duct raceway and equipment.
 - 5) Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
 - 6) Where otherwise required by NFPA 70.
- i. Do not install duct raceways or electrical items on "explosion-relief" walls or rotating equipment.
- j. Do not install conduits within **2 inch (50 mm)** of the bottom side of a metal deck roof.
- k. Keep duct raceways at least **6 inch (150 mm)** away from parallel runs of flues and steam or hot-water pipes. Install horizontal duct raceway runs above water and steam piping.
- l. Cut conduit perpendicular to the length. For conduits metric designator 53 (trade size 2) and larger, use roll cutter or a guide to make cut straight and perpendicular to the length. Ream inside of conduit to remove burrs.
- m. Install pull wires in empty duct raceways. Provide polypropylene or monofilament plastic line with not less than **200 lb (90 kg)** tensile strength. Leave at least **12 inch (300 mm)** of slack at both ends of pull wire. Cap underground duct raceways designated as spare above grade alongside duct raceways in use.
- n. Install duct raceways square to the enclosure and terminate at enclosures without hubs with locknuts on both sides of enclosure wall. Install locknuts hand tight, plus one-quarter turn more.

- 1) Termination fittings with shoulders do not require two locknuts.
- o. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to metric designator 35 (trade size 1-1/4) and insulated throat metal bushings on metric designator 41 (trade size 1-1/2) and larger conduits terminated with locknuts. [**Install insulated throat metal grounding bushings on service conduits**].
2. Types EMT-A, ERMCA, and FMC-A: Do not install aluminum duct raceways or fittings in contact with concrete or earth.
3. Types ERMCA and IMC:
 - a. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound that maintains electrical conductivity to threads of duct raceway and fittings before making up joints. Follow compound manufacturer's published instructions.
4. Type ERMCA-S-PVC:
 - a. Follow manufacturer's installation instructions for clamping, cutting, threading, bending, and assembly.
 - b. Provide PVC-coated sealing locknut for exposed male threads transitioning into female NPT threads that do not have sealing sleeves, including transitions from PVC couplings/female adapters to Type ERMCA-S-PVC elbows in direct-burial applications. PVC-coated sealing locknuts must not be used in place of conduit hub. PVC-coated sealing locknut must cover exposed threads on Type ERMCA-S-PVC duct raceway.
 - c. Coat field-cut threads on PVC-coated duct raceway with manufacturer-approved corrosion-preventing conductive compound prior to assembly.
5. Types FMC, LFMC, and LFNC:
 - a. Provide a maximum of [**36 inch (915 mm)**][**72 inch (1830 mm)**] of flexible conduit for [**recessed and semirecessed luminaires**], equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
6. Types PVC, HDPE, and EPEC:
 - a. Do not install Type PVC, Type HDPE, or Type EPEC conduit where ambient temperature exceeds [**122 deg F (50 deg C)**][**Insert temperature**]. Conductor ratings must be limited to 75 deg C except where installed in a trench outside buildings with concrete encasement, where 90 deg C conductors are permitted.
 - b. Comply with manufacturer's published instructions for solvent welding and fittings.
 - c. Join joints with solvent cement in accordance with manufacturer's published instructions and allowed to cure before handling. Joints to be bent, pushed, or pulled must set for minimum 24 h after joining.
7. Type RTRC: Do not install Type RTRC conduit where ambient temperature exceeds [**230 deg F (110 deg C)**][**Insert temperature**].
8. Duct Raceways Embedded in Slabs:
 - a. [**Run duct raceways larger than metric designator 27 (trade size 1) below concrete slab**][**Run duct raceways larger than metric designator 27 (trade size) parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place duct raceway close to slab support. Secure duct raceways to reinforcement at maximum 10 ft (3 m) intervals**].
 - b. Arrange duct raceways to cross building expansion joints with expansion fittings at right

- angles to the joint.
 - c. Arrange duct raceways to ensure that each is surrounded by minimum of **[1 inch (25 mm)][2 inch (50 mm)]<Insert dimension>** of concrete without voids.
 - d. Do not embed threadless fittings in concrete unless locations have been specifically approved by Architect.
 - e. Change from ENT to **[PVC-80][PVC-40][ERMC][or][IMC]** before rising above floor.
9. Stub-ups to Above Recessed Ceilings:
- a. Provide EMT, IMC, or ERMC for duct raceways.
 - b. Provide a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
10. Duct Raceway Terminations at Locations Subject to Moisture or Vibration:
- a. Provide insulating bushings to protect conductors, including conductors smaller than 4 AWG. **[Install insulated throat metal grounding bushings on service conduits].**
11. Duct Fittings: Install fittings in accordance with NEMA FB 2.10 guidelines.
- a. ERMC-S-PVC: Provide only fittings listed for use with this type of conduit. Patch and seal joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Provide sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
 - b. EMT: Provide **[setscrew][compression]**, **[steel][cast-metal]** fittings. Comply with NEMA FB 2.10.
 - c. Flexible Conduit: Provide only fittings listed for use with flexible conduit type. Comply with NEMA FB 2.20.
12. Expansion-Joint Fittings:
- a. Install in runs of aboveground PVC that are located where environmental temperature change may exceed **30 deg F (17 deg C)** and that have straight-run length that exceeds **25 ft (7.6 m)**. Install in runs of aboveground ERMC **[and EMT]** conduit that are located where environmental temperature change may exceed **100 deg F (55 deg C)** and that have straight-run length that exceeds **100 ft (30 m)**.
 - b. Install type and quantity of fittings that accommodate temperature change listed for the following locations:
 - 1) Outdoor Locations Not Exposed to Direct Sunlight: **[125 deg F (70 deg C)]<Insert temperature>** temperature change.
 - 2) Outdoor Locations Exposed to Direct Sunlight: **[155 deg F (86 deg C)]<Insert temperature>** temperature change.
 - 3) Indoor Spaces Connected with Outdoors without Physical Separation: **[125 deg F (70 deg C)]<Insert temperature>** temperature change.
 - 4) Attics: **[135 deg F (75 deg C)]<Insert temperature>** temperature change.
 - 5) **<Insert location and corresponding temperature change>**.
 - c. Install fitting(s) that provide expansion and contraction for at least **0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C)** of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least **0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C)** of temperature change for metal conduits.
 - d. Install expansion fittings at locations where conduits cross building or structure expansion joints.

- e. Install expansion-joint fitting with position, mounting, and piston setting selected in accordance with manufacturer's published instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- 13. Duct Raceways Penetrating Rooms or Walls with Acoustical Requirements: Seal duct raceway openings on both sides of rooms or walls with acoustically rated putty[**or firestopping**].
- 14. Identification: Provide labels for conduit assemblies, duct raceways, and associated electrical equipment.
 - a. Provide warning signs.
- 15. **<Insert more stringent installation requirements that supplement or supersede listed standards and manufacturer's published instructions>.**

D. Interfaces with Other Work:

- 1. Firestop penetrations of fire-rated floor and wall assemblies.
- 2. Provide conduit hangers and supports.
- 3. Coordinate installation of new products for **<Insert system or product family/category>** with existing conditions.
 - a. **<Insert requirements for transition between new and existing>.**
- 4. Coordinate with **<Insert Section number and title>** for **<Insert description of interfacing related Work>.**
 - a. **<Insert requirements for transition between this Section and related Work>.**

3.3 FIELD QUALITY CONTROL OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Administrant for Electrical Power Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
- 2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
- 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
- 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Communications Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
- 2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
- 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
- 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Acceptance Testing Preparation:

1. <Insert requirements>.
 - D. Field tests and inspections must be witnessed by [Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.
 - E. Tests and Inspections:
 1. Perform manufacturer's recommended tests and inspections.
 2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum **12 inch (300 mm)** long mandrel equal to duct size minus **1/4 inch (6 mm)**. If obstructions are indicated, remove obstructions and retest.
 3. Conduit Placement:
 - a. Verify that center-line location and offsets are in accordance with the Drawings.
 - b. Verify that hangers and supports for conduits are attached to structure **[in accordance with the Drawings][as directed by qualified structural engineer]**.
 - c. Verify that nuts on bolts or hanger rods are secure.
 - d. Verify that space between raceways and cored holes are filled with non-shrinking grout or other approved material indicated on the Drawings and the Specifications.
 - e. Verify that expansion devices are installed at locations indicated on the Drawings and the Specifications.
 - f. Verify that ends are cut square to provide flush-butting surfaces when spliced and inside edges are free of burrs that could impede installation of cables.
 - g. Verify minimum separation of utilities, or that approved mechanical protection has been provided to surrounding conduit(s) where minimum separation cannot be achieved.
 4. Document all changes on Record Drawings.
 - F. Nonconforming Work:
 1. Conduit will be considered defective if it does not pass tests and inspections.
 2. Remove and replace defective units and retest.
 - G. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.
- 3.4 CLEANING
- A. Verify that bentonite or other drilling fluids are contained and removed, and site is restored to its original or improved condition.
- 3.5 PROTECTION
- A. Protect coatings, finishes, and cabinets from damage and deterioration.
 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33 13

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 33 13	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 33 13	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 33 13	27 11 00 00	Communications Equipment Room Fittings
26 05 33 13	27 13 13 00	Communications Copper Backbone Cabling
26 05 33 13	27 15 33 00	Communications Coaxial Horizontal Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 33 16 - BOXES AND COVERS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metallic outlet boxes, device boxes, rings, and covers.
2. Nonmetallic outlet boxes, device boxes, rings, and covers.
3. Junction boxes and pull boxes.
4. Cover plates for device boxes.
5. Hoods for outlet boxes.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
7. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
8. Section 270528 "Pathways for Communications Systems"[and **Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for identification of communications equipment and cabling.

1.2 DEFINITIONS

- A. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.
- B. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:
1. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
 2. Concrete Box: A box intended for use in poured concrete.
 3. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
 4. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.

5. Cover Plate: A cover designed for protecting wiring devices installed in flush-mounted device boxes while permitting their safe operation; also called a faceplate or wallplate.
6. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
7. Device Box: A box with provisions for mounting a wiring device directly to the box.
8. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
9. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
10. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
11. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the entrance of scrub water at the floor level.
12. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
13. Outlet Box: A box that provides access to a wiring system having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
14. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
15. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
16. Raised-Floor Box: A floor box intended for use in raised floors.
17. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
18. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
19. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
20. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
21. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.

C. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.

D. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each type of product requiring samples for source quality control.

C. Shop Drawings: Prepare and submit the following:

1. Shop Drawings for Floor Boxes: Show that floor boxes are located to avoid interferences and are structurally allowable. Indicate floor thickness **[at location]** where boxes are embedded in

concrete floors and underfloor clearances where boxes are installed in raised floors.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.5 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Inspection and Testing of Fire-Alarm Systems (I&TFAS) Technician I: Possessing active NICET I&TFAS Level I certification. Able to perform periodic inspections and tests of basic fire-alarm systems and prepare related records and reports.
- D. Inspection and Testing of Fire-Alarm Systems (I&TFAS) Technician II: Possessing active NICET I&TFAS Level II certification. Able to plan, perform, and coordinate periodic inspections and tests of complex fire-alarm systems (including one or more of suppression interfaces, networked control units, smoke control interfaces, air sampling systems, multi-zone voice evacuation systems, or high-rise applications) and prepare related records and reports.
- E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- F. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site communications testing supervisor must have **[BICSI Technician (TECH)]<Insert certification program>** certification and documented training, and be experienced with testing communications equipment in accordance with **[BICSI]<Insert code enforced by authorities having jurisdiction>** testing standards.
- G. Security Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site security testing supervisor must have **[ASIS][PSP]<Insert organization>** certification and documented training and experience with testing security equipment in accordance with **[ASIS]<Insert organization>** testing standards.

- H. Fire-Alarm Testing Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site fire-alarm testing supervisor must possess active NICET I&TFAS Technician [I][II] certification.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. **<Insert additional performance requirements for the Project>.**

2.2 METALLIC OUTLET BOXES, DEVICE BOXES, RINGS, AND COVERS

- A. Source Quality Control:
 - 1. Samples:
 - a. Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
 - b. Raised Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
 - c. Recessed Access-Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
 - d. Concrete Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
- B. UL QCIT - Metallic Outlet Boxes and Covers:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[MonoSystems, Inc]**
 - i. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - j. **[Pass & Seymour; Legrand North America, LLC]**
 - k. **[Patriot Aluminum Products, LLC]**
 - l. **[Plasti-Bond; Robroy Industries]**

- m. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - n. [Spring City Electrical Manufacturing Company]
 - o. [Topaz Lighting & Electric]
 - p. [Wiremold; Legrand North America, LLC]
 - q. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]
 - c. [Arlington Industries, Inc.]
 - d. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - e. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - f. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - h. [MonoSystems, Inc]
 - i. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - j. [Pass & Seymour; Legrand North America, LLC]
 - k. [Patriot Aluminum Products, LLC]
 - l. [Plasti-Bond; Robroy Industries]
 - m. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - n. [Spring City Electrical Manufacturing Company]
 - o. [Topaz Lighting & Electric]
 - p. [Wiremold; Legrand North America, LLC]
 - q. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT; including UL 514A.
4. Standard Features:
 - a. Box having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting outlet box cover, but without provisions for mounting wiring device directly to box.
 - b. Material: [Sheet steel][Sheet aluminum][Cast metal].
 - c. Sheet Metal Depth: Minimum [1.5 inch (38 mm)][2 inch (50 mm)][2.5 inch (65 mm)][2.8 inch (70 mm)][3.5 inch (90 mm)].
 - d. Cast-Metal Depth: Minimum [1.8 inch (44.5 mm)][2.4 inch (60.3 mm)].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

- a. Luminaire Outlet Boxes and Covers: Nonadjustable, listed and labeled for attachment of luminaire weighing **[up to 50 lb (23 kg)][more than 50 lb (23 kg) and marked with maximum allowable weight]**.
- b. Paddle Fan Outlet Boxes and Covers: Nonadjustable, designed for attachment of paddle fan weighing up to **70 lb (32 kg)**.

C. UL QCIT - Metallic Conduit Bodies:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **[Patriot Aluminum Products, LLC]**
 - h. **[Plasti-Bond; Robroy Industries]**
 - i. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - j. **[Topaz Lighting & Electric]**
 - k. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **[Patriot Aluminum Products, LLC]**
 - h. **[Plasti-Bond; Robroy Industries]**
 - i. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - j. **[Topaz Lighting & Electric]**
 - k. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT; including UL 514A.

4. Standard Features: Means for providing access to interior of conduit or tubing system through one or more removable covers at junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL QCIT - Metallic Device Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - i. **[Patriot Aluminum Products, LLC]**
 - j. **[Plasti-Bond; Robroy Industries]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Topaz Lighting & Electric]**
 - m. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**

- i. **[Patriot Aluminum Products, LLC]**
 - j. **[Plasti-Bond; Robroy Industries]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Topaz Lighting & Electric]**
 - m. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT; including UL 514A.
4. Standard Features:
- a. Box with provisions for mounting wiring device directly to box.
 - b. Material: **[Sheet steel][Sheet aluminum][Cast metal]**.
 - c. Sheet Metal Depth: minimum **[1.5 inch (38 mm)][2 inch (50 mm)][2.5 inch (65 mm)][2.8 inch (70 mm)][3.5 inch (90 mm)]**.
 - d. Cast-Metal Depth: minimum **[1.8 inch (44.5 mm)][2.4 inch (60.3 mm)]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- E. UL QCIT - Metallic Extension Rings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Pass & Seymour; Legrand North America, LLC]**
 - h. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - f. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - g. **[Pass & Seymour; Legrand North America, LLC]**
 - h. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT; including UL 514A.
4. Standard Features: Ring intended to extend sides of outlet box or device box to increase box depth, volume, or both.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

F. UL QCIT - Metallic Floor Boxes and Floor Box Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[AFC Cable Systems; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[FSR Inc.]**
 - f. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**

- h. **[Leviton Manufacturing Co., Inc.]**
 - i. **[Pass & Seymour; Legrand North America, LLC]**
 - j. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - k. **[Wiremold; Legrand North America, LLC]**
 - l. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[ABB, Electrification Business]**
 - b. **[AFC Cable Systems; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[FSR Inc.]**
 - f. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Leviton Manufacturing Co., Inc.]**
 - i. **[Pass & Seymour; Legrand North America, LLC]**
 - j. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - k. **[Wiremold; Legrand North America, LLC]**
 - l. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT; including UL 514A.
4. Standard Features: Box mounted in floor with floor box cover and other components to complete floor box enclosure.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- G. UL QCIT - Metallic Raised-Floor Boxes and Floor Box Covers:
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[ABB, Electrification Business]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT; including UL 514A.
4. Standard Features: Box mounted in raised-floor with floor box cover and other components to complete floor box enclosure.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- H. UL QCIT - Metallic Recessed Access-Floor Boxes and Recessed Floor Box Covers:
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[FSR Inc.]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Wiremold; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. **[ABB, Electrification Business]**
 - b. **[FSR Inc.]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Wiremold; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT; including UL 514A.
4. Standard Features: Floor box with provisions for mounting wiring devices below floor surface and floor box cover with provisions for passage of cords to recessed wiring devices mounted within floor box.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

I. UL QCIT - Metallic Concrete Boxes and Covers:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[Topaz Lighting & Electric]**
 - f. **[Wiremold; Legrand North America, LLC]**
 - g. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**

- b. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - c. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - e. [Topaz Lighting & Electric]
 - f. [Wiremold; Legrand North America, LLC]
 - g. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT; including UL 514A.
4. Standard Features: Box intended for use in poured concrete.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.3 NONMETALLIC OUTLET BOXES, DEVICE BOXES, RINGS, AND COVERS

A. Source Quality Control:

1. Samples:

- a. Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
- b. Raised Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
- c. Recessed Access-Floor Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.
- d. Concrete Box Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and flooring inserts for each type of floor box.

B. UL QCMZ - Nonmetallic Outlet Boxes and Covers:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. [ABB, Electrification Business]
 - b. [Allied Tube & Conduit; Atkore International]

- c. [Appleton; Emerson Electric Co., Automation Solutions]
 - d. [Arlington Industries, Inc.]
 - e. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - f. [Cantex Inc.]
 - g. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - h. [Ericson Manufacturing Company]
 - i. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - j. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - k. [Intermatic, Inc]
 - l. [JM Eagle]
 - m. [Leviton Manufacturing Co., Inc.]
 - n. [Panduit Corp]
 - o. [Pass & Seymour; Legrand North America, LLC]
 - p. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - q. [Topaz Lighting & Electric]
 - r. [Wiremold; Legrand North America, LLC]
 - s. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [ABB, Electrification Business]
 - b. [Allied Tube & Conduit; Atkore International]
 - c. [Appleton; Emerson Electric Co., Automation Solutions]
 - d. [Arlington Industries, Inc.]
 - e. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - f. [Cantex Inc.]
 - g. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - h. [Ericson Manufacturing Company]
 - i. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - j. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - k. [Intermatic, Inc]
 - l. [JM Eagle]
 - m. [Leviton Manufacturing Co., Inc.]
 - n. [Panduit Corp]
 - o. [Pass & Seymour; Legrand North America, LLC]
 - p. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - q. [Topaz Lighting & Electric]
 - r. [Wiremold; Legrand North America, LLC]
 - s. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Box having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting outlet box cover, but without provisions for mounting wiring device directly

to box.

5. Sustainable Design Features:

- a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
- b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL QCMZ - Nonmetallic Conduit Bodies:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Means for providing access to interior of conduit or tubing system through one or more removable covers at junction or terminal point. In the United States, conduit bodies

are listed in accordance with outlet box requirements.

5. Sustainable Design Features:

- a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
- b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL QCMZ - Nonmetallic Device Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Pass & Seymour; Legrand North America, LLC]**
 - h. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Pass & Seymour; Legrand North America, LLC]**
 - h. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Box with provisions for mounting wiring device directly to box.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- E. UL QCMZ - Nonmetallic Extension Rings:
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[Cantex Inc.]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[Cantex Inc.]**
 - f. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Ring intended to extend sides of outlet box or device box to increase box depth, volume, or both.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- F. UL QCMZ - Nonmetallic Floor Boxes and Floor Box Covers:
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Wiremold; Legrand North America, LLC]**
 - i. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Wiremold; Legrand North America, LLC]**
 - i. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product

categories:

- a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Box mounted in floor with floor box cover and other components to complete floor box enclosure.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

G. UL QCMZ - Nonmetallic Raised-Floor Boxes and Floor Box Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Box mounted in raised-floor with floor box cover and other components to complete floor box enclosure.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

- d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

H. UL QCMZ - Nonmetallic Recessed Access-Floor Boxes and Recessed Floor Box Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Pass & Seymour; Legrand North America, LLC]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Wiremold; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Pass & Seymour; Legrand North America, LLC]**
 - f. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Wiremold; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Floor box with provisions for mounting wiring devices below floor surface and floor box cover with provisions for passage of cords to recessed wiring devices mounted within floor box.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts

- c. of extraction operations and activities associated with product and its supply chain.
- d. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- e. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- f. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

I. UL QCMZ - Nonmetallic Floor Nozzles:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Enclosure intended primarily as housing for receptacle, provided with means, such as collar, for surface-mounting on floor, which may or may not include stem to support it above floor level, and is sealed against the entrance of scrub water at floor level.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

J. UL QCMZ - Nonmetallic Concrete Boxes and Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Leviton Manufacturing Co., Inc.]**
 - g. **[Wiremold; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Cantex Inc.]**
 - e. **[JM Eagle]**
 - f. **[Leviton Manufacturing Co., Inc.]**
 - g. **[Wiremold; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCMZ; including UL 514C.
4. Standard Features: Box intended for use in poured concrete.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.4 JUNCTION BOXES AND PULL BOXES

A. UL BGUZ - Indoor Sheet Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[FSR Inc.]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Hubbell Industrial Controls; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Milbank Manufacturing Company]**
 - i. **[N J Sullivan Company]**
 - j. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Spring City Electrical Manufacturing Company]**
 - m. **[Square D; Schneider Electric USA]**
 - n. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[FSR Inc.]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Hubbell Industrial Controls; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Milbank Manufacturing Company]**
 - i. **[N J Sullivan Company]**
 - j. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Spring City Electrical Manufacturing Company]**
 - m. **[Square D; Schneider Electric USA]**
 - n. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN BGUZ; including UL 50 and UL 50E.
4. Standard Features:
 - a. Box with a blank cover that serves the purpose of joining different runs of raceway or

- cable.
- b. Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13]**.

5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL BGUZ - Indoor Cast-Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN BGUZ; including UL 50 and UL 50E.
4. Standard Features:
 - a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.
 - b. Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13]**.
5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL BGUZ - Indoor Polymeric Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Cantex Inc.]**
 - d. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[JM Eagle]**
 - f. **[Robroy Enclosures; Robroy Industries]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Cantex Inc.]**
 - d. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[JM Eagle]**
 - f. **[Robroy Enclosures; Robroy Industries]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN BGUZ; including UL 50 and UL 50E.
4. Standard Features:
 - a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.
 - b. Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13]**.

5. Sustainable Design Features:

- a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
- b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL BGUZ - Outdoor Sheet Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[FSR Inc.]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Hubbell Industrial Controls; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Milbank Manufacturing Company]**
 - i. **[N J Sullivan Company]**
 - j. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Spring City Electrical Manufacturing Company]**
 - m. **[Square D; Schneider Electric USA]**
 - n. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Adalet; division of Scott Fetzer Co.]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[FSR Inc.]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Hubbell Industrial Controls; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**

- h. [Milbank Manufacturing Company]
 - i. [N J Sullivan Company]
 - j. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - k. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - l. [Spring City Electrical Manufacturing Company]
 - m. [Square D; Schneider Electric USA]
 - n. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN BGUZ; including UL 50 and UL 50E.
 4. Standard Features:
 - a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.
 - b. Degree of Protection: [Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P].
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- E. UL BGUZ - Outdoor Cast-Metal Junction and Pull Boxes:
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Adalet; division of Scott Fetzer Co.]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]
 - c. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - d. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Adalet; division of Scott Fetzer Co.]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]

- c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN BGUZ; including UL 50 and UL 50E.
4. Standard Features:
- a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.
 - b. Degree of Protection: **[Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

F. UL BGUZ - Outdoor Polymeric Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Cantex Inc.]**
 - d. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[JM Eagle]**
 - f. **[Robroy Enclosures; Robroy Industries]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[ABB, Electrification Business]**

- b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Cantex Inc.]**
 - d. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[JM Eagle]**
 - f. **[Robroy Enclosures; Robroy Industries]**
 - g. **[Topaz Lighting & Electric]**
 - h. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN BGUZ; including UL 50 and UL 50E.
4. Standard Features:
- a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.
 - b. Degree of Protection: **[Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P]**.
5. Sustainable Design Features:
- a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 COVER PLATES FOR DEVICE BOXES

A. UL QCIT or QCMZ - Metallic Cover Plates for Device Boxes:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**

- f. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Intermatic, Inc]
 - h. [Leviton Manufacturing Co., Inc.]
 - i. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - j. [Panduit Corp]
 - k. [Pass & Seymour; Legrand North America, LLC]
 - l. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - m. [Topaz Lighting & Electric]
 - n. [Wiremold; Legrand North America, LLC]
 - o. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]
 - c. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - d. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - e. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - f. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Intermatic, Inc]
 - h. [Leviton Manufacturing Co., Inc.]
 - i. [O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]
 - j. [Panduit Corp]
 - k. [Pass & Seymour; Legrand North America, LLC]
 - l. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - m. [Topaz Lighting & Electric]
 - n. [Wiremold; Legrand North America, LLC]
 - o. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT or UL CCN QCMZ; including UL 514D.
4. Standard Features:
 - a. Cover plate-Securing Screws: Metal with head color to match cover plate finish.
 - b. Damp and Wet Locations: Listed, labeled, and marked for location and use. Provide gaskets and accessories necessary for compliance with listing.
 - c. Cover Plate Material: [0.032 inch (0.8 mm) thick, Type 302/304 non-magnetic stainless steel with brushed finish][0.040 inch (1.0 mm) thick aluminum, anodized or lacquered to prevent corrosion][0.04 inch (1 mm) thick, brushed brass with factory polymer finish][Steel with white baked enamel, suitable for field painting][0.04 inch (1 mm) thick steel with chrome-plated finish][Galvanized steel][Cast aluminum][As indicated on architectural Drawings].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability

report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL QCIT or QCMZ - Nonmetallic Cover Plates for Device Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Intermatic, Inc]**
 - i. **[Leviton Manufacturing Co., Inc.]**
 - j. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - k. **[Panduit Corp]**
 - l. **[Pass & Seymour; Legrand North America, LLC]**
 - m. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - n. **[Topaz Lighting & Electric]**
 - o. **[Wiremold; Legrand North America, LLC]**
 - p. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Arlington Industries, Inc.]**
 - d. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - e. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - f. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Intermatic, Inc]**
 - i. **[Leviton Manufacturing Co., Inc.]**
 - j. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - k. **[Panduit Corp]**

- l. **[Pass & Seymour; Legrand North America, LLC]**
 - m. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - n. **[Topaz Lighting & Electric]**
 - o. **[Wiremold; Legrand North America, LLC]**
 - p. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT or UL CCN QCMZ; including UL 514D.
 4. Standard Features:
 - a. Cover Plate-Securing Screws: Metal with head color to match cover plate finish.
 - b. Damp and Wet Locations: Listed, labeled, and marked for location and use. Provide gaskets and accessories necessary for compliance with listing.
 - c. Cover Plate Material: **[0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device][As indicated on architectural Drawings]**.
 - d. Color: **[Ivory][White][Gray][Brown][Black][Red][Orange][in accordance with NEMA WD 1][Blue][Office White][Almond][Light Almond][As indicated on architectural Drawings]**.
 5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL QCIT or QCMZ - Illuminating Cover Plates for Device Boxes:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Leviton Manufacturing Co., Inc.]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Leviton Manufacturing Co., Inc.]**
- b. **<Insert manufacturer's name>**
- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN QCIT or UL CCN QCMZ; including UL 514D.
- 4. Standard Features:
 - a. Cover Plate-Securing Screws: Metal with head color to match cover plate finish.
 - b. Damp and Wet Locations: Listed, labeled, and marked for location and use. Provide gaskets and accessories necessary for compliance with listing.
 - c. Cover Plate Material: **[0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device][As indicated on architectural Drawings]**.
 - d. Color: **[Ivory][White][Gray][Brown][Black][Red][Orange][in accordance with NEMA WD 1][Blue][Office White][Almond][Light Almond][As indicated on architectural Drawings]**.
- 5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.6 HOODS FOR OUTLET BOXES

A. UL QCIT or QCMZ - Retractable or Reattachable Hoods for Outlet Boxes:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[ABB, Electrification Business]**
 - b. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT or UL CCN QCMZ; including UL 514D.
 - b. Receptacle, Hood, Cover Plate, Gaskets, and Seals: UL 498 Supplement SA when mated with box or enclosure complying with UL 514A, UL 514C, or UL 50E.
4. Standard Features:
- a. Mounts to box using fasteners different from wiring device.
 - b. Provides **[clear][gray][white]**, weatherproof, "while-in-use" cover.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - d. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL QCIT or QCMZ - Extra-Duty, While-in-Use Hoods for Outlet Boxes:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - d. **[Arlington Industries, Inc.]**
 - e. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - f. **[Intermatic, Inc]**
 - g. **[Leviton Manufacturing Co., Inc.]**
 - h. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - d. **[Arlington Industries, Inc.]**

- e. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - f. [Intermatic, Inc]
 - g. [Leviton Manufacturing Co., Inc.]
 - h. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN QCIT or UL CCN QCMZ; including UL 514D.
 - b. Receptacle, Hood, Cover Plate, Gaskets, and Seals: UL 498 Supplement SA when mated with box or enclosure complying with UL 514A, UL 514C, or UL 50E.
4. Standard Features:
- a. Mounts to box using fasteners different from wiring device.
 - b. Marked "Extra-Duty" in accordance with UL 514D.
 - c. Provides [clear][gray][white], weatherproof, "while-in-use" cover.
 - d. Manufacturer may combine nonmetallic device box with hood as extra-duty rated assembly.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

PART 3 - EXECUTION

3.1 SELECTION OF BOXES AND COVERS FOR ELECTRICAL SYSTEMS

- A. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NFPA 70 for selection of boxes and enclosures. Consult Architect for resolution of conflicting requirements.
- B. Degree of Protection:
 - 1. Outdoors:
 - a. [Type 3][Type 3R][Type 4] unless otherwise indicated.
 - b. Locations Exposed to Hosedown: [Type 4][Type 4X][Type 6][Type 6P].
 - c. Locations Subject to Potential Flooding: Type 6P.
 - d. Locations Aboveground Where Mechanism Must Operate When Ice Covered: Type 3S.

- e. Locations in-Ground or Exposed to Corrosive Agents: **[Type 4X][Type 6P][Type 3RX]**.
- f. Locations in-Ground or Exposed to Corrosive Agents Where Mechanism Must Operate When Ice Covered: Type 3SX.

2. Indoors:

- a. Type 1 unless otherwise indicated.
- b. Damp or Dusty Locations: **[Type 12][Type 2][Type 4][Type 5]**.
- c. Surface Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
- d. Flush Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: **[Type 12][Type 12K]**.
- e. Locations Exposed to Airborne Dust, Lint, Fibers, or Flyings: **[Type 4][Type 6]**.
- f. Locations Exposed to Hosedown: **[Type 4][Type 6][Type 6P]**.
- g. Locations Exposed to Brief Submersion: **[Type 6][Type 6P]**.
- h. Locations Exposed to Prolonged Submersion: Type 6P.
- i. Locations Exposed to Corrosive Agents: **[Type 4X][Type 6P]**.
- j. Locations Exposed to Spraying Oil or Coolants: Type 13.

C. Exposed Boxes Installed Less Than 2.5 m (8 ft) Above Floor:

- 1. **[Provide cast-metal boxes][Boxes with knockouts or unprotected openings are prohibited]**.
- 2. Provide exposed cover. Flat covers with angled mounting slots or knockouts are prohibited.

3.2 INSTALLATION OF BOXES AND COVERS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

- 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
- 2. Electrical Safety: NFPA 70E.
- 3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
- 4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
- 5. Communications Work: BICSI N1.
- 6. Life Safety and Means of Egress Work: NFPA 101.
- 7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
- 8. Work in Confined Spaces: NFPA 350.
- 9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
- 10. Outlet, Device, Pull, and Junction Boxes: Article 314 of NFPA 70.
- 11. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

- 1. Provide boxes in wiring and raceway systems wherever required for pulling of wires, making connections, and mounting of devices or fixtures.
- 2. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to **[center][top][bottom]** of box unless otherwise indicated.
- 3. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box, whether installed indoors or outdoors.
- 4. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same

- vertical channel.
- 5. Locate boxes so that cover or plate will not span different building finishes.
- 6. Support boxes in recessed ceilings independent of ceiling tiles and ceiling grid.
- 7. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for purpose.
- 8. Fasten junction and pull boxes to, or support from, building structure. Do not support boxes by conduits.
- 9. Set metal floor boxes level and flush with finished floor surface.
- 10. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- 11. Do not install aluminum boxes, enclosures, or fittings in contact with concrete or earth.
- 12. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to ensure a continuous ground path.
- 13. Boxes and Enclosures in Areas or Walls with Acoustical Requirements:
 - a. Seal openings and knockouts in back and sides of boxes and enclosures with acoustically rated putty.
 - b. Provide gaskets for cover plates and covers.
- 14. **<Insert more stringent installation requirements that supplement or supersede listed standards and manufacturers' published instructions>.**

D. Interfaces with Other Work:

- 1. Identification: Provide labels for boxes and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
- 2. Coordinate installation of new products for **<Insert system or product family/category>** with existing conditions.
 - a. **<Insert requirements for transition between new and existing>.**
- 3. Coordinate with **<Insert Section number and title>** for **<Insert description of interfacing related Work>.**
 - a. **<Insert requirements for transition between this Section and related Work>.**

3.3 FIELD QUALITY CONTROL OF BOXES AND COVERS

A. Administrant for Electrical Power Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
- 2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
- 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
- 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Communications Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified communications testing and inspecting agency to

- administer and perform tests and inspections.
2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Administrant for Security Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified security testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified security testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

D. Administrant for Fire-Alarm Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified fire-alarm testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified fire-alarm testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

E. Acceptance Testing Preparation:

1. **<Insert requirements>**.

F. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

G. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform tests and inspections recommended by standards listed in "Reference Standards for Installation" Paragraph.

H. Nonconforming Work:

1. Boxes and covers will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

I. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.4 CLEANING

- A. Remove construction dust and debris from boxes before installing cover plates, covers, and hoods.

3.5 PROTECTION

- A. After installation, protect boxes from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 05 33 16

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 33 16	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 33 16	26 27 26 00	Wiring Devices

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 33 23 - SURFACE RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Surface metal raceways and fittings.
2. Surface nonmetallic raceways.
3. Strut-type channel raceways and fittings.
4. Wireways and auxiliary gutters.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260553 "Identification for Electrical Systems" specifies warning signs referenced by this Section.
6. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for identification of communications equipment and cabling.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each type of product requiring samples for source quality control.
- C. Sustainable Design Submittals:
1. Product data for sustainable design features for each type of product.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.

1.4 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment

data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- D. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site communications testing supervisor must have **[BICSI Technician (TECH)]<Insert certification program>** certification and documented training, and be experienced with testing communications equipment in accordance with **[BICSI]<Insert code enforced by authorities having jurisdiction>** testing standards.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.2 SURFACE METAL RACEWAYS AND FITTINGS

- A. Source Quality Control:
 - 1. Samples:
 - a. Surface Metallic Raceway Nonmetallic Cover Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type, **[12 inch (300 mm)]<Insert dimension>** long.
- B. UL RJBT - Surface Metal Raceways and Fittings with Metal Covers:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[MonoSystems, Inc]**
 - c. **[Wiremold; Legrand North America, LLC]**

- d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[MonoSystems, Inc]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN RJBT; including UL 5.
 4. Standard Features:
 - a. **[Galvanized steel][Aluminum]** base with snap-on covers.
 - b. **[Manufacturer's standard enamel finish in color selected by Architect][Prime coated, ready for field painting]**.
 - c. Wiring Channels: **[Single][Dual][Triple]**. Multiple channels must be capable of housing a standard 20 to 30 A device flush within the raceway.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL RJBT - Surface Metal Raceways and Fittings with Nonmetallic Covers:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Union Products International, Inc.]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Union Products International, Inc.]**
 - b. **<Insert manufacturer's name>**
- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN RJBT; including UL 5.
- 4. Standard Features:
 - a. UL 94, V-0 requirements for self-extinguishing characteristics.
 - b. **[Galvanized steel][Aluminum]** base with snap-on covers.
 - c. Provide texture and color selected by Architect from **[manufacturer's standard][custom]** colors.
 - d. Wiring Channels: **[Single][Dual][Triple]**. Multiple channels must be capable of housing a standard 20 to 30 A device flush within the raceway.
- 5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.3 SURFACE NONMETALLIC RACEWAYS

- A. Source Quality Control:
 - 1. Samples:
 - a. Surface Nonmetallic Raceway Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type, **[12 inch (300 mm)][<Insert dimension>** long.
- B. UL RJTX - Surface Nonmetallic Raceways and Fittings with Nonmetallic Covers:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[HellermannTyton]**

- b. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - c. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Panduit Corp]
 - e. [Wiremold; Legrand North America, LLC]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [HellermannTyton]
 - b. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - c. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Panduit Corp]
 - e. [Wiremold; Legrand North America, LLC]
 - f. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN RJTX; including UL 5A.
 - b. UL 94, V-0 requirements for self-extinguishing characteristics.
4. Standard Features:
- a. Provide texture and color selected by Architect from [manufacturer's standard][custom] colors.
 - b. Wiring Channels: [Single][Dual]. Multiple channels must be capable of housing a standard 20 to 30 A device flush within the raceway.
5. Sustainable Design Features:
- a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [510][490] g/L.
 - b. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL RJTX - Surface Nonmetallic Raceways and Fittings with Metallic Covers:
- 1. Manufacturers: Subject to compliance with requirements, [provide products by the

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN RJTX; including UL 5A.
 - b. UL 94, V-0 requirements for self-extinguishing characteristics.
4. Standard Features:
 - a. [Manufacturer's standard enamel finish in color selected by Architect][Prime coated, ready for field painting].
 - b. Wiring Channels: [Single][Dual]. Multiple channels must be capable of housing a standard 20 to 30 A device flush within the raceway.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [510][490] g/L.
 - b. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.4 STRUT-TYPE CHANNEL RACEWAYS AND FITTINGS

A. Source Quality Control:

1. Samples:
 - a. Strut-Type Channel Raceway Nonmetallic Covers for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type, [12 inch (300 mm)]<Insert dimension> long.

B. UL RIUU - Strut-Type Channel Raceways and Fittings with Metallic Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Unistrut]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Power-Strut; Atkore International]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Unistrut]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Power-Strut; Atkore International]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN RIUU; including UL 5B.
4. Standard Features:
 - a. **[Manufacturer's standard enamel finish in color selected by Architect][Prime coated, ready for field painting].**
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL RIUU - Strut-Type Channel Raceways and Fittings with Nonmetallic Covers:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN RIUU; including UL 5B.
 - b. UL 94, V-0 requirements for self-extinguishing characteristics.
4. Standard Features:
 - a. UL 94, V-0 requirements for self-extinguishing characteristics.
 - b. Provide texture and color selected by Architect from [manufacturer's standard][custom] colors.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [510][490] g/L.
 - b. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 WIREWAYS AND AUXILIARY GUTTERS

A. Source Quality Control:

1. Samples:
 - a. Nonmetallic Wireway and Auxiliary Gutter Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type, **[12 inch (300 mm)]<Insert dimension>** long.

B. UL ZOYX - Metal Wireways and Auxiliary Gutters:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. [ABB, Electrification Business]
 - b. [Cooper B-line; brand of Eaton, Electrical Sector]
 - c. [Hoffman; brand of nVent Electrical plc]
 - d. [MonoSystems, Inc]
 - e. [Square D; Schneider Electric USA]
 - f. [Wiegmann; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [ABB, Electrification Business]
 - b. [Cooper B-line; brand of Eaton, Electrical Sector]
 - c. [Hoffman; brand of nVent Electrical plc]
 - d. [MonoSystems, Inc]
 - e. [Square D; Schneider Electric USA]
 - f. [Wiegmann; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. UL CCN ZOYX; including UL 870.
4. Standard Features:
- a. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
 - b. Finish: Manufacturer's standard enamel finish.
 - c. Wireway Covers: [Hinged type][Screw-cover type][Flanged-and-gasketed type] unless otherwise indicated.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Degree of Protection: [Type 1][Type 3R][Type 4][Type 12]<Insert type> unless otherwise

indicated.

C. UL ZOYX - Nonmetallic Wireways and Auxiliary Gutters:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hoffman; brand of nVent Electrical plc]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hoffman; brand of nVent Electrical plc]**
 - b. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. UL CCN ZOYX; including UL 870.
 - b. UL 94, V-0 requirements for self-extinguishing characteristics.
4. Standard Features:
 - a. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings must match and mate with wireways as required for complete system.
 - b. PVC Solvents and Adhesives: As recommended by wireway manufacturer.
 - c. Material:
 - 1) Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover must be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections must be flanged and have stainless steel screws and oil-resistant gaskets.
 - 2) PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.
5. Sustainable Design Features:
 - a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than **[510][490]** g/L.
 - b. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

- development organization, is publicly available for product.
- f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURFACE RACEWAYS FOR ELECTRICAL SYSTEMS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFB, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Safety: NFPA 70E.
 - 3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 - 4. Communications Work: BICSI N1.
 - 5. Work in Confined Spaces: NFPA 350.
 - 6. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
 - 7. Auxiliary Gutters: Article 366 of NFPA 70.
 - 8. Surface Metal Raceway: Article 386 of NFPA 70.
 - 9. Surface Nonmetallic Raceway: Article 388 of NFPA 70.
 - 10. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
 - 1. Install surface raceways only where indicated on Drawings.
 - 2. Install surface raceway with a minimum **2 inch (50 mm)** radius control at bend points.
 - 3. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding **48 inch (1200 mm)** and with no less than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's published instructions. Tape and glue are unacceptable support methods.
 - 4. **<Insert more stringent installation requirements that supplement or supersede listed standards and manufacturers' published instructions>.**
- D. Interfaces with Other Work:
 - 1. Identification: Provide labels for surface raceways and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Provide warning signs.
 - 2. Coordinate installation of new products for **<Insert system or product family/category>** with existing conditions.
 - a. **<Insert requirements for transition between new and existing>.**
 - 3. Coordinate with **<Insert Section number and title>** for **<Insert description of interfacing related Work>.**
 - a. **<Insert requirements for transition between this Section and related Work>.**

3.2 FIELD QUALITY CONTROL OF SURFACE RACEWAYS

- A. Administrant for Electrical Power Tests and Inspections:
1. **[Owner][Tenant]** will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
 2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- B. Administrant for Communications Tests and Inspections:
1. **[Owner][Tenant]** will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
 2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- D. Tests and Inspections:
1. Perform manufacturer's recommended tests and inspections.
 2. Perform tests and inspections recommended by standards listed in "Reference Standards for Installation" Paragraph.
- E. Nonconforming Work:
1. Boxes and covers will be considered defective if they do not pass tests and inspections.
 2. Remove and replace defective units and retest.
- F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.3 CLEANING

- A. Remove construction dust and debris from surface raceways before installing covers.

3.4 PROTECTION

- A. After installation, protect surface raceways from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 05 33 23

Task	Specification	Specification Description
26 05 33 23	26 05 39 00	Underfloor Raceways For Electrical Systems
26 05 33 23	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

SECTION 26 05 36 00 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal cable trays.
2. Nonmetallic cable trays.
3. Cable tray accessories.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

C. Products Installed, but Not Furnished, under This Section:

1. Section 078413 "Penetration Firestopping" specifies firestopping products installed under this Section.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding products installed under this Section.
3. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Metal cable trays.
2. Nonmetallic cable trays.
3. Cable tray accessories.

B. Shop Drawings:

1. Cable tray fabrication drawings, diagrams, and supporting documents.

C. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

A. Manufacturers' published instructions.

B. Field Reports:

1. Factory test reports.

2. Manufacturer's field reports for field quality-control support.

PART 2 - PRODUCTS

2.1 METAL CABLE TRAYS

- A. Description: This product category covers metal cable trays and metal cable tray systems intended for field assembly and for use in accordance with Article 392 of NFPA 70.
- B. Performance Criteria:
 1. Regulatory Requirements:
 - a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 2. Listing Criteria: UL CCN CYNW; including NEMA VE 1 and suitability for use as equipment grounding conductors in accordance with Sections 392.60(A) and 392.60(B) of NFPA 70.
- C. UL CYNW - Ladder Cable Tray :
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[BASOR Electric]**
 - d. **[Chalfant Manufacturing Company]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Hoffman; brand of nVent Electrical plc]**
 - g. **[MonoSystems, Inc]**
 - h. **[MP Husky USA Cable Tray & Cable Bus]**
 - i. **[Niedax Inc.]**
 - j. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[BASOR Electric]**
 - d. **[Chalfant Manufacturing Company]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Hoffman; brand of nVent Electrical plc]**
 - g. **[MonoSystems, Inc]**
 - h. **[MP Husky USA Cable Tray & Cable Bus]**
 - i. **[Niedax Inc.]**
 - j. **<Insert manufacturer's name>**

3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:
 - a. Configuration: Two longitudinal side rails with transverse rungs swaged or welded to side rails, complying with NEMA VE 1.
 - b. Radius-Fitting Rung Spacing: **9 inch (225 mm)** at center of tray's width.
 - c. Minimum Cable-Bearing Surface for Rungs: **7/8 inch (22 mm)** width with radius edges.
 - d. No portion of the rungs must protrude below the bottom plane of side rails.
 - e. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a **200 lb. (90 kg)** concentrated load, when tested in accordance with NEMA VE 1.
 - f. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - g. Splice-Plate Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
5. Materials and Finishes (Steel):
 - a. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of **[ASTM A1011/A1011M, SS, Grade 33][ASTM A1008/A1008M, Grade 33, Type 2]**.
 - b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
 - c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
 - d. Finish:
 - 1) Hot-dip galvanized after fabrication, complying with ASTM A123/A123M, Class B2, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136][stainless steel, Type 316]** hardware.
 - 2) Hot-dip galvanized after fabrication, complying with ASTM A653/A653M, **G90 (Z275)**, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136]** hardware.
 - 3) Electrogalvanized after fabrication, complying with ASTM B633, with galvanized, ASTM B633 hardware.
 - 4) **[Epoxy-resin][Powder-coat enamel]** paint, with **[chromium-zinc plated, ASTM F1136][stainless steel, Type 316, ASTM F593 and ASTM F594]** hardware.
 - a) Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b) Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c) Epoxy-Resin Topcoat: Epoxy, cold-cured gloss, MPI# 77.
 - 5) Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware in accordance with ASTM F1136.
 - 6) Black oxide finish for support accessories and miscellaneous hardware in accordance with ASTM D769.
 - 7) **<Insert finish>**.
6. Materials and Finishes (Aluminum):
 - a. Materials: Alloy 6063-T6 in accordance with ANSI H35.1/H 35.1M for extruded components, and **[Alloy 5052-H32][or][Alloy 6061-T6]** in accordance with ANSI H35.1/H 35.1M for fabricated parts.
 - b. Hardware: **[Chromium-zinc-plated steel, ASTM F1136][Stainless steel, Type 316, ASTM F593 and ASTM F594]**.
 - c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.

7. Materials and Finishes (Stainless Steel):
 - a. Materials: Low-carbon, passivated stainless steel, **[Type 304L][or][Type 316L]**, ASTM F593 and ASTM F594.
 - b. Hardware for Stainless Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
8. Options:
 - a. Width: **[6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (750 mm)][36 inch (900 mm)]** unless otherwise indicated on Drawings.
 - b. Minimum Usable Load Depth: **[3 inch (75 mm)][4 inch (100 mm)][5 inch (125 mm)][6 inch (150 mm)]**.
 - c. Straight Section Lengths: **[10 ft (3.0 m)][12 ft (3.7 m)][20 ft (6.0 m)][24 ft (7.4 m)]**, except where shorter lengths are required to facilitate tray assembly.
 - d. Rung Spacing: **[6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)]** on center.
 - e. Fitting Minimum Radius: **[12 inch (300 mm)][24 inch (600 mm)][36 inch (900 mm)][48 inch (1200 mm)]**.
 - f. Class Designation: Comply with NEMA VE 1, **[Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>**.
 - g. Covers: **[Solid][Louvered][Ventilated-hat][2-in-3 pitch]** type made of same materials and with same finishes as cable tray.

D. UL CYNW - Wire-Mesh Cable Tray :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atkore Cope]**
 - b. **[BASOR Electric]**
 - c. **[Cablofil; Legrand North America, LLC]**
 - d. **[Chalfant Manufacturing Company]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Enduro Composites Inc.]**
 - g. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[MonoSystems, Inc]**
 - i. **[MP Husky USA Cable Tray & Cable Bus]**
 - j. **[Niedax Inc.]**
 - k. **[Snaketray]**
 - l. **[WBT LLC]**
 - m. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atkore Cope]**
 - b. **[BASOR Electric]**
 - c. **[Cablofil; Legrand North America, LLC]**

- d. [Chalfant Manufacturing Company]
 - e. [Cooper B-line; brand of Eaton, Electrical Sector]
 - f. [Enduro Composites Inc.]
 - g. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - h. [MonoSystems, Inc]
 - i. [MP Husky USA Cable Tray & Cable Bus]
 - j. [Niedax Inc.]
 - k. [Snaketray]
 - l. [WBT LLC]
 - m. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:
 - a. Configuration: [**Galvanized**]-steel wire mesh, complying with NEMA VE 1.
 - b. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a **200 lb. (90 kg)** concentrated load, when tested in accordance with NEMA VE 1.
 - c. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - d. Splice-Plate Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
5. Materials and Finishes (Steel):
 - a. Straight Sections and Fittings: Steel complies with the minimum mechanical properties of [**ASTM A1011/A1011M, SS, Grade 33**][**ASTM A1008/A1008M, Grade 33, Type 2**].
 - b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
 - c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
 - d. Finish:
 - 1) Hot-dip galvanized after fabrication, complying with ASTM A123/A123M, Class B2, with [**galvanized, ASTM B633**][**chromium-zinc plated, ASTM F1136**][**stainless steel, Type 316**] hardware.
 - 2) Hot-dip galvanized after fabrication, complying with ASTM A653/A653M, **G90 (Z275)**, with [**galvanized, ASTM B633**][**chromium-zinc plated, ASTM F1136**] hardware.
 - 3) Electrogalvanized after fabrication, complying with ASTM B633, with galvanized, ASTM B633 hardware.
 - 4) [**Epoxy-resin**][**Powder-coat enamel**] paint, with [**chromium-zinc plated, ASTM F1136**][**stainless steel, Type 316, ASTM F593 and ASTM F594**] hardware.
 - a) Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b) Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c) Epoxy-Resin Topcoat: Epoxy, cold-cured gloss, MPI# 77.
 - 5) Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware in accordance with ASTM F1136.
 - 6) Black oxide finish for support accessories and miscellaneous hardware in accordance with ASTM D769.
 - 7) **<Insert finish>**.
6. Options:

- a. Width: [2 inch (50 mm)][4 inch (100 mm)][6 inch (150 mm)][8 inch (200 mm)][12 inch (300 mm)][16 inch (400 mm)][18 inch (450 mm)][20 inch (500 mm)][24 inch (600 mm)] unless otherwise indicated on Drawings.
- b. Minimum Usable Load Depth: [1 inch (25 mm)][2 inch (50 mm)][4 inch (100 mm)][6 inch (150 mm)].
- c. Straight Section Lengths: [10 ft (3.0 m)][12 ft (3.7 m)], except where shorter lengths are required to facilitate tray assembly.
- d. Class Designation: Comply with NEMA VE 1, [Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>.

E. UL CYNW - Single-Rail Cable Tray :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Atkore Cope]
 - b. [Cable Management Solutions, Inc.]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [MonoSystems, Inc]
 - e. [MP Husky USA Cable Tray & Cable Bus]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Atkore Cope]
 - b. [Cable Management Solutions, Inc.]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [MonoSystems, Inc]
 - e. [MP Husky USA Cable Tray & Cable Bus]
 - f. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:
 - a. Configuration: An extruded-aluminum assembly, consisting of a single longitudinal center rail with transverse rungs arranged symmetrically about the center rail complying with NEMA VE 1.
 - b. Construction: Aluminum rungs mechanically connected to aluminum center rail in at least two places, with ends finished to protect installers and cables.
 - c. Radius-Fitting Rung Spacing: 9 inch (225 mm) at center of tray's width.
 - d. Support Point: Splice fittings must be hanger support point.
 - e. Support Spacing: Support each section at midpoint. Support wall-mounted sections a maximum of one-sixth of the section length from each end.
 - f. Unbalanced Loads: Maintain cable tray rungs within six degrees of horizontal under all loading conditions.
 - g. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - h. Splicing Assembly Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
 - i. Splices and Connectors: Protect cables from edges of center rail and do not intrude into cable fill area.

5. Materials: Aluminum alloy 6063-T6 in accordance with ANSI H35.1/H 35.1M for extruded components, and **[Alloy 5052-H32][or][Alloy 6061-T6]** in accordance with ANSI H35.1/H 35.1M for fabricated parts.
6. Hardware: **[Chromium-zinc-plated steel, ASTM F1136][Stainless steel, Type 316, ASTM F593 and ASTM F594]**.
 - a. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
7. Options:
 - a. Width: **[6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)]** unless otherwise indicated on Drawings.
 - b. Minimum Usable Load Depth: **[3 inch (75 mm)][4 inch (100 mm)][5 inch (125 mm)][6 inch (150 mm)]**.
 - c. Straight Section Lengths: **[10 ft (3.0 m)][12 ft (3.7 m)]**, except where shorter lengths are required to facilitate tray assembly.
 - d. Rung Spacing: **[6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)]** on center.
 - e. Class Designation: Comply with NEMA VE 1, **[Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]**<Insert designation>.
 - f. Covers: **[Solid][Louvered][Ventilated-hat][2-in-3 pitch]** type made of same materials and with same finishes as cable tray.

F. UL CYNW - Solid-Bottom Cable Tray :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[BASOR Electric]**
 - d. **[Chalfant Manufacturing Company]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[MonoSystems, Inc]**
 - g. **[MP Husky USA Cable Tray & Cable Bus]**
 - h. **[Niedax Inc.]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[BASOR Electric]**
 - d. **[Chalfant Manufacturing Company]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[MonoSystems, Inc]**
 - g. **[MP Husky USA Cable Tray & Cable Bus]**
 - h. **[Niedax Inc.]**
 - i. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.

4. General Characteristics:

- a. Configuration: Two longitudinal side rails with a nonventilated continuous bottom.
- b. No portion of the continuous bottom must protrude below the bottom plane of side rails.
- c. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a **200 lb. (90 kg)** concentrated load, when tested in accordance with NEMA VE 1.
- d. Splicing Assemblies: Bolted type using serrated flange locknuts.
- e. Splice-Plate Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.

5. Materials and Finishes (Steel):

- a. Straight Sections and Fittings: Steel complies with the minimum mechanical properties of **[ASTM A1011/A1011M, SS, Grade 33][ASTM A1008/A1008M, Grade 33, Type 2]**.
- b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
- c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
- d. Finish:
 - 1) Mill galvanized before fabrication complying with ASTM A653/A653M, **G90 (Z275)**, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136]** hardware.
 - 2) Electrogalvanized before fabrication, complying with ASTM B633, with galvanized, ASTM B633 hardware.
 - 3) Hot-dip galvanized after fabrication complying with ASTM A123/A123M, Class B2, with **[chromium-zinc plated, ASTM F1136][stainless steel, Type 316]** hardware.
 - 4) **[Epoxy-resin][Powder-coat enamel]** paint, with **[chromium-zinc plated, ASTM F1136][stainless steel, Type 316, ASTM F593 and ASTM F594]** hardware.
 - a) Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b) Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c) Epoxy-Resin Topcoat: Cold-cured epoxy gloss, MPI# 77.
 - 5) Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware in accordance with ASTM F1136.
 - 6) Black oxide finish for support accessories and miscellaneous hardware in accordance with ASTM D769.
 - 7) **<Insert finish>**.

6. Materials and Finishes (Aluminum):

- a. Materials: Alloy 6063-T6 in accordance with ANSI H35.1/H 35.1M for extruded components, and **[Alloy 5052-H32][or][Alloy 6061-T6]** in accordance with ANSI H35.1/H 35.1M for fabricated parts.
- b. Hardware: **[Chromium-zinc-plated steel, ASTM F1136][Stainless steel, Type 316, ASTM F593 and ASTM F594]**.
- c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.

7. Materials and Finishes (Stainless Steel):

- a. Materials: Low-carbon, passivated stainless steel, **[Type 304L][or][Type 316L]**, ASTM F593 and ASTM F594.
- b. Hardware for Stainless Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM

F593 and ASTM F594.

8. Options:
 - a. Width: [6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (750 mm)][36 inch (900 mm)] unless otherwise indicated on Drawings.
 - b. Minimum Usable Load Depth: [3 inch (75 mm)][4 inch (100 mm)][5 inch (125 mm)][6 inch (150 mm)].
 - c. Straight Section Lengths: [10 ft (3.0 m)][12 ft (3.7 m)][20 ft (6.0 m)][24 ft (7.4 m)], except where shorter lengths are required to facilitate tray assembly.
 - d. Fitting Minimum Radius: [12 inch (300 mm)][24 inch (600 mm)][36 inch (900 mm)][48 inch (1200 mm)].
 - e. Class Designation: Comply with NEMA VE 1, [Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>.
 - f. Covers: [Solid][Louvered][Ventilated-hat][2-in-3 pitch] type made of same materials and with same finishes as cable tray.

G. UL CYNW - Trough Cable Tray :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [Cablofil; Legrand North America, LLC]
 - c. [Chalfant Manufacturing Company]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [MonoSystems, Inc]
 - f. [MP Husky USA Cable Tray & Cable Bus]
 - g. [Niedax Inc.]
 - h. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Cablofil; Legrand North America, LLC]
 - c. [Chalfant Manufacturing Company]
 - d. [Cooper B-line; brand of Eaton, Electrical Sector]
 - e. [MonoSystems, Inc]
 - f. [MP Husky USA Cable Tray & Cable Bus]
 - g. [Niedax Inc.]
 - h. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:
 - a. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - b. Splicing Assembly Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
5. Materials and Finishes (Steel):

- a. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of **[ASTM A1011/A1011M, SS, Grade 33][ASTM A1008/A1008M, Grade 33, Type 2]**.
 - b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
 - c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
 - d. Finish:
 - 1) Hot-dip galvanized after fabrication complying with ASTM A123/A123M, Class B2, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136][stainless steel, Type 316]** hardware.
 - 2) Hot-dip mill galvanized before fabrication complying with ASTM A653/A653M, **G90 (Z275)**, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136]** hardware.
 - 3) Electrogalvanized after fabrication, complying with ASTM B633, with galvanized, ASTM B633 hardware.
 - 4) **[Epoxy-resin][Powder-coat enamel]** paint, with **[chromium-zinc plated, ASTM F1136][stainless steel, Type 316, ASTM F593 and ASTM F594]** hardware.
 - a) Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b) Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c) Epoxy-Resin Topcoat: Epoxy, cold-cured gloss, MPI# 77.
 - 5) Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware in accordance with ASTM F1136.
 - 6) Black oxide finish for support accessories and miscellaneous hardware in accordance with ASTM D769.
 - 7) **<Insert finish>**.
6. Materials and Finishes (Aluminum):
- a. Materials: Alloy 6063-T6 in accordance with ANSI H35.1/H 35.1M for extruded components, and **[Alloy 5052-H32][or][Alloy 6061-T6]** in accordance with ANSI H35.1/H 35.1M for fabricated parts.
 - b. Hardware: **[Chromium-zinc-plated steel, ASTM F1136][Stainless steel, Type 316, ASTM F593 and ASTM F594]**.
 - c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
7. Materials and Finishes (Stainless Steel):
- a. Materials: Low-carbon, passivated stainless steel, **[Type 304L][or][Type 316L]**, ASTM F593 and ASTM F594.
 - b. Hardware for Stainless Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
8. Options:
- a. Configuration:
 - 1) A **[flat][corrugated]** bearing surface with a **[solid][ventilated]** bottom contained within two longitudinal side rails, with both edges welded to the side rails complying with NEMA VE 1.
 - 2) Single, formed sheet with a **[solid][ventilated]** bottom, complying with NEMA VE 1.

- b. Width: [6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (750 mm)][36 inch (900 mm)] unless otherwise indicated on Drawings.
- c. Minimum Usable Load Depth: [3 inch (75 mm)][4 inch (100 mm)][5 inch (125 mm)][6 inch (150 mm)].
- d. Straight Section Lengths: [10 ft (3.0 m)][12 ft (3.6 m)][20 ft (6.0 m)][24 ft (7.4 m)], except where shorter lengths are required to facilitate tray assembly.
- e. Fitting Minimum Radius: [12 inch (300 mm)][24 inch (600 mm)][36 inch (900 mm)][48 inch (1200 mm)].
- f. Class Designation: Comply with NEMA VE 1, [Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>.
- g. Covers: [Solid][Louvered][Ventilated-hat][2-in-3 pitch] type made of same materials and with same finishes as cable tray.

H. UL CYNW - Channel Cable Tray :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [Atkore Cope]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [MP Husky USA Cable Tray & Cable Bus]
 - e. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Atkore Cope]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [MP Husky USA Cable Tray & Cable Bus]
 - e. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:
 - a. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a **200 lb (90 kg)** concentrated load, when tested in accordance with NEMA VE 1.
 - b. Splicing Assemblies: Bolted type using serrated flange locknuts.
 - c. Splicing Assembly Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
5. Materials and Finishes (Steel):
 - a. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of [ASTM A1011/A1011M, SS, Grade 33][ASTM A1008/A1008M, Grade 33, Type 2].
 - b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
 - c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.

- d. Finish:
- 1) Hot-dip galvanized after fabrication complying with ASTM A123/A123M, Class B2, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136][Stainless steel, Type 316]** hardware.
 - 2) Hot-dip mill galvanized before fabrication complying with ASTM A653/A653M, **G90 (Z275)**, with **[galvanized, ASTM B633][chromium-zinc plated, ASTM F1136]** hardware.
 - 3) Electrogalvanized after fabrication, complying with ASTM B633, with galvanized, ASTM B633 hardware.
 - 4) **[Epoxy-resin][Powder-coat enamel]** paint, with **[chromium-zinc plated, ASTM F1136][stainless steel, Type 316, ASTM F593 and ASTM F594]** hardware.
 - a) Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
 - b) Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
 - c) Epoxy-Resin Topcoat: Epoxy, cold-cured gloss, MPI# 77.
 - 5) Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware in accordance with ASTM F1136.
 - 6) Black oxide finish for support accessories and miscellaneous hardware in accordance with ASTM D769.
 - 7) **<Insert finish>**.
6. Materials and Finishes (Aluminum):
- a. Materials: Alloy 6063-T6 in accordance with ANSI H35.1/H 35.1M for extruded components, and **[Alloy 5052-H32][or][Alloy 6061-T6]** in accordance with ANSI H35.1/H 35.1M for fabricated parts.
 - b. Hardware: **[Chromium-zinc-plated steel, ASTM F1136][Stainless steel, Type 316, ASTM F593 and ASTM F594]**.
 - c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
7. Materials and Finishes (Stainless Steel):
- a. Materials: Low-carbon, passivated stainless steel, **[Type 304L][or][Type 316L]**, ASTM F593 and ASTM F594.
 - b. Hardware for Stainless Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.
8. Options:
- a. Configuration: Single, formed sheet with a **[solid][ventilated]** bearing surface, complying with NEMA VE 1.
 - b. Width: **[3 inch (75 mm)][4 inch (100 mm)][6 inch (150 mm)]** unless otherwise indicated on Drawings.
 - c. Minimum Usable Load Depth: **[1-1/4 inch (30 mm)][2 inch (50 mm)]**.
 - d. Straight Section Lengths: **[10 ft (3.0 m)][12 ft (3.7 m)]**, except where shorter lengths are required to facilitate tray assembly.
 - e. Fitting Minimum Radius: **[12 inch (300 mm)][24 inch (600 mm)][36 inch (900 mm)][48 inch (1200 mm)]**.
 - f. Class Designation: Comply with NEMA VE 1, **[Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>**.

- g. Covers: **[Solid][Louvered][Ventilated-hat][2-in-3 pitch]** type made of same materials and with same finishes as cable tray.

2.2 NONMETALLIC CABLE TRAYS

- A. Description: This product category covers nonmetallic, including fiberglass (fiberglass-reinforced plastic), cable trays and cable tray systems intended for field assembly and for use in accordance with Article 392 of NFPA 70.
- B. Performance Criteria:
1. Regulatory Requirements:
 - a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 2. Listing Criteria: UL CCN CYOV; including UL 568.
- C. UL CYOV - Fiberglass Cable Tray :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Atkore Cope]**
 - d. **[Cablofil; Legrand North America, LLC]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Enduro Composites Inc.]**
 - g. **[MonoSystems, Inc]**
 - h. **[MP Husky USA Cable Tray & Cable Bus]**
 - i. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Atkore Cope]**
 - d. **[Cablofil; Legrand North America, LLC]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Enduro Composites Inc.]**
 - g. **[MonoSystems, Inc]**
 - h. **[MP Husky USA Cable Tray & Cable Bus]**
 - i. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. General Characteristics:
 - a. Configuration: Two longitudinal members with rounded edges and smooth surfaces, supporting a bearing surface, complying with NEMA FG 1.

- b. Temperature Rating: Reduce the load rating of trays exposed to temperatures above **75 deg F (24 deg C)** in accordance with Table 4-3, "Working Loads," in NEMA FG 1.
- c. Splicing Assemblies: Minimum four nuts and bolts per plate. Splice plates must be furnished with straight sections and fittings.
- d. Splicing Assembly Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
- e. Fasteners: Fiberglass-encapsulated, ASTM F593 and ASTM F594 stainless steel, Type 316. Design fasteners so that no metal is visible when fully assembled and tightened. Fastener encapsulation must not be damaged when torqued to manufacturer's recommended value.

5. Options:

- a. Materials: Straight section structural elements; side rails, rungs, and splice plates must be pultruded from glass-fiber-reinforced **[polyester][vinyl ester]** resin, complying with NEMA FG 1 and UL 568.
- b. Width: **[6 inch (150 mm)][9 inch (225 mm)][12 inch (300 mm)][18 inch (450 mm)][24 inch (600 mm)][30 inch (750 mm)][36 inch (900 mm)]** unless otherwise indicated on Drawings.
- c. Minimum Usable Load Depth: **[1 inch (25 mm)][2 inch (50 mm)][3 inch (75 mm)][5 inch (125 mm)][7 inch (175 mm)]** in accordance with NEMA FG 1.
- d. Straight Section Lengths: **[10 ft (3.0 m)][20 ft (6.0 m)]**.
- e. Class Designation: Comply with NEMA VE 1, **[Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>**.
- f. Fitting Minimum Radius: **[12 inch (300 mm)][24 inch (600 mm)]**.
- g. Covers: **[Solid][Louvered][Ventilated-hat][2-in-3 pitch]** type made of same materials and with same finishes as cable tray.

D. UL CYOV - Fiberglass Channel Cable Tray :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Enduro Composites Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Atkore Cope]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Enduro Composites Inc.]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. General Characteristics:

- a. Temperature Rating: Reduce the load rating of trays exposed to temperatures above **75 deg F (24 deg C)** in accordance with Table 4-3, "Working Loads," in NEMA FG 1.
 - b. Splicing Assemblies: Minimum four nuts and bolts per plate. Splice plates must be furnished with straight sections and fittings.
 - c. Splicing Assembly Capacity: Splices located within support span must not diminish rated loading capacity of cable tray.
 - d. Fasteners: Fiberglass-encapsulated, ASTM F593 and ASTM F594 stainless steel, Type 316. Design fasteners so that no metal is visible when fully assembled and tightened. Fastener encapsulation must not be damaged when torqued to manufacturer's recommended value.
5. Options:
- a. Configuration: Two longitudinal members with rounded edges and smooth surfaces, supporting a **[solid][ventilated]** bearing surface, complying with NEMA FG 1.
 - b. Materials: Straight section structural elements; side rails, rungs, and splice plates must be pultruded from glass-fiber-reinforced **[polyester][vinyl ester]** resin, complying with NEMA FG 1 and UL 568.
 - c. Width: **[3 inch (75 mm)][4 inch (100 mm)][6 inch (150 mm)]** unless otherwise indicated on Drawings.
 - d. Minimum Usable Load Depth: **[1-1/4 inch (30 mm)][2 inch (50 mm)]**.
 - e. Straight Section Lengths: **[10 ft (3.0 m)][12 ft (3.7 m)]**, except where shorter lengths are required to facilitate tray assembly.
 - f. Class Designation: Comply with NEMA VE 1, **[Class 5AA][Class 5A][Class 8AA][Class 8A][Class 10AA][Class 10A][Class 12AA][Class 12A][Class 20AA][Class 20A]<Insert designation>**.
 - g. Fitting Minimum Radius: **[12 inch (300 mm)][24 inch (600 mm)]**.
 - h. Covers: **[Solid][Louvered][Ventilated-hat][2-in-3 pitch]** type made of same materials and with same finishes as cable tray.

2.3 CABLE TRAY ACCESSORIES

- A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.
- B. Barrier Strips: Same materials and finishes as for cable tray.
- C. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.4 SOURCE QUALITY CONTROL

- A. Product Data: Prepare and submit catalog cuts, brochures, **[diagrams,][schedules,]** and performance data illustrating size, physical appearance, and other characteristics of product.
 - 1. Include data indicating dimensions and finishes for each type of cable tray indicated.
- B. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.
- C. Factory Tests:
 - 1. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.

2. Testing Administrator: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate cable trays.
3. Factory Tests and Inspections: Perform the following tests and inspections on cable trays, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.
 - a. Test and inspect cable trays in accordance with **[NEMA FG 1][NEMA VE 1]**.
4. Nonconforming Work:
 - a. Equipment that does not pass tests and inspections will be considered defective.
5. Factory Test Reports: Prepare and submit factory test and inspection reports.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Shop Drawings: Prepare and submit the following for each cable tray system:
 1. Cable Tray Fabrication Drawings, Diagrams, and Supporting Documents:
 - a. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.
 - b. Include load calculations to show that dead and live loads do not exceed manufacturer's rating for tray and its support elements.
 - c. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
 - 1) Vertical and horizontal offsets and transitions.
 - 2) Clearances for access above and to sides of cable trays.
 - 3) Vertical elevation of cable trays above the floor or bottom of ceiling structure.

3.2 INSTALLATION OF CABLE TRAYS

- A. Install cable tray and support systems in accordance with **[NEMA FG 1][NEMA VE 2]**.
- B. Install cable tray as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.
- C. Install cable tray, so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.
- D. Remove burrs and sharp edges from cable trays.
- E. Join aluminum cable tray with splice plates; use four square-neck carriage bolts and locknuts.

- F. Fasten cable tray supports to building structure[**and install seismic restraints**].
- G. Design fasteners and supports to carry cable tray, cables, and a concentrated load of **200 lb (90 kg)**. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems." [**Comply with seismic-restraint details in accordance with Section 260548.16 "Seismic Controls for Electrical Systems."**]
- H. Place supports, so that spans do not exceed maximum spans on schedules, and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of tray rungs.
- I. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
- J. Support assembly to prevent twisting from eccentric loading.
- K. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.
- L. Do not install more than one cable tray splice between supports.
- M. Support wire-basket cable trays with [center support hangers][trapeze hangers][wall brackets].
- N. Support [center support hangers][trapeze hangers] for wire-basket trays with [1/4 inch (6 mm)][3/8 inch (10 mm)] diameter rods.
- O. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.
- P. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed recommended dimensions. Space connectors and set gaps in accordance with applicable standard.
- Q. Make changes in direction and elevation using manufacturer's recommended fittings.
- R. Make cable tray connections using manufacturer's recommended fittings.
- S. Seal penetrations through fire and smoke barriers.
- T. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- U. Install cable trays with enough workspace to permit access for installing cables.
- V. Install barriers to separate cables of different systems, such as power, communications, and data processing, or of different insulation levels, such as 600, 5000, and 15 000 V.
- W. Install permanent covers[**and cover clamps**], if used, after installing cable.
- X. Clamp covers on cable trays installed outdoors with heavy-duty clamps.
- Y. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.3 CABLE TRAY GROUNDING

- A. Ground cable trays in accordance with NFPA 70 unless additional grounding is specified.
- B. Cable trays with electrical power conductors must be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.
- C. Cable trays with single-conductor power conductors must be bonded together with a grounding conductor run in the tray along with the power conductors and bonded to the tray at **72 inch (1800 mm)** intervals. The grounding conductor must be sized in accordance with Article 250 and Article 392 of NFPA 70.
- D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding-bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.
- E. Bond cable trays to power source for cables contained within with bonding conductors sized in accordance with Article 250 of NFPA 70.

3.4 INSTALLATION OF CABLES

- A. Install cables only when each cable tray run has been completed and inspected.
- B. Fasten cables on horizontal runs with cable clamps or cable ties. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.
- C. Fasten cables on vertical runs to cable trays every **18 inch (450 mm)**.
- D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure must be no more than **72 inch (1800 mm)**.
- E. Tie mineral-insulated cables down every **36 inch (900 mm)** where required to provide a two-hour fire rating and every **72 inch (1800 mm)** elsewhere.
- F. In existing construction, remove inactive or dead cables from cable trays.

3.5 FABRICATION OF CONNECTION POINTS

- A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.
- B. Connect raceways to cable trays in accordance with requirements in NEMA VE 2 and NEMA FG 1.

3.6 INSTALLATION OF CABLE TRAY MARKINGS AND SIGNS

- A. Trays Containing Cables Operating Over 600 V: Provide hazard markings in accordance with Section 392.18 of NFPA 70 and with NEMA Z535.4.

1. Legend: "DANGER - HIGH VOLTAGE - KEEP AWAY."

- B. Ladder Cable Trays: Provide warning signs to prevent use as personnel ladder.

1. Lettering: [1-1/2 inch (40 mm)]<Insert dimension> high.
2. Legend: "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL."

3.7 FIELD QUALITY CONTROL

- A. Acceptance Testing Preparation:

1. <Insert requirements>.

- B. Field tests and inspections must be witnessed by [Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.

- C. Tests and Inspections:

1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
4. Verify that there are no intruding items, such as pipes, hangers, or other equipment, in the cable tray.
5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
7. Check for improperly sized or installed bonding jumpers.
8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 Ω .

- D. Nonconforming Work:

1. Cable tray will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

- E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

- F. Manufacturer Services: Engage factory-authorized service representative to [support][supervise] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

3.8 PROTECTION

A. Protect installed cable trays and cables.

1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and must remain in place until the risk of damage is over.
2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

SECTION 26 05 39 00 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Flat-top, steel underfloor raceways.
2. Flush, flat-top underfloor raceways.
3. Cellular metal underfloor raceways.
4. Trench-type underfloor raceways.
5. Electrical connection components for precast cellular concrete floor decks.
6. Electrical connection components for electrified cellular steel floor decks.
7. Supports, raceway fittings, and hardware.
8. Junction boxes.
9. Service fittings/activations.

B. Related Requirements:

1. Section 034100 "Precast Structural Concrete" for precast concrete units used as cellular concrete floor raceways.
2. Section 053100 "Steel Decking" for rough-in of underfloor duct distribution system.
3. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
4. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. Activation: Nomenclature used by some manufacturers for a service fitting.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include finishes, construction details, material descriptions, dimensions, and profiles for underfloor raceway components, fittings, and accessories.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For underfloor raceways.

1. Include floor plans, elevations, sections, and details.
2. Detail fabrication and assembly of underfloor raceways.
 - a. Identify components and accessories, such as expansion-joint assemblies, straight raceway lengths, preset and afterset inserts, and service fittings.
 - b. Detail preparation and installation methods and instructions.

- c. Provide dimensions locating raceway header and distribution elements. Include spacing between preset inserts and between preset inserts and ends of duct runs, walls, columns, junction boxes, and header duct connections.
- d. Provide raceway fill charts for each duct size provided for each conductor size the duct is identified to accept. Provide separate charts for power and communication conductors and cables.
- e. Show connections between raceway elements and relationships between components and adjacent structural and architectural elements, including slab reinforcement, floor finish work, permanent partitions, expansion joints[, **architectural module lines**][, and **pretensioning or post-tensioning components**].
- f. Indicate height of preset inserts, junction boxes, and raceways coordinated with depth of concrete slab and floor fill.
- g. Indicate thickening of slabs where required for adequate encasement of raceway components.
- h. Document coordination of exposed components with floor-covering materials to ensure that fittings and trim are suitable for indicated floor-covering material.
- i. Revise locations from those indicated in the Contract Documents, as required to suit field conditions and to ensure a functioning layout. Identify proposed deviations from the Contract Documents.
- j. Show details of connections and terminations of underfloor raceways at panelboards and communication terminal equipment in equipment rooms, wire closets, and similar spaces.
- k. Identify those cells of cellular floor deck that are to be connected and fitted for the following underfloor distribution:
 - 1) Power.
 - 2) Voice.
 - 3) Data.
 - 4) Signal.
 - 5) Communications.
 - 6) **<Insert system>**.

C. Samples: For each underfloor raceway product, in specified finish, including the following:

- 1. Service fittings and flush and recessed outlet and junction-box covers.
- 2. A section of each service raceway configuration, with specified preset insert and service fitting installed.
- 3. A junction box of each size and type for use with underfloor raceway.
- 4. A section of each header raceway configuration, complete with provisions for connection with service raceway.
- 5. A section of trench-type raceway, complete with cover and required trim.
- 6. A junction box of each size and type for use with trench-type raceway, complete with cover and trim.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For underfloor raceways, to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 260010 "Supplemental Requirements for Electrical,"

include the following:

- a. Manufacturer's written instructions for locating preset inserts and for installing afterset inserts.
- B. Project Record Documents: Submit final as-built Drawings, indicating dimensioned locations for all ducts, junction boxes, and preset inserts. Typical spacing designation must be accepted only for preset insert spacing along a continuous length of duct.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Afterset Inserts:
 - a. Furnish quantity equal to [10]<Insert number> percent of service fittings installed, but no fewer than <Insert number> units.
 - b. Furnish quantity equal to [5]<Insert number> percent of each type of preset insert installed, but no fewer than <Insert number> units.
 2. Service Fittings: Furnish [three]<Insert number> of each type of service fitting indicated for each 100 ft. (30 m) of distribution raceway or active-floor-cell length.
 3. Outlet Blanking Covers: Furnish quantity equal to [10]<Insert number> percent of each type of floor opening installed for outlets, but no fewer than <Insert number> units.
- B. Furnish [one]<Insert number> electronic instrument(s) and other tools, as recommended by underfloor raceway manufacturer for detecting, locating, and uncovering preset inserts in metal raceway under floor covering and up to 3/8 inch (10 mm) of concrete fill.
- C. Furnish [one]<Insert number> set(s) of tools needed for installing afterset inserts in underfloor service raceway, including the following:
 1. Electric Drill: Variable speed, 1/2 inch (13 mm) capacity.
 2. Hole Saw: Diamond bit, for dry concrete, [2 inch (50 mm)]<Insert dimension> size.
 3. Insert installation tool.
 4. <Insert name of tool>.

1.7 QUALITY ASSURANCE

- A. Comply with UL 884.
- B. Comply with NFPA 70.
- C. Mockup: Install a mockup for evaluation of surface preparation and duct installation techniques and workmanship.
 1. Mockup area must be designated by Architect.
 2. Do not proceed with remaining work until workmanship, appearance, and performance are approved.
 3. Repair or reinstall mockup area as required to produce acceptable work.
 4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS**2.1 SYSTEM DESCRIPTION**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Jacks, Receptacles, and Fittings:
 1. Comply with Section 262726 "Wiring Devices" for power outlets, faceplates, and connectors.
 2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for twisted pair jacks, outlets, assemblies, and faceplates.
 3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for optical fiber jacks, outlets, assemblies, and faceplates.
 4. Comply with Section 271533 "Communications Coaxial Horizontal Cabling" for coaxial jacks, outlets, assemblies, and faceplates.

2.2 FLAT-TOP, STEEL UNDERFLOOR RACEWAYS

- A. Description: Steel, rectangular, flat-top, single-channel raceways with premanufactured inserts.
- B. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[MonoSystems, Inc]**
 2. **[Square D; Schneider Electric USA]**
 3. **[Walker Systems, Inc.]**
 4. **<Insert manufacturer's name>**
- C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[MonoSystems, Inc]**
 2. **[Square D; Schneider Electric USA]**
 3. **[Walker Systems, Inc.]**
 4. **<Insert manufacturer's name>**
- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- E. Material: One-piece, continuous weld, minimum **0.0598 inch (1.5 mm)** thick steel, with **[corrosion-resistant][galvanized]** coating inside and out after welding.
- F. Cross-Section Shape: Rectangular, with rounded corners.
- G. Number of Longitudinal Channels: **[Two][Three][Four]**, separated by steel wall(s).

- H. Number of Levels: **[One][Two]**.
- I. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks must provide a **[2 inch (50 mm)]<Insert dimension>** minimum bending radius for communication cables.
- J. Service Raceways: Fitted with preset inserts.
1. Nominal Multichannel Underfloor Raceway Dimensions:
 - a. Depth: **1-3/8 inch (35 mm)**.
 - b. Overall Width: **[6 inch (150 mm)][10 inch (250 mm)][15 inch (375 mm)]<Insert dimension>**.
 - c. Power Service Channel Width: **[3-1/2 inch (88 mm)][4-3/8 inch (110 mm)]<Insert dimension>**.
 - d. Communication Service Channel Width: **[3-1/2 inch (88 mm)][4 inch (100 mm)][6-1/2 inch (163 mm)]<Insert dimension>**.
 2. Nominal Single-Channel Underfloor Raceway Dimensions:
 - a. Depth: **1-1/2 inch (38 mm)**.
 - b. Power Service Raceway Width: **3-1/4 inch (81 mm)**.
 - c. Communication Service Raceway Width: **[3-1/4 inch (81 mm)][6 inch (150 mm)]**.
 - d. Number of Single-Channel Raceways per Run: **[One][Two][Three][Four][Five]** unless otherwise indicated.
 3. Preset Inserts: **[Rectangular][Round]**.
 - a. Spacing: **[12 inch (300 mm)][24 inch (600 mm)]** on center.
 - b. Size:
 - 1) Rectangular dimensions as required to accommodate mounting and connection of flush- and surface-mounted, **[single-][and multiple-]**outlet service fittings or to connect to wiring extensions for feeding wall outlets for **[power][communications][power and communications]<Insert system>**.
 - 2) **[2 inch (50 mm)]<Insert dimension>** in diameter.
 - c. Equip each insert with a disposable cover, and select insert height so cover is **1/8 inch (3 mm)** below surface of concrete.
 - d. Arrange insert for optional attachment of flush-, surface-, or wiring-extension service fitting to replace disposable cover. Arrange brackets, mountings, barriers, and floor access covers to support, isolate, and provide access to **[flush][or][surface]** outlet-mounting connector, jack, and receptacle devices.
- K. Header Raceways: **[Single-][Multi]**channel, without preset inserts (blank raceway).
1. Nominal Raceway Dimensions:
 - a. Depth: **[Same as service raceways][2-1/2 inch (63 mm)][2-3/4 inch (69 mm)][3 inch (75 mm)][3-1/2 inch (88 mm)]**.
 - b. Power Header Raceway Width: **[3-1/2 inch (88 mm)][4-3/8 inch (110 mm)]<Insert dimension>**.
 - c. Communication Header Raceway Width: **[3-1/2 inch (88 mm)][4 inch (100 mm)][6-1/2 inch (163 mm)]**.

2. Arrangement: **[In same plane as][Below]** service raceways.
3. Connections: Arranged to connect with service raceways at **[single][two]**-level junction boxes.

2.3 FLUSH, FLAT-TOP UNDERFLOOR RACEWAYS

- A. Description: **[Single][or][multichannel]** underfloor raceways installed on floor slab with top of raceway flush with concrete topping added hereafter, and then covered with finish material.
- B. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[Walker Systems, Inc.]**
 2. **<Insert manufacturer's name>**
- C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[Walker Systems, Inc.]**
 2. **<Insert manufacturer's name>**
- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- E. General Characteristics:
 1. Material: Steel.
 2. Cross-Section Shape: Rectangular, **[single channel][and][multichannel, separated by steel wall(s)]**.
 3. Listed and labeled for installation with top flush with concrete floor.
 4. Number of Levels: One.
- F. Service Raceways: Fitted with preset inserts.
 1. Number of Longitudinal Channels per Multichannel Raceway: **[Two][Three]**.
 2. Number of Single-Channel Raceways per Run: **[One][Two][Three]** unless otherwise indicated.
 3. Nominal Channel Dimensions: **3 inch (75 mm)** wide by **1-1/4 inch (31 mm)** deep.
 4. Preset Inserts: Threaded opening with removable steel plug that is flush with top of raceway when screwed in place.
 - a. Spacing: **[12 inch (300 mm)][24 inch (600 mm)]** on center, full length of each service raceway.
 - b. Arrangement: Stagger insert locations on parallel raceways or channels to accommodate placement of adjacent service fittings.
 - c. Size: **1-5/8 inch (41 mm)** diameter.
- G. Trench Duct Crossunder: Fitting attached to underside of trench duct.
 1. Nominal Channel Dimensions: Same as service raceways.
 2. Arrangement: Offset by depth of trench duct.
 3. Connections: Arranged to connect trench duct to flush duct through factory-cut, grommeted openings.

- H. Header Raceways: Raceways same as service raceways, except without preset inserts (blank raceway).

1. Nominal Channel Dimensions: Same as service raceways.
2. Arrangement: In same plane as service raceways.
3. Connections: Arranged to connect with service raceways at junction boxes.

2.4 CELLULAR METAL UNDERFLOOR RACEWAYS

- A. Description: Multichannel, cellular, underfloor service raceways installed on floor slab with top of raceway flush concrete topping added hereafter, and then covered with finish material.
- B. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. **[ASC Steel Deck; ASC Profiles, LLC]**
2. **[Dennis Filges Company, Inc]**
3. **[Epic Metals Corporation]**
4. **[HH Robertson]**
5. **[United Steel Deck, Inc.]**
6. **[Walker Systems, Inc.]**
7. **<Insert manufacturer's name>**

- C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[ASC Steel Deck; ASC Profiles, LLC]**
2. **[Dennis Filges Company, Inc]**
3. **[Epic Metals Corporation]**
4. **[HH Robertson]**
5. **[United Steel Deck, Inc.]**
6. **[Walker Systems, Inc.]**
7. **<Insert manufacturer's name>**

- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.

- E. Material:

1. Galvanized-steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)** minimum, **[G60 (Z180)][G90 (Z275)]** zinc coating.
2. Galvanized- and shop-primed steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **G60 (Z180)** zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard **[gray][white]** baked-on, rust-inhibitive primer.

- F. Number of Longitudinal Cells: Three, separated by steel walls.

- G. Nominal Dimensions of Cells:

1. Overall Depth: **1-1/4 inch (31 mm)** unless otherwise indicated.
2. Cross-Sectional Area of Cells: Power cells: **5-1/2 sq. inch (34.4 sq. cm)**; communication system cells: **16 sq. inch (100 sq. cm)**.

- H. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts,

junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks must provide a [2 inch (50 mm)]<Insert dimension> minimum bending radius for communication cables.

I. Service Raceways: Fitted with preset inserts.

1. Preset Inserts: Rectangular-shaped metal housing assemblies arranged to provide electrical outlet access to each cell of each raceway designated for service raceway use. Inserts must be provided throughout the entire length of each such raceway.
 - a. Spacing: [12 inch (300 mm)][24 inch (600 mm)][30 inch (750 mm)] on center.
 - b. Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-outlet service fitting.
 - c. Include mounting and connecting provisions for a surface, single- or multiple-outlet service fitting.
 - d. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.
 - e. Equip each insert with a disposable cover plate arranged for installation with top 1/8 inch (3 mm) below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable top.

J. Header Assembly: A junction box and raceway arrangement positioned to feed wires and cables to service raceways.

1. Three-compartment junction box connecting blank, [multicell cellular][flat-top, multichannel] header raceway (no inserts) with cellular service raceways at right angles to header raceway.
2. Cellular header raceway must be made of the same material and have the same nominal dimensions as service raceways.
3. Provide capability for service raceways to be run in both perpendicular directions at the intersection with header raceway.

2.5 TRENCH-TYPE UNDERFLOOR RACEWAYS

A. Description: Trench-type raceways used as header or feeder raceways to serve service raceways.

B. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Dennis Filges Company, Inc]
2. [HH Robertson]
3. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
4. [Square D; Schneider Electric USA]
5. [Walker Systems, Inc.]
6. <Insert manufacturer's name>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Dennis Filges Company, Inc]
2. [HH Robertson]
3. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
4. [Square D; Schneider Electric USA]

5. **[Walker Systems, Inc.]**
6. **<Insert manufacturer's name>**

- D. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.
- E. Trench: Steel, shop or factory welded and fabricated to indicated sizes. Include the following features:
 1. Slab Depth Adjustment: Minimum of minus **1/8 inch (3 mm)** to plus **5/8 inch (17 mm)** before and during concrete placement.
 2. Cover Supports: Height adjustable, with leveling screws to rigidly support cover assembly.
 3. Screed Strip: Extruded aluminum along both edges at proper elevation without requiring shim material.
 4. Trim Strip: Select to accommodate floor finish material.
 5. Partitions: Arranged to separate channels and isolate wiring of different systems.
 6. Grommeted openings in active floor cells or service raceways.
 7. Manufacturer's standard corrosion-resistant finish, applied after fabrication.
- F. Cover Plates: Removable, steel plates, **1/4 inch (6 mm)** thick, each weighing **60 lb. (27 kg)** or less with full gasket attached to side units. Fabricate intermediate supports to limit unsupported spans to **[15 inch (375 mm)]<Insert dimension>** or less. Fabricate covers with appropriate depth recess to receive indicated floor finish.

2.6 ELECTRICAL CONNECTION COMPONENTS FOR CELLULAR STEEL FLOOR DECK

- A. Source Limitations for Electrified Cellular Steel Floor-Deck Components: Obtain electrical components, such as preset inserts, afterset inserts, service fittings, header ducts, and trench header ducts, from cellular steel floor-deck manufacturer.
- B. Preset Inserts: Rectangular metal-housing assemblies.
 1. Spacing: **[12 inch (300 mm)][24 inch (600 mm)][30 inch (750 mm)]** on center.
 2. Size: As required to provide electrical outlet access to each cell of each group of three cells that is designated for electrical service raceway use.
 3. Equip each insert with a disposable cover arranged for installation with top **1/8 inch (3 mm)** below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable cover.
 4. Include housing and connecting provisions for a **[flush or recessed][surface]** service fitting, **[single][double][triple]** outlet.
 5. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.

2.7 ELECTRICAL CONNECTION COMPONENTS FOR PRECAST CELLULAR CONCRETE FLOOR DECK

- A. Source Limitations for Electrified Cellular Concrete Floor-Deck Components: Obtain electrical components, such as preset inserts, afterset inserts, service fittings, header ducts, and trench header ducts, from cellular concrete floor-deck manufacturer or from single source from single manufacturer.
- B. Afterset Inserts: Round metal-nipple assembly with internal and external threading, arranged to screw into plug driven into **1-7/8 inch (47 mm)** hole drilled through floor fill, where present, and deck-cell wall into floor raceway cell.
 1. Inserts must be compatible with floor-mounting service fittings.
 2. Inserts must provide wiring path from cell to **[power][communication][power and**

- communication]<Insert system>[wall][and][ceiling] outlets.**
 3. Inserts must provide wiring path from cell to header raceway.

2.8 SUPPORTS, RACEWAY FITTINGS, AND HARDWARE

- A. Source Limitations: Obtain underfloor raceway supports, fittings, and hardware components for each system through single source from single manufacturer.
- B. Supports, fittings, and hardware must be compatible with raceway and outlet system and must be listed for use with raceway systems and components delivered.
- C. Supports: Adjustable for height and arranged to maintain alignment and spacing of raceways during concrete placement. Include hold-down straps.
- D. Raceway Fittings: Couplings, expansion-joint sleeves, cross-under offsets, vertical and horizontal elbows, grounding screws, adapters, end caps, and other fittings suitable for use with basic components to form a complete installation.

2.9 JUNCTION BOXES

- A. Description: Raceway manufacturer's standard enclosure for indicated type, quantity, arrangement, and configuration of raceways at each raceway junction, intersection, and access location. Include the following accessories and features:
 - 1. Mounting brackets.
 - 2. Escutcheons and holders to accommodate surrounding floor covering.
 - 3. Means for leveling and height adjustment more than **3/8 inch (10 mm)** before and after concrete is placed.
 - 4. Boxes must withstand a minimum **[300 lb (136 kg)]<Insert value>** concentrated load. Internal supports must be provided as needed to meet this requirement.
 - 5. All boxes must provide **2 inch (50 mm)** minimum bend radius for data and communication cables.
 - 6. Raceway Openings: For underfloor raceways and conduits arranged to accommodate raceway layout.
 - 7. Covers must have appropriate depth recess to receive specific floor finish material.
 - 8. Partitions to separate wiring of different systems.

2.10 SERVICE FITTINGS/ACTIVATIONS

- A. Source Limitations: Obtain underfloor raceway service fittings and hardware for each system through single source from single manufacturer.
- B. Exposed Parts Finish: **[Brass][Brushed aluminum]<Insert finish>**.
- C. Flush, Single-System Service Fitting for Round Inserts: Include mounting and cover to support and provide access to single connector, jack, or receptacle device; mounted flush with floor within body of insert.
 - 1. Connector, Jack, and Receptacle Devices: Single modular type.
 - 2. Power Receptacle Outlet: Suitable for 20 A, 120 V device.

- D. Flush, [Single-][or][Multiple-]System Service Fitting for Rectangular Inserts: Include mounting, hinged cover, and trim to support and provide access to connector, jack, or receptacle devices mounted flush with floor within insert.
1. Connector, Jack, and Receptacle Devices: Modular type.
 2. Power Receptacle Rating: 20 A, 120 V unless otherwise indicated.
 3. Recess-Mounted Service Fitting: Modular fittings compatible with preset inserts. Include device plates for indicated systems and provisions for receptacles, jacks, and connectors. Include hinged flush covers with recessed depth to match thickness of floor finish material. Provide for internally mounted receptacle- and communication-jack and connector assemblies.
 - a. Duplex receptacle.
 - b. Duplex data jacks.
 - c. Double duplex receptacles.
 - d. Duplex receptacle and duplex data jacks.
 - e. Fiber-optic cable connector.
- E. Surface-Mounted Service Fitting: Modular pedestal type, with locking attachment matched to insert floor opening.
1. Power-outlet, double-faced, surface-mounted unit for duplex receptacle on both sides.
 2. Power-outlet, single-faced, surface-mounted unit for duplex receptacle on one side.
 3. Communication-outlet, double-faced, surface-mounted unit.
 - a. Include bushed openings on both sides; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
 - b. Include provisions for modular dual fiber-optic connector assembly on both sides.
 - c. Include provisions for modular dual jack-connector assembly, rated for [Category 5][Category 5e][Category 6] on both sides.
 4. Communication-outlet, single-faced, surface-mounted unit with bushed opening on one side; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
 5. Combination surface-mounted unit for duplex receptacle on one side and with communication cable connection provision on opposite side.
 - a. Communication Side:
 - 1) Include bushed opening; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
 - 2) Include provisions for modular dual fiber-optic connector assembly.
 - 3) Include provisions for modular dual jack-connector assembly, rated for [Category 5][Category 5e][Category 6].
 6. Flush-Mounted Service Fittings: Modular fittings compatible with preset inserts and must include covers, provisions for receptacles jacks and connector assemblies and wiring extensions to wall-mounted outlets, and associated device plates for indicated systems. Include flush covers, recessed to suit floor finish material.
 7. Indicate types and locations of devices on Drawings.
 - a. Duplex convenience receptacle.
 - b. Duplex data outlets.
 - c. Double duplex convenience receptacles.
 - d. Duplex convenience receptacle and duplex data outlets.
 - e. Double duplex data outlets.
 - f. Duplex fiber-optic communication connector.
 - g. Wiring-Extension Service Fittings: Arrangement of brackets and mountings to support and

provide access to wiring or cabling of a cell, and to connect the cable or raceway that extends the system to an individual wall outlet. Provide for connection of [ERMC][FMC][ENT][Type MC cable] for power extensions, and [ERMC][FMC][ENT][optical fiber/communication cable raceway] for communication system extensions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install raceways aligned and leveled and, unless otherwise indicated, parallel or perpendicular to floor supports.
- B. Maintain arrangement of conductor services throughout the raceway system.
- C. Install a concrete mud slab for support of cellular metal, flush duct, or trench duct raceway. Construct mud slab with wire mesh in the top **1 inch (25 mm)** of concrete.
- D. Install a vapor barrier between the cellular metal raceway and a substrate in contact with earth.
- E. Arrange supports to attain proper elevation, alignment, and spacing of raceways. Fasten supports securely at ends and at intervals not to exceed **60 inch (1500 mm)**, to prevent movement during concrete pour.
- F. Level raceway components with finished slab and make adjustments in raceway component elevation to accommodate indicated floor finishes.
- G. Junction Boxes: Install tops level and flush with finished floor. Install blank closure plates or plugs to close unused junction-box openings. Grout boxes in place to prevent movement during construction. Place top covers in inverted position during construction to prevent damage to surface of cover. Reinstall covers in proper position prior to final acceptance of the Work.
- H. Install preset inserts per manufacturer's instructions.
- I. Adjust supports to maintain a **1/8 to 3/8 inch (3.0 to 10 mm)** finished concrete cover over preset inserts.
- J. Remove burrs, sharp edges, dents, and mechanical defects.
- K. Cap or plug boxes, insert- and service-fitting openings, and open ends of raceways.
- L. Install expansion fittings with suitable bonding jumper where raceways cross building expansion joints.
- M. Bond underfloor raceway components to create a continuous bonding path.

- N. Seal raceways, cells, junction boxes, and inserts to prevent water, concrete, or foreign matter from entering raceways before and during pouring slab or placing fill. Tape joints or seal with compound, as recommended in writing by underfloor raceway manufacturer.
- O. Install a marker at the center of the last insert of each cell and channel of each straight run of metal underfloor service raceway to locate the insert and identify the system.
 - 1. Install markers at last inserts on both sides of permanent walls and at first inserts adjacent to each junction box.
 - 2. Install markers flush at screed line before pouring slab or placing fill. Extend marker with grommets screw when floor covering is placed. Do not extend through carpet.
 - 3. Use slotted-head screw to identify electrical power; use Phillips-head screw to identify conventional communications.
 - 4. Use another distinctive screw head to identify third system, such as special-purpose wiring.
- P. Protect underfloor raceway system from damage. Do not use the installed duct system as working platforms or walkways. Do not allow equipment or heavy traffic over duct during construction period, without first installing ramps over the duct. Ramps must be designed so that imposed loads are not transferred to the duct. Components of the system that are damaged during construction must be replaced.
- Q. Install concrete surrounding underfloor raceways according to Section 033000 "Cast-in-Place Concrete."
- R. Afterset Inserts: Cut, hole saw, and drill slab and raceways to allow for installation at locations indicated on plans.
- S. Wiring must comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and NFPA 70 requirements for wet locations.
 - 1. Install wiring from outlet insert toward junction boxes, then to termination at panel.
 - 2. Splices: All splices and taps must be made in junction boxes. No splices or taps must be made in raceways or outlet inserts.

3.3 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Perform visual inspection of interior of each **[junction box]****[section of trench raceway]** to verify absence of dirt, dust, construction debris, and moisture. Replace damaged and malfunctioning components.
 - 2. Prior to and after concrete pour, perform point-to-point tests of ground continuity and resistance of ground path between the most remote accessible fitting on each branch of each underfloor raceway system and the main electrical distribution grounding system.
 - a. Determine cause and perform correction of any point-to-point resistance value that exceeds 0.05 ohms.
 - b. Comply with NETA Acceptance Testing Specification about safety, suitability of test equipment, test instrument calibration, and test report and records.
- B. Prepare test and inspection reports.

3.4 CLEANING

- A. Clean and swab out underfloor raceways, inserts, and junction boxes after finish has been applied to floor slab, and remove foreign material, dirt, and moisture. Leave interiors clean and dry.

END OF SECTION 26 05 39 00

Task	Specification	Specification Description
26 05 39 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 43 00 - UNDERGROUND DUCTS AND UTILITY STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Type EPEC raceways and fittings.
2. Type ERMC-SS raceways, elbows, couplings, and nipples.
3. Type ERMC-S raceways, elbows, couplings, and nipples.
4. Type IMC raceways.
5. Type PVC raceways and fittings.
6. Type RTRC-BG raceways and fittings.
7. Fittings for conduit, tubing, and cable.
8. Electrically conductive corrosion-resistant compounds for threaded conduit.
9. Solvent cements.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" specifies seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** specifies preinstallation conference procedures.
4. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
5. Section 260553 "Identification for Electrical Systems" specifies underground-line warning tape and concrete cable routing markers (warning planks).

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

B. Preinstallation Coordination Meeting(s): For underground ducts and raceways. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>**.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**], and **Owner's Commissioning Authority** of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For concrete and steel used in precast concrete **[manholes][and][handholes]**, also include product certificates as required by ASTM C858.

B. Sustainable Design Product Data:

1. Laboratory Test Reports: For solvents and adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings:**1. Electric Utility Duct Banks and Structures:**

- a. Include plans, elevations, sections, and details, including attachments to other Work.
- b. Indicate locations of private property boundaries and utility easements.
- c. Include information required for approval by electric utility and for obtaining public space utility work permits.

2. Precast or Factory-Fabricated Concrete Structures:

- a. Include plans, elevations, sections, and details, including attachments to other Work.
- b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.
- c. Include reinforcement details.
- d. Include frame and cover design and manhole chimneys.
- e. Include [ladder][step] details.
- f. Include grounding details.
- g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, sumps, and other accessories.
- h. Include joint details.

3. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:

- a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
- b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.
- c. Include cover design.
- d. Include grounding details.
- e. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and other accessories.

D. Field quality-control reports.**1.4 INFORMATIONAL SUBMITTALS****A. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.****B. Field Reports:**

1. Factory Test Reports: For handholes and boxes.
2. Manufacturer's field reports for field quality-control support.

PART 2 - PRODUCTS

2.1 TYPE EPEC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651A and UL CCN EAZX.

B. Schedule 40 Electrical HDPE Underground Conduit (EPEC-40):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
2. Dimensional Specifications: Schedule 40.
3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

C. Schedule 80 Electrical HDPE Underground Conduit (EPEC-80):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Blue Diamond Industries, LLC]**
 - b. **[JM Eagle]**
 - c. **[Petroflex North America]**
 - d. **[Prysmian Cables and Systems; Prysmian Group North America]**
 - e. **[Southwire Company, LLC]**
 - f. **<Insert manufacturer's name>**
2. Dimensional Specifications: Schedule 80.
3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

D. Type A Electrical HDPE Underground Conduit (EPEC-A):

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. <Insert manufacturer's name>
- 2. Dimensional Specifications: Type A.
- 3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

E. Type B Electrical HDPE Underground Conduit (EPEC-B):

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. <Insert manufacturer's name>
- 2. Dimensional Specifications: Type B.
- 3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

2.2 TYPE ERM-SS RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

- 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
- 2. General Characteristics: UL 6A and UL CCN DYWV.

B. Stainless Steel Electrical Rigid Metal Conduit (ERM-SS), Elbows, Couplings, and Nipples:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allied Tube & Conduit; Atkore International]**
 - c. **[Calconduit; Atkore International]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. <Insert manufacturer's name>
- 2. Material: Stainless steel.
- 3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - b. Colors: As indicated on Drawings.

2.3 TYPE ERM-S RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6 and UL CCN DYIX.

B. Galvanized-Steel Electrical Rigid Metal Conduit (ERM-S-G), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Allied Tube & Conduit; Atkore International]**
 - b. **[Calconduit; Atkore International]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[Patriot Aluminum Products, LLC]**
 - f. **[Republic Conduit; Nucor Corporation, Nucor Tubular Products]**
 - g. **[Topaz Lighting & Electric]**
 - h. **[Western Tube; Zekelman Industries]**
 - i. **[Wheatland Tube; Zekelman Industries]**
 - j. **<Insert manufacturer's name>**
2. Exterior Coating: Zinc.
3. Options:
 - a. Interior Coating: **[Zinc with organic top coating][Zinc][Organic coating]**.
 - b. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - c. Colors: As indicated on Drawings.

C. PVC-Coated-Steel Electrical Rigid Metal Conduit (ERM-S-PVC), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Bluesteel Services LLC]**
 - c. **[Calbond; Atkore International]**
 - d. **[KorKap; Robroy Industries]**
 - e. **[Perma-Cote; Robroy Industries]**
 - f. **[Plasti-Bond; Robroy Industries]**
 - g. **<Insert manufacturer's name>**
2. Additional Characteristics:
3. Fittings for PVC-Coated Conduit:
 - a. Minimum coating thickness of **0.040 inch**, with overlapping sleeves protecting threaded joints.
 - b. Conduit bodies must be Form 8 with effective seal and positive placement feature to ease and assure proper installation. Certified results confirming seal performance at 15 psig

- (positive) and 25 inch Hg (vacuum) for 72 hours must be available. Conduit bodies must be supplied with plastic-encapsulated stainless steel cover screws.
- c. Form **2 inch** long or one pipe diameter long, whichever is less, PVC sleeve at openings of female fittings, except unions. Inside sleeve diameter must be matched to outside diameter of metal conduit.
 - d. PVC coating on outside of conduit couplings must be protected from tool damage during installation.
 - e. Female threads on fittings and couplings must be protected by urethane coating.
 - f. Fittings must be from same manufacturer as conduit.
 - g. Beam clamps and U bolts must be formed and sized to fit outside diameter of coated conduit. Plastic-encapsulated nuts must cover exposed portions of threads.
4. Options:
- a. Exterior Coating: PVC complying with NEMA RN 1[**and marked ETL Verified PVC-001**].
 - b. Interior Coating: [**Zinc with organic top coating**][Zinc][**Organic coating**].
 - c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
 - d. Colors: As indicated on Drawings.
 - e. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
 - f. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.4 TYPE IMC RACEWAYS

A. Performance Criteria:

- 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
- 2. General Characteristics: UL 1242 and UL CCN DYBY.

B. Steel Electrical Intermediate Metal Conduit (IMC):

- 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. [**ABB, Electrification Business**]
 - b. [**Allied Tube & Conduit; Atkore International**]
 - c. [**Calconduit; Atkore International**]
 - d. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
 - e. [**Topaz Lighting & Electric**]
 - f. [**Western Tube; Zekelman Industries**]
 - g. [**Wheatland Tube; Zekelman Industries**]
 - h. <Insert manufacturer's name>
- 2. Options:
 - a. Exterior Coating: [**Zinc**][**Alternative corrosion-resistant coating**].
 - b. Interior Coating: [**Zinc with organic top coating**][Zinc][**Organic coating**].
 - c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
 - d. Colors: As indicated on Drawings.

2.5 TYPE PVC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651 and UL CCN DZYR.

B. Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[NAPCO; Westlake Chemical Corp.]**
 - e. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - f. **[Topaz Lighting & Electric]**
 - g. **<Insert manufacturer's name>**
2. Dimensional Specifications: Schedule 40.
3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - b. Markings: **[For use with maximum 90 deg C wire.][For directional boring applications.]**

C. Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Calconduit; Atkore International]**
 - c. **[JM Eagle]**
 - d. **[Opti-Com Manufacturing Network, Inc (OMNI)]**
 - e. **[Topaz Lighting & Electric]**
 - f. **<Insert manufacturer's name>**
2. Dimensional Specifications: Schedule 80.
3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.
 - b. Markings: **[For use with maximum 90 deg C wire.][For directional boring applications.]**

D. Type A Rigid PVC Concrete-Encased Conduit (PVC-A) and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. **[Southern Pipe, Inc.]**
- b. **<Insert manufacturer's name>**
- 2. Dimensional Specifications: Type A.
- 3. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

E. Type EB Rigid PVC Concrete-Encased Underground Conduit (PVC-EB) and Fittings:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[JM Eagle]**
 - b. **[Southern Pipe, Inc.]**
 - c. **<Insert manufacturer's name>**
- 2. Dimensional Specifications: Type EB.
- 3. Options:
 - a. Minimum Trade Size: **[Metric designator 53 (trade size 2)][Metric designator 78 (trade size 3)][Metric designator 103 (trade size 4)]**.

2.6 TYPE RTRC-BG RACEWAYS AND FITTINGS

A. Performance Criteria:

- 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
- 2. General Characteristics: UL 2420 and UL CCN DZKT, for Type BG.

B. Low-Halogen, Belowground Reinforced Thermosetting Resin Conduit (RTRC-BG) and Fittings:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert manufacturer's name>**
- 2. Options:
 - a. Minimum Trade Size: **[Metric designator 16 (trade size 1/2)][Metric designator 21 (trade size 3/4)]**.

2.7 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.

B. Metallic Fittings for Type ERM, Type IMC, Type PVC, Type EPEC, and Type RTRC Raceways:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - d. **[Konkore Fittings; Atkore International]**
 - e. **[O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group]**
 - f. **[Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway]**
 - g. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - h. **[Southwire Company, LLC]**
 - i. **[Topaz Lighting & Electric]**
 - j. **<Insert manufacturer's name>**
2. General Characteristics: UL 514B and UL CCN DWTT.
3. Options:
 - a. Material: **[Steel][Die cast]**.
 - b. Coupling Method: **[Compression coupling][Raintight compression coupling with distinctive color gland nut][Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable]**.
 - c. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
 - d. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.8 ELECTRICALLY CONDUCTIVE CORROSION-RESISTANT COMPOUNDS FOR THREADED CONDUIT

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL Subject 2419 and UL CCN FOIZ.

B. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **[ABB, Electrification Business]**
2. **<Insert manufacturer's name>**

2.9 SOLVENT CEMENTS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: As recommended by conduit manufacturer in accordance with UL 514B and UL CCN DWTT.
3. Sustainability Characteristics:
 - a. VOC Content: **[510][490]<Insert value>** g/L or less for **[PVC][CPVC]** conduit and fittings.
 - b. Low-Emitting Material Requirements: As recommended by solvent and adhesive manufacturer and that complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Solvent Cements for Type PVC Raceways and Fittings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **<Insert manufacturer's name>**

2.10 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:
 - a. ASTM C858 for design and manufacturing processes.
 - b. SCTE 77.

2.11 MANHOLES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:
 - a. ASTM C858 for design and manufacturing processes.
 - b. SCTE 77.

B. Cast-in-Place Concrete Manholes:

1. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for duct entrance and sleeve for ground rod.

2. Additional Criteria: Comply with Section 033000 "Cast-in-Place Concrete."

2.12 SOURCE QUALITY CONTROL

A. Factory Tests for Handholes and Boxes:

1. Testing Administrator: **[Owner will engage][Engage]** qualified structural testing agency to evaluate handholes and boxes.
 - a. Tests of materials must be performed by independent testing agency.
 - b. Strength tests of complete boxes and covers must be by independent testing agency or manufacturer. Qualified registered professional engineer must certify tests by manufacturer.
2. Factory Tests and Inspections: Perform the following tests and inspections on handholes and boxes, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, before delivering to site. Affix label with name and date of **[manufacturer's][qualified testing laboratory's]** certification of system compliance.
 - a. Precast Concrete Utility Structures: Test and inspect in accordance with ASTM C1037.
 - b. Polymer Concrete and Nonconcrete Handhole and Pull-Box Prototypes: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests must be for specified tier ratings of products supplied. Testing machine pressure gages must have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.
3. Nonconforming Work:
 - a. Equipment that does not pass tests and inspections will be considered defective.
4. Factory Test Reports: Prepare and submit factory test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF DUCTS AND DUCT BANKS

A. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA TCB 2 for installation of underground ducts and duct banks.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Where indicated on Drawings, install duct, spacers, and accessories into duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
2. Steel raceway, bends, and fittings in **[single duct run or duct bank][on Project]** must be of same type.
3. Slope: Pitch duct minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from high point between two manholes to drain in both directions.

4. Expansion and Deflection Fittings: Install expansion and deflection fitting in each duct in area of disturbed earth adjacent to manhole or handhole.
5. Install expansion fitting near center of straight line duct with calculated expansion of more than **3/4 inch**.
6. Curves and Bends:
 - a. Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with minimum radius of **[48 inch][12.5 ft][25 ft]**, both horizontally and vertically, at other locations unless otherwise indicated.
 - b. Field bending must be in accordance with NFPA 70 minimum radii requirements, except bends over 45 degrees must be made with minimum radius of **[48 inch][12.5 ft][25 ft]**. Use only equipment specifically designed for material and size involved. Use PVC heating bender for bending PVC conduit.
 - c. Duct must have maximum of 180 degrees of bends between pull points.
7. Joints: Use solvent-cemented joints in nonmetallic duct and fittings and make watertight in accordance with manufacturer's published instructions. Stagger couplings so those of adjacent duct do not lie in same plane. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete for minimum of **12 inch** on each side of coupling.
 - a. Install insulated grounding bushings on steel raceway terminations that are less than **12 inch** below grade or floor level and do not terminate in hubs.
8. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing duct will not be subject to environmental temperatures above **104 deg F**. Where environmental temperatures are calculated to rise above **104 deg F**, and anywhere duct crosses above underground steam line, install insulation blankets listed for direct burial to isolate duct bank from steam line to maintain maximum environmental temperature of **104 deg F**.
9. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately **10 inch** o.c. for **5 inch** duct, and vary proportionately for other duct sizes.
 - a. Begin change from regular spacing to end-bell spacing **10 ft** from end bell, without reducing duct slope and without forming trap in line.
 - b. Grout end bells into structure walls from both sides to provide watertight entrances.
10. Duct Terminators for Entrances to Cast-in-Place Manholes and Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately **6 inch** o.c. for **4 inch** duct, and vary proportionately for other duct sizes.
 - a. Begin change from regular spacing to terminator spacing **10 ft** from terminator, without reducing duct line slope and without forming trap in line.
11. Building Wall Penetrations: Make transition from underground duct to steel raceway at least **10 ft** outside building wall, without reducing duct line slope away from building and without forming trap in line. Use fittings manufactured for transition to steel raceway type installed. Install steel raceway penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
12. Install manufactured steel raceway elbows for stub-ups at poles unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
 - a. Couple steel elbows to ducts with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete for minimum of **12 inch** on each side of coupling.

13. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least **15 psig** hydrostatic pressure.
14. Pulling Cord: Install **200 lbf** test nylon cord in empty ducts.
15. Concrete-Encased Ducts and Duct Bank:
 - a. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes **6 inch** or less in nominal diameter.
 - b. Width: Excavate trench [**3 inch**][**12 inch**] wider than duct on each side.
 - c. Depth: Install so top of duct envelope is at least **24 inch** below finished grade in areas not subject to deliberate traffic, and at least **30 inch** below finished grade in deliberate traffic paths for vehicles unless otherwise indicated. Install so top of duct envelope is below local frost line.
 - d. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
 - e. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [**four**][**five**] spacers per **20 ft** of duct. Place spacers within **24 inch** of duct ends. Stagger spacers approximately **6 inch** between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 - f. Minimum Space between Ducts: **3 inch** between edge of duct and exterior envelope wall, **2 inch** between ducts for like services, and **4 inch** between power and communications ducts.
 - g. Elbows:
 - 1) Use manufactured duct elbows for stub-ups and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
 - 2) Use manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct run.
 - h. Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of equipment base.
 - 1) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inch above**] finished floor and minimum **3 inch** from conduit side to edge of slab.
 - i. Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of wall. Install insulated grounding bushings on terminations at equipment.
 - 1) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inch above**] finished floor and no less than **3 inch** from conduit side to edge of slab.
 - j. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
 - k. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
 - l. Concrete Cover: Install minimum of **3 inch** of concrete cover between edge of duct to exterior envelope wall, **2 inch** between duct of like services, and **4 inch** between power and communications ducts.
 - m. Place minimum **6 inch** of engineered fill above concrete encasement of duct.
 - n. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.

- 1) Start at one end and finish at other, allowing for expansion and contraction of duct as its temperature changes during and after pour. Use expansion fittings installed in accordance with manufacturer's published instructions, or use other specific measures to prevent expansion-contraction damage.
 - 2) If more than one pour is necessary, terminate each pour in vertical plane and install **3/4 inch** reinforcing-rod dowels extending minimum of **18 inch** into concrete on both sides of joint near corners of envelope.
- o. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.
16. Direct-Buried Duct and Duct Bank:
- a. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for pipes less than **6 inch** in nominal diameter.
 - b. Width: Excavate trench [**3 inch**][**12 inch**] wider than duct on each side.
 - c. Depth: Install top of duct at least **36 inch** below finished grade unless otherwise indicated.
 - d. Set elevation of top of duct bank below frost line.
 - e. Place minimum **3 inch** of sand as bed for duct. Place sand to minimum of **6 inch** above top level of duct.
 - f. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
 - g. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [**four**][**five**] spacers per **20 ft** of duct. Place spacers within **24 inch** of duct ends. Stagger spacers approximately **6 inch** between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 - h. Install duct with minimum of **3 inch** between ducts for like services and **6 inch** between power and communications duct.
 - i. Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
 - j. Install manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct.
- 1) Couple RNC duct to steel raceway with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete.
 - 2) Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of base. Install insulated grounding bushings on terminations at equipment.
 - a) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inch above**] finished base and minimum **3 inch** from conduit side to edge of base.
 - 3) Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally on exterior of wall minimum of **60 inch** from edge of wall. Install insulated grounding bushings on terminations at equipment.
 - 4) Stub-ups through interior floors must [**terminate in coupling installed flush**

with][be minimum 4 inch above] finished floor and no less than **3 inch** from conduit side to edge of equipment pad or floor slab.

- k. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to **4 inch** over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.
17. Warning Planks: Bury warning planks approximately **12 inch** above direct-buried duct, placing them **36 inch** o.c. Align planks along width and along centerline of duct or duct bank. Provide additional plank for each **12 inch** increment of duct-bank width over nominal **18 inch**. Space additional planks **12 inch** apart, horizontally across width of ducts.
18. Underground-Line Warning Tape: Bury **[nonconducting][conducting]** underground line specified in Section 260553 "Identification for Electrical Systems" no less than **12 inch** above concrete-encased duct and duct banks **and approximately 12 inch below grade]**. Align tape parallel to and within **3 inch** of centerline of duct bank. Provide additional warning tape for each **12 inch** increment of duct-bank width over nominal **18 inch**. Space additional tapes **12 inch** apart, horizontally across width of ducts.
19. Ground ducts and duct banks in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for **<Insert system or product group>** with existing conditions.
 - a. **<Insert requirements for transition between new and existing>.**
2. Coordinate with **<Insert Section number and title>** for **<Insert description of interfacing related Work>.**
 - a. **<Insert requirements for transition between this Section and related Work>.**

3.2 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Reference Standards:

1. Precast Concrete Handholes: Comply with ASTM C891 unless otherwise indicated.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Cast-in-Place Manholes:
 - a. Finish interior surfaces with smooth-troweled finish.
 - b. Knockouts for Future Duct Connections: Form and pour concrete knockout panels **1-1/2 to 2 inch** thick, arranged as indicated.
 - c. Comply with requirements in Section 033000 "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.
2. Precast Concrete Handholes and Manholes:

- a. Install units level and plumb and with orientation and depth coordinated with connecting duct to minimize bends and deflections required for proper entrances.
 - b. Unless otherwise indicated, support units on level bed of crushed stone or gravel graded from **1 inch** sieve to **No. 4** sieve and compacted to same density as adjacent undisturbed earth.
 - c. Field-cut openings for conduits in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
 3. Elevations:
 - a. Manhole Roof: Install with rooftop at least **15 inch** below finished grade.
 - b. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames **1 inch** above finished grade.
 - c. Install handholes with bottom below frost line, **<Insert depth of frost line below grade at Project site>** below grade.
 - d. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes **1 inch** above finished grade.
 - e. Where indicated, cast handhole cover frame integrally with handhole structure.
 4. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
 5. Manhole Access: Circular opening in manhole roof; sized to match cover size.
 - a. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
 - b. Install chimney, constructed of **[precast concrete][cast-iron]** collars and rings, and cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight joints and waterproof grouting for frame and chimney.
 6. Waterproofing: Apply waterproofing to exterior surfaces of manholes **[and handholes]** after concrete has cured at least three days. Waterproofing materials and installation are specified in **[Section 071353 "Elastomeric Sheet Waterproofing"]****[Section 071354 "Thermoplastic Sheet Waterproofing"]****<Insert waterproofing Section>**. After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
 7. Dampproofing: Apply dampproofing to exterior surfaces of manholes **[and handholes]** after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 071113 "Bituminous Dampproofing." After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
 8. Hardware: Install removable hardware, including pulling eyes, cable stanchions, **[and]** cable arms, **[and insulators]**, as required for installation and support of cables and conductors and as indicated.
 9. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
 10. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than **3-7/8 inch** for manholes and **2 inch** for handholes, for anchor bolts installed in field. Use minimum of two anchors for each cable stanchion.
 11. Ground manholes, handholes, and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Interfaces with Other Work:
1. Coordinate installation of new products for **<Insert system or product group>** with existing

conditions.

a. <Insert requirements for transition between new and existing>.

2. Coordinate with <Insert Section number and title> for <Insert description of interfacing related Work>.

a. <Insert requirements for transition between this Section and related Work>.

3.3 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Reference Standards:

1. <Insert reference standard> for <Insert reason>.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.
2. Unless otherwise indicated, support units on level bed of crushed stone or gravel, graded from **1/2 inch** sieve to **No. 4** sieve and compacted to same density as adjacent undisturbed earth.
3. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes **1 inch** above finished grade.
4. Install handholes and boxes with bottom below frost line, **<Insert depth of frost line below grade at Project site>** below grade.
5. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
6. Field cut openings for duct in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
7. For enclosures installed in **[asphalt paving][and]<Insert material>** and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour concrete ring encircling, and in contact with enclosure entry, and with top surface screeded to top of box cover frame. Bottom of ring must rest on **[compacted earth]<Insert material>**.
 - a. Concrete: **3000 psi**, 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with troweled finish.
 - b. Dimensions: **[10 inch wide by 12 inch deep]<Insert dimensions>**.
8. Ground handholes and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for <Insert system or product group> with existing conditions.
 - a. <Insert requirements for transition between new and existing>.
2. Coordinate with <Insert Section number and title> for <Insert description of interfacing

related Work>.

- a. **<Insert requirements for transition between this Section and related Work>.**

3.4 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. **<Insert requirements>.**

B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.**

C. Tests and Inspections:

1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum **12 inch** long mandrel equal to duct size minus **1/4 inch**. If obstructions are indicated, remove obstructions and retest.
3. Test manhole **[and handhole]** grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

D. Nonconforming Work:

1. Underground ducts, raceways, and structures will be considered defective if they do not pass tests and inspections.
2. Correct deficiencies and retest as specified above to demonstrate compliance.

E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

SECTION 26 05 46 00 - POLES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Lighting standards.
2. Lighting standard accessories.
3. Utility poles.
4. Utility pole accessories.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding components referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
8. **[Section 262726 "Wiring Devices"] [Section 262726.31 "General-Grade Single Straight-Blade Receptacles"] [and] [Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles"]** specify receptacles referenced by this Section.
9. Section 270528 "Pathways for Communications Systems" specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on construction details, profiles, EPA, cable entrances, materials, dimensions, weight, rated design load, and ultimate strength of individual components.
2. Include finishes for lighting poles and luminaire-supporting devices.
3. Anchor bolts.
4. Manufactured pole foundations.
5. Product Certificates: Include product certificate, signed by manufacturers of poles, certifying that products are designed for indicated load requirements in accordance with AASHTO LTS-6-M and that load imposed by luminaire and attachments has been included in design. The certification must be based on design calculations signed and sealed by a professional engineer.
6. Include manufacturer's sample extended warranty language.

B. Samples: Submit finish samples for each exposed lighting pole, standard, and luminaire-supporting

device and for each color and texture specified.

- C. Shop Drawings: Prepare and submit the following:
 - 1. Plans, elevations, sections, and **[mounting][and][attachment]** details.
 - 2. Details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Details of fabrication and assembly of **[poles][and][pole accessories]**.
 - 4. Foundation construction details, including material descriptions, dimensions, anchor bolts, support devices, and calculations, signed and sealed by a professional engineer licensed in the state of installation.
 - 5. Anchor bolt templates keyed to specific poles and certified by manufacturer.
 - 6. Method and procedure of pole installation. Include manufacturer's published installations.
- D. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

- A. Material Test Reports:
 - 1. For each foundation component, by qualified testing laboratory.
 - 2. For each pole, by qualified testing laboratory.
- B. Soil test reports.
- C. Manufacturer's published instructions.
- D. Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.

1.4 CLOSEOUT SUBMITTALS

- A. Warranty documentation.

1.5 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed **[pole(s)][and luminaire-lowering device(s)]** perform in accordance with specified requirements and agrees to repair or replace products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that **[pole(s)][and luminaire-lowering device(s)]** perform in accordance with specified requirements and agrees to provide repair or replacement of products that fail to perform as specified within extended-warranty period, including materials that corrode, fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs from special warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: **[Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
2. Warranty Period for Corrosion Resistance: **[Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
3. Warranty Period for Color Retention: **[Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Description: **<Insert brief description of desired system, assembly, or equipment>**.
- B. Performance Criteria:
 1. Regulatory Requirements:
 - a. Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 2. Utility Approval: Comply with **<Insert name of utility>** requirements.
 3. General Characteristics:
 - a. Structural Characteristics: Comply with AASHTO LTS-6-M.
 - b. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied in accordance with AASHTO LTS-6-M.
 - c. Live Load: Single load of **500 lb** distributed in accordance with AASHTO LTS-6-M.
 - d. Ice Load: Load of **3 lb/ft²**, applied in accordance with AASHTO LTS-6-M for applicable areas on the Ice Load Map.
 - e. Wind Load for Poles Exceeding 50 ft (15 m) Height:
 - 1) Basic Wind Speed: **[100 mile/h][90 mile/h]<Insert value from AASHTO LTS-6-M for this Project>**.
 - 2) Wind Importance Factor: **[1.0]<Insert value from AASHTO LTS-6-M>**.
 - 3) Minimum Design Life: **[50 years]<Insert value from AASHTO LTS-6-M>**.
 - 4) Velocity Conversion Factor: **[1.0]<Insert value from AASHTO LTS-6-M>**.
 - f. Wind Load for Poles Not Exceeding 50 ft (15 m) Height:
 - 1) Basic Wind Speed: **[100 mile/h][90 mile/h]<Insert value from AASHTO LTS-6-M for this Project>**.
 - 2) Wind Importance Factor: **[1.0]<Insert value from AASHTO LTS-6-M>**.
 - 3) Minimum Design Life: **[25 years]<Insert value from AASHTO LTS-6-M>**.
 - 4) Velocity Conversion Factor: **[1.0]<Insert value from AASHTO LTS-6-M>**.
 - g. Strength Analysis: For each pole, multiply the actual EPA of luminaires and brackets by a factor of **[1.1]<Insert number>** to obtain the EPA used in pole selection strength analysis.
 - h. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - i. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- 2) Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.2 LIGHTING STANDARDS

A. Steel Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[American LitePole]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Bridgewell Resources]**
 - d. **[Cooper Lighting Solutions; Signify North America Corp.]**
 - e. **[E-conolight]**
 - f. **[H.E. Williams]**
 - g. **[Hapco]**
 - h. **[Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Kim Lighting; brand of GE Current, a Daintree company; American Industrial Partners (AIP)]**
 - j. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - k. **[LSI Industries]**
 - l. **[Millerbernd Manufacturing Company]**
 - m. **[NAFCO; brand of Wisconsin Lighting Lab, Inc.]**
 - n. **[RAB Lighting]**
 - o. **[Ruud Lighting; brand of Cree Lighting; subsidiary of Ideal Industries, Inc.]**
 - p. **[Union Metal Industries Corp.]**
 - q. **<Insert manufacturer's name>**
2. Source Limitations: **[Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties].**
3. Standard Features:
 - a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - d. Carbon Steel Poles: Comply with ASTM A500/A500M, Grade B carbon steel with a minimum yield of **46,000 psig**; one-piece construction up to **40 ft** in height with access handhole in lighting standard wall.

- 1) Shape: **[Round, tapered][Round, straight][Square, tapered][Square, straight]**.
 - 2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- e. Stainless Steel Poles: Comply with **[ASTM A240/A240M][ASTM A666]**, stainless steel with a minimum yield of **55,000 psi**; one-piece construction up to **40 ft** in height with access handhole in lighting standard wall.
- 1) Shape: **[Round, tapered][Round, straight][Square, tapered][Square, straight]**.
 - 2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- f. Steel Mast Arms: **[Single-arm][Truss][Davit]** type, continuously welded to lighting standard attachment plate. Material and finish same as plate.
- g. Brackets for Luminaires: Detachable, cantilever, without underbrace.
- 1) Adaptor fitting welded to lighting standard, allowing the bracket to be bolted to the lighting standard-mounted adapter, then bolted together with **[stainless steel][galvanized-steel]** bolts.
 - 2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.
- h. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to lighting standard top.
- i. Grounding and Bonding Lugs: Welded **1/2 inch** threaded lug, listed for attaching grounding and bonding conductors of type and size indicated, and accessible through handhole.
- j. Steps: Fixed steel, with nonslip treads.
- 1) For climbing positions, install at **15 inch** vertical spacing, alternating on opposite sides of lighting standard, oriented 180 degrees from each other; first step must be at an elevation **10 ft** above finished grade.
 - 2) For working positions, install steps on opposite side of lighting standard, oriented 180 degrees from each other at the same elevation.
- k. Handhole: Oval shaped, with minimum clear opening of **2-1/2-by-5 inch**, with cover secured by stainless steel captive screws.
- l. Intermediate Handhole and Cable Support: Weatherproof, **3-by-5 inch** handhole located at midpoint of lighting standard, with cover for access to internal welded attachment lug for electric cable support grip.
- m. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported load multiplied by a 5.0 safety factor.
- n. Platform for Lamp Ballast Servicing: Factory fabricated of steel, with finish matching that of lighting standard.
- o. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- p. Galvanized Finish: After fabrication, hot-dip galvanize in accordance with ASTM A123/A123M.
- q. Factory-Painted Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.
- 1) Surface Preparation: Clean surfaces in accordance with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
 - 2) Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.

- 3) Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a) Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**
- r. Powder-Coat Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.
 - 1) Surface Preparation: Clean surfaces in accordance with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair powder-coat bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
 - 2) Powder Coat: Comply with AAMA 2604.
 - a) Electrostatic-applied powder coating; single application and cured to a minimum **2.5 to 3.5 mil** dry film thickness. Coat interior and exterior of lighting standard for equal corrosion protection.
 - b) Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**
4. Other Available Features Required by the Project:
 - a. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
 - 1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

B. Aluminum Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[American LitePole]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Bridgewell Resources]**
 - d. **[Cooper Lighting Solutions; Signify North America Corp.]**
 - e. **[E-conolight]**
 - f. **[H.E. Williams]**
 - g. **[Hapco]**
 - h. **[Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Kim Lighting; brand of GE Current, a Daintree company; American Industrial Partners (AIP)]**
 - j. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - k. **[LSI Industries]**
 - l. **[Lyte Poles; brand of DWM Holdings, Inc.]**
 - m. **[NAFCO; brand of Wisconsin Lighting Lab, Inc.]**
 - n. **[Ruud Lighting; brand of Cree Lighting; subsidiary of Ideal Industries, Inc.]**
 - o. **[Sentry Electric, LLC]**

- p. [Union Metal Industries Corp.]
 - q. [Valmont Industries, Inc.]
 - r. <Insert manufacturer's name>
2. Source Limitations: [Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties].
 3. Standard Features:
 - a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - d. [Seamed][Seamless], extruded structural tube complying with ASTM B221, [Alloy 6063-T6][Alloy 6061-T6], with access handhole in in lighting standard wall.
 - 1) Shape: [Round, tapered][Round, straight][Square, tapered][Square, straight].
 - 2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
 - e. Mast Arms: [Aluminum][Steel][Single-arm][Truss][Davit] type, continuously welded to lighting standard attachment plate. Material and finish same as plate.
 - f. Brackets for Luminaires: Detachable, cantilever, without underbrace.
 - 1) Adaptor fitting welded to lighting standard, allowing the bracket to be bolted to the lighting standard-mounted adapter, then bolted together with [stainless steel][galvanized-steel] bolts.
 - 2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.
 - g. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to lighting standard top.
 - h. Grounding and Bonding Lugs: Bolted 1/2 inch threaded lug, listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
 - i. Handhole: Oval shaped, with minimum clear opening of 2-1/2 by 5 inch, with cover secured by stainless steel captive screws.
 - j. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
 - k. Aluminum Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.
 - 1) Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 - 2) Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20 requirements; and seal aluminum surfaces with clear, hard-coat wax.
 - 3) Class I, Clear-Anodic Finish: AA-M32C22A41 (Mechanical Finish: Medium satin;

Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I clear coating of 0.018 mm or thicker), complying with AAMA 611.

- 4) Class I, Color-Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: Medium; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I integrally colored or electrolytically deposited color coating 0.018 mm or thicker), complying with AAMA 611.

- I. Factory-Painted Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

- 1) Surface Preparation: Clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
- 2) Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
- 3) Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

- a) Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**

- m. Powder-Coat Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

- 1) Surface Preparation: Clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair powder coat bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
- 2) Powder coat must comply with AAMA 2604.

- a) Electrostatic applied powder coating; single application with a minimum **2.5 to 3.5 mil** dry film thickness; cured in accordance with manufacturer's published instructions. Coat interior and exterior of lighting standard for equal corrosion protection.
- b) Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**

4. Other Available Features Required by the Project:

- a. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
 - 1) Materials: Compatible with lighting standards as well as to substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

- C. Fiberglass Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Alliance; a division of GEOTEK]**
 - b. **[Bridgewell Resources]**
 - c. **[CMT; a Valmont Company]**
 - d. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - e. **[PLP Composite Technologies, Inc]**
 - f. **[Shakespeare; a Valmont Company]**
 - g. **[Valmont Industries, Inc.]**
 - h. **[Whately; a Valmont Company]**
 - i. **[Wood Preservers, Inc.]**
 - j. **<Insert manufacturer's name>**
2. Source Limitations: **[Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties].**
3. Standard Features:
- a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - d. Designed specifically for supporting luminaires, with factory-formed cable entrance and handhole.
 - e. Not less than 65 percent by weight of fiberglass roving, with resin and pigment making up the remainder.
 - f. Roving must be continuously applied with uniform tension, with multiple layers placed to meet axial and compressive strength requirements.
 - g. Shape: **[Round, tapered][Round, straight][Square, tapered][Square, straight].**
 - h. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
 - i. Surface Finish: Smooth and uniform along surface of lighting standard.
 - j. Paint Finish: Pigmented polyurethane, with a minimum dry film thickness of **1.5 mil**. Polyurethane may be omitted if the surface layer of the lighting standard is inherently UV inhibited.
 - k. Mast Arms: **[Aluminum][Steel][Fiberglass][Single-arm][Truss][Davit]** type, continuously welded to lighting standard attachment plate. Material and finish same as plate. Adaptor plate must be steel hot-dip galvanized in accordance with ASTM A153/A153M or Alloy 6061-T6 aluminum encased within fiberglass roving, allowing the mast arm adaptor to be bolted to the lighting standard.
 - l. Brackets for Luminaires: Detachable, cantilever, without underbrace.
 - 1) Adaptor Fitting: Steel, hot-dip galvanized in accordance with ASTM A153/A153M, or Alloy 6061-T6 aluminum, permanently bonded within fiberglass roving, allowing the bracket to be bolted to the lighting standard-mounted adapter. Bolt together with **[stainless steel][galvanized-steel]** bolts; use anti-seize compound when bolting dissimilar metals.
 - 2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.

- m. Pole-Top Tenons: Steel, hot-dip galvanized in accordance with ASTM A153/A153M, or Alloy 6061-T6 aluminum, permanently bonded to the fiberglass shaft. Fabricated to support luminaire or luminaires and brackets indicated.
 - n. Handhole: Oval shaped, with minimum clear opening of **2-1/2 by 5 inch**, with cover secured by stainless steel captive screws.
 - o. Grounding: Bare, stranded copper, 6 AWG, **[suspended inside of lighting standard][inside 3/4 inch conduit fastened to the interior of the lighting standard]**, connected to luminaire(s), ground lug near handhole, and ground rod.
 - p. Grounding and Bonding Lugs: Bolted **1/2 inch** threaded lug, listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
4. Other Available Features Required by the Project:
- a. Resin Color: **[Black][Dark][Bronze]<Insert color>**; uniform coloration throughout entire wall thickness.
 - b. Anchor Base: Integral galvanized-steel or aluminum casting, enclosing and permanently bonded to the exterior of the fiberglass shaft.
 - c. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
 - 1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

D. Laminated Wood Lighting Standard:

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bell Lumber and Pole Company]**
 - b. **[Hughes Brothers, Inc.]**
 - c. **[Laminated Wood Systems, Inc.]**
 - d. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - e. **[McFarland Cascade]**
 - f. **[Timber Technologies, LLC]**
 - g. **[TimberWood Products; J.H. Baxter & Co.]**
 - h. **[Valmont Industries, Inc.]**
 - i. **<Insert manufacturer's name>**
- 2. Source Limitations: **[Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties]**.
- 3. Standard Features:
 - a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:

- 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- d. Species and Grades for Structural Laminated Timber: Complying with APA A190.1. Use **[Southern pine][Douglas fir][Alaska cedar][any species listed in APA 117]**, engineered and fabricated to withstand indicated structural loads without exceeding allowable design working stresses in accordance with **[APA 117][AWPA/ANSI O5.2]**.
 - e. Features include **[wood bracket][wood crossarm][lighting standard-top adaptor]<Insert items>** for mounting luminaire(s), metal lighting standard cap, and concealed raceway path connected to access handhole.
 - f. Mounting Provisions: **[Embedded]<Insert description of other mounting unless detailed on the Drawings>**.
 - g. Appearance Grade: Architectural appearance grade complying with AITC 110.
 - h. Preservative Treatment:
 - 1) Exposure: Comply with **[AWPA U1, Use Category UC4A][AWPA U1, Use Category UC4B][AWPA U1, Use Category UC4C]**.
 - 2) Treatment after Dressing and End Cutting: Comply with AWPA M4 for surface cuts to a depth of more than **1/16 inch**.
 - i. Adhesive: Wet-use type complying with ASTM D2559.
 - j. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.
 - k. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.
 - l. Finish: **[Natural, unstained wood][Semitransparent stain applied after erection][Factory-applied semitransparent stain]**, color as selected by Architect.
4. Other Available Features Required by the Project:
 - a. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
 - 1) Materials: Compatible with lighting standards as well as to substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

E. Wood Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Pole & Timber]**
 - b. **[Baldwin Pole & Piling Co., Inc.]**
 - c. **[Bell Lumber and Pole Company]**
 - d. **[Cavawood Architectural Products]**
 - e. **[Cobb Lumber Company]**

- f. [Cox Utility Products Division]
 - g. [Guelph Utility Pole Co., Ltd.; a Stella-Jones company]
 - h. [Koppers Performance Chemicals]
 - i. [Langdale Forest Products Company]
 - j. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
 - k. [McFarland Cascade]
 - l. [Stella-Jones]
 - m. [T.R. Miller Mill Co., Inc.]
 - n. [Texas Electric Cooperatives, Inc.]
 - o. [Thomasson Company]
 - p. [TimberWood Products; J.H. Baxter & Co.]
 - q. [United Wood Treating Company]
 - r. [Wood Preservers, Inc.]
 - s. <Insert manufacturer's name>
2. Source Limitations: **[Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties].**
3. Standard Features:
- a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - d. **[Douglas fir][Southern yellow pine], [machine trimmed by turning,]** for wood species used; and bored, roofed, and grained before treatment.
 - 1) Pole Brand: Brand the manufacturer's trademark and date of treatment, height and class of lighting standard, wood species, preservation code, and retention. Brand must be placed so that the bottom of the brand is minimum **10 ft** from lighting standard butt.
 - 2) Mounting Provisions: Embedded.
 - e. Preservative Treatment: Treat in accordance with **[AWPA U1, Use Category UC4A][AWPA U1, Use Category UC4B][AWPA U1, Use Category UC4C].**
 - f. Luminaire Brackets: Comply with NEMA/ANSI C136.13.
4. Other Available Features Required by the Project:
- a. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
 - 1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after

fabrication unless otherwise indicated.

F. Prestressed Concrete Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Baldwin Pole & Piling Co., Inc.]**
 - b. **[Holophane; an Acuity Brands company]**
 - c. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - d. **[Lonestar Prestress Mfg., Inc.]**
 - e. **[NOV Ameron]**
 - f. **[Pre-Cast Specialties, Inc.]**
 - g. **[Seminole Pole, Inc.]**
 - h. **[StressCrete Group]**
 - i. **<Insert manufacturer's name>**
2. Source Limitations: **[Obtain lighting standards from single manufacturer or producer][For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties]**.
3. Standard Features:
 - a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
 - b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
 - c. General Finish Requirements:
 - 1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - d. Comply with ASTM C1089**[and manufactured by centrifugal spin-casting process][and manufactured by static-casting method]**.
 - 1) Shape: **[Round, tapered][Round, straight][Square, tapered][Square, straight]**.
 - 2) Mounting Provisions: **[Steel butt flange for bolted mounting to foundation or breakaway support][Embedded]**.
 - 3) Finishing: Capped at top and plugged at bottom. Seat each reinforcing strand with epoxy adhesive.
 - 4) Grounding: Continuous copper ground wire cast into lighting standard. Terminate at top of lighting standard**[and attach to 24 inch lighting rod]**.
 - 5) Raceway: Smooth, internal, and not less than **3 inch** in diameter.
 - e. Concrete: Minimum 28-day compressive strength of **[7000 psi]<Insert value>**.
 - f. Cured with wet steam and aged for a minimum of 15 days prior to installation.
 - g. Reinforcement: **[Reinforcing bars complying with ASTM A615/A615M][Cold-drawn spiral wire complying with ASTM A1064/A1064M][Prestressing strand, 270 K, complying with ASTM A416/A416M]**.
 - h. Surface Treatment: Hard, nonporous, and resistant to water, frost, and road and soil chemicals; and must have a maximum water-absorption rate of 3 percent.

- i. Finish Texture: **[Standard form][Polished exposed aggregate][Etched exposed aggregate]**.
- 1) Exposed aggregate must be of **<Insert aggregate type selected from manufacturers' lists>** type.
- j. Nameplate: Aluminum cast into lighting standard wall at approximately **5 ft** above ground line, listing name of manufacturer, the Project identifier, overall height, and approximate weight.
- k. Pole Brackets: Comply with NEMA/ANSI C136.31.
- 4. Other Available Features Required by the Project:
 - a. Fasteners: **[Stainless steel][Galvanized steel]<Insert finish or grade>**, size and type as determined by manufacturer. Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.

2.3 LIGHTING STANDARD ACCESSORIES

- A. Duplex Receptacle: Ground-fault circuit interrupter type, 120 V(ac), 20 A in a weatherproof assembly.
 - 1. **[Surface mounted][Recessed][12 inch]<Insert dimensions>** above finished grade.
 - a. UL 50E, **[Type 3R][Type 4X]**, nonmetallic polycarbonate plastic or reinforced fiberglass, enclosure with cover; color to match pole.
 - b. Lockable hasp and latch complying with OSHA lockout and tag-out requirements.
- B. Minimum 1800 W transformer, protected by replaceable fuses, mounted behind access cover.
- C. Base Covers: Manufacturers' standard metal units, finished same as pole, and arranged to cover pole's mounting bolts and nuts.
- D. Transformer-Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and to accept **[ballast(s)][indicated accessories]**. Include removable flanged access cover secured with bolts or screws.
- E. Decorative accessories, supplied by decorative pole manufacturer, include the following:
 - 1. Banner Arms: **<Insert material>**.
 - 2. Flag Holders: **<Insert material>**.
 - 3. Ladder Rests: **<Insert material>**.
- F. Lowering System for Luminaires:
 - 1. System Description: Capable of lowering luminaire **[assembly]** to a service position within **36 inch** of finished grade in winds up to **30 mile/h**. Provide manual plug connection to electrical power accessible in lowered position. Assembled system of pole, luminaire, and lowering device must be capable of loads specified in "Performance Requirements" Article.
 - 2. Compatibility of Material: Materials for attachment and connection of luminaire-mounting assembly, lowering device, lowering cable, and portable winch must be compatible to avoid corrosion and electrolysis.
 - 3. Structural and Mechanical Design Safety Factor: 5.0, minimum, for static and dynamic loads of

- load-bearing components, including cable.
4. Luminaire-Mounting and Disconnect Arrangement: Multiple **[ring][carriage]**-mounted luminaires, arranged for lowering and rising as a group.
 - a. Electrical cable for normal operating power to luminaires must manually disconnect inside pole base, using weatherproof multi-pin connector, and must be arranged to move within the pole during lowering and rising of luminaire assembly.
 - b. Electrical cable for normal operating power to luminaires must automatically disconnect at weatherproof multi-pin connector within the pole-top lowering head at the beginning of the lowering cycle and reconnect when luminaire or luminaire assembly is raised to the operating position.
5. Lowering Device: Weatherproof, cast-aluminum housing, and multiple mechanical latches. Moving parts of latching assembly must be located in the portion of the unit that is lowered to servicing position. Positive latching in the operating position must be indicated to the operator at the base of the pole by a clear visual signal or by other means acceptable to Owner or authorities having jurisdiction.
6. Lowering Cable: **[Zinc-electroplated-steel][or][stainless steel]** aircraft cable.
7. Portable Winch: **[Manual][120 V electric]** type. **[One]<Insert number>** required.
 - a. Winch Power Connection: Cord and plug.
 - b. Winch Raise-Lower Control: Remote-control station with **[15 ft]<Insert dimension>** of cable.

G. Mounting Hardware:

1. Anchor Bolts: Manufactured **[to ASTM F1554, Grade 55,]**with a minimum yield strength of **55,000 psi**.
 - a. Galvanizing: **[Hot-dip galvanized in accordance with ASTM A153/A153M, Class C][Mechanically deposited galvanization in accordance with ASTM B695, Class 50]**.
 - b. **[Bent][Headed]** rods **<Insert dimension>** in diameter by **<Insert dimension>** in length.
 - c. Threading: **[Uniform National Coarse][Uniform National 8]**, Class 2A.
2. Nuts: ASTM A563/A563M, Grade A, Heavy-Hex.
 - a. Galvanizing: **[Hot-dip galvanized in accordance with ASTM A153/A153M, Class C][Mechanically deposited galvanization in accordance with ASTM B695, Class 50]**.
 - b. **[Two][Four]<Insert number>** nuts provided per anchor bolt, **shipped with nuts preassembled to the anchor bolts**.
3. Washers: ASTM F436/F436M, Type 1.
 - a. Galvanizing: **[Hot-dip galvanized in accordance with ASTM A153/A153M, Class C][Mechanically deposited galvanization in accordance with ASTM B695, Class 50]**.
 - b. **[One][Two]<Insert number>** washer(s) provided per anchor bolt.

2.4 UTILITY POLES

A. Wood Utility Pole:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[Ace Pole Company]**
 - b. **[Baxter, J. H. & Co]**
 - c. **[Bell Lumber and Pole Company]**
 - d. **[Brown Wood Preserving Co., Inc.]**
 - e. **[Dayton Superior Corporation]**
 - f. **[Koppers Performance Chemicals]**
 - g. **[McFarland Cascade]**
 - h. **<Insert manufacturer's name>**
 2. Source Limitations: **[Obtain poles from single manufacturer or producer][For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties].**
 3. Standard Features:
 - a. Comply with ATIS O5.1 and RUS Bulletin 1728F-700, for wood poles pressure treated with **[creosote][pentachlorophenol][ammoniacal copper arsenate][ammoniacal copper zinc arsenate][and][chromated copper arsenate].**
 - b. Wood Species: **[Douglas fir][Lodgepole pine][Western larch][Southern yellow pine]<Insert wood species selected from ATIS O5.1>.**
 - c. Pole Marking:
 - 1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.
 - 2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high, with aluminum nails.
 - d. Factory Operations: Machine trim poles by turning smooth, full length. Roof, gain, and bore poles before pressure treatment.
- B. Concrete Utility Pole:**
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Accord Industries]**
 - b. **[Bayshore Concrete Products Corporation]**
 - c. **[CPI Concrete Products]**
 - d. **[StressCrete Group]**
 - e. **[Valmont Industries, Inc.]**
 - f. **<Insert manufacturer's name>**
 2. Source Limitations: **[Obtain poles from single manufacturer or producer][For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties].**
 3. Standard Features:
 - a. Spun-cast prestressed concrete, complying with requirements of ASTM C1089.
 - 1) Comply with requirements of RUS Bulletin 1724E-216.
 - b. Design: Base design on calculation of strength required by IEEE C2 or indicated on the Drawings, whichever is greater. Design must be suitable for installation at a location where annual temperature range is between **[minus 4 deg F and plus 100 deg F]<Insert design**

- c. **temperature range at site location**>. Include pole design for embedded attachments matching fittings, brackets, and other items installed in the field.
- d. Shaft: Hollow, for poles at overhead-to-underground connections. Provide metric designator 91 (trade size 3-1/2) minimum cable raceway capacity, with **[conduit elbow][cable entry port]** at base.
- e. Water Absorption: Not more than 3 percent.
- f. Surface: Smooth, hard, nonporous, and resistant to **[soil acids][road salts][frost and freezing damage]**.
- g. Pole Marking:
 - 1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.
 - 2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high.

2.5 UTILITY POLE ACCESSORIES

A. Crossarms:

1. Description: **[Solid-wood distribution type, complying with RUS Bulletin 1728H-701 for specified construction grade][Galvanized, steel angles]**, and complying with IEEE C2 for required climbing space and wire clearances.
2. Braces: Galvanized, flat, ferrous-metal units; **1/4 inch** thick by **1-1/4 inch** wide, minimum, with length to suit crossarm dimensions.

B. Guys and Anchors:

1. Guy Strand Assemblies: Cable and attachment assemblies must have uniform minimum breaking strength of the cable.
 - a. Cable: Seven strands. **[Zinc-coated steel, complying with ASTM A475][Aluminum-clad steel, complying with ASTM B416][Copper-clad steel, complying with ASTM B228]**. Breaking strength must be not less than **[10,000 lb]<Insert value>**.
 - b. Cable Termination:
 - 1) Thimble eye.
 - 2) Hooks and guy strain plates, complying with IEEE C135.1.
 - 3) Preformed galvanized-steel guy grips, matching material, galvanizing, and strength of the guy strand assembly.
2. Anchor and Anchor-Rod Assemblies: Hot-dip galvanized steel.
 - a. Power-installed, screw-type anchors.
 - 1) **15 inch** screw; with rod **8 ft** long by **1-1/2 inch** in diameter. Rated at **10,000 lb** when installed.
 - 2) Guy anchors must have strength and holding area as required for anchor load and soil conditions at location of that anchor.
 - b. **<Insert anchor size or type>**.
3. Strain Insulators: Epoxy-bonded fiberglass of length to meet clearance requirements specified in "Installation of Guys and Anchors" Subparagraph in "Installation of Utility Poles" Article.
4. Guy Markers: Round, of vinyl or PVC material, **[white][yellow]** color, **8 ft** long. Shatter resistant at temperatures below **0 deg F**.

PART 3 - EXECUTION

3.1 INSTALLATION OF FOUNDATIONS FOR POLES AND LIGHTING STANDARDS

- A. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."
- B. Precast Foundations: Factory fabricated, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."
- C. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories.
 - 1. Baseplate: Stamped with manufacturer's name, date of production, and cable entry.
- D. Direct-Buried Foundations: Install to depth indicated on the Drawings, but not less than **[one-sixth of pole height][as indicated]**. Add backfill **[in 6 to 9 inch layers, tamping each layer before adding the next][as indicated on the Drawings]**<Insert requirement>. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.
- E. Direct-Buried Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on the Drawings, but not less than **[one-sixth of pole height][as indicated]**. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.
 - 1. Make holes **6 inch** in diameter larger than pole diameter.
 - 2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of **3000 psi** at 28 days and finish in a dome above finished grade.
 - 3. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
 - 4. Cure concrete a minimum of 72 hours before performing work on pole.
- F. Anchor Bolts: Install plumb using manufacturer-supplied **[steel][plywood]** template, uniformly spaced.

3.2 INSTALLATION OF LIGHTING STANDARDS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:
 - 1. Electrical Construction: NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Safety: NFPA 70E.
 - 3. Hot Work: NFPA 51B.
 - 4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 - 5. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Alignment: **[Align foundations and lighting standards for optimum directional alignment of luminaires and their mounting provisions on lighting standards][Align lighting standards as indicated]**.
2. Clearances: Maintain the following minimum horizontal distances of lighting standards from surface and underground features unless otherwise indicated on the Drawings:
 - a. Fire Hydrants and Water Piping: **[60 inch]<Insert dimension>**.
 - b. Water, Gas, Electric, Communications, and Sewer Lines: **[10 ft]<Insert dimension>**.
 - c. Trees: **15 ft** from tree trunk.
 - d. **<Insert features and clearance dimensions>**.
3. Concrete Lighting Standard Foundations: Set anchor bolts in accordance with anchor-bolt templates furnished by manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 033000 "Cast-in-Place Concrete."
4. Foundation-Mounted Lighting Standards: Mount lighting standards with leveling nuts and tighten top nuts to torque level in accordance with manufacturer's published instructions.
 - a. Use anchor bolts and nuts selected to resist seismic forces specified for the application and approved by manufacturer.
 - b. Grout void between lighting standard base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
 - c. Install base covers unless otherwise indicated.
 - d. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of lighting standard.
5. Lighting Standards and Foundations Set in Concrete-Paved Areas: Install lighting standards with a minimum **6 inch** wide, unpaved gap between the lighting standard or foundation and the edge of the adjacent concrete slab. Fill unpaved ring with pea gravel. Insert material to a level **1 inch** below top of concrete slab.
6. Raise and set lighting standard using web fabric slings (not chain or cable) at locations indicated by manufacturer.
7. Corrosion Prevention:
 - a. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum using insulating fittings or treatment.
 - b. Steel Conduits: Comply with requirements in Section 260533.13 "Conduits for Electrical Systems." In concrete foundations, wrap conduit with **0.010 inch** thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

D. Interfaces with Other Work:

1. Grounding and Bonding: Bond metallic components of lighting standards and support structures as follows:
 - a. Provide insulated equipment grounding conductors with supply feeders for bonding luminaires and other pole-mounted electrical or electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.
 - b. Bond metallic components of luminaires, pole accessories, and foundation to insulated equipment grounding conductor.
2. Identification: Provide labels for lighting standards, components, wiring, cabling, terminals, and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.

- b. Label each enclosure with engraved metal or laminated-plastic nameplate.
- c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.3 INSTALLATION OF UTILITY POLES

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:
 - 1. Electrical Construction: **[IEEE C2][NFPA 70 and NECA NEIS 1]**.
 - 2. Electrical Safety: NFPA 70E.
 - 3. Hot Work: NFPA 51B.
 - 4. Grounding and Bonding: **[IEEE C2][NECA NEIS 331 and Article 250 of NFPA 70]**.
 - 5. Communications Work: BICSI N1.
 - 6. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
 - 1. Engage the services of a licensed surveyor to verify dimensions by field measurement, to identify locations of poles, anchors, and other features, and to verify all clearances. The survey document must also identify locations of connections to new and existing supply lines and to primary and secondary services. Notify Architect of discrepancies and field conditions that are not indicated and that will affect installation.
 - 2. Pole Orientation: Align curve of curved wood poles with straight-line runs of three or more poles. Align gained surfaces perpendicular to runs.
 - 3. Elevation of Line above Grade: Install poles with top at same elevation, unless grade changes dictate elevation change in poles, and in accordance with the following:
 - a. On level ground, set poles so tops of consecutive poles vary not more than **60 inch** in elevation.
 - b. Shorten wood poles by cutting off the top and make cuts to shed water. Apply preservative to cuts.
 - 4. Set poles in accordance with the following:
 - a. Make pole holes vertical, uniform in diameter, and large enough to permit effective use of tamping bars all around. Bore or excavate holes with an average diameter at grade less than twice the diameter of the pole at the same grade.
 - b. Use minimum depths indicated, except at locations where hole is partly or entirely in rock and if hole is not vertical or has a diameter at grade more than two times the pole diameter at the same level; in these conditions, increase the depth of the hole by the following increments before setting the pole:
 - 1) Poles up to 35 ft (10.6 m) Long: **24 inch**.
 - 2) Poles 36 to 60 ft (11 to 18.3 m) Long: **30 inch**.
 - 3) Poles 61 to 75 ft (18.6 to 22.9 m) Long: **36 inch**.
 - c. For poles on slopes, indicated hole depth is from finished grade at lowest side of hole.
 - d. Set poles in alignment and plumb except at dead ends, angles, and points of extra strain; rake poles against conductor strain **1 inch** minimum, **2 inch** maximum, (after conductors are installed at required tension) for each **10 ft** of pole length. Rake poles so they will not lean or bend in direction of strain when loaded.
 - e. Backfill holes in **6 inch** maximum lifts, and thoroughly tamp each layer before starting the

- next.
- f. Place surplus earth around pole in a conical shape, and tamp thoroughly to provide drainage away from pole.
 - g. Set poles so alternate crossarm gains face in alternate directions, except at terminals and dead ends; place gains on last two poles on side facing terminal or dead end.
 - h. Poles Set in Concrete Paved Areas: Install poles with minimum of **6 inch** wide, unpaved gap between the pole and the edge of adjacent concrete slab. Fill unpaved ring with **[pea gravel]**<Insert appropriate material> to a level **1 inch** below top of concrete slab.
5. Field treat factory-treated poles and crossarms as follows:
 - a. Poles Treated More Than One Year before Installation: Treat portion from **24 inch** above ground line to butt.
 - b. Field-Bored Holes and Field-Cut Gains and Pole Tops: Treat cut portions.
 - c. Unused Holes: Treat and plug with treated-wood-dowel drive pins.
 - d. Engage the services of qualified wood pole and crossarm treatment technician to apply treatment. Comply with requirements in AWWPA standards that govern original factory treatment for field-applied treatment and application of chemicals.
 6. Installation of Crossarms: Set line crossarms at right angle to line for straight runs and for angles 45 degrees and more. Bisect angles less than 45 degrees.
 - a. Buck Arms: Install at corners and junction poles unless otherwise indicated.
 - b. Double Crossarms: Install at dead ends, corners, angles, and line crossings.
 - c. Equipment Arms: Locate below lines and set parallel or at right angles to them, whichever provides best climbing space.
 - d. Gains: Install factory-cut or metal-pole gains only. Do not cut gains in field without specific written approval.
 7. Installation of Guys and Anchors:
 - a. Install guys to resist unbalanced loads, including those developed at angles, corners, and dead ends. Install two or more guys if a single guy will not provide adequate strength. Install separate guys if unbalanced loads are separated by **36 inch** or more. Comply with IEEE C2.
 - 1) Unless a thimble eye is used, at the pole end, install a minimum of two guy hooks and two guy strain plates.
 - 2) At the anchor end, attach guy strand assembly with preformed grips.
 - b. Protect guy strands from damage. Replace damaged guy strands. Install guy insulators where required to comply with IEEE C2 clearance requirements.
 - c. Install guys with a lead-to-height ratio of 1 to 1 unless otherwise indicated. The minimum lead-to-height ratio must be 1/2 to 1. When less than 1 to 1, increase guy strength by the ratio of the sine of the lead angle indicated to the sine of the lead angle provided.
 - d. Install screw-type guy anchors aligned in soil with guy. Set with anchor rod pointing at guy attachment on pole and rod projecting **6 to 9 inch** from ground.
 - e. Install strain insulators to provide a minimum of **12 inch** of clearance between the nearest energized surface and the strain insulator fitting farthest from the pole. When loaded to the tension indicated, fiberglass strain insulators must be loaded to not more than two-thirds of manufacturer's published rating.
 8. Guy Markers: Install at anchor end of guys to visually mark the guy wire at all accessible locations. Clamp to guy strand or anchor at top and bottom of marker.

D. Interfaces with Other Work:

1. Grounding and Bonding:
 - a. Comply with [IEEE C2][NFPA 70] grounding and bonding requirements.
 - b. Ground Rods: [Copper-clad][Zinc-coated][Stainless] steel[, sectional type]; [3/4 inch by 10 ft][5/8 inch by 8 ft].
 - 1) Install [two]<Insert number> parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 Ω .
 - 2) Drive ground rods until tops are **12 inch** below finished grade in undisturbed earth.
 - c. Grounding (Earthing) Conductors:
 - 1) 4 AWG minimum, soft-drawn copper.
 - 2) Conductor Protectors for Wood Poles: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communications service and transformer spaces.
 - 3) Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
 - 4) Lightning Arrester Grounding Conductors: Separate from other grounding conductors.
 - d. Bonding Conductors: Provide equipment grounding conductors with supply feeders for bonding pole-mounted electrical and electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.
2. Identification: Provide labels for poles, components, wiring, cabling, terminals, and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
 - d. Locate pole numbers to provide maximum visibility from the road or patrol route.

3.4 FIELD QUALITY CONTROL

- A. Administrant for Electrical Power Tests and Inspections:
 1. [Owner][Tenant] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
 2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- B. Acceptance Testing Preparation:
 1. <Insert requirements>.
- C. Field tests and inspections must be witnessed by [Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.

D. Tests and Inspections:

1. Inspect poles for nicks, mars, dents, scratches, and other damage.
2. System function tests.
3. Guy Anchors: Test one of each type and capacity installed[, **plus additional units specifically indicated for testing**]. Apply rated pull-out force in the same pull direction applied by the guy at the test location.
 - a. Acceptable Test Results: Denoted by movement of less than **3/8 inch** by the holding component of the anchor in the earth or other medium in which it is installed.
 - b. Replace or reinstall, at Architect's option, all anchors of same type and capacity as anchor type that fails this test.
4. Pole Ground Resistance: Measure resistance of each separate grounding electrode, including pole grounds. Also measure resistance of separate grounding electrode systems before bonding together.
 - a. Perform tests and obtain acceptable results before energizing any portion of overhead electrical distribution system.
 - b. Results and Follow-up: If ground resistance for a single ground electrode or pole ground, tested individually, exceeds 25 Ω , add a ground electrode not less than **10 ft** away and interconnect with 2 AWG, minimum, bare conductor buried at least **12 inch** below furnished grade.
5. **<Insert special inspections>**.

E. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 53 00 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Labels.
2. Extruded insulating tubing.
3. Bands.
4. Tapes and stencils.
5. Tags.
6. Signs.
7. Cable ties.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 284600 "Fire Detection and Alarm"[**and Section 284614 "Single- and Multiple-Station Alarms"**] specifies fire detection and alarm devices referenced in this Section.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.
- C. Identification Schedule: For each piece of electrical equipment and electrical system components to be index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.1 LABELS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN PGDQ2 for components; including UL 969.

B. UL PGDQ2 - Vinyl Wraparound Labels: Preprinted, flexible labels laminated with clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Champion America]**
 - c. **[emedco]**
 - d. **[Grafoplast Wire Markers]**
 - e. **[HellermannTyton]**
 - f. **[LEM Products Inc.]**
 - g. **[Marking Services Inc.]**
 - h. **[Panduit Corp]**
 - i. **[Seton Identification Products; a Brady Corporation company]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Champion America]**
 - c. **[emedco]**
 - d. **[Grafoplast Wire Markers]**
 - e. **[HellermannTyton]**
 - f. **[LEM Products Inc.]**
 - g. **[Marking Services Inc.]**
 - h. **[Panduit Corp]**
 - i. **[Seton Identification Products; a Brady Corporation company]**
 - j. **<Insert manufacturer's name>**

C. UL PGDQ2 - Self-Adhesive Wraparound Labels: **[Preprinted][Write-on]**, **3 mil (0.08 mm)** thick, **[polyester][vinyl]** flexible label with acrylic pressure-sensitive adhesive.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[A'n D Cable Products]**
 - b. **[Brady Corporation]**
 - c. **[Brother International Corporation]**
 - d. **[emedco]**
 - e. **[Grafoplast Wire Markers]**
 - f. **[Ideal Industries, Inc.]**
 - g. **[LEM Products Inc.]**
 - h. **[Marking Services Inc.]**
 - i. **[Panduit Corp]**
 - j. **[Seton Identification Products; a Brady Corporation company]**
 - k. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[A'n D Cable Products]**
 - b. **[Brady Corporation]**
 - c. **[Brother International Corporation]**
 - d. **[emedco]**
 - e. **[Grafoplast Wire Markers]**
 - f. **[Ideal Industries, Inc.]**
 - g. **[LEM Products Inc.]**
 - h. **[Marking Services Inc.]**
 - i. **[Panduit Corp]**
 - j. **[Seton Identification Products; a Brady Corporation company]**
 - k. **<Insert manufacturer's name>**
3. Self-Lamination: Clear; UV-, weather-, and chemical-resistant; self-laminating, with protective shield over legend. Size labels such that clear shield overlaps entire printed legend.
 4. Marker for Labels:
 - a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
 - b. Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.
- D. UL PGDQ2 - Self-Adhesive Labels: **[Polyester][Vinyl]**, thermal, transfer-printed, **3 mil (0.08 mm)** thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[A'n D Cable Products]**
 - b. **[Brady Corporation]**
 - c. **[Brother International Corporation]**
 - d. **[emedco]**
 - e. **[Grafoplast Wire Markers]**
 - f. **[HellermannTyton]**
 - g. **[Ideal Industries, Inc.]**
 - h. **[LEM Products Inc.]**
 - i. **[Marking Services Inc.]**
 - j. **[Panduit Corp]**
 - k. **[Seton Identification Products; a Brady Corporation company]**
 - l. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[A'n D Cable Products]**
 - b. **[Brady Corporation]**
 - c. **[Brother International Corporation]**
 - d. **[emedco]**
 - e. **[Grafoplast Wire Markers]**
 - f. **[HellermannTyton]**
 - g. **[Ideal Industries, Inc.]**
 - h. **[LEM Products Inc.]**

- i. **[Marking Services Inc.]**
- j. **[Panduit Corp]**
- k. **[Seton Identification Products; a Brady Corporation company]**
- l. **<Insert manufacturer's name>**

3. Minimum Nominal Size:

- a. **1-1/2 by 6 inch (37 by 150 mm)** for raceway and conductors.
- b. **3-1/2 by 5 inch (76 by 127 mm)** for equipment.
- c. As required by authorities having jurisdiction.

2.2 EXTRUDED INSULATING TUBING

A. Performance Criteria:

- 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- 2. Listing Criteria: UL CCN YDPU2 for components; including UL 224.

B. UL YDPU2 - Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at maximum of **200 deg F (93 deg C)**.

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Panduit Corp]**
 - c. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Panduit Corp]**
 - c. **<Insert manufacturer's name>**

2.3 BANDS

A. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**

- b. [HellermannTyton]
 - c. [Marking Services Inc.]
 - d. [Panduit Corp]
 - e. [Seton Identification Products; a Brady Corporation company]
 - f. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Brady Corporation]
 - b. [HellermannTyton]
 - c. [Marking Services Inc.]
 - d. [Panduit Corp]
 - e. [Seton Identification Products; a Brady Corporation company]
 - f. <Insert manufacturer's name>
- B. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inch (50 mm) long, with diameters sized to suit diameters and that stay in place by gripping action.
- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Brady Corporation]
 - b. [HellermannTyton]
 - c. [Marking Services Inc.]
 - d. [Panduit Corp]
 - e. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Brady Corporation]
 - b. [HellermannTyton]
 - c. [Marking Services Inc.]
 - d. [Panduit Corp]
 - e. <Insert manufacturer's name>

2.4 TAPES AND STENCILS

- A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [Champion America]
 - d. [HellermannTyton]

- e. **[Ideal Industries, Inc.]**
 - f. **[Marking Services Inc.]**
 - g. **[Panduit Corp]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[Champion America]**
 - d. **[HellermannTyton]**
 - e. **[Ideal Industries, Inc.]**
 - f. **[Marking Services Inc.]**
 - g. **[Panduit Corp]**
 - h. **<Insert manufacturer's name>**
- B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than **3 mil (0.08 mm)** thick by **1 to 2 inch (25 to 50 mm)** wide; compounded for outdoor use.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **<Insert manufacturer's name>**
- C. Tape and Stencil: **4 inch (100 mm)** wide black stripes on **10 inch (250 mm)** centers placed diagonally over orange background and are **12 inch (300 mm)** wide. Stop stripes at legends.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[HellermannTyton]**
 - b. **[LEM Products Inc.]**
 - c. **[Marking Services Inc.]**
 - d. **[Pipemarker.com; Brimar Industries, Inc.]**
 - e. **[Seton Identification Products; a Brady Corporation company]**

- f. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [HellermannTyton]
 - b. [LEM Products Inc.]
 - c. [Marking Services Inc.]
 - d. [Pipemarker.com; Brimar Industries, Inc.]
 - e. [Seton Identification Products; a Brady Corporation company]
 - f. <Insert manufacturer's name>
- D. Floor Marking Tape: 2 inch (50 mm) wide, 5 mil (0.125 mm) pressure-sensitive vinyl tape, with [black and white][yellow and black] stripes and clear vinyl overlay.
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [Seton Identification Products; a Brady Corporation company]
 - d. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [Seton Identification Products; a Brady Corporation company]
 - d. <Insert manufacturer's name>
- E. Underground-Line Warning Tape:
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Brady Corporation]
 - b. [Ideal Industries, Inc.]
 - c. [LEM Products Inc.]
 - d. [Marking Services Inc.]
 - e. [Pipemarker.com; Brimar Industries, Inc.]
 - f. [Reef Industries, Inc.]
 - g. [Seton Identification Products; a Brady Corporation company]
 - h. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Brady Corporation]

- b. [Ideal Industries, Inc.]
 - c. [LEM Products Inc.]
 - d. [Marking Services Inc.]
 - e. [Pipemarker.com; Brimar Industries, Inc.]
 - f. [Reef Industries, Inc.]
 - g. [Seton Identification Products; a Brady Corporation company]
 - h. <Insert manufacturer's name>
3. Tape:
- a. Recommended by manufacturer for method of installation and suitable to identify and locate underground electrical **[and communications]** utility lines.
 - b. Printing on tape must be permanent and may not be damaged by burial operations.
 - c. Tape material and ink must be chemically inert and not be subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
4. Color and Printing:
- a. Comply with APWA Uniform Color Code using NEMA Z535.1 safety colors.
 - b. Inscriptions for Red Tapes: **["CAUTION BURIED ELECTRIC LINE BELOW"]<Insert inscription>**.
 - c. Inscriptions for Orange Tapes: **["CAUTION BURIED CATV LINE BELOW"]**["CAUTION BURIED TELEPHONE LINE BELOW"]**["CAUTION BURIED FIBER OPTIC LINE BELOW"]**["CAUTION BURIED COMMUNICATION LINE BELOW"]<Insert inscription>****.****
5. Nonconducting Line-Warning Tape :
- a. Pigmented polyolefin, bright colored, **[continuous-printed on one side with inscription of utility]**, compounded for direct-burial service.
 - b. Width: **3 inch (75 mm)**.
 - c. Thickness: **4 mil (0.1 mm)**.
 - d. Weight: **18.5 lb/1000 sq. ft (9.0 kg/100 sq. m)**.
 - e. Tensile in accordance with ASTM D882: **30 lbf (133.4 N) and 2500 psi (17.2 MPa)**.
6. Reinforced Nonconducting Line-Warning Tape :
- a. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, **[continuous-printed on one side with inscription of utility]**, compounded for direct-burial service.
 - b. Width: **3 inch (75 mm)**.
 - c. Thickness: **12 mil (0.3 mm)**.
 - d. Weight: **36.1 lb/1000 sq. ft (17.6 kg/100 sq. m)**.
 - e. Tensile in accordance with ASTM D882: **400 lbf (1780 N) and 11,500 psi (79.2 MPa)**.
7. Detectable Line-Warning Tape :
- a. Detectable three-layer laminate, consisting of printed pigmented polyolefin film, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright colored, **[continuous-printed on one side with inscription of utility]**, compounded for direct-burial service.
 - b. Width: **3 inch (75 mm)**.
 - c. Overall Thickness: **5 mil (0.125 mm)**.
 - d. Foil Core Thickness: **0.35 mil (8.9 m)**.
 - e. Weight: **28 lb/1000 sq. ft (13.7 kg/100 sq. m)**.
 - f. Tensile in accordance with ASTM D882: **70 lbf (311.3 N) and 4600 psi (31.7 MPa)**.

8. Reinforced Detectable Line-Warning Tape :

- a. Reinforced, detectable three-layer laminate, consisting of printed pigmented woven scrim, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright-colored, [**continuous-printed on one side with inscription of utility**], compounded for direct-burial service.
- b. Width: **3 inch (75 mm)**.
- c. Overall Thickness: **8 mil (0.2 mm)**.
- d. Foil Core Thickness: **0.35 mil (8.9 m)**.
- e. Weight: **34 lb/1000 sq. ft (16.6 kg/100 sq. m)**.
- f. Tensile in accordance with ASTM D882: **300 lbf (1334 N)** and **12,500 psi (86.1 MPa)**.

F. Concrete Cable Route Markers :

1. Description: Concrete markers visually aid tracing the route of electrical cables. Monument markers are typically installed at grade. Protective cover markers are typically installed above the cables at grade or below grade.
2. Product Characteristics:

- a. Material: Precast reinforced concrete.
- b. Marker Type:
 - 1) Above-Ground Monument Post:
 - a) Nominal Dimensions (Height, Width, Depth): **30 inch (760 mm), 6 inch (150 mm), 3 inch (75 mm)**.
 - 2) Above-Ground Monument Block:
 - a) Nominal Dimensions (Height, Width, Depth): [**12 inch (300 mm), 12 inch (300 mm), 6 inch (150 mm)**][**24 inch (600 mm), 24 inch (600 mm), 4 inch (100 mm)**].
 - 3) In-Ground Protective Cover (Plank or Slab):
 - a) Nominal Dimensions (Length, Width, Depth): [**36 inch (914 mm), 6 inch (150 mm), 2 inch (50 mm)**][**36 inch (914 mm), 9 inch (230 mm), 2 inch (50 mm)**][**12 inch (305 mm), 12 inch (305 mm), 2 inch (50 mm)**][**24 inch (610 mm), 12 inch (305 mm), 2 inch (50 mm)**][**36 inch (914 mm), 12 inch (305 mm), 2 inch (50 mm)**].
- c. Legend: [**"DANGER - ELECTRICITY"**][**"ELECTRIC CABLES"**][**"ELECTRIC SPLICE"**].
- d. Lettering: Approximately **1/8 inch (3 mm)** deep, not less than [**1 inch (25 mm)**][**1.5 inch (38 mm)**] high, symmetrically spaced; marked on both sides to allow for reversal.

3. Required Product Options:

- a. Color: [**Red**]**<Insert color>** dye added to concrete during batching.
- b. Attach metal medallion or sign stamped with [**feeder number**]**<Insert required information>**.

G. Stenciled Legend: In nonfading, waterproof, [**black**]**<Insert color>** ink or paint. Minimum letter height must be [**1 inch (25 mm)**]**<Insert dimension>**.

2.5 TAGS

- A. Metal Tags: Brass or aluminum, **2 by 2 by 0.05 inch (50 by 50 by 1.3 mm)**, with stamped legend, punched for use with self-locking cable tie fastener.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **[Seton Identification Products; a Brady Corporation company]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **[Seton Identification Products; a Brady Corporation company]**
 - f. **<Insert manufacturer's name>**
- B. Nonmetallic Preprinted Tags: Polyethylene tags, **[0.015 inch (0.38 mm)][0.023 inch (0.58 mm)]** thick, color-coded for phase and voltage level, with factory **[screened][printed]** permanent designations; punched for use with self-locking cable tie fastener.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Grafoplast Wire Markers]**
 - e. **[LEM Products Inc.]**
 - f. **[Marking Services Inc.]**
 - g. **[Panduit Corp]**
 - h. **[Seton Identification Products; a Brady Corporation company]**
 - i. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Grafoplast Wire Markers]**

- e. [LEM Products Inc.]
- f. [Marking Services Inc.]
- g. [Panduit Corp]
- h. [Seton Identification Products; a Brady Corporation company]
- i. <Insert manufacturer's name>

C. Write-on Tags:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [LEM Products Inc.]
 - d. [Pipemarker.com; Brimar Industries, Inc.]
 - e. [Seton Identification Products; a Brady Corporation company]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [LEM Products Inc.]
 - d. [Pipemarker.com; Brimar Industries, Inc.]
 - e. [Seton Identification Products; a Brady Corporation company]
 - f. <Insert manufacturer's name>
3. Polyester Tags: **[0.010 inch (0.25 mm)][0.015 inch (0.38 mm)]<Insert dimension>** thick, with corrosion-resistant grommet and cable tie for attachment.
4. Marker for Tags:
 - a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
 - b. Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.6 SIGNS

A. Baked-Enamel Signs:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Brady Corporation]
 - b. [Carlton Industries, LP]
 - c. [Champion America]
 - d. [emedco]
 - e. [Marking Services Inc.]
 - f. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[Champion America]**
 - d. **[emedco]**
 - e. **[Marking Services Inc.]**
 - f. **<Insert manufacturer's name>**
3. Preprinted aluminum signs, **[high-intensity reflective,]**punched or drilled for fasteners, with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **7 by 10 inch (180 by 250 mm)**.

B. Metal-Backed Butyrate Signs:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Champion America]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Brady Corporation]**
 - b. **[Champion America]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **<Insert manufacturer's name>**
3. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with **0.0396 inch (1 mm)** galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **10 by 14 inch (250 by 360 mm)**.

C. Laminated Acrylic or Melamine Plastic Signs:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**

- d. **[Marking Services Inc.]**
 - e. **[Seton Identification Products; a Brady Corporation company]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Brady Corporation]**
 - b. **[Carlton Industries, LP]**
 - c. **[emedco]**
 - d. **[Marking Services Inc.]**
 - e. **[Seton Identification Products; a Brady Corporation company]**
 - f. **<Insert manufacturer's name>**
3. Engraved legend.
4. Thickness:
- a. For signs up to **20 sq. inch (129 sq. cm)**, minimum **1/16 inch (1.6 mm)** thick.
 - b. For signs larger than **20 sq. inch (129 sq. cm)**, **1/8 inch (3.2 mm)** thick.
 - c. Engraved legend with **[black letters on white face][white letters on dark gray background]<Insert colors>**.
 - d. **[Punched or drilled for mechanical fasteners with 1/4 inch (6.4 mm) grommets in corners for mounting][Self-adhesive]**.
 - e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 CABLE TIES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[HellermannTyton]**
 2. **[Ideal Industries, Inc.]**
 3. **[Marking Services Inc.]**
 4. **[Panduit Corp]**
 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[HellermannTyton]**
 2. **[Ideal Industries, Inc.]**
 3. **[Marking Services Inc.]**
 4. **[Panduit Corp]**
 5. **<Insert manufacturer's name>**
- C. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 2. Listing Criteria: UL CCN ZODZ; including UL 1565 or UL 62275.
- D. UL ZODZ - General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and

Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black, except where used for color-coding.

E. UL ZODZ - UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black.

F. UL ZODZ - Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **7000 psi (48.2 MPa)**.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: **Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C)**.
5. Color: Black.

PART 3 - EXECUTION

3.1 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection[**and fire-alarm**] equipment[, **including raceways**,] must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than [7.7 ft (2.3 m)]<Insert height> above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1[**and IEEE C2**].

C. Color-Coding for Phase- and Voltage-Level Identification, 1000 V or Less: Use colors listed below for ungrounded [service][feeder][and][branch-circuit] conductors.

1. Color must be factory applied[**or field applied for sizes larger than 6 AWG when permitted by authorities having jurisdiction**].
2. Colors for 208Y/120 V Circuits:
 - a. Phase A: Black.

- b. Phase B: Red.
 - c. Phase C: Blue.
- 3. Colors for 240 V Circuits:
 - a. Phase A: Black.
 - b. Phase B: Red.
- 4. Colors for 480Y/277 V Circuits:
 - a. Phase A: Brown.
 - b. Phase B: Orange.
 - c. Phase C: Yellow.
- 5. Color for Neutral (Grounded Conductor): **[White][or][gray]**.
- 6. Color for Equipment Ground: **[Bare copper][Green][Green with yellow stripe]**.
- 7. Color for Isolated Ground: Green with two or more yellow stripes.
- D. Color-Coding Raceways, Cable Trays, Junction Boxes, and Conductors for Intrinsically-Safe Circuits: Light blue. When used to identify intrinsically-safe circuits, Article 504 of NFPA 70 requires that the color light blue not be used for any other purpose.
- E. Color-Coding Instructional Signs: Self-adhesive labels, including color code for grounded and ungrounded conductors.
- F. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:
 - 1. "EMERGENCY POWER."
 - 2. "POWER."
 - 3. "UPS."
 - 4. **<Insert name>**.
- G. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.
- H. Locations of Underground Lines: Underground-line warning tape for power and lighting.
- I. Vaults, Manholes, Handholes, and Pull and Junction Boxes, More Than 1000 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use **[write-on tags][nonmetallic preprinted tags colored and marked to indicate phase, and separate tag with circuit designation]**.
- J. Concealed Raceways, Duct Banks, More Than 1000 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with **3 inch (75 mm)** high, black letters on **20 inch (500 mm)** centers.
 - 1. Locate identification at changes in direction, at penetrations of walls and floors, and at **[10 ft (3 m)][30 ft (9 m)]** maximum intervals.
 - 2. Identify system voltage[**and system or service type**] with black letters on orange field.
 - 3. Apply floor marking tape to the following finished surfaces:
 - a. Floor surface directly above conduits running beneath and within **12 inch (300 mm)** of floor that is in contact with earth or is framed above unexcavated space.
 - b. Wall surfaces directly external to raceways concealed within wall.
 - c. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in building, or concealed above suspended ceilings.

- K. Accessible Raceways, Armored and Metal-Clad Cables, More Than 1000 V: **[Vinyl wraparound labels][Snap-around labels][Self-adhesive labels][Snap-around color-coding bands for raceway and cables]**.
1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
 2. Identify system voltage[**and system or service type**] with black letters on orange field.
- L. Vaults, Manholes, Handholes, and Pull and Junction Boxes, 1000 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use **[vinyl wraparound labels][self-adhesive wraparound labels][snap-around labels][snap-around color-coding bands][self-adhesive vinyl tape]** to identify phase.
1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
 2. Identify system voltage[**and system or service type**] with **[black letters on orange field]<Insert color scheme>**.
- M. Accessible Raceways and Metal-Clad Cables, 1000 V or Less, for Service, Feeder, and Branch Circuits, More Than **[30]<Insert number> A** and **[120]<Insert number> V** to Ground: Identify with self-adhesive **[raceway labels][vinyl tape applied in bands]**.
1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
 2. Identify system voltage[**and system or service type**] with **[black letters on orange field]<Insert color scheme>**.
- N. Conductors to Be Extended in Future: Attach **[write-on tags][marker tape]** to conductors[**and list source**].
- O. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Label cover plate with the following information, in the order listed:
1. Panelboard designation.
 2. Colon or dash.
 3. Branch circuit number.
- P. Workspace Indication: Apply **[floor marking tape][or][tape and stencil]** to finished surfaces. Show working clearances in direction of access to live parts. Workspace must comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.
- Q. Equipment Identification Labels:
1. Black letters on white field.
 2. Indoor Equipment: **[Self-adhesive label][Baked-enamel signs][Metal-backed butyrate signs][Laminated acrylic or melamine plastic sign]**.
 3. Outdoor Equipment: **[Laminated acrylic or melamine sign][Stenciled legend 4 inch (100 mm) high]**.
 4. Equipment to Be Labeled:
 - a. Racks, Frames, and Enclosures: Identify front and rear of each with self-adhesive labels[**containing equipment designation**].
 - b. Panelboards: Typewritten directory of circuits in location provided by panelboard manufacturer. Panelboard identification must be in form of **[self-adhesive,**

- c. **engraved,][engraved,]** laminated acrylic or melamine label.
- d. Enclosures and electrical cabinets.
- e. Access doors and panels for concealed electrical items.
- f. Switchgear.
- g. Switchboards.
- h. Transformers: Label that includes tag designation indicated on Drawings for transformer, feeder, and panelboards or equipment supplied by secondary.
- i. Substations.
- j. Emergency system boxes and enclosures.
- k. Motor-control centers.
- l. Enclosed switches.
- m. Enclosed circuit breakers.
- n. Enclosed controllers.
- o. Variable-speed controllers.
- p. Push-button stations.
- q. Power-transfer equipment.
- r. Contactors.
- s. Remote-controlled switches, dimmer modules, and control devices.
- t. Uninterruptible power supplies.
- u. Battery-inverter units.
- v. Battery racks.
- w. Power-generating units.
- x. Monitoring and control equipment.
- x. **<Insert equipment>.**

R. Cable Ties: General purpose, for attaching tags, except as listed below:

- 1. Outdoors: UV-stabilized nylon.
- 2. In Spaces Handling Environmental Air: Plenum rated.

3.3 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

- 1. Safety Colors: NEMA Z535.1.
- 2. Facility Safety Signs: NEMA Z535.2.
- 3. Safety Symbols: NEMA Z535.3.
- 4. Product Safety Signs and Labels: NEMA Z535.4.
- 5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

- 1. Arc-Flash Hazard Warning: Self-adhesive labels. Comply with **[NFPA 70E][and][Section 260573 "Power System Studies"]** requirements for arc-flash hazard warning labels.
- 2. Raceways and Cables Carrying Circuits at More Than 1000 V:
 - a. Black letters on orange field.
 - b. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."
- 3. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
- 4. OSHA Workspace Clearance Warning Legend: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 3 FEET MINIMUM."

5. **<Insert names and wording of warning signs or labels (for example, multiple services and voltages, and others>.**
 - D. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: **[Self-adhesive labels][Baked-enamel warning signs][Metal-backed, butyrate warning signs]**.
 1. Apply to exterior of door, cover, or other access.
 2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:
 - a. Power-transfer switches.
 - b. Controls with external control power connections.
 - c. **<Insert items>.**
 - E. Operating Instruction Signs: **[Self-adhesive labels][Baked-enamel warning signs][Metal-backed, butyrate warning signs][Laminated acrylic or melamine plastic signs]**.
 - F. Emergency Operating Instruction Signs: **[Self-adhesive labels][Baked-enamel warning signs][Metal-backed, butyrate warning signs][Laminated acrylic or melamine plastic signs]** with white legend on red background with minimum **3/8 inch (10 mm)** high letters for emergency instructions at equipment used for **[power transfer][load shedding]<Insert emergency operations>.**
- 3.4 SELECTION OF IDENTIFICATION PRODUCTS FOR COMMUNICATIONS, CONTROL, AUXILIARY, AND LIFE SAFETY SYSTEMS
- A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."
- 3.5 INSTALLATION
- A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.
 - B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes typical for electrical equipment environments specified in Section 018116 "Facility Environmental Requirements" and Section 260010 "Supplemental Requirements for Electrical."
 - C. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).
 - D. Fasteners for Labels and Signs: Self-tapping, stainless steel screws or stainless steel machine screws with nuts and flat and lock washers.
 - E. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.
 - F. Install identifying devices before installing acoustical ceilings and similar concealment.
 - G. Verify identity of item before installing identification products.

- H. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.
- I. Apply identification devices to surfaces that require finish after completing finish work.
- J. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.
- K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.
- L. Vinyl Wraparound Labels:
 - 1. Secure tight to surface of raceway or cable at location with high visibility and accessibility.
 - 2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to location and substrate.
- M. Snap-Around Labels: Secure tight to surface at location with high visibility and accessibility.
- N. Self-Adhesive Wraparound Labels: Secure tight to surface at location with high visibility and accessibility.
- O. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.
- P. Heat-Shrink, Preprinted Tubes: Secure tight to surface at location with high visibility and accessibility.
- Q. Marker Tapes: Secure tight to surface at location with high visibility and accessibility.
- R. Self-Adhesive Vinyl Tape: Secure tight to surface at location with high visibility and accessibility.
 - 1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for minimum distance of **6 inch (150 mm)** where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.
- S. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.
- T. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's instructions.
- U. Underground Line Warning Tape:
 - 1. During backfilling of trenches, install continuous underground-line warning tape not less than **12 inch (300 mm)** directly above cables or raceways buried **18 inch (450 mm)** or more below grade. Use multiple tapes where width of multiple lines installed in common trench [**or concrete envelope**]exceeds **16 inch (400 mm)** overall.
 - 2. Limit use of underground-line warning tape to direct-buried cables.
 - 3. Install underground-line warning tape for direct-buried cables and cables in raceways.
- V. Concrete Cable Route Markers: **[As indicated on Drawings]<Insert Project-specific requirements>**.
- W. Metal Tags:
 - 1. Place in location with high visibility and accessibility.
 - 2. Secure using **[general-purpose][UV-stabilized][plenum-rated]** cable ties.

-
- X. Nonmetallic Preprinted Tags:
 - 1. Place in location with high visibility and accessibility.
 - 2. Secure using **[general-purpose][UV-stabilized][plenum-rated]** cable ties.
 - Y. Write-on Tags:
 - 1. Place in location with high visibility and accessibility.
 - 2. Secure using **[general-purpose][UV-stabilized][plenum-rated]** cable ties.
 - Z. Baked-Enamel Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.
 - AA. Metal-Backed Butyrate Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.
 - BB. Laminated Acrylic or Melamine Plastic Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

END OF SECTION 26 05 53 00

Task	Specification	Specification Description
26 05 53 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 83 00	26 05 13 00	Medium-Voltage Cables
26 05 83 00	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 83 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 00 00 - ADDRESSABLE LUMINAIRE LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bus power supply.
2. Controller/gateways.
3. User interface.
4. Lighting control system management software.
5. Luminaire switching and dimming modules.
6. Ballast switching and dimming modules.
7. Sensors.
8. Relays.
9. Manual switches and plates.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. DALI: Digital addressable lighting interface.
- B. Data Bus: Two wires used to communicate with bus connected devices.
- C. Device: A collective term for DALI-compliant bus connected devices, including fluorescent ballasts, incandescent luminaires, manual switches, switching relays, and similar. Sometimes also called "slave unit."
- D. Group: A set of devices that respond at the same time to messages on the data bus.
- E. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- F. Scene: Digital light level associated with a preset; stored in the luminaire ballast.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches

- and plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sound data including results of operational tests of central dimming controls.
4. Operational documentation for software and firmware.

B. Shop Drawings:

1. Floor Plans: Location, orientation, and coverage area of each sensor; group designations; and other specific design symbols and designations as required to define the installation, location, and configuration of all control devices.
2. Address Drawing: Reflected ceiling plan and floor plans, showing data-bus-connected devices, address for each device, and device groups. The plans must be based on construction plans, using the same legend, symbols, and schedules.
3. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads connected to each data bus and total connected load for each data bus. Include percentage of rated connected load and device addresses.
4. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
6. Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in **[Section 230923 "Direct Digital Control (DDC) System for HVAC."]****<Insert Section number and title.>**
 - a. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.
 - b. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Sample Warranty: For manufacturer's special warranty.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Bus Power Supplies: Equal to **[two]<Insert number>** percent of amount installed, but no fewer than **[two]<Insert number>**.
 2. Controller/Gateways: Equal to **[two]<Insert number>** percent of amount installed, but no fewer than **[two]<Insert number>**.
 3. Incandescent Switching and Dimming Modules: Equal to **[two]<Insert number>** percent of amount installed, but no fewer than **[two]<Insert number>**.
 4. Fluorescent Ballasts: Equal to **[two]<Insert number>** percent of amount installed, but no fewer than **[two]<Insert number>**.

5. Lighting Control Relays: Equal to **[two]<Insert number>** percent of amount installed, but no fewer than **[two]<Insert number>**.

1.6 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Software: Failure of input and output to execute switching or dimming commands.
 - b. Failure of modular relays to operate under manual or software commands.
 - c. Ballast failure.
 - d. Damage of electronic components due to transient voltage surges.
 2. Warranty Periods:
 - a. For DALI Ballasts: **[Three]<Insert number>** years from date of Substantial Completion.
 - b. For Control Components That Are Not Part of Ballasts: **[Three]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. DALI:
 1. Components: Individually addressable devices (such as ballasts, relays, dimmers, and switches) that are operated from digital signals received through a DALI-compliant bus, from data-entry and -retrieval devices (such as computers, Internet portals, hand-held IR programming devices, wired Ethernet hubs, wireless IEEE 802.11 hubs[, **and<Insert digital communications device>**]). Devices also report status to data-entry and -retrieval devices through the bus.
 2. Digital Control: Use peer-to-peer communication and distributed logic, where the failure of any single component must be automatically isolated and not affect global system functions.
- B. Ethernet LAN:
 1. Provide an Ethernet LAN to connect controller/gateways to a PC running a Microsoft Windows operating system. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."
 2. Ethernet Protocols: Comply with and be compatible with 10/100 BaseT TCP/IP routers and networks.
 3. TCP/IP Modem: Capable of maintaining a secure Internet connection using VPN or equivalent protocol.
- C. Interface with HVAC DDC System: Hardware and software must interface with HVAC DDC system to monitor, control, display, and record data for use in processing reports. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>**.

- b. Control: On-off operation, **<Insert control point>**.
 2. Communication Interface: Comply with **[ASHRAE 135]<Insert type of interface>**.
Communication must interface with HVAC DDC system to remotely control and monitor lighting from HVAC DDC system operator workstation. Control features and monitoring points displayed locally at lighting panel must be available through DDC system for HVAC. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 - D. Surge Protective Device: Factory installed as an integral part of control components or field-mounted surge protective device complying with UL 1449, SPD Type 2.
 - E. Operation: Input signal from digital signal sources switches or dims DALI devices associated with ballasts or luminaires, or switches field-deployed, DALI-compliant, control relays.
 1. Each device and relay is connected to a digital data bus.
 2. Each DALI device and relay has a digital address and can be operated by a digital signal.
 3. Each device or relay can be assigned to any or all of 16 available groups connected to a single data bus.
 4. Each dimming ballast may have as many as 16 preset lighting levels or scenes. Scenes can be programmed to ballasts and may be applied to groups.
 - F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - G. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.
 - H. Comply with protocol described in IEC 60929, Annexes E and G, for DALI lighting control devices, wiring, and computer hardware and software.
 - I. Comply with UL 916.
- 2.2 BUS POWER SUPPLY
- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[Leviton Manufacturing Co., Inc.]**
 2. **[Lutron Electronics Co., Inc]**
 3. **[nLight; Acuity Brands Lighting, Inc.]**
 4. **[Philips; Signify North America; Signify Holding]**
 5. **[Starfield Controls, Inc.]**
 6. **[Tridonic]**
 7. **<Insert manufacturer's name>**
 - B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[Leviton Manufacturing Co., Inc.]**
 2. **[Lutron Electronics Co., Inc]**
 3. **[nLight; Acuity Brands Lighting, Inc.]**
 4. **[Philips; Signify North America; Signify Holding]**
 5. **[Starfield Controls, Inc.]**
 6. **[Tridonic]**

7. <Insert manufacturer's name>

- C. Description: Supply power to data bus for 64 addressable devices, suitable for use with NFPA 70, Class 2 control circuit.
1. Primary Power: Field selectable, 120 and 277 V.
 2. Power Supply: Regulated to maintain the operating voltage above 15 V(dc) under full load, and rated for full charging load of 250 mA and a minimum maintained connected load of 190 mA.
 3. Pilot Lights: Indicate data bus ground-fault and data bus traffic.

2.3 CONTROLLER/GATEWAYS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **[Leviton Manufacturing Co., Inc.]**
2. **[Lutron Electronics Co., Inc]**
3. **[Philips; Signify North America; Signify Holding]**
4. **[RAB Lighting]**
5. **[Starfield Controls, Inc.]**
6. **[Tridonic]**
7. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[Leviton Manufacturing Co., Inc.]**
2. **[Lutron Electronics Co., Inc]**
3. **[Philips; Signify North America; Signify Holding]**
4. **[RAB Lighting]**
5. **[Starfield Controls, Inc.]**
6. **[Tridonic]**
7. **<Insert manufacturer's name>**

- C. Description: DALI controller/gateways link the distributed data buses with an Ethernet network to provide computer configuration, control, analysis, and maintenance. Controller/gateways operate independently and continue to process local inputs and schedules when disconnected from the LAN. Controller/gateways must provide local intelligence and features including the following:

1. Integrated real-time clock with automatic daylight savings adjustment and leap-year correction.
2. Integrated sunrise/sunset support based on the site location (latitude and longitude).
3. Automatic time schedules, to control groups for scheduled occupancy with support for holiday exceptions.
4. Two digital outputs for additional control and interlocking with external equipment such as fans, valves, and security panels.
5. Support **[one][two]** data bus(es).
6. Computer Monitoring and Configuration: The controller/gateway must allow configuration, monitoring, and analysis from PCs on the Ethernet LAN.

- D. Each data bus must have the capacity to control 64 addressable devices, using NFPA 70, Class 2 control circuit.

1. Each data bus must have the capacity to control up to 16 groups and scenes.
2. 10 BaseT Ethernet port for DDC system for HVAC connection.

3. LED indicator lights for Ethernet status (link, send, and receive), power-on, and LAN failure.
4. Linking of switch and sensor inputs to relay and ballast outputs.
5. Viewing relay and ballast output status.
6. Controlling relay and ballast outputs.
7. Setting device addresses.
8. Assigning switch and sensor inputs and relay and ballast output modes.

E. Allow connection of the following DALI-compliant addressable devices:

1. Fluorescent luminaire switching and dimming, for linear and compact lamps.
2. Incandescent luminaire switching and dimming.
3. HID and HPS luminaire switching and dimming.
4. LED luminaire switching and dimming.
5. Occupancy and photoelectric sensors.
6. Emergency lighting interface complying with UL 924.

F. Stores system programming in nonvolatile memory.

1. Switch to enable or disable software programming.

2.4 USER INTERFACE

- A. Workstations: A laptop PC, with Microsoft Windows operating system and lighting control system management software installed. With automatic backup.
1. Include documentation, storage media, and licensing for a minimum of five concurrent users.
- B. Tablet Computer: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier. The software must provide for all DALI-protocol programming commands to be applied to the controller/gateway via a tethered connection.
- C. Web Interface: Internet portal, with **[one][10]<Insert number>** unique username and password(s), and a custom graphical user interface, allowing DALI-protocol programming commands to be applied to the controller gateway via **[LAN][the Internet]**.
- D. IR Programming Assistant: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier to program the manual switches.

2.5 LIGHTING CONTROL SYSTEM MANAGEMENT SOFTWARE

- A. The software must provide for programming, configuring, and monitoring all devices connected to all data buses of the lighting control system, using application-specific software with Microsoft Windows-based, user-friendly software with graphical user-interface designed screens.
1. The software must be object oriented with pop-up menus and built-in help screens. All specified features of the data-bus-connected devices and those associated with controller/gateways must be included in the software.

2.6 LUMINAIRE SWITCHING AND DIMMING MODULES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide**

products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Leviton Manufacturing Co., Inc.]
2. [Lutron Electronics Co., Inc]
3. [Philips; Signify North America; Signify Holding]
4. [Starfield Controls, Inc.]
5. <Insert manufacturer's name>

- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Leviton Manufacturing Co., Inc.]
2. [Lutron Electronics Co., Inc]
3. [Philips; Signify North America; Signify Holding]
4. [Starfield Controls, Inc.]
5. <Insert manufacturer's name>

- C. Description: Comply with DALI exponential dimming curve calibrated for the connected lamp type, group, and scene settings, and with DALI light-level and configuration commands. Dimmer rise time must be not less than 15 microseconds.

2.7 BALLAST SWITCHING AND DIMMING MODULES

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Lutron Electronics Co., Inc]
2. [OSRAM SYLVANIA]
3. [Philips; Signify North America; Signify Holding]
4. [Tridonic]
5. <Insert manufacturer's name>

- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Lutron Electronics Co., Inc]
2. [OSRAM SYLVANIA]
3. [Philips; Signify North America; Signify Holding]
4. [Tridonic]
5. <Insert manufacturer's name>

- C. Each ballast or group must be addressable and must include on-off, fade, dimming, scene settings, and other standard DALI control functions and as required to meet the sequence of operation.

- D. Ballasts: Comply with requirements in [Section 265116 "Fluorescent Interior Lighting" for ballasts for linear fluorescent lamps][and][Section 265123 "HID Interior Lighting" for ballasts for HID lamps]; electronic programmed-start; and the following:

1. Starting Method: Programmed rapid start with antilash (turns on at previously set light level).
2. Dimming Range: 100 to 10 percent of rated lumens unless otherwise indicated.
3. Ballast Factor: 1.0 at full output; 0.01 at full dim.
4. Input Voltage Range: 108 to 305 V.

2.8 SENSORS

- A. Comply with requirements in Section 260923 "Lighting Control Devices." All sensors must be DALI-protocol compliant.
- B. Daylight Harvesting Switching and Dimming Controls:
 - 1. Adjustments and Set Points: All adjustments with exception of sensor range must be made via the communication network.
 - 2. Remote Monitoring and Reporting: Sensor value must be displayed when queried by lighting management software or must automatically report based on a change of value or change of time period setting.
- C. Indoor Occupancy Sensors: May be powered directly from the lighting control network or with a standalone power supply. Units powered with a standalone power supply must interface with the lighting control system through an electrically isolated digital input.

2.9 RELAYS

- A. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Pilot light indicates when relay is closed and latched. Control must be by DALI digital data bus. Relay status must be displayed when queried by lighting management software.
- B. Relay Panel: A single enclosure with incoming lighting branch circuits, relays, and connection to the DALI digital control network.
 - 1. Enclosure: NEMA 250, Type 1 unless otherwise indicated.
 - 2. Barriers to separate control-voltage and low-voltage components.
 - 3. Directory: Cover mounted, identifying each relay with its device address and naming the load controlled.
- C. Individually Mounted Relays:
 - 1. Enclosure: Standard outlet box or NEMA 250, Type 1 unless otherwise indicated.
 - 2. Directory: Cover mounted, identifying each relay with its device address.

2.10 MANUAL SWITCHES AND PLATES

- A. Connection Type: RS-485 protocol, **[Category 5][Category 5e]** UTP cable, using 8PSJ connectors. Power must be from the control unit.
- B. Push-Button Switches: Modular, operating over the DALI digital data bus.
 - 1. Each switch must control the following functions, in coordination with programmed sequence of operation and related sensors:
 - a. On.
 - b. Off.
 - c. Dimming, increase light level.
 - d. Dimming, decrease light level.
 - e. Return to preset light level.

2. LED Pilot Lights: On to indicate that the control is active, or when the manual control is operated.
 3. Match color and style specified in Section 262726 "Wiring Devices."
 4. Integral IR receiver for programming.
- C. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."
- D. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.11 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."
- B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18][No. 22][No. 24]** AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14][No. 16][No. 18]** AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."
- D. Digital and Multiplexed Signal Cables: UTP cable with copper conductors, complying with **[Category 5e][Category 6]** for horizontal copper cable and with Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION

3.1 INSTALLATION OF WIRING

- A. Wiring Method: Comply with Section 260523 "Control-Voltage Electrical Power Cables" and Section 260523 "Control-Voltage Electrical Power Cables."
1. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 2. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."
- B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.2 IDENTIFICATION

- A. Identify system components, wiring, cabling, boxes, cabinets, and terminals. Comply with identification requirements specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Identify all ceiling-mounted controls with data bus number and device address.
- D. Label each device cable within **6 inch (152 mm)** of connection to bus power supply or termination block.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing Preparation:
 - 1. Test continuity of each circuit.
- B. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- C. Tests and Inspections:
 - 1. Test each bus controller using local and remote controls.
 - 2. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
- D. Nonconforming Work:
 - 1. Lighting controls will be considered defective if they do not pass tests and inspections.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- E. Field Test Reports:
 - 1. Prepare test and inspection reports, including a certified report that identifies bus controllers included and describes query results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.
 - 2. Printed list of all points created from actual queries of all addressed control points to include lamps, ballasts, manual controls, and sensors.
 - 3. Event log verifying the performance of all devices generating event messages to include occupancy sensors, control buttons, alarm messages, and any other change of value messages.

3.4 STARTUP SERVICE

- A. **[Engage a factory-authorized service representative to perform][Perform]** startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Activate luminaires and verify that all lamps are operating at 100 percent.
 - 3. Burn-in fluorescent lamps at 100 percent for 100 hours.
 - 4. Confirm correct communications wiring, initiate communications between DALI devices and controller/gateways, and program the lighting control system according to approved configuration schedules, time-of-day schedules, and input override assignments.
 - 5. **<Insert startup steps if any>**.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within **[12]<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.6 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement must include software support for **[two]<Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least **[30]<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

END OF SECTION 26 09 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 00 00A - RELAY-BASED LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Lighting control relay panels.
2. Networked lighting control panels.
3. Manual switches and cover plates.
4. Field-mounted signal sources.
5. Conductors and cables.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and cover plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sound data including results of operational tests of central dimming controls.
4. Operational documentation for software and firmware.

B. Shop Drawings: For each relay panel and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than Type 1.
3. Detail wiring partition configuration, current, and voltage ratings.
4. Short-circuit current rating of relays.
5. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.

6. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.
7. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
9. Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in **[Section 230923 "Direct Digital Control (DDC) System for HVAC."]****<Insert Section number and title.>**
 - a. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.
 - b. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Sample warranties.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Lighting Control Relays: Equal to **<Insert number>** percent of amount installed[**for each size indicated**], but no fewer than **<Insert number>**.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Handle and prepare panels for installation in accordance with NECA 407.

1.7 WARRANTY

A. Special Manufacturer Extended Warranty: Manufacturer warrants that components of standalone multipreset modular dimming controls perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: **[Two][Three][Four]<Insert number>** year(s) from date of Substantial Completion, for labor, materials, and equipment.
2. Follow-on Extended Warranty Period: **[Eight]<Insert number>** year(s) from date of Substantial Completion, for materials that failed because of transient voltage surges only, f.o.b. the nearest shipping point to Project site.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Sequence of Operations: Input signal from field-mounted manual switches, or digital signal sources, must open or close one or more lighting control relays in the lighting control panels. Any combination of inputs must be programmable to any number of control relays.
- B. Interface with HVAC DDC System: Hardware and software must interface with HVAC DDC system to monitor, control, display, and record data for use in processing reports. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 - 1. Hardwired Points:
 - a. Monitoring: On-off status, **<Insert monitoring point>**.
 - b. Control: On-off operation, **<Insert control point>**.
 - 2. Communication Interface: Comply with **[ASHRAE 135][ISO/IEC 14908-1]["**MODBUS **Application Protocol Specification"]<Insert type of interface>**. The communication interface must enable the HVAC DDC system operator to remotely control and monitor lighting from a HVAC DDC system operator workstation. Control features and monitoring points displayed locally at lighting panel must be available through the HVAC DDC system. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- C. Surge Protective Device: Factory installed as an integral part of control components or field-mounted surge suppressors complying with UL 1449, SPD Type 2.
- D. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- E. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.
- F. Comply with UL 916.

2.2 LIGHTING CONTROL RELAY PANELS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Intermatic, Inc]**
 - 3. **[Leviton Manufacturing Co., Inc.]**
 - 4. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - 5. **[Lutron Electronics Co., Inc]**
 - 6. **[Philips; Signify North America; Signify Holding]**
 - 7. **[Siemens Industry, Inc., Energy Management Division]**
 - 8. **[Touch-Plate Technologies]**
 - 9. **[WattStopper; Legrand North America, LLC]**
 - 10. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [ABB, Electrification Business]
2. [Intermatic, Inc]
3. [Leviton Manufacturing Co., Inc.]
4. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
5. [Lutron Electronics Co., Inc]
6. [Philips; Signify North America; Signify Holding]
7. [Siemens Industry, Inc., Energy Management Division]
8. [Touch-Plate Technologies]
9. [WattStopper; Legrand North America, LLC]
10. <Insert manufacturer's name>

C. Description: Standalone lighting control panel using mechanically latched relays to control lighting and appliances.

D. Lighting Control Panel:

1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
2. A vertical barrier separating branch circuits from control wiring.

E. Control Unit: Contain the power supply and electronic control for operating and monitoring individual relays.

1. Timing Unit:

- a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
- b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
- c. [Four]<Insert number> independent schedules, each having [24]<Insert number> time periods.
- d. Schedule periods settable to the minute.
- e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
- f. [10]<Insert number> special date periods.

2. Sequencing Control with Override:

- a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
- b. Sequencing control must operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
- c. Override control must allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
- d. Override control "blink warning" must warn occupants approximately [five minutes]<Insert time> before actuating the off sequence.

3. Nonvolatile memory must retain all setup configurations. After a power failure, the controller must automatically reboot and return to normal system operation, including accurate time of day and date.

F. Relays:

1. Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Control must be three-wire, 24 V(ac).
2. Electrically operated, mechanically held single-pole switch, rated at 20 A at 120 V for tungsten, 30 A at 277 V for ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating must be not

less than 14 kA. Control must be three-wire, 24 V(ac).

- G. Power Supply: NFPA 70, Class 2, sized for connected equipment, plus 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, control-voltage inputs, field-installed occupancy sensors, and photo sensors.
- H. Operator Interface:
 - 1. Integral alphanumeric keypad and digital display, and intuitive drop-down menus to assist in programming.
 - 2. Log and display relay on-time.
 - 3. Connect relays to one or more time and sequencing schemes.

2.3 NETWORKED LIGHTING CONTROL PANELS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[ABB, Electrification Business]**
 - 2. **[Intermatic, Inc]**
 - 3. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - 4. **[Lutron Electronics Co., Inc]**
 - 5. **[Touch-Plate Technologies]**
 - 6. **[WattStopper; Legrand North America, LLC]**
 - 7. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Intermatic, Inc]**
 - 3. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - 4. **[Lutron Electronics Co., Inc]**
 - 5. **[Touch-Plate Technologies]**
 - 6. **[WattStopper; Legrand North America, LLC]**
 - 7. **<Insert manufacturer's name>**
- C. Description: Lighting control panels using mechanically latched relays to control lighting and appliances. The panels must be capable of being interconnected with digital communications to appear to the operator as a single lighting control system.
- D. Lighting Control Panels:
 - 1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
 - 2. A vertical barrier separating branch circuits from control wiring.
- E. Main Control Unit: Installed in the main lighting control panel only; powered from the branch circuit of the standard control unit.
 - 1. Ethernet Communications: Comply with **[TCP/IP]<Insert network protocol>** protocol. The main control unit must provide for programming of all control functions of the main and all networked slave lighting control panels including timing, sequencing, and overriding.

2. Protocol: Controllers must support serial MS/TP and Ethernet IP communications in accordance with **[ASHRAE 135][ISO/IEC 14908-1][MODBUS Application Protocol Specification]**, and must be able to communicate directly via DDC system for HVAC TIA-485 serial networks and Ethernet 10Base-T networks as a native device.
 3. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard browser.
 - a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
 - b. Panel summary showing the master and slave panels connected to the controller.
 - c. Controller diagnostic information.
 - d. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens must also allow direct breaker control and zone overrides.
 4. Timing Unit:
 - a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
 - b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
 - c. **[Four]<Insert number>** independent schedules, each having **[24]<Insert number>** time periods.
 - d. Schedule periods settable to the minute.
 - e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
 - f. **[16]<Insert number>** special date periods.
 5. Time Synchronization: The timing unit must be updated not less than every **<Insert number>** hour(s) with the network time server.
 6. Sequencing Control with Override:
 - a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
 - b. Sequencing control must operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
 - c. Override control must allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
 - d. Override control "blinking warning" must warn occupants approximately **[five minutes]<Insert time>** before actuating the off sequence.
 - e. Activity log, storing previous relay operation, including the time and cause of the change of status.
 - f. Download firmware to the latest version offered by manufacturer.
- F. Standard Control Unit, Installed in All Lighting Control Panels: Contain electronic controls for programming the operation of the relays in the control panel, contain the status of relays, and contain communications link to enable the digital functions of the main control unit. Comply with UL 916.
1. Electronic control for operating and monitoring individual relays, and display relay on-time.
 2. Nonvolatile memory must retain all setup configurations. After a power failure, the controller must automatically reboot and return to normal system operation.
 3. Integral keypad and digital-display front panel for local setup, including the following:
 - a. Blink notice, time adjustable from software.
 - b. Ability to log and display relay on-time.
 - c. Capability for accepting downloadable firmware so that the latest production features may be added in the future without replacing the module.

G. Relays:

1. Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Control must be **[three-wire, 24 V(ac)][digital control network]**.
2. Electrically operated, mechanically held single-pole switch, rated at 20 A at 120 V for tungsten, 30 A at 277 V for ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating must be not less than 14 kA. Control must be **[three-wire, 24 V(ac)][digital control network]**.

H. Power Supply: NFPA 70, Class 2, UL listed, sized for connected equipment, plus not less than 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, control-voltage inputs, field-installed occupancy sensors, and control-voltage photo sensors.

I. Operator Interface: At the main control unit, provide interface for a tethered connection of **[a portable PC running MS Windows]<Insert digital device and operating system>** for configuring all networked lighting control panels using setup software designed for the specified operating system. Include one portable device for initial programming of the system and training of Owner's personnel. That device must remain the property of Owner.

J. Software:

1. Menu-driven data entry.
2. Online and offline programming and editing.
3. Provide for entry of the room or space designation for the load side of each relay.
4. Monitor and control all relays, showing actual relay state and the name of the automatic actuating control, if any.
5. Size the software appropriate to the system.

2.4 MANUAL SWITCHES AND COVER PLATES

A. Push-Button Switches: Modular, momentary contact, three wire, for operating one or more relays and to override automatic controls.

1. Match color and style specified in Section 262726 "Wiring Devices."
2. Integral green LED pilot light to indicate when circuit is on.
3. Internal white LED locator light to illuminate when circuit is off.

B. Cover Plates: Single and multigang cover plates as specified in Section 262726 "Wiring Devices."

C. Legend: Engraved or permanently silk-screened on cover plate where indicated. Use designations indicated on Drawings.

2.5 FIELD-MOUNTED SIGNAL SOURCES

A. Daylight Harvesting Switching Controls: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal must be compatible with the relays.

B. Indoor Occupancy Sensors and Extreme-Temperature Occupancy Sensors: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal must be compatible with the relays.

2.6 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18][No. 22][No. 24]** AWG. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14][No. 16][No. 18]** AWG. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- D. Twisted-Pair Data Cable: **[Category 5e][Category 6][Category 6a]**.
 - 1. Comply with requirements for twisted pair cabling in Section 260523 "Control-Voltage Electrical Power Cables."
 - 2. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Receive, inspect, handle, and store panels in accordance with NECA 407.
- B. Examine panels before installation. Reject panels that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panels for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF WIRING

- A. Wiring Methods:
 - 1. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters.
 - 2. Install cables in raceways and cable trays except within consoles, cabinets, desks, counters, accessible ceiling spaces, and gypsum board partitions where unenclosed wiring method may be used.
 - 3. Install conductors and cables concealed in accessible ceilings, walls, and floors where possible.
 - 4. Conceal raceway and cables except in unfinished spaces.
 - 5. Provide plenum-rated cable, where installed exposed or in open cable tray, within environmental airspaces, including plenum ceilings.
 - 6. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 - 7. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."
- B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and

without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 INSTALLATION OF PANELS

- A. Install panels and accessories in accordance with NECA 407.
- B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- C. Mount top of trim [**90 inch (2286 mm)**]**<Insert dimension>** above finished floor unless otherwise indicated.
- D. Mount panel cabinet plumb and rigid without distortion of box.
- E. Install filler plates in unused spaces.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Create a directory to indicate loads served by each relay; incorporate Owner's final room designations. Obtain approval before installing. Use a PC or typewriter to create directory; handwritten directories are unacceptable.
- D. Lighting Control Panel Nameplates: Label each panel with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]**<Insert names or titles of witnesses>**.
- B. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers described below[**and low-voltage surge arrestors**]. Certify compliance with manufacturer's test parameters.
 - a. Circuit-Breaker Tests:
 - 1) Compare nameplate with Drawings and Specifications.
 - 2) Inspect physical and mechanical conditions.
 - 3) Inspect anchorage and alignment.
 - 4) Verify that the units are clean.
 - 5) Operate the circuit breaker to ensure smooth operation.
 - 6) Inspect bolted electrical connections for high resistance using one or more of the following methods:

- a) A low-resistance ohmmeter.
- b) Verify tightness of bolted electrical connections by calibrated torque wrench.
- c) Thermographic survey.

- 7) Inspect operating mechanism, contacts, and arc chutes in unsealed units.
- 8) Perform adjustments for final protective device settings in accordance with the overcurrent protective device coordination study. Comply with requirements in Section 260573.16 "Coordination Studies."
- 9) Perform insulation resistance tests for one minute on each pole, phase-to-phase, and phase-to-ground with the circuit breaker closed and across each pole using manufacturer's published data.
- 10) Perform a contact/pole-resistance test.
- 11) Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be for one minute. Follow manufacturer's instructions for solid-state units.
- 12) Determine long-time pickup and delay by primary current injection.
- 13) Determine short-time pickup and delay by primary current injection.
- 14) Determine ground-fault pickup and time delay by primary current injection.
- 15) Determine instantaneous pickup by primary current injection.
- 16) Test functions of the trip unit by means of secondary injection.
- 17) Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data.
- 18) Verify correct operation of auxiliary features such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free, anti-pump function, and trip unit battery condition. Reset trip logs and indicators.
- 19) Verify operation of charging mechanism.

b. Surge Arrestor Tests:

- 1) Compare nameplate with the Contract Documents.
- 2) Inspect physical and mechanical conditions.
- 3) Inspect anchorage, alignment, grounding, and clearances.
- 4) Verify that the units are clean.
- 5) Inspect bolted electrical connections for high resistance using one or more of the following methods:
 - a) Low-resistance ohmmeter.
 - b) Verify tightness of bolted electrical connections by calibrated torque wrench.
- 6) Verify that the ground lead on each device is individually attached to a ground bus or ground electrode.
- 7) Perform an insulation-resistance test on each arrestor, phase terminal-to-ground using voltage in accordance with manufacturer instructions.
- 8) Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding tests.

C. Nonconforming Work:

- 1. Lighting control panel will be considered defective if it does not pass tests and inspections.
- 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

- D. Prepare test and inspection reports, including a certified report that identifies lighting control panels and describes scanning results. Include notation of deficiencies detected, remedial action taken, and

observations made after remedial action.

E. Manufacturer Services:

1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.6 SYSTEM STARTUP

A. **[Engage a factory-authorized service representative to perform][Perform]** startup service.

1. Complete installation and startup checks in accordance with manufacturer's instructions.
2. Confirm correct communications wiring, initiate communications between panels, and program the lighting control system in accordance with approved configuration schedules, time-of-day schedules, and input override assignments.
3. **<Insert startup steps if any>**.

3.7 ADJUSTING

- A. Occupancy Adjustments: When requested within **[12]<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.8 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for **[two]<Insert number>** years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.
 - a. Upgrade Notice: No fewer than **[30]<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.
3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.

END OF SECTION 26 09 00 00A

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 13 00 - ELECTRICAL POWER MONITORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Multifunction energy meters.
2. Power meters.
3. Circuit meters and monitors.
4. Circuit meter and explorer.
5. PC operating system software.
6. Networked PC operating system software.
7. Power monitoring and control software.
8. Network configuration software.
9. Monitoring and control of power distribution equipment.
10. System operator interfaces.
11. Desktop workstations.
12. Portable workstations.
13. Raceways and boxes.
14. Wires and cables.
15. Surge protection devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 230923.13 "Energy Meters" for electricity meters for HVAC equipment.
4. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.2 DEFINITIONS

- A. Active Power: The average power consumed by a unit. Also known as "real power."
- B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- C. Apparent (Phasor) Power: " $S = VI$ " where "S" is the apparent power, "V" is the RMS value of the voltage, and "I" is the RMS value of the current.
- D. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- E. KY Pulse: A method of measuring consumption of electricity that is based on a relay operating like a SPST switch.

- F. KYZ Pulse: A method of measuring consumption of electricity based on a relay operating like a SPDT switch.
- G. L-G: Line to ground.
- H. L-L: Line to line.
- I. L-N: Line to neutral.
- J. MODBUS TCP/IP: An open protocol for exchange of process data.
- K. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- L. N-G: Neutral to ground.
- M. Power Factor: The ratio of active power to apparent power, sometimes expressed in percentage.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Multifunction energy meters.
2. Power meters.
3. Circuit meters and monitors.
4. Circuit meter and explorer.
5. PC operating system software.
6. Networked PC operating system software.
7. Power monitoring and control software.
8. Network configuration software.
9. Monitoring and control of power distribution equipment.
10. System operator interfaces.
11. Desktop workstations.
12. Portable workstations.
13. Raceways and boxes.
14. Wires and cables.
15. Surge protection devices.

B. Sustainable Design Submittals:

1. Product Data: Indicating that computers used by the system are certified by ENERGY STAR.

C. Shop Drawings: For power monitoring and control equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, method of field assembly, components, and location and size of each field connection.
 - a. Attach copies of approved Product Data submittals for products (such as switchboards, switchgear, and motor-control centers) that describe the following:
 - 1) Location of the meters and gateways, and routing of the connecting wiring.

- 2) Details of power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.
3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
4. Network naming and numbering scheme.
5. Include diagrams for power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
6. Specifications for workstations.
7. UPS sizing calculations for workstation.
8. Surge Suppressors: Data for each device used and where applied.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Design Data:

1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.
 - a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format on compact disk or portable storage device with a USB interface.
 - b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
 - c. As-built versions of submittal Product Data.
 - d. Names, addresses, e-mail addresses, and 24-hour telephone numbers of Installer and service representatives for the system and products.
 - e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing set points and variables.
 - f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
 - g. Engineering, installation, and maintenance manuals that explain how to do the following:
 - 1) Design and install new points, panels, and other hardware.
 - 2) Perform preventive maintenance and calibration.
 - 3) Debug hardware problems.
 - 4) Repair or replace hardware.
 - h. Documentation of programs created using custom programming language including set points, tuning parameters, and object database.
 - i. Backup copy of graphic files, programs, and database on compact disk or portable storage device with a USB interface.
 - j. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
 - k. Complete original-issue copies of furnished software, including operating systems, custom programming language, workstation software, and graphics software on compact disk or portable storage device with a USB interface.
 - l. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.

- m. Owner training materials.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Addressable Relays: One for every [10]<Insert number> installed. Furnish at least one of each type.
 - 2. Data Line Surge Suppressors: One for every [10]<Insert number> of each type installed. Furnish at least one of each type.
 - 3. <Insert material>.

1.6 COORDINATION

- A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
 - 1. Match components and interconnections for optimum performance of specified functions.
- B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Microprocessor-based monitoring and control of electrical power distribution system(s) that includes the following:
 - 1. Electrical meters that monitor, control, and connect to the data transmission network.
 - 2. LAN: High-speed, multi-access, open, nonproprietary, industry-standard communication protocols.
 - 3. Include [**PC-based workstation**][**multiple PC-based workstations**][**with web access**], with its operating system and application software, connected to data transmission network.
- B. The electrical power monitoring and control system must be Internet based.
 - 1. System software must be based on server thin-client architecture, designed around open standards of internet technology.
 - 2. Intent of thin-client architecture is to provide operators complete access to power monitoring and control system via an Internet browser. No special software other than an Internet browser must be required to access graphics, point displays, and trends; to configure trends, points, and controllers; and to edit programming.
 - 3. Internet access must be password protected.
- C. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with UL 61010-1 and marked for intended location and application.

2.2 PERFORMANCE REQUIREMENTS

- A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
1. Minimum Protection for Power Lines 120 V and More: **[SPDs complying with UL 1449, listed and labeled for intended use by an NRTL acceptable to authorities having jurisdiction.][Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."]**
 2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.
- B. Addressable Devices: Transmitters and receivers must communicate unique device identification and status reports to monitoring and control clients.
- C. Interface with DDC System for HVAC: Provide factory-installed hardware and software to enable the DDC system for HVAC to monitor, display, and record data for use in processing reports.
1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours)[, **power factor**]**<Insert monitoring point>**.
 2. **[ASHRAE 135 (BACnet)][ISO/IEC 14908-1 (LonTalk)][MODBUS Application Protocol Specification][Industry-accepted, open-protocol]****<Insert type of interface>** communication interface with the DDC system for HVAC must enable the DDC system for HVAC operator to remotely monitor meter information from a DDC system for HVAC workstation. Control features and monitoring points displayed locally at metering panel must be available through the DDC system for HVAC.
- D. Backup Power Source:
1. Electrical power distribution equipment served by a backup power source for controls must have associated power monitoring and control system products that monitor and control such systems and equipment also served from a backup power source.

2.3 MULTIFUNCTION ENERGY METERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Eaton]**
 2. **[GE Power; General Electric Company]**
 3. **[Leviton Manufacturing Co., Inc.]**
 4. **[Schneider Electric USA, Inc.]**
 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Eaton]**
 2. **[GE Power; General Electric Company]**
 3. **[Leviton Manufacturing Co., Inc.]**
 4. **[Schneider Electric USA, Inc.]**
 5. **<Insert manufacturer's name>**

- C. Multifunction Energy Meter: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power and energy metering and monitoring; complying with UL 61010-1.
 - 1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
 - 2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.
- D. Comply with IEC 60529 degree of protection code of IP65 for the front of the meter, and code of IP30 for the body.
- E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.
- F. Accuracy:
 - 1. Comply with ANSI C12.20, Class 0.5.
 - 2. Neutral Current Measurement: Not more than 0.65 percent.
 - 3. Power Factor: 1.0 percent.
 - 4. Frequency: 0.1 percent.
 - 5. THD: 1.0 percent.
 - 6. Waveform Sampling: 64 per cycle.
- G. Data Link:
 - 1. MODBUS TIA-485, RTU protocol, [2][4]-wire connection to host devices with a compatible port.
 - 2. <Insert protocol>.
- H. Meter Physical Characteristics:
 - 1. Display: Backlit LCD with antiglare and scratch-resistant lens.
 - 2. Display of Metered Values:
 - a. One screen to show at least [three]<Insert number> user-selected values displayed at the same time. Selections available to display must include the following:
 - 1) Meters.
 - 2) Measurements.
 - 3) THD.
 - 4) Energy.
 - 5) Demand.
 - 6) Minimum and maximum values.
 - 7) Power demand.
- I. Sampling Rate: Continuously sample and record voltage and current at a rate not less than [64]<Insert number> samples per cycle, simultaneously on voltage and current channels of the meter.
- J. Meters:
 - 1. Instantaneous, RMS:
 - a. Current: Each phase, [neutral]and three-phase average.
 - b. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - c. Active Power (kW): [Each phase and]three-phase total.
 - d. Reactive Power (kVAR): [Each phase and]three-phase total.

- e. Apparent Power (kVA): **[Each phase and]**three-phase total.
- f. Power Factor: **[Each phase and]**three-phase total.
- 2. Energy:
 - a. Active Energy (kWh): Three-phase total.
- 3. Demand, Derived from Instantaneous RMS Meters:
 - a. Current: Present and maximum.
 - b. Active: Present and maximum.
 - c. Reactive: Present and maximum.
 - d. Apparent: Present and maximum.
- 4. Power Quality Measurements:
 - a. THD: Current and voltage from measurements simultaneously from the same cycle, as can be calculated from the specified sampling rate.
- K. I/O: Two optically isolated digital outputs for KY pulsing or control. Output signal characteristics must be 150 mA at 200 V.
 - 1. KY Pulse: Generate standard KY pulses for a user-defined increment of metered active energy as follows:
 - a. User-defined pulse output, associated with kWh.
 - b. User-defined pulse output, associated with kVARh.
 - 2. **<Insert control function>**.
- L. Capacities and Characteristics:
 - 1. Power Supply: **[120 V(ac), 60 Hz]<Insert text>**.
 - 2. Circuit Connections:
 - a. Voltage: Measurement autoranging, 60 to 400 V(ac) L-N.**[Connect directly to low-voltage (600 V and less) without using voltage transformers.][Connect to instrument grade potential transformers secondary at 120 V.]** Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
 - b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
 - c. Frequency: 45 to 65 Hz.
 - d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.4 POWER METERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**

3. [Leviton Manufacturing Co., Inc.]
 4. [Schneider Electric USA, Inc.]
 5. [Siemens Industry, Inc., Energy Management Division]
 6. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [Eaton]
 2. [GE Power; General Electric Company]
 3. [Leviton Manufacturing Co., Inc.]
 4. [Schneider Electric USA, Inc.]
 5. [Siemens Industry, Inc., Energy Management Division]
 6. <Insert manufacturer's name>
- C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1.
1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
 2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.
- D. Comply with IEC 60529 degree of protection code of IP51 for the front of the meter, and code of IP30 for the body.
- E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.
- F. Accuracy:
1. Comply with ANSI C12.20, Class 0.5.
 2. Neutral Current Measurement: Not more than 0.65 percent.
 3. Power: 0.6 percent.
 4. Power Factor: 0.5 percent.
 5. Active Energy: 0.6 percent.
 6. Reactive Energy: 2.5 percent.
 7. Frequency: 0.05 percent.
 8. THD: 1.0 percent.
 9. Waveform Sampling: 32 per cycle.
- G. Data Link:
1. MODBUS TIA-485 RTU protocol, [2][4]-wire connection.
 - a. Provide for firmware and software updates through the communications port.
 2. <Insert protocol>.
- H. Meter Physical Characteristics:
1. Display: Backlit LCD with antiglare and scratch-resistant lens.
 2. Display of Metered Values: One screen to show at least [four]<Insert number> lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values. The screen selections available at the display must include the following:

- a. Meters, including those listed under the following:
 - 1) Measurements.
 - 2) THD.
 - 3) Energy.
 - 4) Demand.
 - 5) Minimum and maximum values.
 - 6) Power demand.
- I. Sampling Rate: Continuously sample and record voltage and current at a rate not less than **[32 samples per cycle]<Insert number>**, simultaneously on voltage and current channels of the meter.
- J. Meters:
 - 1. Measurements: Instantaneous, in real time, RMS to the 15th harmonic.
 - a. Voltage: L-L each phase, L-N each phase, and three-phase average.
 - b. Current: Each phase, three-phase average, and neutral.
 - c. Unbalanced current, L-L V(ac) and L-N V(ac).
 - d. Active Power (+/- kW): Each phase and three-phase total.
 - e. Reactive Power (+/- kVAR): Each phase and three-phase total.
 - f. Apparent Power (+/- kVA): Each phase and three-phase total.
 - g. Displacement Power Factor: Each phase and three-phase total.
 - h. Distortion Power Factor: Each phase and three-phase total.
 - i. Frequency.
 - 2. THD from measurements simultaneously from the same cycle, through **[15th]<Insert number>** harmonic.
 - a. Voltage THD: L-L each phase, L-N each phase, and three-phase average.
 - b. Current THD: Each phase and three-phase average.
 - c. Total demand distortion.
 - 3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory.
 - a. Active kWh.
 - b. Reactive kVARh.
 - c. Apparent kVAh.
 - 4. Demand: Present, last, predicted, peak.
 - a. Three-phase average current.
 - b. Three-phase total active power (kW).
 - c. Reactive power (kVAR).
 - d. Apparent power (kVA).
 - 5. Minimum and Maximum Values:
 - a. L-L and L-N voltages.
 - b. Current in each phase.
 - c. Power factor.
 - d. Active power total.
 - e. Reactive power total.
 - f. Apparent power total.
 - g. THD L-L and L-N voltages.

- h. THD current in each phase.
- i. Frequency.

K. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
 - a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
 - b. Fixed block that calculates demand at end of the interval.
 - c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
3. Demand Calculation Initiated by a Synchronization Signal:
 - a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
 - b. Signal is a communication signal. Calculation must be configurable as either a block or rolling block calculation.
 - c. Provide for synchronizing the demand with the internal of this instrument.

L. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Minimum and maximum of real-time RMS measurement.
2. Energy.
3. Demand values.
4. Alarms, store the last 40 events.

M. Alarms: Transmit a digital output and show on display when alarmed. Provide for no fewer than [15]<Insert number> metered items. Each alarm must be user configured, by using the following options:

1. Date and time stamp.
2. Enable-disable (default) or enable.
3. Pickup magnitude.
4. Pickup time delay.
5. Dropout magnitude.
6. Dropout time delay.
7. Alarm type.
8. Alarm label.

N. Output Signals: Provide two mechanical relays, rated not less than 250 V(ac), 2 A resistive, and rated for 200,000 cycles or more. The relays must be user configurable in one of the following listed modes:

1. Normal contact closure where the contacts change state for as long as the signal exists.
2. Latched mode when the contacts change state when a pickup signal is received and are held until a dropout signal is received.
3. Timed mode when the contacts change state when a pickup signal is received and are held for a preprogrammed duration.

- O. Meter Face:
 - 1. Display: Backlit LCD display, six lines, with antiglare and scratch-resistant lens.
 - 2. Display of Metered Values: One screen to show at least **[four]<Insert number>** user-selected values on one screen at the same time.
 - 3. Provide for the reset of metered peak values.
- P. Capacities and Characteristics:
 - 1. Power Supply: **[120 V(ac), 60 Hz]<Insert text>**.
 - 2. Circuit Connections:
 - a. Voltage: Measurements autoranging, 60 to 400 V(ac) L-N. **[Connect directly to low-voltage (600 V and less) without using voltage transformers.][Connect to instrument grade potential transformers secondary at 120 V.]** Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
 - b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
 - c. Frequency: 45 to 65 Hz.
 - d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.5 CIRCUIT METERS AND MONITORS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Schneider Electric USA, Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Schneider Electric USA, Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **<Insert manufacturer's name>**
- C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
 - 1. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.
- D. Comply with IEC 60529 degree of protection code of IP52 for the front of the meter, and code of IP30 for the back.
- E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

F. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. For Voltage and Current: 0.5 percent of reading.
3. For Active Power: 0.2 percent.
4. For Active and Reactive Energy: ANSI 12.20, Class 0.2.
5. For Frequency: 0.01 Hz in the range of 45 to 65 Hz.
6. For Power Factor: 0.2 percent from 0.5 leading to 0.5 lagging.

G. Data Links:

1. MODBUS TIA-485 RTU protocol, [2][4]-wire connection.
2. MODBUS TIA-232/TIA-485 RTU/ASCII protocol, [2][4]-wire connection.
3. MODBUS TCP:
 - a. 10/100BaseTX balanced twisted pair cabling. 8PSJ connector, 100 m link.
 - b. Optical fiber 100BaseFX, LC duplex connector, 1300 m link. Multimode 62.5/125 microsecond, 2000 m link.
4. Provide for firmware and software updates through the communications port.
5. Ethernet 10/100BaseTX balanced twisted pair cabling and MODBUS TIA-485 serial master port.
6. Ethernet 10/100BaseTX balanced twisted pair cabling and MODBUS TIA-485 serial master port, Ethernet to serial line gateway, and embedded web server.
7. **<Insert protocol>.**

H. Meter Physical Characteristics:

1. Display: Backlit LCD screen with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least **[four]<Insert number>** lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values.
3. Allow user to select a date/time format and the ability to create additional screens for user-specified views and custom quantities without overwriting existing standard screens.

I. Sampling Rate:

1. Continuously sample and record voltage and current at a rate not less than **[128 samples per cycle]<Insert number>**, simultaneously on voltage and current channels of the meter.

J. Meters must measure, record with time stamp, calculate, and on request display the following:

1. Measurements: Instantaneous, in real time, RMS to the **[31st][63rd]** harmonic:
 - a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - b. Current: Each phase, three-phase average, and neutral.
 - c. Active Power (kW): Each phase and three-phase total.
 - d. Reactive Power (kVAR): Each phase and three-phase total.
 - e. Apparent Power (kVA): Each phase and three-phase total.
 - f. Displacement Power Factor: Each phase and three-phase total.
 - g. Distortion Power Factor: Each phase and three-phase total.
 - h. Frequency.
2. THD from measurements simultaneously from the same cycle, through **[31st][63rd]<insert number>** harmonic:

- a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - b. Current: Each phase, three-phase average, and neutral.
 3. Energy: Accumulated, indicate in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory. Provide for storing accumulated energy at user-defined intervals, up to three intervals per day.
 - a. Active kWh.
 - b. Reactive kVARh.
 - c. Apparent kVAh.
 4. Demand: Three-phase totals, present, predicted, peak.
 - a. Average current.
 - b. Active power (kW).
 - c. Reactive power (kVAR).
 - d. Apparent power (kVA).
 5. Average, Minimum and Maximum Values:
 - a. Record, date and time stamp, and save the minimum and maximum values of RMS metered values since the last reset.
 - b. **<Insert values>**.
- K. Power Demand, User Selectable:
 1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
 2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
 - a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
 - b. Fixed block that calculates demand at end of the interval.
 - c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
 3. Demand Calculation Initiated by a Synchronization Signal:
 - a. Synchronize demand with receipt of a signal pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
 - b. Synchronize demand with receipt of a communication signal. Calculation must be configurable as either a block or rolling block calculation.
 - c. Provide for synchronization to the clock in the instrument.
- L. Trend Curves: Provide for recording four trend curves at intervals of one minute, one hour, one day, or one month; and forecast values for the trended parameters.
 1. Record minimum, maximum, and average values of eight user-selected parameters as follows:
 - a. Every second for one minute for the one-minute curve.
 - b. Every minute for one hour for the one-hour curve.
 - c. Every hour for one day for the one-day curve.

- d. Every day for one month for the one-month curve.
- 2. Forecast the trended parameters for the following:
 - a. The next four hours.
 - b. The next four days.

M. Waveform Capture:

- 1. Steady State Waveform Capture: Manually initiated.
 - a. Capture, record with time stamp, and store voltage and current waveforms for two cycles.
 - b. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. The number of waveform captures stored onboard must be user configurable.
 - c. Harmonic analysis performed on the captured waveforms must resolve harmonics through the 63rd.
 - d. Captured waveforms must be recorded from actual circuit performance.
- 2. Disturbance Waveform Capture:
 - a. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. Disturbance waveform capture may be initiated manually, by an external contact closure, or by an alarm. The waveform captures must be user configurable from 185 cycles on 1 channel at 16 points per cycle, to 3 cycles on 6 channels at 128 points per cycle.

N. Disturbance Detection and Alarm:

- 1. Detect and initiate alarm when detecting voltage or current sag and swell.
 - a. Detect disturbance events of less than half-cycle in length, by monitoring and calculating RMS magnitude of each half-cycle.
 - b. Event detection must be with user-defined parameters of threshold and delay. The threshold must be user defined as a fixed or relative set point. With relative set point, the instrument will alarm based on the nominal current or voltage equal to its present average value. The instrument must automatically adjust the nominal current and voltage values to avoid nuisance alarms caused by gradual daily variations of currents and voltages.
 - c. When detecting an alarm condition:
 - 1) Initiate disturbance waveform capture.
 - 2) Record the disturbance parameters into an onboard alarm log with a date and time stamp to the millisecond.
 - 3) Alarm on must be visible on the display and be transmitted over the data link.
 - 4) Display the voltage sag/swell events on ITIC or SEMI graphs to quantify the event for accepted industry standards.

O. Harmonics Information:

- 1. Calculate the harmonic magnitudes and angles for each phase voltage and current through the 63rd harmonic. Provide harmonic power flows up to the 41st harmonic for active, reactive, and apparent power.
- 2. The current and voltage information for phases must be obtained simultaneously from the same cycle.
- 3. Report harmonic information as a percentage of the fundamental or as a percentage of the RMS

values, as selected by the user.

P. Alarms: Alarm events must be user definable. Provide a minimum of 40 user-defined alarm conditions.

1. User Configuration Options:

- a. Date and time stamp.
- b. Enable-disable (default) or enable.
- c. Pickup magnitude.
- d. Pickup time delay.
- e. Dropout magnitude.
- f. Dropout time delay.
- g. Alarm type.
- h. Alarm label.

2. The following classes of events must be available to be programmed as alarm events:

- a. Over/under current.
- b. Over/undervoltage.
- c. Current imbalance.
- d. Phase loss, current.
- e. Phase loss, voltage.
- f. Voltage imbalance.
- g. Over kVA.
- h. Over kW or kVAR into/out of load.
- i. Over/under frequency.
- j. Under power factor, true or displacement.
- k. Over THD.
- l. Over demand, current or power.
- m. Reverse power.
- n. Phase reversal.
- o. Status input change.
- p. End of incremental energy interval.
- q. End of demand interval.
- r. Over/under analog inputs.
- s. Current sag/swell.
- t. Voltage sag/swell.

3. For each over/under metered alarm value, provide for the user to define a pickup, dropout, and delay.
4. The circuit meter and monitor alarms response time must be not less than one second.
5. Provide for up to four alarms to be combined to give a single result using Boolean algebra operations.

Q. EN 50160 Evaluation: Report EN 50160 evaluation data in the following formats: summary of active evaluations, summary of evaluation status, detailed information for each evaluated parameter, and detailed information for each abnormal event.

R. I/O Module: Modular, with multiple I/O options to accomplish specified performance and one or more spare positions for future.

1. KY Pulse: Generate a standard KY pulses for a user-defined increment of metered active energy as follows:
 - a. User-defined pulse output, associated with kWh.
 - b. Alarm pulse output, which turns on the pulsing at user-defined point.

2. Digital Inputs: As follows:

- a. One input connection rated 24 to 125 V(ac) or V(dc), +/- 10 percent, less than 5 mA burden, 1350 V RMS isolation.
- b. Six input connections rated 19 to 30 V(dc), 5 mA maximum at 24 V(dc). Provide an onboard 24 V(dc) power supply.
- c. Two input connections rated 20 to 150 V(dc) or V(ac), 2 mA maximum.

3. Analog inputs, no fewer than two, adjustable from zero to 5 V(dc) or 4 to 20 mA.

4. Outputs to operate field-installed relays, no fewer than two, providing 6 to 240 V(ac) or 6 to 30 V(dc), 2 A RMS. 5 A maximum for 10 seconds per hour.

5. Analog outputs, no fewer than two, 4 to 20 mA(dc) into 600 ohms maximum.

S. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Data Logs, General: User configurable. Automatically stamp each entry to the millisecond with date and time.

- a. Each log entry must hold data of up to 96 parameters each.
- b. Each log must be user configurable to log data at a different user-defined schedule interval.
- c. Provide each log with user-defined event or a minimum/maximum condition that will trigger log file entries.
- d. Configure log entries to be recorded as Fill & Hold or Circular (First in, First out, or FIFO), as defined by the user.

2. Minimum/Maximum Logs:

- a. Minimum/Maximum/Average interval log also logs minimum/maximum/average of selected parameters on a selected interval from a user-selected interval length from 1 to 1440 seconds.
- b. Minimum/Maximum log must include the time, date, and value for the minimum and maximum of each of the real-time metered values.

3. Alarm Log: Record time, date, event information, and coincident information for each user-defined and automatically initiated alarm or event. Record selected parameters at 100 ms intervals during events and alarms. Automatically stamp each entry to the millisecond with date and time.

4. Waveform Logs: Capture and store waveforms, from 185 cycles on one channel at 16 samples per cycle, up to 3 cycles on six channels at 128 samples per cycle as defined by the user. Waveform log entries must be externally triggered or forced in response to a user-defined event. Configure log entries to be recorded as Fill & Hold or Circular (FIFO), as defined by the user.

T. Capacities and Characteristics:

1. Power Supply: [120 V(ac), 60 Hz]<Insert text>.

2. Circuit Connections:

- a. Voltage: Measurement autoranging, zero to 600 V(ac) L-L, zero to 347 V(ac) L-N.[
Connect directly to low-voltage (600 V and less) without using voltage transformers.][Connect to instrument grade potential transformers secondary at 120 V.] Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
- b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds

- once per hour, and 120 A for one second per hour.
- c. Frequency: 45 to 65 Hz.
- d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.6 CIRCUIT METER AND EXPLORER

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Schneider Electric USA, Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Schneider Electric USA, Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **<Insert manufacturer's name>**
- C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring, control, and power quality explorer; complying with UL 61010-1.
 - 1. Provide for metering four-wire wye, three-wire wye, and three-wire delta power systems.
 - 2. Equip the instrument with security lock to protect revenue related metering from unauthorized and accidental changes.
- D. Comply with IEC 60529 degree of protection code of IP52.
- E. The circuit meter and monitor must meet UL 61010-1 overvoltage withstand rating of CAT IV.
- F. Accuracy to the following plus/minus values:
 - 1. Voltage and Current Meter: 0.04 percent of reading plus 0.025 percent of full scale.
 - 2. Power and Energy Meter: 0.075 percent of reading plus 0.025 percent of full scale.
 - 3. Energy Meter: Comply with ANSI C12.20, Class 0.20.
 - 4. Frequency Meter: 0.01 Hz in the range of 45 to 67 Hz and accurate to 0.1 Hz in the range of 350 to 450 Hz.
 - 5. Power Factor: 0.002 from 0.5 leading to 0.5 lagging.
- G. Data Links:
 - 1. TIA-232 port.
 - 2. MODBUS TIA-485 RTU protocol, **[2][4]**-wire connection.
 - 3. MODBUS Ethernet TCP/IP protocol:
 - a. 10/100BaseTX balanced twisted pair cabling. 8PSJ connector, 100 m link.
 - b. Optical fiber 100BaseFX, LC duplex connector, 1300 m link. Multimode 62.5/125 microsecond, 2000 m link.

- c. HTML server, with standard home page and five customizable pages.
 4. Firmware and software updates must be accessible through the communications port.
 5. **<Insert protocol>**.
- H. Physical Characteristics:
1. Display: Backlit LCD screen with antiglare and scratch-resistant lens.
 2. Display of Metered Values: One screen to show at least **[four]<Insert number>** lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values.
 3. Allow user to select a date/time format and the ability to create additional screens for user-specified views and custom quantities without overwriting existing standard screens.
- I. Sampling Rate:
1. Sample current and voltage to provide RMS accuracy to 255th harmonic of the fundamental frequency of 60 Hz.
 2. Continuously sample and record voltage and current at a rate not less than **[512 samples per cycle][83,333 points per cycle]<Insert rate>**, simultaneously on voltage and current channels of the meter.
- J. Measure, record with time stamp, and calculate; and, on request, display the following:
1. Measurements: Instantaneous, in real time, RMS to the 63rd harmonic:
 - a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, L-N three-phase average, and percent unbalanced.
 - b. Current: Each phase, neutral, ground, three-phase average, apparent RMS, and percent unbalanced.
 - c. Active Power (kW): Each phase and three-phase total.
 - d. Reactive Power (kVAR): Each phase and three-phase total.
 - e. Apparent Power (kVA): Each phase and three-phase total.
 - f. Displacement Power Factor: Each phase and three-phase total.
 - g. Distortion Power Factor: Each phase and three-phase total.
 - h. Frequency.
 - i. K-factor for each phase.
 2. THD from measurements simultaneously from the same cycle, through **[255th]<Insert number>** harmonic:
 - a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - b. Current: Each phase, three-phase average, and neutral.
 - c. Power: Active, reactive, and apparent power including power of up to **[41st]<Insert number>**.
 3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory. Provide for storing accumulated energy at user-defined intervals, up to three intervals per day.
 - a. Active kWh.
 - b. Reactive kVARh.
 - c. Apparent kVAh.

4. Demand:
- a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - 1) Present.
 - 2) Running average.
 - 3) Last completed interval.
 - 4) Peak.
 - b. Current: Each phase, three-phase average, and neutral.
 - 1) Present.
 - 2) Last completed interval.
 - 3) Minimum.
 - 4) Peak.
 - c. Active Power (kW): Three-phase totals.
 - 1) Last completed interval.
 - 2) Predicted.
 - 3) Peak.
 - 4) Coincident with peak kVA demand.
 - 5) Coincident with peak kVAR demand.
 - d. Reactive Power (kVAR): Three-phase totals.
 - 1) Last completed interval.
 - 2) Predicted.
 - 3) Peak.
 - 4) Coincident with peak kW demand.
 - 5) Coincident with peak kVA demand.
 - e. Apparent Power (kVA): Three-phase totals.
 - 1) Last completed interval.
 - 2) Predicted.
 - 3) Peak.
 - 4) Coincident with peak kW demand.
 - 5) Coincident with peak kVA demand.
 - f. Distortion Power Factor: Three-phase totals.
 - 1) Last completed interval.
 - 2) Predicted.
 - 3) Peak.
 - 4) Coincident with peak kVA demand.
 - 5) Coincident with peak kVAR demand.

K. Average, Minimum and Maximum Values:

- 1. Record, date and time stamp, and save the minimum and maximum values of RMS metered values since the last reset.
- 2. Record, date and time stamp, and save maximum, minimum and average over a user-defined interval for the following metered values:

- a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
- b. Voltage Unbalance: L-L each phase and L-N each phase.
- c. Current:
 - 1) RMS each phase, three-phase average, and calculated neutral current.
 - 2) Apparent, RMS average.
 - 3) Active Power (kW): Each phase and three-phase total.
- d. Demand Current: RMS each phase and three-phase average.
- e. Reactive Power (kVAR): Each phase and three-phase total.
- f. Apparent Power (kVA): Each phase and three-phase total.
- g. Demand Active Power: Each phase and three-phase total.
- h. Demand Reactive Power: Each phase and three-phase total.
- i. Demand Apparent Power: Each phase and three-phase total.
- j. Accumulated Energy: MWh, MVAh, and MVARh.
- k. Reactive energy (MVARh) by quadrant.
- l. Power Factor: Three-phase displacement and distortion power factors.
- m. K-factor for each phase.
- n. THD L-L and L-N voltages.
- o. THD current in each phase and neutral.
- p. Frequency.

L. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
 - a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes. The default setting must be the 15-minute continuous sliding block.
 - b. Fixed block that calculates demand at end of the interval.
 - c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
3. Demand Calculation Initiated by a synchronization signal. Synchronize demand with clock in the circuit meter and monitor.
 - a. Synchronize demand with receipt of a signal pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
 - b. Synchronize demand with receipt of a communication signal. Calculation must be configurable as either a block or rolling block calculation.
 - c. Provide for synchronization to the clock in the instrument.
4. Record, date and time stamp, and save the following demand values of RMS metered values since the last reset, including the following:
 - a. Average demand current, per phase.
 - b. Peak demand current, per phase.
 - c. Average demand for active power, reactive power, and apparent power.
 - d. Predicted demand for active power, reactive power, and apparent power.

- e. Peak demand for active power, reactive power, and apparent power.
- M. Trend Curves: Provide for recording four trend curves at intervals of one minute, one hour, one day, or one month; and forecast values for the trended parameters:
 - 1. Record minimum, maximum, and average values of eight user-selected parameters as follows:
 - a. Every second for one minute for the one-minute curve.
 - b. Every minute for one hour for the one-hour curve.
 - c. Every hour for one day for the one-day curve.
 - d. Every day for one month for the one-month curve.
 - 2. Forecast the trended parameters for the following:
 - a. The next four hours.
 - b. The next four days.
- N. Power Analysis Values:
 - 1. THD Voltage: L-L each phase, L-N each phase, and L-N three-phase average.
 - 2. THD Current: Each phase, three-phase average, and neutral current.
 - 3. Total demand distortion.
 - 4. K-factor for each phase.
 - 5. Crest factor, each phase.
 - 6. Displacement power factor.
 - 7. Fundamental voltage, magnitude and angle, each phase.
 - 8. Fundamental currents, magnitude and angle, each phase.
 - 9. Fundamental active power, each phase and three-phase total.
 - 10. Fundamental reactive power, each phase and three-phase total.
 - 11. Harmonic power, each phase and three-phase total.
 - 12. Phase rotation.
 - 13. Voltage and current unbalances.
 - 14. Harmonic magnitudes and angles, each phase.
 - 15. Distortion power.
 - 16. Distortion power factor.
- O. Waveform Capture:
 - 1. Steady State Waveform Capture: Manually initiated over the communications network.
 - a. Capture, record with time stamp, and store voltage and current waveforms at a user-defined resolution of 16 to 512 samples/cycle for up to 30 seconds.
 - b. Capture, record with time stamp, and store 512 digitally sampled data points for each cycle of each phase voltage. The number of waveform captures stored onboard must be user configurable.
 - c. Harmonic analysis performed on the captured waveforms must resolve harmonics through the 255th for the following:
 - 1) Voltage: L-N and L-G each phase.
 - 2) Current: Of each phase and neutral current.
 - d. Captured waveforms must be recorded from actual circuit performance.
 - 2. Disturbance Waveform Capture:
 - a. Capture, record with time stamp, and store digitally sampled data points for each cycle of

each phase voltage. Disturbance waveform capture may be initiated manually, by an external contact closure, or by an alarm. The captured waveform must be at a user-defined resolution of 16 to 512 samples/cycle per second. The number of pre-alarm cycles must be adjustable.

3. Waveform samples must be available for transmission over the communications network, for display, archival, and analysis at computer workstations.

P. Transient Detection:

1. Detect and capture transient voltage surge events up to 10 kV L-L with a duration as short as 200 ns.

Q. Flicker Detection:

1. Detect and capture flicker events, defined by IEEE 1453, at three levels: instantaneous, short term, and long term.
2. Display the flicker event as plots of magnitude versus time on semi-log graph background.

R. Sag and Swell Detection and Alarm:

1. Detect and initiate alarm when detecting voltage or current sag and swell.
 - a. Detect disturbance events of less than half-cycle in length, by monitoring and calculating RMS magnitude of each half-cycle.
 - b. Event detection must be with user-defined parameters of threshold and delay. The threshold must be user defined as a fixed or relative set point. With relative set point, the instrument will alarm based on the nominal current or voltage equal to its present average value. The instrument must automatically adjust the nominal current and voltage values to avoid nuisance alarms caused by gradual daily variations of currents and voltages.
 - c. When detecting an alarm condition:
 - 1) Initiate disturbance waveform capture.
 - 2) Initiate 100 ms event recording.
 - 3) Recording the disturbance parameters into an onboard alarm log with a date and time stamp to the millisecond.
 - 4) Causing an alarm on the display and transmit the alarm over the data link.
 - 5) The user must have the ability to display the voltage sag/swell events on ITIC or SEMI graphs to quantify the event for accepted industry standards.

S. 100 ms Event Recording: Capture, record with time stamp, and store.

1. Initiate recording by an alarm or external contact closure.
2. User-configured recording, to record for the duration of the alarm up to 300 seconds and can be delayed for 1 to 10 seconds.
3. Records current per-phase and neutral, voltage L-L each phase and L-N each phase, active power per-phase and three-phase total, reactive power each phase and three-phase total, apparent power each phase and three-phase total, and true power factor three-phase total.
4. Operate an output relay in the I/O module of the instrument.

T. Harmonics Information:

1. Calculate the harmonic magnitudes and angles for each phase voltage and current in each phase and neutral, through the 255th harmonic. Provide harmonic power flows up to the 41st harmonic for active, reactive, and apparent power.

2. The current and voltage information for phases must be obtained simultaneously from the same cycle.
3. Report harmonic information as a percentage of the fundamental or as a percentage of the RMS values, as selected by the user.

U. Alarms:

1. Alarm events may be either user defined or preconfigured by manufacturer from the applicable standards. Provide for multiple levels for each alarm that is based on metered data.
2. The instrument must calculate the listed key electrical parameters at not less than 100 ms intervals to initiate and record an alarm event. Provide for user-selected range of 1 to 10 seconds of pre-event and up to five minutes of post-event data recording.
3. The following classes of events must be available to be programmed as alarm events:
 - a. Over/under current.
 - b. Over/undervoltage.
 - c. Current imbalance.
 - d. Phase loss, current.
 - e. Phase loss, voltage.
 - f. Voltage imbalance.
 - g. Wave shape alarm.
 - h. Over kVA.
 - i. Over kW or kVAR into/out of load.
 - j. Over/under frequency.
 - k. Under power factor, true or displacement.
 - l. Over THD.
 - m. Over K-factor.
 - n. Over demand, current or power.
 - o. Reverse power.
 - p. Phase reversal.
 - q. Status input change.
 - r. End of incremental energy interval.
 - s. End of demand interval.
 - t. Over/under analog inputs.
 - u. Current sag/swell.
 - v. Voltage sag/swell.
 - w. Transient events.
4. For each over/under metered alarm value, the user must define a pickup, dropout, and delay.
5. Waveform Alarms:
 - a. The instrument must detect anomalous waveform events that are less than half-cycle in length.
 - b. Provide for the user to set a threshold value and an upper limit to determine whether the waveform triggers an alarm. The threshold value and upper limit must be a value between 1 and 100. The threshold value is the limit at which a waveform triggers the alarm. The upper limit defines the highest waveform value that triggers a waveform alarm. The settable values are as follows:
 - 1) Phase voltages.
 - 2) N-G voltages.
 - 3) Phase currents.
 - 4) Neutral currents.
 - c. In response to a waveform alarm, the instrument must:

- 1) Log the event and record phase currents and voltages as defined in the 100 ms event recording.
 - 2) Determine the source of the disturbance (upstream or downstream from the meter) and a statistical level of confidence (low, medium, or high) of the accuracy of the source location.
6. Provide four alarm severity levels to allow the user to respond to the most important events first.
 7. Indicate an alarm condition on the front panel of the instrument, as well as reported over the data link to designated workstations.
 8. The circuit meter and monitor alarms response time must be not less than the following:
 - a. Standard, one second.
 - b. High speed, 100 ms.
 - c. Disturbance, half-cycle.
 9. Up to four alarms may be combined to give a single result using Boolean algebra operations.
 10. Provide e-mail notification of alarm conditions.
 11. Automatic Alarm Set-Point Adjustment:
 - a. The instrument software must provide for recognizing and learning the characteristics of the normal operation of the electrical power system it is connected to, and to select and adjust alarm set points based on that recognition.
 - b. The metered data to be recognized and learned, and the period of time for learning for alarms, disturbances, and waveform alarms, must be set by the user by selection one of the following two modes:
 - 1) Fixed Learning: Initially configured user set points are used during the entire learning period.
 - 2) Dynamic Learning: Initially configured user set points are temporarily replaced by learned set points at the interval specified by the user in the learning setup. The set points continue to be updated at the specified interval until the learning period expires.
 - c. The learning period must be user configurable. If the learned set points do not change over a predefined period, the learning process can be stopped and the set points either installed or held for review.
- V. EN 50160 Evaluation: Report EN 50160 evaluation data in the following formats: summary of active evaluations, summary of evaluation status, detailed information for each evaluated parameter, and detailed information for each abnormal event.
- W. I/O Module: Modular, with multiple I/O options, programmable to accomplish specified performance and one or more spare positions for future. At minimum, the instrument must provide the following:
1. KYZ Pulse: Solid-state output relay, programmed to generate a standard KYZ pulses for a user-defined increment of metered active energy as follows:
 - a. User-defined pulse output, associated with kWh.
 - b. Alarm pulse output, which turns on the pulsing at user-defined point.
 2. Digital inputs, each having the following operating modes:
 - a. Normal: Simple on/off digital inputs.
 - b. Demand Interval Synch Pulse Accept a demand synch pulse from a utility demand meter.
 - c. Conditional Energy Control input to control conditional energy accumulation.

3. Output Relays and Control: Output relays must have normally open and normally closed contacts and must operate in response to a user sent command over the data link, or automatically responding to an alarm event. The relays must be user configured in one of the following listed modes:
 - a. Normal contact closure where the contacts change state for as long as the signal exists.
 - b. Latched mode when the contacts change state when a pickup signal is received and are held until a dropout signal is received.
 - c. Timed mode when the contacts change state when a pickup signal is received and are held for a preprogrammed duration.
 - d. End of Power Demand Interval: When the relay operates as a synch pulse for other devices.
 - e. Energy Pulse Output: Relay will pulse quantities used for Absolute kWh, Absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
 - f. Programmed Output: Relay will operate in response to multiple alarms that are arranged to give a single result using Boolean algebra operations.
- X. Onboard Data Logs:
 1. Log data, alarms and events, and waveforms in onboard solid-state nonvolatile memory.
 2. Onboard data logs must be available for transmission over the communications network for display, archival, and analysis at computer workstations on demand.
 3. Data Logs, General: User configurable. Automatically stamp each entry to the millisecond with date and time.
 - a. Each log entry must hold data of up to 96 parameters each.
 - b. Each log must be user configurable to log data at a different user-defined schedule interval.
 - c. Provide each log with user-defined event or a minimum/maximum condition that will trigger log file entries.
 - d. Configure log entries to be recorded as Fill & Hold or Circular (FIFO), as defined by the user.
 4. Minimum/Maximum Logs:
 - a. Minimum/Maximum/Average interval log also logs minimum/maximum/average of selected parameters on a selected interval from a user-selected interval length from 1 to 1440 seconds.
 - b. Minimum/Maximum log must include the time, date, and value for the minimum and maximum of each of the active-time metered values.
 5. Alarm Log: Record time, date, event information, and coincident information for each user-defined and automatically initiated alarm or event. The log capacity must be not less than 1000 events. Record selected parameters at 100 ms intervals during events and alarms. Automatically stamp each entry to the millisecond with date and time.
 6. Waveform Logs: Capture and store waveforms as follows:
 - a. One cycle, 512 samples, to the 255th harmonic. Manually triggered.
 - b. Adjustable from 8 seconds at 18 samples per cycle, to 264 seconds at 16 samples per cycle. Triggered manually or by a user set alarm.
 - c. Voltage sampling at 5 MHz (83,333 samples per cycle) more than 2 ms to capture transient peaks of less than 1 microsecond.
- Y. Programming: Programming of instrument functions must be similar to BASIC syntax. Provide for initial programming and changes to programs through the communications links.

1. Programming language must include the following capabilities:
 - a. Scheduled tasks.
 - b. Event tasks.
 - c. Math functions including add, subtract, multiple, divide, sine, cosine, and square root.
 - d. Logical functions including: AND, OR, XOR, NOT, shift, and so forth.
 - e. Loop commands.
 - f. Compare statements.
 - g. Counters and timers.
2. Manufacturer must provide custom programs to meet Project requirements that are described in "Capacities and Characteristics" Paragraph below.
3. Metering of specialized utility rate structures, including real-time pricing and curtailable rates.
4. Data reduction using smart data logging.
5. Automatic monthly logging/reset of kWh and peak demand.
6. Statistical profile analysis of metered quantities.
7. ITIC/SEMI power quality analysis.
8. Calculations for IEEE 519 verification.
9. Metering of combined utilities: gas, water, steam, and electric.
10. Non-critical control schemes, such as load control or power factor correction, based on multiple conditions, for example, time of day and input status.

Z. Capacities and Characteristics:

1. Power Supply: **[120 V(ac), 60 Hz]<Insert text>**.
2. Circuit Connections:
 - a. Voltage: Measurements autoranging, zero to 600 V(ac) L-L, zero to 347 V(ac) L-N.[
Connect directly to low-voltage (600 V and less) without using voltage transformers.][Connect to instrument grade potential transformers secondary at 120 V.] Meter impedance must be 2 megohm L-L or greater.
 - b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 15 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
 - c. Frequency: 45 to 67 Hz, and 350 to 450 Hz.
 - d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.
3. Onboard, Field-Upgradeable, Solid-State Nonvolatile Memory: **[8]<Insert number>** MB.
4. Number of Onboard Data Logs: **[14]<Insert number>**.
5. Number of Minimum/Maximum Log Files: **[Two]<Insert number>**.
6. Alarm Log Capacity: Not less than 1000 events.
7. Custom Programs: Provide the following programs with the instrument:
 - a. Metering of specialized utility rate structures, including real-time pricing and curtailable rates.
 - b. Data reduction using smart data logging.
 - c. Automatic monthly logging/reset of kWh and peak demand.
 - d. Statistical profile analysis of metered quantities.
 - e. Calculations for IEEE 519 verification.
 - f. Metering of combined utilities: gas, water, steam, and electric.
 - g. Non-critical control schemes, such as load control or power factor correction, based on multiple conditions such as time of day and input status.
 - h. **<Insert requirements>**.

2.7 PC OPERATING SYSTEM SOFTWARE

- A. Description: System software must monitor, analyze, display, control, and save the parameters and features available at the connected meter.
- B. Software: Configured to run on a portable laptop computer, a single PC, or a tablet computer, with capability for accessing a single meter at a time, at the location of the meter. System is not connected to LAN.
- C. Minimum Requirements:
 - 1. Real-time multitasking and multiuser [32-][or][64-]bit operating system that allows execution of multiple real-time programs and custom program development.
 - 2. Operating system must be capable of operating Microsoft Windows applications.
 - 3. Scheduling software must schedule centrally based time and event, temporary, and exception day programs.

2.8 NETWORKED PC OPERATING SYSTEM SOFTWARE

- A. Description: System software must monitor, analyze, display, control, and save parameters and features available at each of the connected meters.
- B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Software must include interactive graphics client and must be web enabled.
- C. System Software Minimum Requirements:
 - 1. Real-time multitasking and multiuser [32-][or][64-]bit operating system that allows concurrent multiple workstations operating and concurrent execution of multiple real-time programs and custom program development.
 - 2. Operating system must be capable of operating Microsoft Windows applications.
 - 3. Database management software must manage data on an integrated and non-redundant basis. Additions and deletions to database must be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.
 - 4. Scheduling software must schedule centrally based time and event, temporary, and exception day programs.
- D. Operator Interface Software:
 - 1. Minimize operator training through use of English language pronouncing and English language point identification.
 - 2. Minimize use of a typewriter-style keyboard through use of a pointing device, touchscreen, or mouse.
 - 3. Operator sign-off must be a manual operation or, if no keyboard or mouse activity takes place, an automatic sign-off.
 - 4. Automatic sign-off period must be programmable from 1 to 60 minutes in 1-minute increments on a per operator basis.
 - 5. Record operator sign-on and sign-off activity.
 - 6. Security Access:
 - a. Operator access to electrical monitoring and control system must be under password control.
 - b. An alphanumeric password must be user assignable to each operator.
 - c. Software must have at least five access levels.

- 1) View - View information. No change privileges allowed.
 - 2) User - Same as View, but is able to initiate control functions.
 - 3) Controller - Same as User, but is able to initiate communications.
 - 4) Operator - Same as Controller, but is able to modify configurations.
 - 5) Supervisor - Same as Operator, but is able to administer security privileges.
- d. Each menu item must be assigned an access level so that a one-for-one correspondence between operator-assigned access level(s) and menu-item access level(s) is required to gain access to menu item.
 - e. Display menu items to operator with those menu items capable of access highlighted. Menu and operator access level assignments must be online programmable and under password control.

E. Graphic Interface Software:

1. Include a full interactive graphical selection means of accessing and displaying system data to operator.
2. Descriptors for graphics, points, alarms, and such must be modified through workstation under password control.
3. Display operator accessed data on the monitor.
4. Help Features: On-line context-sensitive help utility to facilitate operator training and understanding.

2.9 POWER MONITORING AND CONTROL SOFTWARE

A. Data Storage and Data Sharing:

1. Query and download logs of interval data stored on metering devices.
2. Query and download logs of alarm and event data stored on metering devices.
3. Query and download logs of waveform capture data stored on metering devices.
4. Query and download logs of interval data generated by the software and calculated by the meters.
5. Query and download logs of alarm and event data generated by the software and calculated by the meters.
6. Automatically re-arm the waveform recorders, on upload of information.
7. Provide a facility to archive, trim, and back up the database on demand, or on a schedule.
8. Provide a facility to view historical data from archived databases.
9. Support user changes to the database.
 - a. Support on-line changes while the data storage/retrieval application is running.
 - b. Suffer no interruption to its operation while changes are being made.
 - c. Require no restart once the configuration has been performed.

B. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:

1. Site plan showing each building, and additional site elements, which are being controlled or monitored by the electrical power monitoring and control system.
2. Plan for each building floor, showing the following:
 - a. Locations and identification of monitored and controlled electrical equipment.
 - b. **<Insert requirements>.**
3. Control schematic for each device that is controlled by the meters of this Section, including a graphic system schematic representation[, **similar to that indicated on Drawings,**] with device

identification.

4. Graphic display for each piece of equipment connected to the electrical monitoring and control system through a data link.
5. Electrical power monitoring and control system network riser diagram that shows schematic layout for entire system including meters, **[gateways][and][other network devices]**.

2.10 NETWORK CONFIGURATION SOFTWARE

A. Network Management Graphical Interface Features:

1. Add and remove devices in the power monitoring and control network.
2. Application for naming devices based on a user-defined naming scheme.
3. Add and remove I/O servers in the power monitoring and control network.
4. Edit communication properties for devices including timeouts and delays.
5. Display mandatory fields when adding a new device.
6. Allow to manually connect and disconnect serial, Ethernet, modem, and Ethernet gateway sites.
7. Enable and disable devices and sites in the power monitoring and control network without interruption to other devices or sites.
8. Pool modem resources so that the software uses any available modem.
9. Monitor the following diagnostics:
 - a. Communication request/response and error rates, and timeouts.
 - b. Log acquisition services.

B. Database Maintenance Features:

1. Backup, archive, and trim data, event, and waveform logs.
 - a. Record start and end date for operation.
 - b. Allow copying data to another database.
 - c. Be capable of selecting logs specified for the meters that are Work of this Section.
 - 1) Data logs.
 - 2) Event logs.
 - 3) Waveform logs.

C. Web Reporter: Allow viewing historical data in preformatted report templates via a web browser.

1. Features:
 - a. User-configurable report generator to trigger on event, based on a schedule, or manual initiation.
 - b. Format reports in HTML, PDF, TIF, Excel, XML, or user-selected printer, or network folder.
 - c. Distribution of reports via email.
2. Report on power and demand profiles.
3. Power quality report with CBEMA evaluation.
4. EN 50160 compliance report.
5. 100 ms PQ report.
6. Energy over Period Report:
 - a. User-defined rollup interval by day, week, month, or year.
 - b. Compare daily energy to the following:
 - 1) Previous day.

- 2) Same day, previous week.
 - 3) Same day, previous month.
 - 4) User-defined specific day.
 - c. Compare weekly energy to the following:
 - 1) Previous week.
 - 2) Same week from previous month.
 - 3) Same week from previous year.
 - 4) User-defined specific week.
 - d. Compare monthly energy to the following:
 - 1) Previous month.
 - 2) Same month from previous year.
 - 3) User-defined specific month.
 - e. Compare annual energy to the following:
 - 1) Previous year.
 - 2) User-defined specific year.
- 7. Energy by daily period report for the user-defined periods. Aggregate consumption of the periods by the day, week, and year.
- 8. Tabular Report: Show values for multiple measurements and measurements from multiple devices in tabular format.
- 9. Trend Report:
 - a. Show values for multiple measurements and measurements from multiple devices in the following graphical formats:
 - 1) Line chart.
 - 2) Pie graph.
 - 3) Bar chart.
 - 4) Column chart.
 - 5) Smooth line chart.
 - 6) Stacked column chart.
 - 7) Stacked bar chart.
- 10. Alarm and Event History: User formatted, based on the meters and priority; and with user-defined alarm and event reports.
- 11. System Configuration Report:
 - a. Device name.
 - b. Device type.
 - c. Device address.
 - d. Connection status.
 - e. Device protocol.
 - f. Device description.
- 12. Each default report must include the following:
 - a. Summary aggregation of data from the selected devices.
 - b. Individual device information.
 - c. Raw data.

13. The reporting tool must provide a graphical interface to create and manage multiple Time of Use schedules:
 - a. Tariffs including energy cost rates per kWh, kVARh, and kVAh, and demand charges per kW, kVAR, and kVA.
 - b. Off-peak and on-peak times.

2.11 MONITORING AND CONTROL OF POWER DISTRIBUTION EQUIPMENT

- A. Power Distribution Equipment: Web-enabled, direct connected to the LAN or intranet.
- B. Instrument Transformers: Comply with IEEE C57.13.
 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 accuracy class of 0.3 with burdens of W, X, and Y.
 2. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.
- C. Ethernet Connectivity:
 1. A multipoint, MODBUS TIA-485 serial communications network must be included within the equipment to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications.
 2. Serial communications network must be wired to an Ethernet server in the incoming section of the equipment. Hardware and cabling required for the connection to the network must be included within the power distribution equipment.
 3. Serial communications devices within the equipment must be factory addressed and tested to verify reliable communications to the equipment's Ethernet Server.
- D. Ethernet Gateways:
 1. User configurable; complying with UL 60950-1, and IEEE 802.3, Class 3 PoE.
 2. Include provisions to set initial Ethernet parameters via a local operator interface, or standard (8PSJ) Ethernet port, that is accessible from the front of the equipment. Initial setup must be limited to basic Ethernet addressing parameters, as assigned by Owner.
 3. Common Gateway Features:
 - a. User configurable, with secure password-protected login process.
 - b. Include communications diagnostic information for serial and Ethernet ports as well as internal health status and memory management information through embedded HTML web pages for viewing using a standard web browser.
 - c. Include embedded HTML pages providing real-time information from devices connected to the Ethernet gateway's TIA-485 port(s) through a standard web browser.
 - d. Allow firmware upgrades through the communications port.
 4. Include a "Quick-Start" guide with the equipment to describe the commissioning process for setting the equipment's Ethernet network address and for ensuring trouble-free data access from any PC on the network, using a standard web browser.
 5. Implement a common user interface ("look and feel") across different styles of power equipment.
- E. Distribution Equipment Monitoring:
 1. Main menu and summary pages, factory configured, to display data for each communicating device within the power equipment lineup.
 2. Display Data:

- a. Circuit summary page to display circuit name, three-phase average RMS current, real power (kW), power factor, and breaker status (if applicable).
- b. Load current summary page to display circuit name, and phase a, b, and c RMS current values.
- c. Demand current summary page to display circuit name, and phase a, b, and c average demand current values.
- d. Power summary page to display circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
- e. Energy summary page to display circuit name, real energy (kWh), reactive energy (kVARh), and time/date of last reset.
- f. For unit substations equipped with dry-type transformer(s) and microbased temperature controller(s), the circuit summary web page listed above must be augmented with transformer coil temperatures, phase a, b and c current values, and cooling fan status (on/off).
- g. For motor-control centers, the circuit summary web page must be tailored specifically for this application, to display circuit name, three-phase average RMS current, thermal capacity (percentage), drive output frequency (in Hertz, where applicable), and contactor status.

2.12 SYSTEM OPERATOR INTERFACES

- A. Operator means of system access must be through the following:
 1. Desktop workstation with hardwired connection through LAN port.
 2. Portable terminal with hardwired connection through LAN port at each meter.
 3. Remote connection using outside of system PC, tablet, or phone using an internet portal.

2.13 DESKTOP WORKSTATIONS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[Dell Technologies Inc.]**
 2. **[HP Inc.]**
 3. **[Lenovo Holding Co., Inc.; Lenovo Group Ltd.]**
 4. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[Dell Technologies Inc.]**
 2. **[HP Inc.]**
 3. **[Lenovo Holding Co., Inc.; Lenovo Group Ltd.]**
 4. **<Insert manufacturer's name>**
- C. Performance Requirements:
 1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
 2. Capable of running **[Microsoft Windows]<Insert operating system name>**.
 3. ENERGY STAR compliant.
- D. Personal Computer:

1. Minimum Processor Speed: <Insert gigahertz>, [Core i3][Core i5][Core i7].
2. RAM:
 - a. Capacity: [2][4][8]<Insert value>[GB].
 - b. Speed and Type: [1333]<Insert value> MHz, <Insert type>.
3. Primary Hard Drive:
 - a. Media: [Solid state][Rotating disc, nominal rotational speed of 7200 rpm][Hybrid solid-state and rotating disc].
 - b. Number of Hard Drives: [One][Two]<Insert number>.
 - c. Capacity: <Insert number and measurement unit>.
 - d. Minimum Average Seek Time: <Insert number and measurement unit>.
 - e. Cache Buffer Size: <Insert number and measurement unit>.
 - f. <Insert requirements>.
4. Second Hard Drive:
 - a. Media: [Solid state][Rotating disc, nominal rotational speed of 7200 rpm][Hybrid solid-state and rotating disc].
 - b. Capacity: <Insert number and measurement unit>.
 - c. Minimum Average Seek Time: <Insert number and measurement unit>.
 - d. Cache Buffer Size: <Insert number and measurement unit>.
 - e. <Insert requirements>.
5. Optical Drive:
 - a. Type: <Insert type>.
 - b. Minimum Average Access Time: <Insert number> ms.
 - c. Data Transfer Speed: <Insert number>[MB][TB]/s.
 - d. Reading Formats: Data, audio, recordable, <Insert other> and rewritable.
6. Optical Read and Write Drive:
 - a. Include with at least 2 MB of data buffer.
 - b. Type: <Insert type>.
 - c. Minimum Data Buffer Capacity: <Insert number and measurement unit>.
 - d. Minimum Average Access Time: <Insert number> ms.
 - e. Nominal Data Transfer Rates:
 - 1) Reading: <Insert number>[MB][TB]/s.
 - 2) Writing: <Insert number>[MB][TB]/s.
 - f. Average access time of 150 ms or less.
 - g. MTBF of at least 100,000 power-on hours.
7. Expansion Slots: Minimum of 4, [32][64]<Insert number> bit.
8. Video Card:
 - a. Capable of supporting [one][two][three][four] monitors.
 - b. Resolution: [1920 by 1200]<Insert values> pixels minimum for each monitor.
 - c. RAM: <Insert number>[GB][TB].
 - d. Controller Speed: <Insert number>[MHz][GHz].
 - e. On-Board Memory Speed: <Insert number>[MHz][GHz].
 - f. On-Board Memory Data Width: <Insert number> bit.

9. Sound Card:
 - a. At least 128 voice wavetable synthesis.
 - b. Capable of delivering three-dimensional sound effects.
 - c. High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.
10. Network Interface Card: Include card with connection, as applicable.
 - a. 10-100-1000 base TX Ethernet with 8PSJ connector port.
 - b. 100 base FX Ethernet with SC or ST port.
11. Wireless Ethernet, 802.11 a/b/g/n.
12. Optical Modem: Full duplex link for connection to optical fiber cable provided.
13. I/O Ports:
 - a. Two USB 3.0 ports on front panel, six on back panel, and three internal on motherboard.
 - b. One serial port.
 - c. One parallel port.
 - d. Two PS/2 ports.
 - e. One 8PSJ.
 - f. One stereo line-in and line-out on back panel.
 - g. One microphone and headphone connector on front panel.
 - h. One IEEE 1394 on front and back panel with PCI-e card.
 - i. One ESATA port on back panel.
14. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.

E. Keyboard:

1. 101-key enhanced keyboard.
2. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.
3. Wireless operation within up to **72 inch (1800 mm)** in front of workstation.

F. Pointing Device:

1. Either a two- or three-button mouse.
2. Wireless operation within up to **72 inch (1800 mm)** in front of workstation.

G. Flat Panel Display Monitor:

1. Number of Displays: **[One][Two]<Insert number>**.
 - a. Display Support: **[Individual tilt adjustable base.][Desk mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.][Wall mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.]<Insert description.>**
2. Color display with **<Insert inch (mm)>** diagonal viewable area.
3. Aspect Ratio: **[16 to 9]<Insert value>**.
4. Resolution: **[1920 by 1080]<Insert value>** pixels at 60 Hz with pixel size of **[0.277]<Insert number>** mm or smaller.
5. **[Digital][or][analog]** input signal.

6. Response Time: <Insert number> ms.
7. Dynamic Contrast Ratio: [50000 to 1]<Insert ratio>.
8. Brightness: [250 cd/sq. m]<Insert value>.
9. ENERGY STAR compliant.
10. Antiglare display.

H. Speakers:

1. Two, with individual controls for volume, bass, and treble.
2. Signal to Noise Ratio: At least 65 dB.
3. Power: At least 4 W per speaker/channel.
4. Magnetic shielding to prevent distortion on the video monitor.

I. I/O Cabling: Include applicable cabling to connect I/O devices.

J. Software:

1. Factory-installed operating system.

2.14 PORTABLE WORKSTATIONS

A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Dell Technologies Inc.]
2. [HP Inc.]
3. [Lenovo Holding Co., Inc.; Lenovo Group Ltd.]
4. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Dell Technologies Inc.]
2. [HP Inc.]
3. [Lenovo Holding Co., Inc.; Lenovo Group Ltd.]
4. <Insert manufacturer's name>

C. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. ENERGY STAR compliant.
3. Hardware and software must support local downloading to DDC controllers.
4. Data transfer rate to DDC controller must be at network speed.

D. Processor:

1. Minimum Processor Speed: <Insert gigahertz>.
2. RAM:
 - a. Capacity: <Insert value>[GB][TB].
 - b. Speed and Type: <Insert value> MHz, <Insert type>.
3. Hard Drive:

- a. Media: **[Solid state][Rotating disc, nominal rotational speed of 7200 rpm][Hybrid solid-state and rotating disc]**.
 - b. Number of Hard Drives: **[One][Two]<Insert number>**.
 - c. Capacity: **<Insert number and measurement unit>**.
 - d. Minimum Average Seek Time: **<Insert number and measurement unit>**.
 - e. Cache Buffer Size: **<Insert number and measurement unit>**.
 - f. **<Insert requirements>**.
4. Video Card: **<Insert number and measurement unit>** of RAM.
- E. Input and Output Ports:
1. Serial port.
 2. Shared port for external keyboard or mouse.
 3. Four USB 3.0 ports.
 4. Ethernet port.
 5. HDMI port.
 6. IEEE 1394 port.
- F. Battery:
1. Capable of supporting operation of portable workstation for a minimum of **[8]<Insert number>** hours.
 2. Battery life of at least three years.
 3. Battery charge time of less than three hours.
 4. Spare Batteries: **[One][Two]**.
- G. Keyboard:
1. 85-key **[backlit]** keyboard.
 2. Full upper- and lowercase ASCII keyset.
- H. Integral Pointing Device: Touchpad with two buttons. Gesture enabled.
- I. Display:
1. **<Insert inch (mm)>** diagonal or larger high-definition WLED color display.
 2. Antiglare screen.
 3. **[1920 by 1080]<Insert value>** pixel resolution.
 4. Brightness: 300 nits.
- J. Network Interfaces:
1. Network Interface Card: Include card with connection, as application.
 - a. 10-100-1000 base TX Ethernet with 8PSJ connector port.
 - b. 100 base FX Ethernet with SC or ST port.
 2. Wireless:
 - a. Internal with integrated antenna, capable of supporting 802.11 a/b/g/n.
- K. Digital Video Disc Rewrite Recorder (DVD+/-RW):

1. Compatible with DVD disks and data, audio, recordable and rewritable compact disks.
2. Nominal Data Transfer Rates:
 - a. Reading: <Insert number>[MB][TB]/s.
 - b. Writing: <Insert number>[MB][TB]/s.
3. 160 ms access time.

L. Accessories:

1. Nylon carrying case.
2. Docking station.
3. Mobile broadband card.
4. Wireless optical mouse.
5. <Insert value>[GB][TB] portable hard drive.
6. Light-sensitive web cam and noise-cancelling digital array microphone.
7. Category 6a patch cable. Minimum cable length must be <Insert length>.
8. HDMI cable. Minimum cable length must be <Insert length>.

2.15 RACEWAYS AND BOXES

- A. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" for raceways for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
- B. Comply with requirements in Section 270528 "Pathways for Communications Systems" for control wiring, TIA-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

2.16 WIRES AND CABLES

- A. Electrical Power Wiring: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 1. Copper conductors are Type THHN/THWN-2.
- B. Control Wiring: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
 1. Optical-Fiber Cable: Multimode, 50/125 micrometer OM3, six-fiber, [nonconductive,]tight-buffer, optical-fiber cable, with aqua jacket.
 2. Balanced Twisted Pair Cable: 100 ohm, four-pair [Category 5e][Category 6].
 3. Workstation Outlets: Four-port-connector assemblies mounted in single or multigang faceplate. Coordinate color and labels with Section 262726 "Wiring Devices."
 4. TIA-485 Cable: Paired, [one pair][two pairs], twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
 5. Control-Voltage Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
 - a. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
 - b. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
 - c. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.
- C. TIA-232 Cable:
 1. PVC-Jacketed, TIA-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper

conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.

- a. Type CM.
 - b. Flame Resistance: UL 1581, vertical tray.
2. Plenum-Type, TIA-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. Type CMP.
 - b. Flame Resistance: NFPA 262, flame test.

2.17 SURGE PROTECTION DEVICES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

1. **[ABB, Electrification Business]**
2. **[Advanced Protection Technologies Inc. (APT)]**
3. **[ALLTEC LLC]**
4. **[Eaton]**
5. **[Emerson Electric Co., Automation Solutions]**
6. **[LEA International]**
7. **[Leviton Manufacturing Co., Inc.]**
8. **[Mersen USA]**
9. **[PowerLogics, Inc./PQ Protection]**
10. **[Schneider Electric USA, Inc.]**
11. **[Siemens Industry, Inc., Energy Management Division]**
12. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[ABB, Electrification Business]**
2. **[Advanced Protection Technologies Inc. (APT)]**
3. **[ALLTEC LLC]**
4. **[Eaton]**
5. **[Emerson Electric Co., Automation Solutions]**
6. **[LEA International]**
7. **[Leviton Manufacturing Co., Inc.]**
8. **[Mersen USA]**
9. **[PowerLogics, Inc./PQ Protection]**
10. **[Schneider Electric USA, Inc.]**
11. **[Siemens Industry, Inc., Energy Management Division]**
12. **<Insert manufacturer's name>**

- C. SPDs: Comply with UL 1449, **[Type 1][Type 2]**.

1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor

- components.
3. Include Form-C contacts rated at 5 A and 250 V(ac), one normally open and one normally closed, for remote monitoring of protection status. [**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
 - D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase must not be less than [**100 kA**] <Insert value>. The peak surge current rating must be the arithmetic sum of the ratings of the individual metal-oxide varistors in a given mode.
 - E. Comply with UL 1283.
 - F. Protection modes and UL 1449 SPD for grounded wye circuits with [**480Y/277 V**] [**208Y/120 V**], three-phase, four-wire circuits must not exceed the following:
 1. L-N: [**1200 V for 480Y/277 V**] [**700 V for 208Y/120 V**].
 2. L-G: [**1200 V for 480Y/277 V**] [**700 V for 208Y/120 V**].
 3. N-G: [**1200 V for 480Y/277 V**] [**700 V for 208Y/120 V**].
 4. L-L: [**2000 V for 480Y/277 V**] [**1200 V for 208Y/120 V**].
 - G. Protection modes and UL 1449 SPD for 240/120 V, single-phase, three-wire circuits must not exceed the following:
 1. L-N: 700 V.
 2. L-G: 700 V.
 3. N-G: 700 V.
 4. L-L: 1200 V.
 - H. SCCR: Equal or exceed [**100**] [**200**] <Insert value> kA.
 - I. Nominal Rating: [**20**] [**10**] kA.
 - J. Indoor Enclosures: NEMA 250, Type 1.
 - K. Outdoor Enclosures: NEMA 250, [**Type 3R**] [**Type 4**] [**Type 4X**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF POWER MONITORING AND CONTROL SYSTEMS

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.
- B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and

without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

C. Wiring and Cabling Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 260523 "Control-Voltage Electrical Power Cables" for control wiring.

D. Raceways Installation:

1. Comply with Section 260533.13 "Conduits for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
2. Comply with Section 270528 "Pathways for Communications Systems" for control wiring, TIA-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

E. Identification Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for identification products and cable management system requirements for twisted pair cable, TIA-485 cable, control-voltage cable, and TIA-232 cable.
3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for identification products and cable management system requirements for optical-fiber cable.

3.3 INSTALLATION OF WORKSTATIONS

A. Desktop Workstations Installation:

1. Install workstation(s) at location(s) directed by Owner.
2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single, duplex electrical power receptacle.
3. Install software on workstation(s) and verify that software functions properly.
4. Develop Project-specific graphics, trends, reports, logs, and historical database.
5. Power workstation through a UPS unit. Locate UPS adjacent to workstation.

B. Portable Workstations Installation:

1. Turn over portable workstations to Owner at Substantial Completion.
2. Install software on workstation(s) and verify that software functions properly.

C. Graphics Application:

1. Use system schematics indicated as starting point to create graphics.
2. Develop Project-specific library of symbols for representing system equipment and products.
3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
4. Submit sketch of graphic layout with description of text for each graphic for Owner's[**and Architect's**] review before creating graphic using graphics software.
5. Seek Owner input in graphics development once using graphics software.
6. Final editing must be done on-site with Owner's review and feedback.
7. Refine graphics as necessary for Owner acceptance.
8. On receiving Owner acceptance, print a hard copy to include in operation and maintenance manual. Prepare a scanned copy PDF file of each graphic and include with softcopy of the

system operation and maintenance manual.

3.4 NETWORK NAMING AND NUMBERING

- A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

3.5 GROUNDING

- A. For data communication wiring, comply with BICSI N1.
- B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.6 FIELD QUALITY CONTROL

- A. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- B. Tests and Inspections:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Visually inspect balanced twisted pair cabling and optical-fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
 - 3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of components.
 - 4. Test balanced twisted pair cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination, but not after cross-connection.
 - a. Test instruments must meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in its "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in its "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 - b. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.
 - 5. Optical-Fiber Cable Tests:
 - a. Test instruments must meet or exceed applicable requirements in TIA-568-C.0. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
 - b. Link End-to-End Attenuation Tests:
 - 1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to IEC 61280-4-1.
 - 2) Attenuation test results for links must be less than **[2.0 dB][that calculated according to equation in TIA-568-C.0]**.

- c. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

6. Power Monitoring and Control System Tests.

a. Test Analog Signals:

- 1) Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
- 2) Check analog current signals using a precision current meter at zero, 50, and 100 percent.
- 3) Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

b. Test Digital Signals:

- 1) Check digital signals using a jumper wire.
- 2) Check digital signals using an ohmmeter to test for contact making or breaking.

c. I/O Control Loop Tests:

- 1) Test every I/O point to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
- 2) Test every I/O point throughout its full operating range.
- 3) Test every control loop to verify that operation is stable and accurate.
- 4) Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
- 5) Test and adjust every control loop for proper operation according to sequence of operation.
- 6) Test software and hardware interlocks for proper operation.
- 7) Operate each analog point at the following:
 - a) Upper quarter of range.
 - b) Lower quarter of range.
 - c) At midpoint of range.
- 8) Exercise each binary point.
- 9) For every I/O point in the system, read and record each value at workstation, at controller, and at field instrument simultaneously. Value displayed at workstation and at field instrument must match.
- 10) Prepare and submit a report documenting results for each I/O point in the system, and include in each I/O point a description of corrective measures and adjustments made to achieve desired results.

C. Nonconforming Work:

- 1. Wiring and cabling will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.7 FINAL REVIEW

- A. Submit written request to Architect **[and][Construction Manager]** when the power monitoring and control system is ready for final review. Written request must state the following:
 - 1. The system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
 - 2. The system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
 - 3. The system monitoring and control of electrical distribution systems results in operation according to sequences of operation indicated.
 - 4. The system is complete and ready for final review.
- B. Review by **[Architect][and][Construction Manager]** will be made after receipt of written request. A field report must be issued to document observations and deficiencies.
- C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when deficiencies have been corrected. Repeat process until no deficiencies are reported.
- D. Final review must include a demonstration to parties participating in final review.

3.8 MAINTENANCE SERVICE

- A. Beginning at Substantial Completion, maintenance service must include **[three][six][nine][12]** months' full maintenance by manufacturer's authorized service representative. Include **[quarterly][semiannual][annual]** preventive maintenance, repair or replacement of defective components, cleaning, and adjusting as required for proper system operation. Parts and supplies must be manufacturer's authorized replacement parts and supplies.

3.9 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement must include software support for **[two]<Insert number>** years.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least **[30]<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.10 TRAINING

- A. Attendee Training Manuals:
 - 1. Provide each attendee with a color hard copy of training materials and visual presentations.
 - 2. Hard-copy materials must be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
 - 3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of hard-copy materials.

- B. On-Site Training:
1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power, and data connectivity for instructor and each attendee.
 2. Instructor must provide training materials, projector, and other audiovisual equipment used in training.
 3. Provide as much of training located on-site as deemed feasible and practical by Owner.
 4. On-site training must include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
 5. The workstation provided with the system must be used in training. If workstation is not indicated, provide a temporary workstation to convey training content.
- C. Off-Site Training:
1. Provide conditioned training rooms and workspace with ample tables, chairs, power, and data connectivity for each attendee.
 2. Provide capability to remotely access to Project monitoring and control system for use in training.
 3. Provide a workstation for use by each attendee.
- D. At Completion of Training: Staff familiar with the system installed are capable of demonstrating operation of the system during final review.
- E. Demonstration must include, but not be limited to, the following:
1. Accuracy and calibration of [10]<Insert number> I/O points randomly selected by reviewers. If review finds that some I/O points are not properly calibrated and not satisfying performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.
 2. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and workstations.
 3. Trends, summaries, logs, and reports set-up for Project.
 4. Software's ability to communicate with controllers, workstations, and uploading and downloading of control programs.
 5. Software's ability to edit control programs off-line.
 6. Data entry to show Project-specific customizing capability including parameter changes.
 7. Step through penetration tree, display graphics, demonstrate dynamic update, and direct access to graphics.
 8. Execution of digital and analog commands in graphic mode.
 9. Spreadsheet and curve plot software and its integration with database.
 10. Online user guide and help functions.
 11. For Each Meter:
 - a. Memory: Programmed data, parameters, trend, and alarm history collected during normal operation is not lost during power failure.
 - b. Operator Interface: Ability to connect directly to each meter with a portable workstation.
 - c. Wiring Labels: Match control drawings.
 - d. Network Communication: Ability to locate a meter on the network. Communication architecture matches Shop Drawings.
 - e. Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators, and devices.
 12. For Each Workstation:
 - a. I/O point lists agree with naming conventions.
 - b. Graphics are complete.

- c. UPS unit, if applicable, operates.

END OF SECTION 26 09 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 09 13 00	26 09 00 00	Addressable Luminaire Lighting Controls
26 09 13 00	26 09 00 00a	Relay-Based Lighting Controls

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 23 00 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Time switches.
2. Outdoor photoelectric switches.
3. Daylight-harvesting controls.
4. Business occupancy and vacancy sensors.
5. Storage occupancy sensors.
6. Outdoor motion sensors.
7. Industrial control switches.
8. Emergency lighting controls.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding of lighting control devices referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. **[Section 262726 "Wiring Devices"]****[Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches"]** for wall-box dimmers and manual light switches.

1.2 DEFINITIONS

- A. BCELTS: Branch circuit emergency lighting transfer switch.
- B. DPDT: Double pole double throw.
- C. DPST: Double pole single throw.
- D. N.C.: Normally closed.
- E. N.O.: Normally open.
- F. PIR: Passive infrared.

- G. SPDT: Single pole double throw.
- H. SPST: Single pole single throw.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 - 2. Include manufacturer's sample extended warranty language.
- B. Shop Drawings: Prepare and submit the following:
 - 1. Show installation details for the following:
 - a. Occupancy sensors.
 - b. Vacancy sensors.
 - 2. Interconnection diagrams showing field-installed wiring.
 - 3. Diagrams for power, signal, and control wiring.
- C. Sustainable Design Submittals:
 - 1. ASHRAE/IES 90.1 LPD Compliance Documentation: Prepare plans and calculations demonstrating that as-constructed lighting power density complies with mandatory provisions of ASHRAE/IES 90.1 and that as-constructed lighting, including daylighting and controls, improves on baseline energy performance. If included with Project, indicate locations of energy meters for lighting loads.
 - 2. Lighting Control Documentation: Floor plans indicating the following information:
 - a. As-installed locations of switches and dimmers.
 - b. Lighting zones and control strategy for each switch or dimmer, including unoccupied time-delay setting for shut-off and override time-delay setting for shut-off.
 - c. Multilevel or dimming range capability for each switch or dimmer.
 - d. Which switches or dimmers are operated by occupancy sensors, vacancy sensors, daylighting sensors, or time clocks.
- D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.
- B. Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.
 - 2. Field reports for software and firmware upgrades.

1.5 CLOSEOUT SUBMITTALS

- A. Warranty documentation.
- B. Software and firmware service agreement.

1.6 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multiteam projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- D. Lighting Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with testing and inspecting lighting installations in accordance with applicable IES standards.

1.7 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that installed lighting control devices perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that lighting control devices perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Failures include, but are not limited to, the following:
 - a. Faulty operation of lighting control software.
 - b. Faulty operation of lighting control devices.
 - c. **<Insert failure modes>**.
2. Initial Extended-Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
3. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements:

1. Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Must comply with CCR Title 24.

2.2 TIME SWITCHES

A. UL WGZR - Electronic Time Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[Schneider Electric USA, Inc.]**
 - g. **[TE Connectivity Ltd.]**
 - h. **[Touché Lighting Control]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[Schneider Electric USA, Inc.]**

- g. [TE Connectivity Ltd.]
 - h. [Touché Lighting Control]
 - i. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. Clock-Operated Switches: UL CCN WGZR, including UL 917.
5. Standard Features:
- a. Contact Configuration: [SPST][DPST][DPDT]<Insert configuration>.
 - b. Contact Rating: [30 A inductive or resistive, 240 V(ac)][20 A driver load, 120/240 V(ac)]<Insert rating>.
 - c. Programs:
 - 1) Eight on-off set points on a 24-hour schedule[**and an annual holiday schedule that overrides the weekly operation on holidays**].
 - 2) Two on-off set points on a 24-hour schedule, allowing different set points for each day of the week[**and an annual holiday schedule that overrides the weekly operation on holidays**].
 - 3) <Insert number> channels; each channel is individually programmable with eight on-off set points on a 24-hour schedule.
 - 4) <Insert number> channels; each channel is individually programmable with two on-off set points on a 24-hour schedule with a skip-a-day weekly schedule.
 - 5) <Insert number> channels; each channel is individually programmable with two on-off set points on a 24-hour schedule, allowing different set points for each day of the week.
 - 6) <Insert number> channels; each channel is individually programmable with 40 on-off operations per week and an annual holiday schedule that overrides the weekly operation on holidays.
 - 7) <Insert number> channels; each channel is individually programmable with 40 on-off operations per week, plus four seasonal schedules that modify the basic program and an annual holiday schedule that overrides the weekly operation on holidays.
 - 8) <Insert configuration>[**and an annual holiday schedule that overrides the weekly operation on holidays**].
 - d. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program[**on selected channels**].
 - e. Astronomic Time: [All][Selected] channels.
 - f. Automatic daylight savings time changeover.
 - g. Battery Backup: Not less than seven days' reserve, to maintain schedules and time clock.

B. UL WGZR - Electromechanical-Dial Time Switch :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- a. [Eaton]
 - b. [Intermatic, Inc]
 - c. [Leviton Manufacturing Co., Inc.]
 - d. [NSi Industries LLC]

- e. **[Schneider Electric USA, Inc.]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[NSi Industries LLC]**
 - e. **[Schneider Electric USA, Inc.]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. Clock-Operated Switches: UL CCN WGZR, including UL 917.
5. Standard Features:
- a. Contact Configuration: **[SPST][DPST][SPDT][DPDT]<Insert configuration>**.
 - b. Contact Rating: **[30 A inductive or resistive, 240 V(ac)][20 A driver load, 120/240 V(ac)]<Insert rating>**.
 - c. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.
 - d. Astronomic time dial.
 - e. Eight-Day Program: Uniquely programmable for each weekday and holidays.
 - f. Skip-a-day mode.
 - g. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of **[16]<Insert number>** hours.

C. UL WGZR - Digital Timer Light Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[Schneider Electric USA, Inc.]**
 - g. **[TE Connectivity Ltd.]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[Schneider Electric USA, Inc.]**
 - g. **[TE Connectivity Ltd.]**
 - h. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Clock-Operated Switches: UL CCN WGZR, including UL 917.
5. Standard Features:
 - a. Combination digital timer and conventional switch lighting control unit. Switchbox-mounted, backlit LCD display, with selectable time interval in **[10][20]**-minute increments.
 - b. Rated 960 W at 120 V(ac) for tungsten lighting, 10 A at 120 V(ac) or 10 A at 277 V(ac) for fluorescent or LED lighting, and 1/4 hp at 120 V(ac).
 - c. Standards: Comply with UL 20.
 - d. Integral relay for connection to BAS.
 - e. Voltage: **[Match the circuit voltage][120 V][277 V][Dual voltage - 120 and 277 V]**.
 - f. Color: **[White][Black]<Insert color>**.
 - g. Faceplate: Color matched to switch.

2.3 OUTDOOR PHOTOELECTRIC SWITCHES

A. UL WJFX - Solid-State Outdoor Photoelectric Switch, Flexible Mounting :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**

- g. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.
- 5. Standard Features:
 - a. Solid state, with **[SPST][DPST]<Insert configuration>** dry contacts rated for **[1000 W incandescent][or][1800 VA inductive]<Insert value>**, to operate connected relay, contactor coils, or microprocessor input; and compatible with drivers and LED lamps.
 - b. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 - c. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range[, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off].
 - d. Time Delay: Fifteen-second minimum, to prevent false operation.
 - e. Surge Protection: Metal-oxide varistor.
 - f. Mounting: Twist lock complies with ANSI C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure[**from same source and manufacturer as switch**].
 - g. Failure Mode: Luminaire stays ON.

B. UL WJFX - Solid-State Outdoor Photoelectric Switch, Luminaire-Mounted :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.

4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.
 5. Standard Features:
 - a. Solid state, with **[SPST][DPST]** dry contacts rated for **[1000 W incandescent][or][1800 VA inductive]**, to operate connected load, and compatible with CFL and LED lamps.
 - b. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range.
 - c. Time Delay: Thirty-second minimum, to prevent false operation.
 - d. Lightning Arrester: Air-gap type.
 - e. Mounting: Twist lock complying with ANSI C136.10, with base **[from same source and manufacturer as switch]**.
 - f. Failure Mode: Luminaire stays ON.
- C. UL WJFX - Solid-State, Low-Voltage, Outdoor Photoelectric Switch :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Intermatic, Inc]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[nLight; Acuity Brands Lighting, Inc.]**
 - e. **[NSi Industries LLC]**
 - f. **[TE Connectivity Ltd.]**
 - g. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.
 5. Standard Features:
 - a. Solid state; one set of N.O. dry contacts rated for **[24 V(dc) at 1 A][24 V(ac) at 1 A]**, to operate connected load, and compatible with **[luminaire][power pack][lighting control**

- panelboard].**
- b. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range.
 - c. Time Delay: Thirty-second minimum, to prevent false operation.
 - d. Mounting: **1/2 inch (13 mm)** threaded male conduit.
 - e. Failure Mode: Luminaire stays ON.
 - f. Power Pack:
 - 1) Dry contacts rated for **[20 A]<Insert value>[driver][or][LED]** load at 120 and 277 V(ac), for **[13 A]<Insert value>** tungsten at 120 V(ac), and for **[1 hp]<Insert value>** at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - a) LED status lights to indicate load status.
 - b) Plenum rated.
 - 2) Digital controller capable of accepting **[three][four]<Insert number>** 8PSJ inputs with **[one][two]** outputs rated for **[20 A]<Insert value>** incandescent **[or LED]** load at 120 and 277 V(ac), for **[13 A][16 A]<Insert value>[driver][or][LED]** at 120 and 277 V(ac), and for **[1 hp]<Insert value>** at 120 V(ac). Sensor has 24 V(dc), Class 2 power source.
 - a) With integral current monitoring.
 - b) Compatible with digital addressable lighting interface.
 - c) Plenum rated.

2.4 DAYLIGHT-HARVESTING CONTROLS

A. UL WJCT - Daylight-Harvesting Control Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Eaton]**
 - b. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - e. **[nLight; Acuity Brands Lighting, Inc.]**
 - f. **[NSi Industries LLC]**
 - g. **[Sensor Switch, Inc]**
 - h. **[TE Connectivity Ltd.]**
 - i. **[WattStopper; Legrand North America, LLC]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**

- d. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
 - e. [nLight; Acuity Brands Lighting, Inc.]
 - f. [NSi Industries LLC]
 - g. [Sensor Switch, Inc]
 - h. [TE Connectivity Ltd.]
 - i. [WattStopper; Legrand North America, LLC]
 - j. <Insert manufacturer's name>
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Photoelectric Switches: UL CCN WJCT, including UL 773A.
 5. Standard Features:
 - a. System operates indoor lighting.
 - b. Ceiling-Mounted Switching Controls:
 - 1) Solid-state, light-level sensor unit, with [integrated]power pack, that detects changes in indoor lighting levels that are perceived by the eye.
 - 2) Solid-state, light-level sensor unit, with separate power pack[mounted on luminaire], that detects changes in indoor lighting levels that are perceived by the eye.
 - c. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
 - d. Sensor Output:
 - 1) Contacts rated to operate the associated power pack, complying with UL 773A. Sensor must be powered by the power pack.
 - 2) Digital signal compatible with power pack.
 - e. Sensor Type: [Open loop][Closed loop].
 - f. Zone: [Single][Multi].
 - g. Power Pack:
 - 1) Dry contacts rated for [20 A]<Insert value>[driver][or][LED] load at 120 and 277 V(ac), for [13 A]<Insert value> tungsten at 120 V(ac), and for [1 hp]<Insert value> at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - a) LED status lights to indicate load status.
 - b) Plenum rated.
 - 2) Digital controller capable of accepting [three][four]<Insert number> 8PSJ inputs with [one][two] outputs rated for [20 A]<Insert value> incandescent [or][LED] load at 120 and 277 V(ac), for [13 A][16 A]<Insert value>[driver][or LED] at 120 and 277 V(ac), and for [1 hp]<Insert value> at 120 V(ac). Sensor has 24 V(dc) Class 2 power source.
 - a) With integral current monitoring
 - b) Compatible with digital addressable lighting interface.
 - c) Plenum rated.
 - h. General Space Sensors Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lx), with an adjustment for turn-on and turn-off levels within that range.

- i. Atrium Space Sensors Light-Level Monitoring Range: **100 to 1000 fc (1080 to 10 800 lx)**, with an adjustment for turn-on and turn-off levels within that range.
 - j. Skylight Sensors Light-Level Monitoring Range: **1000 to 10 000 fc (10 800 to 108 000 lx)**, with an adjustment for turn-on and turn-off levels within that range.
 - k. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
 - l. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
 - m. Test Mode: User selectable, overriding programmed time delay to allow settings check.
 - n. Control Load Status: User selectable to confirm that load wiring is correct.
 - o. Indicator: Two digital displays to indicate the beginning of on-off cycles.
6. Sequence of Operation: As daylight increases, the lights are turned off at a predetermined level. As daylight decreases, the lights are turned on at a predetermined level.
- a. Lighting control set point is based on two lighting conditions:
 - 1) When no daylight is present.
 - 2) When significant daylight is present (target level).
 - b. System programming is done with two handheld, remote-control tools.

B. UL WJCT - Daylight-Harvesting Analog Control Dimmer :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Deep Roof Lighting]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[WattStopper; Legrand North America, LLC]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Deep Roof Lighting]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[WattStopper; Legrand North America, LLC]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. Photoelectric Switches: UL CCN WJCT, including UL 773A.
- 5. Standard Features:
 - a. Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
 - b. System programming is done with two handheld, remote-control tools.
 - 1) Initial setup tool.
 - 2) Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.
 - c. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with **[integrated][separate]** power pack **[mounted on luminaire]**, to detect changes in indoor lighting levels that are perceived by the eye.
 - d. Sensor Output: 0-10 V(dc) to operate luminaires. Sensor is powered by controller unit.
 - e. Light-Level Sensor Set-Point Adjustment Range: **20 to 60 fc (120 to 640 lx)**.
 - f. Power Pack: Dry contacts rated for **[20 A]<Insert value>[driver][or][LED]** load at 120 and 277 V(ac), for **[13 A]<Insert value>** tungsten at 120 V(ac), and for **[1 hp]<Insert value>** at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - 1) LED status lights to indicate load status.
 - 2) Plenum rated.
- 6. Sequence of Operation: Lighting control set point is based on two lighting conditions:
 - a. When no daylight is present (target level).
 - b. When significant daylight is present.
- C. UL WJCT - Daylight-Harvesting Digital Control Dimmer :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Deep Roof Lighting]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[nLight; Acuity Brands Lighting, Inc.]**
 - g. **[WattStopper; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Deep Roof Lighting]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**

- f. [nLight; Acuity Brands Lighting, Inc.]
 - g. [WattStopper; Legrand North America, LLC]
 - h. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. Photoelectric Switches: UL CCN WJCT, including UL 773A.
5. Standard Features:
- a. Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, lights are dimmed.
 - b. System programming is done with two handheld, remote-control tools.
 - 1) Initial setup tool.
 - 2) Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.
 - c. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with [integrated][separate] power pack[mounted on luminaire], to detect changes in indoor lighting levels that are perceived by the eye.
 - d. Sensor Output: 0-10 V(dc) to operate luminaires. Sensor is powered by controller unit.
 - e. Light-Level Sensor Set-Point Adjustment Range: **20 to 60 fc (120 to 640 lx)**.
 - f. Power Pack: Digital controller capable of accepting [three][four]<Insert number> 8PSJ inputs with [one][two] output(s) rated for [20 A]<Insert value> incandescent [or][LED] load at 120 and 277 V(ac), for [13 A][16 A]<Insert value>[driver load][or][LED] at 120 and 277 V(ac), and for [1 hp]<Insert value> at 120 V(ac). Sensor has 24 V(dc) Class 2 power source.
 - 1) With integral current monitoring.
 - 2) Compatible with digital addressable lighting interface.
 - 3) Plenum rated.
6. Sequence of Operation: Lighting control set point is based on the following two lighting conditions:
- a. When no daylight is present (target level).
 - b. When significant daylight is present.

2.5 BUSINESS OCCUPANCY AND VACANCY SENSORS

A. Passive-Infrared (PIR) Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- a. [Ademco; Honeywell]
 - b. [ADT Security Services, Inc]
 - c. [Cooper Lighting Solutions; Signify North America Corp.]

- d. [Crestron Electronics, Inc.]
 - e. [Honeywell Security Group]
 - f. [Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Leviton Manufacturing Co., Inc.]
 - h. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
 - i. [Lutron Electronics Co., Inc]
 - j. [Napco Security Technologies, Inc.]
 - k. [Pass & Seymour; Legrand North America, LLC]
 - l. [RAB Lighting]
 - m. [WattStopper; Legrand North America, LLC]
 - n. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Ademco; Honeywell]
 - b. [ADT Security Services, Inc]
 - c. [Cooper Lighting Solutions; Signify North America Corp.]
 - d. [Crestron Electronics, Inc.]
 - e. [Honeywell Security Group]
 - f. [Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Leviton Manufacturing Co., Inc.]
 - h. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
 - i. [Lutron Electronics Co., Inc]
 - j. [Napco Security Technologies, Inc.]
 - k. [Pass & Seymour; Legrand North America, LLC]
 - l. [RAB Lighting]
 - m. [WattStopper; Legrand North America, LLC]
 - n. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
 - a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
 - b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
5. Standard Features:
 - a. [Wall][Ceiling]-mounted, solid-state indoor [occupancy][and][vacancy] sensors.
 - b. [Integrated][Separate] power pack.
 - c. [Hardwired][Wireless] connection to switch[and BAS][; and BAS and lighting control system].
 - d. Sensor Output: [Contacts rated to operate the connected relay, complying with UL 773A][Sensor is powered from the power pack][Wireless].
 - e. Power: [Line voltage][Integral photovoltaic collector].
 - f. Power Pack: Dry contacts rated for 20 A [driver][or][LED] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - g. Mounting:

- 1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
 - 2) Relay: Externally mounted through a **1/2 inch (13 mm)** knockout in a standard electrical enclosure.
 - 3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
- h. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
 - i. Bypass Switch: Override the "on" function in case of sensor failure.
 - j. Automatic Light-Level Sensor: Adjustable from **2 to 200 fc (21.5 to 2152 lx)**; turn lights off when selected lighting level is present.
 - k. Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**.
- 1) Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of **1000 sq. ft (93 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
 - 2) Detection Coverage (Corridor, Ceiling Mounted): Detect occupancy within **90 ft (27.4 m)** when mounted on a **10 ft (3 m)** high ceiling.
 - 3) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [**1000 sq. ft (110 sq. m)**][**2000 sq. ft (220 sq. m)**][**3000 sq. ft (330 sq. m)**] when mounted **48 inch (1200 mm)** above finished floor.
6. Operation:
- a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 - b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 - c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- B. Ultrasonic Occupancy or Vacancy Sensor :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Cooper Lighting Solutions; Signify North America Corp.]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Lutron Electronics Co., Inc]**
 - e. **[WattStopper; Legrand North America, LLC]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. [Cooper Lighting Solutions; Signify North America Corp.]
 - b. [Eaton]
 - c. [Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Lutron Electronics Co., Inc]
 - e. [WattStopper; Legrand North America, LLC]
 - f. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
- a. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
 - b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
5. Standard Features:
- a. [Wall][Ceiling]-mounted, solid-state indoor [occupancy][and][vacancy] sensors.
 - b. [Integrated][Separate] power pack.
 - c. [Hardwired][Wireless] connection to switch[and BAS][; and BAS and lighting control system].
 - d. Power: Line voltage.
 - e. Power Pack: Dry contacts rated for 20 A [driver][or][LED] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - f. Mounting:
 - 1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
 - 2) Relay: Externally mounted through a 1/2 inch (13 mm) knockout in a standard electrical enclosure.
 - 3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 - g. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
 - h. Bypass Switch: Override the "on" function in case of sensor failure.
 - i. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lx); turn lights off when selected lighting level is present.
 - j. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inch (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inch/s (305 mm/s).
 - 1) Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft (56 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
 - 2) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft (93 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
 - 3) Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft (186 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
 - 4) Detection Coverage (Corridor): Detect occupancy anywhere within 90 ft (27.4 m) when mounted on a 10 ft (3 m) high ceiling in a corridor not wider than 14 ft (4.3 m).
 - 5) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [1000 sq. ft

(110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)] when mounted 84 inch (2100 mm) above finished floor.

6. Operation:

- a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

C. Dual-Technology, Passive-Infrared (PIR) and Ultrasonic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Cooper Lighting Solutions; Signify North America Corp.]**
 - b. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Cooper Lighting Solutions; Signify North America Corp.]**
 - b. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - c. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
 - a. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - b. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
5. Standard Features:
 - a. **[Wall][Ceiling]-mounted, solid-state indoor [occupancy][and][vacancy] sensors.**
 - b. **[Integrated][Separate] power pack.**
 - c. **[Hardwired][Wireless] connection to switch[and BAS][; and BAS and lighting control system].**
 - d. Sensitivity Adjustment: Separate for each sensing technology.
 - e. Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**, and detect a person of average size and weight moving not less than **12 inch (305 mm)** in either a horizontal or a vertical manner at an approximate speed of

12 inch/s (305 mm/s).

- 1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft (93 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
- 2) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of **[1000 sq. ft (110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)]** when mounted **48 inch (1200 mm)** above finished floor.

6. Operation:

- a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

D. Dual-Technology, Passive-Infrared (PIR) and Passive-Acoustic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - b. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - c. **[SensorWorx; brand of BLP Technologies, Inc.]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - b. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - c. **[SensorWorx; brand of BLP Technologies, Inc.]**
 - d. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
 - a. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - b. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
5. Standard Features:
 - a. **[Wall][Ceiling]-mounted, solid-state indoor [occupancy][and][vacancy] sensors.**
 - b. **[Integrated][Separate] power pack.**

- c. **[Hardwired][Wireless]** connection to switch **[and BAS][; and BAS and lighting control system]**.
- d. Sensitivity Adjustment: Separate for each sensing technology.
- e. Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**, and detect a person of average size and weight moving not less than **12 inch (305 mm)** in either a horizontal or a vertical manner at an approximate speed of **12 inch/s (305 mm/s)**.
 - 1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft (93 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
 - 2) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of **[1000 sq. ft (110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)]** when mounted **48 inch (1200 mm)** above finished floor.

6. Operation:

- a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
- c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

E. Wall-Switch Occupancy Sensor :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Douglas Lighting Controls]**
 - c. **[Eaton]**
 - d. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - e. **[Intermatic, Inc]**
 - f. **[Leviton Manufacturing Co., Inc.]**
 - g. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - h. **[Lutron Electronics Co., Inc]**
 - i. **[nLight; Acuity Brands Lighting, Inc.]**
 - j. **[NSi Industries LLC]**
 - k. **[Philips; Signify North America; Signify Holding]**
 - l. **[RAB Lighting]**
 - m. **[Sensor Switch, Inc]**
 - n. **[Square D; Schneider Electric USA]**
 - o. **[WattStopper; Legrand North America, LLC]**
 - p. **<Insert manufacturer's name>**

- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - b. [Douglas Lighting Controls]
 - c. [Eaton]
 - d. [Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - e. [Intermatic, Inc]
 - f. [Leviton Manufacturing Co., Inc.]
 - g. [Lithonia Lighting; Acuity Brands Lighting, Inc.]
 - h. [Lutron Electronics Co., Inc]
 - i. [nLight; Acuity Brands Lighting, Inc.]
 - j. [NSi Industries LLC]
 - k. [Philips; Signify North America; Signify Holding]
 - l. [RAB Lighting]
 - m. [Sensor Switch, Inc]
 - n. [Square D; Schneider Electric USA]
 - o. [WattStopper; Legrand North America, LLC]
 - p. <Insert manufacturer's name>
3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
 - a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
 - b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
 5. Standard Features:
 - a. Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in single gang switchbox[, with provisions for connection to BAS][using hardwired connection][using wireless connection].
 - 1) Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 - 2) Operating Ambient Conditions: Dry interior conditions, **32 to 120 deg F (0 to 49 deg C)**.
 - 3) Switch Rating: Not less than 800 VA [driver][or][LED] load at 120 V, 1200 VA [driver][or][LED] load at 277 V, and 800 W incandescent.
 - b. Standard Range: **[180-degree field of view, field adjustable from 180 to 40 degrees][210-degree field of view]**; with a minimum coverage area of **[900 sq. ft (84 sq. m)][2100 sq. ft (196 sq. m)]**.
 - c. Sensing Technology: **[PIR][Dual technology - PIR and ultrasonic]**.
 - d. Switch Type: **[Single pole.][Single pole, dual circuit.][Single pole, manual "on," automatic "off."][Single pole, field-selectable automatic "on," or manual "on," automatic "off."]**
 - e. Capable of controlling load in three-way application.
 - f. Voltage: **[Match circuit voltage][120 V][277 V][Dual voltage - 120 and 277 V]**.
 - g. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from **10 to 150 fc (108 to 1600 lx)**. Switch prevents lights from turning on when light level is higher than set point of sensor.

- h. Time Delay:
 - 1) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
 - 2) Concealed, "off" time-delay selector at 30 seconds and 5, 10, and 20 minutes.
- i. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
- j. Color: **[White][Black]<Insert color>**.
- k. Faceplate: Color matched to switch.

2.6 STORAGE OCCUPANCY SENSORS

A. High-Bay Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[nLight; Acuity Brands Lighting, Inc.]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[nLight; Acuity Brands Lighting, Inc.]**
 - c. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
5. Standard Features:
 - a. Solid-State Unit: Designed to operate with the lamp and ballasts or drivers indicated.
 - b. Power: Line voltage.
 - 1) Operating Ambient Conditions: **32 to 149 deg F (0 to 65 deg C)**.
 - 2) Mounting: Threaded pipe.
 - 3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 - 4) Detector Technology: PIR.
 - c. Detector Coverage: User selectable by interchangeable PIR lenses, suitable for mounting heights from **12 to 50 ft (3.7 to 15.2 m)**.

6. Other Available Features Required for the Project:
 - a. HID Continuous Lamp Monitoring: When lamps are dimmed continuously for 24 hours, automatically turn lamps on to full power for 15 minutes for every 24 hours of continuous dimming.
 - b. HID Dimming Adapter: Power and dimming control from the luminaire ballast that has been modified to include the dimming capacitor[**and MyzerPORT option**].
7. Operation: Turn lights on when coverage area is occupied, and to half-power when unoccupied; with a time delay for turning lights to half-power that is adjustable over a minimum range of 1 to 16 minutes.
8. Accessories: Obtain manufacturer's installation and maintenance kit with laser alignment tool for sensor positioning and power port connectors.

B. Ceiling-Mounted, Solid-State, Extreme-Temperature Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Eaton]**
 - b. **[nLight; Acuity Brands Lighting, Inc.]**
 - c. **[Sensor Switch, Inc]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[nLight; Acuity Brands Lighting, Inc.]**
 - c. **[Sensor Switch, Inc]**
 - d. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
5. Standard Features:
 - a. Operating Ambient Conditions: From **minus 40 to plus 125 deg F (minus 40 to plus 52 deg C)**.
 - b. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
 - c. Separate Power Pack: Dry contacts rated for 20 A **[driver][or][LED]** load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - d. Mounting:
 - 1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
 - 2) Relay: Externally mounted through a **1/2 inch (13 mm)** knockout in a standard electrical enclosure.

- 3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind cover.
- e. Bypass Switch: Override the "on" function in case of sensor failure.
- f. Automatic Light-Level Sensor: Adjustable from **2 to 10 fc (21.5 to 108 lx)**; keep lighting off when selected lighting level is present.
- g. Detector Technology: PIR. Ceiling mounted; detect occupants in coverage area by their heat and movement.
 - 1) Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**.
 - 2) Detection Coverage (Room): Detect occupancy anywhere in a circular area of **1500 sq. ft (139 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
 - 3) Detection Coverage (High Bay): Detect occupancy within **25 ft (7.6 m)** when mounted on a **25 ft (7.6 m)** high ceiling.
6. Operation: Turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 30 minutes.

2.7 OUTDOOR MOTION SENSORS

A. Solid-State Outdoor Motion Sensor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[nLight; Acuity Brands Lighting, Inc.]**
 - g. **[NSi Industries LLC]**
 - h. **[RAB Lighting]**
 - i. **[Sensor Switch, Inc]**
 - j. **[WattStopper; Legrand North America, LLC]**
 - k. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Eaton]**
 - c. **[Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[nLight; Acuity Brands Lighting, Inc.]**
 - g. **[NSi Industries LLC]**
 - h. **[RAB Lighting]**

- i. **[Sensor Switch, Inc]**
- j. **[WattStopper; Legrand North America, LLC]**
- k. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:
 - a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.
 - b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
 - c. Intrusion Detection Units: UL CCN ANSR, including UL 639.
5. Standard Features:
 - a. **[PIR][Dual-technology (PIR and ultrasonic)]** type, weatherproof. Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**.
 - b. Switch Rating:
 - 1) Luminaire-Mounted Sensor: **[1000 W incandescent, 500 VA fluorescent/LED]<Insert rating>**.
 - 2) Separately Mounted Sensor: Dry contacts rated for 20 A **[driver][or][LED]** load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
 - 3) Switch Type: **[Single pole.][Single pole, dual circuit.][Single pole, manual "on," automatic "off."][Single pole, field-selectable automatic "on," or manual "on," automatic "off."][With bypass switch to override the "on" function in case of sensor failure.]**
 - c. Voltage: **[Match the circuit voltage][120 V][277 V][Dual voltage, 120 and 277 V]** type.
 - d. Detector Coverage:
 - 1) Standard Range: 210-degree field of view, with a minimum coverage area of **900 sq. ft (84 sq. m)**.
 - 2) Long Range: 180-degree field of view and **110 ft (34 m)** detection range.
 - 3) **<Insert coverage area>**.
 - e. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from **10 to 150 fc (108 to 1600 lx)**. The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
 - f. Time Delay:
 - 1) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
 - 2) Concealed, "off" time-delay selector at 30 seconds and 5, 10, and 20 minutes.
 - g. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and help eliminate false "off" switching.
 - h. Operating Ambient Conditions: Suitable for operation in ambient temperatures ranging from **minus 40 to plus 130 deg F (minus 40 to plus 54 deg C)**, rated as "raintight" in accordance with UL 773A.

2.8 INDUSTRIAL CONTROL SWITCHES

A. Lighting Contactor :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Allen-Bradley/Rockwell Automation]**
 - c. **[ASCO Power Technologies]**
 - d. **[Eaton]**
 - e. **[Leviton Manufacturing Co., Inc.]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Allen-Bradley/Rockwell Automation]**
 - c. **[ASCO Power Technologies]**
 - d. **[Eaton]**
 - e. **[Leviton Manufacturing Co., Inc.]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Industrial Control Switches: UL CCN NRNT, including UL 508.
5. Standard Features:
 - a. Electrically operated and **[mechanically][electrically]** held, combination-type lighting contactors with **[fusible switch][nonfused disconnect]**, complying with NEMA ICS 2.
 - b. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush driver (driver with 15 percent or less THD of normal load current).
 - c. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
 - d. Enclosure Rating: Comply with UL 50E.
 - e. Provide with control and pilot devices as **[indicated on the Drawings][scheduled]**, matching the enclosure rating specified for the enclosure.
 - f. Interface with DDC System for HVAC: Provide hardware interface to enable the DDC system for HVAC to monitor and control lighting contactors.
 - 1) Monitoring: On-off status, **<Insert monitoring point>**.
 - 2) Control: On-off operation, **<Insert control point>**.

2.9 EMERGENCY LIGHTING CONTROLS

- A. UL FTBR - Automatic Load Control Relay :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bodine; Signify North America; Signify Holding]**
 - b. **[Chloride; Signify North America; Signify Holding]**
 - c. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - d. **[Intelligent Lighting Controls Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[nLight; Acuity Brands Lighting, Inc.]**
 - g. **[WattStopper; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bodine; Signify North America; Signify Holding]**
 - b. **[Chloride; Signify North America; Signify Holding]**
 - c. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - d. **[Intelligent Lighting Controls Inc.]**
 - e. **[Lithonia Lighting; Acuity Brands Lighting, Inc.]**
 - f. **[nLight; Acuity Brands Lighting, Inc.]**
 - g. **[WattStopper; Legrand North America, LLC]**
 - h. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Emergency Lighting and Power Equipment: UL CCN FTBR, including UL 924.
 5. Standard Features:
 - a. N.C., electrically held relay.
 - b. Coil Rating: **[120][277]** V.
- B. UL WPWR - Branch Circuit Emergency Lighting Transfer Switch (BCE LTS) :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bodine; Signify North America; Signify Holding]**
 - b. **[Chloride; Signify North America; Signify Holding]**
 - c. **[HLI Solutions; brand of GE Current, a Daintree Company]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bodine; Signify North America; Signify Holding]**

- b. [Chloride; Signify North America; Signify Holding]
 - c. [HLI Solutions; brand of GE Current, a Daintree Company]
 - d. <Insert manufacturer's name>
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Automatic Transfer Switches: UL CCN WPWR, including UL 1008.
- 5. Standard Features:
 - a. Automatically transfers emergency lighting load from normal branch circuit to emergency branch circuit in accordance with Article 700 of NFPA 70.
 - b. Rating: [120][277] V, not exceeding 20 A.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.
- B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than [18 AWG][22 AWG][24 AWG]. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than [14 AWG][16 AWG][18 AWG]. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 INSTALLATION OF LIGHTING CONTROL DEVICES

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Maintenance: NFPA 70B.

3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
2. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's instructions.
3. Installation of Industrial Control Switches: Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration unless contactors are installed in an enclosure with factory-installed vibration isolators.
4. Installation of Wiring:
 - a. Conduit: Minimum conduit size is **1/2 inch (13 mm)**.
 - b. Wiring within Enclosures: Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's published instructions.
 - c. Size conductors in accordance with lighting control device manufacturer's published instructions unless otherwise indicated.
 - d. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.

D. Interfaces with Other Work:

1. Identification: Provide labels for lighting control devices and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Identify controlled circuits in lighting contactors.
 - d. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
 - e. Label time switches and contactors with a unique designation.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Lighting Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.

2. Engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- C. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- D. Tests and Inspections:
1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Nonconforming Work:
1. Lighting control devices will be considered defective if they do not pass tests and inspections.
 2. Remove and replace defective units and retest.
- F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.
- G. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.
1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.
- 3.5 ADJUSTING
- A. Occupancy Adjustments: When requested within **[12]<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to **[two]<Insert number>** visits to the Project site during other-than-normal occupancy hours for this purpose. Some of the Work may be required during hours of darkness.
1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
 2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
 3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.
- 3.6 CLOSEOUT ACTIVITIES
- A. Demonstration:
1. **[With assistance from factory-authorized service representatives, demonstrate][Demonstrate]** to Owner's maintenance and clerical personnel[**and building occupants**] how to operate the following systems and equipment:
 - a. Lighting control devices.

B. Training:

1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain lighting control devices.

3.7 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for **[two]<Insert number>** years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.
 - a. Upgrade Notice: Not less than **[30 days]<Insert duration>**; to allow Owner to schedule and access the system **[and to upgrade computer equipment if necessary]**.
3. Field Reports for Software and Firmware Upgrades: Prepare and submit report after each update, documenting upgrades installed.

END OF SECTION 26 09 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 23 00A - MODULAR DIMMING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Modular dimming controls.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. **[Section 230923 "Direct Digital Control (DDC) System for HVAC"]<Insert Section number and name>** specifies monitoring and control devices referenced by this Section.
5. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies wiring referenced by this Section.
6. Section 260523 "Control-Voltage Electrical Power Cables" specifies Class 2 control cabling referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
8. **[Section 260943.16 "Addressable Luminaire Lighting Controls"]****[and]****[Section 260943.23 "Relay-Based Lighting Controls"]****[and]****[Section 260923 "Lighting Control Devices"]** specify lighting control system components referenced by this Section.
9. Section 265000 "Lighting" specifies lighting equipment referenced by this Section.
10. Section 270528 "Pathways for Communications Systems" specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

- A. Fade Rate: The time it takes each zone to arrive at the next scene, dependent on the degree of change in lighting level.
- B. RFI: Radio-frequency interference.
- C. Scene: The lighting effect created by adjusting several zones of lighting to the desired intensity.
- D. SCR: Silicon-controlled rectifier.
- E. Zone: A luminaire or group of luminaires controlled simultaneously as a single entity. Also known as a "channel."

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 2. Include manufacturer's sample extended warranty language.
- B. Shop Drawings: Prepare and submit the following:
1. Detail assemblies of standard components, custom assembled for specific application on Project. Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
 - a. Include elevation views of front panels of control and indicating devices and control stations.
 - b. Include diagrams for power, signal, and control wiring.
 2. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.
 3. Point List and Data Bus Load: Summary list of control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.
 4. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
 5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
 6. Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems.
 - a. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.
 - b. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.
- C. Samples for Initial Selection: For master- and remote-control stations, and cover plates with factory-applied color finishes and technical features.
- D. Samples for Verification: For master- and remote-control stations, and cover plates with factory-applied color finishes and technical features.

- E. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.
- B. Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.
 - 2. Manufacturer's field reports for system startup support.
 - 3. Field reports for software and firmware upgrades.

1.5 CLOSEOUT SUBMITTALS

- A. Warranty documentation.
- B. Maintenance service agreement.
- C. Software and firmware service agreement.

1.6 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.
- B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.
- C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.
- E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- F. Lighting Certified Professional: Design professional possessing active qualifications in accordance with Section 014000 "Quality Requirements" and the following:
 - 1. Expertise in lighting design.
 - 2. Lighting Certified (LC) Professional by the National Council on Qualifications for the Lighting Professions (NCQLP).

- G. Lighting Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with testing and inspecting lighting installations in accordance with applicable IES standards.
- H. Communications Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" and the following:
 - 1. Training and manufacturer certification to install, splice, and terminate communications cabling.
 - 2. Installation Supervisor: BICSI Technician (TECH) certification.
 - 3. Copper Installers: **[30 percent]<Insert quantity>** of employees possess BICSI Copper Installer 2 (INSTC) certification. Remaining employees possess BICSI Installer 1 (INST1) certification.
 - 4. Fiber Installers: **[30 percent]<Insert quantity>** of employees possess BICSI Optical Fiber Installer 2 (INSTF) certification. Remaining employees possess BICSI Installer 1 (INST1) certification.
- I. Communications Testing and Inspecting Agency: Entity possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site communications testing supervisor must have **[BICSI Technician (TECH)]<Insert certification program>** certification and documented training, and be experienced with testing communications equipment in accordance with **[BICSI]<Insert code enforced by authorities having jurisdiction>** testing standards.

1.7 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that assembled and installed modular dimming controls perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that modular dimming controls perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Initial Extended-Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 - 2. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. General Characteristics:

1. Compatibility:
 - a. Dimming control components must be compatible with **[luminaires][luminaires and ballasts][luminaires, ballasts, and transformers]**.
 - b. Dimming control devices must be compatible with lighting control system components.
 2. Dimmers and Dimmer Modules:
 - a. Audible Noise and RFI Suppression: Solid-state dimmers must operate smoothly over their operating ranges without audible lamp or dimmer noise or RFI. Modules must include integral or external filters to suppress audible noise and RFI.
 - b. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.
 3. Capacities: Unit must be rated for **[2400 W at 240 V(ac) and 2000 W at 120 V(ac)]<Insert value>** for up to **[100]<Insert number>** devices or zones.
 4. Surge Protection: Withstand supply power surges without impairment to performance.
 - a. Panels: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.
 - b. Other System Devices: 6000 V, 3000 A, complying with IEEE C62.41.1 and IEEE C62.41.2.
 5. Off Control Position: User-selected off position of any control point must disconnect the load from line supply.
- C. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:
1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**]."
 2. Component Importance Factor (Ip): **[1.0][1.5]**.
 3. Component Amplification Factor (ap): **[1.0][2.5]<Insert value>**.
 4. Component Response Modification Factor (Rp): **[1.5][2.0][2.5][6.0]<Insert value>**.
 5. Component Overstrength Factor (Ωo): **[1.5][2.5]<Insert value>**.

2.2 MODULAR DIMMING CONTROLS

A. UL EOXT or EOYX - Wall-Box Multiscene Dimming Control :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Douglas Lighting Controls]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Lutron Electronics Co., Inc]**
 - d. **[Philips; Signify North America; Signify Holding]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. **[Douglas Lighting Controls]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Lutron Electronics Co., Inc]**
 - d. **[Philips; Signify North America; Signify Holding]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Incandescent and Fluorescent Commercial Dimmers: UL CCN EOXT, including UL 508.
 - b. Incandescent, Fluorescent, or Extra-Low Voltage Dimming Controls: UL CCN EOYX, including UL 1472.
 5. Standard Features:
 - a. Factory-fabricated equipment providing manual dimming consisting of a wall-box-mounted master controller **[and indicated number of wall-box zone stations]**.
 - b. Controls and dimmers must be integrated for mounting in multigang wall box under a single wall plate.
 - c. Each zone must be adjustable to indicated number of scenes, which must reside in the memory of zone controller.
 - d. Dimmers:
 - 1) Each zone must be configurable to control the following loads:
 - a) Fluorescent lamps with **[electronic][magnetic]** ballasts.
 - b) LED lamps.
 - c) Incandescent lamps.
 - d) Control-voltage lamps, derived with **[magnetic][electronic]** transformers.
 - e) Non-dim, on-off switching only.
 - f) **<Insert special lighting equipment>**.
 - 2) Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent of RMS voltage.
 - e. Memory:
 - 1) Retain preset scenes and fade rates through momentary (up to 3 s) power interruptions.
 - 2) Retain preset scenes through power failures for at least **[seven]<Insert number>** days.
 - f. Master controller must include the following:
 - 1) Cover-mounted switches, including master off, all bright, and selectors for each scene.
 - 2) Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
 - 3) Concealed switches and indicators for specified function.
 - 4) A raise/lower switch for each zone for temporary adjustments of the zone, without altering scene values stored in memory.

- 5) Fade time indicated by digital display for current scene while fading.
- 6) Cover-mounted infrared receiver.
- g. Infrared Transmitters: Wireless remote control for recalling **[each][four]<Insert number>** of the presets. Operate up to **50 ft. (15 m)** within line of sight of the master controller.
6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.
- B. UL EOXT, EOYX, or DIVQ - Multipreset Modular Dimming Control :
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Douglas Lighting Controls]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Lutron Electronics Co., Inc]**
 - d. **[Philips; Signify North America; Signify Holding]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Douglas Lighting Controls]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Lutron Electronics Co., Inc]**
 - d. **[Philips; Signify North America; Signify Holding]**
 - e. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Incandescent and Fluorescent Commercial Dimmers: UL CCN EOXT, including UL 508.
 - b. Incandescent, Fluorescent, or Extra-Low Voltage Dimming Controls: UL CCN EOYX, including UL 1472.
 - c. Circuit Breakers: UL CCN DIVQ, including UL 489; and the following:
 - 1) Marked "SWD" if circuit breaker is switching fluorescent lighting loads.
 - 2) Marked "HID" if circuit breaker is switching high-intensity-discharge lighting loads.
 5. Standard Features:
 - a. Factory-fabricated equipment providing manual dimming consisting of the following:
 - 1) Master controller.
 - 2) Dimmer panels[, **and indicated number of zone stations**].
 - 3) Controls and dimmers must be integrated for mounting in a multigang wall box under a single wall plate.

- 4) Each zone must be adjustable to indicated number of scenes, which must reside in the memory of zone controller.
- b. Dimmers:
 - 1) Each zone must be configurable to control the following loads:
 - a) Fluorescent lamps with **[electronic][magnetic]** ballasts.
 - b) LED lamps.
 - c) Incandescent lamps.
 - d) Control-voltage incandescent lamps, derived with **[magnetic][electronic]** transformers.
 - e) Non-dim, on-off switching only.
 - f) Neon and cold-cathode lighting.
 - g) **<Insert special lighting equipment>**.
 - 2) Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent of RMS voltage.
- c. Memory: Retain preset scenes and fade settings through power failures by retaining physical settings of controls.
- d. Master controller must include the following:
 - 1) Wall-box style, single cover plate supplied by manufacturer.
 - 2) Cover-mounted switches, including master off, all bright, and selectors for each scene.
 - 3) Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
 - 4) Concealed switches and indicators for specified function.
 - 5) A raise/lower switch for each zone for temporary adjustments of the zone, without altering scene values stored in memory.
 - 6) Fade time indicated by digital display for current scene while fading.
 - 7) Cover-mounted infrared receiver.
- e. Remote-Control Stations:
 - 1) Numbered push buttons to select scenes.
 - 2) Off switch to turn master station off. **[Operating the off switch at any remote station must automatically turn on selected housekeeping lighting.]**
 - 3) On switch turns all scenes of master station to full bright.
 - 4) Control Wiring: NFPA 70, Class 2.
 - 5) Mounting: Single flush wall box with manufacturer's **[standard faceplate]<Insert special material and color for faceplate>**.
- f. Infrared Remote-Control Station: Same functions as for standard remote-control station except that functions are input by a hand-held infrared transmitter. Operate up to **50 ft. (15 m)** within line of sight of the master controller.
- g. Dimmer Panels: Modular, plug-in type.
 - 1) Integrated Short-Circuit Rating: **[10 kA at 120 V][, 14 kA at 277 V]**.
 - 2) Dimmers:
 - a) Dimming Circuit: Two SCR dimmers, in inverse parallel configuration.
 - b) Dimming Curve: Modified square law as specified in "The Lighting Handbook" from IES; control voltage is zero to 10 V(dc).

- c) Dimming Range: Zero to 100 percent, full output voltage not less than 98 percent of line voltage.
- d) Voltage Regulation: Dimmer must maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent of RMS voltage.

6. Accessories:

- a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
- b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

PART 3 - EXECUTION

3.1 SELECTION OF CONDUCTORS AND CABLES

- A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than 12 AWG.
- B. Class 2 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than **[18 AWG][22 AWG][24 AWG]**.

3.2 INSTALLATION OF MODULAR DIMMING CONTROLS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Safety: NFPA 70E.
 - 3. Commissioning of Electrical Systems: NECA NEIS 90.
 - 4. Communications Work: BICSI N1.
 - 5. Life Safety and Means of Egress Work: NFPA 101.
 - 6. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
 - 7. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
 - 1. Wiring Method: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables" and Section 260533.13 "Conduits for Electrical Systems."
 - 2. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's instructions.
 - 3. Size conductors in accordance with lighting control device manufacturer's instructions unless otherwise indicated.
 - 4. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.
- D. Interfaces with Other Work:
 - 1. Identification: Provide labels for modular dimming controls and associated electrical equipment.

- a. Identify field-installed conductors, interconnecting wiring, and components.
- b. Label each enclosure with engraved metal or laminated-plastic nameplate.
- c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
- d. Label each dimmer module with a unique designation.
- e. Label each scene control button with approved scene description.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Field Tests and Inspections of Lighting Installations:

1. **[Owner][Tenant]** will engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Administrant for Communications Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

D. Acceptance Testing Preparation:

1. **<Insert requirements>**.

E. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

F. Tests and Inspections:

1. Continuity tests of circuits.
2. Operational Test: Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.

- a. Include testing of modular dimming control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.
3. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- G. Nonconforming Work:
 1. Dimming control components will be considered defective if they do not pass tests and inspections.
 2. Remove and replace defective units and retest.
- H. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.
- I. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.4 SYSTEM STARTUP

- A. Perform startup service.
 1. Complete installation and startup checks in accordance with manufacturer's published instructions.
 2. **<Insert startup steps if any>**.
- B. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** system startup.
 1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 ADJUSTING

- A. Control Sensor Adjustments: Adjust control devices to suit actual occupied conditions.
 1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
 2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
 3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.6 CLOSEOUT ACTIVITIES

- A. Demonstration:
 1. **[With assistance from factory-authorized service representatives, demonstrate][Demonstrate]** to Owner's maintenance and clerical personnel **[and building occupants]** how to operate the following systems and equipment:
 - a. Lighting control devices.

2. **[Provide video recordings of demonstrations to Owner][Allow Owner to record demonstrations].**

B. Training:

1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain hardware and software specified in this Section.
Laptop computer must be used in training.]
2. **[Provide video recordings of training sessions to Owner][Allow Owner to record training sessions].**

3.7 PROTECTION

- A. After installation, protect modular dimming controls from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

- A. Control Sensor Readjustments: When requested within **[12]<Insert number>** months from date of Substantial Completion, provide on-site assistance in readjusting system to suit actual occupied conditions. Provide up to **[two]<Insert number>** visits to the Project site during other-than-normal occupancy hours for this purpose.
- B. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes **[one year]<Insert duration>** period for full maintenance by **[skilled employees of modular dimming controls Installer][manufacturer's authorized service representative]**. Include annual preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper modular dimming controls operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.
- C. Software and Firmware Service Agreement:
 1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for **[two years]<Insert duration>**.
 2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within **[two years]<Insert duration>** from date of Substantial Completion.
[Verify that upgrading software includes operating system and new or revised licenses for using software.]
 - a. Upgrade Notice: Not less than **[30 days]<Insert duration>**; to allow Owner to schedule and access the system **[and to upgrade computer equipment if necessary.]**
 3. Field Reports for Software and Firmware Upgrades: Prepare and submit report after each update, documenting upgrades installed.

END OF SECTION 26 09 23 00A

Task	Specification	Specification Description
26 09 23 00	02 84 16 00	Handling of Lighting Ballasts and Lamps Containing PCBs and Mercury
26 09 23 00	26 09 13 00	Electrical Power Monitoring
26 09 23 00	26 09 00 00	Addressable Luminaire Lighting Controls

SECTION 26 11 16 00 - SECONDARY UNIT SUBSTATIONS WITH SWITCHBOARD SECONDARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Secondary unit substation equipment.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Re-Installed" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in incoming section of substation.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for connecting wires.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic-[**and wind**]- control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
12. Section 260913 "Electrical Power Monitoring" specifies remote monitoring of metering instruments and for remote control of circuit breakers and switches.
13. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies field-mounted surge-suppression devices referenced in this Section.

1.2 DEFINITIONS

- A. ICCB: Insulated-case circuit breaker.
- B. MCCB: Molded-case circuit breaker.

- C. PCB: Polychlorinated biphenyl.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
3. Include manufacturer's sample extended warranty language.
4. Include product certificates for secondary unit substations, signed by manufacturer.

- B. Shop Drawings: Prepare and submit the following:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Dimensioned plans and elevations showing major components and features.
 - a. Include a plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace that accounts for breaker service and removal, and locations of penetrations for grounding and conduits.
4. One-line diagram.
5. List of materials.
6. Nameplate legends.
7. The material, size and number of bus bars, and current rating for each bus, including mains and branches of phase, neutral, and ground buses.
8. Short-time and short-circuit current ratings of secondary unit substations and components.
9. Ratings of individual protective devices.
10. Design Data:
 - a. Time-Current Characteristic Curves: For overcurrent protective devices.
 - b. Primary Fuses: Submit recommendations and size calculations.
 - c. Utility company's metering provisions with indication of approval by utility company.

- C. Factory test reports.

- D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.
- B. Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.
 - 2. Manufacturer's field reports for system startup support.
 - 3. Field reports for voltage monitoring and adjusting.
 - 4. Field reports for infrared scanning.

1.5 CLOSEOUT SUBMITTALS

- A. Warranty documentation.
- B. Maintenance service agreement.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare parts.
- B. Special tools.
- C. Consumable items.

1.7 REGULATORY AGENCY APPROVALS

- A. Submittals for secondary unit substations requiring approval by <Insert name of electrical utility> must be signed by qualified electrical professional engineer responsible for their preparation. **[Obtain approval by electrical utility prior to submitting for action by Architect][Submit for action by Architect prior to submitting for approval by electrical utility].**

1.8 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.
- B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.
- C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

- E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
 - F. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.
 - G. Medium-Voltage Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with training and manufacturer certification to install, splice, and terminate medium-voltage cable[**in accordance with electrical utility service provider's requirements**].
 1. Medium-voltage cable Installer must be approved by <**Insert name of electrical utility service provider**>.
 - H. Medium-Voltage Duct Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with installation of medium-voltage duct banks[**in accordance with electrical utility service provider's requirements**].
 1. Medium-voltage duct Installer must be approved by <**Insert name of electrical utility service provider**>.
 - I. Medium-Voltage Equipment Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with hazards and safety requirements associated with installation and operation of medium-voltage equipment[**in accordance with electrical utility service provider requirements**].
 1. Medium-voltage equipment Installer must be approved by <**Insert name of electrical utility service provider**>.
 - J. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.
 - K. Power Quality Specialist: Recognized experts possessing active NICET Electrical Power Testing (EPT) Technician IV certification and documented experience in power quality testing for installations similar in complexity to the Project.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
 - B. Coordinate delivery of secondary unit substations to allow movement into designated space.
 - C. Store secondary unit substation components[**protected from weather and**] so condensation will not form on or in units. Provide temporary heating in accordance with manufacturer's instructions.
 - D. Handle secondary unit substation components in accordance with manufacturer's instructions. Use factory-installed lifting provisions.

1.10 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

- A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Equipment Service Conditions," "Outdoor Equipment Service Conditions," and "Indoor Equipment Services Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.11 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

- A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substations performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Initial Extended-Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 - 2. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>**.
- C. Accessories: **<Insert accessories included with existing product>**.

2.2 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>**.

- C. Accessories: **<Insert accessories included with existing product>**.

2.3 PERFORMANCE REQUIREMENTS

- A. Description: Medium-voltage, primary incoming section; transformer section; and low-voltage secondary switchgear section; and including coordinated circuit breakers, fusible switches, and metering components.
- B. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- C. General Characteristics:
1. Referenced Standards: IEEE C2 and IEEE C37.121.
 2. Indoor Unit Arrangement: Single assembly.
 3. Outdoor Unit Arrangement: Single assembly.
 - a. Weatherproof, listed for installation outdoors, complying with IEEE C37.20.1.
 - b. Aisleless Construction: Full-height doors in front of basic weatherproof equipment.
 4. Connections between the primary device and transformer must be **[cable][bus]**, and between the transformer and secondary must be flexible bus braid unless noted otherwise.
 5. Indoor Enclosure: Steel.
 6. Outdoor Enclosure: Weatherproof, galvanized steel, listed for installation outdoors, complying with IEEE C37.20.1. Aisleless, full-height doors, with provisions for padlocking, in front of basic weatherproof equipment. Integral structural-steel base frame with factory-applied asphaltic undercoating.
 7. Each compartment must have the following features:
 - a. Structural design and anchorage adequate to resist loads imposed by **[125 mile/h (200 km/h)]<Insert wind speed>** wind.
 - b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of each section above expected dew point.
 - c. Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
 - d. Weatherproof ground-fault circuit interrupter duplex receptacle.
 - e. Power for heaters and receptacles must be provided **[by control power transformer][as indicated]**.
 - f. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.
 8. Enclosure Finish:
 - a. Outdoor Finish: Provide factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
 - b. Indoor Finish: Provide factory-applied finish in manufacturer's standard gray over a rust-inhibiting primer on treated metal surface.
 - c. Severe Environment Finish: Provide factory-applied corrosion-resistant finish in manufacturer's standard color that withstands **[120][480]** hours of exposure to the salt spray test specified in ASTM B117 without loss of paint or release of adhesion of the paint primer coat to the metal surface in excess of **1/16 inch (1.6 mm)** from the test mark. The

scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with a rating of not less than 7 arrived at in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with a manufacturer's standard zinc-rich paint.

2.4 SECONDARY UNIT SUBSTATION EQUIPMENT

A. Source Quality Control:

1. Factory Tests:

- a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
- b. Testing Administrant: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate secondary unit substation equipment.
- c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation equipment, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with the following standards before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.
 - 1) Conduct transformer tests in accordance with IEEE C57.12.90.
 - 2) Conduct primary switchgear tests in accordance with NEMA C37.51.
 - 3) Conduct routine tests of completely assembled switchboard.
 - 4) Resistance measurements of windings on rated voltage connection and on tap extreme connections.
 - 5) Ratios on rated voltage connection and on tap extreme connections.
 - 6) Polarity and phase relation on rated voltage connection.
 - 7) No-load loss at rated voltage on rated voltage connection.
 - 8) Exciting current at rated voltage on rated voltage connection.
 - 9) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
 - 10) Applied potential.
 - 11) Induced potential.

2. Temperature Test: If transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating.

- a. Temperature test is not required if record of temperature test on essentially duplicate unit is available.
- b. Nonconforming Work:
 - 1) Equipment that does not pass tests and inspections will be considered defective.
- c. Factory Test Reports: Compile and submit factory test and inspection reports.

B. UL YEFV or DLAH or WVGN - Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**

- b. [Eaton]
 - c. [Siemens Industry, Inc., Energy Management Division]
 - d. [Square D; Schneider Electric USA]
 - e. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Siemens Industry, Inc., Energy Management Division]
 - d. [Square D; Schneider Electric USA]
 - e. <Insert manufacturer's name>
 - 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.
 - 4. Standard Features:
 - a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for the transformer section.
 - b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - c. System Voltage: [4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>.
 - d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.
- C. UL YEFV or DLAH or WVGN - Medium-Voltage Metal-Enclosed Switchgear Section :
- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Siemens Industry, Inc., Energy Management Division]
 - d. [Square D; Schneider Electric USA]
 - e. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGW, including IEEE C37.20.3 and IEEE C37.20.7.
4. Standard Features:
 - a. Metal-enclosed, air-interrupter switchgear, **[with][without]** fuses, complying with IEEE C37.20.3.
 - 1) Switchgear must be arc-resistant, complying with IEEE C37.20.7, **[Type 1A][Type 2A][Type 1C][Type 2C]**.
 - b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - 1) System Voltage: **[4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>**.
 - 2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
 - 3) Main-Bus Rating: **[600][1200][2000]** A, continuous.
 - c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.
 - 1) Rating: **[600][1200]** A continuous duty and load break.
 - 2) Two-Time Duty-Cycle Fault Closing: **[25 000][40 000]** A, asymmetrical.
 - 3) Switch Action: No external arc and no significant quantities of ionized gas released into the enclosure.
 - 4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
 - 5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
 - 6) Protective Shields: Cover live components and terminals.

- a) Fuse Mounts: Single-frame mounted and de-energized when switch is open.
 - 7) Mechanical Interlock: Prevent opening switch compartment door unless switchblades are open, and prevent closing switch if door is open. **[Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.]**
 - 8) Window: Permits viewing switch-blade positions when door is closed.
 - 9) Accessory Set: Tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include fuse-handling tool as recommended by switchgear manufacturer.
 - d. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.
 - 1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.
 - 2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
 - 3) Indicator integral with each fuse to show when it has blown.
 - 4) Spares: Include three fuses in use and three spare fuses in storage clips in each switch.
 - e. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with ratings as indicated, connected in each phase of incoming circuit and ahead of disconnecting device.
- D. UL YEFV or DLAH or WVG N - Medium-Voltage Instruments Section :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product

categories:

- a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.
4. Standard Features:
- a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential and Current Transformers: Burden and Accuracy Class suitable for connected meters.
 - b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
 - 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
 - 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
 - c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
 - 1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three

wire; with three elements, **[15 min]<Insert value>** indicating demand register, and provision for testing and adding pulse initiation.

- 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with **[15 min]<Insert value>** interval.
 - a) Operation: Counts and records a succession of pulses entering two channels.
 - b) Housing: Drawout, back-connected case arranged for semiflush mounting.

E. UL YEFV or XPLH - Liquid-Filled Transformer Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - 3) Liquid-Immersed Transformers: IEEE C57.12.00.
 - b. Liquid-Filled Distribution Transformers Over 600 V: UL CCN XPLH, including IEEE C57.12.00 and IEEE C57.12.28.
4. Standard Features:
 - a. Insulating Liquid:
 - 1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with ASTM D117.
 - 2) Less flammable, edible-seed-oil based, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
 - 3) Less flammable, dielectric, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than

- 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
- 4) Less flammable, silicone-based dielectric, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.
- b. Insulation Temperature Rise:
- 1) 55 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**. Insulation system must be rated to continuously allow an additional 12-percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
 - 2) 65 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**.
- c. BIL: **[60][75][95][110]** kV.
- d. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps[, **two above and two**] below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
- e. Cooling System: **[Class ONAN, liquid cooled][Class ONAN/ONAF, liquid cooled, and with forced-air rating][Class ONAN/ONAF/ONAF, liquid cooled, and with provisions for future forced-air rating]**. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.
- f. Impedance: **<Insert number>** percent.
- g. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap.
Include the following additional accessories:
- 1) Liquid-level gage.
 - 2) Pressure-vacuum gage.
 - 3) Liquid temperature indicator.
 - 4) Drain and filter valves.
 - 5) Pressure-relief device.
- F. UL YEFV - Dry-Type Transformer Section :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Square D; Schneider Electric USA]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Square D; Schneider Electric USA]**
 - c. **<Insert manufacturer's name>**
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

- a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - 3) Dry-Type Transformers: UL 1562.
4. Standard Features:
 - a. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for the transformer section.
 - b. Style:
 - 1) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
 - 2) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
 - c. Cooling System:
 - 1) Class AA, air cooled, complying with IEEE C57.12.01.
 - 2) Class AFA, air cooled with forced-air rating, complying with IEEE C57.12.01.
 - a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
 - b) Include mounting provision for fans.
 - 3) Class AA/FA, air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.
 - a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
 - b) Include mounting provision for fans.
 - 4) Class AFA, forced-air cooling, complying with IEEE C57.12.01.
 - a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
 - b) Include cooling fans.
 - d. Insulation Materials: IEEE C57.12.01, rated **[220]<Insert number>** deg C.
 - 1) Insulation Temperature Rise: **[80][115][150]** deg C, maximum rise above **104 deg F**

(40 deg C).

- e. BIL: **[60][75][95][110]** kV.
- f. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps[, **two above and two**] below rated primary voltage.
- g. Impedance: **<Insert number>** percent.
- h. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

G. UL WEVC - Secondary Distribution Section Switchboard :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Dead-Front Switchboards: UL CCN WEVZ, including UL 891.
 - 1) Arc Resistance: Annex J of IEEE C37.20.7.
4. Standard Features:
 - a. The secondary distribution section must be drawout, **[fused][fused where indicated]**, low-voltage switchgear, complying with NEMA PB 2.
 - b. Switchboard Structure: Front and rear accessible.
 - 1) Match and align the **[front][front and rear]** of the switchgear.
 - 2) Comply with UL requirements for service entrance equipment.
 - c. Switchboard Bus:
 - 1) Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
 - 2) Main Phase Bus: Uniform capacity the entire length of section.
 - 3) Neutral Bus: **[50][100]** percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.

- 4) Include braces for neutral-bus extensions for busway feeders.
- 5) Vertical Section Bus: Extend to spaces for future circuit breakers.
- 5) Phase- and Neutral-Bus Material:
 - a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
 - b) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.
- 6) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size **1/4-by-2 inch (6 by 50 mm)**.
- 7) Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors. Neutral-bus extensions for busway feeders are braced.
- 8) Neutral Disconnect Link: Bolted, uninsulated, **1/4-by-2 inch (6-by-50 mm)** copper bus, arranged to connect neutral bus to ground bus.
- d. Switchboard Arrangement:
 - 1) Main Disconnect Device(s): **[Power circuit breakers][Bolted pressure switches][ICCBs][MCCBs][Fusible switches]**.
 - 2) Feeder Protective Devices: **[Bolted pressure switches][ICCBs][MCCBs][Fusible switches]**.
- e. Power Circuit Breakers: **[Fixed][Drawout]** mounted, electrically operated air-circuit breakers, complying with UL 1066.
 - 1) With "close" and "open" push buttons and red and green lighted breaker position indicators. Charging time of the motor operator must not exceed 8 seconds. Operator power must be from a control power transformer internal to the switchboard.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show cause of automatic trip.
 - 5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip the circuit breaker when closing on a fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) One test kit to test each trip function.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator LED.
- f. Bolted Pressure Switches: Fixed-mounted, manually operated, **[electrically tripped],[fusible,]**bolted pressure contact switch. Comply with UL 977.

- 1) Stored energy deadfront mechanism, compressed and released by the operating handle; switching action must be independent of the speed of the operating handle.
 - 2) Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
 - 3) With fuse clips and fuses for UL 248 Class L time-delay fuses.
 - 4) Electrically tripped switches must include:
 - a) Ground-fault protection, with adjustable time delay and test panel.
 - b) Single-phase protection, tripping the switch on loss of a source phase.
 - c) Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.
- g. ICCBs: **[Fixed][Drawout]**-mounted, **[manually][electrically]** operated air-circuit breakers. Comply with UL 1066.
- 1) With "close" and "open" push buttons and red and green lighted breaker position indicators. Charging time of the motor operator must not exceed 8 seconds. Operator power must be from a control power transformer internal to the switchboard.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show cause of automatic trip.
 - 5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip the circuit breaker when closing on a fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) With built-in connector to test the breaker settings. Provide one test set.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- h. MCCBs (to 2500 A): Fixed-mounted, manually operated air-circuit breakers. Comply with UL 489.
- 1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by the position of the handle. With manual push-to-trip push button.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) With trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs must not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
 - 5) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-time delay.
 - b) Adjustable short-time setting and delay to shape the time-current curve.

- c) Adjustable instantaneous setting.
 - d) Individually adjustable ground-fault setting and time delay.
- 6) With built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker. **[Provide one test set for testing installed circuit breakers with 225 A frame and higher.]**
- 7) With built-in digital ammeter display, showing load current and tripping cause.
- i. MCCBs (1600 to 2500 A): Fixed-mounted, manually operated air-circuit breakers. Comply with UL 489.
 - 1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by the position of the handle. With manual push-to-trip push button.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show reasons of automatic trip.
 - 5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip the circuit breaker when closing on a fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) One test kit to test each trip function.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- j. Fusible Switches: Fixed-mounted, manually operated, **[electrically tripped]**, fusible, quick-make, quick-break switch. Comply with UL 98.
 - 1) Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
 - 2) With fuse clips and fuses.
 - 3) Electrically tripped switches must include:
 - a) Shunt trip.
 - b) Ground-fault protection, with adjustable time delay and test panel.
 - c) Single-phase protection, tripping the switch on loss of a source phase.
 - d) Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.

H. UL YEFV or YEFR - Low-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

Secondary Unit Substations with Switchboard

Secondary

- a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Unit Substation Rated 600 V or Less: UL CCN YEFR, including UL 1062.
4. Standard Features:
 - a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
 - 2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.
 - b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

- 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
 - 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
- c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
- 1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
 - 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.
 - a) Operation: Counts and records a succession of pulses entering two channels.
 - b) Housing: Drawout, back-connected case arranged for semiflush mounting.
- d. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.
- e. Surge Suppression: Factory installed as an integral part of the low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:
- 1) Integral disconnect switch.
 - 2) Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
 - 3) Indicator light display for protection status.
 - 4) Form-C contacts rated at 5 A and 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
 - 5) Surge counter.
- f. Control Power Supply: Control power transformer supplying 120 V control circuits through secondary disconnect devices.
- g. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
- 1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - 2) Conductors sized in accordance with NFPA 70 for duty required.

2.5 MAINTENANCE MATERIAL ITEMS

- A. Spare Parts: Furnish to Owner spare parts, for repairing unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the**

Secondary Unit Substations with Switchboard

Secondary

following:]

1. Spare Fuses: **[Six]<Insert number>** of each type and rating of fuse and fusible device used, except for medium-voltage fuses. Include spares for the following:
 - a. Primary disconnect fuses.
 - b. Potential transformer fuses.
 - c. Control power fuses.
 - d. Fuses and fusible devices for fused circuit breakers.
 - e. Fuses for secondary fusible devices.
 2. Spare Indicating Lights: Six of each type installed.
 3. Spare Mounting Gaskets: **[One]<Insert number>** set(s) for bushings, handholes, and the gasket between relief cover and flange of pressure-relief device.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.**[Include the following:]**
1. Racking handle, to manually move circuit breaker between "connected" and "disconnected" positions.
 2. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchboard.
 3. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
 4. Circuit-Breaker Removal Apparatus: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
 5. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
 6. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.
- C. Consumable Items: Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents.**[Include the following:]**
1. Touchup Paint: **[Three]<Insert number>** half-pint containers of paint matching enclosure's exterior finish.
 2. Primary Switch Contact Lubricant: **[One]<Insert number>** container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 1. Wiring entries comply with layout requirements.
 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.

- D. Verify that ground connections are in place. Maximum ground resistance must be 5 Ω at secondary unit substation location.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATION EQUIPMENT

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFB, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Maintenance: NFPA 70B.
 - 3. Electrical Safety: NFPA 70E.
 - 4. Temporary Electric Power Work: NECA NEIS 200.
 - 5. Commissioning of Electrical Systems: NECA NEIS 90.
 - 6. Hot Work: NFPA 51B.
 - 7. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 - 8. Life Safety and Means of Egress Work: NFPA 101.
 - 9. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
 - 10. Work in Confined Spaces: NFPA 350.
 - 11. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
 - 12. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
 - 13. Installation of Switchboards: NECA NEIS 400.
 - 14. Installation of Liquid-Filled Transformers: NECA NEIS 410.
 - 15. Installation of Medium-Voltage Switchgear: NECA NEIS 430.
 - 16. AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
 - 17. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
 - 1. Install secondary unit substations on cast-in-place concrete equipment base(s).
 - 2. Comply with requirements for vibration isolation and seismic control devices.
- D. Interfaces with Other Work:
 - 1. Identification: Provide labels for secondary unit substation equipment and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
 - d. Install the number of signs required to be readable from each accessible side, but space the signs a maximum of **30 ft (9 m)** apart.
 - e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with the maintenance materials.
 - 2. Grounding and Bonding:
 - a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not

smaller than 4/0 AWG. Bond surge arrester and neutrals directly to the transformer enclosure and then to the grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.

- b. At Exterior Locations:
- c. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting the grounding electrodes. Bond surge arrester and neutrals directly to the transformer enclosure and then to the grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.
 - 1) Fence and equipment connections must not be smaller than 4 AWG. Ground fence at each gate post and corner post and at intervals not exceeding **10 ft (3050 mm)**. Bond each gate section to the fence post using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
 - 2) Make joints in grounding conductors and loops by exothermic weld or compression connector.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

- 1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
- 2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
- 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
- 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

- 1. **<Insert requirements>**.

C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

D. Tests and Inspections:

- 1. Comply with the provisions of NFPA 70B Ch. 11, "Testing and Test Methods."
- 2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
- 3. After installing secondary unit substation but before primary is energized, verify that grounding system at the substation is tested at the specified value or less.
- 4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
- 5. Visual and Mechanical Inspection:
 - a. Verify equipment nameplate data complies with the Contract Documents.
 - b. Inspect bolted electrical connections for high resistance using one of the following two methods:

- 1) Use a low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar

- 2) bolted connections by more than 50 percent of the lowest value.
- 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS, Table 100.12.

E. Switchgear Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, grounding, and required area clearances.
- c. Verify the unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
- d. Verify that fuse and circuit-breaker sizes and types correspond to the Drawings and coordination study as well as the address of the circuit breaker that is used to identify it in microprocessor-communication software.
- e. Verify that current and voltage-transformer ratios correspond to the Drawings.
- f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.
 - 1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
 - 2) Make key exchange with devices operated in off-normal positions.
- g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- h. Inspect insulators for evidence of physical damage or contaminated surfaces.
- i. Verify correct barrier and shutter installation and operation.
- j. Exercise active components.
- k. Inspect mechanical indicating devices for correct operation.
- l. Verify that filters are in place and vents are clear.
- m. Inspect control power transformers as follows:
 - 1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
 - 2) Verify that primary- and secondary-use or circuit-breaker ratings match the Drawings and comply with manufacturer's published instructions.
 - 3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

2. Electrical Tests:

- a. Perform dc voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If the temperature of the bus is other than plus or minus 20 deg C, adjust the resulting resistance as provided in NETA ATS Table 100.11.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
 - 2) Do not proceed to the dielectric-withstand-voltage tests until insulation-resistance levels are raised above minimum values.

- b. Perform a dielectric-withstand-voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply the test voltage for one minute.
 - 1) If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the test specimen is considered to have passed the test.
- c. Voltage Transformers:
 - 1) Perform secondary wiring integrity test. Verify correct potential at devices.
 - 2) Verify secondary voltages by energizing the primary winding with system voltage.
- d. Perform current-injection tests on the entire current circuit in each section of switchgear.
 - 1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
 - 2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
- e. Verify operation of space heaters.
- f. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.

F. Medium-Voltage Surge Arrester Field Tests:

- 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and clearances.
 - c. Verify the arresters are clean.
 - d. Verify that the ground lead on each device is individually attached to a ground bus or ground electrode.
 - e. Verify that the stroke counter is correctly mounted and electrically connected if applicable. Record the stroke counter reading.
- 2. Electrical Test:
 - a. Perform an insulation-resistance test on each arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in the table.
 - b. Perform a watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

G. Instrument Transformer Field Tests:

- 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Verify correct connection of transformers with system requirements.
 - c. Verify that adequate clearances exist between primary and secondary circuit wiring.
 - d. Verify the unit is clean.

- e. Verify that required grounding and shorting connections provide contact.
- f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
- g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
- h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

- a. Perform insulation-resistance test of each current transformer and its secondary wiring with respect to ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate the applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
- b. Perform a polarity test of each current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
- c. Perform a ratio-verification test using the voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
- d. Perform an excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match the curve supplied by the manufacturer or must comply with IEEE C57.13.1.
- e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. The measured burdens must match the instrument transformer Accuracy Class rating.
- f. Perform insulation-resistance tests on the primary winding with the secondary grounded. Test voltages must comply with NETA ATS, Table 100.5. The insulation-resistance value must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
- g. Perform dielectric-withstand-voltage tests on the primary winding with the secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application, the primary winding is considered to have passed the test.
- h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with test equipment manufacturer's published data.
- i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

3. Electrical Tests of Voltage and Potential Transformers:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply the test voltage for one minute in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate the applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
- b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS, Table 100.5. Insulation-resistance values of the transformers must not be less than values shown in NETA ATS, Table 100.5.
- c. Perform a polarity test on each transformer to verify the polarity marks or H(1)- X(1) relationship. Polarity results must agree with transformer markings.
- d. Perform a turns-ratio test on tap positions. Ratio errors must not exceed the tolerances specified in IEEE C57.13.

- e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. The measured burdens must match the instrument transformer Accuracy Class rating.
- f. Perform a dielectric-withstand-voltage test on the primary windings with the secondary windings connected to ground. The dielectric voltage must comply with NETA ATS, Table 100.9. The test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the primary windings are considered to have passed the test.
- g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with test equipment manufacturer's published data.
- h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

- a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
- b. Verify operation of light-emitting diodes, display, and targets.
- c. Record passwords for each access level.
- d. Clean the front panel and remove foreign material from the case.
- e. Check tightness of connections.
- f. Verify that the frame is grounded in accordance with manufacturer's instructions.
- g. Set the relay in accordance with results in Section 260573 "Power System Studies."
- h. Download settings from the relays. Print a copy of the settings for the report and compare the settings to those specified in the coordination study.

2. Electrical Tests:

- a. Perform insulation-resistance tests from each circuit to the grounded frame in accordance with manufacturer's published data.
- b. Apply voltage or current to analog inputs, and verify correct registration of the relay meter functions.
- c. Functional Operation: Check functional operation of each element used in the protection scheme.

I. Liquid-Filled Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect impact recorder prior to unloading.
- c. Test dew point of tank gases if applicable.
- d. Inspect anchorage, alignment, and grounding.
- e. Verify the presence of PCB content labeling.
- f. Verify removal of shipping bracing after placement.
- g. Verify the bushings are clean.
- h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
- j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.

- k. Perform specific inspections and mechanical tests recommended by the manufacturer.
- l. Verify presence of transformer surge arresters and that their ratings are as specified.
- m. Verify that as-left tap connections are as specified.
- n. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
- c. Measure core insulation resistance at 500 V(dc) if the core is insulated and the core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
- d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
- e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
- f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if the test shows a different pattern.
- g. Measure the resistance of each winding at each tap connection, and record temperature-corrected winding-resistance values in the Operations and Maintenance Manual.
- h. Perform an applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
- i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- j. Remove a sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:
 - 1) Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
 - 2) Acid Neutralization Number: ASTM D974.
 - 3) Specific Gravity: ASTM D1298.
 - 4) Interfacial Tension: ASTM D971.
 - 5) Color: ASTM D1500.
 - 6) Visual Condition: ASTM D1524.
 - 7) Water in Insulating Liquids: ASTM D1533.
 - 8) Power Factor or Dissipation Factor: ASTM D924.
- k. Remove a sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

J. Small Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that resilient mounts are free and that shipping brackets have been removed.
- d. Verify the unit is clean.

- e. Perform specific inspections and mechanical tests recommended by the manufacturer.
- f. Verify that as-left tap connections are as specified.
- g. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
- b. Perform turns-ratio tests at tap positions. The test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
- c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

K. Large Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that resilient mounts are free and that shipping brackets have been removed.
- d. Verify the unit is clean.
- e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
- g. Perform specific inspections and mechanical tests recommended by the manufacturer.
- h. Verify that as-left tap connections are as specified.
- i. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on windings in accordance with the test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:
 - 1) 2.0 percent for power transformers.
 - 2) 5.0 percent for distribution transformers.
 - 3) Measure core insulation resistance at 500 V dc if the core is insulated and the core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
- c. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-up test result exceeding 1.0 percent must be investigated.
- d. Perform turns-ratio tests at tap positions. The test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
- e. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if the test shows a different pattern.
- f. Measure the resistance of each winding at each tap connection.

- g. Perform an applied-voltage test on high- and low-voltage windings-to-ground. See IEEE C57.12.91, Sections 10.2 and 10.9. The AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for one-minute duration. The dc dielectric-withstand-voltage test result must not exceed 100 percent of the AC RMS test voltage specified in IEEE C57.12.91, Section 10.2, for one-minute duration. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the test specimen is considered to have passed the test.
- h. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

L. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that maintenance devices are available for servicing and operating the breaker.
- d. Verify the unit is clean.
- e. Verify that the arc chutes are intact.
- f. Inspect moving and stationary contacts for condition and alignment.
- g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of the breaker are correct.
- h. Perform mechanical operator and contact alignment tests on both the breaker and its operating mechanism in accordance with manufacturer's published data.
- i. Verify cell fit and element alignment.
- j. Verify racking mechanism operation.
- k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
- m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.
- b. Measure contact resistance across each power contact of the circuit breaker. Drop values for $\mu\Omega$ or mV(dc) must not exceed the high levels of the normal range as indicated in the manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
- c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed the value shown in NETA ATS, Table 100.7.
- d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's

- published time-current tolerance band.
- e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.
- f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
- g. Test functions of the trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
- h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the shunt trip and close coils must conform to the manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
- i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
- j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
- k. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

M. Insulated-Case/Molded-Case Air-Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage and alignment.
- c. Verify the unit is clean.
- d. Operate the circuit breaker to ensure smooth operation.
- e. Inspect operating mechanism, contacts, and arc chutes in unsealed units.
- f. Perform adjustments for final protective-device settings in accordance with the coordination study. Set the protective devices in accordance with coordination study report.

2. Electrical Tests:

- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with the circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.
- b. Perform a contact/pole-resistance test. Drop values for $\mu\Omega$ or mV(dc) must not exceed the high levels of the normal range as indicated in the manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
- c. Determine long-time pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band, including adjustment factors.
- d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.
- e. Determine ground-fault pickup and time delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.

- f. Determine instantaneous pickup by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
- g. Test functions of the trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
- h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the shunt trip and close coils must conform to the manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
- i. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
- j. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

N. Low-Voltage Ground-Fault Protection System Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect the components for damage and errors in polarity or conductor routing.
 - 1) Verify that ground connection is made on the source side of the neutral disconnect link and on the source side of ground-fault sensor.
 - 2) Verify that the neutral sensors are connected with correct polarity on both primary and secondary.
 - 3) Verify that phase conductors and the neutral pass through the sensor in the same direction for zero sequence systems.
 - 4) Verify that grounding conductors do not pass through zero sequence sensors.
 - 5) Verify that grounded conductor is solidly grounded.
- b. Verify the unit is clean.
- c. Operate the circuit breaker to ensure smooth operation.
- d. Verify correct operation of functions of the self-test panel if provided.
- e. Verify that the control power transformer has adequate capacity for the system.
- f. Set pickup and time-delay settings. Record appropriate operation and test sequences in accordance with Section 230.95 "Ground-Fault Protection of Equipment" of NFPA 70.

2. Electrical Tests:

- a. Measure the system neutral-to-ground insulation resistance with the neutral disconnect link temporarily removed. Replace the neutral disconnect link after testing. System neutral-to-ground insulation resistance must be a minimum of 1 MΩ. Correct wiring until the minimum is achieved.
- b. Perform ground-fault protective-device pickup tests using primary injection. Results of pickup test must be greater than 90 percent of the ground-fault protective-device pickup setting and less than 1200 A or 125 percent of the pickup setting, whichever is smaller. Adjust or replace the device until these parameters are achieved.
- c. For summation-type systems utilizing phase and neutral current transformers, verify correct polarities by applying current to each phase-neutral current-transformer pair. This test also applies to MCCBs utilizing an external neutral current transformer. The ground-fault protective device must operate when current direction is the same relative to polarity marks in the two current transformers. The ground-fault protective device must not operate when current direction is opposite relative to polarity marks in the two current transformers.

- d. Measure time delay of the ground-fault protective device at a value equal to or greater than 150 percent of the pickup value. Relay timing must be in accordance with manufacturer's published data but must be no longer than one second at 3000 A in accordance with Section 230.95 "Ground-Fault Protection of Equipment" of NFPA 70.
- e. Verify reduced control voltage tripping capability is 55 percent for AC systems and 80 percent for DC systems. Replace the ground-fault system if the reduced control voltage tripping requirement is not achieved, and retest.
- f. Verify blocking capability of zone interlock systems. Results of zone-blocking tests must be in accordance with manufacturer's published data and design specifications.

O. Metering Device Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
- c. Verify the unit is clean.
- d. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

- a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
- b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
- c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
- d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm the integrity of the secondary circuits of current and voltage transformers.

P. Nonconforming Work:

- 1. Equipment and devices will be considered defective if they do not pass tests and inspections.
- 2. Remove and replace defective units and retest.

Q. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

R. Manufacturer Services: Engage factory-authorized service representative to [support][supervise] field tests and inspections.

- 1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

- 1. Complete installation and startup checks in accordance with manufacturer's published instructions.
- 2. <Insert startup steps if any>.

- B. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** system startup.
 - 1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.6 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain secondary unit substation equipment.
 - 2. **[Provide video recordings of training sessions to Owner][Allow Owner to record training sessions].**

3.7 PROTECTION

- A. After installation, protect secondary unit substation equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

- A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
 - 1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards and with a chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
 - 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Rebalance loads.
 - c. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
 4. Field Reports for Voltage Monitoring and Adjusting:
 - a. Prepare a written report covering monitoring performed and corrective action taken.
 - b. For each relay and adjustable circuit breaker, tag the device with adjusting technician's initials and the date of the adjustment. Record the settings and file with test records specified in "Field Quality Control" Article.
- B. Infrared Scanning of Secondary Unit Substation Equipment: Perform the survey during periods of maximum possible loading. Remove covers prior to the inspection. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.
1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of the unit substation.
 2. Follow-On Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
 3. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
 4. Field Reports for Infrared Scanning: Prepare a certified report that identifies the testing technician and equipment used, and lists the results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between the area of concern and the reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of the deficient area.
 5. Act on inspection results in accordance with the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
- C. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes **[one year]<Insert duration>** period for full maintenance by **[skilled employees of secondary unit substation equipment Installer][manufacturer's authorized service representative]**. Include annual preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper secondary unit substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

END OF SECTION 26 11 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 11 16 00A - SECONDARY UNIT SUBSTATIONS WITH MOTOR CONTROL CENTER
SECONDARY**

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Secondary unit substation equipment.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Re-Installed" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
5. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
6. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in incoming section of substation.
7. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for connecting wires.
8. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
9. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
10. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic[**and wind**] control devices referenced by this Section.
11. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
12. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
13. Section 260913 "Electrical Power Monitoring" specifies remote monitoring of metering instruments and for remote control of circuit breakers and switches.
14. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies field-mounted surge-suppression devices referenced in this Section.

1.2 DEFINITIONS

- A. Combination Motor Controller: A combination motor-control unit that includes externally operable circuit-disconnecting means, branch-circuit overcurrent protection, and a motor controller with associated auxiliary devices when used.
- B. CPT: Control power transformer.
- C. ICCB: Insulated-case circuit breaker.
- D. MCCB: Molded-case circuit breaker.
- E. MCP: Motor-circuit protector.
- F. PCB: Polychlorinated biphenyl.
- G. SCR: Silicon controlled rectifier.
- H. SPD: Surge protection device.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.
- B. Preinstallation Coordination Meeting(s): For unit substation. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location> before <Insert construction activity>**.
 - 1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 - 3. Include manufacturer's sample extended warranty language.
 - 4. Include product certificates for secondary unit substations, signed by manufacturer.

- B. Shop Drawings: Prepare and submit the following:
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
 2. Wiring Diagrams: Power, signal, and control wiring.
 3. Dimensioned plans and elevations showing major components and features.
 - a. Include plan view and cross section of equipment base, showing clearances, manufacturer's published instructions for minimum workspace clearances that account for breaker service and removal, and locations of penetrations for grounding and conduits.
 4. One-line diagram.
 5. List of materials.
 6. Nameplate legends.
 7. Material, size and number of bus bars, and current rating for buses, including mains and branches of phase, neutral, and ground buses.
 8. Short-time and short-circuit current ratings of secondary unit substations and components.
 9. Ratings of individual protective devices.
 10. For motor-control secondary section, submit manufacturer's standard drawings complying with requirements of UL 845.
 - a. Manufacturer's production drawings as defined in UL 845.
 - b. Schematic and Connection Wiring Diagrams: For power, signal, and control wiring for installed controllers.
 - c. Nameplate legends.
 - d. Vertical and horizontal bus capacities.
 - e. Features, characteristics, ratings, and factory settings of installed units.
 - f. **<Insert required information>**.
 11. Design Data:
 - a. Time-Current Characteristic Curves: For overcurrent protective devices.
 - b. Primary Fuses: Submit recommendations and size calculations.
 - c. Utility company's metering provisions with indication of approval by utility company.
- C. Factory test reports.
- D. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

- A. For motor-control secondary section, submit the following:
1. Manufacturer's approval drawings as defined in UL 845.
 2. Manufacturer's custom drawings as defined in UL 845.
 3. Manufacturer's production drawings as defined in UL 845.
- B. Manufacturer's published instructions.
- C. Field Reports:
1. Manufacturer's field reports for field quality-control support.
 2. Manufacturer's field reports for system startup support.

3. Field reports for voltage monitoring and adjusting.
4. Field reports for infrared scanning.

1.6 CLOSEOUT SUBMITTALS

- A. Warranty documentation.
- B. Maintenance service agreement.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare parts.
- B. Special tools.
- C. Consumable items.

1.8 REGULATORY AGENCY APPROVALS

- A. Submittals for secondary unit substations requiring approval by **<Insert name of electrical utility>** must be signed by qualified electrical professional engineer responsible for their preparation. **[Obtain approval by electrical utility prior to submitting for action by Architect][Submit for action by Architect prior to submitting for approval by electrical utility].**

1.9 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.
- B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.
- C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.
- E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.

- F. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.
- G. Medium-Voltage Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with training and manufacturer certification to install, splice, and terminate medium-voltage cable[**in accordance with electrical utility service provider's requirements**].
 - 1. Medium-voltage cable Installer must be approved by **<Insert name of electrical utility service provider>**.
- H. Medium-Voltage Duct Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with installation of medium-voltage duct banks[**in accordance with electrical utility service provider's requirements**].
 - 1. Medium-voltage duct Installer must be approved by **<Insert name of electrical utility service provider>**.
- I. Medium-Voltage Equipment Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with hazards and safety requirements associated with installation and operation of medium-voltage equipment[**in accordance with electrical utility service provider requirements**].
 - 1. Medium-voltage equipment Installer must be approved by **<Insert name of electrical utility service provider>**.
- J. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.
- K. Power Quality Specialist: Recognized experts possessing active NICET Electrical Power Testing (EPT) Technician IV certification and documented experience in power quality testing for installations similar in complexity to the Project.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
- B. Coordinate delivery of secondary unit substations to allow movement into designated space.
- C. Store secondary unit substation components[**protected from weather and**] so condensation will not form on or in units. Provide temporary heating in accordance with manufacturer's written instructions.
- D. Handle secondary unit substation components in accordance with manufacturer's written instructions. Use factory-installed lifting provisions.
 - 1. Handle MCCs in accordance with NEMA ICS 2.3 and NECA NEIS 402.

1.11 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

- A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility

Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

- B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Equipment Service Conditions," "Outdoor Equipment Service Conditions," and "Indoor Equipment Services Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.12 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

- A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Initial Extended-Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 - 2. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>**.
- C. Accessories: **<Insert accessories included with existing product>**.

2.2 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>**.
- C. Accessories: **<Insert accessories included with existing product>**.

Secondary Unit Substations with Motor Control Center

Secondary

2.3 PERFORMANCE REQUIREMENTS

- A. Description: Medium-voltage, primary incoming section; transformer section; and low-voltage MCC section; and including coordinated circuit breakers, fusible switches, and metering components.
- B. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- C. General Characteristics:
 1. Referenced Standards: IEEE C2 and IEEE C37.121.
 2. Indoor Unit Arrangement: Single assembly, with secondary section MCC complying with **[UL 50E, Type 1][UL 50E, Type 1 (gasketed)][UL 50E, Type 12]** construction.
 3. Outdoor Unit Arrangement: Single assembly.
 - a. Weatherproof, listed for installation outdoors, with primary and transformer sections complying with IEEE C37.20.1, and MCC section complying with UL 50E, Type 3R.
 - b. Aisleless Construction: Full-height doors in front of basic weatherproof equipment.
 4. Connections between primary device and transformer must be **[cable][bus]**, and between transformer and secondary must be flexible bus braid unless noted otherwise.
 5. Indoor Enclosure: Steel.
 6. Outdoor Enclosure: Weatherproof, galvanized steel, listed for installation outdoors, complying with IEEE C37.20.1. Aisleless, full-height doors, with provisions for padlocking, in front of basic weatherproof equipment. Integral structural-steel base frame with factory-applied asphaltic undercoating.
 - a. Compartments must have the following features:
 - 1) Structural design and anchorage adequate to resist loads imposed by **[125 mph (200 km/h)]<Insert wind speed>** wind.
 - 2) Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of section above expected dew point.
 - 3) Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
 - 4) Weatherproof ground-fault circuit interrupter (GFCI) duplex receptacle.
 - 5) Power for heaters and receptacles must be provided **[by control power transformer][as indicated on the Drawings]**.
 - 6) Skid Mounted: Mount shipping group on integral base frame as complete weatherproof unit.
 7. Unit Substation Enclosures Finish:
 - a. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
 - b. Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
 - c. Factory-applied corrosion-resistant finish in manufacturer's standard color that withstands **[120 h][480 h]** of exposure to salt spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654, with rating of not less than 7, in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized

Secondary Unit Substations with Motor Control Center

sheet steel must be coated with manufacturer's standard zinc-rich paint.

2.4 SECONDARY UNIT SUBSTATION EQUIPMENT

A. Source Quality Control:

1. Factory Tests:

- a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
- b. Testing Administrant: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate secondary unit substation equipment.
- c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation equipment, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with the following standards before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.

- 1) Conduct transformer tests in accordance with IEEE C57.12.90.
- 2) Conduct primary switchgear tests in accordance with NEMA C37.51.
- 3) Conduct routine tests of completely assembled MCC, including the following:
 - a) Dielectric Tests: Comply with NEMA ICS 1.
 - b) Verify correct operation of circuit breaker, **[motor circuit protector,]** magnetic contactor, and control devices, accessories and indicating lamps. Verification checks must be made at rated voltage with power supplies to main buses.
 - c) Verify correct operation of magnetic contactors with power at 90 percent of rated voltage.
- 4) Resistance measurements of windings on rated voltage connection and on tap extreme connections.
- 5) Ratios on rated voltage connection and on tap extreme connections.
- 6) Polarity and phase relation on rated voltage connection.
- 7) No-load loss at rated voltage on rated voltage connection.
- 8) Exciting current at rated voltage on rated voltage connection.
- 9) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
- 10) Applied potential.
- 11) Induced potential.

2. Temperature Test: If transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating.
 - a. Temperature test is not required if record of temperature test on essentially duplicate unit is available.
 - b. Nonconforming Work:
 - 1) Equipment that does not pass tests and inspections will be considered defective.
 - c. Factory Test Reports: Compile and submit factory test and inspection reports.

B. UL YEFV or DLAH or WVG N - Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVG N, including IEEE C37.20.3 and IEEE C37.20.7.
4. Standard Features:
 - a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for transformer section.
 - b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - c. System Voltage: **[4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>**.
 - d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.

C. UL YEFV or DLAH or WVG N - Medium-Voltage Metal-Enclosed Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

Secondary Unit Substations with Motor Control Center

following]:

- a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.
4. Standard Features:
 - a. Metal-enclosed, air-interrupter switchgear, **[with][without]** fuses, complying with IEEE C37.20.3.
 - 1) Switchgear must be arc-resistant, complying with IEEE C37.20.7, **[Type 1A][Type 2A][Type 1C][Type 2C]**.
 - b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - 1) System Voltage: **[4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>**.
 - 2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
 - 3) Main-Bus Rating: **[600 A][1200 A][2000 A]**, continuous.
 - c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.

- 1) Rating: **[600 A][1200 A]** continuous duty and load break.
 - 2) Two-Time Duty-Cycle Fault Closing: **[25 000 A(asym)][40 000 A(asym)]**.
 - 3) Switch Action: No external arc and no significant quantities of ionized gas released into enclosure.
 - 4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
 - 5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
 - 6) Protective Shields: Cover live components and terminals.
 - a) Fuse Mounts: Single-frame mounted and de-energized when switch is open.
 - 7) Mechanical Interlock: Prevent opening switch compartment door unless switchblades are open, and prevent closing switch if door is open. **[Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.]**
 - 8) Window: Permits viewing switch-blade positions when door is closed.
 - 9) Accessory Set: Tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include fuse-handling tool as recommended by switchgear manufacturer.
- d. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.
- 1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.
 - 2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
 - 3) Indicator integral with fuse to show when it has blown.
 - 4) Spares: Include three fuses in use and three spare fuses in storage clips in switch.
- e. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with ratings as indicated, connected in each phase of incoming circuit and ahead of disconnecting device.

D. UL YEFV or DLAH or WVG N - Medium-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
 - c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:
 - a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential and Current Transformers: Burden and Accuracy Class suitable for connected meters.
 - b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand: Demand interval selectable from 5 to 60 min; plus or minus 2 percent.
 - i) Accumulated Energy in MWh (MJ): Plus or minus 2 percent; stored values unaffected by power outages for up to 72 h.
 - 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
 - 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
 - c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

- 1) Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, **[15 min]<Insert duration>** indicating demand register, and provision for testing and adding pulse initiation.
 - 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with **[15 min]<Insert duration>** interval.
- d. Operation: Counts and records succession of pulses entering two channels.
 - e. Housing: Drawout, back-connected case arranged for semiflush mounting.

E. UL YEFV or XPLH - Liquid-Filled Transformer Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - 3) Liquid-Immersed Transformers: IEEE C57.12.00.
 - b. Liquid-Filled Distribution Transformers over 600 V: UL CCN XPLH, including IEEE C57.12.00 and IEEE C57.12.28.
4. Standard Features:
 - a. Insulating Liquid:
 - 1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with

Secondary Unit Substations with Motor Control Center

- ASTM D117.
- 2) Less flammable, edible-seed-oil based, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
 - 3) Less flammable, dielectric, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
 - 4) Less flammable, silicone-based dielectric, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.

b. Insulation Temperature Rise:

- 1) 55 deg C, based on average ambient temperature of 30 deg C over 24 h with maximum ambient temperature of 40 deg C. Insulation system must be rated to continuously allow additional 12 percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
- 2) 65 deg C, based on average ambient temperature of 30 deg C over 24 h with maximum ambient temperature of 40 deg C.

c. BIL: **[60 kV][75 kV][95 kV][110 kV]**.

d. Full-Capacity Voltage Taps:

- 1) Four nominal 2.5 percent taps, two above and two below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
- 2) Four nominal 2.5 percent taps below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

e. Cooling System: **[Class ONAN, liquid cooled][Class ONAN/ONAF, liquid cooled, and with forced-air rating][Class ONAN/ONAF/ONAF, liquid cooled, and with provisions for future forced-air rating]**. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.

f. Impedance: **<Insert number>** percent.

g. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have steel base and frame allowing use of pipe rollers in any direction, and insulated, low-voltage, neutral bushing with removable ground strap. **[Include the following additional accessories:]**

- 1) Liquid-level gauge.
- 2) Pressure-vacuum gauge.
- 3) Liquid temperature indicator.
- 4) Drain and filter valves.
- 5) Pressure-relief device.

F. UL YEFV - Dry-Type Transformer Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Eaton]**
 - b. **[Square D; Schneider Electric USA]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Square D; Schneider Electric USA]**
 - c. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - 3) Dry-Type Transformers: UL 1562.
4. Standard Features:
 - a. Primary Incoming Section: Transformer cover-mounted bushings. Bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
 - b. Style:
 - 1) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with 80 deg C average winding temperature rise above maximum ambient temperature of 40 deg C.
 - 2) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with 80 deg C average winding temperature rise above maximum ambient temperature of 40 deg C.
 - c. Cooling System:
 - 1) Class AA: air cooled, complying with IEEE C57.12.01.
 - 2) Class AFA: air cooled with forced-air rating, complying with IEEE C57.12.01.
 - a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
 - b) Include **[mounting provisions for]** cooling fans.
 - 3) Class AA/FA: air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.
 - a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
 - b) Include mounting provisions for fans.

Secondary Unit Substations with Motor Control Center

- d. Insulation Materials: IEEE C57.12.01, rated **[220 deg C]**<Insert deg C>.
 - 1) Insulation Temperature Rise: **[80 deg C][115 deg C][150 deg C]** maximum rise above 40 deg C.
 - e. BIL: **[60 kV][75 kV][95 kV][110 kV]**.
 - f. Full-Capacity Voltage Taps:
 - 1) Four nominal 2.5 percent taps, two above and two below rated primary voltage.
 - 2) Four nominal 2.5 percent taps below rated primary voltage.
 - g. Impedance: <Insert number> percent.
5. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

G. UL NJAV - Secondary Distribution Section MCC :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Motor Control Center: UL CCN NJAV, including UL 845.
4. Standard Features:
 - a. MCC: Combination motor controllers, complying with NEMA ICS 18.
 - 1) Wiring:
 - a) NEMA ICS 18, **[Class I][Class I-S], [Type A][Type B, for starters larger than Size 3][Type B-D, for starter Size 3 and smaller][Type B-T, for starter**

- Size 3 and smaller][Type C].
 - b) NEMA ICS 18, [Class II][Class II-S], [Type B, for starters larger than Size 3][Type B-D, for starter Size 3 and smaller][Type B-T, for starter Size 3 and smaller][Type C].
 - 2) Short-Circuit Current Rating for Each Unit: [Combination series rated][Fully rated]; [22 kA][42 kA][65 kA][100 kA]<Insert kA>.
 - 3) Short-Circuit Current Rating of MCC: [Combination series rated][Fully rated] with its main overcurrent device; [22 kA][42 kA][65 kA][100 kA]<Insert kA>.
- b. MCC Structure: Front and rear accessible.
- 1) Match and align front[and rear] of MCC.
 - 2) Comply with UL requirements for service entrance equipment.
- c. MCC Bus:
- 1) Use bus bars to connect compartments and vertical sections. Cable connections are prohibited.
 - 2) Main Phase Bus: Uniform capacity entire length of section.
 - 3) Neutral Bus: [50][100] percent of phase-bus ampacity, except as indicated on the Drawings. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.
 - 4) Vertical Section Bus: Extend to spaces for future controllers.
 - 5) Phase- and Neutral-Bus Material:
 - a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
 - b) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.
 - 6) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for ground conductors, minimum size 1/4 by 2 inch (6 by 50 mm).
 - 7) Neutral Disconnect Link: Bolted, uninsulated, 1/4 by 2 inch (6 by 50 mm) copper bus, arranged to connect neutral bus to ground bus.
- d. Power Circuit Breaker: [Fixed][Drawout] mounted, electrically operated air-circuit breaker. Comply with UL 1066.
- 1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from supply internal to MCC.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show cause of automatic trip.
 - 5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip circuit breaker when closing on fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.

Secondary Unit Substations with Motor Control Center

- d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) One test kit to test trip function.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator LED.
- e. Bolted Pressure Switch: Fixed mounted, manually operated, **[electrically tripped,][fusible,]** bolted pressure contact switch. Comply with UL 977.
 - 1) Stored energy deadfront mechanism, compressed and released by operating handle; switching action must be independent of speed of operating handle.
 - 2) Indication whether switch is open or closed, and provisions for padlocking operating handle.
 - 3) With fuse clips and fuses for UL 248 Class L time-delay fuses.
 - 4) Electrically tripped switches must include:
 - a) Ground-fault protection, with adjustable time delay and test panel.
 - b) Single-phase protection, tripping switch on loss of source phase.
 - c) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.
 - d) Operator power must be from supply internal to MCC.
- f. Insulated Case Circuit Breaker: **[Fixed][Drawout]** mounted, **[manually][electrically]** operated air-circuit breaker. Comply with UL 1066.
 - 1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from supply internal to MCC.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show cause of automatic trip.
 - 5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip circuit breaker when closing on fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) With built-in connector to test breaker settings. Provide one test set.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- g. MCCB (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.
 - 1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual

- push-to-trip push-button.
- 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
- 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
- 4) With trip-setting dials or interchangeable plugs to establish continuous trip of circuit breaker. Plugs must not be interchangeable between frames, and breaker may not be closed without plug. With neutral ground-fault sensor.
- 5) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-time delay.
 - b) Adjustable short-time setting and delay to shape time-current curve.
 - c) Adjustable instantaneous setting.
 - d) Individually adjustable ground-fault setting and time delay.
- 6) With built-in connector to test long-time delay, instantaneous, and ground-fault functions of breaker. **[Provide one test set for testing installed circuit breakers 225 A frame and higher.]**
- 7) With built-in digital ammeter display, showing load current and tripping cause.
- h. MCCB (1600 to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.
 - 1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual push-to-trip push-button.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show reasons of automatic trip.
 - 5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip circuit breaker when closing on fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) One test kit to test trip function.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- i. Fusible Switch: Fixed-mounted, manually operated, **[electrically tripped,]** quick-make, quick-break switch. Comply with UL 98.
 - 1) Indication whether switch is open or closed, and provisions for padlocking operating handle.
 - 2) With fuse clips and fuses.
 - 3) Electrically tripped switches must include:
 - a) Shunt trip.

- b) Ground-fault protection, with adjustable time delay and test panel.
 - c) Single-phase protection, tripping switch on loss of source phase.
 - d) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.
 - e) Operator power must be from supply internal to MCC.
- j. Full-Voltage Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.
 - 1) Configurations: **[Nonreversing][and][reversing]<Insert configuration>**.
- k. Reduced-Voltage Magnetic Controllers: Electrically held, NEMA ICS 2, general purpose, Class A; closed transition; adjustable time delay on transition.
 - 1) Configurations: Reduced voltage, electrically held.
 - a) Wye-Delta Controller: Four contactors, with three-phase starting resistor/reactor bank.
 - b) Part-Winding Controller: Separate START and RUN contactors, field selectable for one-half or two-thirds winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
 - c) Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; one RUN and two START contactors.
- l. Reduced-Voltage, Solid-State Controllers: Comply with UL 508.
 - 1) Description: Integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relays.
 - 2) Application: Suitable for use with NEMA MG 1 Design B, polyphase induction motors.
 - 3) Configuration: **[Standard duty][Severe duty]; [nonreversible][reversible]**.
 - 4) Starting Mode: **[Voltage ramping][Current limit][Torque control][Torque control with voltage boost]; field selectable**.
 - 5) Stopping Mode: **[Coast to stop][Adjustable torque deceleration][Adjustable braking]; field selectable**.
 - 6) Surge Suppression: Factory installed as integral part of controller, SPD complying with UL 1449 as Type 2, or SPD complying with UL 1449, Type 4, suitable for use in Type 2 application.
 - 7) Bypass Contactor: Operates automatically to bypass SCRs when motor has reached rated speed and full voltage is applied to motor. Solid-state controller protective features must remain active when bypass relay is in bypass mode.
 - a) Manufacturer's standard product.
 - b) NEMA ICS 2, general-purpose, Class A contactor, rated to start load across the line.
 - 8) Bypass Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating. **[Provide coil with SPD.]**
 - 9) Adjustable acceleration-rate control using voltage or current ramp, and adjustable starting torque control with up to **[400]<Insert number>** percent current limitation for 20 s.

- 10) SCR Bridge: At least two SCRs per phase, for stable and smooth acceleration **[with][without]** external feedback from motor or driven equipment.
- 11) Keypad: Front accessible; for programming controller parameters, functions, and features; must be manufacturer's standard and include not less than the following functions:
 - a) Adjusting motor full-load amperes, as percentage of controller's rating.
 - b) Adjusting current limitation on starting, as percentage of motor full-load current rating.
 - c) Adjusting linear acceleration and deceleration ramps, in seconds.
 - d) Setting initial torque, as percentage of nominal motor torque.
 - e) Adjusting torque limit, as percentage of nominal motor torque.
 - f) Adjusting maximum start time, in seconds.
 - g) Adjusting voltage boost, as percentage of nominal supply voltage.
 - h) Selecting stopping mode and adjusting parameters.
 - i) Selecting motor thermal-overload protection class between 5 and 30.
 - j) Activating and deactivating protection modes.
 - k) Selecting or activating communications modes.
 - l) **<Insert function>**.
- 12) Digital display, front accessible; for showing motor, controller, and fault status; must be manufacturer's standard and include not less than the following:
 - a) Controller Condition: Ready, starting, running, stopping.
 - b) Motor Condition: Amperes, voltage, power factor, power, and thermal state.
 - c) Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
 - d) **<Insert items>**.
- 13) Controller Diagnostics and Protection:
 - a) Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor overload alarm and trip; settings selectable via keypad.
 - b) Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency over or under normal.
 - c) Input isolation contactor that opens when controller diagnostics detect faulted solid-state component, or when motor is stopped.
 - d) Shunt trip that opens disconnecting means when controller diagnostics detect faulted solid-state component.
 - e) **<Insert items>**.
- 14) Remote Output Features:
 - a) All outputs prewired to terminal blocks.
 - b) Form C status contacts that change state when controller is running.
 - c) Form C alarm contacts that change state when fault condition occurs.
 - d) **<Insert items>**.
- 15) Optional Features:
 - a) Analog output for field-selectable assignment of motor operating characteristics; **[Zero to 10 V(dc)][4 to 20 mA(dc)]**.

- b) **[Two]<Insert number>** additional field-assignable Form C contacts for alarm outputs.
 - c) Full-voltage/BYPASS selector switch. Power contacts must be totally enclosed, double break, and made of silver-cadmium oxide; and assembled to allow inspection and replacement without disturbing line or load wiring.
- m. Multispeed Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.
 - 1) Nonreversing Configuration: **[Consequent pole][Two winding]**.
 - a) Two speed, with compelling relays to ensure that motor will start only at low speed.
 - b) Accelerating timer relays, for properly timed acceleration through speeds lower than that selected.
 - c) Decelerating timer relays, for automatically timed deceleration through each speed.
 - 2) Reversing Configuration: **[Consequent pole][Two winding]**.
 - a) Two speed, with compelling relay to ensure that motor will start only at low speed.
 - b) Compelling relays must ensure that motor starts only at low speed.
 - c) Accelerating timer relays, for properly timed acceleration through speeds lower than that selected.
 - d) Decelerating timer relays, for automatically timed deceleration through each speed.
 - e) Antiplugging timer relays, for time delay when transferring from FORWARD to REVERSE and back.
- n. Controller Disconnect and OCPD:
 - 1) Fusible Disconnecting Means:
 - a) NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate **[Class J][Class L]<Insert class>** fuses.
 - b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c) Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.
 - 2) MCP Disconnecting Means:
 - a) UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 - b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c) Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
 - d) **[N.C.][N.O.]** alarm contact that operates only when MCP has tripped.
 - e) Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.
 - 3) MCCB Disconnecting Means:

- a) UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
 - b) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - c) Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - d) Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
 - e) **[N.C.][N.O.]** alarm contact that operates only when MCCB has tripped.
- 4) Molded-Case Switch Disconnecting Means:
- a) UL 489, with in-line fuse block for Class J or Class L power fuses (depending on ampere rating), providing interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
 - b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c) Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
 - d) **[N.C.][N.O.]** alarm contact that operates only when molded-case switch has tripped.
- o. Overload Relays:
- 1) Melting-Alloy Overload Relays:
- a) Inverse-time-current characteristic.
 - b) **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
- 2) Bimetallic Overload Relays:
- a) Inverse-time-current characteristic.
 - b) **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - d) Ambient compensated.
 - e) Automatic resetting.
- 3) Solid-State Overload Relays:
- a) Switch or dial selectable for motor-running overload protection.
 - b) Sensors in each phase.
 - c) **[Class 10][Class 20][Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - d) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - e) Analog communication module.
- 4) **[N.C.][N.O.]** isolated overload alarm contact.
- 5) External overload reset push-button.
- p. Control Power:

- 1) Control Circuits: **[24 V(ac)][120 V(ac)]<Insert voltage>**; obtained from **[integral CPT, with primary and secondary fuses]<Insert source of control power>**, with **[CPT][control power source]** of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
 - 2) CPT Spare Capacity: **[50 VA][100 VA][200 VA]<Insert VA>**.
- q. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
- 1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - 2) Conductors sized in accordance with NFPA 70 for duty required.
- r. ICCB Feeder Tap Units: **[Fixed][Drawout]**-mounted, **[manually][electrically]** operated air-circuit breakers. Comply with UL 1066.
- 1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from control power transformer internal to switchboard.
 - 2) Solid-state monitoring and tripping system must provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show cause of automatic trip.
 - 5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
 - 6) Trip circuit breaker when closing on fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) Built-in connector tests breaker settings. Provide one test set.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- s. MCCB Feeder Tap Units (to 2500 A): Fixed-mounted, manually operated air-circuit breakers, complying with UL 489.
- 1) Include quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. Include manual push-to-trip push-button.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) Include trip-setting dials or interchangeable plugs to establish continuous trip of circuit breaker. Plugs must not be interchangeable between frames, and circuit breaker may not be closed without plug. With neutral ground-fault sensor.
 - 5) Time-current adjustments to achieve protective-device coordination as follows:

- a) Adjustable long-time delay.
 - b) Adjustable short-time setting and delay to shape time-current curve.
 - c) Adjustable instantaneous setting.
 - d) Individually adjustable ground-fault setting and time delay.
- 6) With built-in connector to test long-time delay, instantaneous, and ground-fault functions of breaker. **[Provide one test set for testing installed circuit breakers 225 A frame and higher.]**
- 7) With built-in digital ammeter and digital display, showing tripping cause.
- t. MCCB Feeder Tap Units (1600 to 2500 A): Fixed-mounted, manually operated air-circuit breakers, complying with UL 489.
 - 1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual push-to-trip push-button.
 - 2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
 - 3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 4) LED indicators or display, with manual reset, to show reasons of automatic trip.
 - 5) Display panel indicates that status of system circuitry is fully operational or gives fault location based on automatic diagnosis.
 - 6) Trip circuit breaker when closing on fault.
 - 7) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-delay pickup and time.
 - b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - c) Adjustable instantaneous pickup.
 - d) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - 8) One test kit to test trip function.
 - 9) Battery backup for informational displays after automatic trip, with battery status indicator.
- u. Fusible Switch Feeder Tap Units: Fixed-mounted, manually operated, **[electrically tripped]**, fusible, quick-make, quick-break switch. Comply with UL 98.
 - 1) Indication whether switch is open or closed, and provisions for padlocking operating handle.
 - 2) Include fuse clips and fuses.
 - 3) Electrically tripped switches must include:
 - a) Shunt trip.
 - b) Ground-fault protection, with adjustable time delay and test panel.
 - c) Single-phase protection, tripping switch on loss of source phase.
 - d) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.
- v. Compartments: Modular; individual **[lift-off]** doors with concealed hinges and quick-captive screw fasteners. Interlocks on units require disconnecting means in off position before door can be opened or closed, except by operating permissive release device.
- w. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other

Secondary Unit Substations with Motor Control Center

units in MCC. Same-size compartments permit interchangeability and ready rearrangement of units, such as replacing three single units with unit requiring three spaces, without cutting or welding.

- x. Wiring Spaces:
 - 1) Vertical wireways in vertical section for vertical wiring to unit compartments; supports to hold wiring in place.
 - 2) Horizontal wireways in **[bottom][and][top]** of vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.
- y. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
 - 1) Push-Buttons, Pilot Lights, and Selector Switches: **[Heavy][Standard]-duty[, oiltight]** type.
 - a) Push-Buttons: **[Covered][Lockable][Recessed][Shielded][Shrouded][Unguarded]** types; **[maintained][momentary]** contact unless otherwise indicated.
 - b) Pilot Lights: **[Incandescent][LED][Neon][Resistor][Transformer]** types; **<Insert color(s)>; push to test**.
 - c) Selector Switches: **[Rotary]<Insert description>** type.
 - 2) Elapsed-Time Meters: Heavy duty with digital readout in hours[; **nonresettable**][; **resettable**].
- z. Meters: Panel type, **2 1/2 inch (64 mm)** minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy, with selector switches having off position.
- aa. **[N.C.][N.O.][Reversible N.C./N.O.]** contactor auxiliary contact(s).
- bb. Control Relays: Auxiliary and adjustable **[pneumatic][solid-state]** time-delay relays.
- cc. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections and adjustable undervoltage, overvoltage, and time-delay settings.
- dd. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- ee. Sun shields, installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.
- ff. Cover gaskets, for UL 50E, Type 1 enclosures.
- gg. Terminals, for connecting power-factor correction capacitors to **[line][load]** side of overload relays.
- hh. Spare control-wiring terminal blocks[; **unwired**][; **wired**].
- ii. **<Insert auxiliary device>**.

H. UL YEFV or YEFR - Low-Voltage Instruments Section :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**

- d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:
 - 1) Articulated Unit Substations: IEEE C37.121.
 - 2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
 - b. Unit Substation Rated 600 V or Less: UL CCN YEFR, including UL 1062.
4. Standard Features:
 - a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 Accuracy Class 0.3 with burdens of W, X, and Y.
 - 2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.
 - b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand, with Demand Interval: Selectable from 5 to 60 min, plus or minus 2 percent.
 - i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 h.
 - 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.

Secondary Unit Substations with Motor Control Center

- 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
- c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
 - 1) Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15 min indicating demand register, and provision for testing and adding pulse initiation.
 - 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15 min interval.
 - a) Operation: Counts and records succession of pulses entering two channels.
 - b) Housing: Drawout, back-connected case arranged for semiflush mounting.
- d. Surge Suppression: Factory installed as integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:
 - 1) Integral disconnect switch.
 - 2) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
 - 3) Indicator light display for protection status.
 - 4) Form-C contacts rated at 5 A and 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
 - 5) Surge counter.

2.5 MAINTENANCE MATERIAL ITEMS

- A. Spare Parts: Furnish to Owner spare parts, for repairing unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]
 1. Spare Fuses: [**Six**]**<Insert number>** of each type and rating of fuse and fusible device used, except for medium-voltage fuses. Include spares for the following:
 - a. Primary disconnect fuses.
 - b. Potential transformer fuses.
 - c. Control power fuses.
 - d. Fuses for secondary fusible devices.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[

Secondary Unit Substations with Motor Control Center

Secondary

Include the following:]

1. Racking handle, to manually move circuit breaker between "connected" and "disconnected" positions.
 2. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
 3. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.
- C. Consumable Items: Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents. **[Include the following:]**
1. Touchup Paint: **[Three]<Insert number>** half-pint containers of paint matching enclosure's exterior finish.
 2. Primary Switch Contact Lubricant: **[One]<Insert number>** container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 1. Wiring entries comply with layout requirements.
 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.
- D. Verify that ground connections are in place. Maximum ground resistance must be 5 Ω at secondary unit substation location.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATION EQUIPMENT

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 1. Electrical Construction: ICC IBC, ICC IFB, NFPA 1, NFPA 70, and NECA NEIS 1.
 2. Electrical Maintenance: NFPA 70B.
 3. Electrical Safety: NFPA 70E.
 4. Temporary Electric Power Work: NECA NEIS 200.
 5. Commissioning of Electrical Systems: NECA NEIS 90.
 6. Hot Work: NFPA 51B.
 7. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 8. Life Safety and Means of Egress Work: NFPA 101.

9. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
10. Work in Confined Spaces: NFPA 350.
11. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
12. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
13. Installation of Liquid-Filled Transformers: NECA NEIS 410.
14. Installation of Medium-Voltage Switchgear: NECA NEIS 430.
15. Installation of Motor Control Centers: NEMA ICS 2.3.
16. AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
17. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install secondary unit substations on cast-in-place concrete equipment base(s).
2. Comply with requirements for vibration isolation and seismic control devices.

D. Interfaces with Other Work:

1. Identification: Provide labels for secondary unit substation equipment and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
 - d. Install number of signs required to be readable from accessible side, but space signs maximum of **30 ft (9 m)** apart.
 - e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with maintenance materials.
2. Grounding and Bonding:
 - a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - b. At Exterior Locations:
 - 1) For counterpoise use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **24 inch (610 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.
 - 2) Fence and equipment connections must not be smaller than 4 AWG. Ground fence at gate post and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate section to fence post using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
 - 3) Make joints in grounding conductors and loops by exothermic weld or compression connector.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

Secondary Unit Substations with Motor Control Center

Secondary

1. [Owner][Tenant] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
 2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- B. Acceptance Testing Preparation:
1. <Insert requirements>.
- C. Field tests and inspections must be witnessed by [Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.
- D. Tests and Inspections:
1. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
 2. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
 3. After installing secondary unit substation but before primary is energized, verify that grounding system measurement at substation does not exceed specified value.
 4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
 5. Visual and Mechanical Inspection:
 - a. Verify equipment nameplate data complies with Contract Documents.
 - b. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
- E. Switchgear and MCC Field Tests:
1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and required area clearances.
 - c. Verify unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
 - d. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study as well as address of circuit breaker that is used to identify it in microprocessor-communication software.
 - e. Verify that current and voltage-transformer ratios correspond to Drawings.
 - f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.
 - 1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.

Secondary Unit Substations with Motor Control Center

- 2) Make key exchange with devices operated in off-normal positions.
 - g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - h. Inspect insulators for evidence of physical damage or contaminated surfaces.
 - i. Verify correct barrier and shutter installation and operation.
 - j. Exercise active components.
 - k. Inspect mechanical indicating devices for correct operation.
 - l. Verify that filters are in place and vents are clear.
 - m. Inspect control power transformers as follows:
 - 1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
 - 2) Verify that primary- and secondary-fuse or circuit-breaker ratings match Drawings and comply with manufacturer's published instructions.
 - 3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.
2. Electrical Tests:
- a. Perform DC voltage insulation-resistance tests on bus section, phase-to-phase and phase-to-ground, for 1 min. If temperature of bus is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published recommendations or NETA ATS, Table 100.1.
 - 2) Do not proceed to dielectric withstand-voltage tests until insulation-resistance levels are raised above minimum values.
 - b. Perform dielectric withstand-voltage test on bus section, phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no published recommendation for this test, it must be conducted to in accordance with NETA ATS, Table 100.2. Apply test voltage for 1 min.
 - 1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand-voltage test, test specimen is considered to have passed test.
 - c. Voltage Transformers:
 - 1) Perform secondary wiring integrity test. Verify correct potential at devices.
 - 2) Verify secondary voltages by energizing primary winding with system voltage.
 - d. Perform current-injection tests on entire current circuit in section of switchgear.
 - 1) Perform current tests by secondary injection with magnitudes such that minimum current of 1.0 A flows in secondary circuit. Verify correct magnitude of current at device in circuit.
 - 2) Perform current tests by primary injection with magnitudes such that minimum of 1.0 A flows in secondary circuit. Verify correct magnitude of current at device in circuit.
 - e. Verify operation of space heaters.

- f. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from every source.

F. Medium-Voltage Surge Arrester Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, grounding, and clearances.
- c. Verify that arresters are clean.
- d. Verify that ground lead on device is individually attached to ground bus or ground electrode.
- e. Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

2. Electrical Test:

- a. Perform insulation-resistance test on arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in table.
- b. Perform watts loss test. Evaluate watts loss values by comparison with similar units and test equipment manufacturer's published data.

G. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Verify correct connection of transformers with system requirements.
- c. Verify that adequate clearances exist between primary and secondary circuit wiring.
- d. Verify that unit is clean.
- e. Verify that required grounding and shorting connections provide contact.
- f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
- g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
- h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

- a. Perform insulation-resistance test of current transformer and its secondary wiring with respect to ground at 1000 V(dc) for 1 min. For units with solid-state components that cannot tolerate applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
- b. Perform polarity test of current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
- c. Perform ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
- d. Perform excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or must comply with IEEE C57.13.1.
- e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. Measured burdens must match instrument transformer Accuracy Class rating.
- f. Perform insulation-resistance tests on primary winding with secondary grounded. Test

Secondary Unit Substations with Motor Control Center

- voltages must comply with NETA ATS, Table 100.5. Insulation-resistance value must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
- g. Perform dielectric withstand-voltage tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by end of total time of voltage application, primary winding is considered to have passed test.
 - h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with test equipment manufacturer's published data.
 - i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.
3. Electrical Tests of Voltage and Potential Transformers:
- a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply test voltage for 1 min in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
 - b. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Test voltages must be applied for 1 min in accordance with NETA ATS, Table 100.5. Insulation-resistance values of transformers must not be less than values shown in NETA ATS, Table 100.5.
 - c. Perform polarity test on transformer to verify polarity marks or H(1) to X(1) relationship. Polarity results must agree with transformer markings.
 - d. Perform turns-ratio test on tap positions. Ratio errors must not exceed tolerances specified in IEEE C57.13.
 - e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. Measured burdens must match instrument transformer Accuracy Class rating.
 - f. Perform dielectric withstand-voltage test on primary windings with secondary windings connected to ground. Dielectric voltage must comply with NETA ATS, Table 100.9. Test voltage must be applied for 1 min. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand-voltage test, primary windings are considered to have passed test.
 - g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with test equipment manufacturer's published data.
 - h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.
- H. Liquid-Filled Transformer Section Field Tests:
1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect impact recorder prior to unloading.
 - c. Test dew point of tank gases if applicable.

- d. Inspect anchorage, alignment, and grounding.
- e. Verify presence of PCB content labeling.
- f. Verify removal of shipping bracing after placement.
- g. Verify that bushings are clean.
- h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
- j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
- k. Perform specific inspections and mechanical tests recommended by manufacturer.
- l. Verify presence of transformer surge arresters and that their ratings are as specified.
- m. Verify that as-left tap connections are as specified.
- n. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with NETA ATS, Table 100.3.
- c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
- d. Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
- e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- f. Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
- g. Measure resistance of winding at tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
- h. Perform applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
- i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- j. Remove sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:
 - 1) Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
 - 2) Acid Neutralization Number: ASTM D974.
 - 3) Specific Gravity: ASTM D1298.
 - 4) Interfacial Tension: ASTM D971.
 - 5) Color: ASTM D1500.
 - 6) Visual Condition: ASTM D1524.
 - 7) Water in Insulating Liquids: ASTM D1533.
 - 8) Power Factor or Dissipation Factor: ASTM D924.
- k. Remove sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

I. Small Dry-Type Transformer Section Field Tests:**1. Visual and Mechanical Inspection:**

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that resilient mounts are free and that shipping brackets have been removed.
- d. Verify that unit is clean.
- e. Perform specific inspections and mechanical tests recommended by manufacturer.
- f. Verify that as-left tap connections are as specified.
- g. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform turns-ratio tests at tap positions. Test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

J. Large Dry-Type Transformer Section Field Tests:**1. Visual and Mechanical Inspection:**

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that resilient mounts are free and that shipping brackets have been removed.
- d. Verify that unit is clean.
- e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
- g. Perform specific inspections and mechanical tests recommended by manufacturer.
- h. Verify that as-left tap connections are as specified.
- i. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:
 - 1) 2 percent for power transformers.
 - 2) 5 percent for distribution transformers.
- c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
- d. Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-

- up test result exceeding 1 percent must be investigated.
- e. Perform turns-ratio tests at tap positions. Test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
 - f. Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
 - g. Measure resistance of winding at tap connection.
 - h. Perform applied-voltage test on high- and low-voltage windings-to-ground. See IEEE C57.12.91, Sections 10.2 and 10.9. AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for 1 min duration. DC dielectric-withstand-voltage test result must not exceed 100 percent of AC RMS test voltage specified in IEEE 57.12.91, Section 10.2, for 1 min duration. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.
 - i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

K. Low-Voltage Motor Controller Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect anchorage, alignment, grounding, and clearances.
- b. Verify that unit is clean.
- c. Inspect contactors:
 - 1) Verify mechanical operation.
 - 2) Verify contact gap, wipe, alignment, and pressure are in accordance with manufacturer's published data.
- d. Motor-Running Protection:
 - 1) Verify that overload element rating is correct for its application.
 - 2) If motor-running protection is provided by fuses, verify correct fuse rating.
- e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests:

- a. **[For contactor and circuit breaker, perform][Perform]**insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to ground with switch closed, and across each open pole. Insulation-resistance values must comply with manufacturer's published data or NETA ATS, Table 100.1. In absence of manufacturer's published data, comply with Table 100.5. Investigate and correct values of insulation resistance less than this table or manufacturer's published instructions.
- b. Test circuit breakers as follows:
 - 1) Operate circuit breaker to ensure smooth operation.
 - 2) Perform contact/pole-resistance test. Drop values for $\mu\Omega$ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
- c. Perform operational tests by initiating control devices. Control devices must perform in accordance with system design requirements.

Secondary Unit Substations with Motor Control Center

L. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that maintenance devices are available for servicing and operating breaker.
- d. Verify that unit is clean.
- e. Verify that arc chutes are intact.
- f. Inspect moving and stationary contacts for condition and alignment.
- g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
- h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
- i. Verify cell fit and element alignment.
- j. Verify racking mechanism operation.
- k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
- m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

- a. Perform insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published recommendations must be investigated.
- b. Measure contact resistance across power contact of circuit breaker. Drop values for $\mu\Omega$ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
- c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed value shown in NETA ATS, Table 100.7.
- d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
- g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
- h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data,

- comply with NETA ATS, Table 100.20.
- i. Measure fuse resistance. Investigate fuse-resistance values that deviate from others by more than 15 percent.
- j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
- k. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

M. Insulated-Case/Molded-Case Air-Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage and alignment.
- c. Verify that unit is clean.
- d. Operate circuit breaker to ensure smooth operation.
- e. Inspect operating mechanism, contacts, and arc chutes in unsealed units.
- f. Perform adjustments for final protective-device settings in accordance with coordination study. Set protective devices in accordance with coordination study report.

2. Electrical Tests:

- a. Perform insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to-ground with circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published recommendations must be investigated.
- b. Perform contact/pole-resistance test. Drop values for $\mu\Omega$ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
- c. Determine long-time pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band, including adjustment factors.
- d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- e. Determine ground-fault pickup and time delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- f. Determine instantaneous pickup by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
- g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
- h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
- i. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and

trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.

- j. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

N. Low-Voltage Ground-Fault Protection System Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect components for damage and errors in polarity or conductor routing.
 - 1) Verify that ground connection is made on source side of neutral disconnect link and on source side of ground-fault sensor.
 - 2) Verify that neutral sensors are connected with correct polarity on both primary and secondary.
 - 3) Verify that phase conductors and neutral pass through sensor in same direction for zero sequence systems.
 - 4) Verify that grounding conductors do not pass through zero sequence sensors.
 - 5) Verify that grounded conductor is solidly grounded.
- b. Verify that unit is clean.
- c. Operate circuit breaker to ensure smooth operation.
- d. Verify correct operation of functions of self-test panel if provided.
- e. Verify that control power transformer has adequate capacity for system.
- f. Set pickup and time-delay settings. Record appropriate operation and test sequences in accordance with Section 230.95 "Ground-Fault Protection Equipment" of NFPA 70.

2. Electrical Tests:

- a. Measure system neutral-to-ground insulation resistance with neutral disconnect link temporarily removed. Replace neutral disconnect link after testing. System neutral-to-ground insulation resistance must be minimum of 1 MΩ. Correct wiring until minimum is achieved.
- b. Perform ground-fault protective-device pickup tests using primary injection. Results of pickup test must be greater than 90 percent of ground-fault protective-device pickup setting and less than 1200 A or 125 percent of pickup setting, whichever is smaller. Adjust or replace device until these parameters are achieved.
- c. For summation-type systems utilizing phase and neutral current transformers, verify correct polarities by applying current to phase-neutral current-transformer pair. This test also applies to MCCBs utilizing external neutral current transformer. Ground-fault protective device must operate when current direction is same relative to polarity marks in two current transformers. Ground-fault protective device must not operate when current direction is opposite relative to polarity marks in two current transformers.
- d. Measure time delay of ground-fault protective device at value equal to or greater than 150 percent of pickup value. Relay timing must be in accordance with manufacturer's published data but must be no longer than 1 s at 3000 A in accordance with Section 230.95 "Ground-Fault Protection Equipment" of NFPA 70.
- e. Verify that reduced control voltage tripping capability is 55 percent for AC systems and 80 percent for DC systems. Replace ground-fault system if reduced control voltage tripping requirement is not achieved, and retest.
- f. Verify blocking capability of zone interlock systems. Results of zone-blocking tests must be in accordance with manufacturer's published data and design specifications.

O. Metering Device Field Tests:

Secondary Unit Substations with Motor Control Center

Secondary

1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
 - c. Verify that unit is clean.
 - d. Verify freedom of movement, end play, and alignment of rotating disk(s).
2. Electrical Tests:
 - a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
 - b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
 - c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
 - d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

P. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

Q. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

R. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. **<Insert startup steps if any>.**

B. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Remove paint

splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.6 CLOSEOUT ACTIVITIES

A. Training:

1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain secondary unit substation equipment.
2. **[Provide video recordings of training sessions to Owner][Allow Owner to record training sessions].**

3.7 PROTECTION

- #### A.
- After installation, protect secondary unit substation equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

- #### A.
- Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of secondary unit substation. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch/h (25 mm/h)**. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Rebalance loads.
 - c. Prepare written request for voltage adjustment by electric utility.
 3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
 4. Field Reports for Voltage Monitoring and Adjusting:
 - a. Prepare written report covering monitoring performed and corrective action taken.
 - b. For relay and adjustable circuit breaker, tag device with adjusting technician's initials and date of adjustment. Record settings and file with test records specified in "Field Quality Control" Article.
- #### B.
- Infrared Scanning of Secondary Unit Substation Equipment: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection. Take visible light photographs at same

locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of unit substation.
 2. Follow-On Infrared Scanning: Perform additional follow-up infrared scan of switchgear 11 months after date of Substantial Completion.
 3. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
 4. Field Reports for Infrared Scanning: Prepare certified report that identifies testing technician and equipment used, and lists results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
 5. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
- C. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes **[one year]<Insert duration>** period for full maintenance by **[skilled employees of substation equipment Installer][manufacturer's authorized service representative]**. Include annual preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

END OF SECTION 26 11 16 00A

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 11 16 11 - SECONDARY UNIT SUBSTATIONS WITH SWITCHGEAR SECONDARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Articulated secondary unit substations with switchgear secondary.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in substation medium-voltage sections.
5. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for terminating cables in substation low-voltage sections.
6. Section 260523 "Control-Voltage Electrical Power Cables" for requirements for terminating cables in substation instrumentation sections.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic[**and wind**] control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
12. Section 262300 "Low-Voltage Switchgear" specifies low-voltage distribution sections referenced by this Section.

1.2 DEFINITIONS

- A. NETA ATS: Acceptance testing specification.
- B. PCB: Polychlorinated biphenyl.
- C. RTD: Resistance temperature detector (IEEE C37.2 Device No. 26).
- D. SCR: Silicon-controlled rectifier.
- E. SPD: Surge protective device.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 - 3. Include manufacturer's sample extended warranty language.
- B. Factory test reports.
- C. Shop Drawings: Prepare and submit the following:
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: Power, signal, and control wiring.
 - 3. Dimensioned plans and elevations showing major components and features.
 - a. Include a plan view and cross section of equipment base, showing clearances, workspace that accounts for breaker service and removal, and locations of penetrations for grounding and conduits in accordance with manufacturer's published instructions.
 - 4. One-line diagram.
 - 5. List of materials.
 - 6. Nameplate legends.
 - 7. The material, size and number of bus bars, and current rating for each bus, including mains and branches of phase, neutral, and ground buses.
 - 8. Short-time and short-circuit current ratings of secondary unit substations and components.
 - 9. Ratings of individual protective devices.
 - 10. Mimic-bus diagram.
 - 11. Utility company's metering provisions with indication of approval by utility company.
- D. Time-Current Characteristic Curves: For overcurrent protective devices.
- E. Primary Fuses: Submit recommendations and size calculations.
- F. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Manufacturer's field reports for system startup support.
3. Field reports for voltage monitoring and adjusting.
4. Field reports for infrared scanning.
5. Field reports for software and firmware upgrades.

1.5 CLOSEOUT SUBMITTALS

- A. Warranty documentation.
- B. Maintenance service agreement.
- C. Software and firmware service agreement.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare parts.
- B. Special tools.
- C. Consumable items.

1.7 REGULATORY AGENCY APPROVALS

- A. Submittals for secondary unit substations requiring approval by authorities having jurisdiction must be signed by qualified electrical professional engineer responsible for their preparation. **[Obtain approval by authorities having jurisdiction prior to submitting for action by Architect.][Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.]**

1.8 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- D. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical

power system modeling and analysis of electrical safety in accordance with NFPA 70E.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.
- B. Coordinate delivery of secondary unit substations to allow movement into designated space.
- C. Store secondary unit substation components[**protected from weather and**] so condensation does not form on or in units. Provide temporary heating in accordance with manufacturer's published instructions.
- D. Handle secondary unit substation components in accordance with manufacturer's published instructions. Use factory-installed lifting provisions.

1.10 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

- A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.11 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

- A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Extended-Warranty Period: [**Two**][**Three**][**Four**]**<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substation performs in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.
 - 1. Initial Extended-Warranty Period: [**Three**][**Four**][**Five**]**<Insert number>** years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
 - 2. Follow-On Extended-Warranty Period: [**Eight**]**<Insert number>** years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

1.12 WARRANTY FOR BATTERIES

- A. Special DC Control System Manufacturer Extended Warranty: Manufacturer warrants that components

of DC control system perform in accordance with specified requirements and agrees to provide repair or replacement of batteries that fail to perform as specified within extended warranty period.

1. DC Control System Equipment (Excluding Batteries) Extended Warranty Period: **[Two]<Insert number>** year(s) from date of Substantial Completion, for labor, materials, and equipment.
2. Standard VRLA Batteries:
 - a. Initial Extended Warranty Period: **[Two]<Insert number>** year(s) from date of Substantial Completion, full coverage for materials only.
 - b. Follow-on Extended Warranty Period: **[Nine]<Insert number>** year(s) from date of Substantial Completion, pro-rated coverage for materials only.
3. Premium VRLA Batteries:
 - a. Initial Extended Warranty Period: **[Two]<Insert number>** year(s) from date of Substantial Completion, full coverage for materials only.
 - b. Follow-on Extended Warranty Period: **[19]<Insert number>** year(s) from date of Substantial Completion, pro-rated coverage for materials only.
4. Vented Ni-Cd Batteries:
 - a. Initial Extended Warranty Period: **[Five]<Insert number>** year(s) from date of Substantial Completion, full coverage for materials only.
 - b. Follow-on Extended Warranty Period: **[15]<Insert number>** year(s) from date of Substantial Completion, pro-rated coverage for materials only.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 1. Unit Substations over 600 V: UL CCN YEFV, including IEEE C37.121 and the following:
 - a. Metal-Clad Switchgear: IEEE C37.20.2 and NEMA C 37.55.
 - b. Metal-Enclosed Switchgear: IEEE C37.20.3 and NEMA C 37.57.
 - c. Liquid-Filled Transformer: IEEE C57.12.00.
 - d. Dry-Type Transformer: UL 1562.
- C. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:
 1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
 2. Component Importance Factor (Ip): **[1.0][1.5]**.
 3. Component Amplification Factor (ap):

- a. Batteries: [1.0]<Insert value>.
 - b. Transformers: [1.0]<Insert value>.
 - c. Sheet Metal Enclosed Electrical Equipment: [2.5]<Insert value>.
 - d. Cabling and Bus Ducts: [2.5]<Insert value>.
4. Component Response Modification Factor (R_p):
- a. Batteries: [2.5]<Insert value>.
 - b. Transformers: [2.5]<Insert value>.
 - c. Sheet Metal Enclosed Electrical Equipment: [6.0]<Insert value>.
 - d. Cabling and Bus Ducts: [6.0]<Insert value>.
5. Component Overstrength Factor (Ω_o): [1.5][2.5]<Insert value>.
- a. Batteries: [2.5]<Insert value>.
 - b. Transformers: [2.5]<Insert value>.
 - c. Sheet Metal Enclosed Electrical Equipment: [2.5]<Insert value>.
 - d. Cabling and Bus Ducts: [1.5]<Insert value>.

2.2 ARTICULATED SECONDARY UNIT SUBSTATIONS WITH SWITCHGEAR SECONDARY

- A. Description: **[Medium-voltage, primary incoming section; transformer section; and low-voltage secondary switchgear section; and including coordinated circuit breakers, fusible switches, and metering components]<Insert brief description of desired system, assembly, or equipment>.**
- B. Indoor Unit Arrangement: **[Single assembly][Separate secondary distribution equipment connected with busway].**
- C. Outdoor Unit Arrangement: **[Single assembly][Separate secondary distribution equipment connected with busway].**
 - 1. Weatherproof, listed for installation outdoors, complying with IEEE C37.20.1.
 - 2. Aisle-less Construction: Full-height doors in front of basic weatherproof equipment.
- D. Selection of Components for Secondary Unit Substation:
 - 1. Source Limitations: Obtain components for secondary unit substation from sources approved by **[manufacturer][fabricator]** warranting performance of entire **[system][assembly]**.
 - 2. Provide the following specified products with the secondary unit substation:
 - a. Secondary Unit Substation No. 1 :
 - 1) Medium-voltage terminal compartment section .
 - 2) Medium-voltage metal-clad switchgear section .
 - 3) Medium-voltage metal-enclosed switchgear section .
 - 4) Medium-voltage instruments section .
 - 5) Liquid-filled medium-voltage transformer section .
 - 6) Dry-type medium-voltage transformer section .
 - 7) Secondary distribution terminal compartment section .
 - 8) Secondary distribution network protectors section .
 - 9) Secondary distribution low-voltage instrument section .
 - 10) Secondary distribution switchgear section .
 - 11) Secondary Distribution Low-Voltage Distribution Section : As specified in Section 262300 "Low-Voltage Switchgear."

E. General Criteria:

1. Connections between primary device and transformer must be **[cable][bus]**, and between transformer and secondary must be flexible bus braid unless noted otherwise.
2. Indoor Enclosure: Steel.
3. Outdoor Enclosure: **[Weatherproof, aisle-less construction][Weatherproof, sheltered-aisle construction, with interior-lighted walk-in aisle]** for outdoor service. Galvanized-steel, weatherproof construction; integral structural-steel base frame with factory-applied asphaltic undercoating.
 - a. Enclosure: **[Flat][Downward, rearward sloping]** roof; **[bolt-on rear covers][rear hinged doors]** for each section, with provisions for padlocking.
 - b. Each compartment must have the following features:
 - 1) Structural design and anchorage adequate to resist loads imposed by **[125 mph (200 km/h)]<Insert wind speed>** wind.
 - 2) Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by **[thermostats to maintain temperature of each section above expected dew point][manual switching of branch-circuit protective device]**.
 - 3) Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
 - 4) LED lighting fixtures, ceiling mounted; wired to a three-way light switch at each end of aisle
 - 5) Weatherproof ground-fault circuit interrupter (GFCI) duplex receptacle.
 - 6) Power for heaters, lights, and receptacles must be provided **[by control power transformer][as indicated]**.
 - c. Weatherproof internal-aisle construction must have the following features:
 - 1) Common internal aisle of sufficient width to permit protective device withdrawal, disassembly, and servicing in aisle.
 - 2) Doors: Personnel door at each end of aisle, minimum width of **[30 inch (762 mm)]<Insert dimension>**; opening outwards; with panic hardware and provisions for **[padlocking][cylinder lock]**.
 - 3) Aisle space heaters operating at one-half or less of rated voltage and thermostatically controlled.
 - 4) Vapor-proof fluorescent aisle lights with low-temperature ballasts and controlled by wall switch at each entrance.
 - 5) Emergency battery pack lighting fixture installed on wall of aisle midway between personnel doors
 - 6) GFCI duplex receptacles, a minimum of two, located in aisle.
 - 7) Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of **[plus 10 deg F (minus 12 deg C)]<Insert temperature>** with outside design temperature of **[minus 20 deg F (minus 29 deg C)]<Insert temperature>**.
 - 8) Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of **[85 deg F (29 deg C)]<Insert temperature>** with outside design temperature of **[104 deg F (40 deg C)]<Insert temperature>**.
 - 9) Ventilating openings **[complete with replaceable fiberglass air filters]**.
 - 10) Thermostat: Single stage; wired to control heat and exhaust fan.
4. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.
5. Unit Substation Enclosures Finish:

- a. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
- b. Factory-applied finish in manufacturer's standard gray over a rust-inhibiting primer on treated metal surface.
- c. Factory-applied corrosion-resistant finish in manufacturer's standard color that withstands **[120][480]** hours of exposure to salt spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. The scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with a rating of not less than 7 arrived at in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with a manufacturer's standard zinc-rich paint.

F. Source Quality Control:

1. Factory Tests:

- a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
- b. Testing Administrant: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate secondary unit substation components.
- c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation components, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.
 - 1) Perform design and routine tests in accordance with standards specified for components. Conduct transformer tests in accordance with IEEE C57.12.90. Conduct switchgear and switchboard tests in accordance with NEMA C 37.51.
 - 2) Perform the following factory-certified tests on each secondary unit substation:
 - a) Resistance measurements of all windings on rated voltage connection and on tap extreme connections.
 - b) Ratios on rated voltage connection and on tap extreme connections.
 - c) Polarity and phase relation on rated voltage connection.
 - d) No-load loss at rated voltage on rated voltage connection.
 - e) Exciting current at rated voltage on rated voltage connection.
 - f) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
 - g) Applied potential.
 - h) Induced potential.
 - i) Temperature Test: If a transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating. Temperature test is not required if a record of a temperature test on an essentially duplicate unit is available.
- d. Nonconforming Work:
 - 1) Equipment that does not pass tests and inspections will be considered defective.
- e. Factory Test Reports: Compile and submit factory test and inspection reports.

G. Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for transformer section.
 - b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - c. System Voltage: **[4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>**.
 - d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of any disconnecting device.

H. Medium-Voltage Metal-Clad Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**

- d. [Siemens Industry, Inc., Energy Management Division]
- e. [Square D; Schneider Electric USA]
- f. <Insert manufacturer's name>

3. Standard Features:

- a. Metal-clad, circuit-breaker switchgear, complying with IEEE C37.20.2 and NEMA SG 4 and tested for compliance in accordance with NEMA C 37.55.
 - 1) Arc Resistant: Comply with IEEE C37.20.7, [Type 1][Type 2][Type 1C][Type 2C].
- b. Ratings must comply with IEEE C37.04, suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - 1) System Voltage: [4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>.
 - 2) Nominal Interrupting-Capacity Class: [250][350][500][750][1000] MVA.
 - 3) Main-Bus Rating: [1200][2000][3000] A, continuous.
- c. Circuit Breakers: Electrically operated, drawout mounting; using three individual vacuum-sealed interrupter modules, and including the following features:
 - 1) Designed to operate at rated voltage to interrupt fault current within its rating within [three][five] cycles of trip initiation. For systems with X/R ratio of 17 or less, transient voltage during interruption must not exceed twice rated line-to-ground voltage of system.
 - 2) Contact-Wear Indicator: Readily accessible to field maintenance personnel.
 - 3) Minimum of six Type A and six Type B spare contacts.
 - 4) Interchangeability: Interchangeable with vacuum circuit breakers of same current and interrupting ratings.
 - 5) Operating Mechanism: Electrically charged, mechanically and electrically trip-free, stored-energy operation.
- d. Control Power:
 - 1) [48][125]<Insert voltage> V(dc) for closing and tripping.
 - 2) [120][240]<Insert voltage> V(ac) for closing and tripping.
- e. Low-DC-Voltage Alarm: Monitor DC control power voltage with a remote alarm. Alarm must sound if voltage falls to an adjustable value to indicate an impending battery failure. Factory set alarm value at 80 percent of full-charge voltage.
- f. Remote-Tripping Device: Wall-mounting emergency control station to open circuit breakers; located in red cast-metal box with break-glass operation.
- g. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of any disconnecting device.

I. Medium-Voltage Metal-Enclosed Switchgear Section :

- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]

- b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Metal-enclosed, air-interrupter switchgear, **[with][without]** fuses, complying with IEEE C37.20.3.
 - 1) Switchgear must be arc resistant, complying with IEEE C37.20.7, **[Type 1][Type 2][Type 1C][Type 2C]**.
 - b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
 - 1) System Voltage: **[4.16 kV nominal; 4.76 kV maximum][7.2 kV nominal; 15 kV maximum][13.8 kV nominal; 15 kV maximum][34.5 kV nominal; 38 kV maximum]<Insert other voltage>**.
 - 2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
 - 3) Main-Bus Rating: **[600][1200][2000]** A, continuous.
 - c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.
 - 1) Rating: **[600][1200]** A continuous duty and load break.
 - 2) Two-Time Duty-Cycle Fault Closing: **[25 000][40 000]** A, asymmetrical.
 - 3) Switch Action: No external arc and no significant quantities of ionized gas released into enclosure.
 - 4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
 - 5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
 - 6) Protective Shields: Cover live components and terminals.
 - 7) Fuse Mounts: Single-frame mounted and de-energized when switch is open.
 - 8) Mechanical Interlock: Prevent opening of switch compartment door unless switchblades are open, and prevent closing switch if door is open. **[Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.]**
 - 9) Window: Permits viewing switchblade positions when door is closed.
4. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with

ratings as indicated, connected in each phase of incoming circuit and ahead of any disconnecting device.

J. Medium-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
 - 2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.
 - b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

- 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
 - 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
- c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
- 1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, [**15-minute**]<Insert value> indicating demand register, and provision for testing and adding pulse initiation.
 - 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with [**15-minute**]<Insert value> interval.
 - a) Operation: Counts and records a succession of pulses entering two channels.
 - b) Housing: Drawout, back-connected case arranged for semiflush mounting.
- d. Overcurrent and Ground-Fault Protective Relays: Multifunctional, solid-state microprocessor-based, medium-voltage relay, for operation from specified control power. Comply with IEEE C37.90.
- 1) Field-Selectable Relay Settings: Required by overcurrent protective device coordination study and arc-flash study.
 - 2) Primary Current-Transformer Ratings: Programmable from 5 to 5000 A.
 - 3) Phase and Ground Protection: Field-selectable curves from IEEE moderately inverse, very inverse, or extremely inverse.
 - 4) Phase Instantaneous Overcurrent Trip Pickup Point: Field selectable as "none" or from 1.0 to 25 times current-transformer primary rating. Include discriminator circuit with "on" and "off" switch, so that when phase instantaneous overcurrent has been programmed to "none," discriminator circuit protects against currents exceeding 11 times current-transformer primary rating when breaker is being closed and must be deactivated after approximately eight cycles.
 - 5) Contacts: Two Form A contacts, field selectable into contact pairs as follows and as required by overcurrent protective device coordination study and arc-flash study:
 - a) One contact assigned IEEE Device No. 51 phase and IEEE Device No. 51 ground, and other contact assigned IEEE Device No. 50 phase and IEEE Device No. 50 ground.
 - b) One contact assigned IEEE Device No. 51/50 phase, and other contact assigned 51/50 ground.
 - 6) Alphameric display to show the following parameters with metering accuracy not to exceed 2 percent of full scale:
 - a) Individual phase currents.
 - b) Ground current.
 - c) Cause of trip.

- d) Magnitude and phase of current causing trip.
 - e) Phase or ground indication.
 - f) Peak current demand for each phase and ground since last reset.
 - g) Current-transformer primary rating.
 - h) Programmed phase and ground set points.
- 7) Communications module to transmit the following data in accordance with Section 260913 "Electrical Power Monitoring."
- a) Relay's metered and target data, such as currents, set points, cause of trip, magnitude of trip current, and open-close trip status.
 - b) Ability to close and open associated breaker with proper access code from remote location over communication network when relay is configured in remote open-close mode.
- 8) Relay alarm and trip contacts must not change state if power is lost or an undervoltage occurs. These contacts must only cause a trip on detection of an overcurrent or fault condition based on programmed settings. Provide a "protection off" alarm, which must be normally energized when relay is powered and self-diagnostics indicates unit is functional. On loss of power or relay failure, this alarm relay must be de-energized providing a fail-safe protection off alarm.
- 9) The relay must operate reliably solely from breaker main current transformers during a fault condition, if normally connected auxiliary AC voltage is not available, even after an extended power outage.
- 10) Mount relay in a drawout case with a two-stage quick-release operation. The removal of relay from case must disconnect trip circuits and short current-transformer secondaries before unit control power is disconnected. When relay is inserted into case, control power connections must be made before trip circuits are activated. Include a self-shorting contact on case terminal block to provide alarm indication and tripping of circuit breaker upon removal of relay from case.
- e. **<Insert other relay types>.**
- f. Control Power Supply Transformer:
- 1) Control power transformer supplies 120 V control circuits through secondary disconnect devices.
 - a) Dry-type transformers, in separate compartments for units larger than 3 kVA, including primary and secondary fuses.
 - b) Two control power transformers in separate compartments with necessary interlocking relays; each transformer connected to line side of associated main circuit breaker.
 - c) Secondary windings connected through relay(s) to control bus to affect an automatic transfer scheme.
 - d) Secondary windings connected through an internal automatic transfer switch to switchgear control power bus.
 - e) Control Power Fuses: Primary and secondary fuses provide current-limiting and overload protection.
- g. Control Power Supply DC Battery System:
- 1) System Requirements: Battery must have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at **77 deg F (25 deg C)** with electrolyte at normal level and minimum ambient temperature of **55 deg F (13 deg C)**. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery

to operate ungrounded. Battery system capacity must be in accordance with switchgear manufacturer's published instructions to operate circuit breakers for intended duty.

- 2) Battery: **[Standard VRLA][Premium VRLA][Vented Ni-Cd]** batteries, with battery disconnect and overcurrent protective device.
- 3) Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads. **[Rate battery rack, cell supports, and anchorage for seismic requirements.]**
 - a) Thermometers with specific-gravity correction scales.
 - b) Hydrometer syringes.
 - c) Set of cell numerals.
- 4) Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with AC input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.
 - a) DC ammeter.
 - b) DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
 - c) Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by N.O. push-button contact.
 - d) Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
 - e) Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.
 - f) AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of AC power supply for any interval.
 - g) Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. The device must regulate charging current, but must not disconnect charger from either battery or AC supply.
 - h) Charger's Audible Noise: Less than 26 dB(A-weighted).
- 5) Control Wiring: Factory installed, complete with bundling, lacing, and protection.
 - a) Conductors across Hinges and for Interconnections between Shipping Units: Flexible conductors for 8 AWG and smaller.
 - b) Conductors: Sized in accordance with NFPA 70 for duty required.

K. Liquid-Filled Medium-Voltage Transformer Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**

- f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Hitachi Energy USA Inc.; business of Hitachi, Ltd.]
 - d. [Siemens Industry, Inc., Energy Management Division]
 - e. [Square D; Schneider Electric USA]
 - f. <Insert manufacturer's name>
 3. Standard Features:
 - a. IEEE C57.12.00 [and UL 1062,] liquid-filled, two-winding, secondary unit substation transformer.
 - b. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
 - c. Insulating Liquid:
 - 1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with ASTM D117.
 - 2) Less flammable, edible-seed-oil based, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
 - 3) Less flammable, dielectric, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
 - 4) Less flammable, silicone-based dielectric, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.
 - d. Insulation Temperature Rise:
 - 1) 55 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**. Insulation system must be rated to continuously allow an additional 12 percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
 - 2) 65 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**.
 - e. BIL: [60][75][95][110][150][200] kV.
 - f. Full-Capacity Voltage Taps:
 - 1) Four nominal 2.5 percent taps, two above and two below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
 - 2) Four nominal 2.5 percent taps below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
 - g. Cooling System: [Class ONAN, liquid cooled][Class ONAN/ONAF, liquid cooled, and with forced-air rating][Class ONAN/OFAP, liquid cooled, and with provisions for future forced-air rating]. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.

h. Impedance: **<Insert number>** percent.

L. Dry-Type Medium-Voltage Transformer Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. IEEE C57.12.01 and IEEE C57.12.51, dry-type, two-winding, secondary unit substation transformer.
 - b. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
 - c. Style:
 - 1) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
 - 2) **[Indoor, ventilated][Outdoor, ventilated][Totally enclosed, nonventilated]**, vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
 - d. Cooling System:
 - 1) Class AA, air cooled, complying with IEEE C57.12.01.
 - 2) Class AFA, air cooled with forced-air rating, complying with IEEE C57.12.01.
 - a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
 - b) Include mounting provision for fans.
 - 3) Class AA/AFA, air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.

- a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
 - b) Include mounting provision for fans.
- 4) Class AFA, forced-air cooling, complying with IEEE C57.12.01.
 - a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
 - b) Include cooling fans.
- e. Insulation Materials: IEEE C57.12.01, rated **[220]<Insert number> deg C**.
- 1) Insulation Temperature Rise: **[80][115][150] deg C** maximum rise above **104 deg F (40 deg C)**.
- f. BIL: **[60][75][95][110][150][200] kV**.
- g. Full-Capacity Voltage Taps:
 - 1) Four nominal 2.5 percent taps, two above and two below rated primary voltage.
 - 2) Four nominal 2.5 percent taps below rated primary voltage.
- h. Impedance: **<Insert number> percent**.
- i. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

M. Secondary Distribution Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. Low-Voltage Terminal Compartment: Bus **[bars mounted on standoff insulators][duct**

flange for close coupling with busway].

N. Secondary Distribution Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:
 - a. The secondary distribution section must be drawout, **[fused][fused where indicated]**, low-voltage switchgear, complying with IEEE C37.20.1 and UL 1558.
 - 1) Section barriers between main and tie circuit-breaker compartments must be extended to rear of section.
 - b. Switchgear Structure:
 - 1) Match and align front and back of switchgear.
 - 2) Isolate line bus from load bus at each main and tie circuit breaker with bus isolation barriers.
 - 3) Allow the following circuit-breaker functions to be performed when compartment door is closed:
 - a) Operate manual charging system.
 - b) Open and close circuit breaker.
 - c) Examine and adjust trip unit.
 - d) Read breaker nameplate.
 - 4) Locate instrumentation transformers within breaker cell, and make front accessible and removable.
 - c. Switchgear Bus:
 - 1) Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
 - 2) Main Phase Bus: Uniform capacity the entire length of section.

- 3) Neutral Bus: **[50][100]** percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors. Include braces for neutral-bus extensions for busway feeders.
 - 4) Vertical Section Bus Size: Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers.
 - 5) Phase- and Neutral-Bus Material:
 - a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
 - b) Silver- or tin-plated, high-strength, electrical-grade aluminum alloy, with copper or tin-plated aluminum circuit-breaker line connections.
 - c) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.
 - 6) Use silver-plated copper or tin-plated aluminum for connecting circuit-breaker line to aluminum bus.
 - 7) Use copper for connecting circuit-breaker line to copper bus.
 - 8) Contact Surfaces of Buses: Silver plated.
 - 9) Feeder Circuit-Breaker Load Terminals: Silver-plated copper bus extensions equipped with pressure connectors for outgoing circuit conductors.
 - 10) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size **1/4 by 2 inch (6 by 50 mm)**.
 - 11) Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors. Neutral-bus extensions for busway feeders are braced.
 - 12) Neutral Disconnect Link: Bolted, uninsulated, **1/4 by 2 inch (6 by 50 mm)** copper bus, arranged to connect neutral bus to ground bus.
 - 13) Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
 - 14) Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - 15) Sprayed Insulation Thickness: **3 mils (0.08 mm)**, minimum.
 - 16) Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.
- d. Circuit-Breaker Compartment:
- 1) Drawout Features: Circuit-breaker mounting assembly equipped with a racking mechanism to position circuit breaker and hold it rigidly in "connected," "test," and "disconnected" positions. Include the following features:
 - a) Interlocks: Prevent movement of circuit breaker to or from "connected" position when it is closed, and prevent closure of circuit breaker unless it is in "connected," "test," or "disconnected" position.
 - b) Primary Disconnect: Mount on stationary part of compartment. The disconnect must consist of a set of contacts extending to rear through an insulating support barrier, and of corresponding moving finger contacts on power circuit-breaker studs, which engage in only "connected" position. The assembly must provide multiple silver-to-silver full floating, spring-loaded, high-pressure-point contacts with uniform pressure on each finger. Load studs must connect to bus extensions that terminate in solderless terminals in rear cable compartment.
 - c) Secondary Disconnect: Floating terminals mounted on stationary part of compartment that engage mating contacts at front of breaker. Disconnecting devices must be gold plated, and engagement must be maintained in

"connected" and "test" positions.

- e. Circuit-Breaker Positioning: Permit racking of an open circuit breaker to or from "connected," "test," and "disconnected" positions only when compartment door is closed unless live parts are covered by a full dead-front shield. Permit manual withdrawal of an open circuit breaker to a position for removal from structure. When compartment door is open, status for connection devices for different positions includes the following:
 - 1) Test Position: Primary disconnects disengaged, and secondary disconnect devices and ground contact engaged.
 - 2) Disconnected Position: Primary and secondary devices and ground contact disengaged.
- f. Circuit Breakers:
 - 1) Comply with IEEE C37.13 and UL 1066.
 - 2) Ratings: Continuous, interrupting, and short-time current ratings for each circuit breaker must match voltage and frequency ratings for switchgear.
 - 3) Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
 - a) Normal Closing Speed: Independent of both control and operator.
 - b) Slow Closing Speed: Optional with operator for inspection and adjustment.
 - c) Stored-Energy Mechanism: **[Manually charged][Electrically charged][Electrically charged, and operator's choice of manual charging]**.
 - d) Operating Handle: One for each circuit breaker capable of manual operation.
 - e) Electric Close Button: One for each electrically operated circuit breaker.
 - f) Operation counter.
 - 4) Trip Devices: Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, a release mechanism, and the following features:
 - a) Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
 - b) Temperature compensation that ensures accuracy and calibration stability from **plus 23 to 104 deg F (minus 5 to plus 40 deg C)**.
 - c) Field-adjustable, time-current characteristics.
 - d) Current Adjustability: Dial settings and rating plugs on trip units, or sensors on circuit breakers, or a combination of these methods.
 - e) Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
 - 5) Pickup Points:
 - a) Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I-squared-t operation.
 - b) Five minimum, for instantaneous-trip functions.
 - 6) Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup.
 - a) Arrange to provide protection for three-wire circuit or system.
 - b) Arrange to provide protection for four-wire circuit or system.
 - c) Arrange to provide protection for four-wire, double-ended substation.

- 7) Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
 - 8) Auxiliary Contacts:
 - a) Contacts and switches required for normal circuit-breaker operation, sufficient for interlocking and remote indication of circuit-breaker position.
 - b) Spare auxiliary switches, at least two, unless other quantity is indicated. Each switch must consist of two Type A and two Type B contacts wired through secondary disconnect devices to a terminal block in stationary circuit-breaker compartment.
 - 9) Arc Chutes: Readily removable from associated circuit breaker when it is in "disconnected" position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.
 - 10) Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement of drawout mechanism.
- g. Mechanical Interlocking of Circuit Breakers: Uses a mechanical tripping lever or equivalent design and electrical interlocks.
- h. Key Interlocks: Arranged to prevent opening or closing interlocked circuit breakers, except in a specified sequence. Include mountings and hardware for future installation of key interlocks.
- i. Undervoltage Trip Devices:
- 1) Instantaneous, with adjustable pickup voltage.
 - 2) Adjustable time-delay and pickup voltage.
- j. Shunt-trip devices.
- k. Fused Circuit Breakers: Circuit-breaker and fuse combinations complying with requirements for circuit breakers and trip devices.
- 1) Fuses: NEMA FU 1, Class L current limiting, sized to coordinate with and protect associated circuit breaker.
 - 2) Circuit Breakers with Frame Size **[1600]<Insert number> A and Smaller**: Mount fuses on line side of associated circuit breaker, **on a common drawout carriage**, arranged so fuses are accessible only when circuit breaker is in "disconnected" position.
 - 3) Circuit Breakers with Frame Sizes More than **[1600]<Insert number> A**: Fuses and circuit breakers **[may][must]** be installed in separate compartments on separate drawout mountings. Interlock fuse drawout element with associated power circuit breaker to prevent drawing out fuse element unless circuit breaker is in "open" position.
 - 4) Open-Fuse Trip Device: Provide for a positive means of tripping and holding circuit breaker in "open" position when a fuse opens. Indicate open-fuse status **[at front of circuit breaker][or][fuse drawout element]**.
- l. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

O. Secondary Distribution Network Protectors Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Hitachi Energy USA Inc.; business of Hitachi, Ltd.]
 - d. [Siemens Industry, Inc., Energy Management Division]
 - e. [Square D; Schneider Electric USA]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Hitachi Energy USA Inc.; business of Hitachi, Ltd.]
 - d. [Siemens Industry, Inc., Energy Management Division]
 - e. [Square D; Schneider Electric USA]
 - f. <Insert manufacturer's name>
3. Standard Features:
 - a. The secondary distribution section must be composed of drawout, fused, low-voltage network protectors, complying with IEEE C57.12.44 and IEEE C37.20.1. The switch must comply with UL 1066.
 - 1) Rated for continuous service in an ambient temperature of up to **104 deg F (40 deg C)**, applied to three-phase, four-wire, solidly grounded wye secondary networks. Comply with IEEE C57.12.44.
 - 2) Dead-front, drawout design with externally mounted fuses, using hand-cranked rail system. Include mechanical interlocks to prevent racking in and racking out when protector is closed.
 - 3) Locate relay and control panel on a separate drawout module.
 - 4) Protector Operator: [**Spring-close**][and][or][**stored-energy**] mechanism, rated to close on a [**25 000**][**40 000**] A RMS symmetrical load.
 - 5) Control Voltage: 125 V.
 - 6) Program relay with factory default values. Provide one hand-held pendant to field adjust these values using relay calibration procedures. Include an anti-pumping program to lock protector open under abnormal conditions.
 - 7) Include current-limiting fuses on network side of protector for protection against switchboard bus faults.
 - b. Coordinate and comply with requirements of low-voltage switchgear supplied by network.
 - c. Controls: Microprocessor-based, three-phase network relay, with features and functions as follows:
 - 1) The protector control must use a positive and negative sequence-based algorithm for current and voltage.
 - 2) Close protector if positive sequence power flows into network. Adjustable closing range must be from 0.5 to 3.5 V in phase difference between network and transformer voltages.
 - 3) Trip protector if there is a net, three-phase, reverse power flow through protector. Trip protectors must be adjustable from 0.05 to 5 percent of continuous-current rating of current transformers within protector.
 - 4) Trip protector if there is a flow of reverse magnetizing current to its associated transformer.
 - 5) Relay parameters and watt or watt-var trip values must be field adjustable.
 - 6) Protector must not open under any fault on network side of protector.

- 7) Include auxiliary contacts and control wiring for use with remote pilot devices that provide remote trip and lockout functions in low-voltage switchgear. Include **[two]<Insert number>** spare auxiliary contacts and an equal number of N.O. and N.C. types.
- d. Network Communications: Data and digital data-transmission interface must be compatible with system specified in Section 260913 "Electrical Power Monitoring." Communicate the following network relay parameters:
 - 1) Current in each phase.
 - 2) Phase-to-phase and phase-to-neutral voltages.
 - 3) Three-phase watts, VARs, and VA.
 - 4) Frequency.
 - 5) Power factor.
 - 6) Network relay set points.
- e. Enclosure:
 - 1) With top-mounted transition to connect to low-voltage power network.
 - 2) Network Switchgear-Mounted Disconnect Switch:
 - a) Supply each network-protector circuit with a switchgear-mounted fuse truck, with Class L fuses rated for 200 kA interrupting capacity and key interlocked with each associated protector.
 - b) Supply each network-protector circuit with a switchgear-mounted main circuit breaker rated for fault current that can be delivered by network transformers, less one. Use drawout type to provide a means of isolating load side of each protector from network bus.

P. Secondary Distribution Low-Voltage Instrument Section :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Standard Features:

- a. Instrument Transformers: Comply with IEEE C57.13.
 - 1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
 - 2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.
- b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.
 - 1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2) Switch-selectable digital display with the following features:
 - a) Phase Currents, Each Phase: Plus or minus 1 percent.
 - b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d) Three-Phase Real Power: Plus or minus 2 percent.
 - e) Three-Phase Reactive Power: Plus or minus 2 percent.
 - f) Power Factor: Plus or minus 2 percent.
 - g) Frequency: Plus or minus 0.5 percent.
 - h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
 - 3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
 - 4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.
- c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
 - 1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
 - 2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - 3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
 - 4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
 - 5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 - 6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
 - 7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.
 - a) Operation: Counts and records a succession of pulses entering two channels.
 - b) Housing: Drawout, back-connected case arranged for semiflush mounting.
- d. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.
- e. Surge Suppression:

- 1) Factory installed as an integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:
 - a) Integral disconnect switch.
 - b) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
 - c) Indicator light display for protection status.
 - d) Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status. [**Contacts must reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.**]
 - e) Surge counter.
- 2) Field-mounted surge suppressors complying with Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits." Include the following features and accessories:
 - a) Integral disconnect switch.
 - b) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
 - c) Indicator light display for protection status.
 - d) Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status. [**Contacts must reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.**]
 - e) Surge counter.
- f. Control Power Supply:
 - 1) From medium-voltage instruments section.
 - 2) Control power transformer supplying 120 V control circuits through secondary disconnect devices.
- g. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:
 - 1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - 2) Conductors sized in accordance with NFPA 70 for duty required.

2.3 MAINTENANCE MATERIAL ITEMS

- A. Spare Parts: Furnish to Owner spare parts, for repairing secondary unit substation, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]
 1. Spare Fuses: [Six]<Insert number> of each type and rating of fuse and fusible device used, except for medium-voltage fuses [**and fuses associated with network protector**]. Include spares for the following:
 - a. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.
 - 1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will

- operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.
 - 2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
 - 3) Indicator integral with each fuse to show when it has blown.
 - 4) Spares: Include three fuses in use and three spare fuses in storage clips in each switch.
 2. Spare Indicating Lights: Six of each type installed.
 3. **[One]<Insert number>** set(s) of spare mounting gaskets for bushings, handholes, and gasket between relief cover and flange of pressure-relief device.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation, that are packaged with protective covering for storage on-site and identified with labels describing contents. **[Include the following:]**
1. Control-power battery hoist.
 2. Switchgear Circuit-Breaker Test Cabinet:
 - a. Separately mounted.
 - b. Containing push buttons for circuit-breaker closing and tripping, control relay, fuses, and secondary coupler with cable approximately **108 inch (2740 mm)** long.
 - c. Include secondary devices for operating circuit breaker if removed from switchgear and moved near test cabinet.
 - d. Include provision for storage of test and maintenance accessories in cabinet.
 3. Switchgear Maintenance Tools: Furnish tools and miscellaneous items required for switchgear test, inspection, maintenance, and operation.
 - a. Fuse-handling tool.
 - b. Relay and meter test plugs.
 - c. Extension rails, lifting device, transport or dockable dolly or mobile lift, and all other items necessary to remove circuit breaker from housing and transport to remote location.
 - d. Racking handle to move circuit breaker manually between "connected" and "disconnected" positions, and a secondary test coupler to permit testing of circuit breaker without removal from switchgear.
 4. Transformer Accessories Set: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap. **[Include the following additional accessories:]**
 - a. Liquid-level gauge.
 - b. Pressure-vacuum gauge.
 - c. Liquid temperature indicator.
 - d. Drain and filter valves.
 - e. Pressure-relief device.
 5. Low-Voltage Instruments Maintenance Tools: Furnish tools and miscellaneous items required for circuit-breaker and switchgear test, inspection, maintenance, and operation.
 - a. Racking handle to manually move circuit breaker between "connected" and "disconnected" positions.
 - b. Portable test set for testing all functions of circuit-breaker, solid-state trip devices without

- removal from switchgear.
- c. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
- d. Circuit-Breaker Removal Apparatus:
 - 1) Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
 - 2) Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.
- e. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
- f. Storage for Manual: Include a rack or holder, near operating instructions, for a copy of maintenance manual.

C. Consumable Items:

- 1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fuel tanks and fluid reservoirs.
- 2. Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents.[**Include the following:**]
 - a. Touchup Paint: **[Three]<Insert number>** half-pint containers of paint matching enclosure's exterior finish.
 - b. Primary Switch Contact Lubricant: **[One]<Insert number>** container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.
- D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at secondary unit substation location.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATIONS

- A. Comply with manufacturer's published instructions.

- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
1. Electrical Construction: ICC IBC, ICC IFB, NFPA 1, NFPA 70, and NECA NEIS 1.
 2. Electrical Maintenance: NFPA 70B.
 3. Electrical Safety: NFPA 70E.
 4. Commissioning of Electrical Systems: NECA NEIS 90.
 5. Hot Work: NFPA 51B.
 6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 7. Communications Work: BICSI N1.
 8. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
 9. Work in Confined Spaces: NFPA 350.
 10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
 11. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
 12. Installation of Switchboards: NECA NEIS 400.
 13. Installation of Liquid-Filled Transformers: NECA NEIS 410.
 14. Installation of Medium-Voltage Metal-Clad Switchgear: NECA NEIS 430.
 15. Installation and Maintenance of AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
 16. Consult Architect for resolution of conflicting requirements.
- C. Special Installation Techniques:
1. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and NFPA 70.
- D. Interfaces with Other Work:
1. Identification: Provide signs and labels for secondary unit substation and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
 - d. Install number of signs required to be readable from each accessible side, but space signs a maximum of **30 ft (9 m)** apart.
 - e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with maintenance materials.
 2. Install secondary unit substations on concrete equipment base(s).
 3. Provide vibration isolation and seismic control devices.
 4. Grounding and Bonding:
 - a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - b. At Exterior Locations:
 - 1) For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as indicated. Keep lead lengths as short as practicable with no kinks or sharp bends.
 - 2) Fence and equipment connections must not be smaller than 4 AWG. Ground fence

at each gate post and corner post and at intervals not exceeding 10 ft (3 m). Bond each gate section to fence post using 1/8 by 1 inch (3 by 25 mm) [tinned]flexible braided copper strap and clamps.

- 3) Make joints in grounding conductors and loops by exothermic weld or compression connector.

5. Connect feeder, branch-circuit, and instrumentation wiring.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [Owner][Tenant] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Field tests must be witnessed by [Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.

C. General Field Testing Requirements:

1. Comply with provisions of NFPA 70B, "Testing and Test Methods" Chapter.
2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
3. After installing secondary unit substation but before primary is energized, verify that grounding system at substation is tested at specified value or less.
4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
5. Visual and Mechanical Inspection:
 - a. Verify equipment nameplate data complies with Contract Documents.
 - b. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use a low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
6. Remove and replace malfunctioning units and retest.
7. Prepare test and inspection reports. Record as-left set points of all adjustable devices.

D. Switchgear Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, grounding, and required area clearances.
- c. Verify unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
- d. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study as well as to address of circuit breaker that is used to identify it in microprocessor-communication software.
- e. Verify that current and voltage-transformer ratios correspond to Drawings.
- f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.
 - 1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
 - 2) Make key exchange with devices operated in off-normal positions.
- g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- h. Inspect insulators for evidence of physical damage or contaminated surfaces.
- i. Verify correct barrier and shutter installation and operation.
- j. Exercise all active components.
- k. Inspect mechanical indicating devices for correct operation.
- l. Verify that filters are in place and vents are clear.
- m. Inspect control power transformers as follows:
 - 1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
 - 2) Verify that primary- and secondary-fuse or circuit-breaker ratings match Drawings and comply with manufacturer's published instructions.
 - 3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

2. Electrical Tests:

- a. Perform DC voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If temperature of bus is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
 - 2) Do not proceed to dielectric-withstand-voltage tests until insulation-resistance levels are raised above minimum values.
- b. Perform a dielectric-withstand-voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, conduct it in accordance with NETA ATS, Table 100.2. Apply test voltage for one minute.
 - 1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.
- c. Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instructions.

- 1) Minimum insulation-resistance values of control wiring must not be less than 2 MΩ.
 - d. Voltage Transformers:
 - 1) Perform secondary wiring integrity test. Verify correct potential at all devices.
 - 2) Verify secondary voltages by energizing primary winding with system voltage.
 - e. Perform current-injection tests on entire current circuit in each section of switchgear.
 - 1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in secondary circuit. Verify correct magnitude of current at each device in circuit.
 - 2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in secondary circuit. Verify correct magnitude of current at each device in circuit.
 - f. Verify operation of space heaters.
 - g. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.
- E. Medium-Voltage Surge Arrester Field Tests:
1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and clearances.
 - c. Verify arresters are clean.
 - d. Verify that ground lead on each device is individually attached to a ground bus or ground electrode.
 - e. Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.
 2. Electrical Tests:
 - a. Perform an insulation-resistance test on each arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in table.
 - b. Perform a watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.
- F. Medium-Voltage Vacuum Circuit Breaker Field Tests:
1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and required clearances.
 - c. Verify that maintenance devices such as special tools and gauges specified by manufacturer are available for servicing and operating breaker.
 - d. Verify unit is clean.
 - e. Perform mechanical operation tests on operating mechanism in accordance with manufacturer's published data.
 - f. Measure critical distances on operating mechanism in accordance with manufacturer's published instructions. Critical distances of operating mechanism must be in accordance with manufacturer's published data.

- g. Verify cell fit and element alignment.
- h. Verify racking mechanism operation.
- i. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- j. Perform time-travel analysis. Travel and velocity values must be in accordance with manufacturer's published data.
- k. Record as-found and as-left operation counter reading. Operation counter must advance one digit per close-open cycle.

2. Electrical Tests:

- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than this table or manufacturer's published instructions. Dielectric-withstand-voltage tests must not proceed until insulation-resistance levels are raised above minimum values.
- b. Perform a contact/pole-resistance test. Compare bolted-connection resistance values to values of similar connections. Investigate values which deviate from those of similar bolted connections by more than 50 percent of lowest value. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
- c. Perform minimum pickup voltage tests on trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of trip and close coils must comply with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
- d. Verify correct operation of any auxiliary features, such as electrical close and trip operation, trip-free operation, and anti-pump function. Auxiliary features must operate in accordance with manufacturer's published data.
- e. Trip circuit breaker by operation of each protective device. Reset all trip logs and indicators.
- f. Perform power-factor or dissipation-factor tests on each pole with breaker open and each phase with breaker closed. Power-factor or dissipation-factor values must meet manufacturer's published data.
- g. Perform vacuum bottle integrity (dielectric-withstand-voltage) test across each vacuum bottle, with contacts in "open" position in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by end of total time of voltage application during vacuum bottle integrity test, test specimen is considered to have passed test.
- h. Perform a dielectric-withstand-voltage test in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.
- i. Verify operation of heaters.

G. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Verify correct connection of transformers with system requirements.
- c. Verify that adequate clearances exist between primary and secondary circuit wiring.

- d. Verify unit is clean.
- e. Verify that required grounding and shorting connections provide contact.
- f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
- g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
- h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

- a. Perform insulation-resistance test of each current transformer and its secondary wiring with respect to ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
- b. Perform a polarity test of each current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
- c. Perform a ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
- d. Perform an excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or must comply with IEEE C57.13.1.
- e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. The measured burdens must match instrument transformer Accuracy Class rating.
- f. Perform insulation-resistance tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.5. The insulation-resistance value must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
- g. Perform dielectric-withstand-voltage tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by end of total time of voltage application, primary winding is considered to have passed test.
- h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with test equipment manufacturer's published data.
- i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

3. Electrical Tests of Voltage and Potential Transformers:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply test voltage for one minute in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
- b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS, Table 100.5. Insulation-resistance values of transformers must not be less than values shown in NETA ATS, Table 100.5.
- c. Perform a polarity test on each transformer to verify polarity marks or H(1)-X(1) relationship. Polarity results must agree with transformer markings.
- d. Perform a turns-ratio test on all tap positions. Ratio errors must not exceed tolerances specified in IEEE C57.13.

- e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. The measured burdens must match instrument transformer Accuracy Class rating.
- f. Perform a dielectric-withstand-voltage test on primary windings with secondary windings connected to ground. The dielectric voltage must comply with NETA ATS, Table 100.9. The test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, primary windings are considered to have passed test.
- g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with test equipment manufacturer's published data.
- h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

- a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
- b. Verify operation of light-emitting diodes, display, and targets.
- c. Record passwords for each access level.
- d. Clean front panel and remove foreign material from case.
- e. Check tightness of connections.
- f. Verify that frame is grounded in accordance with manufacturer's published instructions.
- g. Set relay in accordance with results in Section 260573 "Power System Studies."
- h. Download settings from relay. Print a copy of settings for report and compare settings to those specified in coordination study.

2. Electrical Tests:

- a. Perform insulation-resistance tests from each circuit to grounded frame in accordance with manufacturer's published data.
- b. Apply voltage or current to analog inputs, and verify correct registration of relay meter functions.
- c. Functional Operation: Check functional operation of each element used in protection scheme as follows:
 - 1) Timing Relay (IEEE C37.2 Device No. 2):
 - a) Determine time delay.
 - b) Verify operation of instantaneous contacts.
 - 2) Volts Per Hertz Relay (IEEE C37.2 Device No. 24):
 - a) Determine pickup frequency at rated voltage.
 - b) Determine pickup frequency at a second voltage level.
 - c) Determine time delay.
 - 3) Sync Check Relay (IEEE C37.2 Device No. 25):
 - a) Determine closing zone at rated voltage.
 - b) Determine maximum voltage differential that permits closing at zero degrees.
 - c) Determine live line, live bus, dead line, and dead bus set points.
 - d) Determine time delay.

- e) Verify dead bus/live line, dead line/live bus, and dead bus/dead line control functions.
- 4) Undervoltage Relay (IEEE C37.2 Device No. 27):
- a) Determine dropout voltage.
 - b) Determine time delay.
 - c) Determine time delay at a second point on timing curve for inverse time relays.
- 5) Directional Power Relay (IEEE C37.2 Device No. 32):
- a) Determine minimum pickup at maximum torque angle.
 - b) Determine closing zone.
 - c) Determine maximum torque angle.
 - d) Determine time delay.
 - e) Verify time delay at a second point on timing curve for inverse time relays.
 - f) Plot operating characteristic.
- 6) Loss of Excitation/Field Relay (IEEE C37.2 Device No. 40):
- a) Determine maximum reach.
 - b) Determine maximum torque angle.
 - c) Determine offset.
 - d) Plot impedance circle.
- 7) Phase Balance Current Relay (IEEE C37.2 Device No. 46):
- a) Determine pickup of each unit.
 - b) Determine percent slope.
 - c) Determine time delay.
- 8) Negative Sequence Current Relay (IEEE C37.2 Device No. 46):
- a) Determine negative sequence alarm level.
 - b) Determine negative sequence minimum trip level.
 - c) Determine maximum time delay.
 - d) Verify two points on I-two-squared-t curve.
- 9) Phase Sequence or Phase Balance Voltage Relay (IEEE C37.2 Device No. 47):
- a) Determine positive sequence voltage to close N.O. contact.
 - b) Determine positive sequence voltage to open N.C. contact (undervoltage trip).
 - c) Verify negative sequence trip.
 - d) Determine time delay to close N.O. contact with sudden application of 120 percent of pickup.
 - e) Determine time delay to close N.C. contact upon removal of voltage when previously set to rated system voltage.
- 10) Thermal Replica Relay (IEEE C37.2 Device No. 49):
- a) Determine time delay at 300 percent of setting.
 - b) Determine a second point on operating curve.
 - c) Determine pickup.

- 11) RTD Biased Thermal Overload Relay (IEEE C37.2 Device No. 49RTD):
 - a) Determine RTD resistance trip setting.
 - b) Determine RTD resistance reset setting.
- 12) Instantaneous Overcurrent Relay (IEEE C37.2 Device No. 50):
 - a) Determine pickup.
 - b) Determine dropout.
 - c) Determine time delay.
- 13) Time Overcurrent Relay (IEEE C37.2 Device No. 51):
 - a) Determine minimum pickup.
 - b) Determine time delay at two points on time current curve.
- 14) Power-Factor Relay (IEEE C37.2 Device No. 55):
 - a) Determine tripping angle.
 - b) Determine time delay.
- 15) Overvoltage Relay (IEEE C37.2 Device No. 59):
 - a) Determine overvoltage pickup.
 - b) Determine time delay to close contact with sudden application of 120 percent of pickup.
- 16) Voltage Balance Relay (IEEE C37.2 Device No. 60):
 - a) Determine voltage difference to close contacts with one source at rated voltage.
 - b) Plot operating curve for relay.
- 17) Sudden Pressure Relay (IEEE C37.2 Device No. 63):
 - a) Determine rate-of-rise or pickup level of suddenly applied pressure in accordance with manufacturer's published data.
 - b) Verify operation of auxiliary relay (IEEE C37.2 Device No. 63X) seal-in circuit.
 - c) Verify trip circuit to remote operating device.
- 18) Ground Detector Relay (IEEE C37.2 Device No. 64):
 - a) Determine maximum impedance to ground causing relay pickup.
- 19) Directional Overcurrent Relay (IEEE C37.2 Device No. 67):
 - a) Determine directional unit minimum pickup at maximum torque angle.
 - b) Determine closing zone.
 - c) Determine maximum torque angle.
 - d) Plot operating characteristics.
 - e) Determine overcurrent unit pickup.
 - f) Determine overcurrent unit time delay at two points on time current curve.
- 20) Reclosing Relay (IEEE C37.2 Device No. 79):

- a) Determine time delay for each programmed reclosing interval.
- b) Verify lockout for unsuccessful reclosing.
- c) Determine reset time.
- d) Determine close pulse duration.
- e) Verify instantaneous overcurrent lockout.

21) Frequency Relay (IEEE C37.2 Device No. 81):

- a) Verify frequency set points.
- b) Determine time delay.
- c) Determine undervoltage cutoff.

22) Pilot Wire Monitor (IEEE C37.2 Device No. 85):

- a) Determine overcurrent pickup.
- b) Determine undercurrent pickup.
- c) Determine pilot wire ground pickup level.

23) Differential Protective Relay (IEEE C37.2 Device No. 87):

- a) Determine operating unit pickup.
- b) Determine operation of each restraint unit.
- c) Determine slope.
- d) Determine harmonic restraint.
- e) Determine instantaneous pickup.
- f) Plot operating characteristics for each restraint.

d. Control Verification:

1) Functional Tests:

- a) Check operation of all active digital inputs.
- b) Check output contacts or SCRs, preferably by operating controlled device, such as circuit breaker, auxiliary relay, or alarm.
- c) Check internal logic functions used in protection scheme.
- d) For pilot schemes, perform a loop-back test to check receive and transmit communication circuits.
- e) For pilot schemes, perform satellite synchronized end-to-end tests.
- f) For pilot schemes with direct transfer trip (DTT), perform transmit and received DTT at each terminal.
- g) Upon completion of testing, reset min/max recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.

2) In-Service Monitoring: After equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.

I. DC System VRLA Batteries Field Tests:

1. Visual and Mechanical Inspection:

- a. Verify that batteries are adequately located.
- b. Verify that battery area ventilation system is operable.
- c. Verify existence of suitable eyewash equipment.
- d. Verify equipment nameplate data complies with Contract Documents.
- e. Inspect physical and mechanical condition.

- f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
- g. Verify units are clean.
- h. Inspect spill containment installation.
- i. Verify application of an oxide inhibitor on battery terminal connections.

2. Electrical Tests:

- a. Measure charger float and equalizing voltage levels. Adjust voltage in accordance with battery manufacturer's published instructions.
- b. Verify charger functions and that alarms comply with system manufacturer's published instructions.
- c. Measure negative post temperature. Negative post temperature must comply with manufacturer's published data or IEEE 1188.
- d. Measure charger float and equalizing voltage levels. Charger float and equalizing voltage levels must be in accordance with battery manufacturer's published data.
- e. Measure each monoblock/cell voltage and total battery voltage with charger energized and in float mode of operation. Monoblock/cell voltages must be in accordance with manufacturer's published data.
- f. Measure intercell connection resistances.
- g. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical cells that are in a fully charged state. Monoblock/cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical monoblocks/cells in a fully charged state.
- h. Perform a load test in accordance with manufacturer's published data or IEEE 1188. Replace units that fail to pass test.
- i. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

J. DC System Vented Ni-Cd Batteries Field Tests:

1. Visual and Mechanical Inspection:

- a. Verify that batteries are adequately located.
- b. Verify that battery area ventilation system is operable.
- c. Verify existence of suitable eyewash equipment.
- d. Verify equipment nameplate data complies with Contract Documents.
- e. Inspect physical and mechanical condition.
- f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
- g. Verify electrolyte level. Measure pilot-cell electrolyte temperature, and correct in accordance with manufacturer's maintenance procedures to bring temperature and electrolyte level to within normal limits.
- h. Verify units are clean.
- i. Inspect spill containment installation.
- j. Verify application of an oxide inhibitor on battery terminal connections.

2. Electrical Tests:

- a. Measure charger float and equalizing voltage levels. Adjust voltage in accordance with battery manufacturer's published instructions.
- b. Verify charger functions and that alarms comply with system manufacturer's published instructions.
- c. Measure each cell voltage and total battery voltage with charger energized and in float

mode of operation. Cell voltages must be within 0.05 volt of each other or in accordance with manufacturer's published data.

- d. Measure intercell connection resistances.
- e. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical cells that are in a fully charged state.
- f. Perform a load test in accordance with manufacturer's published data or IEEE 1106. Replace units that fail to pass test.
- g. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

K. DC System Charger Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect for physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify unit is clean.
- d. Inspect filter and tank capacitors.
- e. Verify operation of cooling fans and presence of filters.

2. Electrical Tests:

- a. Verify float voltage, equalizing voltage, and overvoltage shutdown settings. Float and equalizing voltage settings must be in accordance with battery manufacturer's published data.
- b. Verify current limit. Current limit must be set in accordance with manufacturer's published instructions.
- c. Verify operation of alarms. Results of alarm operation must be in accordance with manufacturer's published data and system design.
- d. Measure and record input and output voltage and current. Input and output voltage must be in accordance with manufacturer's published data.
- e. Measure and record AC ripple current and voltage imposed on battery. AC ripple current and voltage imposed on battery must be in accordance with manufacturer's published data.
- f. Perform full-load testing of charger. Charger must be capable of manufacturer's specified full load.

L. Liquid-Filled Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect impact recorder prior to unloading.
- c. Test dew point of tank gases if applicable.
- d. Inspect anchorage, alignment, and grounding.
- e. Verify presence of PCB content labeling.
- f. Verify removal of any shipping bracing after placement.
- g. Verify bushings are clean.
- h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate in accordance with manufacturer's published instructions.
- i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
- j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
- k. Perform specific inspections and mechanical tests recommended by manufacturer's

- published instructions.
- l. Verify presence of transformer surge arresters and that their ratings are as specified.
- m. Verify that as-left tap connections are as specified.
- n. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on all windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
- c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
- d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
- e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows a different pattern.
- g. Measure resistance of each winding at each tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
- h. Perform an applied-voltage test on primary and secondary windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
- i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- j. Remove a sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:
 - 1) Dielectric Breakdown Voltage: ASTM D877/D877M or ASTM D1816.
 - 2) Acid Neutralization Number: ASTM D974.
 - 3) Specific Gravity: ASTM D1298.
 - 4) Interfacial Tension: ASTM D971.
 - 5) Color: ASTM D1500.
 - 6) Visual Condition: ASTM D1524.
 - 7) Water in Insulating Liquids: ASTM D1533.
 - 8) Power Factor or Dissipation Factor: ASTM D924.
- k. Remove a sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

M. Small Dry-Type Transformer Section Field Tests:

- 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, and grounding.
 - c. Verify that resilient mounts are free and that any shipping brackets have been removed.
 - d. Verify unit is clean.
 - e. Perform specific inspections and mechanical tests recommended by manufacturer's published instructions.
 - f. Verify that as-left tap connections are as specified.

- g. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform turns-ratio tests at all tap positions. The test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

N. Large Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that resilient mounts are free and that any shipping brackets have been removed.
- d. Verify unit is clean.
- e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate in accordance with manufacturer's published instructions.
- f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
- g. Perform specific inspections and mechanical tests recommended by manufacturer's published instructions.
- h. Verify that as-left tap connections are as specified.
- i. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

- a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:
 - 1) 2.0 percent for power transformers.
 - 2) 5.0 percent for distribution transformers.
- c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
- d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-up test result exceeding 1.0 percent must be investigated.
- e. Perform turns-ratio tests at all tap positions. The test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows a different pattern.
- g. Measure resistance of each winding at each tap connection.
- h. Perform an applied-voltage test on all primary and secondary windings-to-ground. See

IEEE C57.12.91, Sections 10.2 and 10.9. The AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for one-minute duration. The DC dielectric-withstand-voltage test result must not exceed 100 percent of AC RMS test voltage specified in IEEE C57.12.91, Section 10.2, for one-minute duration. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.

- i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

O. Secondary Distribution Section Network Protector Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify unit is clean.
- d. Verify arc chutes are intact.
- e. Inspect moving and stationary contacts for condition and alignment.
- f. Verify that maintenance devices are available for servicing and operating network protector.
- g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of network protector are correct.
- h. Perform mechanical operator and contact alignment tests on both network protector and its operating mechanism. Operations counter must advance one digit per close-open cycle.
- i. Verify cell fit and element alignment.
- j. Verify racking mechanism operation.
- k. Verify compliance with manufacturer's published instructions for lubrication on moving current-carrying parts and on moving and sliding surfaces.
- l. Record as-found and as-left operation counter readings.
- m. Perform a leak test on submersible enclosure in accordance with manufacturer's published data.

2. Electrical Tests:

- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with network protector closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or Table 100.1.
 - 2) Do not conduct insulation-resistance tests of control wiring until insulation-resistance levels of power circuits are raised above minimum values.
- b. Perform a contact/pole-resistance test. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. In absence of manufacturer's published data, investigate values that deviate from adjacent poles or similar protectors by more than 50 percent of lowest value.

3. Perform insulation-resistance tests on all control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instructions.

- a. Minimum insulation-resistance values of control wiring must not be less than 2 MΩ.
- b. Verify current-transformer ratios in accordance with IEEE C57.13.
- c. Measure resistance of each network protector power fuse. Investigate and correct fuse-resistance values that deviate from each other by more than 15 percent.
- d. Measure minimum pickup voltage of motor-control relay. Minimum pickup voltage of motor-control relay must be in accordance with manufacturer's published data, but not more than 75 percent of rated control circuit voltage.
- e. Verify that motor can charge closing mechanism at minimum voltage specified by manufacturer. Minimum operating voltage of motor on closing mechanism must not exceed 75 percent of rated control circuit voltage.
- f. Measure minimum pickup voltage of trip actuator. Trip actuator minimum pickup voltage must not exceed 7.5 percent of rated control circuit voltage. Verify that actuator resets correctly.
- g. Calibrate network protector relays in accordance with "Medium-Voltage Instruments Section" Paragraph, "Overcurrent and Ground-Fault Protective Relays" Subparagraph, specifying microprocessor-based protective relays.
- h. Perform the following operational tests:
 - 1) Verify correct operation of all mechanical and electrical interlocks.
 - 2) Verify trip-free operation.
 - 3) Verify correct operation of auto-open-close control handle.
 - 4) Verify protector will close with voltage on transformer side only.
 - 5) Verify protector will open when source feeder breaker is opened.
- i. Verify phase rotation, phasing, and synchronized operation.

P. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect anchorage, alignment, and grounding.
- c. Verify that all maintenance devices are available for servicing and operating breaker.
- d. Verify unit is clean.
- e. Verify that arc chutes are intact.
- f. Inspect moving and stationary contacts for condition and alignment.
- g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
- h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
- i. Verify cell fit and element alignment.
- j. Verify racking mechanism operation.
- k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
- l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
- m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply

with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.

- b. Measure contact resistance across each power contact of circuit breaker. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
- c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed value shown in NETA ATS, Table 100.7.
- d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
- f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
- g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
- h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
- i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
- j. Verify correct operation of any auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
- k. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

Q. Metering Device Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
- c. Verify unit is clean.
- d. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

- a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
- b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
- c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
- d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

R. Nonconforming Work:

1. Equipment will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

S. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

T. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. Complete installation and startup checks required by electric utility provider.
3. **<Insert startup steps if any>**.

B. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 ADJUSTING

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with a chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Rebalance loads.
 - c. Prepare written request for voltage adjustment by electric utility.
3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
4. Report:

- a. Prepare a written report covering monitoring performed and corrective action taken.
 - b. For each relay and adjustable circuit breaker, tag device with adjusting technician's initials and date of adjustment. Record settings and file with test records specified in "Field Quality Control" Article.
- B. Infrared Inspection and Adjusting: Perform survey during periods of maximum possible loading. Remove all necessary covers prior to inspection.
 1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of unit substation.
 2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
 3. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of **1.8 deg F (1 deg C) at 104 deg F (30 deg C)**.
 4. Record of Infrared Inspection: Prepare a certified report that identifies testing technician and equipment used, and lists the following results:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
 5. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

3.6 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.7 CLOSEOUT ACTIVITIES

- A. Training:
 1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to operate normal and emergency electrical systems, including justifications for, and limitations of, protective device settings recommended in coordination study report.
 - b. How to adjust, operate, and maintain secondary unit substation equipment.
 2. **[Provide video recordings of training sessions to Owner.][Allow Owner to record training sessions.]**

3.8 MAINTENANCE

- A. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes **[three month][six month][nine month][one year]<Insert duration>** period for full

maintenance by **[skilled employees of secondary unit substation Installer][manufacturer's authorized service representative]**. Include periodic preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper secondary unit substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

B. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes secondary unit substation equipment software and firmware support for **[two years]<Insert duration>**.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within **[two years]<Insert duration>** from date of Substantial Completion. **[Verify that upgrading software includes operating system and new or revised licenses for using software.]**
 - a. Upgrade Notice: Not less than **[30 days]<Insert duration>**; to allow Owner to schedule and access the system **[and to upgrade computer equipment if necessary]**.
3. Field Reports for Software and Firmware Upgrades: Prepare and submit report after each update, documenting upgrades installed.

END OF SECTION 26 11 16 11

Task	Specification	Specification Description
26 11 16 11	26 11 16 00	Secondary Unit Substations with Switchboard Secondary

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 13 00 - LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Liquid-filled, medium-voltage substation transformers, with primary and secondary bushings within or without air-terminal enclosures.
2. Control network.
3. Warning labels and signs.

B. Products Furnished, but Not Installed, under This Section:

1. **<Insert products furnished, but not installed>.**

C. Products Installed, but Not Furnished, under This Section:

1. **<Insert products installed, but not furnished>.**

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>.**

B. Preinstallation Coordination Meeting(s): For liquid-filled, medium-voltage transformers. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>.**

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.
 - a. Include rated capacities, operating characteristics, and furnished specialties and

accessories.

B. Shop Drawings:

1. For liquid-filled, medium-voltage transformers.

a. Include plans and elevations showing major components and features.

1) Include plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace, and locations of penetrations for grounding and conduits.

b. Include details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.

c. Include single-line diagram.

d. Include list of materials.

e. Include nameplate legends.

C. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For transformers, signed by product manufacturer.

B. Source quality-control reports.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

A. Basis for Pricing: **<Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor>.**

B. Description: **<Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation>.**

C. Accessories: **<Insert accessories that will be provided with product>.**

2.2 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**

B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**

C. Accessories: **<Insert accessories included with existing product>.**

2.3 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**
- C. Accessories: **<Insert accessories included with existing product>.**

2.4 LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **[Square D; Schneider Electric USA]**
 - 6. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Eaton]**
 - 2. **[GE Power; General Electric Company]**
 - 3. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **[Square D; Schneider Electric USA]**
 - 6. **<Insert manufacturer's name>**

2.5 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. Comply with IEEE C2.
- C. Comply with IEEE C57.12.00.

2.6 PERFORMANCE REQUIREMENTS

- A. Windings Material: **[Aluminum][Copper].**
- B. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.
- C. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.

- D. Efficiency: Comply with 10 CFR 431, Subpart K.
- E. Insulation:
1. Transformer kVA Rating[, **when Indicated at 65 deg C Rise,**] Must Be as Follows: Average winding temperature rise above ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using combination of connections and taps that give highest average winding temperature rise.
 2. Transformer kVA Rating[, **when Indicated at 55/65 deg C Rise,**] Must Be as Follows: Average winding temperature rise above ambient temperature must not exceed 55 deg C, based on average ambient temperature of 30 deg C over 24 hours with maximum ambient temperature of 40 deg C. Insulation system must be rated to continuously allow additional 12-percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life. Rating must conform to requirements of IEEE C57.12.90.
- F. Bushings must comply with IEEE C57.19.01 requirements for impulse and low-frequency insulation levels.
- G. Tap Changer: External, for de-energized operation.
- H. Tank: Sealed, with welded-on cover. [**Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.**]
- I. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.
- J. Insulating Liquids:
1. Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.
 2. Less-Flammable Liquids:
 - a. Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.
 - b. Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.
 - c. Silicone-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.
- K. Sound level must comply with NEMA TR 1 requirements.
- L. Capacities and Characteristics:
1. Location: [**Indoors**][**Outdoors**].
 2. Additional Standards: Comply with [**IEEE C57.12.10**][**IEEE C57.12.36**].

- a. Comply with **[IEEE C57.12.10][IEEE C57.12.36]**.
 - b. Comply with UL 1062 listing requirements.
 - c. Comply with FM Global Class No. 3990.
 - d. Comply with UL listing requirements for combination classification and listing for transformer and less-flammable insulating liquid.
3. Connections:
 - a. Primary: **[Air-filled terminal cabinet for cable connection][Throat for busway connection][Terminals for close connection to primary switch][Open wire]**.
 - b. Secondary: **[Air-filled terminal cabinet for cable connection][Throat for busway connection][Open wire]**.
4. Transformer Ratings. Comply with IEEE C57.12.00 for cooling class.
 - a. Self-Cooled Rating, Class **<Insert letters>**: **<Insert number>** kVA.
 - b. Future Forced-Air-Cooled Rating, Class **<Insert letters>**:
 - 1) Self-Cooled: **<Insert number>** kVA.
 - 2) Forced-Air Cooled: **<Insert number>** kVA.
 - 3) Make provision for future addition of forced-air-cooling equipment. Transformer bushings, leads, and related components must be sized for future equipment. Provide fan mounts, conduit supports, and terminal boxes.
 - c. Forced-Air-Cooled Rating, Class **<Insert letters>**:
 - 1) Self-Cooled: **<Insert number>** kVA.
 - 2) Forced-Air Cooled: **<Insert number>** kVA.
 - 3) Equip with forced-air-cooling equipment, including fans, conduit, wiring, motor controllers, and top liquid thermometer for fan control.
 - d. Impedance: Not less than **[5.75]<Insert number>** percent.
 - e. Temperature Rise: **[65 deg C][55/65 deg C]**.
 - f. Coils Connection:
 - 1) Line-Side Winding: **[Delta]<Insert connection>**.
 - 2) Load-Side Winding: **[Wye]<Insert connection>**.
 - g. Voltage and BIL Ratings:
 - 1) Nominal primary phase-to-phase voltage and BIL: **[4160 V, 60 kV][13 800 V, 95 kV][34 500 V, 125 kV]<Insert requirements>**.
 - 2) Nominal secondary voltage and BIL: **[208Y/120 V, 45 kV][480Y/277 V, 45 kV]<Insert requirements>**.
 - h. K-Factor: **<Insert number>**, complying with UL 1561.
5. Finish:
 - a. Outdoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard color, corrosion resistance complying with IEEE C57.12.28.
 - b. Indoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
 - c. Special Corrosion-Resistant Enclosure Finish: Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands **[120][480]** hours of exposure to salt-spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer

coat to metal surface in excess of **1/16 inch (2 mm)** from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654 with rating of not less than 7, in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel, or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.

6. Taps: Two 2-1/2 percent, full-capacity taps above, and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.36 requirements.
7. Transformer Accessories:
 - a. Drain and filter connection.
 - b. Filling and top filter press connections.
 - c. Pressure-vacuum gauge.
 - d. Dial-type analog thermometer with alarm contacts.
 - e. Magnetic liquid level indicator with high and low alarm contacts.
 - f. Pressure-relief device set to operate at 10 psig, plus or minus 2 psig, and then automatically reseal when pressure drops to 6 psig minimum. Device flow must be as recommended by manufacturer. With alarm contacts and manual bleeder.
 - g. At least four stainless steel ground connection pads.
 - h. Provisions for jacking, lifting, and towing.
 - i. Machine-engraved nameplate made of anodized aluminum or stainless steel.
 - j. Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide **[with][without]** seal-in delay.

2.7 CONTROL NETWORK

- A. Controllers: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via RS-485 serial networks and Ethernet 10Base-T networks as native device.

2.8 WARNING LABELS AND SIGNS

- A. Comply with requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."
 1. Warning signs must be made of baked enamel.
 2. Equipment Identification Labels: **[Engraved, laminated-acrylic or -melamine label][Stenciled legend 4 inch (100 mm) high]**.

2.9 SOURCE QUALITY CONTROL

- A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
- B. Testing Administrator: **[Owner will engage][Engage]** qualified testing agency to evaluate liquid-filled, medium-voltage transformer.
- C. Testing: Test and inspect liquid-filled, medium-voltage transformer in accordance with IEEE C57.12.90.
- D. Factory Tests and Inspections: Perform the following tests and inspections on liquid-filled, medium-voltage transformer, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance on

control units.

1. Resistance.
2. Turns ratio, polarity, and phase relation.
3. Transformer no-load losses and excitation current at 100 percent of ratings.
4. Transformer impedance voltage and load loss.
5. Operation of devices.
6. Control (auxiliary) and consumption losses.
7. Lightning impulse.
8. Low frequency.
9. Leak.
10. Transformer no-load losses and excitation current at 110 percent of ratings.
11. Insulation power factor.
12. Applied potential.
13. Induced potential.
14. Resistance measurements of windings on rated voltage connection and at tap extreme connections.
15. Ratios on rated voltage connection and at tap extreme connections.
16. Polarity and phase relation on rated voltage connection.
17. No-load loss at rated voltage on rated voltage connection.
18. Exciting current at rated voltage on rated voltage connection.
19. Impedance.

E. Nonconforming Work:

1. System equipment that does not pass tests and inspections will be considered defective.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine liquid-filled, medium-voltage transformers upon delivery.

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Verify that there is no evidence of insulating-liquid leakage on transformer surfaces, at weld seams, on line- or load-side bushing parts, and at transformer base.
5. Verify that there is positive pressure or vacuum on tank. Check pressure gauge; it is required to read other than zero.
6. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
7. Verify presence of polychlorinated biphenyl content labeling.
8. Unload transformers carefully, observing packing label warnings and handling instructions.
9. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign

material, and water or moisture.

B. Handling:

1. Handle transformers carefully, in accordance with manufacturer recommendations, to avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer termination compartments against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and to prevent trapping air in windings. Do not tilt or tip transformers.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of tank base plate.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage tank base structure when handling transformer using skids or rollers. Use skids to distribute stresses over tank base when using rollers under large transformers.

C. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.
4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Verify that effective pressure seal is maintained using pressure gauges. Visually check for insulating-liquid leaks and rust spots.

D. Examine areas and space conditions for compliance with requirements for liquid-filled, medium-voltage transformers and other conditions affecting performance of the Work.

E. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will cross section barriers to reach load or line lugs.

F. Examine walls, floors, roofs, and concrete bases for suitable conditions for transformer installation.

G. Pre-Installation Checks:

1. Verify removal of shipping bracing after placement.
2. Remove sample of insulating liquid in accordance with ASTM D923. Insulating-liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:
 - a. Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.

- b. Acid Neutralization Number: ASTM D974.
 - c. Specific Gravity: ASTM D1298.
 - d. Interfacial Tension: ASTM D971.
 - e. Color: ASTM D1500.
 - f. Visual Condition: ASTM D1524.
 - g. Water in Insulating Liquids: ASTM D1533.
 - h. Power Factor or Dissipation Factor: ASTM D924.
- H. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5Ω at transformer location.
- I. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install transformers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
- B. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.
- C. Comply with requirements for vibration isolation and seismic control devices specified in Section 260529 "Hangers and Supports for Electrical Systems" and **[Section 260548 "Vibration and Seismic Controls for Electrical Systems."][Section 260548.16 "Seismic Controls for Electrical Systems."]**
- D. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's written instructions and NFPA 70.

3.3 CONNECTIONS

- A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
 - 1. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable, with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - 2. At Exterior Locations:
 - a. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep lead lengths as short as practicable, with no kinks or sharp bends.
 - b. Fence and equipment connections must not be smaller than 4 AWG. Ground fence at gate post and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate section to fence post using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
 - c. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - 3. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.

4. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.

- B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

- C. Terminate medium-voltage cables in incoming section of substations in accordance with Section 260513 "Medium-Voltage Cables."

3.4 SIGNS AND LABELS

- A. Comply with installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."
- B. Install warning signs as required to comply with 29 CFR 1910.269.

3.5 FIELD QUALITY CONTROL

- A. **[Acceptance]**Testing Preparation:

1. **<Insert requirements>**.

- B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

- C. Tests and Inspections:

1. General Field-Testing Requirements:

- a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
- b. Perform visual and mechanical inspection and electrical test. Certify compliance with test parameters.
- c. After installing transformer but before primary is energized, verify that grounding system at substation is tested at specified value or less.
- d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
- e. Visual and Mechanical Inspection:
 - 1) Verify equipment nameplate data complies with Contract Documents.
 - 2) Inspect bolted electrical connections for high resistance using one of the following two methods:
 - a) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - b) Verify tightness of accessible bolted electrical connections by calibrated

torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

2. Medium-Voltage Surge Arrester Field Tests:

a. Visual and Mechanical Inspection:

- 1) Inspect physical and mechanical condition.
- 2) Inspect anchorage, alignment, grounding, and clearances.
- 3) Verify arresters are clean.
- 4) Verify that ground lead on device is individually attached to ground bus or ground electrode.
- 5) Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

b. Electrical Test:

- 1) Perform insulation-resistance test on arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to comply with recommended minimum insulation resistance listed in that table.
- 2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

3. Liquid-Filled Transformer Field Tests:

a. Visual and Mechanical Inspection:

- 1) Test dew point of tank gases if applicable.
- 2) Inspect anchorage, alignment, and grounding.
- 3) Verify bushings are clean.
- 4) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- 5) Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
- 6) Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
- 7) Perform specific inspections and mechanical tests recommended by manufacturer.
- 8) Verify presence of transformer surge arresters and that their ratings are as specified.
- 9) Verify that as-left tap connections are as specified.
- 10) Verify presence of surge arresters and that their ratings are as specified.

b. Electrical Tests:

- 1) Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
- 2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.

- 3) Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
- 4) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
- 5) Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- 6) Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
- 7) Measure resistance of winding at tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
- 8) Perform applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
- 9) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- 10) Remove sample of insulating liquid in accordance with ASTM D923, and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

D. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest.

E. Assemble and submit test and inspection reports. Record as-left set points of adjustable devices.

F. Manufacturer Services:

1. Engage factory-authorized service representative to [support][supervise] field tests and inspections.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformer. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Prepare written request for voltage adjustment by electric utility.
3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are obtained.
4. Report:
 - a. Prepare written report covering monitoring performed and corrective action taken.

- B. Infrared Inspection: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.
1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections.
 2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C.
 3. Record of Infrared Inspection: Prepare certified report that identifies testing technician and equipment used, and lists results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
 4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

Task	Specification	Specification Description
26 12 13 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 16 00 - DRY-TYPE, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Dry-type, medium-voltage transformers.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" or "Existing Products to be Removed and Reinstalled" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
5. Section 260513 "Medium-Voltage Cables" specifies installation of medium-voltage cables.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies installation of low-voltage wiring.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. VPE: Vacuum Pressure Encapsulation.

B. VPI: Vacuum Pressure Impregnation.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

- B. Preinstallation Coordination Meeting(s): For dry-type, medium-voltage transformers. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location> before <Insert construction activity>.**
1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 2. Product Certificates: Include product certificate stating compliance with IEEE C57.16, signed by manufacturer or fabricator.
- B. Factory test reports.
- C. Shop Drawings: Prepare and submit the following:
1. Include plans and elevations showing major components and features.
 - a. Include plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace, and locations of penetrations for grounding and conduits.
 2. Include details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
 3. Include single-line diagram.
 4. Include list of materials.
 5. Include nameplate legends.
- D. Sustainable Design Submittals:
1. Product data for sustainable design features for each type of product.
- E. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Field reports for voltage monitoring and adjusting.
3. Field reports for infrared scanning.

1.6 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
5. Unload transformers carefully, observing packing label warnings and handling instructions.
6. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

B. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.

4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Visually check for rust spots.

C. Handling:

1. Handle transformers carefully, in accordance with manufacturer recommendations, to avoid damage to enclosure, termination compartments, base, frame, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and transformer case.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of base plate of transformer case.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage base structure of case when handling transformer using skids or rollers. Use skids to distribute stresses over case base when using rollers under large transformers.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

- A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C57 series standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 - 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 MEDIUM-VOLTAGE TRANSFORMERS

- A. Source Quality Control:
 - 1. Factory Tests:
 - a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
 - b. Testing Administrant: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate transformer.
 - c. Factory Tests and Inspections: Perform the following tests and inspections on transformer by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.16 before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.
 - 1) Tests for Transformers 500 kVA and Smaller:
 - a) Turns ratio, polarity, and phase relation on rated voltage connection.
 - b) Transformer no-load losses and excitation current at 100 percent of ratings. This test may be based on a statistical sample.
 - c) Applied voltage and induced voltage.
 - d) Partial discharge.
 - e) Impedance voltage and load loss at rated current and rated frequency on rated voltage connection and at tap extremes.
 - f) Temperature rise at minimum and maximum ratings.
 - g) Impulse.
 - h) Insulation power factor.
 - i) Insulation resistance.
 - j) Audible sound level.
 - k) Short-circuit capability.
 - l) Operation of devices.
 - m) Control (auxiliary) and consumption loss data values.
 - 2) Tests for Transformers 501 kVA and Larger:

- a) Resistance measurements of windings on rated voltage tap and at tap extremes.
 - b) Turns ratio, polarity, and phase relation on rated voltage connection.
 - c) Transformer no-load losses and excitation current at 100 percent of ratings.
 - d) Impedance voltage and load loss at rated current and rated frequency on rated voltage connection and at tap extremes.
 - e) Applied voltage and induced voltage.
 - f) Partial discharge.
 - g) Leak test.
 - h) Temperature rise at minimum and maximum ratings.
 - i) Impulse.
 - j) Insulation power factor.
 - k) Insulation resistance.
 - l) Audible sound level.
 - m) Short-circuit capability.
 - n) Operation of devices.
 - o) Control (auxiliary) and consumption loss data values.
- d. Nonconforming Work:
- 1) Equipment that does not pass tests and inspections will be considered defective.
- e. Factory Test Reports: Compile and submit factory test and inspection reports.

B. Dry-Type, Medium-Voltage Transformers :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[GE Power; General Electric Company]**
 - d. **[Hammond Power Solutions Inc.]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[GE Power; General Electric Company]**
 - d. **[Hammond Power Solutions Inc.]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. Transformers, Distribution, Dry Type, Over 600 V: UL CCN XPFS; including UL 1562 or IEEE C57.16.

4. Standard Features:

- a. Referenced Standards: IEEE C2 and IEEE C57.16.
- b. Windings Material: **[Aluminum][Copper]**.
- c. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.
- d. Cooling Systems: Comply with IEEE C57.12.01 for cooling class.
 - 1) Self-Cooled Rating, Class **<Insert letters>**: **<Insert number>** kVA.
 - 2) Future Forced-Air-Cooled Rating, Class **<Insert letters>**:
 - a) Self-Cooled: **<Insert number>** kVA.
 - b) Forced-Air Cooled: **<Insert number>** kVA.
 - c) Make provision for future addition of forced-air-cooling equipment. Transformer bushings, leads, and related components must be sized for future equipment. Provide fan mounts, conduit supports, and terminal boxes.
 - 3) Forced-Air-Cooled Rating, Class **<Insert letters>**:
 - a) Self-Cooled: **<Insert number>** kVA.
 - b) Forced-Air Cooled: **<Insert number>** kVA.
 - c) Equip with forced-air-cooling equipment, including fans, conduit, wiring, motor controllers, and thermometer with alarm contacts for fan control.
 - d) Forced-air cooling must be regulated automatically by sensors placed in load-side winding's air ducts. Forced-air cooling must include three-phase electronic digital temperature monitor, fans, control wiring, control panel with test switch, indicating lights, alarm, and alarm silencing switch. **[Connect to control network.]**
- e. Coils Insulation Systems:
 - 1) Primary and secondary coil assemblies must be manufactured using polyester VPI system.
 - 2) Primary and secondary coil assemblies must be manufactured using silicone resin VPE system.
 - 3) Primary coil assembly must be manufactured using **<Insert system description>**. Secondary coil assembly must be manufactured using **<Insert system description>**.
- f. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
- g. Efficiency: Comply with 10 CFR 431, Subpart K.
- h. Bushings must comply with IEEE C57.19.01 requirements for impulse and low-frequency insulation levels.
- i. Tap Changer: External, for de-energized operation.
 - 1) Taps: Two 2-1/2 percent, full-capacity taps above and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.36 requirements.
- j. Enclosure:
 - 1) Provide with provisions for lifting and anchoring frame to concrete pad.
 - 2) With integral skid-mounting frame, suitable to allow skidding or rolling of transformer

- in any direction.
- 3) Enclosure Finish:
- a) Outdoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard color, corrosion resistant complying with IEEE C57.12.28.
 - b) Indoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
 - c) Special Corrosion-Resistant Enclosure Finish: Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands **[120][480]** hours of exposure to salt-spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654 with rating of not less than 7 in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel, or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.
- k. Sound level must comply with requirements of NEMA TR 1.
- l. Capacities and Characteristics:
- 1) Enclosure: **[Ventilated][Nonventilated]** power transformer, UL 50E **[Type 1][Type 2][Type 3R]** enclosure.
 - 2) Additional IEEE Standards: Comply with IEEE C57.12.51.
 - 3) Connections:
 - a) Primary: **[Air-filled terminal cabinet for cable connection][Throat for busway connection][Terminals for close connection to primary switch]**.
 - b) Secondary: **[Air-filled terminal cabinet for cable connection][Throat for busway connection]**.
 - 4) Transformer Ratings.
 - a) Impedance: Not less than **[5.75]<Insert number>** percent.
 - b) Temperature Rise: **[150 deg C]<Insert deg C>**.
 - 5) Coils Connection:
 - a) Line-Side Winding: **[Delta]<Insert connection>**.
 - b) Load-Side Winding: **[Wye]<Insert connection>**.
 - 6) Voltage and BIL Ratings:
 - a) Nominal primary phase-to-phase voltage and BIL: **[4160 V, 30 kV][13 800 V, 60 kV][34 500 V, 150 kV]<Insert requirements>**.
 - b) Nominal secondary voltage and BIL: **[208Y/120 V, 10 kV][480Y/277 V, 10 kV]<Insert requirements>**.
 - c) K-Factor: **<Insert number>**, complying with UL 1562.
 - 7) Taps: Two 2-1/2 percent, full-capacity taps above and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.51 requirements.
 - 8) Transformer Accessories:
 - a) Dial-type analog thermometer with alarm contacts.
 - b) At least four stainless steel ground connection pads.

- c) Provisions for jacking, lifting, and towing.
 - d) Machine-engraved nameplate made of anodized aluminum or stainless steel.
- 9) Heaters: Where outdoor cast-coil transformers are indicated on Drawings, they must include thermostatically controlled space heaters powered from **[external source that remains energized when transformer is de-energized][a fused control power transformer connected to primary side of substation transformer]**.
- m. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.
- 5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:
 - a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
 - b. Component Importance Factor (Ip): **[1.0][1.5]**.
 - c. Component Amplification Factor (ap): **[1.0]<Insert value>**.
 - d. Component Response Modification Factor (Rp): **[2.5]<Insert value>**.
 - e. Component Overstrength Factor (Ωo): **[2.5]<Insert value>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for dry-type, medium-voltage transformers and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders may cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable conditions for transformer installation.
- D. Pre-Installation Checks:
 - 1. Verify removal of shipping bracing after placement.
- E. Verify that grounding and bonding connections are in place. Ground (earth) resistance at transformer location may not be greater than **[5 Ω]<Insert resistance in ohms>**.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TRANSFORMERS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the

Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Communications Work: BICSI N1.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.
2. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and NFPA 70.
3. Grounding and Bonding:
 - a. At Interior Locations: For grounding to grounding electrodes, provide bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable, with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - b. At Exterior Locations:
 - 1) For counterpoise, provide tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep lead lengths as short as practicable, with no kinks or sharp bends.
 - 2) Fence and equipment connections may not be smaller than 4 AWG. Ground fence at gate posts and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
 - 3) Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - c. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.
 - d. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.
4. Connect low-voltage wiring.
 - a. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer's published instructions.
 - b. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

5. Terminate medium-voltage cables in incoming section of substations.

D. Interfaces with Other Work:

1. Identification: Provide labels for transformers and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
2. Install transformers on cast-in-place concrete equipment base(s).
3. Provide vibration isolation and seismic control devices.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. **<Insert requirements>**.

C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

D. Tests and Inspections:

1. General Field-Testing Requirements:
 - a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
 - b. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
 - c. After installing transformer but before primary is energized, verify that grounding system at substation is tested at specified value or less.
 - d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
 - e. Visual and Mechanical Inspection:
 - 1) Verify equipment nameplate data complies with Contract Documents.
 - 2) Inspect bolted electrical connections for high resistance using one of the following two methods:
 - a) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - b) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or

NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

2. Medium-Voltage Surge Arrester Field Tests:

a. Visual and Mechanical Inspection:

- 1) Inspect physical and mechanical condition.
- 2) Inspect anchorage, alignment, grounding, and clearances.
- 3) Verify arresters are clean.
- 4) Verify that ground leads on devices are individually attached to ground bus or ground electrode.
- 5) Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

b. Electrical Test:

- 1) Perform insulation-resistance test on arresters, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in that table.
- 2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

3. Dry-Type Transformer Field Tests:

a. Visual and Mechanical Inspection:

- 1) Test dew point of tank gases if applicable.
- 2) Inspect anchorage, alignment, and grounding.
- 3) Verify that resilient mounts are free and that shipping brackets have been removed.
- 4) Verify bushings are clean.
- 5) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
- 6) Verify that cooling fans operate correctly and have appropriate overcurrent protection.
- 7) Perform specific inspections and mechanical tests recommended by manufacturer.
- 8) Verify that as-left tap connections are as specified.

b. Electrical Tests:

- 1) Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index may not be less than 1.0.
- 2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data.
- 3) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
- 4) Perform turns-ratio tests at tap positions. Turns-ratio test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- 5) Perform excitation-current test on each phase. The typical excitation-current test data pattern for three-legged core transformer is two similar current readings and

- one lower current reading. Investigate and correct if test shows different pattern.
- 6) Measure resistance of windings at tap connections, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
- 7) Perform applied-voltage test on high- and load-side windings-to-ground. Comply with IEEE C57.12.91 provisions for field-deployed dielectric tests. Measurements must be made only when voltage and current have reached stable value. Test must be discontinued immediately in the event current begins to increase without stabilizing. Record test values in Operations and Maintenance Manual.
- 8) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

E. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

G. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 CLOSEOUT ACTIVITIES

A. Training:

1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain transformer equipment.
2. **[Provide video recordings of training sessions to Owner.][Allow Owner to record training sessions.]**

3.5 PROTECTION

- A. After installation, protect transformer from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.6 MAINTENANCE

- A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformers. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than 1 inch (25 mm) per hour. Voltage unbalance greater than 1 percent between phases, or

deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.

2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

- a. Adjust transformer taps.
- b. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are obtained.
4. Field Reports for Voltage Monitoring and Adjusting: Prepare written report covering monitoring performed and corrective action taken.

- B. Infrared Scanning of Transformers: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
3. Field Reports for Infrared Scanning: Prepare certified report that identifies transformer equipment checked, testing technician, equipment used, and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action. List results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

END OF SECTION 26 12 16 00

Task	Specification	Specification Description
26 12 16 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 19 00 - PAD-MOUNTED, LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pad-mounted, liquid-filled, medium-voltage transformers.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
5. Section 260513 "Medium-Voltage Cables" specifies installation of medium-voltage cables.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies installation of low-voltage wiring.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

- A. Bushing: An insulating structure including a central conductor, or providing a central passage for a conductor, with provision for mounting on a barrier, conducting or otherwise, for the purpose of insulating the conductor from the barrier and conducting current from one side of the barrier to the other.
- B. Bushing Elbow: An insulated device used to connect insulated conductors to separable insulated connectors on dead-front, pad-mounted transformers and to provide a fully insulated connection. This is also called an "elbow connector."
- C. Bushing Insert: That component of a separable insulated connector that is inserted into a bushing well to complete a dead-front, load break or nonload break, separable insulated connector (bushing).

- D. Bushing Well: A component of a separable insulated connector, either permanently welded or clamped to an enclosure wall or barrier, having a cavity that receives a replaceable component (bushing insert) to complete the separable insulated connector (bushing).
- E. Elbow Connector: See "bushing elbow" above.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.
- B. Preinstallation Coordination Meeting(s): For {Insert system or product}. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>**.
 - 1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.
 - 2. Product Certificates: Include product certificate stating compliance with IEEE C57.12.00, signed by manufacturer or fabricator.
- B. Factory test reports.
- C. Shop Drawings: Prepare and submit the following:
 - 1. Plans and elevations showing major components and features.
 - a. Plan view and cross section of equipment base, showing clearances, required workspace, and locations of penetrations for grounding and conduits.
 - 2. Details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
 - 3. Single-line diagram.
 - 4. List of materials.
 - 5. Nameplate data.

6. Manufacturer's published time-current curves of transformer line-side fuses, with transformer damage curve, inrush curve, and thru fault current indicated.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

E. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.
- B. Manufacturer's field reports for field quality-control support.
- C. Field reports for voltage monitoring and adjusting.
- D. Field reports for infrared scanning.

1.6 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Verify that there is no evidence of insulating-liquid leakage on transformer surfaces, at weld seams, on line- or load-side bushing parts, and at transformer base.
5. Verify that there is positive pressure or vacuum on tank. Check pressure gauge; it is required to read other than zero.

6. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
7. Verify presence of polychlorinated biphenyl content labeling.
8. Unload transformers carefully, observing packing label warnings and handling instructions.
9. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

B. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure that transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in the presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.
4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Verify that effective pressure seal is maintained using pressure gauges. Visually check for insulating-liquid leaks and rust spots.

C. Handling:

1. Handle transformers carefully, in accordance with manufacturer's recommendations, to avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer termination compartments against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and to prevent trapping air in windings. Do not tilt or tip transformers.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of tank base plate.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage tank base structure when handling transformer using skids or rollers. Use skids to distribute stresses over tank base when using rollers under large transformers.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

- A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."
- B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116

"Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C57 series standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 - 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 - 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 PAD-MOUNTED, LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

- A. Source Quality Control:
 - 1. Factory Tests:
 - a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
 - b. Testing Administrator: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate transformer.
 - c. Factory Tests and Inspections: Perform the following tests and inspections on transformer, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.12.00 before delivering to site. Affix label

with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance.

- 1) Resistance.
- 2) Turns ratio, polarity, and phase relation.
- 3) Transformer no-load losses and excitation current at 100 percent of ratings.
- 4) Transformer impedance voltage and load loss.
- 5) Operation of devices.
- 6) Lightning impulse.
- 7) Low frequency.
- 8) Leak.
- 9) Perform Optional Tests:
 - a) Transformer no-load losses and excitation current at 110 percent of ratings.
 - b) Insulation power factor.
 - c) Applied potential, except that this test is not required for single-phase transformers or for three-phase Y-Y-connected transformers.
 - d) Induced potential.
 - e) Resistance measurements of windings on rated voltage connection and at tap extreme connections.
 - f) Ratios on rated voltage connection and at tap extreme connections.
 - g) Polarity and phase relation on rated voltage connection.
 - h) No-load loss at rated voltage on rated voltage connection.
 - i) Exciting current at rated voltage on rated voltage connection.
 - j) Impedance.

d. Nonconforming Work:

- 1) Equipment that does not pass tests and inspections will be considered defective.

e. Factory Test Reports: Compile and submit factory test and inspection reports.

B. Single-Phase, Pad-Mounted Transformers :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[ERMCO-ECI]**
 - c. **[GE Power; General Electric Company]**
 - d. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - e. **[Howard Industries, Inc]**
 - f. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[ERMCO-ECI]**
 - c. **[GE Power; General Electric Company]**

- d. [Hitachi Energy USA Inc.; business of Hitachi, Ltd.]
 - e. [Howard Industries, Inc]
 - f. [Prolec GE; A Xignux and General Electric Company Joint Venture]
 - g. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. Transformers, Distribution, Liquid-Filled Type, Over 600 V: UL CCN XPLH; including IEEE C57.12.00 and IEEE C57.12.28.
4. Standard Features:
- a. [Oil-filled][Less-flammable-liquid-filled], two-winding, 60 Hz, 65 deg C rise above 30 deg C average ambient, self-cooled transformer.
 - b. Reference Standards: IEEE C2 and IEEE C57.12.38.
 - c. Windings Material: [Aluminum][Copper].
 - d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, fully shielded, separable-elbow type, suitable for plugging into inserts provided in line-side section of transformer. Connected in each phase of incoming circuit and ahead of disconnecting device.
 - e. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
 - f. Efficiency: Comply with 10 CFR 431, Subpart K.
 - g. Insulation: Transformer kVA rating must be as follows: Average winding temperature rise above 30 deg C ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using combination of connections and taps that give highest average winding temperature rise.
 - h. Tap Changer: External handle, for de-energized operation.
 - i. Tank: Sealed, with welded-on cover. **Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.]**
 - j. Enclosure Integrity: Comply with IEEE C57.12.28 for pad-mounted enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to public.
 - k. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.
 - l. Insulating Liquids:
 - 1) Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.
 - 2) Less-Flammable Liquids:
 - a) Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.
 - b) Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.
 - m. Sound level must comply with NEMA TR 1 requirements.

- n. Corrosion Protection:
- 1) Transformer coating system must be factory applied, complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], in manufacturer's standard color [green]<Insert color>.
 - 2) Fabricate front sill, hood, and tank base of single-compartment transformers from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage, complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], standard color [green]<Insert color>.
 - 3) Base and Cabinets of Two Compartment Transformers: Fabricate from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage. Coat transformer with manufacturer's standard green color coating complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], in manufacturer's standard color [green]<Insert color>.
- o. Compartment Construction:
- 1) Single compartment for line- and load-side sections, clamshell style, with provision for padlocking hinged cover and single-point latching.
 - 2) Individual compartments for line- and load-side sections, formed by steel isolating barriers that extend full height and depth of compartments. With hinged, lift-off doors, with stop in open position, three-point latching, and provision for padlocking.
 - 3) Provide [Type 1][Type 2] terminal arrangement.
- p. Primary Fusing: Designed and rated to provide thermal protection of transformer by sensing overcurrent and high liquid temperature.
- 1) 150 kV BIL current-limiting fuses, conforming to requirements of IEEE C37.42.
 - 2) Interrupting Rating: 50 000 A(rms sym) at system voltage.
 - 3) Fuse Assembly: Bayonet-type, liquid-immersed, expulsion fuses in series with liquid-immersed, partial-range, current-limiting fuses. Bayonet fuse must sense both high currents and high oil temperatures to provide transformer with thermal protection.
 - 4) Provide bayonet fuse assembly with oil retention valve and external drip shield inside housing to eliminate or minimize oil spills. Valve must close when fuse holder is removed.
 - 5) Provide conspicuously displayed warning adjacent to bayonet fuse(s), cautioning against removing or inserting fuses unless transformer has been de-energized and tank pressure has been released.
- q. Line-Side Section: Dead-front design.
- 1) To connect primary cable, use separable insulated connectors. Bushings must be one-piece units, with ampere and BIL ratings same as connectors.
 - 2) Bushing inserts[**and feed-through inserts**]:
 - a) Conform to requirements of IEEE 386.
 - b) Rated at 200 A, with voltage class matching connectors. Provide parking stand near bushing wells.[**Parking stands must be with insulated standoff bushings for parking of energized load-break elbow connectors on parking stands.**]
 - c) Provide insulated protective caps for insulating and sealing out moisture from unused bushing inserts[**and insulated standoff bushings**].
 - 3) Bushing wells configured for loop-feed application.

- 4) Access to liquid-immersed fuses.
 - 5) Dead-front surge arrester(s).
 - 6) Tap-changer operator.
 - 7) Ground pad.
- r. Load-Side Section:
- 1) Bushings with spade terminals drilled for terminating number of conductors indicated on the Drawings, and lugs that comply with requirements of Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 2) Metering: Coordinated with and complying with requirements of Section 262713 "Electricity Metering." **[Install][Make provision for installation by providing mounting space, brackets, and cable and conduit routing as well as]** the following:
 - a) Sensors.
 - b) BAS interface.
 - c) Kilowatt-hour meter.
 - d) Kilowatt-hour demand meter.
- s. Capacities and Characteristics:
- 1) Power Rating: **<Insert number>** kVA.
 - 2) Voltage Ratings: **<Insert primary voltage>** V - **[240/120][480/240]** V.
 - 3) Taps: **[Four 2.5 percent, full-capacity taps below rated primary voltage]<Insert description>**.
 - 4) Transformer BIL (kV): **[Comply with IEEE C57.12.38 requirements]<Insert number>**.
 - 5) Minimum Tested Impedance (Percent) at 85 deg C: **[1.25][2.1][3.0][3.2]<Insert number>**.
- t. Transformer Accessories:
- 1) Drain and filter connection.
 - 2) Filling and top filter press connections.
 - 3) Pressure-vacuum gauge.
 - 4) Dial-type analog thermometer with alarm contacts.
 - 5) Magnetic liquid level indicator with high and low alarm contacts.
 - 6) Automatically resetting pressure-relief device. Device flow must be as recommended by manufacturer. **[With alarm contacts and manual bleeder.]**
 - 7) Stainless steel ground connection pads.
 - 8) Machine-engraved nameplate made of anodized aluminum or stainless steel.
 - 9) Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide **[with][without]** seal-in delay.
- u. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.
5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:
- a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events **[and unit must be fully operational after seismic events]**.
 - b. Component Importance Factor (Ip): **[1.0][1.5]**.

- c. Component Amplification Factor (ap): **[1.0]<Insert value>**.
- d. Component Response Modification Factor (Rp): **[2.5]<Insert value>**.
- e. Component Overstrength Factor (Ω_o): **[2.5]<Insert value>**.

C. Three-Phase, Pad-Mounted Transformers :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[ERMCO-ECI]**
 - c. **[GE Power; General Electric Company]**
 - d. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - e. **[Howard Industries, Inc]**
 - f. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[ERMCO-ECI]**
 - c. **[GE Power; General Electric Company]**
 - d. **[Hitachi Energy USA Inc.; business of Hitachi, Ltd.]**
 - e. **[Howard Industries, Inc]**
 - f. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 - g. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Transformers, Distribution, Liquid-Filled Type, Over 600 V: UL CCN XPLH; including IEEE C57.12.00 and IEEE C57.12.28.
4. Standard Features:
 - a. **[Oil-filled][Less-flammable-liquid-filled]**, two-winding, 60 Hz, 65 deg C rise above 30 deg C average ambient, self-cooled transformer.
 - b. Reference Standards: IEEE C2 and IEEE C57.12.26.
 - c. Windings Material: **[Aluminum][Copper]**.
 - d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, fully shielded, separable-elbow type, suitable for plugging into inserts provided in line-side section of transformer. Connected in each phase of incoming circuit and ahead of disconnecting device.
 - e. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
 - f. Efficiency: Comply with 10 CFR 431, Subpart K.
 - g. Insulation: Transformer kVA rating must be as follows: Average winding temperature rise above 30 deg C ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using

- combination of connections and taps that give highest average winding temperature rise.
- h. Tap Changer: External handle, for de-energized operation.
- i. Tank: Sealed, with welded-on cover. [**Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.**]
- j. Enclosure Integrity: Comply with IEEE C57.12.28 for pad-mounted enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to public.
- k. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.
- l. Insulating Liquids:
 - 1) Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.
 - 2) Less-Flammable Liquids:
 - a) Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.
 - b) Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.
- m. Sound level must comply with NEMA TR 1 requirements.
- n. Corrosion Protection:
 - 1) Transformer coating system must be factory applied, complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], in manufacturer's standard color [green]<Insert color>.
 - 2) Fabricate front sill, hood, and tank base of single-compartment transformers from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage, complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], standard color [green]<Insert color>.
 - 3) Base and Cabinets of Two Compartment Transformers: Fabricate from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage. Coat transformer with manufacturer's standard green color coating complying with requirements of [IEEE C57.12.28][IEEE C57.12.29], in manufacturer's standard color [green]<Insert color>.
- o. Compartment Construction:
 - 1) Single-Compartment Construction: Clamshell style, with provision for padlocking, hinged cover, and single-point latching.
 - 2) Double-Compartment Construction: Individual compartments for line- and load-side sections, formed by steel isolating barriers that extend full height and depth of compartments, with hinged, lift-off doors and three-point latching, with stop in open position and provision for padlocking.
- p. Primary Fusing: Designed and rated to provide thermal protection of transformer by sensing overcurrent and high liquid temperature.
 - 1) 150 kV BIL current-limiting fuses, conforming to requirements of IEEE C37.42.

- 2) Interrupting Rating: 50 000 A(rms sym) at system voltage.
 - 3) Fuse Assembly: Bayonet-type, liquid-immersed, expulsion fuses in series with liquid-immersed, partial-range, current-limiting fuses. Bayonet fuse must sense both high currents and high oil temperature to provide thermal protection to transformer.[
Connect current-limiting fuses ahead of radial-feed load-break switch.]
 - 4) Provide bayonet fuse assembly with oil retention valve and external drip shield inside housing to eliminate or minimize oil spills. Valve must close when fuse holder is removed and external drip shield is installed.
 - 5) Provide conspicuously displayed warning adjacent to bayonet fuse(s), cautioning against removing or inserting fuses unless transformer has been de-energized and tank pressure has been released.
- q. Line-Side Section: Dead-front design.
- 1) To connect primary cable, use separable insulated connectors; coordinated with and complying with requirements of Section 260513 "Medium-Voltage Cables." Bushings must be one-piece units, with ampere and BIL ratings same as connectors.
 - 2) Bushing inserts[**and feed-through inserts**]:
 - a) Conform to requirements of IEEE 386.
 - b) Rated at 200 A, with voltage class matching connectors. Provide parking stand near bushing wells.[**Parking stands must be equipped with insulated standoff bushings for parking of energized load-break elbow connectors on parking stands.**]
 - c) Provide insulated protective caps for insulating and sealing out moisture from unused bushing inserts[**and insulated standoff bushings**].
 - 3) Bushing wells configured for loop-feed application.
 - 4) Access to liquid-immersed fuses.
 - 5) Dead-front surge arresters.
 - 6) Tap-changer operator.
 - 7) Ground pad.
- r. Load-Break Switch:
- 1) Radial-feed, liquid-immersed type with voltage class and BIL matching that of separable connectors, with continuous current rating and load-break rating of **[200 A][300 A]<Insert amperage>**, and make-and-latch rating of 12 kA(rms sym).
 - 2) Loop-feed sectionalizing switches, using three two-position, liquid-immersed-type switches for closed transition loop-feed and sectionalizing operation. Voltage class and BIL must match that of separable connectors, with continuous current rating and load-break rating of **[200 A][300 A]<Insert amperage>**, and make-and-latch rating of 12 kA(rms sym). Switch operation must be as follows:
 - a) Position I: Line A connected to line B and both lines connected to transformer.
 - b) Position II: Transformer connected to line A only.
 - c) Position III: Transformer connected to line B only.
 - d) Position IV: Transformer disconnected and line A not connected to line B.
 - e) Position V: Transformer disconnected and line A connected to line B.
- s. Load-Side Section:
- 1) Bushings with spade terminals drilled for terminating number of conductors indicated on the Drawings, and lugs that comply with requirements of Section 260519 "Low-

- Voltage Electrical Power Conductors and Cables."
- 2) Metering: Coordinated with and complying with requirements of Section 262713 "Electricity Metering." **[Install][Make provision for installation by providing mounting space, brackets, and cable and conduit routing as well as]** the following:
 - a) Sensors.
 - b) BAS interface.
 - c) Kilowatt-hour meter.
 - d) Kilowatt-hour demand meter.
 - t. Capacities and Characteristics:
 - 1) Power Rating: **<Insert number>** kVA.
 - 2) Voltage Ratings: **<Insert primary voltage>** V - **[208Y/120][480Y/277]** V.
 - 3) Taps: **[Comply with IEEE C57.12.26 requirements]<Insert values>**.
 - 4) Transformer BIL (kV): **[Comply with IEEE C57.12.26 requirements]<Insert number>**.
 - 5) Minimum Tested Impedance (Percent) at 85 deg C: **[2.50][2.87][4.03][5.75]<Insert number>**.
 - 6) K-factor: **<Insert number>**.
 - 7) Comply with FM Global Class No. 3990.
 - 8) Comply with UL listing requirements for combination classification and listing for transformer and less-flammable insulating liquid.
 - u. Transformer Accessories:
 - 1) Drain and filter connection.
 - 2) Filling and top filter press connections.
 - 3) Pressure-vacuum gauge.
 - 4) Dial-type analog thermometer with alarm contacts.
 - 5) Magnetic liquid level indicator with high and low alarm contacts.
 - 6) Automatically resetting pressure-relief device. Device flow must be as recommended by manufacturer. **[With alarm contacts and manual bleeder.]**
 - 7) Stainless steel ground connection pads.
 - 8) Machine-engraved nameplate, made of anodized aluminum or stainless steel.
 - 9) Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide **[with][without]** seal-in delay.
 - v. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.
 5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:
 - a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events **[and unit must be fully operational after seismic events]**.
 - b. Component Importance Factor (Ip): **[1.0][1.5]**.
 - c. Component Amplification Factor (ap): **[1.0]<Insert value>**.
 - d. Component Response Modification Factor (Rp): **[2.5]<Insert value>**.
 - e. Component Overstrength Factor (Qo): **[2.5]<Insert value>**.

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Examine areas and space conditions for compliance with requirements for pad-mounted, liquid-filled, medium-voltage transformers and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will cross section barriers to reach load or line lugs.
- C. Examine concrete bases for suitable conditions for transformer installation.
- D. Preinstallation Checks:
 - 1. Verify removal of shipping bracing after placement.
 - 2. Remove sample of insulating liquid in accordance with ASTM D923. Insulating-liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:
 - a. Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
 - b. Acid Neutralization Number: ASTM D974.
 - c. Specific Gravity: ASTM D1298.
 - d. Interfacial Tension: ASTM D971.
 - e. Color: ASTM D1500.
 - f. Visual Condition: ASTM D1524.
 - g. Water in Insulating Liquids: Comply with ASTM D1533.
 - h. Power Factor or Dissipation Factor: ASTM D924.
- E. Verify that grounding and bonding connections are in place. Ground (Earth) resistance may not exceed **[5 Ω]<Insert resistance in ohms>** at transformer location.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:
 - 1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
 - 2. Electrical Maintenance: NFPA 70B.
 - 3. Electrical Safety: NFPA 70E.
 - 4. Commissioning of Electrical Systems: NECA NEIS 90.
 - 5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
 - 6. Communications Work: BICSI N1.
 - 7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
 - 8. Work in Confined Spaces: NFPA 350.
 - 9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install transformers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
2. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.
3. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and IEEE C2.

D. Grounding and Bonding:

1. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable, with no kinks or sharp bends.
2. Fence and equipment connections may not be smaller than 4 AWG. Ground fence at gate posts and corner posts and at intervals not exceeding **10 ft (3 m)**. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
3. Make joints in grounding conductors and loops by exothermic weld or compression connector.
4. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure.
5. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.

E. Connect low-voltage wiring.

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

F. Terminate medium-voltage cables in incoming section of transformers.

G. Interfaces with Other Work:

1. Identification: Provide labels for transformers and associated electrical equipment.
 - a. Identify field-installed conductors, interconnecting wiring, and components.
 - b. Label each enclosure with engraved metal or laminated-plastic nameplate.
 - c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
2. Install transformers on cast-in-place concrete equipment base(s).
3. Provide vibration isolation and seismic control devices.

3.3 FIELD QUALITY CONTROL

A. Administrator for Electrical Power Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.

2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].
- B. Acceptance Testing Preparation:
1. **<Insert requirements>**.
- C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- D. Tests and Inspections:
1. General Field-Testing Requirements:
 - a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
 - b. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
 - c. After installing transformer but before primary is energized, verify that grounding system at transformer is tested at specified value or less.
 - d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
 - e. Visual and Mechanical Inspection:
 - 1) Verify equipment nameplate data complies with the Contract Documents.
 - 2) Inspect bolted electrical connections for high resistance using one of the following two methods:
 - a) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - b) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
 2. Medium-Voltage Surge Arrester Field Tests:
 - a. Visual and Mechanical Inspection:
 - 1) Inspect physical and mechanical condition.
 - 2) Verify arresters are clean.
 - 3) Verify that ground leads on devices are individually attached to ground bus or ground electrode.
 - b. Electrical Test:
 - 1) Perform insulation-resistance test on arresters, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of

- manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to comply with recommended minimum insulation resistance listed in that table.
- 2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.
3. Liquid-Filled Transformer Field Tests:
- a. Visual and Mechanical Inspection:
 - 1) Test dew point of tank gases if applicable.
 - 2) Inspect anchorage, alignment, and grounding.
 - 3) Verify bushings are clean.
 - 4) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
 - 5) Verify that liquid level in tanks is within manufacturer's published tolerances.
 - 6) Perform specific inspections and mechanical tests recommended by manufacturer.
 - 7) Verify presence of transformer surge arresters and that their ratings are as specified.
 - 8) Verify that as-left tap connections are as specified.
 - b. Electrical Tests:
 - 1) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index may not be less than 1.0.
 - 2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
 - 3) Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values may not be less than 1 MΩ at 500 V(dc).
 - 4) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
 - 5) Perform Optional Field Tests:
 - a) Perform turns-ratio tests at tap positions. Turns-ratio test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
 - b) Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
 - c) Measure resistance of windings at tap connections, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
 - d) Perform applied-voltage test on line- and load-side windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9. This test is not required for single-phase transformers and for three-phase wye-wye-connected transformers.
 - 6) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
 - 7) Remove sample of insulating liquid in accordance with ASTM D923, and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

- E. Nonconforming Work:
 - 1. Equipment and devices will be considered defective if they do not pass tests and inspections.
 - 2. Remove and replace malfunctioning units and retest.
- F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.
- G. Manufacturer Services: Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.
 - 1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. **[With assistance from factory-authorized service representatives, train][Train]** Owner's maintenance personnel on the following topics:
 - a. How to adjust, operate, and maintain transformer equipment.
 - 2. **[Provide video recordings of training sessions to Owner][Allow Owner to record training sessions].**

3.5 PROTECTION

- A. After installation, protect transformer from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.6 MAINTENANCE

- A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
 - 1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformers. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
 - 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust transformer taps.
 - b. Prepare written request for voltage adjustment by electric utility.
 - 3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are

- obtained.
4. Field Reports for Voltage Monitoring and Adjusting: Prepare written report covering monitoring performed and corrective action taken.
- B. Infrared Scanning of Transformers: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.
1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.
 2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
 3. Field Reports for Infrared Scanning: Prepare certified report that identifies transformer equipment checked, testing technician, and equipment used, and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action. List results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
 4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

END OF SECTION 26 12 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 19 00A - LOW-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

A. The Work of This Section Includes:

1. Metal-enclosed, low-voltage switchgear, with drawout power circuit breakers and metering and control accessories.
 - a. Switchgear structure.
 - b. Additional requirements for indoor switchgear.
 - c. Additional requirements for outdoor switchgear.
 - d. Circuit breakers.
 - e. Arc-flash limiting feeder circuit breakers.
 - f. Zone-selective interlocking.
 - g. Network protectors.
 - h. Surge suppression.
 - i. Control power supply, 120 V(ac).
 - j. Control power supply, 24 V(dc).
 - k. Instrumentation and control.

B. Products Furnished, but Not Installed, under This Section:

1. **<Insert products furnished, but not installed>.**

C. Products Installed, but Not Furnished, under This Section:

1. **<Insert products installed, but not furnished>.**

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
4. Section 230923.13 "Energy Meters" for electricity meters for HVAC equipment.
5. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for submetering.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

B. Preinstallation Coordination Meeting(s): For switchgear. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>**.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for switchgear.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. For low-voltage switchgear.
 - a. System Power One-Line Diagrams: Depict power sources, feeders, distribution components, and major loads. Include as-built data for low-voltage power switchgear and connections as follows:
 - 1) Frame size of circuit breakers.
 - 2) Trip rating for circuit breakers.
 - 3) Conduit and wire size for feeders.
 - b. Include plans, elevations, sections, shipping splits, and mounting details.
 - c. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
 - d. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
 - e. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
 - f. Indicate short-time and short-circuit current rating of switchgear assembly.
 - g. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - h. Include mimic-bus diagram.

C. Delegated Design Submittals: For low-voltage switchgear.

1. Comply with Section 260572 "Overcurrent Protective Device Short-Circuit Study" and Section 260573.16 "Coordination Studies."
2. For differential ground-fault protection scheme. Include wiring diagram of differential system along with test procedure recommended by UL 1558, using high-current injection equipment.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Submit evidence that switchgear is compatible with connected monitoring and control devices and systems specified in [**Section 260913 "Electrical Power Monitoring"**]**<Insert Section number and title for integrated controls>**.
 - 1. Show interconnecting signal and control wiring, and interface devices to show compatibility of meters.
 - 2. For reporting and billing interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of protocol.
- B. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:
 - 1. For unloading and inspection, clearances, torque values, insulation-resistance testing, dielectric withstand-voltage testing, breaker testing, power factor testing, grounding, ground-fault protection testing, batteries and chargers testing, and system functional testing.
- C. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. System Power Riser Diagram: For switchgear, using non-fugitive ink on high-quality paper. Post on wall at switchgear location.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts: Furnish to Owner the following spare parts for repairing switchgear that are packaged with protective covering for storage on-site and identified with labels describing contents:
 - 1. Drawout Circuit Breakers: One of each type and rating used for circuit breaker in switchgear.
 - 2. Fuses: [**One**]**<Insert number>** for every [**three**]**<Insert number>** of each type and rating, but no fewer than three of each for the following:
 - a. Potential transformers.
 - b. Control power circuits.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchgear, packaged with protective covering for storage on-site and identified with labels describing contents. Include the following:
 - 1. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchgear.
 - 2. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
 - 3. Racking handle to move circuit breaker manually between connected and disconnected positions.
 - 4. Circuit-Breaker Removal Apparatus:
 - a. Floor Type: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
 - b. Overhead Type: Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

5. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
6. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items:

1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fluid reservoirs.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Indoor Switchgear Storage: Store in dry, clean location, placed on level surface to prevent strain and possible distortion. During construction period, provide protection against dust, dirt, falling objects, dripping water, water, excessive moisture, and other possible causes of damage to equipment. Temporary covering may not restrict ventilation and may not be removed until equipment is ready for installation. **[Store indoor equipment within heated building.][Take special precaution to keep equipment sufficiently warm with adequate ventilation to prevent condensation during storage period. Install temporary heating if necessary.]**
- B. When provisions for temporary power connection are provided as part of switchgear assembly, provisions must be included to prevent energization of primary buses or connections by means of backfeed through fuses or control power transformers connected to primary buses or connections.
- C. If outdoor switchgear cannot be installed and energized, temporary power must be provided for operation of space heaters provided so as to prevent condensation of moisture within housing.
- D. Ventilation openings must be left open to permit proper air circulation.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor>.**
- B. Description: **<Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation>.**
- C. Accessories: **<Insert accessories that will be provided with product>.**

2.2 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**
- C. Accessories: **<Insert accessories included with existing product>.**

2.4 LOW-VOLTAGE SWITCHGEAR

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[ABB, Electrification Business]**
 - 2. **[Eaton]**
 - 3. **[SAI Advanced Power Solutions/Switchboard Apparatus Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **[Square D; Schneider Electric USA]**
 - 6. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Eaton]**
 - 3. **[SAI Advanced Power Solutions/Switchboard Apparatus Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **[Square D; Schneider Electric USA]**
 - 6. **<Insert manufacturer's name>**

2.5 SYSTEM DESCRIPTION

- A. Description: Metal-enclosed, low-voltage switchgear with drawout **[fused][fused, where indicated,]** power circuit breakers, with accessories and metering components.
 - 1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
 - 2. Comply with IEEE C37.20.1.
 - 3. Listed and labeled as complying with UL 1558.
 - 4. Listed and labeled for use as service entrance equipment.

2.6 PERFORMANCE REQUIREMENTS

- A. Capacities and Characteristics:
 - 1. Nominal System Voltage: **[480 V, three][480/277 V, four][240 V, three][208/120 V, four]** wire, 60 Hz.
 - 2. Rated Maximum Voltage: **[254 V][508 V][635 V]**.
 - 3. Rated Power Frequency: 60 Hz.

4. Rated Insulation Level: Power frequency withstand must be not less than 2.2 kV(rms).
5. Rated Continuous Current:
 - a. Main-Bus Continuous: **[1600 A][2000 A][3000 A][3200 A][4000 A][5000 A]**.
 - b. Vertical Section Bus Riser: Equal to frame size of low-voltage power circuit breaker connected to that riser.
6. Rated Short-Circuit Withstand Current: **[42 000 A(sym)][65 000 A(sym)][85 000 A(sym)][100 000 A(sym)][200 000 A(sym)]**.
7. Short-Time and Short-Circuit Current: Match rating of integrated short-circuit current rating.

2.7 SWITCHGEAR STRUCTURE

- A. Bus isolation barriers must be arranged to isolate line bus from load bus at main and tie circuit breaker. Extend section barriers between main and tie circuit breakers to rear of section.
- B. Allow the following circuit-breaker functions to be performed when compartment door is closed:
 1. Operate manual charging system.
 2. Open and close circuit breaker.
 3. Examine and adjust trip unit.
 4. Read breaker nameplate.
- C. Install instrument compartments when additional space is required for metering and instrumentation. Allow for routing of instrumentation, control and communications wires, and cables.
- D. Switchgear Bus:
 1. Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
 2. Main Phase Bus: Uniform capacity entire length of assembly.
 3. Neutral Bus: **[50][100]** percent of phase-bus ampacity unless otherwise indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors. Include braces for neutral-bus extensions for busway feeders.
 4. Ground Bus: Uniform capacity entire length of assembly, with pressure connector terminations for feeder and branch-circuit ground conductors, minimum size **1/4 by 2 inch (6 by 50 mm)**.
 5. Vertical Section Bus Size: **[Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers][Fully rated to system continuous current, equal to horizontal bus]**.
 6. Bus Material and Connections:
 - a. Phase- and Neutral-Bus Material:
 - 1) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
 - 2) Silver- or tin-plated, high-strength, electrical-grade aluminum alloy, with copper or tin-plated aluminum circuit-breaker line connections.
 - 3) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.
 - b. Use silver-plated copper or tin-plated aluminum for connecting circuit-breaker line to aluminum bus.
 - c. Use copper for connecting circuit-breaker line to copper bus.
 - d. Contact Surfaces of Buses: Silver plated.

- e. Feeder Circuit-Breaker Load Terminals: Silver-plated copper bus extensions equipped with pressure connectors for outgoing circuit conductors.
- 7. Neutral Disconnect Link: Bolted, uninsulated, bus, arranged to connect neutral bus to ground bus.
- 8. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
- 9. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - a. Sprayed Insulation Thickness: **3 mil (0.08 mm)**, minimum.
 - b. Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.
- E. Circuit-Breaker Compartment:
 - 1. Drawout Features: Circuit-breaker mounting assembly equipped with racking mechanism to position circuit breaker and hold it rigidly in connected, test, disconnected, and withdrawn positions. Include the following features:
 - a. Provide circuit-breaker racking system with positive stops at connected, test, disconnected, and withdrawn positions.
 - b. Interlocks: Prevent racking of circuit breaker to or from connected position when it is closed, and prevent closure of circuit breaker unless it is in connected, test, or disconnected position.
 - c. Circuit-Breaker Positioning: Permit racking of open circuit breaker to or from connected, test, and disconnected positions only when compartment door is closed unless live parts are covered by full dead-front shield. Permit manual withdrawal of open circuit breaker to position for removal from structure. When compartment door is open, status for connection devices for different positions includes the following:
 - 1) Test Position: Primary disconnects disengaged, and secondary disconnect devices and ground contact engaged.
 - 2) Disconnected Position: Primary and secondary devices and ground contact disengaged.
 - d. Primary Disconnect: Mount on stationary part of compartment. Disconnect must consist of set of contacts extending to rear through insulating support barrier, and of corresponding moving finger contacts on power circuit-breaker studs, which engage in only connected position. Assembly must provide multiple silver-to-silver full floating, spring-loaded, high-pressure-point contacts with uniform pressure on fingers. Load studs must connect to bus extensions that terminate in solderless terminals in rear cable compartment.
 - e. Secondary Disconnect: Floating terminals mounted on stationary part of compartment that engage mating contacts at front of breaker.
 - f. Provide verification of positive ground contact between circuit breaker and its compartment when accessory cover is removed while circuit breaker is in connected, test, disconnected, and withdrawn positions.
 - g. Place 2400 A frame and larger circuit breakers at bottom of switchgear.
- F. Auxiliary Compartments: Match and align with basic switchgear assembly. Include the following:
 - 1. Utility metering compartment that complies with utility-company requirements.
 - 2. Bus transition sections.
 - 3. Incoming-line pull sections.
 - 4. Hinged front panels for access to metering, accessory, and blank compartments.
- G. Pull Boxes: Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and

side covers and with ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.

1. Set pull box back from front to clear circuit-breaker lifting mechanism.
2. Pull-Box Bottom: Insulating, fire-resistant material with separate holes for cable drops into switchgear.
3. Cable Supports: Arranged to ease cabling and adequate to support cables, including those for future installation.

2.8 ADDITIONAL REQUIREMENTS FOR INDOOR SWITCHGEAR

- A. Enclosure Rating: Indoor.
- B. Enclosure Material: Steel.
- C. Enclosure Finish: IEEE C37.20.1, manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.
- D. Enclosure Rear Panels: Removable and hinged, to allow access to rear interior of switchgear.

2.9 ADDITIONAL REQUIREMENTS FOR OUTDOOR SWITCHGEAR

- A. Outdoor Enclosure Rating: UL 1558.
- B. Outdoor Enclosure Description: Weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating
- C. Outdoor Enclosure Material: **[Steel][12 gage, ASTM A240, Type 304 or 304L stainless steel]**.
- D. Outdoor Enclosure Finish:
 1. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
 2. Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands **[120][480]** hours of exposure to salt-spray test specified in ASTM B117, without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with rating of not less than 7 in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.
 3. Front and rear doors must be provided with stainless steel padlockable vault handles with three-point catch. Bases, frames, and channels of enclosure must be corrosion resistant, fabricated of ASTM A240 Type 304 or 304L stainless steel. Base must include part of enclosure that is within **3 inch (75 mm)** of concrete pad. Coat enclosure, including bases, must be ASTM D1535 light gray No. 61 or No. 49. Coating system must comply with IEEE C57.12.29 for stainless steel.
- E. Features:
 1. Structural design and anchorage adequate to resist seismic and wind loads specified in Section 260011 "Facility Performance Requirements for Electrical."
 2. Sloping, standing-seam type, insulated roof panels.
 3. Mount shipping group on integral base frame as complete weatherproof unit.

4. Aisle-Less Construction: Vertical sections must have the following:
 - a. Hinged front door with padlocking provisions.
 - b. Interior light with switch.
 - c. Weatherproof duplex receptacle.
 - d. With draft-stop where busway exits vertical section.
 - e. Vertical Section Space Conditioning: Provide outside-air openings with insect and rodent screens and filters; arranged to permit air circulation while excluding insects, rodents, and exterior dust. Provide thermostatically controlled space heaters operating at one-half or less of rated voltage.
5. Common Internal Aisle-Type Construction:
 - a. With aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
 - b. Aisle access doors with outside padlocking provisions and interior panic latches.
 - c. Vaporproof [**LED aisle lights**][**fluorescent aisle lights with low-temperature ballasts**], controlled by wall switches at entrances.
 - d. GFCI duplex receptacles, minimum of two, located in aisle.
 - e. Interior Space Conditioning:
 - 1) Forced-air aisle ventilation with thermostatically controlled vent fans, interlocked with aisle space heaters operating at one-half or less of rated voltage. Provide outside-air openings with insect and rodent screens and filters; arranged to permit air circulation while excluding insects, rodents, and exterior dust.
 - 2) Air conditioned.

2.10 CIRCUIT BREAKERS

- A. Drawout type, unfused, power operated, with electromechanical or electronic trip devices. Comply with IEEE C37.13, IEEE C37.13a, and UL 1066.
- B. Ratings: For continuous, interrupting, and short-time current ratings for circuit breakers; voltage and frequency ratings same as switchgear. Comply with IEEE C37.16.
 1. Circuit breakers must have 30-cycle short-time withstand ratings equal to their symmetrical interrupting ratings through 85 000 A, whether or not equipped with instantaneous trip protection.
- C. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
 1. Normal Closing Speed: Independent of both control and operator.
 2. Slow Closing Speed: Optional with operator for inspection and adjustment.
 3. Stored-Energy Mechanism: [**Manually charged**][**Electrically charged**][**Electrically charged, and operator's choice of manual charging**].
 - a. Operating Handle: One for each circuit breaker capable of manual operation.
 - b. Electric Close Button: One for each electrically operated circuit breaker.
 4. Provide interlock to discharge stored energy mechanism before circuit breaker can be withdrawn from its compartment.
 5. Operation counter.
- D. Operator Display: Located on face of circuit breaker.

1. Electrical operation buttons to open and close circuit breaker. [**Provide clear lockable cover over buttons.**]
 2. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices. Energized or hot condition must be indicated by red light. De-energized, open, and safe condition must be indicated by green light.
 3. Indicator to show position of circuit-breaker contacts, status of closing springs, and circuit-breaker position in its compartment.
 4. Provide "Charged-not OK to close" indicator when closing springs are charged but circuit breaker is not ready to close.
 5. Computer Display: One or more [touchscreen]computer displays with dedicated CPU, to display data that are generated for transmission via Ethernet connection. Display the following functions:
 - a. Circuit-breaker status and circuit-breaker controls status.
 - b. Onboard meters.
 - c. User settings for overcurrent protection and undervoltage protection.
 - d. <Insert features>.
- E. Overcurrent Protective Tripping: Microprocessor-based, programmable, time-current shaping adjustments; complete with current transformers and sensors and the following features:
1. Programmable functions independent of each other in both action and adjustment.
 - a. Long-time setting.
 - b. Long-time-delay with selectable I2T or I4T curve shaping.
 - c. Short-time setting.
 - d. Short-time-delay with flat or selectable I2T curve shaping.
 - e. Instantaneous trip.
 2. Field-adjustable, time-current characteristics.
 3. Current Adjustability: Dial settings and rating plugs on trip units, or sensors on circuit breakers, or combination of these methods.
 4. Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
 5. Pickup Points:
 - a. Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I2T operation.
 - b. Five minimum, for instantaneous-trip functions.
- F. Ground-Fault Protection:
1. Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup.
 2. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
 3. Test Form: Provide ground-fault relays with information sheets describing system-testing instructions, and with test form; comply with UL 1558.
- G. Undervoltage Trip Devices:
1. Instantaneous, with adjustable pickup voltage.
 2. Adjustable time-delay and pickup voltage.
- H. Shunt-Trip Devices.

I. Metering:

1. Accuracy: **[0.5][1.0]** percent of reading, complying with ANSI C12.20.
2. Values must be RMS average over period of one second.
 - a. Current: Each phase, **[neutral]** and three-phase average.
 - b. Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - c. Active Power (kW): **[Each phase and]** three-phase total.
 - d. Reactive Power (kVAR): **[Each phase and]** three-phase total.
 - e. Apparent Power (kVA): **[Each phase and]** three-phase total.
 - f. Power Factor: **[Each phase and]** three-phase total.
 - g. Active Energy (kWh): Three-phase total.

J. Auxiliary Contacts:

1. Contacts and switches required for normal circuit-breaker operation, sufficient for interlocking and remote indication of circuit-breaker position.
2. Spare auxiliary switches, at least two, unless otherwise indicated. Switches must consist of two Type A and two Type B contacts wired through secondary disconnect devices to terminal block in stationary circuit-breaker compartment.

K. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.

L. Padlocking Provisions: For installing at least three padlocks on circuit breakers to secure its enclosure and prevent movement of drawout mechanism.

M. Mechanical Interlocking of Circuit Breakers: Uses mechanical tripping lever or equivalent design and electrical interlocks.

N. Key Interlocks: Arranged to prevent opening or closing of interlocked circuit breakers, except in specified sequence. Include mountings and hardware for future installation of key interlocks.

2.11 ARC-FLASH LIMITING FEEDER CIRCUIT BREAKERS

- A. Feeder circuit breakers must be without current-limiting fuses, listed as complying with UL 1066.
- B. Short-circuit withstand current rating must be 200 kA.
- C. Equip arc-flash limiting feeder circuit breakers with Arc-Flash Maintenance Setting switch for use as temporary arc-flash incident energy-reduction device during maintenance activities on that feeder.
 1. Provide manual switch on compartment door to switch circuit-breaker short-time tripping characteristics to instantaneous with minimum pickup setting, to reduce danger from potential arc-flash at downstream equipment.
 2. Provide lock feature for switch so that it may be locked in either off or on maintenance-mode position.
 3. Provide blue LED indicating light to indicate that switch is in maintenance mode.
 4. Provide dry relay contacts on switches for annunciation of switch position.

2.12 ZONE-SELECTIVE INTERLOCKING

- A. Trip units for indicated circuit breakers must include zone-interlocking capability for short-time delay and ground-fault delay trip functions for system coordination and arc energy reduction. Zone-interlocking system must restrain tripping of upstream circuit breaker and allow circuit breaker closest to fault to trip with no intentional time delay. In event that downstream breaker does not trip, upstream breaker must trip after preset time delay. **[Zone-interlock system must be factory wired and tested for circuit breakers within switchgear.]**

2.13 NETWORK PROTECTORS

- A. Comply with IEEE 57.12.44 and IEEE C37.20.1. Switch must comply with UL 1066.
1. Dead-front, drawout design with externally mounted fuses, using hand-cranked rail system. Include mechanical interlocks to prevent racking in and racking out when protector is closed.
 2. Locate relay and control panel on separate drawout module.
 3. Protector Operator: **[Spring-close][and][or][stored-energy]** mechanism, rated to close on **[25 000 A(rms sym)][40 000 A(rms sym)]** load.
 4. Program relay with factory-default values. Make provisions to field adjust these values using relay calibration procedures. Include antipumping program to lock protector open under abnormal conditions.
 5. Include current-limiting fuses on network side of protector for protection against switchboard bus faults.
- B. Controls must be via microprocessor-based, three-phase network relay, with the following features and functions:
1. Protector control must use positive and negative sequence-based algorithm for current and voltage.
 2. Close protector if positive sequence power flows into network. Adjustable closing range must be from 0.5 to 3.5 V in phase difference between network and transformer voltages.
 3. Trip protector if there is net, three-phase, reverse power flow through protector. Trip protectors must be adjustable from 0.05 to 5 percent of continuous-current rating of current transformers within protector.
 4. Trip protector if there is flow of reverse magnetizing current to its associated transformer.
 5. Relay parameters and W or VAR trip values must be field adjustable.
 6. Protector may not open under fault on network side of protector.
 7. Include auxiliary contacts and control wiring for use with remote pilot devices that provide remote trip and lockout functions in low-voltage switchgear. Include **[two]<Insert number>** spare auxiliary contacts and equal number of N.O. and N.C. types.
- C. Communicate the following network relay parameters:
1. Current in each phase.
 2. Phase-to-phase and phase-to-neutral voltages.
 3. Three-phase W, VAR, and VA.
 4. Frequency.
 5. Power factor.
 6. Network relay set points.

2.14 SURGE SUPPRESSION

- A. Factory Installed: Integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the

following features and accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3. Indicator light display for protection status.
4. Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status. [**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5. Surge counter.

- B. Field Mounted: Complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits." Include the following features and accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3. Indicator light display for protection status.
4. Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status. [**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5. Surge counter.

2.15 CONTROL POWER SUPPLY, 120 V(ac)

- A. Control Power Transformer: Supply 120 V control circuits through dry-type control power transformers, include secondary disconnect devices.

1. Place transformers larger than 3 kVA in separate compartments at bottom of vertical section, including related primary and secondary fuses.
2. Two control power transformers in separate compartments with necessary interlocking relays; transformers connected to line side of associated main circuit breaker.
 - a. Secondary windings connected through relay(s) to control bus to affect automatic transfer scheme.
 - b. Secondary windings connected through internal automatic transfer switch to switchgear control power bus.
3. Control Power Fuses: Primary and secondary fuses provide current-limiting and overload protection.

2.16 CONTROL POWER SUPPLY, 24 V(dc)

- A. System Requirements: Battery must have number of cells and ampere-hour capacity based on initial specific gravity of 1.210 at 25 deg C with electrolyte at normal level and minimum ambient temperature of 13 deg C. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery to operate ungrounded. Battery system capacity must be as recommended by switchgear manufacturer to operate circuit breakers for intended duty.
- B. Battery: [**Standard VRLA**] [**Premium VRLA**] [**Vented NiCd** ,] batteries, with battery disconnect and overcurrent protective device.

- C. Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads. **[Rate battery rack, cell supports, and anchorage for seismic requirements.]**
- D. Accessories:
 - 1. Thermometers with specific-gravity correction scales.
 - 2. Hydrometer syringes.
 - 3. Set of cell numerals.
- E. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with AC input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.
 - 1. DC ammeter.
 - 2. DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
 - 3. Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by N.O. push-button contact.
 - 4. Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell, and equalizing charge at 2.33 V per cell.
 - 5. Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.
 - 6. AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of AC power supply for interval.
 - 7. Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. Device must regulate charging current but may not disconnect charger from either battery or AC supply.
 - 8. Charger's Audible Noise: Less than 26 dB(A-weighted).

2.17 INSTRUMENTATION AND CONTROL

- A. Power Distribution Equipment must be web enabled, direct connected to Local Area Network (LAN) or Intranet.
- B. Ethernet Connectivity:
 - 1. Install multipoint, TIA-485 MODBUS serial communications network within switchgear to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications.
 - 2. Serial communications network must be wired to Ethernet gateway in switchgear. Gateway must be web enabled, with integral network port and embedded web server with factory-configured firmware and HTML-formatted web pages for viewing of power monitoring and equipment status information from switchgear devices equipped with digital communication ports.
 - 3. LAN must consist of multipoint, TIA-485 MODBUS serial communication network to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications. Serial communication network must be connected to Ethernet server that functions as gateway and server, providing data access via **[10 Base-T][100 Base-T][100 Base-TX][100 Base FX]** LAN.
 - 4. Server Configuration:

- a. Initial network parameters set using standard web browser. Connect via local operator interface, or TIA-1096 Type 8P8C jack accessible from front of equipment.
 - b. Network server must be factory programmed with embedded HTML-formatted web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of TIA-485 network; with internal memory management information pages for viewing using standard web browser.
 - c. Password-protected login, with password administration accessible from LAN using standard web browser.
 - d. Operating Software: Suitable for local access; firewall protected.
 5. All serial communications devices within equipment must be addressed at factory and tested.
- C. Instrument Transformers: Comply with IEEE C57.13. Instrument transformers may not be used to power space conditioning equipment associated with outdoor switchgear, or for power to convenience receptacles and lighting.
 1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 Accuracy class of 0.3 with burdens of W, X, and Y.
 2. Current Transformers: Burden and Accuracy class suitable for connected relays, meters, and instruments.
- D. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.
 1. Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
 2. Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
 3. Ammeters: Cover expanded scale range of bus rating plus 10 percent.
 4. Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
 5. Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
 6. Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
 7. Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.
 - a. Operation: Counts and records succession of pulses entering two channels.
 - b. Housing: Drawout, back-connected case arranged for semiflush mounting.
- E. Power Monitoring: Separately mounted, modular, permanently installed, solid-state, digital I/O multifunction metering instrument for power and energy metering and monitoring, complying with UL 61010-1.
 1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
 2. Equipped with security lock to protect revenue-related metering from unauthorized and accidental changes.
 3. Comply with IEC 60529 degree of protection code of IP65 for front of meter, and code of IP30 for body.
 4. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.
 5. Accuracy:
 - a. Comply with ANSI C12.20, Class 0.5.
 - b. Neutral Current Measurement: Not more than 0.65 percent.

- c. Power Factor: 1.0 percent.
 - d. Frequency: 0.1 percent.
 - e. THD: 1.0 percent.
 - f. Waveform Sampling: 64 per cycle.
6. Data Link: Ethernet connectivity specified in this article.
7. Meter Physical Characteristics:
- a. Display: Backlit LCD with antiglare and scratch-resistant lens.
 - b. Display of Metered Values: One screen to show at least **[three]<Insert number>** user-selected values displayed at same time. Selections available to display must include the following:
 - 1) All meters.
 - 2) Measurements.
 - 3) THD.
 - 4) Energy.
 - 5) Demand.
 - 6) Minimum and maximum values.
 - 7) Power demand.
8. Sampling Rate: Continuously sample and record voltage and current at rate not less than **[64]<Insert number>** samples per cycle, simultaneously on voltage and current channels of meter.
9. Meters:
- a. Instantaneous, RMS:
 - 1) Current: Each phase, **[neutral]** and three-phase average.
 - 2) Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
 - 3) Active Power (kW): **[Each phase and]** three-phase total.
 - 4) Reactive Power (kVAR): **[Each phase and]** three-phase total.
 - 5) Apparent Power (kVA): **[Each phase and]** three-phase total.
 - 6) Power Factor: **[Each phase and]** three-phase total.
 - b. Energy:
 - 1) Active Energy (kWh): Three-phase total.
 - c. Demand, Derived from Instantaneous RMS Meters:
 - 1) Current: Present and maximum.
 - 2) Active: Present and maximum.
 - 3) Reactive: Present and maximum.
 - 4) Apparent: Present and maximum/
 - d. Power Quality Measurements:
 - 1) THD: Current and voltage from measurements simultaneously from same cycle, as can be calculated from specified sampling rate.
10. I/O: Two optically isolated digital outputs for KYZ pulsing or control. Output signal characteristics must be 150 mA at 200 V.

- a. KYZ Pulse: Generate standard KYZ pulses for user-defined increment of metered active energy as follows:
 - 1) User-defined pulse output, associated with kWh.
 - 2) User-defined pulse output, associated with kVARh.
 - b. <Insert control function>.
11. Capacities and Characteristics:
- a. Circuit Connections:
 - 1) Voltage: Measurement autoranging, 60 to 400 V(ac rms) L-N. [**Connect directly to low-voltage (600 V and less) without using voltage transformers.**] [**Connect to instrument-grade potential transformers secondary at 120 V.**] Meter impedance must be 2 MΩ L-L or greater.
 - 2) Overload Tolerance: 1500 V(ac rms) continuously.
 - 3) Current: Connect to instrument-grade current transformer with metering range of 5 mA to 6 A. Overcurrent tolerance of instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
 - 4) Frequency: 45 to 65 Hz.
 - 5) Time: Input from GPS receiver to synchronize internal clock of instrument and to time-synchronize this instrument with network to deviation of not greater than 1 ms.

2.18 POWER TRANSFER CONFIGURATIONS

- A. Factory-installed and -tested controls of circuit breakers to accomplish automatic transfer controls for switchgear having two power sources.
- B. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.
- C. Control Wiring:
 - 1. Factory installed, complete with bundling, lacing, and protection.
 - 2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 - 3. Install plugs in control wiring at shipping splits.
- D. Two-Breaker Transfer Control:
 - 1. Two-breaker transfer control must provide for switchgear assembly with common load bus and two normally energized medium-voltage power sources, designated "normal" and "standby," connected to load bus. Circuit breakers connecting two power sources to load bus must be controlled by microprocessor-based automatic transfer control. Power for transfer control must be from voltage sensing transformers.
 - 2. In automatic mode, load bus is connected to normal power source. When normal source fails, control must automatically open normal power source and close standby source circuit breaker.
 - 3. Sequence of Operation:
 - a. Default operation must be with normal source main breaker closed and standby main breaker open. On detection of undervoltage to line side of normal main breaker and after field-adjustable time delay, that main breaker must open and after additional field-adjustable time delay, standby breaker must close restoring power to facility.
 - b. On restoration of voltage to line side of normal main breaker and after field-adjustable time delay, standby main breaker must open and after field-adjustable time delay, normal main

breaker must close.

4. Field-Adjustable Transfer Parameters:
 - a. Delay transfer from normal power source to standby power source and from standby power source to normal source. Time delay is to allow load voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.
 - b. Delay initiation of transfer sequence. Time delay is recommended to override momentary power outage or voltage fluctuation. Delay range: zero seconds to 120 seconds.
 - c. Delay transfer from standby power source to normal power source. Delay range: zero seconds to 30 minutes.
 - d. A relay with contact that changes state when power is available on normal source and relay with contact that changes state when power is available on standby source.
5. Controls and Indicators: Besides delay setting controls, provide the following:
 - a. Interlocks or relay control to prevent transfer when either of two controlled circuit breakers are tripped due to overcurrent or ground fault.
 - b. Three-position selector switch to select normal source: Source 1, Source 2, or none.
 - c. Transfer-control automatic and manual selector.
 - 1) Interlock must prevent paralleling of two power sources in manual mode.
 - d. Open-close control switch for manual electrical operation of controlled circuit breakers.
 - e. Selector to place control into programming mode.
 - f. Circuit-breaker control switch for normal and standby source breakers, providing open and close operation.
 - g. Push-button to initiate manual retransfer to normal source when transfer controller is in automatic mode.
 - h. Meters and display to show the following:
 - 1) Voltage and frequency of both sources.
 - 2) A multiline display showing the following:
 - a) Set points of timers, and voltage pickup and dropout set points.
 - b) Date, time, and reason for at least last 10 transfers. Display may show information for one transfer at time using scrolling control, with others held in memory.
 - c) When control system is in transferring process, display must show delay countdown in seconds.
 - i. LED indicator lights to show the following:
 - 1) Normal source available.
 - 2) Standby source available.
 - 3) Normal source connected.
 - 4) Standby source connected.
 - 5) Load bus energized.
6. Voltage Transformers: Primary and secondary protection and disconnecting means for sensing functions and control power.
7. Voltage Sensing Relays: Microprocessor-based ANSI No. 27/47 voltage detection relays for three-phase undervoltage protection and negative sequence voltage protection.

E. Three-Breaker Transfer Control:

1. Switchgear assembly, with two normally energized, medium-voltage power sources designated "Main 1" and "Main 2" connected to load bus. N.O. bus tie circuit breaker can tie two load buses. Three circuit breakers must be controlled by microprocessor-based automatic-transfer control. Power for transfer control must be from voltage sensing transformers.
2. In automatic mode, on loss of voltage to line side of source, that main breaker must open and then bus tie must close. On restoration of power to previously failed main breaker, bus tie must open and open main must close.
3. Sequence of Operation:
 - a. Default operation must be with main breakers closed and bus tie breaker open. On detection of undervoltage to line side of main breaker and after field-adjustable time delay, that main breaker must open and after additional field-adjustable time delay, bus tie breaker must close, restoring power to failed bus.
 - b. On restoration of voltage to line side of previously failed main breaker and after field-adjustable time delay, tie breaker must open and after field-adjustable time delay, previously failed main breaker must close.
4. Field-Adjustable Transfer Parameters:
 - a. Delay opening of failed main and closing of bus tie. Time delay is to allow load voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.
 - b. Delay initiation of transfer sequence. Time delay is recommended to override momentary power outage or voltage fluctuation. Delay range: zero to 120 seconds.
 - c. Delay opening of bus tie and closing of previously failed main. Time delay is to allow bus voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.
5. Controls and indicators must include the following in addition to delay setting controls:
 - a. Interlocks or relay control to prevent transfer when any of three controlled circuit breakers trip due to overcurrent or ground fault.
 - b. Transfer control automatic and manual selector.
 - 1) Interlock that prevents paralleling of two mains in manual or automatic mode.
 - c. Open-close control switch for manual electrical operation of controlled circuit breakers.
 - d. Selector must place control into programming mode.
 - e. A relay with contact that changes state when power is available on both mains and relay with contact that changes state to indicate open main and when bus tie is closed.
 - f. Push-button to initiate manual retransfer to previously failed source when transfer controller is in automatic mode.
 - g. Meters and display must show the following:
 - 1) Voltage and frequency at line side of both mains.
 - 2) A multiline display must show following:
 - a) Set points of timers, and voltage pickup and dropout set points.
 - b) Date, time, and reason for at least last 10 transfers. Display may show information for one transfer at time using scrolling control, with others held in memory.
 - c) When control system is in transferring process, display must show delay countdown in seconds.
 - h. LED indicator lights must show the following:

- 1) Main source available.
 - 2) Main source unavailable.
 - 3) Main closed.
 - 4) Main open.
 - 5) Bus tie open or closed.
6. Voltage transformers must have primary and secondary protection and disconnecting means for sensing functions and control power.
 7. Voltage Sensing Relays: Microprocessor-based ANSI No. 27/47 voltage detection relays for three-phase undervoltage protection and negative-sequence voltage protection.

2.19 DIFFERENTIAL GROUND-FAULT PROTECTION

- A. Description: Ground-fault protection system for three-phase, four-wire switchgear having multiple sources must be devised by manufacturer to insure that proper main or tie breaker(s) operate properly in normal and emergency conditions. Switchgear must include additional current transformers, ground-fault relays, interlocks, wiring, and accessories to avoid nuisance tripping of circuit breakers connected to main bus of switchgear. Ensure that the following occurs on main bus:
 1. A ground fault at location in switchgear must trip system.
 2. Combination of normal current flow and ground-fault current flow must trip system.
 3. Circulating currents through neutral due to multiple grounds and sources external to immediate low-voltage power sources may not trip system.
 4. System may not trip if there is no ground fault, during normal current flow.
 5. System may not trip due to large single-phase currents.
- B. Relays: Comply with IEEE C37.90, with test blocks and plugs.
- C. Control Wiring:
 1. Factory installed, complete with bundling, lacing, and protection.
 2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 3. Install plugs in control wiring at shipping splits.

2.20 SOURCE QUALITY CONTROL

- A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
- B. Testing Administrator: **[Owner will engage][Engage]** qualified testing agency to evaluate low-voltage switchgear.
- C. Factory Tests and Inspections: Test and inspect low-voltage switchgear, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C37.20.1 before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance on control units. Drawout circuit breakers need not be tested in assembly if they are tested separately.
 1. Dielectric Tests: Perform power-frequency withstand tests to demonstrate ability of insulation system to withstand voltages listed in IEEE C37.20.1. Voltage must be increased gradually from zero to required test value within 5 to 10 seconds and must be held at that value for one minute.
 2. Perform mechanical operation tests to ensure proper functioning of operating mechanism,

- mechanical interlocks, and interchangeability of removable elements that are designed to be interchangeable.
- 3. Test effectiveness of grounding of metal-case instrument transformer frame or case.
- 4. Verify that control wiring is correct by verifying continuity. Perform electrical operation of component devices to ensure that they function properly and in intended sequence.
- 5. Perform control wiring insulation tests.
- 6. Verify correct polarity of connections between instrument transformers and meters and relays.
- D. Serial communications devices within equipment must be addressed at factory and tested to verify reliable communications to equipment's Ethernet gateway.
- E. Nonconforming Work:
 - 1. Low-voltage switchgear assembly will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.
- B. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.
- C. Examine walls, floors, roofs, and concrete bases for suitable conditions where switchgear will be installed.
- D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be [5 Ω]<Insert Ω> at switchgear location.
- E. On delivery of switchgear and prior to unloading, inspect equipment for damage.
 - 1. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing are tight.
 - 2. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's published instructions.
 - 3. Examine switchgear for external damage, including dents or scratches in doors and sill, and termination provisions.
 - 4. Compare switchgear and accessories received with bill of materials to verify that shipment is complete. Verify that switchgear and accessories comply with manufacturer's published instructions and Shop Drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
 - 5. Unload switchgear, observing packing label warnings and handling instructions.
 - 6. Open compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

- F. Handling:
1. Handle switchgear, in accordance with manufacturer's published instructions; avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject switchgear to impact, jolting, jarring, or rough handling.
 2. Protect switchgear compartments against entrance of dust, rain, and snow.
 3. Transport switchgear upright, to avoid internal stresses on equipment mounting assemblies. Do not tilt or tip switchgear.
 4. Use spreaders or lifting beam to obtain vertical lift and to protect switchgear from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
 5. Do not damage structure when handling switchgear.
- G. Proceed with installation only after examinations are complete and unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
- B. Comply with requirements for vibration isolation and seismic-control devices specified in Section 260529 "Hangers and Supports for Electrical Systems" and **[Section 260548 "Vibration and Seismic Controls for Electrical Systems."][Section 260548.16 "Seismic Controls for Electrical Systems."]**
- C. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and NFPA 70.

3.3 CONNECTIONS

- A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Connections at Exterior Locations:
1. Install tinned bare copper conductors not smaller than 4/0 AWG, for ground conductors buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes.
 2. Bond surge arrester and neutrals directly to switchgear enclosure and then to grounding electrode system with bare copper conductors, sized as indicated.
 3. Keep lead lengths as short as practicable with no kinks or sharp bends.
 4. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 5. Fence and equipment connections may not be smaller than 4 AWG.
 6. Ground fence at gate posts and corner posts and at intervals not exceeding **10 ft (3 m)**.
 7. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm) [tinned,]flexible braided copper strap and clamps.**
- C. Terminate grounding and bonding conductors on common equipment grounding terminal on switchgear enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.
- D. Complete switchgear grounding and surge-protector connections prior to making other electrical connections.

3.4 IDENTIFICATION

- A. Comply with installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."
- B. Install warning signs as required to comply with OSHA 29 CFR 1910.269.
- C. Compartment Nameplates: **[Engraved, laminated-acrylic][Engraved, melamine plastic][Preprinted aluminum signs]**, as described in Section 260553 "Identification for Electrical Systems," for compartments, mounted with corrosion-resistant screws.
- D. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.
 - 1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce concise visual presentation of principal switchgear components and connections.
 - 2. Medium: Painted graphics, as selected by Architect.
 - 3. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.
- E. Arc-Flash Warning Labels:
 - 1. Comply with requirements in Section 260573.19 "Arc-Flash Hazard Analysis." Produce **3.5 by 5 inch (76 by 127 mm)** self-adhesive equipment label for work locations included in analysis.
 - 2. Comply with requirements in Section 260553 "Identification for Electrical Systems." Produce **3.5 by 5 inch (76 by 127 mm)** self-adhesive equipment label for work locations included in analysis. Labels must be machine printed, with no field-applied markings.
 - a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:
 - 1) Location designation.
 - 2) Nominal voltage.
 - 3) Flash protection boundary.
 - 4) Hazard risk category.
 - 5) Incident energy.
 - 6) Working distance.
 - 7) Engineering report number, revision number, and issue date.
 - b. Labels must be machine printed, with no field-applied markings.

3.5 FIELD QUALITY CONTROL

- A. Acceptance Testing Preparation:
 - 1. **<Insert requirements>**.
- B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- C. Tests and Inspections:
 - 1. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B and NETA ATS.
 - 2. After installing switchgear and after electrical circuitry has been energized, test for compliance

- with requirements.
3. Perform visual and mechanical inspections and electrical tests stated in NETA ATS. Certify compliance with test parameters.
 4. Visual and Mechanical Inspection:
 - a. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study[, **as well as to circuit breaker's address in control network**].
 - b. Verify that current and voltage transformer ratios correspond to Drawings.
 - c. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
 - d. Confirm correct operation and sequencing of electrical and mechanical interlock systems.
 - 1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
 - 2) Make key exchange with devices operated in off-normal positions.
 - e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - f. Inspect insulators for evidence of physical damage or contaminated surfaces.
 - g. Verify correct barrier and shutter installation and operation.
 - h. Exercise active components.
 - i. Inspect mechanical indicating devices for correct operation.
 - j. Verify that filters are in place and that vents are clear.
 - k. Perform visual and mechanical inspection of instrument transformers in accordance with "Instrument Transformer Field Tests" Paragraph.
 - l. Inspect control power transformers.
 - 1) Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring, and overall general condition.
 - 2) Verify that primary and secondary fuse or circuit-breaker ratings match Drawings.
 - 3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.
 5. Electrical Tests:
 - a. Perform DC voltage insulation-resistance tests on bus sections, phase-to-phase and phase-to-ground, for one minute. If bus temperature is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
 - 2) Do not proceed to dielectric withstand voltage tests until insulation-resistance levels are raised above minimum values.

- b. Perform dielectric withstand voltage test on bus sections, phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply test voltage for one minute.
 - 1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand test, test specimen is considered to have passed test.
 - c. Perform insulation-resistance tests on control wiring for ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instruction.
 - 1) Minimum insulation-resistance values of control wiring may not be less than 2 MΩ.
 - d. Control Power Transformers:
 - 1) Perform insulation-resistance tests. Perform measurements from winding-to-winding and windings-to-ground. Insulation-resistance values of winding insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
 - 2) Perform secondary wiring integrity test. Disconnect transformer at secondary terminals and connect secondary wiring to rated secondary voltage source. Verify correct potential at devices.
 - 3) Verify correct secondary voltage by energizing primary winding with system voltage. Measure secondary voltage with secondary wiring disconnected.
 - 4) Verify correct function of control transfer relays located in switchgear with multiple control power sources.
 - e. Voltage Transformers:
 - 1) Perform secondary wiring integrity test. Verify correct potential at devices.
 - 2) Verify secondary voltages by energizing primary winding with system voltage.
 - f. Perform current-injection tests on entire current circuit in switchgear sections.
 - 1) Perform current tests by secondary injection with magnitudes such that minimum 1.0 A current flows in secondary circuit. Verify correct magnitude of current at devices in circuit.
 - 2) Perform current tests by primary injection with magnitudes such that minimum 1.0 A current flows in secondary circuit. Verify correct magnitude of current at devices in circuit.
 - g. Perform system function tests in accordance with "System Function Tests" Paragraph.
 - h. Verify operation of space heaters.
 - i. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from sources.
- D. Circuit-Breaker Field Tests:
- 1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.

- b. Inspect anchorage, alignment, and grounding.
 - c. Verify that maintenance devices are available for servicing and operating breaker.
 - d. Verify unit is clean.
 - e. Verify that arc chutes are intact.
 - f. Inspect moving and stationary contacts for condition and alignment.
 - g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
 - h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
 - i. Verify cell fit and element alignment.
 - j. Verify racking mechanism operation.
 - k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - l. Perform adjustments for final protective-device settings in accordance with coordination study provided by Owner.
 - m. Record as-found and as-left operation counter readings.
2. Electrical Tests:
- a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with switch closed, and across open poles. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than Table 100.1 or manufacturer's published instructions must be investigated.
 - b. Measure contact resistance across power contacts of circuit breakers. Drop values for $\mu\Omega$ or mV(dc) may not exceed high levels of normal range as indicated in manufacturer's published data. In absence of manufacturer's published data, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
 - c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are unavailable, trip times may not exceed value shown in NETA ATS, Table 100.7.
 - d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current tolerance band.
 - e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current tolerance band.
 - f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
 - g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
 - h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must comply with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
 - i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
 - j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip-unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in

- accordance with manufacturer's published data.
- k. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

E. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

- a. Verify that equipment nameplate data complies with Contract Documents.
- b. Inspect physical and mechanical condition.
- c. Verify correct connection of transformers with system requirements.
- d. Verify that adequate clearances exist between primary and secondary circuit wiring.
- e. Verify that unit is clean.
- f. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
- g. Verify that required grounding and shorting connections provide contact.
- h. Verify correct operation of transformer withdrawal mechanism and grounding operation.
- i. Verify correct primary and secondary fuse sizes for voltage transformers.
- j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

- a. Perform insulation-resistance test of current transformers and secondary wiring for ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.5.
- b. Perform polarity test on current transformers in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
- c. Perform ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must be in accordance with IEEE C57.13.
- d. Perform excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or be in accordance with IEEE C57.13.1.
- e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. Measured burdens must be compared to, and must match, instrument transformer ratings.
- f. Perform insulation-resistance tests on primary winding with secondary grounded. Test voltages must be in accordance with NETA ATS, Table 100.5.
- g. Perform dielectric withstand tests on primary winding with secondary grounded. Test voltages must be in accordance with NETA ATS, Table 100.9.
- h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data.
- i. Verify that current transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3. That grounding point should be located

as specified by Engineer in Project Drawings.

3. Electrical Tests of Voltage Transformers:

- a. Perform insulation-resistance tests, winding-to-winding and windings-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.5.
- b. Perform polarity test on transformers to verify polarity marks or H1-X1 relationship as applicable. Polarity results must agree with transformer markings.
- c. Perform turns-ratio test on tap positions. Ratio errors must be in accordance with IEEE C57.13.
- d. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to, and must match, instrument transformer ratings.
- e. Perform dielectric withstand test on primary windings with secondary windings connected to ground. Dielectric voltage must be in accordance with NETA ATS, Table 100.9. Test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand test, primary windings are considered to have passed test.
- f. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use test equipment manufacturer's published data.
- g. Verify that voltage transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3. Test results must indicate that circuits are grounded at only one point.

F. Ground-Resistance Test:

1. Visual and Mechanical Inspection:

- a. Verify that ground system complies with Contract Documents and with Article 250, "Grounding and Bonding," in NFPA 70.
- b. Inspect physical and mechanical condition. Grounding system electrical and mechanical connections must be free of corrosion.
- c. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
- d. Inspect anchorage.

2. Electrical Tests:

- a. Perform fall-of-potential or alternative test in accordance with IEEE 81 on main grounding electrode or system. Resistance between main grounding electrode and ground must be no more than **[5 Ω][maximum ground-resistance value specified in "Examination"**

Article].

- b. Perform point-to-point tests to determine resistance between main grounding system and major electrical equipment frames, system neutral, and derived neutral points. Investigate point-to-point resistance values that exceed 0.5 Ω . Compare equipment nameplate data with the Contract Documents.
- c. Inspect physical and mechanical condition.
- d. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

G. Metering Devices Field Tests:

1. Visual and Mechanical Inspection:

- a. Inspect physical and mechanical condition.
- b. Inspect bolted electrical connections for high resistance using one of the following two methods:
 - 1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.
- c. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
- d. Verify that unit is clean.
- e. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

- a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
- b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
- c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
- d. Verify that current transformer and voltage transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

- a. Record model number, style number, serial number, firmware revision, software revision,

- and rated control voltage.
- b. Verify operation of LEDs, display, and targets.
- c. Record passwords for each access level.
- d. Clean front panel and remove foreign material from case.
- e. Check tightness of connections.
- f. Verify that frame is grounded in accordance with manufacturer's published instructions.
- g. Set relay in accordance with results in Section 260573.16 "Coordination Studies" and in Section 260573.19 "Arc-Flash Hazard Analysis."
- h. Download settings from relay. Print copy of settings for report and compare settings to those specified in coordination study.

2. Electrical Tests:

- a. Perform insulation-resistance tests from circuits to grounded frame in accordance with manufacturer's published data.
- b. Apply voltage or current to analog inputs, and verify correct registration of relay meter functions.
- c. Check functional operation of elements used in protection scheme as follows:
 - 1) ANSI No. 2/62, Timing Relay:
 - a) Determine time delay.
 - b) Verify operation of instantaneous contacts.
 - 2) ANSI No. 24, Volts/Hertz Relay:
 - a) Determine pickup frequency at rated voltage.
 - b) Determine pickup frequency at second voltage level.
 - c) Determine time delay.
 - 3) ANSI No. 25, Sync Check Relay:
 - a) Determine closing zone at rated voltage.
 - b) Determine maximum voltage differential that permits closing at zero degrees.
 - c) Determine set points of live line, live bus, dead line, and dead bus.
 - d) Determine time delay.
 - e) Verify control functions of dead bus/live line, dead line/live bus, and dead bus/dead line.
 - 4) ANSI No. 27, Undervoltage Relay:
 - a) Determine dropout voltage.
 - b) Determine time delay.
 - c) Determine time delay at second point on timing curve for inverse time relays.
 - 5) ANSI No. 32, Directional Power Relay:
 - a) Determine minimum pickup at maximum torque angle.
 - b) Determine closing zone.
 - c) Determine maximum torque angle.
 - d) Determine time delay.
 - e) Verify time delay at second point on timing curve for inverse time relays.
 - f) Plot operating characteristic.
 - 6) ANSI No. 46, Current Balance Relay:

- a) Determine pickup of unit.
 - b) Determine percent slope.
 - c) Determine time delay.
- 7) ANSI No. 46N, Negative Sequence Current Relay:
- a) Determine negative sequence alarm level.
 - b) Determine negative sequence minimum trip level.
 - c) Determine maximum time delay.
 - d) Verify two points on I²T curve.
- 8) ANSI No. 47, Phase Sequence or Phase Balance Voltage Relay:
- a) Determine positive sequence voltage to close N.O. contact.
 - b) Determine positive sequence voltage to open N.C. contact (undervoltage trip).
 - c) Verify negative sequence trip.
 - d) Determine time delay to close N.O. contact with sudden application of 120 percent of pickup.
 - e) Determine time delay to close N.C. contact on removal of voltage when previously set to rated system voltage.
- 9) ANSI No. 50, Instantaneous Overcurrent Relay:
- a) Determine pickup.
 - b) Determine dropout.
 - c) Determine time delay.
- 10) ANSI No. 51, Time Overcurrent:
- a) Determine minimum pickup.
 - b) Determine time delay at two points on time current curve.
- 11) ANSI No. 64, Ground Detector Relay:
- a) Determine maximum impedance to ground causing relay pickup.
- 12) ANSI No. 67, Directional Overcurrent Relay:
- a) Determine directional unit minimum pickup at maximum torque angle.
 - b) Determine closing zone.
 - c) Determine maximum torque angle.
 - d) Plot operating characteristics.
 - e) Determine overcurrent unit pickup.
 - f) Determine overcurrent unit time delay at two points on time current curve.
- 13) ANSI No. 87, Differential Relay:
- a) Determine operating unit pickup.
 - b) Determine operation of restraint unit.
 - c) Determine slope.
 - d) Determine harmonic restraint.
 - e) Determine instantaneous pickup.
 - f) Plot operating characteristics for restraint.

d. Control Verification:

- 1) Functional Tests:
 - a) Check operation of active digital inputs.
 - b) Check output contacts or SCRs, preferably by operating controlled device, such as circuit breaker, auxiliary relay, or alarm.
 - c) Check internal logic functions used in protection scheme.
 - d) On completion of testing, reset minimum/maximum recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.
 - 2) In-Service Monitoring: After equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.
- I. Ground-Fault Protection Field Tests: Evaluate interconnected system in accordance with switchgear manufacturer's published instructions.
1. Determine proper location of sensors around bus of circuit to be protected. This determination may be done visually, with knowledge of which bus is involved.
 2. Verify grounding points of system to determine that ground paths do not exist that would bypass sensors. Use high-voltage testers and resistance bridges.
 3. Test installed system for correct response by application of full-scale current into equipment to duplicate ground-fault condition, or by equivalent means such as by simulated fault current generated by the following:
 - a. A coil around sensors.
 - b. A separate test winding in sensors.
 4. Record test results on test form provided with instructions provided by manufacturer.
- J. DC System VRLA Batteries Field Test:
1. Visual and Mechanical Inspection:
 - a. Verify that batteries are adequately located.
 - b. Verify that battery area ventilation system is operable.
 - c. Verify existence of suitable eyewash equipment.
 - d. Verify that equipment nameplate data complies with the Contract Documents.
 - e. Inspect physical and mechanical condition.
 - f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
 - g. Verify that units are clean.
 - h. Inspect spill containment installation.
 - i. Verify application of oxide inhibitor on battery terminal connections.
 2. Electrical Tests:
 - a. Measure charger float and equalizing voltage levels. Adjust to battery manufacturer's recommended levels.
 - b. Verify charger functions and verify that alarms comply with system manufacturer's published instructions.
 - c. Measure negative post temperature. This temperature must comply with manufacturer's published data or IEEE 1188.
 - d. Measure charger float and equalizing voltage levels. These levels must be in accordance with battery manufacturer's published data.
 - e. Measure monoblock/cell voltage and total battery voltage with charger energized and in

float mode of operation. Monoblock/cell voltages must be in accordance with manufacturer's published data.

- f. Measure intercell connection resistances.
- g. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical cells that are in fully charged state. Monoblock/cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical monoblocks/cells in fully charged state.
- h. Perform load test in accordance with manufacturer's published data or IEEE 1188. Replace units that fail to pass test.
- i. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

K. DC System Vented NiCd Batteries Field Test:

1. Visual and Mechanical Inspection:

- a. Verify that batteries are adequately located.
- b. Verify that battery area ventilation system is operable.
- c. Verify existence of suitable eyewash equipment.
- d. Verify that equipment nameplate data complies with the Contract Documents.
- e. Inspect physical and mechanical condition.
- f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
- g. Verify electrolyte level. Measure pilot-cell electrolyte temperature, and correct as recommended by manufacturer's maintenance procedures to bring temperature and electrolyte level to within normal limits.
- h. Verify that units are clean.
- i. Inspect spill containment installation.
- j. Verify application of oxide inhibitor on battery terminal connections.

2. Electrical Tests:

- a. Measure charger float and equalizing voltage levels. Adjust to battery manufacturer's recommended levels.
- b. Verify charger functions and verify that alarms comply with system manufacturer's published instructions.
- c. Measure cell voltage and total battery voltage with charger energized and in float mode of operation. Cell voltages must be within 0.05 V of each other or in accordance with manufacturer's published data.
- d. Measure intercell connection resistances.
- e. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical cells that are in fully charged state.
- f. Perform load test in accordance with manufacturer's published data or IEEE 1106. Replace units that fail to pass test.
- g. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

L. System Function Tests: Perform system function tests after other field quality-control tests have been completed and components have passed specified tests. Verify correct interaction of sensing, processing, and action devices.

- 1. Develop test parameters and perform tests for purpose of evaluating performance of integral

components and their functioning as complete unit within design requirements and manufacturer's published data.

2. Verify correct operation of interlock safety devices for fail-safe functions in addition to design function.
3. Verify correct operation of sensing devices, alarms, and indicating devices.

M. Nonconforming Work:

1. Switchgear components will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

N. Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

O. Manufacturer Services:

1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, but not more than six months after Final Acceptance, and if requested by Owner, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at switchgear outgoing sections. Use voltmeters with calibration traceable to NIST standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
 - a. Adjust switchgear taps.
 - b. Prepare published request for voltage adjustment by electric utility.
3. Retests: Repeat monitoring, after corrective action has been performed, until specified results are obtained.
4. Report:
 - a. Prepare published report covering monitoring performed and corrective action taken.

B. Infrared Inspection: Perform survey during periods of maximum possible loading. Remove covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of switchgear.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C.
3. Record of Infrared Inspection: Prepare certified report that identifies testing technician and equipment used and that lists results as follows:
 - a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between area of concern and reference area.

- d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of deficient area.
 - 4. Act on inspection results in accordance with recommendations in NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
 - 5. **[Follow-up Infrared Scanning: Perform additional follow-up infrared scan of switches 11 months after date of Substantial Completion.]**
- C. Software and Firmware Service Agreement:
- 1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for **[two]<Insert number>** years.
 - 2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.
 - a. Upgrade Notice: No fewer than **[30]<Insert number>** days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.
 - 3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 26 12 19 00A

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 12 19 00	26 12 13 00	Liquid-Filled, Medium-Voltage Transformers
26 12 19 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 13 29 00 - MEDIUM-VOLTAGE COMPARTMENTALIZED SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes dead-front, remotely controlled insulated vacuum load and fault interrupting switchgear.
- B. Related Requirements:
 - 1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
 - 2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. Bushing: An insulating structure including a central conductor, or providing a central passage for a conductor, with provision for mounting on a barrier, conducting or otherwise, for insulating the conductor from the barrier and conducting current from one side of the barrier to the other.
- B. Bushing Elbow: An insulated device used to connect insulated conductors to separable insulated connectors on dead-front, pad-mounted switchgear and to provide a fully insulated connection. Also called an "elbow connector."
- C. Bushing Insert: That component of a separable insulated connector that is inserted into a bushing well to complete a dead-front, load break or non-load break, separable insulated connector (bushing).
- D. Bushing Well: A component of a separable insulated connector, either permanently welded or clamped to an enclosure wall or barrier, having a cavity that receives a replaceable component (bushing insert) to complete the separable insulated connector (bushing).
- E. Fault Interrupter: A self-controlled mechanical switching device capable of making, carrying, and automatically interrupting an alternating current. It includes an assembly of control elements to detect overcurrents and control the fault interrupter. A fault interrupter always consists of a switching device, a control unit, and sensors for current and/or voltage sensing.
- F. Hotstick: An insulated stick, usually made of fiberglass, that is used to work energized overhead conductors and operate electrical equipment that is overhead, underground, and compartmentalized.
- G. NETA ATS: InterNational Electrical Testing Association, Acceptance Testing Specification.
- H. Way: A three-phase or single-phase circuit connection to the bus that may contain combinations of switches and protective devices or may be a solid bus.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Time-current characteristic curves for overcurrent protective devices.

B. Shop Drawings: For pad-mounted switchgear.

1. Include a tabulation of installed devices with features and ratings.
2. Include dimensioned plans and elevations, showing dimensions, shipping sections, and weights of each assembled section. Elevations must show major components and features, and they will mimic bus diagram.
3. Include a plan view and cross section of equipment base showing clearances, manufacturer's recommended work space, and locations of penetrations for grounding and conduits. Show location of anchor bolts[**and leveling channels**].
4. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, and location and size of each field connection.
5. Include list of materials.
6. Locate accessory and spare equipment storage.
7. Include single-line diagram.
8. Include control power wiring diagrams.
9. Include battery, charger, and transfer switch ratings.
10. Include copy of nameplate.
11. Switchgear Ratings:
 - a. Voltage.
 - b. Continuous current.
 - c. Short-circuit rating.
 - d. BIL.
12. Design Calculations: Signed and sealed by a qualified professional structural engineer. Calculate requirements for selecting seismic restraints.
13. Relay settings.
14. Interface data with monitoring or control network.
15. Wiring Diagrams: For each switchgear assembly, include the following:
 - a. Power, signal, and control wiring.
 - b. Three-line diagrams of current and future secondary circuits, showing device terminal numbers and internal diagrams.
 - c. Schematic control diagrams.
 - d. Diagrams showing connections of component devices and equipment.
 - e. Schematic diagrams showing connections to remote devices[**including SCADA remote terminal unit**].

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For pad-mounted switchgear.

1. Switch ratings as listed in IEEE C37.74.
2. Interrupter ratings as listed in IEEE C37.60.
3. Coating system compliance with the IEEE standard listed in "Switchgear Enclosure" Article.

B. Source quality-control reports.

C. Field quality-control reports.

1.5 WARRANTY

- A. Special Battery Warranties: Manufacturer and Installer agree to repair or replace the switchgear control system storage batteries that fail in materials or workmanship within specified warranty period.
1. Warranted Cycle Life for VRLA Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of **77 deg F (25 deg C)**:
 - a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than six discharge cycles.
 - b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 20 discharge cycles.
 - c. For discharge rate not faster than 15 minutes, discharge duration not longer than 45 seconds, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 120 discharge cycles.
 2. Warranted Cycle Life for Premium VRLA Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of **77 deg F (25 deg C)**:
 - a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 40 discharge cycles.
 - b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 20 discharge cycles.
 - c. For discharge rate not faster than 15 minutes, discharge duration not longer than 1.5 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 750 discharge cycles.

PART 2 - PRODUCTS

2.1 MEDIUM-VOLTAGE COMPARTMENTALIZED SWITCHGEAR

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[ABB, Electrification Business]**
 2. **[Eaton]**
 3. **[S&C Electric Company]**
 4. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[ABB, Electrification Business]**
 2. **[Eaton]**
 3. **[S&C Electric Company]**
 4. **<Insert manufacturer's name>**

2.2 SYSTEM DESCRIPTION

- A. Manufactured Unit: Pad-mounted switchgear, designed for application in **[solidly grounded neutral][ungrounded][impedance-grounded]** underground distribution systems.
- B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory, and marked for intended location and application.
- C. Comply with IEEE C2.
- D. Comply with IEEE C37.74.

2.3 RATINGS

- A. Switchgear is applied to a nominal **[4.16][13.2][13.8][23][24.94][34.5]<Insert voltage>** kV (L-L) medium-voltage electrical power system. Minimum ratings of the switchgear must be as follows:
 - 1. Rated Maximum Voltage and Rated BIL: **[15.5 kV and 95 kV BIL][27 kV and 125 kV BIL][38 kV and 150 kV BIL]<Insert voltage>**.
 - 2. Continuous and Load Interrupting Current: 600 A.
 - 3. Short-Time and Short-Circuit Interrupting Current: **[12.5 kA SYM RMS][16 kA SYM RMS][20 kA SYM RMS][25 kA SYM RMS]**.

2.4 SWITCHGEAR ENCLOSURE

- A. Weatherproof enclosure with an integral skid mounting frame, designed for mounting on a concrete pad, suitable to allow skidding or rolling of the switchgear in any direction, and with provision for anchoring the frame to the pad.
- B. Enclosure Integrity: Comply with IEEE C57.12.28 for compartmentalized enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to the public.
 - 1. Each vertical section must have the following features:
 - a. Structural design and anchorage adequate to resist loads imposed by **[125 mph (200 km/h)]<Insert wind speed>** wind.
 - b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of each section above expected dew point.
 - c. Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
 - d. Weatherproof ground-fault circuit interrupter duplex receptacles.
 - e. Power for heaters and receptacles must be provided **[by control power transformer][as indicated]**.
 - f. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.
- C. Corrosion Protection:
 - 1. Enclosure coating system must be factory applied, meeting the requirements of **[IEEE C57.12.28][IEEE C57.12.29]**, in manufacturer's standard color **[green]<Insert color>**.
 - 2. Fabricate the support frame, enclosure base, and the enclosure from stainless steel, ASTM A167,

Type 304 or 304L. Enclosure coating system must be factory applied, meeting the requirements of [IEEE C57.12.28][IEEE C57.12.29], standard color [green]<Insert color>.

2.5 SWITCHGEAR CONSTRUCTION

- A. Dead-front, front and rear access switchgear.
- B. Each disconnect switch in switched ways must be in a sealed, dielectric filled [stainless]steel tank, factory-filled with [SF6 gas][mineral oil][or][less-flammable, high-firepoint fluid].
 - 1. SF6 Gas: Comply with ASTM D2472. Provide enclosure with pressure gauge and self-sealing fill valve.
 - 2. Mineral Oil: Comply with ASTM D3487, Type II, and tested for compliance with ASTM D117. Provide enclosure with level gauge to monitor the dielectric level; automatic pressure relief valve; and fill, drain, and sampling valves.
 - 3. Less-flammable, high-firepoint fluid must comply with ASTM D6871 and IEC 61099. The temperature rating of the fluid must be satisfactory for ambient air temperatures of **minus 22 and plus 104 deg F (minus 30 and plus 40 deg C)**. Provide enclosure with level gage to monitor the dielectric level; automatic pressure relief valve; and fill, drain, and sampling valves.
- C. Construct switchgear assembly with switched ways that have front-accessible terminations for cables entering from below and with manual operating provisions with a lineman's hotstick.
- D. Trapped Key Interlocks: Kirk key interlock system using a dowel pin design having no openings. Brass housing and 316 stainless steel key and lock bolts.
- E. Viewing Windows: For each switch, located adjacent to manual operating devices, and positioned to show switch contact position.
- F. Grounding: Provision to make grounding cable and wire connections at each way.

2.6 SWITCHED WAYS

- A. Source Switch Ways: Non-fused, hotstick operated, ganged vacuum load interrupter switches[, **in series with a visible-break disconnect switch**].
 - 1. Rated Continuous Current and Load Switching Current: 600 A.
 - 2. Vacuum Load Interrupter:
 - a. With 24 V(dc) motor operators to open or close the load interrupter.
 - b. Trip-free switch mechanism. Closing the switch must be independent of the speed of the operating handle.
 - 3. Visible-Break Disconnect Switch: [**Three positions, with open, closed, and ground positions**][**Two positions, with open and closed positions**]. The switch must be mechanically interlocked so that the vacuum interrupter opens and closes first.
 - a. Switch position indicator, clearly labeled.
 - b. Padlocking and tagging provisions.
- B. Fault Interrupting Switched Ways: Non-fused, hotstick-operated, ganged vacuum fault interrupter switches[, **in series with a visible-break disconnect**]. With internally mounted current transformers and electronic overcurrent sensing for [**single-phase or**]three-phase ganged tripping of the interrupter.

Comply with IEEE C37.60.

1. Rated Continuous Current and Load Switching Current: 600 A.
2. Vacuum Fault Interrupter:
 - a. Operated by a motor-charged stored energy mechanism, with provision to manually charge the mechanism. Charging motors must operate at 24 V(ac).
 - b. Auxiliary Switches: Provide two auxiliary switches, each with field-selectable NC or NO switch position, for connection of remote indication of the position of the switched way. The switches must be rated at 15 A, 120 V(ac), and 1 A, 120 V(dc).
 - c. Trip-free switch mechanism when manually operated. Closing the switch must be independent of the speed of the operating handle.
 - d. Single operating handle and a clearly labeled switch position indicator; open, closed, tripped.
 - e. Operations Counters: Mechanical type, linked to the operating handle of each switched way.
 - f. Padlocking and tagging provisions.
3. Visible-Break Disconnect Switch: **[Three positions, with open, closed, and ground positions][Two positions, with open and closed positions]**. The switch must be mechanically interlocked so that the switch cannot be operated unless the vacuum fault interrupter is open.
 - a. Switch position indicator, clearly labeled.
 - b. Padlocking and tagging provisions.

C. Controls:

1. Motor Actuators: "Open," "close," and "stop" push buttons.
2. Switch Status LEDs: "Open" and "closed" lights. Show status of disconnect switch using its auxiliary contact.
3. Motor Actuator Process LEDs: "Opening" and "closing" lights indicating that the selected motor is operating the switch.
4. Power Switch: "On" and "off" toggle switch and circuit protector, to disconnect the dc supply to its motor and provide overload and short-circuit protection.
5. 120 V(ac) LED to display battery system power level.
6. Battery voltage meter to show battery condition.
7. Local and Remote Selector: In the "local" position remote operation of the switches is disabled and is possible only under the control of switchgear-mounted push buttons.

D. Overcurrent[**and Control**] Relays: Field-adjustable microprocessor electronic relays in each phase at indicated locations. Provide for current adjustment from 0 to 600 A.

1. Device Functions: **[51/50, 51N/50N, or 51G/50G in accordance with IEEE C37.2]<Insert values>**.

2.7 POWER SUPPLY

- A. The power supply for instrumentation, communications, and switch operations must be for connection to two 120 V(ac) power sources, controlled by an automatic transfer switch to connect to the alternate supply when the primary supply has failed.
- B. The power supply for instrumentation, communications, and switch operations must be from a potential transformer installed as part of the switchgear.

- C. Control Power Supply: Dedicated **[48 V(dc)][120 V(dc)][240 V(dc)]** battery system.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[C&D Technologies, Inc.]**
 - b. **[EnerSys]**
 - c. **[Trojan Battery Company]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[C&D Technologies, Inc.]**
 - b. **[EnerSys]**
 - c. **[Trojan Battery Company]**
 - d. **<Insert manufacturer's name>**
 3. System Requirements: Battery must have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at **77 deg F (25 deg C)** with electrolyte at normal level and minimum ambient temperature of **55 deg F (13 deg C)**. Cycle battery before shipment to guarantee rated capacity on installation. Arrange to operate ungrounded. Battery system capacity must be as recommended by switchgear manufacturer to operate the circuit breakers for intended duty.
 4. Battery:
 - a. **[Standard VRLA][Premium VRLA]<Insert type>** batteries, with system disconnect and overcurrent protective device.
 - b. Rack: **[Two]<Insert number>**-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads. **[Rate battery rack, cell supports, and anchorage for seismic requirements.]**
 - c. Accessories:
 - 1) Set of cell numerals.
 - 2) Monitoring system.
 - d. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with ac input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.
 - 1) DC ammeter.
 - 2) DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
 - 3) Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by NO push-button contact.
 - 4) Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
 - 5) Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.

- 6) AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of ac power supply for any interval.
 - 7) Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. The device must regulate charging current but must not disconnect charger from either battery or ac supply.
 - 8) Charger's Audible Noise: Less than 26 dB.
5. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
 6. Control Wiring: Factory installed, complete with bundling, lacing, and protection.
 - a. Conductors across Hinges and for Interconnections between Shipping Units: Flexible conductors for No. 8 AWG and smaller.
 - b. Conductors: Sized in accordance with NFPA 70 for duty required.
 7. An automatic transfer switch to connect the alternate power supply when the primary power supply has failed.

2.8 AUTOMATIC SOURCE TRANSFER CONTROLS

- A. An automatic switch control system must execute manual, automatic source-transfer, and SCADA operation of the source and fault interrupting switch ways. The source-transfer controls must open an incoming switch way where voltage is lost and close the other incoming switch way if voltage is present. The controls must include an overcurrent lockout that prevents the closing of a switch way into a system fault.
- B. The automatic switch control system must execute remote commands received from a SCADA master station and transmit switchgear operation information to a SCADA master station using DNP3 communications protocol. Execution of remote commands must include enabling of the source-transfer controls and transfer of switch ways to "close," "open," and "ground" positions. Transmission of switchgear information must include switch way positions and DC supply system status. Additional switchgear information that must be transmitted follows:
 1. Voltage.
 2. Current in load ways.
 3. <Insert text>.
- C. The control must have communication port provisions for connection to a multi-mode serial fiber link.

2.9 CONTROL NETWORK

- A. Compliance with ASHRAE 135: Controllers must support serial MS/TP and Ethernet IP communications and must be able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as a native device.
- B. Support DNP3 protocol remote control commands received from the SCADA master stations that control switch operations. Comply with the requirements of IEEE 1815.

2.10 BUSHINGS

- A. Separable insulated connectors must be used to connect primary cable. Comply with requirements in Section 260513 "Medium-Voltage Cables."
 - 1. Bushings: One-piece, 600 A, BIL ratings the same as the connectors. Comply with IEEE 386.
 - 2. Supply a standoff bracket or parking stand for each bushing, mounted horizontally adjacent to each bushing.

2.11 SURGE ARRESTERS

- A. Distribution class; metal-oxide-varistor type, fully shielded, separable elbow type, suitable for plugging into the inserts. Comply with IEEE C62.11 and IEEE 386.
 - 1. Nominal System Line-to-Line Voltage: <Insert number> kV RMS.
 - 2. Maximum Continuous Operating Voltage: <Insert number> kV RMS.
 - 3. Duty-Cycle Voltage: <Insert number> kV RMS.

2.12 WARNING LABELS AND SIGNS

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for labels and signs.
 - 1. High-Voltage Warning Label: Self-adhesive labels on the outside of the high-voltage compartment door(s). Legend must be "DANGER HIGH VOLTAGE" printed in two lines of minimum 2 inch (50 mm) high letters. The word "DANGER" must be in white letters on a red background and the words "HIGH VOLTAGE" must be in black letters on a white background.
 - 2. Arc-Flash Warning Label: Self-adhesive labels on the outside of the high-voltage compartment door(s), warning of potential electrical arc-flash hazards and appropriate personal protective equipment required.

2.13 SOURCE QUALITY CONTROL

- A. Factory Tests: Comply with requirements in IEEE C37.60 and IEEE C37.74 for testing procedures.
 - 1. Circuit Resistance Test: Verify that switchgear contacts have been properly aligned and current transfer points have been properly assembled.
 - 2. Power-frequency dry withstand voltage test.
 - 3. Dielectric withstand test; one-minute dry power-frequency.
 - 4. Calibrate overcurrent devices for conformance to published time-current characteristic curves.
 - 5. Sealed Tank Leak Test:
 - a. Comply with IEC 62271-1 for test procedure for switchgear using SF6.
 - b. The test procedure for vacuum switchgear must be as follows:
 - 1) Each vacuum tube must be identified by its serial number. Its vacuum pressure level must be tested by the manufacturer of the vacuum interrupter. Document the test results.
 - 2) After assembly of the switchgear way, test the vacuum pressure level of the vacuum tubes by the routine dielectric test across the open contacts. The test voltage must be stated by the manufacturer. The dielectric test must be carried out after the mechanical routine test.

6. Operating tests must verify the following:
 - a. Switch position indicators and contacts are in the correct position for both the open and closed positions.
 - b. Insulating medium quantity indicator (if provided) is functioning properly.
 - c. Circuit configuration is shown correctly.
 - d. Mechanical interlocks are in place and operative.
 - e. Position and polarity of current transformers meets requirements.
 - f. Control, secondary wiring, and accessory devices are connected correctly.
 - g. Devices and relays actually operate as intended. Circuits for which operation is not feasible must be checked for continuity.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Upon delivery of switchgear and prior to unloading, inspect equipment for damage.
 1. Examine tie rods and chains to verify they are undamaged and tight and that blocking and bracing are tight.
 2. Verify that there is no evidence of load shifting in transit and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
 3. Examine switchgear for external damage, including dents or scratches in doors and sill, and termination provisions.
 4. Compare switchgear and accessories received with the bill of materials to verify that the shipment is complete. Verify that switchgear and accessories conform to the manufacturer's quotation and Shop Drawings. If the shipment is not complete or does not comply with project requirements, notify the manufacturer in writing immediately.
 5. Unload switchgear, observing packing label warnings and handling instructions.
 6. Open compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.
- B. Handling:
 1. Handle switchgear, in accordance with manufacturer's recommendations; avoid damage to the enclosure, termination compartments, base, frame, and internal components. Do not subject switchgear to impact, jolting, jarring, or rough handling.
 2. Transport switchgear upright to avoid internal stresses on equipment mounting assemblies. Do not tilt or tip switchgear.
 3. Use spreaders or a lifting beam to obtain a vertical lift and to protect switchgear from straps bearing against the enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
 4. Do not damage structure when handling switchgear.
- C. Storage:
 1. Switchgear may be stored outdoors. If possible, store switchgear at final installation locations on concrete pads. If dry concrete surfaces are not available, use pallets of adequate strength to protect switchgear from direct contact with the ground. Ensure switchgear is level.
 2. Protect switchgear from physical damage. Do not store switchgear in the presence of corrosive or explosive gases.
 3. Store switchgear with compartment doors closed.

- D. Examine roughing-in of conduits and grounding systems to verify the following:
 - 1. Wiring entries comply with layout requirements.
 - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders have to cross section barriers to reach load or line lugs.
- E. Pre-Installation Checks:
 - 1. Verify removal of shipping bracing after placement.
- F. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be **[5 ohms]<Insert value>** at switchgear location.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SWITCHGEAR INSTALLATION

- A. Equipment Mounting:
 - 1. Install switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- B. Install level and plumb, tilting less than 1.5 degrees when energized.
- C. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and NFPA 70.
- D. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and IEEE C2.

3.3 CONNECTIONS

- A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
 - 1. For counterpoise, use tinned bare copper cable not smaller than No. 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting the grounding electrodes. Bond surge arrester and neutrals directly to the switchgear enclosure and then to the grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.
 - 2. Fence and equipment connections must not be smaller than No. 4 AWG. Ground fence at each gate post and corner post and at intervals not exceeding **10 ft. (3 m)**. Bond each gate section to the fence post using **1/8 by 1 inch (3 by 25 mm) [tinned]** flexible braided copper strap and clamps.
 - 3. Make joints in grounding conductors and loops by exothermic weld or compression connector.
 - 4. Terminate grounding and bonding conductors on a common equipment grounding terminal on the switchgear enclosure.
 - 5. Complete the switchgear grounding and surge protector connections prior to making other electrical connections.
- B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and

Cables."

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within the switchgear enclosure. Arrange conductors such that there is not excessive strain on the connections that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

- C. Terminate medium-voltage cables in incoming section of switchgear in accordance with Section 260513 "Medium-Voltage Cables."

3.4 SIGNS AND LABELS

- A. Comply with the installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."
- B. Install warning signs as required to comply with OSHA 29 CFR 1910.269.

3.5 FIELD QUALITY CONTROL

- A. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- B. General Field Testing Requirements:
 1. Comply with the provisions of NFPA 70B, "Testing and Test Methods" chapter.
 2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
 3. After installing switchgear but before primary is energized, verify that grounding system at the switchgear is tested at the specified value or less.
 4. After installing switchgear and after electrical circuitry has been energized, test for compliance with requirements.
- C. Medium-Voltage Switchgear Field Tests:
 1. Visual and Mechanical Inspection:
 - a. Verify that current and voltage transformer ratios correspond to Drawings.
 - b. Inspect bolted electrical connections using calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS, Table 100.12. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
 - c. Confirm correct operation and sequencing of electrical and mechanical interlock systems.
 - 1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
 - 2) Make key exchange with devices operated in off-normal positions.
 - d. Inspect control power transformers.
 - 1) Inspect for physical damage, cracked insulation, broken leads, tightness of

- connections, defective wiring, and overall general condition.
- 2) Verify that primary and secondary fuse or circuit breaker ratings match Drawings.

2. Electrical Tests:

- a. Inspect bolted electrical connections using a low-resistance ohmmeter to compare bolted resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
- b. Perform dc voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If the temperature of the bus is other than plus or minus 20 deg C, adjust the resulting resistance as provided in NETA ATS, Table 100.11.
 - 1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's recommendations or NETA ATS, Table 100.1.
 - 2) Do not proceed to the dielectric withstand voltage tests until insulation-resistance levels are raised above minimum values.
- c. Perform a dielectric withstand voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply the test voltage for one minute.
 - 1) If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the test specimen is considered to have passed the test.
- d. Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate the applied voltage, follow the manufacturer's recommendation.
 - 1) Minimum insulation-resistance values of control wiring must not be less than 2 megohms.
- e. Voltage Transformers:
 - 1) Perform secondary wiring integrity test. Verify correct potential at devices.
 - 2) Verify secondary voltages by energizing the primary winding with system voltage.
- f. Perform current-injection tests on the entire current circuit in each section of switchgear.
 - 1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
 - 2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
- g. Perform system function tests in accordance with "System Function Tests" Article.
- h. Verify operation of space heaters.
- i. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.

D. Medium-Voltage Vacuum Interrupter Field Tests:

1. Visual and Mechanical Inspection:
 - a. Inspect physical and mechanical condition.
 - b. Inspect anchorage, alignment, grounding, and required clearances.
 - c. Verify that maintenance devices such as special tools and gages specified by the manufacturer are available for servicing and operating the breaker.
 - d. Verify the unit is clean.
 - e. Perform mechanical operation tests on operating mechanism in accordance with manufacturer's published data.
 - f. Measure critical distances on operating mechanism as recommended by the manufacturer. Critical distances of the operating mechanism must be in accordance with manufacturer's published data.
 - g. Verify cell fit and element alignment.
 - h. Verify racking mechanism operation.
 - i. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
 - k. Perform time-travel analysis. Travel and velocity values must be in accordance with manufacturer's published data.
 - l. Record as-found and as-left operation counter reading. Operation counter must advance one digit per close-open cycle.
2. Electrical Tests:
 - a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than this table or manufacturer's recommendations. Dielectric-withstand-voltage tests must not proceed until insulation-resistance levels are raised above minimum values.
 - b. Perform a contact/pole-resistance test. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value. Microhm or dc millivolt drop values must not exceed the high levels of the normal range in accordance with manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
 - c. Perform minimum pickup voltage tests on trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the trip and close coils must comply with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
 - d. Verify correct operation of auxiliary features, such as electrical close and trip operation, trip-free operation, and anti-pump function. Auxiliary features must operate in accordance with manufacturer's published data.
 - e. Trip circuit breaker by operation of each protective device. Reset trip logs and indicators.
 - f. Perform power-factor or dissipation-factor tests on each pole with the breaker open and each phase with the breaker closed. Power-factor or dissipation-factor values must comply with manufacturer's published data.
 - g. Perform vacuum bottle integrity (dielectric-withstand-voltage) test across each vacuum bottle, with the contacts in the "open" position in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by the end of the total time

of voltage application during the vacuum bottle integrity test, the specimen is considered to have passed the test.

- h. Perform a dielectric-withstand-voltage test in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the specimen is considered to have passed the test.

E. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

- a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
- b. Verify operation of light-emitting diodes, display, and targets.
- c. Record passwords for each access level.
- d. Clean the front panel and remove foreign material from the case.
- e. Check tightness of connections.
- f. Verify that the frame is grounded in accordance with manufacturer's instructions.
- g. Set the relay in accordance with results in Section 260573.16 "Coordination Studies" and in Section 260573.19 "Arc-Flash Hazard Analysis."
- h. Download settings from the relay. Print a copy of the settings for the report and compare the settings to those specified in the coordination study.

2. Electrical Tests:

- a. Perform insulation-resistance tests from each circuit to the grounded frame in accordance with manufacturer's published data.
- b. Apply voltage or current to analog inputs, and verify correct registration of the relay meter functions.
- c. Functional Operation: Check functional operation of each element used in the protection scheme.
- d. Control Verification:

1) Functional Tests:

- a) Check operation of active digital inputs.
- b) Check output contacts or silicone-controlled rectifiers, preferably by operating the controlled device, such as circuit breaker, auxiliary relay, or alarm.
- c) Check internal logic functions used in protection scheme.
- d) Upon completion of testing, reset min/max recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.

- 2) In-Service Monitoring: After the equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.

F. Ground Resistance Test:

1. Visual and Mechanical Inspection:

- a. Verify ground system complies with the Contract Documents and NFPA 70 "Grounding and Bonding" Article.
- b. Inspect physical and mechanical condition. Grounding system electrical and mechanical connections must be free of corrosion.
- c. Inspect bolted electrical connections using a calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of

manufacturer's published data, use NETA ATS, Table 100.12. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

- d. Inspect anchorage.

2. Electrical Tests:

- a. Perform fall-of-potential or alternative test in accordance with IEEE 81 on the main grounding electrode or system. The resistance between the main grounding electrode and ground must be no more than **[5 ohms][maximum ground resistance value specified in the "Examination" Article]**.
- b. Perform point-to-point tests to determine the resistance between the main grounding system and major electrical equipment frames, system neutral, and derived neutral points. Investigate point-to-point resistance values that exceed 0.5 ohms. Compare equipment nameplate data with Contract Documents.
- c. Inspect bolted electrical connections for high resistance using a low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
- d. Inspect physical and mechanical condition.
- e. Inspect anchorage.

G. Nonconforming Work:

- 1. Switchgear will be considered defective if it does not pass tests and inspections.
- 2. Remove and replace defective units and retest.

H. Prepare test and inspection reports.

3.6 SYSTEM FUNCTION TESTS

- A. System function tests must prove the correct interaction of sensing, processing, and action devices. Perform system function tests after "Field Quality Control" tests have been completed and components have passed specified tests.
 - 1. Develop test parameters and perform tests for evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
 - 2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
 - 3. Verify the correct operation of sensing devices, alarms, and indicating devices.

3.7 MAINTENANCE

- A. Infrared Inspection: Perform the survey during periods of maximum possible loading. Remove necessary covers prior to the inspection.
 - 1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of the switchgear.
 - 2. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at **86 deg F (30 deg C)**.
 - 3. Record of Infrared Inspection: Prepare a certified report that identifies the testing technician and equipment used, and lists the results as follows:

- a. Description of equipment to be tested.
 - b. Discrepancies.
 - c. Temperature difference between the area of concern and the reference area.
 - d. Probable cause of temperature difference.
 - e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
 - f. Identify load conditions at time of inspection.
 - g. Provide photographs and thermograms of the deficient area.
4. Act on inspection results in accordance with the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 21 16 00 - PARALLELING LOW-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Multiple-generator paralleling monitoring and control system.
2. Single-generator paralleling monitoring and control system.
3. Metal-enclosed, circuit-breaker switchgear (600 V and less).

B. Products Furnished, but Not Installed, under This Section:

1. **<Insert products furnished, but not installed>.**

C. Products Installed, but Not Furnished, under This Section:

1. **<Insert products installed, but not furnished>.**

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
4. Section 260913 "Electrical Power Monitoring" for interfacing communication and metering requirements.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

B. Preinstallation Coordination Meeting(s): For {Insert system or product}. Conduct meeting(s) **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>**.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, and **Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of paralleling low-voltage switchgear.
 - a. Include technical data on features, performance, electrical characteristics, ratings, and

finishes for programmable logic controllers, instrumentation, control devices, monitoring devices, **[SCADA interface devices,][Ethernet interface,]** and display components.

- b. Include rated capacities, operating characteristics, furnished specialties, factory settings, and accessories for individual circuit breakers.
- c. Include time-current characteristic curves for overcurrent protective devices.

B. Shop Drawings:

1. For each type of paralleling low-voltage switchgear.

- a. Include dimensioned plans, elevations, sections, details, shipping sections, weights of assembled sections, and required clearances and service space around equipment.
- b. Include tabulation of installed devices with features and ratings.
- c. Include enclosure types and details.
- d. Detail locations for anchor bolts **[and leveling channels]**.
- e. Show bus configuration with current rating, size, and number of conductors in bus run, including phase, neutral, and ground conductors of main and branch buses.
- f. Indicate short-time and short-circuit current rating of switchgear assembly.
- g. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- h. Detail nameplate legends.
- i. Include mimic-bus diagram.
- j. Include three-line power wiring diagrams for paralleling low-voltage switchgear, generators, and related equipment showing device terminal numbers.
- k. Include point-to-point schematic control, monitoring, and alarm wiring diagrams showing internal component terminal numbers.
- l. Include point-to-point schematic control, monitoring, and alarm wiring diagrams for external components indicating terminal numbers for the following:
 - 1) Engine generators.
 - 2) Transfer switches.
 - 3) Other load-control devices.
 - 4) Elevator controller in elevator bank.
 - 5) DDC system for HVAC controller.
 - 6) SCADA remote terminal unit.

2. Sequence of Operation: Description of sequence of operation for paralleling controls in automatic, manual, system test, and peak-shaving modes.

- a. Include the following in description of automatic-mode sequence of operation:
 - 1) Programmed sequence of initial generator starting and connection of generators to isolated paralleling bus, including description of how proposed design complies with requirements for redundancy.
 - 2) Programmed sequence of transferring loads to isolated paralleling bus based on operator-adjustable preset priorities and preset loads. Include initial load settings.
 - 3) Programmed sequence of starting and stopping generators based on actual real-time measured loads.
 - 4) Programmed sequence of sending load-shed signal to transfer switches **[, and to other devices]** when generator frequency does not return to normal frequency within adjustable time period.
 - 5) Programmed sequence of stopping generators based on no transfer switch or other device sending start signal.
- b. Include the following in description of system testing mode sequence of operation:

- 1) Load.
- 2) No load.

- c. Include in description, peak-shaving-mode sequence of operation.
- d. Include in description, manual-mode sequence of operation showing that manual mode fulfills requirement to permit operator at paralleling low-voltage switchgear to accomplish automatic, system test, and peak-shaving functions.
- e. Paralleling Low-Voltage Switchgear Redundancy: Identify single points of failure.

C. Samples:

1. Representative portion of mimic bus with specified finish. Manufacturer's color charts showing colors available for mimic bus.

D. Delegated Design Submittal: For seismic restraints for switchgear and wind-loading for outdoor enclosures, include analysis data signed and sealed by qualified structural professional engineer responsible for their preparation.

E. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Source quality-control reports.
- B. Sample Warranty: For manufacturer's special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Record Documentation: Include updated mimic bus diagram reflecting field changes after final switchgear load connections have been made, for record.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts: Furnish to Owner the following spare parts for repairing paralleling switchgear that are packaged with protective covering for storage on-site and identified with labels describing contents:
 1. Control Power Fuses: **[Six]<Insert number>** of each type and rating used. Include spares for the following:
 - a. Potential transformers.
 - b. Control power circuits.
 2. Indicating Lights: **[Six]<Insert number>** of each type installed.
 3. Draw-out Circuit Breakers: One of each type and rating used for circuit breaker in paralleling low-voltage switchgear.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchgear, packaged with protective covering for storage on-site and identified with labels describing contents. Include the following:

1. Racking handle to move circuit breaker manually between connected and disconnected positions.
2. Tools for circuit-breaker and switchgear tests, inspections, maintenance, and operation.
3. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchgear.
4. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
5. Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
6. Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of draw-out circuit breaker installed.
7. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
8. Storage for Manual: Rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items:

1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fluid reservoirs.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver paralleling low-voltage switchgear in sections of lengths that can be moved past obstructions in delivery path.
- B. Store paralleling low-voltage switchgear indoors in clean dry space with uniform temperature to prevent condensation.

1.8 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed paralleling switchgear perform in accordance with specified requirements and agrees to repair or replace components that fail to perform as specified within extended-warranty period.
 1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that components of paralleling switchgear perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended-warranty period.
 1. **[Initial]**Extended-Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 2. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials **[that failed because of transient voltage surges]** only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor>**.

- B. Description: **<Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation>.**
- C. Accessories: **<Insert accessories that will be provided with product>.**

2.2 EXISTING PRODUCTS[**TO BE MODIFIED**][**TO BE REMOVED AND RE-INSTALLED**]

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. Multiple-generator paralleling monitoring and control panel in paralleling low-voltage switchgear must monitor and control the following standby power system components:
 - 1. Paralleling low-voltage switchgear.
 - 2. Single-generator monitoring and control system.
 - 3. Single-generator paralleling monitoring and control systems that are **[part of paralleling low-voltage switchgear][located at individual engine generator]**.
 - 4. Engine generators.
 - 5. Transfer switches.
 - 6. Circuit breakers downstream of transfer switches.
 - 7. Other load-control devices.
 - 8. Distribution circuit breakers in paralleling low-voltage switchgear.
- C. Redundant Standby Power System:
 - 1. Single generator with associated single-generator paralleling monitoring and control system.
 - 2. Black-start controller with no single point of failure.
 - 3. Black-start controller with backup control in multiple-generator paralleling monitoring and control system.
 - 4. Multiple-generator paralleling monitoring and control system must automatically be performed by backup system without degradation in the event that primary system fails to function (such as component failure or off-line maintenance).
 - 5. Multiple-generator paralleling monitoring and control system must automatically be performed by backup system without degradation in the event that primary system fails to function (such as component failure or off-line maintenance), except for the following manually operated functions:
 - a. Load management.
 - b. Peak shaving.
 - c. **<Insert exceptions>.**
- D. Sequence of Operation for Normal Conditions:
 - 1. Paralleling low-voltage switchgear, including controlled generators[, **controlled circuit breakers,**][, **other controlled devices,**] and transfer switches, must be in automatic position and

- ready to operate on loss of power or other designated initiation conditions.
2. Single-generator monitoring and control system has not received "start" signal from the following:
 - a. Transfer switch.
 - b. Multiple-generator paralleling monitoring and control system.
 - c. **<Insert device>**.

E. Sequence of Operation for Loss of Normal Power Conditions:

1. Single-generator monitoring and control system must receive start signal from redundant system.
 - a. Start signal may come from transfer switch[**or other device**] directly wired to start engine generator.
 - b. Start signal may come from multiple-generator paralleling monitoring and control system that monitors loss of normal source availability from one or more transfer switches[**or other device**].
2. On receiving start signal, single-generator monitoring and control system must start engine generators and achieve rated voltage and frequency.
3. If engine generator fails to start, after expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
4. Transfer Inhibit Control: Multiple-generator paralleling monitoring and control system receives loss of normal source availability signal from transfer switch(es)[**or other device**] and sends transfer inhibit signals.
 - a. Transfer switch(es) serving emergency loads may not be sent transfer-inhibit signal.
 - b. Transfer switch(es) serving other than emergency loads that must transfer within required time must have transfer-inhibit signal end at such time as will permit transfer switch to operate within required time.
 - c. Transfer switch(es) serving other than emergency loads that are not required to transfer within required time must be sent transfer-inhibit signal.
 - d. Transfer switch(es) serving loads that are to be disconnected after detecting loss of normal source availability must signal associated circuit breakers and other load devices to de-energize these predetermined loads.
 - e. Transfer switch(es) serving HVAC loads that need to operate at lower load by modifying HVAC sequence of operation after detecting loss of normal source availability must signal DDC system for HVAC to change to HVAC load-shed sequence of operation for associated equipment.
 - f. Transfer switch(es) serving elevator loads after detecting loss of normal source availability must signal associated elevator controllers that elevators are connected to generator power and must initiate sequence of operation in elevator control system to protect elevators and to reduce elevator load demand.
 - g. Distribution circuit breakers in paralleling low-voltage switchgear, which are indicated in priority-load schedule to transfer load by opening and closing circuit breaker, receive inhibit closing signal.
5. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus.
 - a. Comply with requirements in applicable engine generator Section for selection of first engine generator to connect to isolated paralleling bus.
 - b. Redundant System: Multiple-generator paralleling monitoring and control system selects first engine generator to connect to isolated paralleling bus.

6. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
7. Failure of Engine Generator to Synchronize: If engine generator fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.

F. Priority Controller Sequence of Operation:

1. Programming from Human-Machine Interface for Priority Controller:
 - a. Set priority blocks of load that indicate priority number and scheduled size of load from Priority-Load Schedule. Set generator blocks of capacity that indicate individual engine generators and their capacity.
 - b. Signal to transfer loads to engine generator source may be accomplished by one of the following:
 - 1) Signaling to transfer-inhibit enable transfer switch associated with priority load to transfer load.
 - 2) Signaling load-add relay at transfer switch to transfer priority load.
 - 3) Closing distribution-feeder circuit breaker associated with priority load.
 - 4) Enabling another device.
2. When generator has transferred Priority 1 emergency load, send signal to transfer loads that must be transferred within specific time in accordance with Priority-Load Schedule.
3. When generator capacity is adequate to support next priority load, send signal to transfer next priority load to generator source until priority loads have been transferred.

G. Overload Sequence of Operation:

1. Signal to shed loads from generator source may be accomplished by one of the following:
 - a. Signaling load-shed relay in transfer switch associated with priority load.
 - b. Opening distribution-feeder circuit breaker associated with priority load.
 - c. Disabling another device.
2. Overload sequence of operation sends signal to shed lowest connected load priority when isolated paralleling bus frequency does not return to normal frequency within its adjustable time period.
3. If isolated paralleling bus does not return to normal frequency after shedding lowest connected priority load within adjustable time period, additional load continues to be shed by signaling to load shed in reverse priority until isolated paralleling bus returns to normal frequency.
4. Loads shed can be reconnected to isolated paralleling bus only by manual reset at human-machine interface.

H. Load-Demand Sequence of Operation:

1. With load-demand sequence of operation activated, controller continuously monitors total isolated paralleling bus load.
2. If isolated paralleling bus load is below preset limits and after preset time delay, demand controller shuts down engine generators in predetermined order until minimum number of sets are operating. Set preset limits, predetermined order, and preset time delay, as well as choose manual operation, from human-machine interface.
3. On sensing available isolated paralleling bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.

- I. Individual Transfer Switch Return to Normal Condition Sequence of Operation: Enable individual transfer switches to return to normal power when normal power is available at transfer switch.
- J. Feeder Circuit Breakers in Paralleling Low-Voltage Switchgear Return to Normal Condition Sequence of Operation: When normal power is available at transfer switches served by feeder circuit breaker, open circuit breaker.
- K. Individual Circuit Breaker or Other Load Device for Loads Controlled Downstream from Transfer Switch Sequence of Operation: Return circuit breaker or other load device to closed position when transfer switch serving circuit breaker has returned to normal power.
- L. Return to Normal Condition Sequence of Operation:
 - 1. Process starts on removal of start signals from system.
 - 2. When no load remains on isolated paralleling bus, generator breakers open, go through cool-down period, and shut down.
 - 3. If start signal is received during cool-down period, one engine generator is reconnected to isolated paralleling bus, and system operation follows that of "loss of normal power."
- M. System Test Sequence of Operation:
 - 1. Configure tests to comply with NFPA 110, Level 1 testing requirements for generator. Automatically generate NFPA 110, Level 1 reports.
 - 2. Single-generator test.
 - 3. Multiple-generator test.
 - 4. Start generators manually, by generator exerciser on user-defined schedule, or by remote contact from **[DDC system for HVAC][SCADA system]**.
 - 5. Engine generator(s) start and achieve rated voltage and frequency.
 - 6. Failure of Engine Generator to Start: After expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
 - 7. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
 - 8. Failure of Engine Generator to Synchronize: If engine generator fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.
 - 9. Manually select or automatically preselect whether test is load or no-load test. If test is load test, manually select or automatically preselect loads to be transferred in accordance with schedule or by adjustable time delays at transfer switches. After generators are connected to isolated paralleling bus, transfer loads by sending signal to load-add relay that is connected to input for "remote transfer to generator source" of transfer switch controller or to other devices. **[If test is load-bank test, automatically operate load-bank breaker to connect load bank for testing generators based on number and configuration of generators.]**
 - 10. After adjustable period of time system, allow engine generators to optimize down to only required number to be online to avoid wet stacking. Set stopping and starting sequences through human-machine interface panel device and allow settings based on manual priorities or by engine run time.
 - 11. On sensing available bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.
 - 12. After system test is completed, transfer loads back to normal power with transfer switches. Shut down system using sequence in automatic mode.

13. If there is outage during this mode of operation, automatically change to requirements specified in "Sequence of Operation for Loss of Normal Power Conditions" Paragraph, send load-shed signals to lower-priority loads until load is below generator capacity, signal engine generator that is not currently operating to start, and cancel system test.
- N. Peak-Shaving Sequence of Operation:
1. Start engine generators manually through human-machine interface or by remote contact initiated from peak-shaving command from **[DDC system for HVAC][SCADA system]**.
 2. Engine generator(s) start and achieve rated voltage and frequency.
 3. Failure of Engine Generator to Start: After expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
 4. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus.
 5. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
 6. Failure of Engine Generator to Synchronize: If generator set fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.
 7. Through human-machine interface manually select or on closure of contact from peak-shaving command preselected loads to be automatically transferred to isolated paralleling bus. After engine generators are connected to isolated paralleling bus, transfer loads by sending signal to corresponding load-add relays that are connected to remote transfer to generator source control input at transfer switch or similar control devices. Add loads until contact closure from **[DDC system for HVAC][SCADA system]** opens.
 8. After adjustable period of time, allow engine generators to optimize down to only required number to be online to avoid wet stacking. Set stopping and starting sequences through human-machine interface panel device and allow settings based on manual priorities or by engine run time.
 9. If isolated paralleling bus load is below preset limits and after preset time delay, demand controller shuts down engine generators in predetermined order until minimum number of sets are operating. Set preset limits, predetermined order, and preset time delay, as well as choose manual operation, from human-machine interface.
 10. On sensing available isolated paralleling bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.
 11. After peak shaving is completed, transfer loads back to normal power. Shut down system using sequence in automatic mode.
 12. If there is outage during this mode of operation, automatically change to requirements specified in "Sequence of Operation for Loss of Normal Power Conditions" Paragraph, send, send load-shed signals to lower-priority loads until load is below engine generator capacity, signal generators that are not currently operating to start, and cancel system peak-shaving operation.
 13. Manual Sequence of Operation: Include functions indicated for automatic mode, except that operator must be able to monitor parameters and manually perform operations.
- O. Comply with NFPA 110 for the following:
1. Legally Required Standby Systems: EPSS Level 1, Type 10.
 2. Optional Standby Systems: EPSS **[Level 1][Level 2]**, **[Type 10][Type 60][Type 120][Manual]**.
- P. Comply with NFPA 99 for healthcare applications.

2.4 MULTIPLE-GENERATOR PARALLELING MONITORING AND CONTROL SYSTEM

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[ABB, Electrification Business]**
 2. **[ASCO Power Technologies]**
 3. **[Caterpillar, Inc.; Electric Power Division]**
 4. **[Cummins Power Generation]**
 5. **[Russelectric, Inc]**
 6. **[SAI Advanced Power Solutions/Switchboard Apparatus Inc.]**
 7. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[ABB, Electrification Business]**
 2. **[ASCO Power Technologies]**
 3. **[Caterpillar, Inc.; Electric Power Division]**
 4. **[Cummins Power Generation]**
 5. **[Russelectric, Inc]**
 6. **[SAI Advanced Power Solutions/Switchboard Apparatus Inc.]**
 7. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for **[engine generator][transfer switches][transfer switches and engine generators]**.
- D. Components and Devices: Factory mounted in **[metal-enclosed, paralleling low-voltage switchgear][separate switchboard]**.
1. Paralleling Low-Voltage Switchgear Door-Mounted Control Devices: Industrial, oil-type devices.
 2. Indicator Lamps: High-intensity digital display.
- E. Control Power for Multiple-Generator Monitoring and Control System: Supplied from 24 V(dc) starting batteries of engine generators.
1. Isolate battery bank to prevent failure of one battery from disabling entire system.
 2. Include, if necessary, separate control power battery system rated 24 V(dc) for equipment unable to accept voltage drop that occurs during engine cranking.
- F. Redundant Multiple-Generator Monitoring and Control System Controller:
1. Fully equip with hot swappable programmable logic controller, power supplies, and I/O points.
 2. Black-start control equipment specified in applicable engine generator Section.
- G. Multiple-generator monitoring and control system auto/manual selector switch.
- H. Control switch for circuit breaker that serves load bank.
- I. Full-Color, Touch-Screen, Human-Machine Interface Device:
1. Minimum viewing area of **[60 sq. inch (387 sq. cm)][100 sq. inch (645 sq. cm)]** must be configurable in either U.S. Standard or SI (metric) units.
 2. Main Menu: Include date, time, and system status messages. Configure screens so that no

- screen is more than three touches from other screen.
- a. Individual engine generator data must be accessed at paralleling low-voltage switchgear from **[main menu][main menu and single-generator paralleling monitoring and control system]**.
3. One-Line Diagram: Depicting system configuration and system status by screen animation, screen colors, text messages, or pop-up indicators.
- a. Conditions for Engine Generators, Buses, and Paralleling Circuit Breakers: Energized or de-energized.
 - b. Engine Generator Modes:
 - 1) Auto.
 - 2) Lockout.
 - 3) Reset.
 - 4) Off.
 - 5) Cool down.
 - 6) Test off line.
 - 7) Test on load.
 - c. Engine Generator Status: Normal, warning, shutdown, or load-demand stop.
 - d. Paralleling Circuit-Breaker Status: Open, closed, or tripped.
 - e. Bus Conditions: Energized or de-energized.
 - f. Percent load.
4. AC metering screen for isolated paralleling bus must display the following:
- a. Phase, volts, and amperes.
 - b. Kilowatts.
 - c. Kilovolt amperes.
 - d. Kilovolt-ampere rating.
 - e. Power factor.
 - f. Frequency.
 - g. Kilowatt hour.
 - h. Kilowatt demand.
 - i. Real-time trend chart for system kilowatts and volts updated on not less than one-second intervals.
 - j. A minimum of one historical trend chart for total system loads with intervals no shorter than five minutes and minimum duration of four hours.
 - k. Percent of available capacity of engine generators that are operating in parallel on bus.
5. Engine Generator Monitoring and Control Screen:
- a. Control:
 - 1) Engine generator manual start/stop control (functional only when paralleling low-voltage switchgear mounted control switch is in "Auto" position).
 - 2) Engine generator alarm reset.
 - 3) Manual paralleling and circuit-breaker enable/inhibit controls.
 - 4) Engine function and timer settings.
 - 5) System function, testing, and timer settings.
 - 6) Engine generator optimization settings: automatically determine priority of engine generators based on engine run time and number of engine starts or manually assign engine priorities.

- b. Status and Alarms:
 - 1) Power Metering: Watts, volt-ampere reactive, power factor, frequency, amperes, and voltage.
 - 2) Engine run hours.
 - 3) Engine status.
 - 4) Number of generator circuit-breaker operations.
 - 5) Replicate status and alarms from single-generator paralleling monitoring and control panel.
6. Dual, Three-Phase, Metering Screen: Graphical analog (270 electrical degree) metering representation with digital display. Display two generators at same time or one generator and isolated paralleling bus at same time. Display graphical synchroscope when one generator and isolated paralleling bus are selected.
 - a. True RMS, three-phase voltage, amperes, kilowatts, kilovolt amperes, kilovolt-ampere reactive, power factor, and frequency parameters.
 - b. Engine battery voltage display.
7. Password-Protected System Control Screen:
 - a. System Test Modes: Test with load/test without load/normal/retransfer time-delay override.
 - b. Test with Load: Starts and synchronizes engine generators on isolated paralleling bus; loads are transferred to isolated paralleling bus.
 - c. Test without Load: Starts and synchronizes engine generators on isolated paralleling bus but does not transfer loads to isolated paralleling bus.
 - d. Time adjustments for retransfer time delay, transfer time delay, system time delay on stopping, and system time delay on starting.
8. Password-Protected, Peak-Shaving Control Screen:
 - a. Peak-Shaving Modes: Manual start and transfer of loads; automatic start and transfer of loads by DDC system for HVAC peak-shaving relay closure.
 - b. For automatic mode, set load priorities for peak-shaving function.
 - c. Time adjustments for retransfer time delay, transfer time delay, system time delay on stopping, and system time delay on starting.
9. Load-Demand Control Screen: Monitors total load on isolated paralleling bus and controls number of engine generators running so that capacity tracks load demand.
 - a. Load-Demand Control: Enable/disable.
 - b. Set engine generator shutdown sequence.
 - c. Load-Demand Pickup Set Point: Adjustable from 90 to 40 percent in 5 percent increments.
 - d. Load-Demand Dropout Set Point: Adjustable from 20 to 70 percent in 5 percent increments.
10. Manual Load Control Screen: Allows operator to manually add or delete engine generators from paralleled system in response to system load parameters.
 - a. Indication of system available in kilowatts and amperes.
 - b. Control functions allow manual addition/removal of engine generators on system, and activation of load-shed/load-restore functions.
11. Load-Add/Load-Shed Sequence Screen: Password protected and with the following minimum functions:

- a. Display sequence.
 - b. Assigns "load-add sequence priority" to load-control relay with designation for relay operation after set number of engine generators are online.
 - c. Assigns "load-shed sequence priority" to load-control relay with designation for relay operation depending on number of engine generators online.
12. Alarm Summary and Run Report Screen:
- a. Lists most recent alarm conditions and status changes.
 - b. Lists minimum of most recent 32 alarm conditions by name and time/date; acknowledges alarm conditions with time/date.
 - c. For start signal, lists start time and date, stop time and date, maximum kilowatt and ampere load on system during run time, and start and stop times of individual engine generators.
 - d. Lists generator circuit position and status.
 - e. Access to trend monitored automatic transfer switches.
 - f. **[16-gigabyte]<Insert value>** hard-disk space for storing database file for multiple-generator paralleling monitoring and control panel trending and event logging. Trend and log data at resolution of one second. If hard drive is full, overwrite in first-in-first-out procedure.
 - 1) Trend up to eight monitored points simultaneously.
13. Load Status and Control Screen: Displays status of automatic transfer switches connected to system for **[32][64]** transfer switches, and other controlled devices.
- a. Automatic transfer switch connected to normal.
 - b. Automatic transfer switch connected to emergency.
 - c. Controlled circuit breakers downstream from automatic transfer switch device enabled or disabled.
 - d. Engine start indication.
 - e. Load-shed indication.
 - f. Load-add indication.
 - g. Inhibit to emergency source.
 - h. Inhibit to normal source.
 - i. Transfer Switch Power Metering Function: Total kilowatt, three-phase current, and three-phase voltage.
 - j. Automatic Transfer Switch Load Priority: Ability to change priorities of automatic transfer switches (password protected).
 - k. Display name, status, and priority of load block (whether on or off) and total load of that block.
 - l. Allow for manually adding or shedding loads.
14. Automated email messages must be transmitted when shutdowns occur and must include time and date of alarm.
15. Based on either number operations or time since last maintenance, suggest maintenance period for generator (run hours), controlled circuit breaker (number of operations), and transfer switches (number of transfers).
16. Status and Alarm Screen:
- a. Visual alarm status indicator and alarm horn with silence and acknowledge push-button.
 - b. Status, Light Only:
 - 1) "SYSTEM NOT IN AUTO" (red).
 - 2) Running Status: Display engine generator number and running-status light (green).
 - 3) Load-demand mode (green).

- 4) Priority Load Status: Display load number with "LOAD ADD" (green) and "LOAD SHED" (red).
- 5) System test (green).
- 6) Remote system start (red).
- 7) Monitoring of Transfer Switch:
 - a) Normal source available (green).
 - b) Connected to normal (green).
 - c) Generator source available (green).
 - d) Connected to generator source (green).

c. Status Light and Alarm:

- 1) Isolated paralleling bus under frequency (red).
- 2) Isolated paralleling bus over frequency (red).
- 3) Auxiliary power failure (red).
- 4) Emergency start signal power failure (red).
- 5) Load-Shed Level Status: Displays load number and red load-shed, status light.
- 6) Generator Alarm Status: Displays generator number and red "Check Generator" status light.
- 7) Controller malfunction (red).
- 8) Check station battery (red).
- 9) Isolated paralleling bus overload (red).
- 10) System not in auto (red).
- 11) Main tank, low fuel (amber)
- 12) Main tank, high fuel (amber).
- 13) Main tank, fuel leak (red).

J. Remote Monitoring: Replicate human-machine interface monitoring functions **[at SCADA][at remote computer terminal][via communication bus]**.

K. Remote Monitoring of Status and Alarms: Replicate human-machine interface status and alarms at DDC system for HVAC via isolated contacts.

2.5 SINGLE-GENERATOR PARALLELING MONITORING AND CONTROL SYSTEM

A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. **[ABB, Electrification Business]**
2. **[ASCO Power Technologies]**
3. **[Caterpillar, Inc.; Electric Power Division]**
4. **[Cummins Power Generation]**
5. **[Russelectric, Inc]**
6. **<Insert manufacturer's name>**

B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[ABB, Electrification Business]**
2. **[ASCO Power Technologies]**
3. **[Caterpillar, Inc.; Electric Power Division]**
4. **[Cummins Power Generation]**

5. [Russelectric, Inc]
 6. <Insert manufacturer's name>
- C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for [engine generator][transfer switches][transfer switches and engine generators].
- D. Components and Devices: Factory mount in single-generator section of metal-enclosed, paralleling low-voltage switchgear.
1. Paralleling low-voltage switchgear door-mounted control devices must be industrial oil-type devices. Indicator lamps must be high-intensity digital display.
- E. Control Power: Supply control power from 24 V(dc) starting batteries from controlled generator. Include separate control power battery system rated 24 V(dc) for equipment unable to accept voltage drop that occurs during engine cranking.
- F. Programmable Logic Controller: Factory-mounted controller, separate from multiple-generator paralleling monitoring and control system in single-generator paralleling monitoring and control module of metal-enclosed, paralleling low-voltage switchgear.
- G. Single-Generator Paralleling Low-Voltage Switchgear Circuit Breaker:
1. Factory mount circuit-breaker control switch.
 2. Paralleling Circuit-Breaker Monitor and Control:
 - a. Monitors circuit-breaker auxiliary contacts.
 - b. Initiates fault signal if circuit breaker fails to close within adjustable time-delay period (0.5 to 15 seconds).
 - c. Trips open and locks out paralleling circuit breaker on paralleling circuit breaker failure to close, until manually reset.
- H. Generator Mode Selector Switch: Factory mounted in single-generator paralleling monitoring and control system module of metal-enclosed, paralleling low-voltage switchgear.
1. "Lockout/Reset" mode prevents generator from starting or immediately shuts down generator if running.
 2. "Off/Cool-Down" mode stops engine after cool-down period.
 3. "Auto" mode allows generator to start on receipt of remote start signal. If generator is already running and there is not start signal, then "Auto" mode allows engine to run for predetermined cool-down period before stopping.
 4. "Test Off-Line" allows engine to start and run as if start signal were received, except it does not allow generator to connect to isolated paralleling bus unless start signal is received.
 5. "Test Online" allows engine to start, run, and connect to isolated paralleling bus as if start signal were received.
- I. Engine Generator Controller: Woodward compatible.
1. Factory mount governor (speed control and load sharing) supplied in applicable engine generator Section in single-generator monitoring and control module.
 2. Loading control interface to governor system.
 3. Automatic synchronizer.
- J. Automatic Synchronizer:
1. Include sync mode selector switch with RUN-OFF-CHECK-PERMISSIVE positions. In RUN mode, enable active synchronization and sync-check function. In CHECK mode, perform sync-

check function. In PERMISSIVE mode, annunciate when generator and bus are synchronized but do not allow breaker closure.

- a. Include discrete inputs in synchronizer to switch to each mode.
2. Bias generator speed and voltage to match paralleling isolated bus.
 3. If automatic synchronizer receives permissive signal to allow closure to paralleling isolated bus and generator is within synchronizing limits, send close signal to single-generator paralleling circuit breaker.
- K. Sync-switch, removable, keyed T-handle.
- L. "Engine Generator Synchronized" Indication: Indicator lamp or digital-display indication of synchronization.
- M. Voltage and Frequency Raise and Lower Switches: Allow plus or minus 5 percent adjustment when engine generator is operating but is not connected to isolated paralleling bus.
- N. Control and Reset Push-Button: Have flashing lamp to indicate generator is locked out due to fault condition.
- O. Lamp Test Push-Button: Simultaneously tests lamps on panel.
- P. Control Panel Illumination: DC lamps illuminate panel when lighting from surrounding environment is unavailable.
- Q. Emergency Stop Push-Button: Red mushroom-head switch maintains its position until manually reset.
- R. Alarm and Status Indicating Display:
1. Status and Alarm Indications:
 - a. Status, Light Only (Nonlatching):
 - 1) Generator mode selector switch not in auto (red).
 - 2) Generator mode selector switch in auto (green).
 - 3) Start signal received (green).
 - 4) Emergency stop activated (red).
 - 5) Demand mode standby (green).
 - 6) Timing for start (green).
 - 7) Timing for shutdown (green).
 - 8) Generator circuit breaker closed (red).
 - 9) Generator circuit breaker open (green).
 - a) Generator circuit breaker locked out (white).
 - b) Generator circuit breaker racked out (white)
 - 10) Remote generator breaker is open (red).
 - 11) Engine stopped (green).
 - 12) Time-delay start (green).
 - 13) Engine running (red).
 - 14) Engine cool-down (green).
 - b. Pre-Alarm, Light and Horn (Nonlatching):

- 1) Pre-high coolant temperature (amber).
- 2) Pre-low oil pressure (amber).
- 3) Low coolant temperature (amber).
- 4) Engine low battery (amber).
- 5) Battery charger failure (amber).
- 6) Auxiliary power failure (amber).
- 7) Low fuel-day tank (amber).
- 8) Paralleling low-voltage switchgear generator breaker failed to close (amber).
- 9) Paralleling low-voltage switchgear generator breaker failed to open (amber).
- 10) Overcurrent alarm (amber).
- 11) Day tank low-fuel alarm (amber).
- 12) Ground-fault alarm (amber).

c. Shutdown Alarm, Light and Horn (Latching):

- 1) Engine overcrank (red).
- 2) Engine overspeed (red).
- 3) Engine low oil pressure (red).
- 4) Engine high coolant temperature (red).
- 5) Engine low coolant level (red).
- 6) Engine remote emergency shutdown (red).
- 7) Generator fail to synchronize shutdown (red).
- 8) Generator circuit breaker tripped (red).
- 9) Generator circuit breaker failure (red).
- 10) Generator not in auto (red).
- 11) Generator loss of field (red).
- 12) Generator reverse power (red).
- 13) Generator undervoltage (red).
- 14) Generator overvoltage (red).
- 15) Generator underfrequency (red).
- 16) Generator overfrequency (red).
- 17) Phase rotation (red).
- 18) Generator short circuit (red).
- 19) Day tank low-fuel shutdown (red).
- 20) Air damper activated, shutdown (red).

S. Paralleling Controls and Protection:

1. Engine Generator Governor (Speed Control and Load Sharing): Comply with requirements in applicable engine generator Section. Components must be Woodward compatible.
2. Kilowatt Load Sharing Control and Interface:
 - a. Operates engine generator governors during synchronizing and provides isochronous load sharing when paralleled.
 - b. Allows engine generator to ramp up to kilowatt load level[**signaled by multiple-generator monitoring and control controller**].
3. Load-Demand Governing Control:
 - a. Causes engine generator to ramp down at operator-adjustable rate to zero load when signaled to shut down in load-demand mode.
 - b. Causes engine generator to ramp up at operator-adjustable rate to proportional share of total isolated paralleling bus load when signaled to restart.
4. Kilovolt-Ampere-Reactive Load Sharing Control:

- a. Operates alternator excitation system while engine generator is paralleled.
 - b. Causes sharing of reactive load among engine generators to within 1 percent of equal levels without voltage drop.
5. Paralleling Monitor and Control:
- a. Monitors and verifies that engine generator has reached 90 percent of nominal voltage and frequency before closing to isolated paralleling bus.
 - b. Prevents accidental closure of breaker with engine generator out of phase with bus.
 - c. Prevents out-of-phase closure to isolated paralleling bus due to errant manual or automatic operation of synchronizer.
 - d. System of diagnostic digital displays to assist in analyzing synchronization.
6. Synchronizer Control:
- a. Adjusts engine governor to match voltage, frequency, and phase angle of isolated paralleling bus.
 - b. Maintains engine generator voltage within 1 percent of isolated paralleling bus voltage, and phase angle within 20 electrical degrees of isolated paralleling bus for 0.5 seconds before circuit-breaker closing.
 - c. Provides "fail-to-synchronize time delay" adjustable from 10 to 120 seconds; with field selectivity to either initiate alarm or shut down engine generator on failure condition.
7. Reverse Power Monitor and Control:
- a. Prevents sustained reverse power flow in engine generator.
 - b. Trips generator paralleling circuit breaker and initiates engine generator shutdown when reverse power condition exceeds 10 percent of engine generator kilowatt for three seconds.
 - c. Trips generator paralleling circuit breaker and initiates engine generator shutdown when reverse kilovolt-ampere conditions exceeds 20 percent of generator kilovolt-ampere rating.
8. Phase Rotation Monitor and Control: Verifies engine generator and isolated paralleling bus phase rotation match prior to closing paralleling circuit breaker.
9. Electronic Alternator Overcurrent Alarm and Shutdown Control:
- a. Monitors current flow at engine generator output terminals.
 - b. Initiates alarm when load current on engine generator is more than 110 percent of rated current for more than 60 seconds.
 - c. Overcurrent shutdown function matched to thermal damage curve of alternator.
10. Electronic Alternator Short-Circuit Protection: Shuts down generator, without instantaneous-trip function, when load current is more than 175 percent of rated current and combined time/current approaches thermal damage curve of alternator.
11. Loss of Excitation Monitor: Displays alarm on single-generator paralleling monitoring and control panel when generator controls sense loss of excitation to alternator while paralleled to isolated paralleling bus.
12. Cool-Down, Time-Delay Control: Adjustable, zero to 600 seconds.
13. Start Time-Delay Control: Adjustable, zero to 300 seconds.
14. Frequency Control: Initiate alarm condition when engine generator is below 90 percent of rated frequency for more than 20 seconds or is over frequency.
15. Under- and Overvoltage Control: Initiate alarm condition when engine generator is at 90 percent voltage for more than 20 seconds or is over voltage.

2.6 METAL-ENCLOSED, CIRCUIT-BREAKER SWITCHGEAR (600 V AND LESS)

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Eaton]**
 - 3. **[Siemens Industry, Inc., Energy Management Division]**
 - 4. **[Square D; Schneider Electric USA]**
 - 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Eaton]**
 - 3. **[Siemens Industry, Inc., Energy Management Division]**
 - 4. **[Square D; Schneider Electric USA]**
 - 5. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for **[engine generator][transfer switches][transfer switches and engine generators]**.
- D. Description: Factory assembled and tested, and complying with IEEE C37.20.1 and UL 1558.
- E. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded neutral system.
- F. Nominal System Voltage: **[480 V, three][480/277 V, four][240 V, three][208/120 V, four]** wire, 60 Hz.
- G. Isolated Paralleling Bus: **[5000 A][4000 A][3200 A][2000 A][1600 A]<Insert amperes>**.
 - 1. Phase-, Neutral-, and Ground-Bus Materials:
 - a. Phase**[and Neutral]** Bus: **[Copper, silver plated at connection points][Copper, tin plated][Aluminum, tin plated]**.
 - b. Ground Bus: Copper**[, silver][, tin]** plated; minimum size **1/4 by 2 inch (6 by 50 mm)**.
 - 2. Bus bars connect between vertical sections and between compartments. Cable connections are not permitted.
 - a. Uniform capacity for horizontal and vertical bus.
 - b. Neutral Bus: **[50][100]** percent of phase-bus ampacity, except as indicated. **[Equip bus with pressure-connector terminations for outgoing neutral conductors][Include braces for neutral-bus extensions for busway feeders]**.
 - c. Supports and Bracing for Buses: Adequate strength for indicated short-circuit currents.
- H. Short-Circuit Current: Match rating of highest-rated circuit breaker in switchgear assembly.
- I. Switchgear Fabrication:
 - 1. Bus isolation barriers must be arranged to isolate line bus from load bus at main and tie circuit breaker.
 - 2. Circuit-breaker compartments must be equipped to house drawout-type circuit breakers and must be fitted with hinged outer doors.
 - 3. Auxiliary Compartments: Match and align with basic switchgear assembly.

- a. Bus transition sections.
 - b. Pull sections.
 - c. Hinged front panels for access to accessory and blank compartments.
 - d. Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and side covers; and ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.
 - 1) Set pull box back from front to clear circuit-breaker lifting mechanism.
 - 2) Bottom: Insulating, fire-resistive material with separate holes for cable drops into switchgear.
 - 3) Cable Supports: Arranged to ease cabling and adequate to support cables indicated, including those for future installation.
 - e. Neutral Disconnect Link: Bolted, uninsulated, **1/4 by 2 inch (6 by 50 mm)** copper bus, arranged to connect neutral bus to ground bus.
 - f. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
 - g. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
 - 1) Sprayed Insulation Thickness: **3 mil (0.08 mm)**, minimum.
 - 2) Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.
4. Circuit-Breaker Terminals for Cable Connections: Silver-plated copper bus extensions equipped with pressure connectors for conductors.
- J. Circuit Breakers: Comply with IEEE C37.13, IEEE C37.16, and IEEE C37.17.
1. Ratings: As indicated for continuous, interrupting, and short-time current ratings for circuit breaker; voltage and frequency ratings same as switchgear.
 2. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
 - a. Normal Closing Speed: Independent of both control and operator.
 - b. Slow Closing Speed: Optional with operator for inspection and adjustment.
 3. Stored-Energy Mechanism: Electrically charged, with optional manual charging[**and operation counter**].
 4. Trip Devices:
 - a. Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, and release mechanism.
 - b. Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
 - c. Temperature Compensation: Ensures accuracy and calibration stability from minus 5 to plus 40 deg C.
 - d. Time-Current Characteristics: Field adjustable.
 - e. Current Adjustability: Dial settings and rating plugs on trip units or sensors on circuit breakers, or combination of these methods.
 - f. Long-Time- and Short-Time-Delay Functions: Three bands, minimum; marked "minimum," "intermediate," and "maximum."
 - g. Pickup Points:
 - 1) Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip

- function for switchable I-squared-t operation.
 - 2) Five minimum, for instantaneous-trip functions.
 - h. Ground-fault protection[**alarm**] with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup. Arrange to provide protection for the following:
 - 1) Three-wire circuit or system.
 - 2) Four-wire circuit or system.
 - 3) Four-wire, double-ended substation.
 - i. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
- 5. Auxiliary Contacts: For interlocking or remote indication of circuit-breaker position, with spare auxiliary switches and other auxiliary switches required for normal circuit-breaker operation, quantity as indicated, consisting of two Type "a" and two Type "b" stages (contacts) wired through secondary disconnect devices to terminal block in stationary housing.
- 6. Drawout Features: Circuit-breaker mounting assembly equipped with racking mechanism to position circuit breaker and hold it rigidly in connected, test, and disconnected positions.
 - a. Interlocks: Prevent movement of circuit breaker to or from connected position when it is closed.
 - b. Circuit-Breaker Positioning:
 - 1) An open circuit breaker may be racked to or from connected, test, and disconnected positions only with associated compartment door closed, unless live parts are covered by full dead-front shield.
 - 2) An open circuit breaker may be manually withdrawn to position for removal from structure with door open.
 - 3) Status for connection devices for different positions includes the following:
 - a) Test Position: Primary disconnect devices disengaged, and secondary disconnect devices and ground contact engaged.
 - b) Disconnected Position: Primary and secondary devices and ground contact disengaged.
- 7. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position; arranged to permit inspection of contacts without removing circuit breaker from switchgear.
- 8. Padlocking Provisions: For installing at least three padlocks on circuit breaker to secure its enclosure and prevent movement of drawout mechanism.
- 9. Operating Handle: One for each circuit breaker capable of manual operation.
 - a. Generator Paralleling Circuit Breakers: Interlocked with system control so that circuit breaker does not close unless mode selector switch is in "Auto" position and engine generator is synchronized with isolated paralleling bus.
- 10. Electric Close Button: One for each electrically operated circuit breaker.
 - a. Generator Paralleling Circuit Breakers: Interlocked with system control so that circuit breaker does not close unless mode selector switch is in "Auto" position and engine generator is synchronized with isolated paralleling bus.
- 11. Mechanical Interlocking of Circuit Breakers: Uses mechanical tripping lever or equivalent design and electrical interlocks.
- 12. Key Interlocks: Arranged so keys are attached at devices indicated. Mountings and hardware are

- included where future installation of key-interlock devices is indicated.
13. Undervoltage Trip Devices:

- a. Instantaneous, with adjustable pickup voltage.
- b. Adjustable time-delay and pickup voltage.

14. Shunt-Trip Devices:

- a. 24 V(dc) for generator paralleling circuit breakers and for distribution paralleling switchgear circuit breakers.
- b. Where indicated.

15. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

K. Metering:

1. Type and Locations:

- a. Isolated Paralleling Bus: **[Multifunction digital-metering monitor;][Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;]** on door of separate metering compartment.
- b. Generator Circuit Breakers: **[Multifunction digital-metering monitor;][Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;]** on circuit-breaker door.
- c. Distribution Circuit Breakers: **[Multifunction digital-metering monitor;][Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;]** on circuit-breaker door.

2. Instrument Transformers:

- a. Comply with IEEE C57.13.
- b. Potential Transformers: Secondary-voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.
- c. Current Transformers:
 - 1) Burden and accuracy class suitable for connected relays, meters, and instruments.
 - 2) Size for maximum momentary current amperage based on calculation or momentary rating of circuit breaker protecting conductor.
 - 3) Include shorting-type terminal blocks.

3. Multifunction Digital-Metering Monitor:

- a. Microprocessor-based unit suitable for three- or four-wire systems.
- b. Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
- c. Switch-selectable digital display with the following features:
 - 1) Phase Currents, Each Phase: Plus or minus 1 percent.
 - 2) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - 3) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - 4) Three-Phase Real Power: Plus or minus 2 percent.
 - 5) Three-Phase Reactive Power: Plus or minus 2 percent.
 - 6) Power Factor: Plus or minus 2 percent.
 - 7) Frequency: Plus or minus 0.5 percent.

- 8) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
- 9) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
- d. Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
- e. Mounting: Display and control unit that is flush or semirecessed mounted in instrument compartment door.
- 4. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, accurate within 1 percent of full scale range; semirecessed mounting, with antiparallax 250-degree scale and external adjustment.
 - a. Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
 - b. Voltmeter Selector Switch: Rotary type with off position; provides readings of phase-to-phase[**and phase-to-neutral**] voltages.
 - c. Ammeters: Cover expanded scale range of bus rating plus 10 percent.
 - d. Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
 - e. Watt-Hour Meters: Flush- or semirecessed-mounting type, **[5 A, 120 V, three phase, three wire; with three elements]<Insert characteristics>, [15-minute]<Insert value>** indicating demand register, and provision for testing and adding pulse initiation.
 - f. Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with **[15-minute]<Insert value>** interval.
 - 1) Operation: Counts and records succession of pulses entering two channels.
 - 2) Housing: Drawout type, back-connected case arranged for semirecessed mounting.
- L. Relays: Comply with IEEE C37.90, integrated digital type; with test blocks and plugs.
 - 1. Functions: **<Insert functions>**.
 - 2. Characteristics: **<Insert characteristics>**.
- M. Door-Mounted Control Components: Industrial-type oiltight devices and digital-display indicator lamps.
- N. Control Power Supply:
 - 1. Control power transformer must supply 120 V(ac) control circuits from generator source through secondary disconnect devices.
 - 2. Include control power transformer for generator paralleling switchgear circuit breaker connected to generator side of circuit breaker.
 - 3. Include control power transformer for distribution paralleling switchgear circuit breaker.
 - 4. Dry-type transformers must be in separate compartments for units larger than 3 kVA, including primary and secondary fuses.
 - 5. Two control power transformers in separate compartments with necessary interlocking relays; transformer must be connected to line side of associated main circuit breaker.
 - a. Secondary windings must be connected through relay(s) to control bus to effect automatic transfer scheme.
 - b. Secondary windings must be connected through internal automatic transfer switch to paralleling switchgear control power bus.
 - 6. Control Power Fuses: Primary and secondary fuses must provide current-limiting and overload protection.

- O. Control Wiring:
1. Factory installed, complete with bundling, lacing, and protection.
 2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
 3. Conductors must be sized in accordance with NFPA 70 for duty required.
- P. Provision for Future Devices: Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.
- Q. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems" for electrical identification devices and installation.
1. Identify units, devices, controls, and wiring.
 2. Mimic Bus: Continuous mimic bus, applied to front of paralleling low-voltage switchgear, arranged in one-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.
 - a. Mimic-bus segments coordinated with devices in paralleling low-voltage switchgear sections to which applied, to produce concise visual presentation of principal paralleling switchgear components and connections.
 - b. Medium: Painted graphics, as selected by Architect.
 - c. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.
- R. Indoor Enclosure Material: Steel.
- S. Outdoor Enclosure Fabrication Requirements: Galvanized steel, weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating.
1. Features for Compartment or Group of Compartments:
 - a. Thermostatically controlled air-conditioning units sized to prevent temperatures exceeding **[80 deg F (27 deg C)]<Insert temperature>**.
 - b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation.
 - c. Louvers equipped with insect and rodent screen and filter; arranged to permit air circulation while excluding insects, rodents, and exterior dust.
 - d. Hinged front door with locking provisions.
 - e. Interior light with switch.
 - f. Weatherproof ground-fault circuit-interrupter duplex receptacle.
 - g. Power for air conditioning, heaters, lights, and receptacles to be provided from control power transformer.
 2. Features for Weatherproof Internal Aisle Construction:
 - a. Common internal aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
 - b. Aisle access doors with exterior padlocking provisions and interior panic latches.
 - c. Thermostatically controlled aisle space heaters operating at one-half or less of rated voltage.
 - d. Thermostatically controlled, aisle air-conditioning units sized to prevent temperatures exceeding **104 deg F (40 deg C)**.
 - e. Vaporproof, fluorescent aisle lights with low-temperature ballasts, controlled by wall switch at entrance.
 - f. At least two duplex, ground-fault circuit-interrupter receptacles, located in aisle.

- g. Aisle ventilation louvers arranged with makeup air near floor level and exhaust air near roof level.
 - 1) Louvers must have insect and rodent screen and filter, arranged to permit air circulation while excluding insects, rodents, and exterior dust.
 - 2) Exhaust fans.
- T. Access: Fabricate enclosure with hinged, rear cover panels to allow access to rear interior of paralleling low-voltage switchgear.
- U. Finish: Manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.

2.7 SOURCE QUALITY CONTROL

- A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
 - 1. Perform successfully tests prior to witness test.
- B. Testing Administrant: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate paralleling switchgear.
- C. **[Factory]**Tests and Inspections: Test and inspect paralleling low-voltage switchgear, with **[generators][generators and transfer switches]**, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with {Insert standards} before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance on control units.
 - 1. Paralleling Low-Voltage Switchgear:
 - a. NETA ATS, 7.6.1.2, "Circuit Breaker, Air, Low-Voltage Power Switchgear."
 - b. Factory test with simulated inputs. Test control and relay functions for proper operation.
 - 2. Engine Generator:
 - a. NETA ATS, 7.22.1, "Emergency Systems, Engine Generator."
 - b. NETA ATS, 7.15.1, "Rotating Machinery, AC Motors & Generator."
 - 3. Automatic Transfer Switches:
 - a. NETA ATS, 7.22.3, "Emergency System, Automatic Transfer Switches."
- D. Verification of Performance: Rate paralleling low-voltage switchgear, with **[generators][generators and transfer switches]**, in accordance with operation of functions and features specified.
- E. Nonconforming Work:
 - 1. Paralleling low-voltage switchgear, with **[generators][generators and transfer switches]**, will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, where paralleling low-voltage switchgear will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF SWITCHGEAR COMPONENTS

- A. Product Selection for Restricted Space: Drawings indicate maximum dimensions for paralleling low-voltage switchgear, including clearances between paralleling switchgear and adjacent surfaces and other items. Comply with indicated maximum dimensions.

3.3 INSTALLATION

- A. Comply with applicable portions in NECA 400.
- B. Equipment Mounting:
 - 1. Install paralleling low-voltage switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
 - 2. Comply with requirements for seismic control devices specified in **[Section 260548 "Vibration and Seismic Controls for Electrical Systems."][Section 260548.16 "Seismic Controls for Electrical Systems."]**
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from paralleling low-voltage switchgear units and components.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 260553 "Identification for Electrical Systems."
- B. Diagrams and Instructions:
 - 1. Frame and mount under clear acrylic plastic on front of paralleling low-voltage switchgear.
 - a. Operating Instructions: Printed basic instructions for paralleling low-voltage switchgear, including control and key-interlock sequences and emergency procedures.
 - b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.
 - 2. Storage for Maintenance: Include rack or holder, near operating instructions, for copy of maintenance manual.
- C. Compartment Nameplates: **[Engraved, laminated acrylic][Engraved, melamine plastic][Preprinted**

aluminum], as described in Section 260553 "Identification for Electrical Systems," for compartment, mounted with corrosion-resistant screws.

- D. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.
1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce concise visual presentation of principal switchgear components and connections.
 2. Medium: Painted graphics, as selected by Architect.
 3. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.
- E. Arc-Flash Warning Labels:
1. Comply with requirements in Section 260573.19 "Arc-Flash Hazard Analysis." Produce **3.5-by-5-inch (76-by-127-mm)** self-adhesive equipment label for each work location included in analysis.
 2. Comply with requirements in Section 260553 "Identification for Electrical Systems." Produce **3.5-by-5-inch (76-by-127-mm)** self-adhesive equipment label for each work location included in analysis. Labels must be machine printed, with no field-applied markings.
 - a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:
 - 1) Location designation.
 - 2) Nominal voltage.
 - 3) Flash protection boundary.
 - 4) Hazard risk category.
 - 5) Incident energy.
 - 6) Working distance.
 - 7) Engineering report number, revision number, and issue date.
 - b. Labels must be machine printed, with no field-applied markings.

3.5 CONNECTIONS

- A. Comply with grounding and bonding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Comply with wire and cable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

- A. **[Acceptance]**Testing Preparation: Prepare for acceptance tests as follows:
1. Test insulation resistance for switchgear bus, component, connecting supply, feeder, and control circuit.
 2. Test continuity of circuit.
 3. Inspect paralleling switchgear installation, including wiring, components, connections, and equipment. **[Test and adjust components and equipment.]**
 4. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing.
 5. Complete installation and startup checks in accordance with manufacturer's written instructions.

- B. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- C. Tests and Inspections:
 - 1. Perform visual and mechanical inspections and electrical tests stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for the following NETA categories:
 - a. AC generators and emergency systems.
 - b. Switchgear.
 - c. Circuit breakers.
 - d. Instrument transformers.
 - e. Metering and instrumentation.
 - f. Ground-fault systems.
 - g. Battery systems.
 - h. Surge arresters.
 - i. Capacitors.
 - 2. Perform NFPA 110 tests for Type 1 essential power systems.
 - 3. Test sequence of operation step by step for each mode.
- D. Nonconforming Work:
 - 1. Paralleling low-voltage switchgear will be considered defective if it does not pass tests and inspections.
- E. Collect, assemble, and submit test and inspection reports.
- F. Manufacturer Services:
 - 1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.7 ADJUSTING

- A. Set field-adjustable, electronic circuit-breaker trip characteristics in accordance with results specified in Section 260573.16 "Coordination Studies."
- B. Set field-adjustable, electronic circuit-breaker trip characteristics.

3.8 CLEANING

- A. On completion of installation, inspect interior and exterior of paralleling low-voltage switchgear. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair damaged finishes.

3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to paralleling low-voltage switchgear, in accordance with manufacturer's written instructions, throughout periods when paralleling switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.10 MAINTENANCE

- A. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of switchgear 11 months after date of Substantial Completion.
 - 2. Instrument: Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 3. Record of Infrared Scanning: Prepare certified report that identifies switchgear checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 21 16 00	26 05 13 00	Medium-Voltage Cables
26 21 16 00	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 22 00 00	26 12 19 00a	Low-Voltage Switchgear

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 22 13 00 - LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Distribution, dry-type transformers with nominal primary and secondary rating of 600 V and less, with capacities up to 1500 kVA.

B. Products Furnished, but Not Installed, under This Section:

1. **<Insert products furnished, but not installed>.**

C. Products Installed, but Not Furnished, under This Section:

1. **<Insert products installed, but not furnished>.**

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.
 - a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
 - b. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.

B. Shop Drawings:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Include diagrams for power, signal, and control wiring.

C. Field Quality-Control Submittals:

1. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:
 - 1. Transformer temporary heating, working clearances, anchoring, torque values, and insulation-resistance testing.
- B. Source quality-control reports.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Inspection: On receipt, inspect for and note shipping damage to packaging and transformer.
 - 1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.
- B. Storage: Store in warm, dry, and temperature-stable location in original shipping packaging.
- C. Temporary Heating: Apply temporary heat in accordance with manufacturer's published instructions within enclosure of ventilated-type units, throughout periods during which equipment is not energized and when transformer is not in space that is continuously under normal control of temperature and humidity.
- D. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

PART 2 - PRODUCTS**2.1 OWNER-FURNISHED PRODUCTS**

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor>.**
- B. Description: **<Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation>.**
- C. Accessories: **<Insert accessories that will be provided with product>.**

2.2 EXISTING PRODUCTS[TO BE MODIFIED][TO BE REMOVED AND RE-INSTALLED]

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact Work>.**
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[ABB, Electrification Business]**
 2. **[Acme Electric; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 3. **[Dongan Electric Manufacturing Company]**
 4. **[Eaton]**
 5. **[Federal Pacific]**
 6. **[Hammond Power Solutions Inc.]**
 7. **[Jefferson Electric, Inc.]**
 8. **[Lincoln Electric Products Co., Inc.]**
 9. **[Mag-Tran; a division of Quality Transformer & Electronics]**
 10. **[Marcus Transformer LTD]**
 11. **[MGM Transformer Company]**
 12. **[Micron Industries Corporation]**
 13. **[Mirus International Inc.]**
 14. **[Powersmiths International Corp.; Socomec Group]**
 15. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 16. **[Rex Power Magnetix]**
 17. **[Siemens Industry, Inc., Energy Management Division]**
 18. **[SolaHD; Emerson Electric Co., Automation Solutions]**
 19. **[Square D; Schneider Electric USA]**
 20. **[TEMCo Transformers]**
 21. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[ABB, Electrification Business]**
 2. **[Acme Electric; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 3. **[Dongan Electric Manufacturing Company]**
 4. **[Eaton]**
 5. **[Federal Pacific]**
 6. **[Hammond Power Solutions Inc.]**
 7. **[Jefferson Electric, Inc.]**
 8. **[Lincoln Electric Products Co., Inc.]**
 9. **[Mag-Tran; a division of Quality Transformer & Electronics]**
 10. **[Marcus Transformer LTD]**
 11. **[MGM Transformer Company]**
 12. **[Micron Industries Corporation]**
 13. **[Mirus International Inc.]**
 14. **[Powersmiths International Corp.; Socomec Group]**
 15. **[Prolec GE; A Xignux and General Electric Company Joint Venture]**
 16. **[Rex Power Magnetix]**
 17. **[Siemens Industry, Inc., Energy Management Division]**
 18. **[SolaHD; Emerson Electric Co., Automation Solutions]**
 19. **[Square D; Schneider Electric USA]**
 20. **[TEMCo Transformers]**
 21. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain each type of transformer from single source from single manufacturer.

2.4 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60 Hz service.
- B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- C. Transformers Rated 15 kVA and Larger:
 - 1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
 - 2. Marked as compliant with DOE 2016 efficiency levels by qualified electrical testing laboratory recognized by authorities having jurisdiction.
- D. Shipping Restraints: Paint or otherwise color-code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside transformer enclosure.

2.5 DISTRIBUTION TRANSFORMERS

- A. Comply with NFPA 70[, and list and label as complying with UL 1561].
- B. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.
 - 1. One leg per phase.
 - 2. Core volume must allow efficient transformer operation at 10 percent above nominal tap voltage.
 - 3. Grounded to enclosure.
- C. Coils: Continuous windings[**without splices**] except for taps.
 - 1. Coil Material: **[Aluminum][Copper]**.
 - 2. Internal Coil Connections: Brazed or pressure type.
 - 3. Terminal Connections: **[Welded][Bolted]**.
- D. Encapsulation: Transformers smaller than 30 kVA must have core and coils completely resin encapsulated.
- E. Enclosure: **[Ventilated][Totally enclosed, nonventilated]**.
 - 1. Core and coil must be encapsulated within resin compound[**using vacuum-pressure impregnation process**] to seal out moisture and air.
 - 2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
 - 3. Wiring Compartment: Sized for conduit entry and wiring installation.
 - 4. Environmental Protection:
 - a. Indoor: UL 50E, **[Type 2][Type 3R][Type 4X, Stainless Steel]**.
 - b. Outdoor: UL 50E, **[Type 3R][Type 4X][Type 4X, Stainless Steel]**.
 - 5. Finish Color: **[Gray][ANSI 49 gray][ANSI 61 gray]** weather-resistant enamel.
- F. Taps for Transformers 3 kVA and Smaller: **[None][One 5 percent tap above normal full capacity]**.
- G. Taps for Transformers 7.5 to 24 kVA: **[One 5 percent tap above and one 5 percent tap below normal**

full capacity][Two 5 percent taps below rated voltage].

- H. Taps for Transformers 25 kVA and Larger: **[Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity][Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity].**
- I. Insulation Class, Smaller Than 30 kVA: 180 deg C, UL-component-recognized insulation system with maximum of 115 deg C rise above 40 deg C ambient temperature.
- J. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with maximum of **[150 deg C][115 deg C][80 deg C]** rise above 40 deg C ambient temperature.
- K. Grounding: Provide ground-bar kit or ground bar installed on inside of transformer enclosure.
- L. K-Factor Rating: Transformers indicated to be K-factor rated must comply with UL 1561 requirements for nonsinusoidal load current-handling capability to degree defined by designated K-factor.
 - 1. Unit may not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor, without exceeding indicated insulation class in 40 deg C maximum ambient and 24-hour average ambient of 30 deg C.
 - 2. Indicate value of K-factor on transformer nameplate.
 - 3. Unit must comply with requirements of DOE 2016 efficiency levels when tested in accordance with NEMA TP 2 with K-factor equal to one.
- M. Electrostatic Shielding: Windings must have independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
 - 1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
 - 2. Include special terminal for grounding shield.
- N. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.
- O. Wall Brackets: **[Manufacturer's standard brackets][Wall brackets fabricated from design drawings signed and sealed by qualified structural professional engineer].**
- P. Low-Sound-Level Requirements: Maximum sound levels when factory tested in accordance with IEEE C57.12.91, as follows:
 - 1. 9.00 kVA and Less: **[40 dB(A-weighted)]<Insert dB(A-weighted)>.**
 - 2. 9.01 to 30.00 kVA: **[45 dB(A-weighted)]<Insert dB(A-weighted)>.**
 - 3. 30.01 to 50.00 kVA: **[45 dB(A-weighted) for K-factors of 1, 4, and 9][48 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 4. 50.01 to 150.00 kVA: **[50 dB(A-weighted) for K-factors of 1, 4, and 9][53 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 5. 150.01 to 300.00 kVA: **[55 dB(A-weighted) for K-factors of 1, 4, and 9][58 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 6. 300.01 to 500.00 kVA: **[60 dB(A-weighted) for K-factors of 1, 4, and 9][63 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 7. 500.01 to 700.00 kVA: **[62 dB(A-weighted) for K-factors of 1, 4, and 9][65 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 8. 700.01 to 1000.00 kVA: **[64 dB(A-weighted) for K-factors of 1, 4, and 9][67 dB(A-weighted) for K-factors of 13 and 20]<Insert dB(A-weighted)>.**
 - 9. 1000.01 to 1500.00 kVA: **<Insert dB(A-weighted)>.**

2.6 IDENTIFICATION

A. Nameplates:

1. Engraved, laminated-acrylic or melamine plastic signs for distribution transformers, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."
2. Self-adhesive label for distribution transformers. Self-adhesive labels are specified in Section 260553 "Identification for Electrical Systems."

2.7 SOURCE QUALITY CONTROL

A. Testing Administrator: **[Owner will engage][Engage]** qualified electrical testing agency to evaluate transformer.

B. Factory Tests and Inspections: Test and inspect assembled system, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.12.01 and IEEE C57.12.91 before delivering to site. Affix label with name and date of **[manufacturer's][qualified electrical testing laboratory's]** certification of system compliance on control units.

1. Resistance measurements of windings at rated voltage connections and at tap connections.
2. Ratio tests at rated voltage connections and at tap connections.
3. Phase relation and polarity tests at rated voltage connections.
4. No load losses, and excitation current and rated voltage at rated voltage connections.
5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
6. Applied and induced tensile tests.
7. Regulation and efficiency at rated load and voltage.
8. Insulation-Resistance Tests:
 - a. Line-side to ground.
 - b. Load-side to ground.
 - c. Line-side to load-side.
9. Temperature tests.
10. Factory Sound-Level Tests: **[Conduct sound-level tests on equipment for this Project][Conduct prototype sound-level tests on production-line products]**.

C. Nonconforming Work:

1. System equipment that does not pass tests and inspections will be considered defective.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for transformers.

- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's published instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at location of transformer.
- E. Environment: Enclosures must be rated for environment in which they are located. Covers for UL 50E, Type 4X enclosures may not cause accessibility problems.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated **[by transformer manufacturer][from design drawings signed and sealed by qualified structural professional engineer]**.
 - 1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
 - 2. Brace wall-mounted transformers as specified in **[Section 260548 "Vibration and Seismic Controls for Electrical Systems."][Section 260548.16 "Seismic Controls for Electrical Systems."]**
- B. Install transformers level and plumb on concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- C. Construct concrete bases and anchor floor-mounted transformers in accordance with manufacturer's published instructions[, **seismic requirements applicable to Project,**] and requirements in Section 260529 "Hangers and Supports for Electrical Systems."
 - 1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- D. Secure transformer to concrete base in accordance with manufacturer's published instructions.
- E. Secure covers to enclosure and tighten bolts to manufacturer-recommended torques to reduce noise generation.
- F. Remove shipping bolts, blocking, and wedges.

3.3 CONNECTIONS

- A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque-

tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

- D. Provide flexible connections at conduit and conductor terminations and supports to eliminate sound and vibration transmission to building structure.

3.4 FIELD QUALITY CONTROL

- A. **[Acceptance]**Testing Preparation:

- 1. **<Insert requirements>**.

- B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

- C. Tests and Inspections:

- 1. Small (Up to 167 kVA Single-Phase or 500 kVA Three-Phase) Dry-Type Transformer Field Tests:

- a. Visual and Mechanical Inspection.

- 1) Inspect physical and mechanical condition.
- 2) Inspect anchorage, alignment, and grounding.
- 3) Verify that resilient mounts are free and that shipping brackets have been removed.
- 4) Verify that unit is clean.
- 5) Perform specific inspections and mechanical tests recommended by manufacturer.
- 6) Verify that as-left tap connections are as specified.
- 7) Verify presence of surge arresters and that their ratings are as specified.

- b. Electrical Tests:

- 1) Measure resistance at windings, taps, and bolted connections.
- 2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
- 3) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- 4) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

- 2. Large (Larger Than 167 kVA Single Phase or 500 kVA Three Phase) Dry-Type Transformer Field Tests:

- a. Visual and Mechanical Inspection:

- 1) Inspect physical and mechanical condition.
- 2) Inspect anchorage, alignment, and grounding.
- 3) Verify that resilient mounts are free and that shipping brackets have been removed.
- 4) Verify that unit is clean.
- 5) Perform specific inspections and mechanical tests recommended by manufacturer.
- 6) Verify that as-left tap connections are as specified.
- 7) Verify presence of surge arresters and that their ratings are as specified.

b. Electrical Tests:

- 1) Measure resistance at windings, taps, and bolted connections.
- 2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
- 3) Perform power-factor or dissipation-factor tests on windings.
- 4) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
- 5) Perform excitation-current test on each phase.
- 6) Perform applied voltage test on line- and load-side windings to ground. See IEEE C57.12.91, Sections 10.2 and 10.9.
- 7) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

D. Test Labeling: On completion of satisfactory testing of units, attach dated and signed "Satisfactory Test" label to tested components.

E. Nonconforming Work:

1. Transformer will be considered defective if it does not pass tests and inspections.
2. Remove and replace units that do not pass tests or inspections and retest as specified above.

F. Assemble and submit test and inspection reports.

G. Manufacturer Services:

1. Engage factory-authorized service representative to [support][supervise] field tests and inspections.

3.5 ADJUSTING

A. Record transformer secondary voltage at unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare written report recording output voltages and tap settings.

3.6 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.7 MAINTENANCE

A. Infrared Scanning: Two months after Substantial Completion, perform infrared scan of transformer connections.

1. Use infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.

-
2. Perform two follow-up infrared scans of transformers, one at four months and another at 11 months after Substantial Completion.
 3. Prepare certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

END OF SECTION 26 22 13 00

Task	Specification	Specification Description
26 22 13 00	26 12 19 00a	Low-Voltage Switchgear

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 13 00 - SWITCHBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Switchboards.
2. Surge protection devices.
3. Disconnecting and overcurrent protective devices.
4. Instrumentation.
5. Control power.
6. Accessory components and features.

B. Related Requirements

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 260573.19 "Arc-Flash Hazard Analysis" for arc-flash analysis and arc-flash label requirements.

1.2 COORDINATION

- A.** Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B.** Coordinate sizes and locations of concrete bases with actual equipment provided.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Switchboards.
2. Overcurrent protective devices.
3. Surge protection devices.
4. Ground-fault protection devices.
5. Accessories.
6. Other components.
7. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and

service space around equipment. Show tabulations of installed devices, equipment features, and ratings.

2. Detail enclosure types for types other than UL 50E, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.
10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

C. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

D. Field Quality-Control Submittals:

1. Field Quality-Control Reports:
 - a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:

1. Handling, storing, and providing temporary heat.
2. Mounting accessories and anchoring devices.
3. Testing and adjusting overcurrent protective devices.

B. Sample warranties.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Furnish to Owner spare parts, for repairing switchboards, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two of each size and type.

2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one of each size and type.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchboards, that are packaged with protective covering for storage on-site and identified with labels describing contents. **[Include the following:]**

1. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
2. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.
3. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.
4. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.
5. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Remove loose packing and flammable materials from inside switchboards and **[install temporary electric heating (250 W per section)][connect factory-installed space heaters to temporary electrical service]** to prevent condensation.
- C. Handle and prepare switchboards for installation in accordance with **[NECA 400][NEMA PB 2.1]**.

1.8 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed switchboard perform in accordance with specified requirements and agrees to repair or replace components that fail to perform as specified within extended-warranty period.
 1. Extended-Warranty Period: **[Two]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that switchboard performs in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended-warranty period.
 1. **[Initial]**Extended-Warranty Period: **[Three]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 2. Follow-On Extended-Warranty Period: **[Five]<Insert number>** years from date of Substantial

Completion; [full][prorated] coverage for materials[that failed because of transient voltage surges] only, free on board [origin][destination], freight prepaid.

PART 2 - PRODUCTS

2.1 SWITCHBOARDS

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
1. [ABB, Electrification Business]
 2. [Eaton]
 3. [Siemens Industry, Inc., Energy Management Division]
 4. [Square D; Schneider Electric USA]
 5. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [ABB, Electrification Business]
 2. [Eaton]
 3. [Siemens Industry, Inc., Energy Management Division]
 4. [Square D; Schneider Electric USA]
 5. <Insert manufacturer's name>
- C. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- E. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- F. Comply with NEMA PB 2.
- G. Comply with NFPA 70.
- H. Comply with UL 891.
- I. Front-Connected, Front-Accessible Switchboards:
1. Main Devices: [Panel][Fixed, individually] mounted.
 2. Branch Devices: Panel mounted.
 3. Sections front and rear aligned.
- J. Front- and Side-Accessible Switchboards:
1. Main Devices: Fixed, individually mounted.

2. Branch Devices: Panel mounted.
 3. Section Alignment: **[Front][and][Rear]** aligned.
- K. Front- and Rear-Accessible Switchboards:
1. Main Devices: **[Fixed, individually][Drawout]** mounted.
 2. Branch Devices: **[Panel][Fixed, individually][Panel and fixed, individually][Fixed and individually compartmented][Individually compartmented and drawout]** mounted.
 3. Sections **[front and rear][rear]** aligned.
- L. Nominal System Voltage: **[480Y/277 V][208Y/120 V]<Insert system voltage>**.
- M. Main-Bus Continuous: **[5000][4000][3000][2500][2000][1600][1200]<Insert ampere rating>** A.
- N. Indoor Enclosures: Steel, UL 50E, **[Type 1][Type 2]**.
- O. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's **[standard gray][custom color]** finish over rust-inhibiting primer on treated metal surface.
- P. Outdoor Enclosures: **[Type 3R][Type 3R, with interior-lighted walk-in aisle]**.
1. Finish: Factory-applied finish in manufacturer's **[standard][custom]** color; undersurfaces treated with corrosion-resistant undercoating.
 2. Enclosure: **[Flat][Downward, rearward sloping]** roof; **[bolt-on rear covers][rear hinged doors]** for each section, with provisions for padlocking.
 3. Doors: Personnel door at each end of aisle, minimum width of **[30 inch (762 mm)]<Insert value>**; opening outwards; with panic hardware and provisions for **[padlocking][cylinder lock]**. At least one door must be sized to permit largest single switchboard section to pass through without disassembling doors, hinges, or switchboard section.
 4. Accessories: LED luminaires, ceiling mounted; wired to three-way light switch at each end of aisle; ground-fault circuit interrupter (GFCI) duplex receptacle; emergency battery pack luminaire installed on wall of aisle midway between personnel doors.
 5. Walk-in Aisle Heating and Ventilating:
 - a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of **[40 deg F (5 deg C)]<Insert temperature>** with outside design temperature of **[0 deg F (minus 18 deg C)]<Insert temperature>**.
 - b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of **[100 deg F (38 deg C)]<Insert temperature>** with outside design temperature of **[90 deg F (32 deg C)]<Insert temperature>**.
 - c. Ventilating openings **[complete with replaceable fiberglass air filters]**.
 - d. Thermostat: Single stage; wired to control heat and exhaust fan.
 6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include control-power transformer, with spare capacity of 25 percent, within switchboard. Supply voltage must be **[120 V(ac)][120/240 V(ac)][120/208 V(ac)]**.
 7. Power for space heaters, ventilation, lighting, and receptacle provided by remote source.
- Q. Barriers: Between adjacent switchboard sections.
- R. Insulation and isolation for **[main bus of main section and]** main and vertical buses of feeder sections.
- S. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

1. Space-Heater Control: **[Thermostats to maintain temperature of each section above expected dew point][Manual switching of branch-circuit protective device].**
 2. Space-Heater Power Source: **[Transformer, factory installed in switchboard][120 V external branch circuit].**
- T. Service Entrance Rating: Switchboards intended for use as service entrance equipment may contain from one to six service disconnecting means with overcurrent protection, neutral bus with disconnecting link, grounding electrode conductor terminal, and main bonding jumper.
- U. Utility Metering Compartment: Barrier compartment and section complying with utility company's requirements; hinged sealable door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.
- V. Customer Metering Compartment: Separate customer metering compartment **[and section with front hinged door,]** and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring must be terminated on shorting-type terminal blocks. **[Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.]**
- W. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.
- X. Removable, Hinged Rear Doors and Compartment Covers: Secured by **[captive thumb screws][standard bolts]**, for access to rear interior of switchboard.
- Y. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.
- Z. Pull Box on Top of Switchboard:
1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
 2. Set back from front to clear circuit-breaker removal mechanism.
 3. Removable covers may form top, front, and sides. Top covers at rear must be easily removable for drilling and cutting.
 4. Bottom must be insulating, fire-resistive material with separate holes for cable drops into switchboard.
 5. Cable supports must be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.
- AA. Buses and Connections: Three phase, four wire unless otherwise indicated.
1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from front of switchboard.
 2. Phase- and Neutral-Bus Material:
 - a. Hard-drawn copper of 98 percent conductivity[, **silver-plated**].
 - b. Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections.
 3. Copper feeder circuit-breaker line connections.
 4. Tin-plated aluminum feeder circuit-breaker line connections.
 5. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with **[mechanical][compression]** connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.

6. Ground Bus: [1/4 by 2 inch (6 by 50 mm-)][1/4 by 1 inch (6 by 25 mm-)][Minimum-size required by UL 891,] hard-drawn copper of 98 percent conductivity, equipped with [mechanical][compression] connectors for feeder and branch-circuit ground conductors.
 7. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
 8. Disconnect Links:
 - a. Isolate neutral bus from incoming neutral conductors.
 - b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
 9. Neutral Buses: [50][100] percent of ampacity of phase buses unless otherwise indicated, equipped with [mechanical][compression] connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
 10. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.
- BB. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.
- CC. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.
- DD. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.2 SURGE PROTECTION DEVICES

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
1. [ABB, Electrification Business]
 2. [Advanced Protection Technologies Inc. (APT)]
 3. [Eaton]
 4. [Siemens Industry, Inc., Energy Management Division]
 5. [Square D; Schneider Electric USA]
 6. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [ABB, Electrification Business]
 2. [Advanced Protection Technologies Inc. (APT)]
 3. [Eaton]
 4. [Siemens Industry, Inc., Energy Management Division]
 5. [Square D; Schneider Electric USA]
 6. <Insert manufacturer's name>
- C. SPDs: Listed and labeled in accordance with UL 1449, [Type 1][Type 2].
- D. Features and Accessories:
1. Integral disconnect switch.
 2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.

3. Indicator light display for protection status.
 4. Form-C contacts rated at **[5 A and 250 V(ac)][2 A and 24 V(ac)]<Insert values>**, one normally open and one normally closed, for remote monitoring of protection status. **[Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.]**
 5. Surge counter.
- E. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase may not be less than **[200 kA][250 kA][300 kA]<Insert amperes>**. Peak surge current rating must be arithmetic sum of ratings of individual MOVs in each mode.
- F. Protection modes and UL 1449 VPR for grounded wye circuits with **[480Y/277 V][208Y/120 V]**, three-phase, four-wire circuits may not exceed the following:
1. Line to Neutral: **[1200 V for 480Y/277 V][700 V for 208Y/120 V]**.
 2. Line to Ground: **[1200 V for 480Y/277 V][1200 V for 208Y/120 V]**.
 3. Line to Line: **[2000 V for 480Y/277 V][1000 V for 208Y/120 V]**.
- G. Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits may not exceed the following:
1. Line to Neutral: 700 V.
 2. Line to Ground: **[700 V][1000 V]**.
 3. Line to Line: 1000 V.
- H. SCCR: Equal or exceed **[100 kA][200 kA]<Insert amperes>**.
- I. Nominal Rating: 20 kA.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with **[series-connected rating][interrupting capacity]** to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic trip circuit breakers with RMS sensing; field-replaceable rating plug or field-replaceable electronic trip; and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long and short time adjustments.
 - d. Ground-fault pickup level, time delay, and I squared t response.
 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
 6. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6 mA trip).

7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30 mA trip).
8. MCCB Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Lugs: **[Mechanical][Compression]** style, suitable for number, size, trip ratings, and conductor material.
 - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
 - d. Ground-Fault Protection: **[Integrally mounted][Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 - f. Communication Capability: **[Circuit-breaker-mounted][Universal-mounted][Integral][Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
 - g. Shunt Trip: 120 V trip coil energized from separate circuit, set to trip at **[55][75]** percent of rated voltage.
 - h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
 - i. Auxiliary Contacts: **[One SPDT switch][Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
- B. Insulated-Case Circuit Breaker (ICCB): **[80][100]** percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
 1. **[Fixed][Drawout]** circuit-breaker mounting.
 2. Two-step, stored-energy closing.
 3. **[Standard][Full]**-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Time adjustments for long- and short-time pickup.
 - c. Ground-fault pickup level, time delay, and I squared t response.
 - d. **<Insert settings>**.
 4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 5. Remote trip indication and control.
 6. Communication Capability: Web enabled integral Ethernet communication module and embedded Web server with factory-configured Web pages (HTML file format). Provide functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
 7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
 8. Control Voltage: **[40 V(dc)][125 V(dc)][250 V(dc)][120 V(ac)]**.
- C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on switch blade after it engages stationary contacts.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

- a. **[Boltswitch, Inc.]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Boltswitch, Inc.]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
3. Main-Contact Interrupting Capability: Minimum of 12 times switch current rating.
4. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
- a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
5. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
6. Service-Rated Switches: Labeled for use as service equipment.
7. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
- a. Configuration: **[Integrally mounted][Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - b. Internal Memory: Integrates cumulative value of intermittent arcing ground-fault currents and uses effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
8. Open-Fuse Trip Device: Arranged to trip switch open if phase fuse opens.
- D. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **<Insert manufacturer's name>**
3. Main-Contact Interrupting Capability: Minimum of 12 times switch current rating.
4. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
 - a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
5. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
6. Service-Rated Switches: Labeled for use as service equipment.
7. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
 - a. Configuration: **[Integrally mounted][Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - b. Internal Memory: Integrates cumulative value of intermittent arcing ground-fault currents and uses effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
8. Open-Fuse Trip Device: Arranged to trip switch open if phase fuse opens.
- E. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
- F. Fuses are specified in Section 262813 "Fuses."

2.4 INSTRUMENTATION

- A. Instrument Transformers: NEMA EI 21.1, and the following:
 1. Potential Transformers: NEMA EI 21.1; 120 V, 60 Hz, **[single][tapped][double]** secondary; disconnecting type with integral fuse mountings. Burden and accuracy must be consistent with connected metering and relay devices.
 2. Current Transformers: NEMA EI 21.1; 5 A, 60 Hz, secondary; **[wound][bushing][bar or window]** type; **[single][double]** secondary winding and secondary shorting device. Burden and accuracy must be consistent with connected metering and relay devices.
 3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
 4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.
- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
 - a. Phase Currents, Each Phase: Plus or minus 0.5 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 0.5 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 0.5 percent.
 - d. Megawatts: Plus or minus 1 percent.
 - e. Megavars: Plus or minus 1 percent.
 - f. Power Factor: Plus or minus 1 percent.
 - g. Frequency: Plus or minus 0.1 percent.
 - h. Accumulated Energy, Megawatt Hours: Plus or minus 1 percent; accumulated values unaffected by power outages up to 72 hours.
 - i. Megawatt Demand: Plus or minus 1 percent; demand interval programmable from five to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
 2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.
- C. Analog Meters:
1. Meters: **4 inch (100 mm)** diameter or **6 inch (150 mm)** square, flush or semiflush, with anti-parallax 250-degree scales and external zero adjustment.
- D. Voltmeters: Cover expanded-scale range of nominal voltage plus 10 percent.
- E. Instrument Switches: Rotary type with off position.
1. Voltmeter Switches: Permit reading of phase-to-phase voltages and, where neutral is indicated, phase-to-neutral voltages.
 2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in closed-circuit condition at all times.
- F. Ammeters: **2-1/2 inch (64 mm)** minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.
- G. Watt-Hour Meters and Wattmeters:
1. Comply with ANSI C12.1.
 2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
 3. Suitable for connection to three- and four-wire circuits.
 4. Potential indicating lamps.
 5. Adjustments for light and full load, phase balance, and power factor.
 6. Four-dial clock register.
 7. Integral demand indicator.
 8. Contact devices to operate remote impulse-totalizing demand meter.
 9. Ratchets to prevent reverse rotation.
 10. Removable meter with drawout test plug.
 11. Semiflush mounted case with matching cover.
 12. Appropriate multiplier tag.
- H. Impulse-Totalizing Demand Meter:
1. Comply with ANSI C12.1.
 2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.

3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording **[five][15][30]<Insert time period>**-minute integrated demand of totalized system.

2.5 CONTROL POWER

A. Control Circuits:

1. 120 V(ac), supplied through secondary disconnecting devices from control-power transformer.
2. 120 V(ac), supplied from remote branch circuit.
3. **<Insert control voltage>** V(dc).

B. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to primary side of each control-power transformer at line side of associated main circuit breaker. 120 V secondaries connected through automatic transfer relays to ensure fail-safe automatic transfer scheme.

C. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

D. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.6 ACCESSORY COMPONENTS AND FEATURES

A. Mounting Accessories: For anchors, mounting channels, bolts, washers, and other mounting accessories, comply with requirements in Section 260548.16 "Seismic Controls for Electrical Systems" or manufacturer's instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store switchboards in accordance with **[NECA 400][NEMA PB 2.1]**.

1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's published instructions.
2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
3. Protect from moisture, dust, dirt, and debris during storage and installation.
4. Install temporary heating during storage in accordance with manufacturer's published instructions.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and

other conditions affecting performance of the Work or that affect performance of equipment.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

3.3 INSTALLATION

- A. Comply with manufacturer's published instructions.

- B. Reference Standards:

1. Switchboards and Accessories: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with **[NECA 400][NEMA PB 2.1]**.
2. Consult Architect for resolution of conflicting requirements.

- C. Special Techniques:

1. Equipment Mounting: Install switchboards on concrete base, **4 inch (100 mm)** nominal thickness. Comply with requirements for concrete base specified in Section 260529 "Hangers and Supports for Electrical Systems."
 - a. Install conduits entering underneath switchboard, entering under vertical section where conductors will terminate. Install with couplings flush with concrete base. Extend **2 inch (50 mm)** above concrete base after switchboard is anchored in place.
 - b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18 inch (450 mm)** centers around full perimeter of concrete base.
 - c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, published instructions, and directions furnished with items to be embedded.
 - e. Install anchor bolts to elevations required for proper attachment to switchboards.
 - f. Anchor switchboard to building structure at top of switchboard if required or recommended by manufacturer.
2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.
3. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
4. Operating Instructions: Frame and mount printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
5. Install filler plates in unused spaces of panel-mounted sections.
6. Install overcurrent protective devices, surge protection devices, and instrumentation.
 - a. Set field-adjustable switches and circuit-breaker trip ranges.
7. Install spare-fuse cabinet.

3.4 CONNECTIONS

- A. Comply with requirements for terminating feeder bus specified in Section 262500 "Enclosed Bus Assemblies." Drawings indicate general arrangement of bus, fittings, and specialties.
- B. Comply with requirements for terminating cable trays specified in Section 260536 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.
- C. Bond conduits entering underneath switchboard to equipment ground bus with bonding conductor sized in accordance with NFPA 70.
- D. Support and secure conductors within switchboard in accordance with NFPA 70.
- E. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

3.5 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- D. Mimic Bus:
 - 1. Entire single-line switchboard bus work, as depicted on factory record drawing, on minimum **0.032 inch (0.813 mm)** thick anodized aluminum photoengraved nameplate, located at eye level on front cover of switchboard incoming service section.
 - 2. Entire single-line switchboard bus work, as depicted on factory record drawing, on engraved minimum **0.0625 inch (1.588 mm)** thick laminated-plastic (Gravoply) nameplate, located at eye level on front cover of switchboard incoming service section.
 - 3. Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.
 - 4. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce concise visual presentation of principal switchboard components and connections.
 - 5. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.
- E. Service Equipment Label: Labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

3.6 FIELD QUALITY CONTROL

- A. **[Acceptance]**Testing Preparation:
 - 1. **<Insert requirements>**.

- B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- C. Tests and Inspections:
1. Acceptance Testing:
 - a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
 - b. Test continuity of each circuit.
 2. Test ground-fault protection of equipment for service equipment in accordance with NFPA 70.
 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 5. Perform the following infrared scan tests and inspections, and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each switchboard. Remove **[front][front and rear]** panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
 - c. Instruments and Equipment:
 - 1) Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 6. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Nonconforming Work:
1. Switchboard will be considered defective if it does not pass tests and inspections.
 2. Remove and replace defective units and retest.
- E. Collect, assemble, and submit test and inspection reports, including certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
- F. Manufacturer Services:
1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.
- 3.7 ADJUSTING
- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges **[as indicated.][as specified in Section 260573.16]**

"Coordination Studies."]

3.8 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature in accordance with manufacturer's published instructions, until switchboard is ready to be energized and placed into service.

END OF SECTION 26 24 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 24 13 00	26 27 13 00	Electricity Metering
26 24 13 00	26 28 16 00	Enclosed Switches And Circuit Breakers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 16 00 - PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panelboards.
2. Disconnecting and overcurrent protective devices.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article> .**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other requirements applicable to the Work for electrical, communications, and electronic safety and security systems on Project, including wiring methods.
4. Section 260529 "Hangers and Supports for Electrical Systems" specifies concrete bases and supports for panelboards installed by this Section.
5. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies seismic control devices, mounting devices, and anchoring devices installed by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
7. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, and arc-flash hazard analysis studies.
8. Section 260913 "Electrical Power Monitoring" specifies power monitoring and control systems installed by this Section.
9. Section 262813 "Fuses" specifies fuses and spare-fuse cabinets installed by this Section.
10. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies Type 1 and Type 2 surge protective devices installed by this Section.

1.2 DEFINITIONS

- A. MCCB: Molded-case circuit breaker.
- B. SPD: Surge protective device.
- C. VPR: Voltage protection rating.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of specified product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Include operating characteristics, electrical characteristics, and furnished accessories.
 - 3. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.
 - 4. Include manufacturer's sample extended warranty language.
- B. Shop Drawings: For each panelboard and related equipment.
 - 1. Include plans, elevations, sections, details, and attachments to other Work.
 - 2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
 - 3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
 - 4. Detail bus configuration, current, and voltage ratings.
 - 5. Short-circuit current rating of panelboards and overcurrent protective devices.
 - 6. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series rating of installed devices.
 - 7. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for SPD as installed in panelboard.
 - 8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - 9. Include wiring diagrams for power, signal, and control wiring.
 - 10. Key interlock scheme drawing and sequence of operations.
 - 11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device. Include Internet link for electronic access to downloadable PDF of coordination curves.
- C. Field Quality Control Reports: For specified tests and inspections.

1.4 INFORMATIONAL SUBMITTALS

- A. Panelboard Schedules: For installation in panelboards. [**Submit final versions after load balancing.**]
- B. Manufacturer's published instructions.
- C. Field Reports:
 - 1. Manufacturer's field reports for field quality-control support.
 - 2. Field reports for voltage monitoring and adjusting.
 - 3. Field reports for infrared scanning.

1.5 CLOSEOUT SUBMITTALS

- A. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare parts.
- B. Special tools.

1.7 QUALIFICATIONS

- A. Low-Voltage Electrical Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 - 1. On-site electrical testing supervisors must have documented certification and experience with testing electrical equipment in accordance with NETA testing standards.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.
- B. Handle and prepare panelboards for installation in accordance with **[NECA 407][NEMA PB 1]** .

1.9 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed panelboards perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.
 - 1. Extended-Warranty Period: **[Two]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that panelboards perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.
 - 1. Initial Extended-Warranty Period: **[Three][Four]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 - 2. Follow-On Extended-Warranty Period: **[Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials **[that failed because of transient voltage surges]** only, free on board **[origin][destination]** , freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>** .
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>** .
 - 1. Sustainable Design Features:

- a. Material Reuse: Product is salvaged, refurbished, or reused.

- C. Accessories: **<Insert accessories included with existing product>** .

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>** .

- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>** .

- 1. Sustainable Design Features:

- a. Material Reuse: Product is salvaged, refurbished, or reused.

- C. Accessories: **<Insert accessories included with existing product>** .

2.3 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

- B. Fabricate and test panelboards in accordance with IEEE 344 to withstand seismic forces specified in Section 018123 "Facility Seismic and Wind Criteria."

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

- D. Comply with NEMA PB 1.

- E. Enclosures: **[Flush][and][Surface]** -mounted, dead-front cabinets.

- 1. Rated for environmental conditions at installed location.

- a. Indoor Dry and Clean Locations: UL 50E, **[Type 1]<Insert type>** .
- b. Outdoor Locations: UL 50E, **[Type 3R]<Insert type>** .
- c. Kitchen and Wash-Down Areas: UL 50E, **[Type 4X]<Insert type>** , **[stainless steel]<Insert material>** .
- d. Other Wet or Damp Indoor Locations: UL 50E, **[Type 4]<Insert type>** .
- e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: UL 50E, **[Type 5][Type 12]** .

- 2. Height: **7 ft (2.13 m)** maximum.

- 3. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box. Trims must cover live parts and may have no exposed hardware.

- 4. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims must cover live parts and may have no exposed hardware.

- 5. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.

6. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
 7. Finishes:
 - a. Panels and Trim: **[Steel][and][galvanized steel]** , factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
 - b. Back Boxes: **[Galvanized steel][Same finish as panels and trim]** .
 - c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.
- F. Phase, Neutral, and Ground Buses:
1. Material: **[Tin-plated aluminum][Hard-drawn copper, 98 percent conductivity]** .
 - a. Plating must run entire length of bus.
 - b. Bus must be fully rated for entire length.
 2. Interiors must be factory assembled into unit. Replacing switching and protective devices may not disturb adjacent units or require removing main bus connectors.
 3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
- G. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: **[Tin-plated aluminum][Hard-drawn copper, 98 percent conductivity]** .
 2. Terminations must allow use of 75 deg C rated conductors without derating.
 3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
 4. Main and Neutral Lugs: **[Compression][Mechanical]** type, with lug on neutral bar for each pole in panelboard.
 5. Ground Lugs and Bus-Configured Terminators: **[Compression][Mechanical]** type, with lug on bar for each pole in panelboard.
- H. Quality-Control Label: Panelboards or load centers must be labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers must have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.
- I. Future Devices: Panelboards or load centers must have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
1. Percentage of Future Space Capacity: **[5][10][20]<Insert number>** percent.
- J. Panelboard Short-Circuit Current Rating:
1. Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction. Include label or manual with size and type of allowable upstream and branch devices listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series-connected short-circuit rating.
 - a. Panelboards rated 240 V or less must have short-circuit ratings as shown on Drawings, but not less than 10 000 A(rms) symmetrical.
 - b. Panelboards rated above 240 V and less than 600 V must have short-circuit ratings as

shown on Drawings, but not less than 14 000 A(rms) symmetrical.

2. Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for 100 percent interrupting capacity.
 - a. Panelboards and overcurrent protective devices rated 240 V or less must have short-circuit ratings as shown on Drawings, but not less than 10 000 A(rms) symmetrical.
 - b. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V must have short-circuit ratings as shown on Drawings, but not less than 14 000 A(rms) symmetrical.

2.4 PANELBOARDS

A. UL QEUY - Distribution Panelboard :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**
 - c. **[ESL Power Systems, Inc.]**
 - d. **[Mersen USA]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**
 - c. **[ESL Power Systems, Inc.]**
 - d. **[Mersen USA]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Distribution Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.
5. Standard Features:
 - a. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
 - 1) For doors more than **[36 inch (914 mm)]<Insert dimension>** high, provide two latches, keyed alike.

- b. Mains: **[Circuit breaker][Fused switch][Lugs only]** .
 - 1) Location: **[Top][Bottom][Convertible between top and bottom]** .
 - 2) Main Breaker: Main lug interiors up to 400 A must be field convertible to main breaker.
 - c. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: **[Plug-in circuit breakers][Bolt-on circuit breakers][Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal]** .
 - d. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: **[Bolt-on circuit breakers][Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal]** .
 - e. Branch Overcurrent Protective Devices: Fused switches.
6. Other Available Features Required by Project:
- a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD **[Type 1][Type 2]** .
 - b. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
 - c. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.
 - d. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors must be sized for double-sized or parallel conductors as indicated on Drawings.
 - e. Do not mount neutral bus in gutter.
 - f. Feed-Through Lugs: **[Compression][Mechanical]** type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 - g. Subfeed (Double) Lugs: **[Compression][Mechanical]** type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
 - h. Gutter-Tap Lugs: **[Compression][Mechanical]** type suitable for use with conductor material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.
 - i. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
 - j. Split Bus: Vertical buses divided into individual vertical sections.
 - 1) Contactors in Main Bus: NEMA ICS 2, Class A, **[electrically][mechanically]** held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
 - a) Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
 - b) External Control-Power Source: **[120 V branch circuit][24 V control circuit]<Insert requirement>** .
- B. UL QEUY - Lighting and Appliance Branch-Circuit Panelboard :
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[ABB Electrification Installations Products]**

- b. **[Bender Inc.; Bender GmbH & Co. KG]**
 - c. **[Eaton]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB Electrification Installations Products]**
 - b. **[Bender Inc.; Bender GmbH & Co. KG]**
 - c. **[Eaton]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Lighting and Appliance Branch-Circuit Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.
- 5. Standard Features:
 - a. Mains: **[Circuit breaker][or][lugs only]** .
 - 1) Location: **[Top][Bottom][Convertible between top and bottom]** .
 - 2) Main Breaker: Main lug interiors up to 400 A must be field convertible to main breaker.
 - b. Branch Overcurrent Protective Devices: **[Plug-in][Bolt-on]** circuit breakers, replaceable without disturbing adjacent units.
- 6. Other Available Features Required by Project:
 - a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD **[Type 1][Type 2]** .
 - b. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
 - c. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.
 - d. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors must be sized for double-sized or parallel conductors as indicated on Drawings.
 - e. Do not mount neutral bus in gutter.
 - f. Feed-Through Lugs: **[Compression][Mechanical]** type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 - g. Subfeed (Double) Lugs: **[Compression][Mechanical]** type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
 - h. Gutter-Tap Lugs: **[Compression][Mechanical]** type suitable for use with conductor

material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.

- i. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
- j. Split Bus: Vertical buses divided into individual vertical sections.
 - 1) Contactors in Main Bus: NEMA ICS 2, Class A, **[electrically][mechanically]** held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
 - a) Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
 - b) External Control-Power Source: **[120 V branch circuit][24 V control circuit]<Insert requirement>** .
- k. Doors: Door-in-door construction with concealed hinges; secured with **[flush][or][multipoint]** latch with tumbler lock; keyed alike. **[Outer door must permit full access to panel interior. Inner door must permit access to breaker operating handles and labeling, but current carrying terminals and bus must remain concealed.]**
- l. Column-Type Panelboards: Single row of overcurrent devices **[with narrow gutter extension][and][overhead junction box equipped with ground and neutral terminal buses]** .
 - 1) Column-Type Panelboard Doors: Concealed hinges secured with multipoint latch with tumbler lock; keyed alike.

C. UL QEUY - Electronic-Grade Panelboard :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Electronic-Grade Type Panelboards: UL CEN QEUY; including UL 67 and NEMA PB 1.

5. Standard Features:

- a. Main Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- b. Branch Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- c. Factory-Installed, Integral SPD:
 - 1) Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase may not be less than **[100 kA]<Insert value>** . Peak surge current rating must be arithmetic sum of ratings of individual MOVs in given mode.
 - 2) Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V or 208Y/120 V, three-phase, four-wire circuits may not exceed the following:
 - a) Line to Neutral: **[1200 V for 480Y/277 V][700 V for 208Y/120 V]** .
 - b) Line to Ground: **[1200 V for 480Y/277 V][700 V for 208Y/120 V]** .
 - c) Neutral to Ground: **[1200 V for 480Y/277 V][700 V for 208Y/120 V]** .
 - d) Line to Line: **[2000 V for 480Y/277 V][1200 V for 208Y/120 V]** .
 - 3) Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits may not exceed the following:
 - a) Line to Neutral: 700 V.
 - b) Line to Ground: 700 V.
 - c) Neutral to Ground: 700 V.
 - d) Line to Line: 1200 V.
 - 4) SCCR: Equal to **[SCCR of panelboard in which installed][or exceed 100 kA][or exceed 200 kA][or exceed]<Insert value>** .
 - 5) Inominal Rating: **[20 kA][10 kA]** .
- d. Buses:
 - 1) Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
 - 2) Copper equipment and isolated ground buses.
- e. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

D. UL QEUY - Load Center :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**
 - e. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB Electrification Installations Products]**
 - b. **[Eaton]**

- c. **[Siemens Industry, Inc., Energy Management Division]**
- d. **[Square D; Schneider Electric USA]**
- e. **<Insert manufacturer's name>**
- 3. Source Limitations: Obtain products from single manufacturer.
- 4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Electronic-Grade Type Panelboards: UL CCN QEUY; including UL 67.
- 5. Standard Features:
 - a. Mains: **[Circuit breaker][or][lugs only]** .
 - b. Branch Overcurrent Protective Devices: Plug-in circuit breakers, replaceable without disturbing adjacent units.
 - c. Doors: Concealed hinges secured with flush latch with tumbler lock; keyed alike.
 - d. Conductor Connectors: Mechanical type for main, neutral, and ground lugs and buses.

2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - 1. **[ABB Electrification Installations Products]**
 - 2. **[Eaton]**
 - 3. **[Siemens Industry, Inc., Energy Management Division]**
 - 4. **[Square D; Schneider Electric USA]**
 - 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[ABB Electrification Installations Products]**
 - 2. **[Eaton]**
 - 3. **[Siemens Industry, Inc., Energy Management Division]**
 - 4. **[Square D; Schneider Electric USA]**
 - 5. **<Insert manufacturer's name>**
- C. MCCB: Comply with UL 489, with **[series-connected rating][interrupting capacity]** to meet available fault currents.
 - 1. Thermal-Magnetic Circuit Breakers:
 - a. Inverse time-current element for low-level overloads.
 - b. Instantaneous magnetic trip element for short circuits.
 - c. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 - 3. Electronic Trip Circuit Breakers:
 - a. RMS sensing.
 - b. Field-replaceable rating plug or electronic trip.

- c. Digital display of settings, trip targets, and indicated metering displays.
 - d. Multi-button keypad to access programmable functions and monitored data.
 - e. Ten-event, trip-history log. Each trip event must be recorded with type, phase, and magnitude of fault that caused trip.
 - f. Integral test jack for connection to portable test set or laptop computer.
 - g. Field-Adjustable Settings:
 - 1) Instantaneous trip.
 - 2) Long- and short-time pickup levels.
 - 3) Long- and short-time adjustments.
 - 4) Ground-fault pickup level, time delay, and I squared T response.
4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6 mA trip).
 6. GFPE Circuit Breakers: Class B ground-fault protection (30 mA trip).
 7. Arc-Fault Circuit Interrupter Circuit Breakers: Comply with UL 1699; 120/240 V, single-pole configuration.
 8. Subfeed Circuit Breakers: Vertically mounted.
 9. MCCB Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Breaker handle indicates tripped status.
 - c. UL listed for reverse connection without restrictive line or load ratings.
 - d. Lugs: **[Compression][Mechanical]** style, suitable for number, size, trip ratings, and conductor materials.
 - e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
 - f. Ground-Fault Protection: **[Integrally mounted][Remote-mounted]** relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - g. Communication Capability: **[Circuit-breaker-mounted][Universal-mounted][Integral][Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system.
 - h. Shunt Trip: **[120 V][24 V]<Insert voltage>** trip coil energized from separate circuit, set to trip at **[55][75]** percent of rated voltage.
 - i. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in **[on][off][on or off]** position.
 - j. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.
 - k. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage **[without intentional][with field-adjustable 0.1- to 0.6-second]** time delay.
 - l. Rating Plugs: Three-pole breakers with ampere ratings greater than **[150]<Insert value>** A must have interchangeable rating plugs or electronic adjustable trip units.
 - m. Auxiliary Contacts: **[One, SPDT switch][Two, SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
 - n. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
 - o. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
 - p. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
 - q. Multipole units enclosed in **[single housing with single handle][or][factory assembled to operate as single unit]**.

- D. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Provide fuses and spare fuse cabinet.
 2. Fused Switch Features and Accessories:
 - a. Standard ampere ratings and number of poles.
 - b. Mechanical cover interlock with manual interlock override, to prevent opening of cover when switch is in on position. Interlock must prevent switch from being turned on with cover open. Operating handle must have lock-off means with provisions for three padlocks.
 - c. Auxiliary Contacts: **[One][Two]** normally open and normally closed contact(s) that operate with switch handle operation.

2.6 MAINTENANCE MATERIAL ITEMS

- A. Spare Parts: Furnish to Owner spare parts, for repairing panelboards and related equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]
1. Keys: **[Two]<Insert number>** spares for each type of panelboard cabinet lock.
 2. Circuit Breakers Including GFCI and GFPE Types: **[Two]<Insert number>** spares for each panelboard.
 3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
- B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to panelboards and related equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]
1. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
 2. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.
- B. Receive, inspect, handle, and store panelboards in accordance with **[NECA 407][NEMA PB 1.1]** .
- C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.
- D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF PANELBOARDS

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:
1. Panelboards: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with **[NECA 407][NEMA PB 1.1]** .
 2. Consult Architect for resolution of conflicting requirements.
- C. Special Techniques:
1. Equipment Mounting:
 - a. Install floor-mounted panelboards on cast-in-place concrete equipment base(s).
 - b. Attach panelboard to vertical finished or structural surface behind panelboard.
 - c. Mount surface-mounted panelboards to steel slotted supports **[5/8 inch (16 mm)][1-1/4 inch (32 mm)]** in depth. Orient steel slotted supports vertically.
 - d. Provide seismic control devices.
 2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
 3. Provide mounting and anchoring devices.
 4. Mount top of trim **[7.5 ft (2.3 m)]<Insert height>** above finished floor unless otherwise indicated.
 5. Mount panelboard cabinet plumb and rigid without distortion of box.
 6. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
 7. Install overcurrent protective devices and controllers not already factory installed.
 - a. Set field-adjustable, circuit-breaker trip ranges.
 - b. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver in accordance with manufacturer's published instructions.
 8. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
 9. Install filler plates in unused spaces.
 10. Stub four **1 inch (25 mm)** empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in future. Stub four **1 inch (25 mm)** empty conduits into raised floor space or below slab not on grade.
 11. Arrange conductors in gutters into groups and bundle and wrap with wire ties [**after completing load balancing**] .
 12. Mount spare fuse cabinet in accessible location.
- D. Interfaces with Other Work:
1. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components.
- B. Install warning signs.
- C. Panelboard Nameplates: Label each panelboard with nameplate.
- D. Device Nameplates: Label each branch circuit device in power panelboards with nameplate.
- E. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles must be located on interior of panelboard door.
- F. Breaker Labels: Faceplate must list current rating, UL and IEC certification standards, and AIC rating.
- G. Circuit Directory:
 - 1. Provide directory card inside panelboard door, mounted in **[transparent card holder][metal frame with transparent protective cover]** .
 - a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.
 - 2. Provide computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.
 - a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.
 - 3. Create directory to indicate installed circuit loads **[after balancing panelboard loads]** ; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.

3.4 FIELD QUALITY CONTROL

- A. Adminstrant for Low-Voltage Electrical Tests and Inspections:
 - 1. **[Owner][Tenant]** will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
 - 2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
 - 3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
 - 4. Administer and perform tests and inspections **[with assistance of factory-authorized service representative]** .
- B. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>** .

D. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers [**and low-voltage surge arrestors**] stated in NETA ATS, Paragraph 7.6 Circuit Breakers [**and Paragraph 7.19.1 Surge Arrestors, Low-Voltage**] . [Do not perform][Perform] optional tests. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
 - c. Instruments and Equipment:
 - 1) Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Nonconforming Work:

1. Panelboards will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

1. Include certified report that identifies panelboards included and that describes scanning results, with comparisons of two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

G. Manufacturer Services: Engage factory-authorized service representative to [support][supervise] field tests and inspections.

3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended in writing by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges.
- C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Architect of effect on phase color coding.
 1. Measure loads during period of normal facility operations.
 2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by Architect. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
 4. Tolerance: Maximum difference between phase loads, within panelboard, may not exceed 20 percent.

3.6 PROTECTION

- A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature in accordance with manufacturer's published instructions.

END OF SECTION 26 24 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 16 00A - ELECTRONICALLY OPERATED CIRCUIT-BREAKER PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panelboards.
2. Circuit breakers.
3. Main controllers.
4. Slave panel controllers.
5. Control network.
6. Manual switches and cover plates.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. Monitoring:** Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, manual switches and cover plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For each electronically operated, circuit-breaker panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Short-circuit current rating of panelboards and overcurrent protective devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
6. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for

- each type of overcurrent protective device.
- 7. Include diagrams for power, signal, and control wiring.
- 8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
- 9. Submit evidence that electronic controls are compatible with connected monitoring and control devices and systems specified in other Sections.
 - a. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
 - b. For networked controls, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of network protocol.
- C. Field quality-control reports.
- D. Sample Warranty: For manufacturer's special warranty.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Electrically Operated, Molded-Case Circuit Breakers: Equal to **<Insert number>** percent of amount installed[**for each size indicated**], but no fewer than **<Insert number>**.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Handle and prepare panelboards for installation according to **[NECA 407][NEMA PB 1.1]**.

1.6 WARRANTY

- A. Special Manufacturer Extended Warranty: Manufacturer warrants that components of panelboards perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.
 - 1. Initial Extended Warranty Period: **[Two]<Insert number>** year(s) from date of Substantial Completion, for labor, materials, and equipment.
 - 2. Follow-on Extended Warranty Period: **[Five]<Insert number>** year(s) from date of Substantial Completion, for materials that failed because of transient voltage surges only, f.o.b. the nearest shipping point to Project site.

PART 2 - PRODUCTS

2.1 ELECTRICALLY OPERATED CIRCUIT-BREAKER PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. [ABB, Electrification Business]
2. [Eaton]
3. [Siemens Industry, Inc., Energy Management Division]
4. [Square D; Schneider Electric USA]
5. <Insert manufacturer's name>

- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [ABB, Electrification Business]
2. [Eaton]
3. [Siemens Industry, Inc., Energy Management Division]
4. [Square D; Schneider Electric USA]
5. <Insert manufacturer's name>

- C. Source Limitations: Obtain electrically operated circuit breakers and power distribution components from single manufacturer.

2.2 SYSTEM DESCRIPTION

- A. Input signal from field-mounted or on-board signal source must open or close one or more electrically operated circuit breakers in electronically operated, circuit-breaker panelboards. Any combination of inputs must be programmable to any combination outputs.
- B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by the authorities having jurisdiction, and marked for intended location and application.
- C. Comply with 47 CFR Part 15, Subpart A and Subpart B, for Class A digital devices.

2.3 PERFORMANCE REQUIREMENTS

- A. Expansion Requirements: Capacity for future expansion of number of control functions by 25 percent of current capacity; to include equipment ratings, housing capacities, spare spaces for circuit breakers, terminals, number of conductors in control cables, and control software.
- B. Interface with DDC System for HVAC: Provide hardware and software to enable DDC system for HVAC to monitor, control, display, and record data for use in processing reports.
 1. Hardwired Points:
 - a. Monitoring: On-off status, <Insert monitoring point>.
 - b. Control: On-off operation, <Insert control point>.
 2. Communication Interface: Comply with [ASHRAE 135][ISO/IEC 14908-1][MODBUS Application Protocol Specification]<Insert type of interface> communication interface with DDC system for HVAC must enable DDC system for HVAC operator to remotely control and monitor electronically operated circuit breakers from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at panelboard controller must be available through DDC system for HVAC.

2.4 PANELBOARDS

- A. Electronically operated, circuit-breaker panelboards may contain remotely operated circuit breakers and standard branch circuit breakers specified in Section 262416 "Panelboards."
- B. Assemblies: Comply with UL 67 and NEMA PB 1.
- C. Surge Protective Device:
 - 1. Field mounted, complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 - 2. Integrally mounted, complying with UL 1449 Type 1.
 - a. Comply with IEEE C62.41, Category C, 200 kA short-circuit current rating.
 - b. Non-modular type with the following features and accessories:
 - 1) Digital-display indicator lights for power and protection status.
 - 2) **<Insert features and accessories>**.
- D. Enclosures: Comply with UL 50.
- E. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
- F. Panelboard Short-Circuit Current Rating:
 - 1. Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by a qualified electrical testing laboratory. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected, short-circuit rating by a qualified electrical testing laboratory.
 - 2. Fully rated to interrupt **[10 kA]** symmetrical short-circuit current available at terminals.

2.5 CIRCUIT BREAKERS

- A. Remotely operated branch circuit breakers must provide branch circuit overcurrent protection.
- B. Labeled with SWD and HID Ratings: Comply with UL 489 for 15 and 20 A, single-pole branch devices. **[15 and 20 A circuit breakers, if scheduled, must be a product of same manufacturer, and be of same class as rated circuit breakers.]**
- C. Switching Endurance Rating: Not less than **[50,000][200,000]<Insert number>** full-load open/close/open remote operations.
- D. Remotely Operated Circuit Breakers: Manual override switch or handle position must enable or disable remote operation of device and allow breaker handle to manually control breaker's on-off status.

2.6 MAIN CONTROLLERS

- A. Description: Controllers must contain power supply and electronic control for operating and monitoring remotely operated branch circuit breakers.
 - 1. Comply with UL 916 (CSA C22.2, No. 205); with a microprocessor-based, solid-state, 365-day

- timing and control unit.
2. Power Supply: Powered from panelboard, sized to provide control power for operation of remotely operated circuit breakers, controller, bus system, control-voltage inputs, and field-installed sensors.
3. Integral keypad and digital-display front panel for local setup, including the following:
 - a. Log and display remotely operated breaker on-time.
 - b. Provision to accept downloadable firmware so that latest features may be added in future without replacing module.
4. Nonvolatile memory must retain all setup configurations. After a power failure, controller must automatically reboot and return to normal system operation.
5. Ethernet Communications: Comply with [ASHRAE 135][ISO/IEC 14908-1][**"MODBUS Application Protocol Specification"**]<Insert network protocol> protocols.
 - a. Each input connected to controller must control any remotely operated breaker in any other networked electronically operated, circuit-breaker panelboard.
 - b. A schedule programmed at one controller must be able to control any remotely operated breaker in any other networked panelboard.
6. Time Synchronization: Timing unit must be updated not less than every <Insert number> hour(s) with network time server.
7. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard Web browser.
 - a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
 - b. Separate Web page, showing status of each main and slave electronically operated, circuit-breaker panelboards with arrangement of breakers on page matching physical appearance of panel. Status must include breaker nametags, pole configuration, location in panel, actual contact state (on-off/tripped/manual), and breaker on-time.
 - c. Panel summary showing master and slave panels connected to controller.
 - d. Controller diagnostic information.
 - e. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens must also allow direct breaker control and zone overrides.
8. Alarm and E-mail Notification: Automatically initiate alarms based on preconfigured conditions listed below and routing alarm alerts as set at control panel.
 - a. General Alarms: Power loss, non-responding breakers, loss and restoration of sub-net communications, loss and restoration of serial port communications, loss and restoration of DDC system for HVAC commands.
 - b. Specific Alarms: Input status, zone status, breaker status on-time (zero to 99999 hours).
 - c. E-mail Notification: Automatically route e-mail messages to five individual e-mail addresses. Within body text of e-mail, include a link that will automatically redirect user to associated panels' status Web page.

B. Timing Unit:

1. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
2. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
3. [16]<Insert number> independent schedules, each having [24]<Insert number> time periods.
4. Schedule periods settable to the minute.
5. Day of week, day of month, day of year with one-time or repeating capability.

6. [32]<Insert number> special date periods.

C. With [eight][16]<Insert number> inputs, each configurable to the following parameters:

1. Normally open, normally closed, two-wire maintained toggle, two-wire momentary toggle, two-wire momentary on, two-wire momentary off, or three-wire momentary operation.
2. On and off-delay timers for local override operation, adjustable from five minutes to 12 hours. Local override must be by field-installed, two-wire momentary toggle switch.

2.7 SLAVE PANEL CONTROLLERS

- A. Slave panels must contain necessary busses and network hardware to allow connection of sub-net wiring between panels, with programming at main panel controller. Programmable timing unit, Web server, alarm and e-mail notification, and Ethernet connection to control network is not required provided all of these functions are available for slave panel from main panel controller.
- B. Sub-net wiring connections must allow connection of wiring to a terminal that can be removed from panel without interrupting communications to other panels.
- C. Slave panels must contain a nameplate label attached to deadfront trim indicating panel designation, panel network address, and panel designation of associated master panel.

2.8 CONTROL NETWORK

- A. Panel Controllers: Networked with other [electronically operated, circuit-breaker panel controllers][DDC system for HVAC controllers] in a peer-to-peer configuration using Ethernet [10Base-T][100Base-T] network.
- B. Protocol: Controllers must support serial MS/TP and Ethernet IP communications, and must be able to communicate directly via DDC system for HVAC TIA-485 serial networks and Ethernet 10Base-T networks as a native device.

2.9 MANUAL SWITCHES AND COVER PLATES

- A. Keypads: Programmable, designed to control functions associated with equipment of this Section. Units must be able to control any system output device.
- B. Push-Button Switches: Modular, momentary-contact, control-voltage type.
 1. Match color specified in Section 262726 "Wiring Devices."
 2. Integral green [digital-display][neon] pilot light to indicate when circuit is on.
 3. Internal white [digital-display][neon] locator light to illuminate when circuit is off.
- C. Manual, Maintained Contact, Line-Voltage or Control-Voltage Switch: Comply with Section 262726 "Wiring Devices."
- D. Cover Plates: Single and multigang cover plates as specified in Section 260533.16 "Boxes and Covers for Electrical Systems."
- E. Legend: Engraved or permanently silk-screened on cover plate where indicated. Use designations indicated on Drawings.

2.10 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Class 2 and Class 3 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 18][No. 22][No. 24]** AWG. Comply with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than **[No. 14][No. 16][No. 18]** AWG. Comply with Section 260523 "Control-Voltage Electrical Power Cables."
- D. Twisted-Pair Data Cable:
 - 1. **[Category 5e][Category 6][Category 6a]**. Comply with requirements for twisted pair cabling in Section 260523 "Control-Voltage Electrical Power Cables."
 - 2. **[Category 5e][Category 6][Category 6a]**. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Receive, inspect, handle, and store panelboards according to **[NECA 407][NEMA PB 1.1]**.
- B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.
- C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF WIRING

- A. Wiring Method:
 - 1. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
 - 2. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters**[and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used]**. Conceal raceway and cables except in unfinished spaces.
 - a. Install plenum cable in environmental air spaces, including plenum ceilings.
 - b. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
 - c. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."
- B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 INSTALLATION OF PANELBOARDS

- A. Install panelboards and accessories according to **[NECA 407][NEMA PB 1.1]**.
- B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- C. Mounting Height: **[90 inch (2286 mm)]<Insert dimension>** to top of trim above finished floor unless otherwise indicated.
- D. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- E. Install filler plates in unused spaces.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."
- C. Create a directory to indicate loads served by each circuit; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are unacceptable.
- D. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- C. Tests and Inspections:
- D. Perform the following tests and inspections **[with the assistance of a factory-authorized service representative]**:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Perform the following infrared scan tests and inspections and prepare reports:

- a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
- b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
- c. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Nonconforming Work:

1. Panelboard will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Prepare test and inspection reports, including a certified report that identifies panelboards included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

G. Manufacturer Services:

1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.6 STARTUP SERVICE

A. **[Engage a factory-authorized service representative to perform][Perform]** startup service.

1. Complete installation and startup checks according to manufacturer's instructions.
2. Confirm correct communication wiring, initiate communications between panels, and program control system according to approved time-of-day schedules and input override assignments.
3. **<Insert startup steps if any>**.

3.7 ADJUSTING

A. Occupancy Adjustments: When requested within **[12]<Insert number>** months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two]<Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.8 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for **[two]<Insert number>** years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.

- a. Upgrade Notice: No fewer than **[30]<Insert number>** days to allow Owner to schedule and

access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.

END OF SECTION 26 24 16 00A

SECTION 26 24 19 00 - MOTOR-CONTROL CENTERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes MCCs for use with ac circuits rated 600 V and less, with combination controllers and having the following factory-installed components:
 - 1. Automatic power transfer.
 - 2. Feeder-tap units.
 - 3. Measurement and control.
 - 4. Auxiliary devices.
 - 5. Panelboards.
 - 6. Transformers.

1.2 DEFINITIONS

- A. CPT: Control power transformer.
- B. MCC: Motor-control center.
- C. MCCB: Molded-case circuit breaker.
- D. MCP: Motor-circuit protector.
- E. OCPD: Overcurrent protective device.
- F. PID: Control action; proportional plus integral plus derivative.
- G. PT: Potential transformer.
- H. SPD: Surge protective device.
- I. SCR: Silicon-controlled rectifier.
- J. VFC: Variable-frequency controller.
- K. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for MCCs.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories for each cell of the MCC.

B. Sustainable Design Submittals:

1. Product Data: For continuous metering equipment for energy consumption.
2. Product Data: For continuous metering equipment for energy consumption.
3. Product Data: For continuous metering equipment for energy consumption.
4. Product Data: For continuous metering equipment for energy consumption.
5. Product Data: For continuous metering equipment for energy consumption.

C. Shop Drawings: For each MCC, manufacturer's **[approval][custom][and][production]** drawings as defined in UL 845. In addition to requirements specified in UL 845, include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.

1. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Factory-installed devices.
 - c. Enclosure types and details.
 - d. Nameplate legends.
 - e. Short-circuit current (withstand) rating of complete MCC, and for bus structure and each unit.
 - f. Features, characteristics, ratings, and factory settings of each installed controller and feeder device, and installed devices.
 - g. Specified optional features and accessories.
 - h. **<Insert required information>**.
2. Schematic **[and Connection]** Wiring Diagrams: For power, signal, and control wiring for each installed controller.
3. Nameplate legends.
4. Vertical and horizontal bus capacities.
5. Features, characteristics, ratings, and factory settings of each installed unit.
6. **<Insert required information>**.

1.4 INFORMATIONAL SUBMITTALS

- A. Standard Drawings: For each MCC, as defined in UL 845.
- B. Production Drawings: For each MCC, as defined in UL 845.
- C. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around MCCs where pipe and ducts are prohibited. Show MCC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
- D. Qualification Data: For testing agency.
- E. Seismic Qualification Data: Certificates, for MCCs, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their

installation requirements.

- F. Product Certificates: For each MCC.
- G. Source quality-control reports.
- H. Field quality-control reports.
- I. Load-Current and Overload Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- J. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.
- K. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For MCCs, all installed devices, and components to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 2. Manufacturer's Record Drawings: As defined in UL 845. In addition to requirements specified in UL 845, include field modifications **[and field-assigned wiring identification]** incorporated during construction by manufacturer, Contractor, or both.
 - 3. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
 - 4. Manufacturer's written instructions for setting field-adjustable overload relays.
 - 5. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage, solid-state controllers.
 - 6. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
 - 7. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Power Fuses: Equal to **[10]<Insert number>** percent of quantity installed for each size and type, but no fewer than **[three]<Insert number>** of each size and type.
 - 2. Control Power Fuses: Equal to **[10]<Insert number>** percent of quantity installed for each size and type, but no fewer than **[two]<Insert number>** of each size and type.
 - 3. Indicating Lights: **[Two]<Insert number>** of each type and color installed.
 - 4. Auxiliary Contacts: Furnish **[one]<Insert number>** spare(s) for each size and type of magnetic controller installed.
 - 5. Power Contacts: Furnish **[three]<Insert number>** spares for each size and type of magnetic contactor installed.
 - 6. **<Insert extra materials>**.

1.7 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA.
 - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.
- B. Source Limitations: Obtain MCCs and controllers of a single type from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, and marked for intended use.
- D. UL Compliance: MCCs shall comply with UL 845 and shall be listed and labeled by a qualified testing agency.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver MCCs in shipping splits of lengths that can be moved past obstructions in delivery paths.
- B. Handle MCCs according to the following:
 - 1. NECA 402, "Recommended Practice for Installing and Maintaining Motor Control Centers."
 - 2. NEMA ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of Motor Control Centers Rated Not More Than 600 Volts."
- C. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside MCCs; **[install temporary electric heating, with at least 250 W per vertical section][connect factory-installed space heaters to temporary electrical service]**.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace **[MCC][and][SPD]<Insert devices>** that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: **[Five]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS**2.1 MOTOR-CONTROL CENTERS**

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[ABB, Electrification Business]**
 - 2. **[Eaton]**
 - 3. **[Rockwell Automation, Inc.]**
 - 4. **[Siemens Industry, Inc., Energy Management Division]**
 - 5. **[Square D; Schneider Electric USA]**

6. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [ABB, Electrification Business]
2. [Eaton]
3. [Rockwell Automation, Inc.]
4. [Siemens Industry, Inc., Energy Management Division]
5. [Square D; Schneider Electric USA]
6. <Insert manufacturer's name>

2.2 SYSTEM DESCRIPTION

A. NEMA Compliance: Fabricate and label MCCs to comply with NEMA ICS 18.

B. Ambient Environment Ratings:

1. Ambient Temperature Rating: Not less than **0 deg F (minus 18 deg C)** and not exceeding **104 deg F (40 deg C)**, with an average value not exceeding **95 deg F (35 deg C)** over a 24-hour period.
2. Ambient Storage Temperature Rating: Not less than **minus 4 deg F (minus 20 deg C)** and not exceeding **140 deg F (60 deg C)**
3. Humidity Rating: Less than 95 percent (noncondensing).
4. Altitude Rating: Not exceeding **6600 feet (2000 m)**, or **3300 feet (1000 m)** if MCC includes solid-state devices.
5. <Insert unusual service condition>.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: MCCs shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
2. Component Importance Factor: **[1.5][1.0]**.
3. Component Amplification Factor: 2.5.
4. Component Response Modification Factor: 6.0.

B. Capacities and Characteristics:

1. MCC Enclosure and Assembly:
 - a. Nominal System Voltage: **[277][277/480][600]<Insert number(s)>-V ac**.
 - b. Service Equipment Rated: **[Yes][No]**.
 - c. Enclosure: NEMA 250, Type **<Insert number or number and a letter>**.
2. Integrated Short-Circuit Rating for MCC:

- a. Combination series rated; **<Insert number> kA.**
 - b. Fully rated; **<Insert number> kA.**
3. Integrated Short-Circuit Rating for Each Unit:
 - a. Combination series rated; **<Insert number> kA.**
 - b. Fully rated; **<Insert number> kA.**
4. Wiring Class: **<Insert numbers and letters>.**
5. Bus:
 - a. Horizontal Bus: **<Insert number> kA.**
 - b. Neutral Bus: **[None][50 percent][Full size][150 percent]<Insert percentage>.**
6. Main Disconnect Device:
 - a. Main Disconnect: **[MCCB, UL 489,][Fusible switch, UL 98,] three pole, <Insert number> A.[Manually operated, electrically tripped.]**
 - b. SPD: UL 1449, **[Type 1][Type 2].**
 - c. Optional Features: **<Insert items>.**
7. Automatic Power Transfer: Electrically operated MCCBs, three pole, **<Insert number> A.**
8. Magnetic Controllers:
 - a. Tag Number: **<Insert numbers and letters>, <Insert description>, <Insert number> hp, <Insert number> full-load A.**
 - 1) Classification by Starting Method: **<Insert text>.**
 - 2) Controller Size: **<Insert number or numbers and letters> complying with NEMA ICS 2.**
 - 3) Optional Features: **<Insert items>.**
9. Reduced-Voltage Solid-State Controllers:
 - a. Tag Number: **<Insert numbers and letters>, <Insert description>, <Insert number> hp, <Insert number> full-load A.**
 - 1) Starting Configuration: **<Insert text>.**
 - 2) Starting Mode: **<Insert text>.**
 - 3) Stopping Mode: **<Insert text>.**
 - 4) Controller Size: **<Insert number or numbers and letters> complying with NEMA ICS 2.**
 - 5) Bypass Contactor: **Comply with NEMA ICS 2.**
 - 6) Acceleration Control: **<Insert number>.**
 - 7) Overload Relays: **[Melting alloy][Bimetallic][Solid state]. Class [10][20][30].**
 - 8) Isolated Overload Alarm Contact: **[NC][NO].**
 - 9) Optional Features: **<Insert items>.**
10. VFCs:
 - a. Tag Number: **<Insert numbers and letters>, <Insert description>, <Insert number> hp, <Insert number> full-load A.**
 - 1) Bypass Mode: **[Manual][Field selectable, manual or automatic].**
 - 2) Bypass Style: **[Two][Three] contactor style.**

- 3) Bypass Contactor Classification: **[Full-voltage (across-the-line)][Reduced-voltage autotransformer, open transition][Reduced-voltage autotransformer, closed transition]<Insert type>**.
 - 4) Overload Relays: **[Melting alloy][Bimetallic][Solid state]**. Class **[10][20][30]**.
 - 5) Isolated Overload Alarm Contact: **[NC][NO]**.
 - 6) Optional Features: **<Insert items>**.
11. Controller-Mounted Auxiliary Devices:
- a. Push Buttons and Selector Switches: **[Heavy][Standard]-duty, [oiltight]** type.
 - b. **<Insert devices>**.
 - c. Feeder Tap Units: Main Disconnect: **[MCCB, UL 489,][Fusible switch, UL 98,]** three pole, **<Insert number> A.[Manually operated, electrically tripped.]**
12. Panelboards: Tag Number **<Insert designation>**.
- a. Mains: **[MCCB][Main lugs only]**, **<Insert number>** phase, **<Insert number>** V, **<Insert number>** A.
 - b. **[Plug-in][Bolt-on]** circuit breakers.
13. Transformer(s): Tag Number **<Insert designation>**, **<Insert number>** kVA, **<Insert number>** V primary, **<Insert number>** V secondary.
- a. Primary Circuit Breaker: MCCB, **<Insert number>** A.
14. Transfer Switch: Tag Number **<Insert designation>**, **<Insert number>** pole, **<Insert number>** A.

2.4 MOTOR-CONTROL CENTER ENCLOSURES

- A. Indoor Enclosures: Freestanding steel cabinets unless otherwise indicated. NEMA 250, **[Type 1][Type 1A][Type 2][Type 12]** unless otherwise indicated to comply with environmental conditions at installed location.
- B. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.
 1. Space-Heater Control: **[Thermostats to maintain temperature of each section above expected dew point][Manual switching of branch-circuit protective device]**.
 2. Space-Heater Power Source: **[Transformer, factory installed in MCC][120-V external branch circuit]**.
- C. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's **[standard gray][custom color]** finish over a rust-inhibiting primer on treated metal surface.
- D. Outdoor Enclosures: Type 3R, **[non-walk-in aisle][with interior-lighted walk-in aisle]**.
 1. Finish: Factory-applied finish in manufacturer's **[standard][custom]** color; undersurfaces treated with corrosion-resistant undercoating.
 2. Enclosure: **[Flat][Downward, rearward sloping]** roof; **[bolt-on rear covers][rear hinged doors]** for each section, with provisions for padlocking.
 3. Doors: Personnel door at each end of aisle, minimum width of **[30 inches (762 mm)]<Insert dimension>**; opening outwards; with panic hardware and provisions for **[padlocking][cylinder lock]**.
 4. Accessories: Fluorescent luminaires, ceiling mounted; wired to a three-way light switch at each

end of aisle; GFCI duplex receptacle; emergency battery pack luminaire installed on wall of aisle midway between personnel doors.

5. Walk-in Aisle Heating and Ventilating:
 - a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [40 deg F (5 deg C)]<Insert temperature> with outside design temperature of [plus 23 deg F (minus 5 deg C)]<Insert temperature>.
 - b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [100 deg F (38 deg C)]<Insert temperature> with outside design temperature of [104 deg F (40 deg C)]<Insert temperature>.
 - c. Ventilating openings[**complete with replaceable fiberglass air filters**].
 - d. Thermostat: Single stage; wired to control heat and exhaust fan.
6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a CPT within the switchboard. Supply voltage shall be [120][120/240][120/208]-V ac.
7. Power for space heaters, ventilation, lighting, and receptacle supplied from a remote source.

2.5 ASSEMBLY

- A. Structure:
 1. Comply with UL requirements for service entrance equipment.
 2. Units up to and including Size 3 shall have drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.
 3. Units in Type B and Type C MCCs shall have pull-apart terminal strips for external control connections.
 4. Pull Boxes:
 - a. Include provisions for ventilation to maintain temperature in pull box within same limits as the MCC.
 - b. Set the box back from front to clear circuit-breaker removal mechanism.
 - c. Covers: Removable covers forming top, front, and sides.
 - d. Insulated bottom of fire-resistive material with separate holes for cable drops into MCC.
 - e. Cable Supports: Arranged to facilitate cabling and adequate to support cables, including supports for future cables.
 - f. When equipped with barriers, supply with access to check bus bolt tightness.
- B. Compartments: Modular; individual [**lift-off**]doors with concealed hinges and quick-captive screw fasteners.
 1. Interlock compartment door to require that the disconnecting means is "off" before door can be opened or closed, except by operating a concealed release device.
 2. Compartment construction shall allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC.
 3. The same-size compartments shall be interchangeable to allow rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.
- C. Bus Transition and Incoming Pull Sections: Included and aligned with the structure of the MCC.
- D. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and PTs or potential taps as required by utility company. If separate vertical section is

required for utility metering, match and align with basic MCC. Install service entrance label and applicable service entrance features. Comply with requirements in Section 262713 "Electricity Metering."

- E. Owner's Metering Compartment: A separate customer metering compartment and section with front hinged door, metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. **[Include PTs having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.]**
- F. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC; same-size compartments to permit interchangeability and ready rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.
- G. Wiring Spaces:
 - 1. Vertical wireways in each vertical section for vertical wiring to each unit compartment; supports to hold wiring in place.
 - 2. Horizontal wireways in **[bottom][and][top]** of each vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.
- H. Provisions for Future:
 - 1. Compartments marked "future" shall be bused, wired and equipped with guide rails or equivalent, and ready for insertion of drawout units.
 - 2. Compartments marked "spare" shall include provisions for connection to the vertical bus.
- I. Integrated Short-Circuit Rating:
 - 1. Short-Circuit Current Rating for Each Unit: **[Combination series rated][Fully rated]; [22][42][65][100]<Insert number> kA.**
 - 2. Short-Circuit Current Rating of MCC: **[Combination series rated][Fully rated]** with its main overcurrent device; **[22][42][65][100]<Insert number> kA.**
- J. Control Power:
 - 1. 120-V ac, supplied centrally **[from a CPT][from a remote branch circuit]**.
 - 2. **[24][120]<Insert number>-V ac**; obtained from CPT integral with controller; with primary and secondary fuses. The CPT shall be of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
 - 3. Control Circuits: 24-V dc, supplied centrally from two redundant, automatically switched power supplies.
 - 4. CPT Spare Capacity: **[50][100][200]<Insert number> VA.**
- K. Factory-Installed Wiring: Factory installed, with bundling, lacing, and protection included. Use flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.
 - 1. Wiring Class:
 - a. NEMA ICS 18, **[Class I][Class I-S], [Type A][Type B, for starters larger than Size 3][Type B-D, for starters Size 3 and smaller][Type B-T, for starters Size 3 and smaller][Type C].**
 - b. NEMA ICS 18, **[Class II][Class II-S], [Type B, for starters larger than Size 3][Type B-D, for starters Size 3 and smaller][Type B-T, for starters Size 3 and smaller][Type C].**

2. Control and Load Wiring: Factory installed, with bundling, lacing, and protection included. Use flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

L. Bus:

1. Main Horizontal and Equipment Ground Buses: Uniform capacity for entire length of MCC's main and vertical sections. Provide for future extensions[**from both ends**].
2. Vertical Phase and Equipment Ground Buses: Uniform capacity for entire usable height of vertical sections, except for sections incorporating single units.
3. Phase- and Neutral-Bus Material:
 - a. Hard-drawn copper of 98 percent minimum conductivity or **[silver][tin]**-plated alloy, with **[mechanical][compression]** connectors for outgoing conductors.
 - b. Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy, with **[mechanical][compression]** connectors for outgoing conductors.
4. Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for ground conductors, minimum size **1/4-by-2 inches (6 by 50 mm)**. Equip with **[mechanical][compression]** connectors for outgoing conductors.
5. Neutral Disconnect Link: Bolted, uninsulated, **1/4-by-2-inch (6-by-50-mm)** copper bus, arranged to connect neutral bus to ground bus.
6. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Insulation temperature rating shall not be less than 105 deg C.

2.6 MAIN DISCONNECT AND OVERCURRENT PROTECTIVE DEVICE(S)

- A. MCCB (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.
 1. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be shown by the position of the handle, and manual push-to-trip push button.
 2. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.
 - a. Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - b. Trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs shall not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
 - c. Time-current adjustments to achieve protective-device coordination as follows:
 - 1) Adjustable long-time delay.
 - 2) Adjustable short-time setting and delay to shape the time-current curve.
 - 3) Adjustable instantaneous setting.
 - 4) Individually adjustable ground-fault setting and time delay.
 - d. Built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker.[**Provide one test set for testing the installed circuit breakers 225-A frame and higher.**]
 - e. Built-in digital ammeter display, showing load current and tripping cause.

3. Switch operator power shall be from control power specified in "Assembly" Article.
 - B. MCCB (1600 to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.
 1. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be indicated by the position of the handle, and manual push-to-trip push button.
 2. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.
 - a. Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - b. LED indicators or display, with manual reset, to show reasons of automatic trip.
 - c. Display panel to indicate the status of the system circuitry, or give fault location based on automatic diagnosis.
 - d. Trip the circuit breaker when closing on a fault.
 - e. Time-current adjustments to achieve protective-device coordination as follows:
 - 1) Adjustable long-delay pickup and time.
 - 2) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
 - 3) Adjustable instantaneous pickup.
 - 4) Individually adjustable ground-fault pickup and time, with **[I-squared-t setting][ground alarm]**.
 - f. One test kit to test each trip function.
 - g. Battery backup for informational displays after automatic trip, with battery status indicator.
 3. Switch operator power shall be from control power specified in "Assembly" Article.
 - C. MCC Main Disconnect Device: Fusible switch; fixed-mounted, manually operated, **[electrically tripped]**, quick-make, quick-break switch. Comply with UL 98.
 1. Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
 2. Fuse clips and fuses.
 3. Electrically tripped switches shall include the following:
 - a. Shunt trip.
 - b. Ground-fault protection, with adjustable time delay and test panel.
 - c. Single-phase protection, tripping the switch on loss of a source phase.
 - d. Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.
 - e. Switch operator power shall be from control power specified in "Assembly" Article.
 - D. Surge Suppression: Factory installed as an integral part of the incoming feeder, complying with UL 1449, SPD **[Type 1][Type 2]**.
- 2.7 AUTOMATIC POWER TRANSFER
- A. Two-Breaker Transfer Control:
 1. Transfer control, using electrically operated MCCBs, for an MCC supplied from two normally energized low-voltage power sources, designated "normal" and "standby." The circuit breakers connecting the two power sources to the load bus shall be controlled by a microprocessor-based automatic transfer control. Power for the transfer control shall be from the voltage-sensing transformers.

2. MCCBs (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.
 - a. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be indicated by the position of the handle, and manual push-to-trip push button.
 - b. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.
 - 1) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
 - 2) Trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs shall not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
 - 3) Time-current adjustments to achieve protective-device coordination as follows:
 - a) Adjustable long-time delay.
 - b) Adjustable short-time setting and delay to shape the time-current curve.
 - c) Adjustable instantaneous setting.
 - d) Individually adjustable ground-fault setting and time delay.
 - 4) Built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker. **[Provide one test set for testing the installed circuit breakers 225-A frame and higher.]**
 - 5) Built-in digital ammeter display, showing load current and tripping cause.
3. In the automatic mode, the load bus is connected to the normal power source. When the normal source fails, the control shall automatically open the normal power source and close the standby source circuit breaker.
4. Sequence of Operation:
 - a. The default operation shall be with the normal source main breaker closed and standby main breaker open. On detection of an undervoltage to the line side of the normal main breaker and after a field-adjustable time delay, the main breaker shall open and, after an additional field-adjustable time delay, the standby breaker shall close and restore power to the facility.
 - b. On restoration of voltage to the line side of the normal main breaker and after a field-adjustable time delay, the standby main breaker shall open and, after a field-adjustable time delay, the normal main breaker shall close.
5. Field-Adjustable Transfer Parameters:
 - a. Delay the transfer from the normal power source to the standby power source and from the standby power source to the normal source. The time delay is to allow the load voltage to decay before reconnecting to another power source. Delay range is zero seconds to 30 minutes.
 - b. Delay the initiation of the transfer sequence. The time delay is recommended to override a momentary power outage or voltage fluctuation. Delay range is zero to 120 seconds.
 - c. Delay the transfer from the standby power source to the normal power source. Delay range is zero seconds to 30 minutes.
 - d. A relay with contact that changes state when the power is available on the normal source, and a relay with contact that changes state when the power is available on the standby source.
6. Controls and Indicators: In addition to the delay setting controls, include the following:

- a. Interlocks or relay control to prevent transfer when either of the two controlled circuit breakers trip due to overcurrent or ground-fault.
 - b. Three-position selector switch to select the normal source: Source 1, Source 2, or none.
 - c. Transfer-control automatic and manual selector.
 - 1) Interlock shall prevent paralleling of the two power sources in manual mode.
 - d. Open-close control switch for manual electrical operation of each controlled circuit breaker.
 - e. Selector to place control into programming mode.
 - f. Circuit breaker control switch for each of the normal and standby source breakers, providing open and close operation.
 - g. Push button to initiate manual retransfer to the normal source when the transfer controller is in the automatic mode.
 - h. Meters and display to show the following:
 - 1) Voltage and frequency of both sources.
 - 2) A multiline display showing the following:
 - a) Set points of timers, and voltage pickup and dropout set points.
 - b) Date, time, and reason for minimum of the last 10 transfers. The display may show the information for one transfer at a time using a scrolling control, with the others held in memory.
 - c) When the control system is in the transferring process, the display shall show delay countdown in seconds.
 - i. LED indicators to show the following:
 - 1) Normal source available.
 - 2) Standby source available.
 - 3) Normal source connected.
 - 4) Standby source connected.
 - 5) Load bus energized.
7. Voltage Transformers: Primary and secondary protection and disconnecting means for sensing functions and control power.
8. Voltage Sensing Relays: Microprocessor-based, IEEE device number 27/47 voltage detection relays for three-phase undervoltage protection and negative sequence voltage protection.

2.8 MAGNETIC CONTROLLERS

A. Controller Units: Combination controllers.

B. Disconnects:

1. Fusible Switch:

- a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate **[UL 248-8 Class J][UL 248-10 Class L]<Insert class>** fuses.
- b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
- c. Auxiliary Contacts: **[NC][NO]**, arranged to activate before switch blades open.

2. MCP:

- a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with

- motor locked-rotor amperes.
- b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- d. **[NC][NO]** alarm contact that operates only when MCP has tripped.
- e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB:

- a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
- d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
- e. **[NC][NO]** alarm contact that operates only when MCCB has tripped.

4. Molded-Case Switch:

- a. UL 489, with in-line fuse block for **[UL 248-8 Class J][UL 248-10 Class L]** power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
- b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
- c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
- d. **[NC][NO]** alarm contact that operates only when molded-case switch has tripped.

C. Controllers: Comply with UL 508.

1. Full-Voltage Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.
 - a. Classification: **[Nonreversing][and][reversing]<Insert classification>**.
2. Reduced-Voltage Magnetic Controllers: Electrically held, NEMA ICS 2, general purpose, Class A; **[closed][open]** transition; adjustable time delay on transition. **[Electrically][Mechanically]** held.
 - a. Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
 - b. Part-Winding Controller: Separate START and RUN contactors, with separate overload relays for starting and running sequences.
 - c. Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; one RUN and two START contactors.
3. Multispeed Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.
 - a. Classification, Nonreversing: **[Consequent pole][Two winding]**.
 - 1) Two speed, with compelling relays to ensure that motor will start only at low speed.
 - 2) Timer Relays:
 - a) Accelerating, for properly timed acceleration through speeds lower than that selected.
 - b) Decelerating, for automatically timed deceleration through each speed.

- b. Classification, Reversing: **[Consequent pole][Two winding]**.
 - 1) Two speed, with compelling relay to ensure that motor will start only at low speed.
 - 2) Timer Relays:
 - a) Accelerating, for properly timed acceleration through speeds lower than that selected.
 - b) Decelerating, for automatically timed deceleration through each speed.
 - c. Antiplugging Relays: Time delay when transferring from FORWARD to REVERSE and back.
- D. Overload Relays:
- 1. Melting-Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - 2. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - d. Ambient compensated.
 - e. Automatic resetting.
 - 3. Solid-State Overload Relays:
 - a. Switch or dial selectable for motor-running overload protection.
 - b. Sensors in each phase.
 - c. **[Class 10][Class 20][Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - d. UL 1053 Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - e. Analog communication module.
 - 4. **[NC][NO]** isolated overload alarm contact.
 - 5. External overload reset push button.
- 2.9 REDUCED-VOLTAGE SOLID-STATE CONTROLLERS
- A. Controller Units: An integrated unit with disconnects, power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relays. Comply with UL 508.
 - 1. Suitable for use with NEMA MG 1 Design B, polyphase induction motors.
 - 2. **<Insert special applications>**.
 - B. Disconnects:

1. Fusible Switch:
 - a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate **[UL 248-8 Class J][UL 248-10 Class L]<Insert class>** fuses.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary Contacts: **[NC][NO]**, arranged to activate before switch blades open.
2. MCP:
 - a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
 - d. **[NC][NO]** alarm contact that operates only when MCP has tripped.
 - e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.
3. MCCB:
 - a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
 - b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
 - e. **[NC][NO]** alarm contact that operates only when MCCB has tripped.
4. Molded-Case Switch:
 - a. UL 489, with in-line fuse block for **[UL 248-8 Class J][UL 248-10 Class L]** power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
 - d. **[NC][NO]** alarm contact that operates only when molded-case switch has tripped.
- C. Configuration: **[Standard][Severe]** duty; **[nonreversible][reversible]**.
- D. Starting Mode: **[Voltage ramping][Current limit][Torque control][Torque control with voltage boost][; field selectable]**.
- E. Stopping Mode: **[Coast to stop][Adjustable torque deceleration][Adjustable braking][; field selectable]**.
- F. Bypass Controller: Operates automatically to bypass the SCRs when the motor has reached rated speed and full voltage is applied to motor. Solid-state controller protective features shall remain active when the bypass relay is in the bypass mode.
 1. Bypass Contactor: **[Manufacturer's standard product][or][NEMA ICS 2, general-purpose, Class A contactor, rated to start the load across the line][, as indicated on Drawings]**.
 2. Bypass Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating.

- G. Acceleration Control: Adjustable, using voltage or current ramp, and adjustable starting torque control with up to [400]<Insert number> percent current limitation for 20 seconds.
- H. SCR Bridge: At least two SCRs per phase, for stable and smooth acceleration [with][without] external feedback from the motor or driven equipment.
- I. Keypad: Front accessible; for programming the controller parameters, functions, and features; shall be manufacturer's standard and include not less than the following functions:
 - 1. Adjusting motor full-load amperes, as a percentage of the controller's rating.
 - 2. Adjusting current limitation on starting, as a percentage of the motor full-load current rating.
 - 3. Adjusting linear acceleration and deceleration ramps, in seconds.
 - 4. Setting initial torque, as a percentage of the nominal motor torque.
 - 5. Adjusting torque limit, as a percentage of the nominal motor torque.
 - 6. Adjusting maximum start time, in seconds.
 - 7. Adjusting voltage boost, as a percentage of the nominal supply voltage.
 - 8. Selecting stopping mode and adjusting parameters.
 - 9. Selecting motor thermal-overload protection class between 5 and 30.
 - 10. Activating and deactivating protection modes.
 - 11. Selecting or activating communications modes.
 - 12. <Insert function>.
- J. Digital Display: Front accessible; for showing motor, controller, and fault status; shall be manufacturer's standard and include not less than the following:
 - 1. Controller Condition: Ready, starting, running, stopping.
 - 2. Motor Condition: Amperes, voltage, power factor, power, and thermal state.
 - 3. Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
 - 4. <Insert items>.
- K. Controller Diagnostics and Protection:
 - 1. Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor overload alarm and trip; settings selectable via the keypad.
 - 2. Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency excursions to over- or under-normal. Accomplish protection by the following:
 - a. Input isolation contactor that opens when the controller diagnostics detect a faulted solid-state component, or when the motor is stopped.
 - b. Shunt trip that opens the disconnecting means when the controller diagnostics detect a faulted solid-state component.
 - c. <Insert items>.
- L. Remote Output Features:
 - 1. All outputs prewired to terminal blocks.
 - 2. Form C status contacts that change state when controller is running.
 - 3. Form C alarm contacts that change state when a fault condition occurs.
 - 4. <Insert items>.
- M. Overload Relays:

1. Melting-Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 2. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. **[Class 10][Class 20][Class 30]** tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - d. Ambient compensated.
 - e. Automatic resetting.
 3. Solid-State Overload Relays:
 - a. Switch or dial selectable for motor-running overload protection.
 - b. Sensors in each phase.
 - c. **[Class 10][Class 20][Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - d. UL 1053, Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - e. Analog communication module.
- N. Optional Features:
1. Analog output for field-selectable assignment of motor operating characteristics; **[0- to 10-V dc][4- to 20-mA dc]**.
 2. **[Two]<Insert number>** additional field-assignable Form C contacts for alarm outputs.
 3. Full-voltage/BYPASS selector switch. Power contacts shall be totally enclosed, double break, made of silver-cadmium oxide, and assembled to allow inspection and replacement without disturbing line or load wiring.

2.10 VFC

- A. Controller Units: Combination controllers, consisting of variable-frequency power converter that is factory packaged in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged for self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency. Comply with NEMA ICS 7, NEMA ICS 61800-2, UL 508C, and **[UL 508E]<Insert standard>**.
1. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
 2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
 3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
 4. Listed and labeled for single-phase use by an NRTL acceptable to authorities having jurisdiction.
- B. Disconnects:

1. Fusible Switch:
 - a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate **[UL 248-8 Class J][UL 248-10 Class L]<Insert class>** fuses.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary Contacts: **[NC][NO]**, arranged to activate before switch blades open.
2. MCP:
 - a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
 - d. **[NC][NO]** alarm contact that operates only when MCP has tripped.
 - e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.
3. MCCB:
 - a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
 - b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
 - e. **[NC][NO]** alarm contact that operates only when MCCB has tripped.
4. Molded-Case Switch:
 - a. UL 489, with in-line fuse block for **[UL 248-8 Class J][UL 248-10 Class L]** power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
 - b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
 - c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
 - d. **[NC][NO]** alarm contact that operates only when molded-case switch has tripped.
5. Disconnect Rating:
 - a. Not less than 115 percent of VFC input current rating.
 - b. Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.
6. Auxiliary Contacts: **[NC][NO]**, arranged to activate before switch blades open.
7. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
8. **[NC][NO]** alarm contact that operates only when circuit breaker has tripped.

C. Operating Requirements:

1. Input AC Voltage Tolerance: Plus 10 and minus **[10][15]** percent of VFC input voltage rating.
2. Input AC Voltage Unbalance: Not exceeding **[3][5]** percent.
3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
4. Minimum Efficiency: **[96][97]<Insert number>** percent at 60 Hz, full load.
5. Minimum Displacement Primary-Side Power Factor: **[96][98]<Insert number>** percent under any load or speed condition.

6. Overload Capability:
 - a. For variable-torque controllers, 1.1 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
 - b. For constant-torque controllers, 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
7. Starting Torque: Minimum of 100 percent of rated torque from 3 to 60 Hz.
8. Speed Regulation: Plus or minus **[5][10]** percent.
9. Output Carrier Frequency: Field selectable.
10. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.
11. Internal Adjustability Capabilities:
 - a. Minimum Speed: 5 to 25 percent of maximum rpm.
 - b. Maximum Speed: 80 to 100 percent of maximum rpm.
 - c. Acceleration: **[0.1 to 999.9]<Insert range>** seconds.
 - d. Deceleration: **[0.1 to 999.9]<Insert range>** seconds.
 - e. Current Limit: 30 to a minimum of 150 percent of maximum rating.
 - f. **<Insert adjustment and parameters>**.
12. Self-Protection and Reliability Features:
 - a. Input transient protection by means of SPDs for three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
 - b. Loss of Input Signal Protection: Selectable response strategy including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
 - c. Under- and overvoltage trips.
 - d. Inverter overcurrent trips.
 - e. VFC and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved and listed and labeled by an NRTL.
 - f. Critical frequency rejection, with **[three]<Insert number>** selectable, adjustable deadbands.
 - g. Instantaneous line-to-line and line-to-ground overcurrent trips.
 - h. Loss-of-phase protection.
 - i. Reverse-phase protection.
 - j. Short-circuit protection.
 - k. Motor overtemperature fault.
 - l. **<Insert additional protection or reliability feature>**.
13. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
14. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

D. Operator Station:

1. Inverter Logic: Microprocessor based, **[16][32]** bit, isolated from all power circuits.
2. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
3. Panel-mounted, manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.

- a. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
- b. Security Access: Electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.

E. Displays:

1. Historical Logging Information and Displays:

- a. Real-time clock with current time and date.
- b. Running log of total power versus time.
- c. Total run time.
- d. Fault log, maintaining last **[four]<Insert number>** faults with time and date stamp for each.
- e. **<Insert information or display>**.

2. Indicating Devices: Digital display[**and additional readout devices as required,**] mounted flush in VFC door and connected to display VFC parameters including the following:

- a. Output frequency (Hz).
- b. Motor speed (rpm).
- c. Motor status (running, stop, fault).
- d. Motor current (amperes).
- e. Motor torque (percentage).
- f. Fault or alarming status (code).
- g. PID feedback signal (percentage).
- h. DC-link voltage (V dc).
- i. Set-point frequency (Hz).
- j. Motor output voltage (V ac).
- k. **<Insert parameter>**.

F. Bypass Systems:

1. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes, and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.
2. Manual Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor and retransfer shall only be allowed with the motor at zero speed.
3. Field-Selectable Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic control system feedback.
4. Two-Contactor Bypass Controller: Allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode**].
 - a. Bypass Contactor: Load-break, **[IEC][NEMA]**-rated contactor.
 - b. Output Isolating Contactor: Non-load-break, **[IEC][NEMA]**-rated contactor.
 - c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.
5. Three-Contactor Bypass Controller: Allows motor operation via the power converter or the bypass controller[; **with input isolating switch and barrier**] arranged to isolate the power converter

input and output and permit safe testing[**and troubleshooting**] of the power converter, both energized and de-energized, while motor is operating in bypass mode.

- a. Bypass Contactor: Load-break, **[IEC][NEMA]**-rated contactor.
 - b. Input and Output Isolating Contactors: Non-load-break, **[IEC][NEMA]**-rated contactors.
 - c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.
6. Bypass Contactor Classification: **[Full-voltage (across-the-line)][Reduced-voltage autotransformer, open transition][Reduced-voltage autotransformer, closed transition]<Insert type>** type.
 7. NORMAL/BYPASS selector switch.
 - a. HAND/OFF/AUTO selector switch.
 - b. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
 - c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].
 - 1) Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 - 2) Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
 8. Overload Relays: NEMA ICS 2.
 - a. Melting-Alloy Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) **[Class 10][Class 20][Class 30]** tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - b. Bimetallic Overload Relays:
 - 1) Inverse-time-current characteristic.
 - 2) **[Class 10][Class 20][Class 30]** tripping characteristic.
 - 3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 - 4) Ambient compensated.
 - 5) Automatic resetting.
 - c. Solid-State Overload Relays:
 - 1) Switch or dial selectable for motor-running overload protection.
 - 2) Sensors in each phase.
 - 3) **[Class 10][Class 20][Class 10/20 selectable]** tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - 4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - 5) Analog communication module.
 - d. **[NC][NO]** isolated overload alarm contact.
 - e. External overload reset push button.

- G. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.
- H. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.
- I. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.
- J. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from **[the firefighter's control station][smoke-control fan controller]<Insert location>**, the following password-protected input:
 - 1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
 - 2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
 - 3. Forces VFC to transfer to bypass mode and operate motor at full speed.
 - 4. Causes display of override mode on the VFC display.
 - 5. Reset VFC to normal operation on removal of override signal **[automatically][manually]**.
- K. Communication Port: **[Ethernet][RS-232 port][USB 2.0 port]** or equivalent connection Capable of connecting a printer **[and a notebook computer]**.
- L. **<Insert feature>**.

2.11 CONTROLLER-MOUNTED AUXILIARY DEVICES

- A. Control-Circuit and Pilot Devices: Factory installed in controller enclosure cover unless otherwise indicated. Comply with NEMA ICS 5.
 - 1. Push Buttons, Pilot Lights, and Selector Switches: **[Heavy][Standard]**-duty, **[oiltight]** type.
 - a. Push Buttons: **[Covered][Lockable][Recessed][Shielded][Shrouded][Unguarded]** types; **[maintained][momentary]** contact unless otherwise indicated.
 - b. Pilot Lights: **[LED][Resistor][Transformer]** types; **<Insert color(s)>; push to test**.
 - c. Selector Switches: **[Rotary]<Insert description>** type.
- B. Elapsed-Time Meters: Heavy duty with digital readout in hours; **[nonresettable]; [resettable]**.
- C. Meters: Panel type, **2-1/2-inch (64-mm)** minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy, with selector switches having an off position.
- D. Auxiliary Dry Contacts: **[NC][NO][Reversible NC/NO]**.
- E. Control Relays:
 - 1. Time Delay: Auxiliary and adjustable **[pneumatic][solid-state]** time-delay relays.
 - 2. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections and adjustable undervoltage, overvoltage, and time-delay settings.
 - 3. **<Insert control device>**.

2.12 MEASUREMENT AND CONTROL DEVICES

- A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:
1. PTs: IEEE C57.13; 120 V, 60 Hz, **[single][tapped][double]** secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
 2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; **[wound][bushing][bar or window]** type; **[single][double]** secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
 3. CPTs: Dry type, mounted in separate compartments for units larger than 3 kVA.
 4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, for selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker and ground-fault protection.
- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
1. Listed or recognized by a nationally recognized testing laboratory.
 2. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 3. Switch-selectable digital display of the following values with the indicated maximum accuracy tolerances:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Three-Phase Real Power (Megawatts): Plus or minus 2 percent.
 - e. Three-Phase Reactive Power (Megavars): Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
 - i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from 5 to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
 4. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.
- C. Ammeters, Voltmeters, and Power-Factor Meters: ANSI C39.1. **4-inch (100-mm)** diameter or **6 inches (150 mm)** square, flush or semiflush, with antiparallax 250-degree scale and external zero adjustment.
1. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.
 2. Feeder Ammeters: **2-1/2-inch (64-mm)** minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for feeder circuits, unless otherwise indicated.
- D. Instrument Switches: Rotary type with off position.
1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and phase-to-neutral voltages where a neutral is included.
 2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.
- E. Watt-Hour Meters and Wattmeters:

1. Comply with ANSI C12.1.
2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
3. Suitable for connection to three- and four-wire circuits.
4. Potential indicating lamps.
5. Adjustments for light and full load, phase balance, and power factor.
6. Four-dial clock register.
7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

F. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with MCC watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording **[five][15][30]<Insert time>**-minute integrated demand of totalized system.

G. Control Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

2.13 FEEDER TAP UNITS

A. MCCBs (to 1200 A): Fixed mounted, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger. Comply with UL 489, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

1. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
2. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I₂t response.
3. Communication Capability: **[Circuit-breaker-mounted][Universal-mounted][Integral][Din-rail-mounted]** communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
4. With built-in digital ammeter and a digital display, showing tripping cause.
5. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
6. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
7. Auxiliary Contacts: **[One SPDT switch][Two SPDT switches]** with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker

contacts.

8. Alarm Switch: One **[NC][NO]** contact that operates only when circuit breaker has tripped.
9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
10. Zone-Selective Interlocking: Integral with **[electronic][ground-fault]** trip unit; for interlocking ground-fault protection function.
11. Electrical Operator: Remote control for on, off, and reset operations.

- B. Fusible Switches (to 600 A): Fixed-mounted, manually operated, **[electrically tripped]**, fusible, quick-make, quick-break switch with 200-kA interrupting and short-circuit current rating when fitted with UL 248-8 Class J fuses. Comply with UL 98.

1. Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
2. Include fuse clips and fuses.
3. Electrically tripped switches shall include the following:
 - a. Shunt trip.
 - b. Ground-fault protection, with adjustable time delay and test panel.
 - c. Single-phase protection, tripping the switch on loss of a source phase.
 - d. Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.

2.14 PANELBOARDS

- A. Comply with NEMA PB 1.
- B. Branch OCPDs for Circuit-Breaker Frame Sizes 125 A and Smaller: **[Plug-in][Bolt-on]** circuit breakers.
- C. Branch OCPDs for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; or plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
- D. Contactors in Main Bus: NEMA ICS 2, Class A, **[electrically][mechanically]** held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
- E. Accessory Control Power Voltage: Integrally mounted, self-powered, **<Insert number> [Remote mounted and powered]**.

2.15 TRANSFORMERS

- A. Factory-assembled and -tested, air-cooled, two-winding, low-voltage dry-type transformers; with primary circuit breaker. Comply with NEMA ST 20.
- B. Taps for Transformers Smaller Than 3 kVA: **[None][One 5 percent tap above normal full capacity]**.
- C. Taps for Transformers 7.5 to 24 kVA: **[One 5 percent tap above and one 5 percent tap below normal full capacity][Two 5 percent taps below rated voltage]**.
- D. Taps for Transformers 25 kVA and Larger: **[Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity][Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity]**.
- E. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of

[150][115][80] deg C rise above 40 deg C ambient temperature.

F. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with NEMA TP 1, Class 1 efficiency levels.
2. Tested according to NEMA TP 2.

2.16 TRANSFER SWITCHES

- A. Factory-assembled and -tested, open-transition transfer switches. The transfer switch shall comply with UL 1008[**and be listed and labeled by a qualified testing agency**].
- B. Comply with NEMA ST 20.
- C. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- D. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- E. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- F. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41.1. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- G. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- H. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are unacceptable.
 2. Switch Action: Double throw; mechanically held in both directions.
 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.
- I. Neutral Switching. Where four-pole switches are indicated, equip with **[neutral pole switched simultaneously with phase poles][overlapping neutral contacts]**.
- J. Neutral Terminal: Solid and rated the same as the neutral bus.
- K. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.
- L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall

have communication capability matched with remote device.

2.17 SOURCE QUALITY CONTROL

- A. MCC Testing: Test and inspect MCCs according to requirements in **[NEMA ICS 18]<Insert standard>**.
- B. VFC Testing: Test and inspect VFCs according to requirements in **[NEMA ICS 61800-2]<Insert standard>**.
 - 1. Test each VFC while connected to **[its specified motor][a motor that is comparable to that for which the VFC is rated]**.
 - 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.
- C. MCCs will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive MCCs, with Installer present, for compliance with requirements for installation tolerances, **<Insert Project-specific conditions,>** and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. NEMA Industrial Control and Systems Standards: Comply with parts of NEMA ICS 2.3 for installation and startup of MCCs.
- B. Floor Mounting: Install MCCs on **4-inch (100-mm)** nominal-thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Seismic Bracing: Comply with requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

- E. Install fuses in each fusible switch.
- F. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."
- G. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- I. Install power factor correction capacitors. Connect to the **[line][load]** side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.
- J. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identification of MCC, MCC components, and control wiring.
 - 1. Identify field-installed conductors, interconnecting wiring, and components.
 - 2. Install required warning signs.
 - 3. Label MCC and each cubicle with engraved nameplate.
 - 4. Label each enclosure-mounted control and pilot device.
 - 5. Mark up a set of manufacturer's connection wiring diagrams with field-assigned wiring identifications and return to manufacturer for inclusion in Record Drawings.
- B. Operating Instructions: Frame printed operating instructions for MCCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of MCCs.

3.4 INSTALLATION OF CONTROL WIRING

- A. Install wiring between **[enclosed controllers][master terminal boards]** and remote devices **[and facility's BAS][and facility's central-control system]**. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control selection devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
 - 2. Connect selector switches within enclosed controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.5 CONNECTIONS

- A. Comply with requirements for installation of conduit in Section 260533.13 "Conduits for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.

- B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections **[with the assistance of a factory-authorized service representative]**.
- D. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- E. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 4. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multipole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multipole enclosed controller 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Submit calibration record for device.
 - 5. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
 - 6. Mark up a set of manufacturer's drawings with all field modifications incorporated during construction and return to manufacturer for inclusion in Record Drawings.
- F. MCCs will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports.

3.7 STARTUP SERVICE

- A. **[Engage a factory-authorized service representative to perform][Perform]** startup service.
 - 1. Complete installation and startup checks according to NETA Acceptance Testing Specification and manufacturer's written instructions.

2. <Insert startup steps if any>.

3.8 ADJUSTING

- A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload relay pickup and trip ranges.
- B. Adjust overload relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify **[Architect][Construction Manager][Owner]** before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers at **[50][65][80]** percent.
- E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage, solid-state controllers.
- F. Program microprocessors in VFCs for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- G. Set field-adjustable circuit-breaker trip ranges **[as specified in Section 260573.16 "Coordination Studies."]**

3.9 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train][Train]** Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers **[, and to use and reprogram microprocessor-based, reduced-voltage, solid-state controllers].**

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 25 00 00 - LOW-VOLTAGE ENCLOSED BUS ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Enclosed bus assemblies.
2. Plug-in devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Shop Drawings: For each type of product.

1. Show fabrication and installation details for enclosed bus assemblies. Include plans, elevations, and sections of components. Designate components and accessories, including clamps, brackets, hanger rods, connectors, straight lengths, and fittings.
2. Show fittings, materials, fabrication, and installation methods for **[listed firestop barriers][and][weather barriers]**.
3. Indicate required clearances, method of field assembly, and location and size of each field connection.
4. Detail connections to switchgear, switchboards, transformers, and panelboards.
5. Cable and conductor terminal sizes for bus and plug-in device terminations.
6. Wiring Diagrams: Power[**and signal**][**and control**][, **signal, and control**] wiring.

B. Delegated Design Submittal: For seismic-restraint details, signed and sealed by a qualified structural professional engineer.

1. Include design calculations for selecting seismic restraints.
2. Detail fabrication, including anchorages and attachments to structure and to supported equipment.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Plug-in Units: [10]<Insert number> percent of amount installed[**for each size indicated**], but no fewer than <Insert number> unit(s).

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle enclosed bus assemblies according to NEMA BU 1.1, "General Instructions for Handling, Installation, Operation, and Maintenance of Busway Rated 600 Volts or Less."

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTIONS

- A. Source Limitations: Obtain enclosed bus assemblies[**and plug-in devices**] from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with UL 857.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified electrical professional engineer to design enclosed bus assemblies, plug-in devices, and components.

2.3 ENCLOSED BUS ASSEMBLIES

- A. Feeder-Bus Assemblies: Low-impedance bus assemblies in totally enclosed, nonventilated housing; single-bolt joints; ratings as indicated.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [EAE USA]
 - c. [Eaton]
 - d. [Siemens Industry, Inc., Energy Management Division]
 - e. [Square D; Schneider Electric USA]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [EAE USA]
 - c. [Eaton]

- d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
3. Seismic Fabrication Requirements: Fabricate mounting provisions and attachments for feeder-bus assemblies with reinforcement strong enough to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems" when mounting provisions and attachments are anchored to building structure.
 4. Electrical Characteristics:
 - a. Voltage: **[120/208][240][480][277/480]** V.
 - b. Phase: Three; **[3 wire][4 wire]**.
 - c. Percent of Neutral Capacity: **[50][100][200]<Insert value>**.
 5. Short-Circuit Interrupting Rating:
 - a. For Bus Amperage of 800: 85 symmetrical kAIC.
 - b. For Bus Amperage of 1200: 100 symmetrical kAIC.
 - c. For Bus Amperage of 1600: 125 symmetrical kAIC.
 - d. For Bus Amperage of 2500: 150 symmetrical kAIC.
 - e. For Bus Amperage of 5000: 200 symmetrical kAIC.
 6. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
 7. Bus Materials: Current-carrying **[copper][aluminum]** conductors, fully insulated with Class 130C insulation except at joints; plated surface at joints.
 8. Voltage Drop:
 - a. Measure voltage drop at 30 deg C ambient with bus thermally stabilized at full rated load.
 - b. Three-phase, line-to-line voltage drop less than 3.1 V per **100 ft. (30.5 m)** at 40 percent power factor.
 9. Ground: 50 percent capacity, **[integral with housing][internal bus bar of material matching bus material][isolated, internal bus bar of material matching bus material]**.
 10. Enclosure: **[Steel][Aluminum]**, with manufacturer's standard finish.**[Weatherproof, sealed seams, drains, and removable closures.]**
 11. Fittings and Accessories: Manufacturer's standard.
 12. Firestop: Comply with UL 1479 firestop system, listed and labeled by an NRTL acceptable to authorities having jurisdiction for penetrations of fire-rated walls, ceilings, and floors.
 13. Mounting: Arranged flat, edgewise, or vertically without derating. Rated for hanger spacing of up to **10 ft. (3 m)** for horizontally mounted runs and up to **16 ft. (5 m)** for vertically mounted runs.
 14. Expansion Section: Manufacturer's standard expansion fitting for the provided busway with expansion capability to accommodate thermal expansion of bus and enclosure, and to accommodate movement across building expansion joints.
- B. Plug-in Bus Assemblies: Low-impedance bus assemblies in totally enclosed, nonventilated housing; single-bolt joints; ratings as indicated.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Siemens Industry, Inc., Energy Management Division]**
 - d. **[Square D; Schneider Electric USA]**

- e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Siemens Industry, Inc., Energy Management Division]
 - d. [Square D; Schneider Electric USA]
 - e. <Insert manufacturer's name>
 3. Electrical Characteristics:
 - a. Voltage: [120/208][240][480][277/480] V.
 - b. Phase: Three; [3 wire][4 wire].
 - c. Percent of Neutral Capacity: [100][200]<Insert value>.
 4. Short-Circuit Interrupting Rating:
 - a. For Bus Amperage of 800: 85 symmetrical kAIC.
 - b. For Bus Amperage of 1200: 100 symmetrical kAIC.
 - c. For Bus Amperage of 1600: 125 symmetrical kAIC.
 - d. For Bus Amperage of 2500: 150 symmetrical kAIC.
 - e. For Bus Amperage of 5000: 200 symmetrical kAIC.
 5. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
 6. Bus Materials: Current-carrying [copper][aluminum] conductors, fully insulated with Class 130C insulation except at stabs and joints; plated surface at stabs and joints.
 7. Ground: 50 percent capacity, [integral with housing][internal bus bar of material matching bus material][isolated, internal bus bar of material matching bus material].
 8. Enclosure: [Steel][Aluminum], with manufacturer's standard finish.
 9. Plug-in Openings: 24 inch (600 mm) on center on each side of bus, and hinged covers over unused openings. Plug-in openings must be finger-safe with covers open or closed.
 10. Fittings and Accessories: Manufacturer's standard.
 11. Firestop: Comply with UL 1479 firestop system, listed and labeled by an NRTL acceptable to authorities having jurisdiction for penetrations of fire-rated walls, ceilings, and floors.
 12. Mounting: Arranged flat, edgewise, or vertically without derating. Rated for hanger spacing of up to 10 ft. (3 m) for horizontally mounted runs and up to 16 ft. (5 m) for vertically mounted runs.
 13. Expansion Section: Manufacturer's standard expansion fitting for the provided busway with expansion capability to accommodate thermal expansion of bus and enclosure, and to accommodate movement across building expansion joints.
- C. Joints:
1. Busway joints must use one high-strength steel bolt with Belleville washers.
 2. Bolts must be torque indicating type and at ground potential.
 3. Bolts must be two-headed design to indicate when proper torque has been applied and require only a standard long handle wrench to be properly activated.
 4. Access must be required to only one side of the busway for tightening joint bolts.
 5. Joint connection assemblies must be removable without disturbing adjacent busway lengths.
 6. Joint connection assemblies that rely on the joint cover to provide ground continuity are unacceptable.

2.4 PLUG-IN DEVICES

- A. Fusible Switches: NEMA KS 1, heavy duty; with **[R-type rejection][J-type][L-type]** fuse clips to accommodate specified fuses; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position. Interlocked to prevent plug-in device insertion into or removal from bus with switch in closed position. See Section 262813 "Fuses" for fuses and fuse installation requirements.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Eaton]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **[Square D; Schneider Electric USA]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Eaton]**
 - b. **[Siemens Industry, Inc., Energy Management Division]**
 - c. **[Square D; Schneider Electric USA]**
 - d. **<Insert manufacturer's name>**
- B. Molded-Case Circuit Breakers: UL 489; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position. Interlocked to prevent plug-in device insertion into or removal from bus with switch in closed position.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[NOARK Electric North America]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[NOARK Electric North America]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
- C. SPD: NEMA 250, Type 1 enclosure with NEMA KS 1, fusible, disconnect switch and external handle to isolate SPD from busway. SPD product and installation requirements are specified in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Advanced Protection Technologies Inc. (APT)]**
 - c. **[ALLTEC LLC]**
 - d. **[Eaton]**
 - e. **[Emerson Electric Co., Automation Solutions]**
 - f. **[LEA International]**
 - g. **[Leviton Manufacturing Co., Inc.]**
 - h. **[Mersen USA]**
 - i. **[PowerLogics, Inc./PQ Protection]**
 - j. **[Schneider Electric USA, Inc.]**
 - k. **[Siemens Industry, Inc., Energy Management Division]**
 - l. **<Insert manufacturer's name>**

 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Advanced Protection Technologies Inc. (APT)]**
 - c. **[ALLTEC LLC]**
 - d. **[Eaton]**
 - e. **[Emerson Electric Co., Automation Solutions]**
 - f. **[LEA International]**
 - g. **[Leviton Manufacturing Co., Inc.]**
 - h. **[Mersen USA]**
 - i. **[PowerLogics, Inc./PQ Protection]**
 - j. **[Schneider Electric USA, Inc.]**
 - k. **[Siemens Industry, Inc., Energy Management Division]**
 - l. **<Insert manufacturer's name>**
- D. Motor Controllers: NEMA ICS 2, Class A, full voltage, nonreversing, across the line unless otherwise indicated.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[ABB, Motion Business]**
 - c. **[Cerus Industrial, Inc.]**
 - d. **[Eaton]**
 - e. **[Rockwell Automation, Inc.]**
 - f. **[Siemens Industry, Inc., Energy Management Division]**
 - g. **[Square D; Schneider Electric USA]**
 - h. **<Insert manufacturer's name>**

 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[ABB, Electrification Business]**
 - b. **[ABB, Motion Business]**
 - c. **[Cerus Industrial, Inc.]**
 - d. **[Eaton]**
 - e. **[Rockwell Automation, Inc.]**
 - f. **[Siemens Industry, Inc., Energy Management Division]**
 - g. **[Square D; Schneider Electric USA]**
 - h. **<Insert manufacturer's name>**
3. Control Circuit: 120 V; obtained from **[integral control power transformer]<Insert source of control power>** with a control power **[transformer][source]** of enough capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
 4. Combination Controller: Factory-assembled combination controller and disconnect switch with or without overcurrent protection as indicated.
 - a. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with **[R-type rejection][J-type]** fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1, as certified by an NRTL acceptable to authorities having jurisdiction. See Section 262813 "Fuses" for fuses and fuse installation requirements.
 - b. Circuit-Breaker Disconnecting Means: UL 489, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 5. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, **[Class 10][Class 20][Class 30]** tripping characteristic. Overload relays must have heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.
 6. Adjustable Overload Relay: Dipswitch selected for motor running overload protection with NEMA ICS 2, **[Class 10][Class 20][Class 30]** tripping characteristic, and selected to protect motor against voltage and current unbalance and single phasing. Adjustable overload relays must have Class II ground-fault protection with start and run delays to prevent nuisance trip on starting.
- E. Multispeed Magnetic Controllers: Match controller to motor type, application, and number of speeds.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[ABB, Motion Business]**
 - c. **[Eaton]**
 - d. **[Rockwell Automation, Inc.]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**
 - f. **[Square D; Schneider Electric USA]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[ABB, Motion Business]**
 - c. **[Eaton]**
 - d. **[Rockwell Automation, Inc.]**
 - e. **[Siemens Industry, Inc., Energy Management Division]**

- f. **[Square D; Schneider Electric USA]**
- g. **<Insert manufacturer's name>**

- 3. Compelling relay ensures motor starts only at low speed.
- 4. Accelerating relay ensures properly timed acceleration through speeds lower than that selected.
- 5. Decelerating relay ensures automatically timed deceleration through each speed.

- F. Accessories: Hookstick operator, adjustable to maximum extension of **[14 ft. (4.3 m)]<Insert dimension>**.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Coordinate layout and installation of enclosed bus assemblies and suspension system with other construction that penetrates ceilings or floors or is supported by them, including luminaires, HVAC equipment, fire-suppression system, and partition assemblies.
- B. Equipment Mounting:
 - 1. Install enclosed bus assemblies on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Coordinate size and location of concrete curbs around openings for vertical bus. Concrete, reinforcement, and formwork requirements are specified with concrete.
- C. Support bus assemblies independent of supports for other elements such as equipment enclosures at connections to panelboards and switchboards, pipes, conduits, ceilings, and ducts.
 - 1. Design each fastener and support to carry load indicated by seismic requirements and to comply with seismic-restraint details according to Section 260548.16 "Seismic Controls for Electrical Systems."
 - 2. Design each fastener and support to carry **200 lb (90 kg)** or 4 times the weight of bus assembly, whichever is greater.
 - 3. Support bus assembly to prevent twisting from eccentric loading.
 - 4. Support bus assembly with not less than **[3/8 inch (10 mm)]<Insert dimension>** steel rods. Install side bracing to prevent swaying or movement of bus assembly. Modify supports after completion to eliminate strains and stresses on bus bars and housings.
 - 5. Fasten supports securely to building structure according to Section 260529 "Hangers and Supports for Electrical Systems."
 - 6. Bolts and nuts that are loosened for any reason after tightening to manufacturer's recommended torque setting must be discarded and replaced with new bolts and nuts.
- D. Install expansion fittings at locations where bus assemblies cross building expansion joints. Install at other locations so distance between expansion fittings does not exceed manufacturer's recommended distance between fittings.
- E. Construct rated firestop assemblies where bus assemblies penetrate fire-rated elements such as walls, floors, and ceilings. Seal around penetrations according to Section 078413 "Penetration Firestopping."
- F. Install weatherseal fittings and flanges where bus assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application.

- G. Coordinate bus-assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.
- H. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus-assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.
- I. Install bus-assembly, plug-in units. Support connecting conduit independent of plug-in unit.

3.2 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Terminate to transformer enclosures with matching bus assemblies according to Section 262200 "Low-Voltage Transformers."
- D. Terminate to switchgear enclosures with matching bus assemblies according to Section 262300 "Low-Voltage Switchgear."
- E. Terminate to switchboard enclosures with matching bus assemblies according to Section 262413 "Switchboards."
- F. Terminate to panelboard enclosures with matching bus assemblies according to Section 262416 "Panelboards."
- G. Terminate to motor-control centers enclosures with matching bus assemblies according to Section 262419 "Motor-Control Centers."

3.3 FIELD QUALITY CONTROL

- A. Field tests must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.
- B. Tests and Inspections:
 - 1. After installing equipment, test for compliance with requirements according to NETA ATS.
 - 2. Visual and Mechanical Inspection:
 - a. Compare equipment nameplate data with Drawings and Specifications.
 - b. Inspect physical and mechanical condition.
 - c. Inspect anchorage, alignment, and grounding.
 - d. Verify correct connection according to single-line diagram.
 - e. Inspect bolted electrical connections for high resistance using one or more of the following methods:
 - 1) Use of low-resistance ohmmeter.
 - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data.
 - 3) Perform thermographic survey.
 - 3. Electrical Tests:

- a. Perform insulation resistance measurements through bolted connections and bus joints with low-resistance ohmmeter.
- b. Perform insulation resistance tests of each busway, phase to phase, and phase to ground.
- c. Perform a dielectric withstand voltage test on each busway, phase to ground with phases not under test grounded for one minute.
- d. Measure resistance of assembled busway sections on insulated busway and compare values with adjacent phases.
- e. Perform phasing test on each busway tie section energized by separate sources.
- f. Verify operation of busway space heaters.

- C. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
 1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 2. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
 3. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
- D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.
- E. Nonconforming Work:
 1. Enclosed bus assemblies will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Set field-adjustable, circuit-breaker trip ranges[**and overload relay trip settings**] as indicated.

3.5 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.6 PROTECTION

- A. Provide final protection to ensure that moisture does not enter bus assembly.

END OF SECTION 26 25 00 00

Task	Specification	Specification Description
26 25 13 00	26 25 00 00	Low-Voltage Enclosed Bus Assemblies
26 25 16 00	26 25 00 00	Low-Voltage Enclosed Bus Assemblies

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 13 00 - ELECTRICITY METERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Electricity meters.
2. Work to accommodate utility company revenue meters, and Owner's electricity meters used to manage electrical power system.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

- A. KY or KYZ Pulse:** Term used by metering industry to describe method of measuring consumption of electricity (kWh) that is based on relay opening and closing in response to rotation of disk in meter. Electronic meters generate pulses electronically.

1.3 COORDINATION

A. Electrical Service Connections:

1. Coordinate with utility companies and utility-furnished components.
 - a. Comply with requirements of utility providing electrical power services.
 - b. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.4 ACTION SUBMITTALS

A. Product Data:

1. For each type of meter.
2. For metering infrastructure components.
3. For metering software.

B. Shop Drawings: For electricity-metering equipment.

1. Include elevation views of front panels of control and indicating devices and control stations.
2. Include diagrams for power, signal, and control wiring.
3. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control

wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.

4. Include series-combination rating data for modular meter centers with main disconnect device.
5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
6. Submit evidence that meters are compatible with connected monitoring and control devices and systems specified in **[Section 260913 "Electrical Power Monitoring and Control."]<Insert Section number and title.>**
 - a. Show interconnecting signal and control wiring, and interface devices to show compatibility of meters.
 - b. For reporting and billing interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

C. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturers' Published Instructions: Record copy of official installation **[and testing]** instructions issued to Installer by manufacturer for the following:
 1. Installation of metering equipment.
- B. Sample warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Contracts:
 1. Software and firmware service agreement.
- B. Warranty documentation.

1.7 WARRANTY

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed metering equipment performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.
 1. Extended-Warranty Period: **[Two]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that metering equipment performs in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.

1. Initial Extended-Warranty Period: **[Three]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials **[that failed because of transient voltage surges]** only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
- B. Comply with UL 916.

2.2 UTILITY METERING INFRASTRUCTURE

- A. Install metering accessories furnished by utility company, complying with its requirements.
- B. Utility-Furnished Meters: Connect data transmission facility of metering equipment installed by Utility.
 1. Data Transmission: Transmit pulse data over control-circuit conductors, classified as Class 1 per NFPA 70, Article 725. Comply with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Current-Transformer Cabinets: Comply with requirements of electrical-power utility company.
- D. Meter Sockets:
 1. Comply with requirements of electrical-power utility company.
 2. Steady-state and short-circuit current ratings must meet indicated circuit ratings.
- E. Modular Meter Center: Factory-coordinated assembly of main service **[terminal box with lugs only][disconnect device]**, wireways, meter socket modules, and feeder circuit breakers arranged in adjacent vertical sections complete with interconnecting buses.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[ABB, Electrification Business]**
 - b. **[Eaton]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Siemens Industry, Inc., Energy Management Division]**
 - e. **[Square D; Schneider Electric USA]**
 - f. **<Insert manufacturer's name>**
 3. Comply with requirements of utility company for meter center.
 - a. Comply with UL 67.
 4. Housing: UL 50E, **[Type 1][Type 3R][Type 4X]** enclosure.
 5. Meter Socket Rating: Coordinated with connected feeder circuit rating.
 6. Minimum Short-Circuit Rating: **[22 000 A][42 000 A][65 000 A][100 000 A]<Insert amperes>** symmetrical at rated voltage.
 7. Steady-state and short-circuit current ratings must have ratings that match connected circuit ratings.
 8. Main Disconnect Device:
 - a. Circuit breaker, series-combination rated for use with downstream feeder and branch circuit breakers and having adjustable magnetic trip setting for circuit-breaker frame sizes of 250 A and larger. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers." Circuit breakers must be operable from outside enclosure to disconnect unit. Configure cover so it can be opened only when disconnect switch is open.
 - b. Fusible switch, UL 98 Type GD, series-combination rated by fuse manufacturer to protect downstream feeder and branch circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers." Switch must be operable from outside enclosure to disconnect unit. Configure cover so that it can be opened only when disconnect switch is open.
 9. Feeder Circuit Breakers: Series-combination-rated molded-case units, rated to protect downstream circuit breakers and to house load centers and panelboards that have **[10 000 A]<Insert amperes>** interrupting capacity.
 - a. Identification: Complying with requirements in Section 260553 "Identification for Electrical Systems."
 - b. Physical Protection: Tamper resistant, with hasp for padlock.
 10. Surge Protection:
 - a. Factory-installed in main disconnect, integrally mounted, UL 1449 Type 1. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 - b. Field-mounted external to main disconnect, UL 1449 Type 2, with integral disconnect and overcurrent protective device. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 - c. Factory-installed in main terminal box, integrally mounted, UL 1449 Type 1. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
 - d. Field-mounted external to main terminal box, UL 1449 Type 2, with integral disconnect and overcurrent protective device. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
- F. Arc-Flash Warning Labels:
1. Comply with requirements for "Arc-Flash Warning Labels" in Section 260573.19 "Arc-Flash Studies." Apply **3-1/2-by-5 inch (76-by-127 mm)** thermal transfer label of high-adhesion

- polyester for each work location included in the analysis.
2. Comply with requirements for "Self-Adhesive Equipment Labels" and "Signs" in Section 260553 "Identification for Electrical Systems." Apply **3-1/2-by-5 inch (76-by-127 mm)** thermal transfer label of high-adhesion polyester for each work location included in the analysis. Labels must be machine printed, with no field-applied markings.
 - a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:
 - 1) Location designation.
 - 2) Nominal voltage.
 - 3) Flash protection boundary.
 - 4) Hazard risk category.
 - 5) Incident energy.
 - 6) Working distance.
 - 7) Engineering report number, revision number, and issue date.

2.3 ELECTRICITY METERS

- A. System Description: Able to meter designated activity loads, with or without external alarm, control, and communication capabilities, or other optional features.
- B. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[ABB, Electrification Business]**
 2. **[Davidge Controls]**
 3. **[E-Mon]**
 4. **[Eaton]**
 5. **[GE Power; General Electric Company]**
 6. **[Leviton Manufacturing Co., Inc.]**
 7. **[National Meter Industries]**
 8. **[Sensus Metering Systems]**
 9. **[Siemens Industry, Inc., Energy Management Division]**
 10. **[Square D; Schneider Electric USA]**
 11. **<Insert manufacturer's name>**
- C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[ABB, Electrification Business]**
 2. **[Davidge Controls]**
 3. **[E-Mon]**
 4. **[Eaton]**
 5. **[GE Power; General Electric Company]**
 6. **[Leviton Manufacturing Co., Inc.]**
 7. **[National Meter Industries]**
 8. **[Sensus Metering Systems]**
 9. **[Siemens Industry, Inc., Energy Management Division]**
 10. **[Square D; Schneider Electric USA]**
 11. **<Insert manufacturer's name>**
- D. General Requirements for Meters:

1. Comply with NEMA ANSI C12.1 and NEMA ANSI C12.20, [0.1][0.2][0.5] accuracy class.
 2. Ambient Temperature: Minus 22 deg F to plus 158 deg F (Minus 30 deg C to plus 70 deg C).
 3. Humidity: Zero to 95 percent, noncondensing.
 4. Capacities and Characteristics:
 - a. Circuit: 120/240 V(ac), 100 A.
 - b. Measure: kWh, onboard LED display.
 - c. Remote-Reading Options: None.
 5. Billing Meters Accuracy: [0.2][0.5][1.0] percent of reading, complying with NEMA ANSI C12.20.
 6. Meter Certification: Certified by [California Type Evaluation Program]<Insert agency> as complying with [4 CCR 4027, Article 2.2]<Insert state or Federal regulatory requirement>.
 7. Certify that meters comply with NEMA ANSI C12.20 requirements by laboratory accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology (NIST). Laboratory must use test equipment that is certified annually and is traceable to NIST standards.
 8. Enclosure: Supplied by meter manufacturer, UL 50E, [Type 1][Type 3R][Type 4X] minimum, with provisions for locking or sealing.
 9. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems."
 10. Onboard Nonvolatile Data Storage: kWh, until reset.
 11. Sensors: Current-sensing type, supplied by electronic meter manufacturer, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.
 - a. Type: [Split][and][solid] core, complying with recommendation of meter manufacturer.
- E. kWh Meter: Electronic [single-phase][and][three-phase] meters, measuring electricity use.
1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
 2. Display:
 - a. LCD with characters not less than 0.25 inch (6 mm) high, indicating accumulative kWh and current kilowatt load. Retain accumulated kWh in nonvolatile memory, until reset.
 - b. Digital electromechanical counter, indicating accumulative kWh.
- F. kWhd Meter: Electronic [single-phase][and][three-phase] meters, measuring electricity use and demand. Demand must be integrated over [15-minute]<Insert time> interval.
1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
 2. Display: LCD with characters not less than 0.25 inch (6 mm) high, indicating the following:
 - a. Accumulative kWh.
 - b. Current time and date.
 - c. Current demand.
 - d. Historic peak demand.
 - e. Time and date of historic peak demand.
 3. Retain accumulated kWh and historic peak demand in nonvolatile memory, until reset.
- G. KY and KYZ Pulse Totalizer:
1. Pulse Totalizer: Instrument for demand and billing applications where one or more utility revenue meters stream KY or KYZ energy pulses. Instrument must totalize kWh accumulated over user-selected period and must log maximum and minimum kWhd for that period. Record each period

with date/time stamp. Time period must be user selected from one to 60 minutes.

- a. Pulse Input: **[One]<Insert number>**, individually programmable, KYZ Form C (three-wire) contact pulse channels. Pulse interval, pulse rate, and minimum pulse width must be field adjustable, set for pulse stream provided by utility revenue meter.
 - b. Data Totalizing Capacity of Each Channel: Not less than 149 days at 15-minute intervals.
 - c. Instrument Power: User selectable, 120 V(ac) and 277 V(ac).
 - d. Clock: Line frequency.
- H. Remote Reading Options:
1. Pulse Output: **[KY][KYZ]**, complete with optical sensor and interface devices.
 2. TIA-232 serial interface.
 3. TIA-485 serial interface, with **[Modbus RTU protocol]<Insert protocol name>**.
 4. USB interface.
 5. TCP/IP adapter.
- I. Current-Transformer Cabinet: Size and configuration as recommended by metering equipment manufacturer for use with indicated connected feeder and sensors.
- J. Uninterruptible Power Supply: Single phase, 120 V(ac), sized and rated to provide continuous power to meter for operations of **[48]<Insert number>** hours after interruption of normal power.
1. Output: Sine wave, total harmonic distortion less than 5 percent at full load.
 2. Battery: Maintenance free, sealed, lead acid, and leakproof.
 3. Control Panel: LED status display of "on-battery," "replace battery," and "overload."
- K. Data Transmission Cable: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
- L. Software: PC-based product **[of][recommended by]** meter manufacturer, suitable for calculating utility cost allocation.
1. Utility Cost Allocation: Automatically import electricity-usage records to allocate electricity costs for the following:
 - a. At least **[15]<Insert number>** departments.
 - b. At least **[30]<Insert number>** tenants or activities.
 - c. At least **[five]<Insert number>** processes.
 - d. At least **[five]<Insert number>** buildings.
 - e. **<Insert entity>**.
 2. Activity Billing Software: Automatically import electricity-usage records to automatically compute and prepare electricity-use statements[**and invoices**] based on electricity use[**and peak demand**]. Maintain separate directory for each allocation. Prepare summary reports in user-defined formats and time intervals.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Install modular meter center according to switchboard installation requirements in NECA 400.
2. Install arc-flash labels as required by NFPA 70.

C. Special Techniques:

1. Install meters furnished by utility company. Install raceways and equipment according to utility company's published instructions. Provide empty conduits for metering leads and extend grounding connections as required by utility company.
2. Wiring Methods:
 - a. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and Section 260533.13 "Conduits for Electrical Systems."
 - b. Install unshielded, twisted-pair cable for control and signal transmission conductors, complying with Section 271513 "Communications Copper Horizontal Cabling."
 - c. Minimum conduit size is metric designator 16 (trade size 1/2).

3.2 IDENTIFICATION**A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."**

1. Series Combination Warning Label: Self-adhesive labels, with text as required by NFPA 70.
2. Equipment Identification Labels: Self-adhesive labels with clear protective overlay. For residential meters, provide additional card holder suitable for **[printed, weather-resistant card][typewritten card]** with occupant's name.

3.3 FIELD QUALITY CONTROL**A. Acceptance Testing Preparation:**

1. **<Insert requirements>**.

B. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>.****C. Tests and Inspections:**

1. Equipment and Software Setup:
 - a. Set meter date and time clock.
 - b. Test, calibrate, and connect pulse metering system.
 - c. Set and verify billing demand interval for demand meters.
 - d. Report settings and calibration results.
 - e. Set up reporting and billing software, insert billing location names and initial constant values and variable needed for billing computations.
2. Connect load of known power rating, **[1.5 kW]<Insert kilowatts>** minimum, to circuit supplied by metered feeder.
3. Turn off circuits supplied by metered feeder and secure them in off condition.
4. Run test load continuously for eight hours minimum, or longer, to obtain measurable meter

- indication. Use test-load placement and setting that ensures continuous, safe operation.
5. Check and record meter reading at end of test period and compare with actual electricity used, based on test-load rating, duration of test, and sample measurements of supply voltage at test-load connection. Record test results.
 6. Generate test report and billing for each tenant or activity from meter reading tests.

D. Nonconforming Work:

1. Electricity metering will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services:

1. Engage factory-authorized service representative to **[support][supervise]** field tests and inspections.

3.4 PROTECTION

- A. After installation, protect metering equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.5 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for **[two]<Insert number>** years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within **[two]<Insert number>** years from date of Substantial Completion. **[Verify that upgrading software includes operating system and new or revised licenses for using software.]**
 - a. Upgrade Notice: No fewer than **[30]<Insert number>** days to allow Owner to schedule and access the system **[and to upgrade computer equipment if necessary.]**
3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 26 27 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 16 00 - ELECTRICAL CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cabinets and cutout boxes.
2. Termination boxes.
3. Miscellaneous enclosures.
4. Rack or frame systems.
5. Enclosure-mounted power distribution.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
6. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding for RBBs referenced by this Section.
7. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
8. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

- A. RBB: Rack bonding busbar, located in equipment cabinets and racks.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Prepare and submit the following:

1. Shop Drawings for Custom Enclosures and Cabinets: Include plans, elevations, sections, and attachment details.
2. Shop Drawings for Racks or Frames:
 - a. Include plans, elevations, sections, details, and attachments to other work.
 - b. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - c. Include workspace requirements and access for cable connections.
 - d. Grounding: Indicate location of RBB and its mounting detail showing standoff insulators and wall-mounting brackets.

C. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturers' published instructions.

1.5 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.
- D. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
1. On-site communications testing supervisor must have **[BICSI Technician (TECH)]<Insert certification program>** certification and documented training, and be experienced with testing communications equipment in accordance with **[BICSI]<Insert code enforced by authorities having jurisdiction>** testing standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 - 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer; model number or series for existing product>.**
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>.**
 - 1. Sustainable Design Features:
 - a. Material Reuse: Product is salvaged, refurbished, or reused.
- C. Accessories: **<Insert accessories included with existing product>.**

2.3 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 CABINETS AND CUTOOT BOXES

- A. UL CYIV - Indoor Sheet Metal Cabinets :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Adalet; division of Scott Fetzer Co.]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Erickson Electrical Equipment Company]**
 - f. **[FSR Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**

- i. [Milbank Manufacturing Company]
 - j. [N J Sullivan Company]
 - k. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - l. [Robroy Enclosures; Robroy Industries]
 - m. [Siemens Industry, Inc., Building Technologies Division]
 - n. [Square D; Schneider Electric USA]
 - o. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Adalet; division of Scott Fetzer Co.]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - e. [Erickson Electrical Equipment Company]
 - f. [FSR Inc.]
 - g. [Hoffman; brand of nVent Electrical plc]
 - h. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. [Milbank Manufacturing Company]
 - j. [N J Sullivan Company]
 - k. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - l. [Robroy Enclosures; Robroy Industries]
 - m. [Siemens Industry, Inc., Building Technologies Division]
 - n. [Square D; Schneider Electric USA]
 - o. <Insert manufacturer's name>
3. Listing Criteria:
 - a. UL CCN CYIV.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
4. Standard Features:
 - a. Enclosure provided with frame, mat, or trim in which swinging door or doors are or can be hung.
 - b. Degree of Protection: [Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL CYIV - Indoor Sheet Metal Cutout Boxes :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Adalet; division of Scott Fetzer Co.]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Erickson Electrical Equipment Company]**
 - f. **[FSR Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Milbank Manufacturing Company]**
 - j. **[N J Sullivan Company]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Robroy Enclosures; Robroy Industries]**
 - m. **[Siemens Industry, Inc., Building Technologies Division]**
 - n. **[Square D; Schneider Electric USA]**
 - o. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Adalet; division of Scott Fetzer Co.]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Erickson Electrical Equipment Company]**
 - f. **[FSR Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Milbank Manufacturing Company]**
 - j. **[N J Sullivan Company]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Robroy Enclosures; Robroy Industries]**
 - m. **[Siemens Industry, Inc., Building Technologies Division]**
 - n. **[Square D; Schneider Electric USA]**
 - o. **<Insert manufacturer's name>**
3. Listing Criteria:
 - a. UL CCN CYIV.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
4. Standard Features:
 - a. Enclosure that has swinging doors or covers secured directly to and telescoping with walls of enclosure.
 - b. Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13].**
5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL CYIV - Outdoor Sheet Metal Cabinets :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Adalet; division of Scott Fetzer Co.]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Erickson Electrical Equipment Company]**
 - f. **[FSR Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Milbank Manufacturing Company]**
 - j. **[N J Sullivan Company]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Robroy Enclosures; Robroy Industries]**
 - m. **[Siemens Industry, Inc., Building Technologies Division]**
 - n. **[Square D; Schneider Electric USA]**
 - o. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Adalet; division of Scott Fetzer Co.]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Crouse-Hinds; brand of Eaton, Electrical Sector]**
 - e. **[Erickson Electrical Equipment Company]**
 - f. **[FSR Inc.]**
 - g. **[Hoffman; brand of nVent Electrical plc]**
 - h. **[Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - i. **[Milbank Manufacturing Company]**
 - j. **[N J Sullivan Company]**
 - k. **[Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - l. **[Robroy Enclosures; Robroy Industries]**
 - m. **[Siemens Industry, Inc., Building Technologies Division]**
 - n. **[Square D; Schneider Electric USA]**

- o. <Insert manufacturer's name>
3. Listing Criteria:
 - a. UL CCN CYIV.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
4. Standard Features:
 - a. Enclosure provided with frame, mat, or trim in which swinging door or doors are or can be hung.
 - b. Degree of Protection: [Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- D. UL CYIV - Outdoor Sheet Metal Cutout Boxes :
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [Adalet; division of Scott Fetzer Co.]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - e. [Erickson Electrical Equipment Company]
 - f. [FSR Inc.]
 - g. [Hoffman; brand of nVent Electrical plc]
 - h. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. [Milbank Manufacturing Company]
 - j. [N J Sullivan Company]
 - k. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - l. [Robroy Enclosures; Robroy Industries]
 - m. [Siemens Industry, Inc., Building Technologies Division]
 - n. [Square D; Schneider Electric USA]
 - o. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the

following:

- a. [ABB, Electrification Business]
 - b. [Adalet; division of Scott Fetzer Co.]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [Crouse-Hinds; brand of Eaton, Electrical Sector]
 - e. [Erickson Electrical Equipment Company]
 - f. [FSR Inc.]
 - g. [Hoffman; brand of nVent Electrical plc]
 - h. [Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. [Milbank Manufacturing Company]
 - j. [N J Sullivan Company]
 - k. [Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - l. [Robroy Enclosures; Robroy Industries]
 - m. [Siemens Industry, Inc., Building Technologies Division]
 - n. [Square D; Schneider Electric USA]
 - o. <Insert manufacturer's name>
3. Listing Criteria:
- a. UL CCN CYIV.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
4. Standard Features:
- a. Enclosure that has swinging doors or covers secured directly to and telescoping with walls of enclosure.
 - b. Degree of Protection: [Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P].
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 TERMINATION BOXES

- A. Description: Enclosure for termination base consisting of lengths of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors or both.
- B. UL XCKT - Termination Boxes and Termination Bases for Installation on Line Side of Service Equipment :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABB, Electrification Business]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [Erickson Electrical Equipment Company]
 - e. [Hoffman; brand of nVent Electrical plc]
 - f. [Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Milbank Manufacturing Company]
 - h. [N J Sullivan Company]
 - i. [Square D; Schneider Electric USA]
 - j. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Appleton; Emerson Electric Co., Automation Solutions]
 - c. [Cooper B-line; brand of Eaton, Electrical Sector]
 - d. [Erickson Electrical Equipment Company]
 - e. [Hoffman; brand of nVent Electrical plc]
 - f. [Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - g. [Milbank Manufacturing Company]
 - h. [N J Sullivan Company]
 - i. [Square D; Schneider Electric USA]
 - j. <Insert manufacturer's name>
3. Listing Criteria:
 - a. UL CCN XCKT; including UL 1773.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
4. Standard Features:
 - a. Listed and labeled for installation on line side of service equipment.
 - b. Indoor Degree of Protection: [Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13].
 - c. Outdoor Degree of Protection: [Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

- development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- C. UL XCKT - Termination Boxes and Termination Bases for Installation on Load Side of Service Equipment :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
 3. Listing Criteria:
 - a. UL CCN XCKT; including UL 1773.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.
 4. Standard Features:
 - a. Listed and labeled for installation on load side of service equipment.
 - b. Indoor Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13]**.
 - c. Outdoor Degree of Protection: **[Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P]**.
 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts

- of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.6 MISCELLANEOUS ENCLOSURES

A. UL XCKT or NWIN - Indoor Sheet Metal Miscellaneous Enclosures :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
3. Listing Criteria:
 - a. UL CCN XCKT; including UL 1773; or UL CCN NWIN, including UL 2416.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E.

4. Standard Features:

- a. Degree of Protection: **[Type 1][Type 2][Type 5][Type 12][Type 12K][Type 13]**.

5. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL XCKT or NWIN - Outdoor Sheet Metal Miscellaneous Enclosures :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Appleton; Emerson Electric Co., Automation Solutions]**
 - c. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - d. **[Erickson Electrical Equipment Company]**
 - e. **[Hoffman; brand of nVent Electrical plc]**
 - f. **[Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - g. **[Milbank Manufacturing Company]**
 - h. **[N J Sullivan Company]**
 - i. **[Square D; Schneider Electric USA]**
 - j. **<Insert manufacturer's name>**
3. Listing Criteria:
 - a. UL CCN XCKT; including UL 1773; or UL CCN NWIN, including UL 2416.
 - b. Non-Environmental Characteristics: UL 50.

- c. Environmental Characteristics: UL 50E.
- 4. Standard Features:
 - a. Degree of Protection: **[Type 3][Type 3X][Type 3R][Type 3RX][Type 3S][Type 3SX][Type 4][Type 4X][Type 6][Type 6P]**.
- 5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.7 RACK OR FRAME SYSTEMS

- A. Description: This category covers rack or frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support electrical or electronic equipment that will be installed at a later time.
- B. UL NWIN - 19 Inch Open Equipment Rack :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Belden Inc.]**
 - b. **[Black Box Corporation]**
 - c. **[Bud Industries, Inc.]**
 - d. **[CommScope, Inc]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Dell Technologies Inc.]**
 - g. **[Hammond Mfg. Co. Inc]**
 - h. **[Hoffman; brand of nVent Electrical plc]**
 - i. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - j. **[Kendall Howard]**
 - k. **[Leviton Manufacturing Co., Inc.]**
 - l. **[Liebert; Vertiv Holdings Co.]**
 - m. **[Middle Atlantic Products; Legrand North America, LLC]**
 - n. **[Ortronics, Inc.]**
 - o. **[Panduit Corp]**
 - p. **[Siemon Co. (The)]**
 - q. **[Tripp-Lite]**
 - r. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Belden Inc.]**
 - b. **[Black Box Corporation]**
 - c. **[Bud Industries, Inc.]**
 - d. **[CommScope, Inc]**
 - e. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - f. **[Dell Technologies Inc.]**
 - g. **[Hammond Mfg. Co. Inc]**
 - h. **[Hoffman; brand of nVent Electrical plc]**
 - i. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - j. **[Kendall Howard]**
 - k. **[Leviton Manufacturing Co., Inc.]**
 - l. **[Liebert; Vertiv Holdings Co.]**
 - m. **[Middle Atlantic Products; Legrand North America, LLC]**
 - n. **[Ortronics, Inc.]**
 - o. **[Panduit Corp]**
 - p. **[Siemon Co. (The)]**
 - q. **[Tripp-Lite]**
 - r. **<Insert manufacturer's name>**

3. Listing Criteria:
 - a. UL CCN NWIN; including UL 2416.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E or UL 2416.

4. Standard Features:
 - a. Threaded rails designed for mounting telecommunications equipment.
 - b. Width: Compatible with EIA/ECIA 310-E, **19 inch (482.6 mm)** equipment mounting with an opening of **17.72 inch (450 mm)** between rails.
 - c. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
 - d. Finish: Manufacturer's standard, baked-polyester powder coat.
 - e. Cable Management:
 - 1) Metal, with integral wire retaining fingers.
 - 2) Baked-polyester powder coat finish.
 - 3) Vertical cable management panels have front and rear channels with covers.
 - 4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.
 - f. Configuration: **[Two post][and][four post]**.
 - g. Material: **[Extruded steel][Extruded aluminum][Sheet steel][Sheet aluminum]**.

5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted,

- manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
- 6. Other Available Features Required by the Project:
 - a. Color: **[Black]<Insert color>**.
 - b. Floor-Mounted Racks:
 - 1) Overall Height: **[72 inch (1828.8 mm)][84 inch (2133.6 mm)][As indicated on Drawings]<Insert value>**.
 - 2) Overall Depth: **[23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>**.
 - 3) Rail Depth: **[3 inch (76.2 mm)][6 inch (152.4 mm)]<Insert value>**
 - 4) Two-Post Load Rating: **[200 lb (91 kg)][400 lb (181 kg)]<Insert value>**.
 - 5) Four-Post Load Rating: **[1000 lb (454 kg)][2000 lb (907 kg)]<Insert value>**.
 - 6) Number of Rack Units per Rack: **[38][42][45][52][58][As indicated on Drawings]<Insert number>**.
 - a) Numbering: **[Every][Every five]** rack unit(s), on interior of rack.
 - 7) Threads: **[10-32][12-24][Universal square]**.
 - 8) Vertical and horizontal cable management channels, top and bottom cable troughs, grounding lug[, and a power strip].
 - 9) Base must have minimum four mounting holes for permanent attachment to floor.
 - 10) Top must have provisions for attaching to cable tray or ceiling.
 - 11) Self-leveling.
 - c. Wall-Mounted Racks:
 - 1) Height: **[18 inch (457.2 mm)][22 inch (558.8 mm)][As indicated on Drawings]<Insert value>**.
 - 2) Depth: **[23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>**.
 - 3) Load Rating: **[150 lb (65 kg)][200 lb (91 kg)]<Insert value>**.
 - 4) Number of Rack Units per Rack: **[8][12][22][As indicated on Drawings]<Insert number>**.
 - 5) Threads: **[10-32][12-24][Universal square]**.
 - 6) Wall Attachment: Four pre-punched mounting holes.
 - 7) Equipment Access: Integral swing.

C. UL NWIN - 19 Inch Enclosed Equipment Rack :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Belden Inc.]**
 - b. **[Black Box Corporation]**
 - c. **[Bud Industries, Inc.]**
 - d. **[Chatsworth Products, Inc.]**

- e. [CommScope, Inc]
 - f. [Cooper B-line; brand of Eaton, Electrical Sector]
 - g. [Hoffman; brand of nVent Electrical plc]
 - h. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. [Kendall Howard]
 - j. [Leviton Manufacturing Co., Inc.]
 - k. [Liebert; Vertiv Holdings Co.]
 - l. [Middle Atlantic Products; Legrand North America, LLC]
 - m. [Ortronics, Inc.]
 - n. [Panduit Corp]
 - o. [Siemon Co. (The)]
 - p. [Tripp-Lite]
 - q. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [Belden Inc.]
 - b. [Black Box Corporation]
 - c. [Bud Industries, Inc.]
 - d. [Chatsworth Products, Inc.]
 - e. [CommScope, Inc]
 - f. [Cooper B-line; brand of Eaton, Electrical Sector]
 - g. [Hoffman; brand of nVent Electrical plc]
 - h. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - i. [Kendall Howard]
 - j. [Leviton Manufacturing Co., Inc.]
 - k. [Liebert; Vertiv Holdings Co.]
 - l. [Middle Atlantic Products; Legrand North America, LLC]
 - m. [Ortronics, Inc.]
 - n. [Panduit Corp]
 - o. [Siemon Co. (The)]
 - p. [Tripp-Lite]
 - q. <Insert manufacturer's name>
3. Listing Criteria:
- a. UL CCN NWIN; including UL 2416.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E or UL 2416.
4. Standard Features:
- a. Manufacturer-assembled four-post frame enclosed by side and top panels and front and rear doors, designed for mounting telecommunications equipment.
 - b. Threaded rails designed for mounting telecommunications equipment.
 - c. Width: Compatible with EIA/ECIA 310-E, **19 inch (482.6 mm)** equipment mounting with an opening of **17.72 inch (450 mm)** between rails.
 - d. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
 - e. Finish: Manufacturer's standard, baked-polyester powder coat.
 - f. Cable Management:

- 1) Metal, with integral wire retaining fingers.
 - 2) Baked-polyester powder coat finish.
 - 3) Vertical cable management panels have front and rear channels with covers.
 - 4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.
- g. Material: **[Extruded steel][Extruded aluminum][Sheet steel][Sheet aluminum]**.
5. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
- a. Color: **[Black]<Insert color>**.
 - b. Modular Freestanding Cabinets:
 - 1) Overall Height: **[72 inch (1828.8 mm)][84 inch (2133.6 mm)][As indicated on Drawings]<Insert value>**.
 - 2) Overall Depth: **[23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>**.
 - 3) Load Rating: **[3000 lb (1362 kg)]<Insert value>**.
 - 4) Number of Rack Units: **[38][42][45][52][58][As indicated on Drawings]<Insert number>**.
 - a) Numbering: **[Every][Every five]** rack unit(s), on interior of rack.
 - 5) Threads: **[10-32][12-24][Universal square]**.
 - 6) Removable and lockable side and top panels.
 - 7) Hinged and lockable front and rear doors.
 - 8) Adjustable feet for leveling.
 - 9) Screened ventilation openings in roof and rear door.
 - 10) Cable access provisions in roof and base.
 - 11) RBB.
 - 12) **[Rack][Roof]**-mounted, **550 cfm (260 L/s)** fan with filter.
 - 13) Power strip.
 - 14) All cabinets keyed alike.
 - c. Modular Wall Cabinets:
 - 1) Height: **[18 inch (457.2 mm)][22 inch (558.8 mm)][As indicated on Drawings]<Insert value>**.
 - 2) Depth: **[23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>**.
 - 3) Load Rating: **[150 lb (65 kg)][200 lb (91 kg)]<Insert value>**.
 - 4) Number of Rack Units: **[8][12][22][As indicated on Drawings]<Insert number>**.

- 5) Threads: **[10-32][12-24][Universal square]**.
- 6) Lockable front **[and rear]** doors.
- 7) Louvered side panels.
- 8) Cable access provisions top and bottom.
- 9) Grounding lug.
- 10) **[Rack][Roof]**-mounted, **250 cfm (118 L/s)** fan.
- 11) Power strip.
- 12) All cabinets keyed alike.

D. UL NWIN - 23 Inch Open Equipment Rack :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Belden Inc.]**
 - b. **[Black Box Corporation]**
 - c. **[CommScope, Inc]**

 - l. [Ortronics, Inc.]
 - m. [Panduit Corp]
 - n. [Siemon Co. (The)]
 - o. [Tripp-Lite]
 - p. <Insert manufacturer's name>
3. Listing Criteria:
 - a. UL CCN NWIN; including UL 2416.
 - b. Non-Environmental Characteristics: UL 50.
 - c. Environmental Characteristics: UL 50E or UL 2416.
4. Standard Features:
 - a. Manufacturer-assembled four-post frame enclosed by side and top panels and front and rear doors, designed for mounting telecommunications equipment.
 - b. Threaded rails designed for mounting telecommunications equipment.
 - c. Width: Compatible with **23 inch (584.2 mm)** equipment mounting.
 - d. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
 - e. Finish: Manufacturer's standard, baked-polyester powder coat.
 - f. Cable Management:
 - 1) Metal, with integral wire retaining fingers.
 - 2) Baked-polyester powder coat finish.
 - 3) Vertical cable management panels have front and rear channels with covers.
 - 4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.
 - g. Material: [**Extruded steel**][**Extruded aluminum**][**Sheet steel**][**Sheet aluminum**].
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Color: [**Black**]<Insert color>.
 - b. Modular Freestanding Cabinets:
 - 1) Overall Height: [**72 inch (1828.8 mm)**][**84 inch (2133.6 mm)**][**As indicated on**

Drawings]<Insert value>.

- 2) Overall Depth: [23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>.
- 3) Load Rating: [3000 lb (1362 kg)]<Insert value>.
- 4) Number of Rack Units: [38][42][45][52][58][As indicated on Drawings]<Insert number>.

a) Numbering: [Every][Every five] rack unit(s), on interior of rack.

- 5) Threads: [10-32][12-24][Universal square].
- 6) Removable and lockable side and top panels.
- 7) Hinged and lockable front and rear doors.
- 8) Adjustable feet for leveling.
- 9) Screened ventilation openings in roof and rear door.
- 10) Cable access provisions in roof and base.
- 11) RBB.
- 12) [Rack][Roof]-mounted, 550 cfm (260 L/s) fan with filter.
- 13) Power strip.
- 14) All cabinets keyed alike.

c. Modular Wall Cabinets:

- 1) Height: [18 inch (457.2 mm)][22 inch (558.8 mm)][As indicated on Drawings]<Insert value>.
- 2) Depth: [23 inch (584.2 mm)][29 inch (736.6 mm)]<Insert value>.
- 3) Load Rating: [150 lb (65 kg)][200 lb (91 kg)]<Insert value>.
- 4) Number of Rack Units: [8][12][22][As indicated on Drawings]<Insert number>.
- 5) Threads: [10-32][12-24][Universal square].
- 6) Lockable front[and rear] doors.
- 7) Louvered side panels.
- 8) Cable access provisions top and bottom.
- 9) Grounding lug.
- 10) [Rack][Roof]-mounted, 250 cfm (118 L/s) fan.
- 11) Power strip.
- 12) All cabinets keyed alike.

2.8 ENCLOSURE-MOUNTED POWER DISTRIBUTION

A. Description: This category covers relocatable power taps and power distribution units.

B. UL XBYS - Enclosure-Mounted Relocatable Power Tap :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>

3. Listing Criteria: UL CCN XBY5; including UL 1363.
4. Standard Features:
 - a. Rocker-type on-off switch, illuminated when in on position.
 - b. LED indicator lights for power and protection status.
 - c. LED indicator lights for reverse polarity and open outlet ground.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Wiring Devices: **[Six]<Insert quantity>[5-15R][5-20R]<Insert type>** receptacles.
 - b. Circuit Breaker and Thermal Fusing: **[When protection is lost, circuit opens and cannot be reset][Unit continues to supply power if protection is lost].**
 - c. Cord Length: **[Close-coupled, direct plug-in][15 ft (4.5 m)].**
 - d. Surge Protection: Type 3 SPDs.
 - 1) Peak Single-Impulse Surge Current Rating: **[33][26][13]** kA per phase.
 - 2) Protection modes must be line to neutral, line to ground, and neutral to ground. UL 1449 clamping voltage for all three modes may not be more than **[330 V]<Insert value>**.

C. UL QPQY - Rack-Mounted Power Distribution Center :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Fujitsu Network Communications]**
 - c. **[Vertiv Co.]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Fujitsu Network Communications]**
 - c. **[Vertiv Co.]**
 - d. **<Insert manufacturer's name>**

3. Listing Criteria: UL CCN QPQY; including UL 62368-1 or UL 60950-1, in addition to UL Subject 1801.
4. Standard Features:
 - a. Input Voltage: [120 V][208 V][120/208 V][208Y/120 V][208 V Delta].
 - b. Input Current: [15 A][20 A][30 A].
 - c. Output Receptacle Types and Quantities:
 - 1) 5-15R: [6][8][10][12][14][20].
 - 2) 5-20R: [6][10][12][20].
 - 3) L5-20R: [6][12][24].
 - 4) L5-30R: 6.
 - 5) L6-20R: [1][12][20][24].
 - 6) L6-30R: [1][6].
 - 7) L21-30R: 1.
5. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
6. Other Available Features Required by the Project:
 - a. Rack transfer switch.
 - b. Switched receptacles.
 - c. Monitoring: [Unit level][Outlet level].
 - d. Sensors:
 - 1) Temperature: [1][3].
 - 2) Humidity.
 - 3) Dew point.
 - 4) Airflow.
 - 5) Plug-and-play dry contact.
 - 6) Door position.
 - 7) Water.
 - 8) Power failure.

PART 3 - EXECUTION

3.1 SELECTION OF ELECTRICAL CABINETS AND ENCLOSURES

- A. Unless more stringent requirements are specified in Contract Documents or manufacturers' written

instructions, comply with NFPA 70 for selection of electrical cabinets and enclosures. Consult Architect for resolution of conflicting requirements.

B. Degree of Protection:

1. Outdoors:

- a. [Type 3R][Type 4][Type 3] unless otherwise indicated.
- b. Locations Exposed to Hosedown: [Type 4][Type 6][Type 6P].
- c. Locations Subject to Potential Flooding: Type 6P.
- d. Locations Aboveground Where Mechanism Must Operate When Ice Covered: Type 3S.
- e. Locations in-Ground or Exposed to Corrosive Agents: [Type 4X][Type 6P][Type 3RX].
- f. Locations in-Ground or Exposed to Corrosive Agents Where Mechanism Must Operate When Ice Covered: Type 3SX.

2. Indoors:

- a. Type 1 unless otherwise indicated.
- b. Damp or Dusty Locations: [Type 12][Type 2][Type 4][Type 5].
- c. Surface Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
- d. Flush Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: [Type 12][Type 12K].
- e. Locations Exposed to Airborne Dust, Lint, Fibers, or Flyings: [Type 4][Type 6].
- f. Locations Exposed to Hosedown: [Type 4][Type 6][Type 6P].
- g. Locations Exposed to Brief Submersion: [Type 6][Type 6P].
- h. Locations Exposed to Prolonged Submersion: Type 6P.
- i. Locations Exposed to Corrosive Agents: [Type 4X][Type 6P].
- j. Locations Exposed to Spraying Oil or Coolants: Type 13.

3.2 INSTALLATION OF ELECTRICAL CABINETS AND ENCLOSURES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFB, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Communications Work: BICSI N1.
5. Work in ITE Rooms: NFPA 75.
6. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
7. Cabinets and Cutout Boxes: Article 312 of NFPA 70.
8. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Mount cabinets and enclosures at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to [center][top][bottom] of box unless otherwise indicated.
2. Do not install cabinets, enclosures, or fittings in contact with concrete or earth.
3. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to ensure a continuous ground path.
4. Identification: Provide labels for cabinets, enclosures, racks and associated electrical equipment.

- a. Identify field-installed conductors, interconnecting wiring, and components.
- b. Provide warning signs.
- c. Label each cabinet, enclosure, and rack with engraved metal or laminated-plastic nameplate.

D. Interfaces with Other Work:

1. Firestop penetrations of rated walls and partitions.
2. Ground and bond RBBs in cabinets, enclosures, and racks.
3. Apply arc-flash hazard warning labels cabinets, enclosures, and racks.
4. Coordinate installation of new products for **<Insert system or product family/category>** with existing conditions.
 - a. **<Insert requirements for transition between new and existing>**.
5. Coordinate with **<Insert Section number and title>** for **<Insert description of interfacing related Work>**.
 - a. **<Insert requirements for transition between this Section and related Work>**.

3.3 FIELD QUALITY CONTROL OF ELECTRICAL CABINETS AND ENCLOSURES

A. Administrant for Electrical Power Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Communications Tests and Inspections:

1. **[Owner][Tenant]** will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Field tests and inspections must be witnessed by **[Architect][Tenant][authorities having jurisdiction]<Insert names or titles of witnesses>**.

D. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

E. Nonconforming Work:

1. Cabinet, enclosure, or rack will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.4 CLEANING

A. Remove construction dust and debris from cabinets, enclosures, and racks.

3.5 PROTECTION

A. Protect coatings and finishes of cabinets, enclosures, and racks from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 27 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description

26 27 16 00	26 24 19 00	Motor-Control Centers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 19 00 - MULTI-OUTLET ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall-mounted, surface metal raceway multi-outlet assemblies.
2. Wall-mounted, surface nonmetallic raceway multi-outlet assemblies.
3. Floor-mounted, recessed metal raceway multi-outlet assemblies.
4. Indoor service poles.
5. Floor-mounted, enclosure multi-outlet assemblies.
6. Fire-rated, poke-through assemblies.
7. Above-floor service fittings.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 260533.13 "Conduits for Electrical Systems" and Section 260533.23 "Surface Raceways for Electrical Systems" for raceways.
4. Section 260533.16 "Boxes and Covers for Electrical Systems" for floor boxes and covers.
5. Section 262726 "Wiring Devices" for receptacles and switches.
6. Section 271513 "Communications Copper Horizontal Cabling" for control-voltage communications outlet devices.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Wall-mounted, surface metal raceway multi-outlet assemblies.
2. Wall-mounted, surface nonmetallic raceway multi-outlet assemblies.
3. Floor-mounted, recessed metal raceway multi-outlet assemblies.
4. Indoor service poles.
5. Floor-mounted, enclosure multi-outlet assemblies.
6. Fire-rated, poke-through assemblies.
7. Above-floor service fittings.

PART 2 - PRODUCTS

2.1 WALL-MOUNTED, SURFACE METAL RACEWAY MULTI-OUTLET ASSEMBLIES

- ##### A. Description:
- Two-piece surface metal raceway, field assembled and wired or with factory-wired multi-outlet harness, including outlets.

- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- C. General Characteristics:
1. Reference Standards: UL 5 for exposed power raceway and fittings. Multi-outlet assemblies used for communications or data must also comply with UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
 2. Provide separate paths for management of telecommunications and power cables.
- D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways, receptacles, and switches.
- E. Wall-Mounted, Surface Metal Raceway Power Multi-Outlet Assembly :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
 3. Options:
 - a. Material: **[Steel][Aluminum]**, with manufacturer's standard finish.
 - b. Color: **<Indicate color>**.
 - c. Power Outlets: **<Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices."
 - d. Power Outlet Spacing: **[6 inch (150 mm)][9 inch (230 mm)][12 inch (300 mm)][18 inch (460 mm)]**.
 - e. Wiring: **[Single circuit][Two circuits, connecting alternating receptacles or switches,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- F. Wall-Mounted, Surface Metal Raceway Power and Communications Multi-Outlet Assembly :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell**

- b. **Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
- 3. Options:
 - a. Material: **[Steel][Aluminum]**, with manufacturer's standard finish.
 - b. Color: **<Indicate color>**.
 - c. Power Outlets: **<Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices."
 - d. Power Outlet Spacing: **[6 inch (150 mm)][9 inch (230 mm)][12 inch (300 mm)][18 inch (460 mm)]**.
 - e. Power Wiring: **[Single circuit][Two circuits, connecting alternating receptacles or switches,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - f. Voice and Data Communication Outlets: **<Indicate quantity>[blank insert with bushed cable opening][8PSJ jacks]** complying with requirements in Section 271500 "Communications Horizontal Cabling."
 - g. A minimum of **[two][four]** four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.2 WALL-MOUNTED, SURFACE NONMETALLIC RACEWAY MULTI-OUTLET ASSEMBLIES

- A. Description: Two-piece surface nonmetallic raceway, field assembled and wired or with factory-wired multi-outlet harness, including outlets.
- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- C. General Characteristics:
 - 1. Reference Standards: UL 5A for exposed power raceway and fittings, UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
 - 2. Provide separate paths for management of telecommunications and power cables.
- D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways, receptacles, and switches.
- E. Wall-Mounted, Surface Nonmetallic Raceway Power Multi-Outlet Assembly :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
3. Options:
 - a. Material: **[PVC]<Indicate material>**.
 - b. Color: **<Indicate color>**.
 - c. Power Outlets: **<Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices."
 - d. Power Outlet Spacing: **[6 inch (150 mm)][9 inch (230 mm)][12 inch (300 mm)][18 inch (460 mm)]**.
 - e. Wiring: **[Single circuit][Two circuits, connecting alternating receptacles or switches,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Wall-Mounted, Surface Nonmetallic Raceway Power and Communications Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
3. Options:
 - a. Material: **[PVC]<Indicate material>**.
 - b. Color: **<Indicate color>**.
 - c. Power Outlets: **<Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices."
 - d. Power Outlet Spacing: **[6 inch (150 mm)][9 inch (230 mm)][12 inch (300 mm)][18 inch (460 mm)]**.

- e. Power Wiring: **[Single circuit][Two circuits, connecting alternating receptacles or switches,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- f. Voice and Data Communication Outlets: **<Indicate quantity>[blank insert with bushed cable opening][8PSJ jacks]** complying with requirements in Section 271500 "Communications Horizontal Cabling."
- g. A minimum of **[two][four]** four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.3 FLOOR-MOUNTED, RECESSED METAL RACEWAY MULTI-OUTLET ASSEMBLIES

- A. Description: Two-piece flush-mounted, in-floor, metal raceway, with factory-wired multi-outlet harness, for installation flush in floor or under floor finish.
- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- C. General Characteristics:
 - 1. Reference Standards: UL 5 for exposed power raceway and fittings, UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
 - 2. Provide separate paths for management of telecommunications and power cables.
- D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.
- E. Floor-Mounted, Recessed Metal Raceway Power Multi-Outlet Assembly :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
 - 3. Options:
 - a. Load-Bearing Capacity: **[1000 lb (450 kg)]<Indicate capacity>**.
 - b. Material: **[Steel][Aluminum]**, with manufacturer's standard finish.
 - c. Color: **<Indicate color>**.
 - d. Power Outlets: **<Indicate quantity><Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices" in surface-mounted enclosure capable of mounting

anywhere along length of recessed raceway.

- e. Wiring: **[Single circuit][Two circuits, connecting alternating receptacles,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Floor-Mounted, Recessed Metal Raceway Power and Communications Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Wiremold; Legrand North America, LLC]**
 - c. **<Insert manufacturer's name>**
3. Options:
 - a. Load-Bearing Capacity: **[1000 lb (450 kg)]<Indicate capacity>**.
 - b. Material: **[Steel][Aluminum]**, with manufacturer's standard finish.
 - c. Color: **<Indicate color>**.
 - d. Power Outlets: **<Indicate quantity><Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices" in surface-mounted enclosure capable of mounting anywhere along length of recessed raceway.
 - e. Power Wiring: **[Single circuit][Two circuits, connecting alternating receptacles,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - f. Voice and Data Communication Outlets: **<Indicate quantity>[blank insert with bushed cable opening][8PSJ jacks]** complying with requirements in Section 271500 "Communications Horizontal Cabling."
 - g. A minimum of **[two][four]** four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.4 INDOOR SERVICE POLES

- A. Description: Factory-assembled and -wired, exposed raceway and fittings to route electrical wiring from connections above ceiling to outlets below ceiling.
- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- C. General Characteristics:
 1. Reference Standards: UL 5 for exposed power raceway and fittings, and UL 2024 for communications raceway and fittings.

2. Listed and labeled in accordance with NFPA 90A for installation in air-handling plenum spaces.
3. Mounting: Ceiling trim flange with concealed bracing arranged for positive connection to above ceiling structural supports; with pole foot and carpet pad attachment.
4. Provide barrier to separate channel for power wiring from channel for voice and data communication cabling.

D. Indoor Service Pole :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Panduit Corp]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Panduit Corp]**
 - c. **<Insert manufacturer's name>**
3. Options:
 - a. Material: **[Aluminum][Steel]**.
 - b. Height: **<Insert height>** below ceiling, and **<Insert height>** above ceiling.
 - c. Finish: **[Manufacturer's standard painted finish and trim combination][Satin-anodized aluminum]**.
 - 1) Color: **[Clear anodized][White][Ivory][Gray][Black]<Insert color>**.
 - d. Power Outlets: **<Indicate quantity><Indicate receptacle type>** in accordance with Section 262726 "Wiring Devices."
 - e. Wiring: **[Single circuit][Two circuits, connecting alternating receptacles,]** in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - f. Voice and Data Communication Outlets: **<Indicate quantity>[blank insert with bushed cable opening][8PSJ jacks]** complying with requirements in Section 271500 "Communications Horizontal Cabling."
 - g. A minimum of **[two][four]** four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.5 FLOOR-MOUNTED ENCLOSURE MULTI-OUTLET ASSEMBLIES

- A. Description: Floor-mounted box with cover enclosing multiple power **[and communications]** outlets in a single assembly.
- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 514A for metallic boxes; UL 514C for nonmetallic boxes, including scrub-water exclusion requirements; and UL 514D for cover plates.
2. Provide separate paths for management of telecommunications and power cables in accordance with NFPA 76.
3. Compartments: Barrier separates power from voice and data communication cabling.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.

E. Floor-Mounted Enclosure Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ABB, Electrification Business]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ABB, Electrification Business]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
3. Options:
 - a. Floor Box and Cover:
 - 1) **[Provide floor boxes classified for use in 1-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.]**
 - 2) **[Provide floor boxes classified for use in 1-1/2-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.]**
 - 3) **[Provide floor boxes classified for use in 2-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.]**
 - 4) **[Provide floor boxes classified for use in 3-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.]**
 - 5) **[Provide floor boxes for installation in raised floors.]**
 - 6) **[Provide floor boxes for installation in wood floors.]**
 - 7) Floor boxes for concrete floors must provide a minimum of **4 inch (100 mm)** of adjustment prior to concrete pour and a minimum of **1/2 inch (12.5 mm)** after concrete is set.
 - 8) Provide **[cast-metal][sheet metal][nonmetallic]** floor boxes with **[four][six][eight][10]** gangs.
 - 9) Provide brass or aluminum flanges approved for use on carpet, tile, or wood floor applications. Flanges and cover plates must have a buffed appearance and a

protective finish. Covers must match appearance of floor flanges and provide access to included devices.

- 10) Covers must lay flat on floor surface when open. Provide for cable egress when cover is closed. Provide ADA-compliant covers.
- 11) Provide flanges, mounting brackets, keystones, and accessories for mounting devices and connections indicated on Drawings.

b. Outlets:

- 1) Power Outlets: <Indicate quantity><Indicate receptacle type> in accordance with Section 262726 "Wiring Devices."
- 2) Wiring: [Single circuit][Two circuits, connecting alternating receptacles,] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- 3) Voice and Data Communication Outlets: <Indicate quantity>[blank insert with bushed cable opening][8PSJ jacks] complying with requirements in Section 271500 "Communications Horizontal Cabling."
- 4) A minimum of [two][four] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.6 FIRE-RATED, POKE-THROUGH ASSEMBLIES

- A. Description: Factory-fabricated assembly of below-floor junction box with multichannel, through-floor raceway/firestop unit with receptacles or communications outlets installed below floor surface level.
- B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- C. General Characteristics:
 1. Reference Standards: UL 514A for metallic boxes and UL 514C for nonmetallic boxes, including scrub-water exclusion requirements.
 2. Provide separate paths for management of telecommunications and power cables.
 3. Fire Rating: Provide unit listed and labeled for fire rating of floor-ceiling assembly.
- D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.
- E. Fire-Rated, Poke-Through Assembly : [Recessed][Flush][Pedestal] type.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - b. [Square D; Schneider Electric USA]
 - c. [Wiremold; Legrand North America, LLC]
 - d. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - b. **[Square D; Schneider Electric USA]**
 - c. **[Wiremold; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
3. Options:
- a. Modular, **[recessed][flush][pedestal]**-type, dual-service units suitable for wiring method used[, **with cover flush with finished floor**].
 - b. Service Plate, Flaps, and Cover: **[Rectangular][Round]**, **[die-cast aluminum][solid brass]** with satin finish.
 - c. Core Size: Selected to fit nominal **[4 inch (100 mm)][6 inch (150 mm)][8 inch (200 mm)][10 inch (250 mm)]** cored holes in floor and matched to floor thickness.
 - d. Closure Plug: Close unused cored opening and reestablish fire rating of floor.
 - e. Feed Conduits: Provide connection points for conduits as indicated on Drawings or required for conductors shown. Provide minimum **[1 inch (25 mm)]<Insert nominal size>** conduits for communications cables.
 - f. Power Outlets: **<Indicate quantity><Indicate receptacle type>** gray finish, unless otherwise indicated, in accordance with Section 262726 "Wiring Devices."
 - g. Telephone and Data Outlets: **<Indicate quantity>[blank cover with bushed cable opening.][modular, keyed, color-coded, 8PSJ jacks in accordance with Section 271513 "Communications Copper Horizontal Cabling."]**
 - h. Audio and Video Outlets: **[Blank cover with bushed cable opening]<Indicate quantity and type>**.

2.7 ABOVE-FLOOR SERVICE FITTINGS

- A. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
- B. General Characteristics:
 - 1. Reference Standards: UL 514A for metallic boxes and UL 514C for nonmetallic boxes, including scrub-water exclusion requirements.
 - 2. Provide separate paths for management of telecommunications and power cables in compliance with NFPA 76.
 - 3. See Section 260533.16 "Boxes and Covers for Electrical Systems" for more details and requirements for floor boxes.
 - 4. Compartments: Barrier separates power from voice and data communication cabling.
- C. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.
- D. Pedestal-Type, Above-Floor Service Fitting :
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[ABB, Electrification Business]**
 - b. **[Eaton]**

- c. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Wiremold; Legrand North America, LLC]
 - e. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABB, Electrification Business]
 - b. [Eaton]
 - c. [Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - d. [Wiremold; Legrand North America, LLC]
 - e. <Insert manufacturer's name>
- 3. Options:
 - a. Service Plate and Housing: [die-cast aluminum][solid brass] with satin finish.
 - b. Wiring, Raceways, and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of [two][four] four-pair cables in accordance with Section 260533.23 "Surface Raceways for Electrical Systems" and Section 271513 "Communications Copper Horizontal Cabling."
 - c. Power Outlets: <Indicate quantity><Indicate receptacle type> gray finish, unless otherwise indicated, in accordance with Section 262726 "Wiring Devices."
 - d. Communications Outlets: <Indicate quantity>[blank cover with bushed cable opening.][modular, keyed, color-coded, 8PSJ jacks in accordance with Section 271513 "Communications Copper Horizontal Cabling."]

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with NECA 1 for device mounting heights, except where requirements on Drawings or in this Section are stricter.
- B. Comply with NECA 101 for installation requirements for steel raceways, except where requirements on Drawings or in this Section are stricter.
- C. Comply with NECA 102 for installation requirements for aluminum raceways, except where requirements on Drawings or in this Section are stricter.
- D. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies.
- E. Provide terminations, adapters, boxes, and other fittings required for installation.
- F. Install surface raceway with a minimum **2 inch (50 mm)** radius control at bend points.
- G. Secure metallic surface raceway with screws or other anchor-type devices at intervals not exceeding **48 inch (1200 mm)** and with no fewer than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.
- H. Do not install aluminum raceways or fittings in contact with concrete.

- I. Secure nonmetallic surface raceway with screws or other anchor-type devices in each wiring channel at intervals not exceeding **18 inch (460 mm)** and with no fewer than two supports per straight raceway section in each wiring channel. Support nonmetallic surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.
- J. Do not install PVC raceways where ambient temperature exceeds [**122 deg F (50 deg C)**]**<Insert temperature>**. Conductors with insulation rated higher than 75 deg C installed in PVC raceways may not be operated at a temperature greater than 75 deg C.
- K. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- L. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and support.
- M. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" and Section 260533.23 "Surface Raceways for Electrical Systems" for installation of raceways.
- N. Comply with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems" for additional requirements for floor boxes.
- O. Coordination with Other Work:
 - 1. Adjust locations of multi-outlet assemblies to suit arrangement of partitions and furnishings. Locate outlets to avoid blocking by supports, furnishings, and other architectural fixtures.
 - 2. Provide outlets with special requirements, such as GFCI, AFCI, or special environmental requirements, where required by Drawings or to meet codes.
 - 3. Adjust locations of poke-through assembly penetrations to coordinate with locations of structural members, concealed piping, and concealed conduit. Obtain written approval from Architect prior to drilling penetrations in floors other than where dimensioned on architectural Drawings. Comply with requirements in Section 078413 "Penetration Firestopping."

3.2 IDENTIFICATION

- A. Comply with Section 260553 "Identification for Electrical Systems."

END OF SECTION 26 27 19 00

Task	Specification	Specification Description
26 27 19 00	26 05 39 00	Underfloor Raceways For Electrical Systems
26 27 23 00	26 27 26 00	Wiring Devices

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 26 00 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. General-use switches, dimmer switches, and fan-speed controller switches.
2. General-grade single straight-blade receptacles.
3. General-grade duplex straight-blade receptacles.
4. Hospital-grade straight-blade receptacles.
5. Receptacles with arc-fault and ground-fault protective devices.
6. Locking receptacles.
7. Pin-and-sleeve receptacles.
8. Special-purpose power outlet assemblies.
9. Connectors, cords, and plugs.

B. Products Installed, but Not Furnished, under This Section:

1. **<Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article>.**

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. **[Section 013100 "Project Management and Coordination"]<Insert Section number and title>** for preinstallation conference procedures.
5. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
6. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
8. Section 260923 "Lighting Control Devices" for occupancy sensors, timers, control-voltage switches, and control-voltage dimmers.
9. Section 260936 "Modular Dimming Controls" for multiscene and multipreset dimming controls.
10. Section 260943.16 "Addressable Luminaire Lighting Controls" for network lighting control solid-state devices.
11. Section 260943.23 "Relay-Based Lighting Controls" for network lighting control relay devices.
12. Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches" for additional wiring device products.
13. Section 262726.31 "General-Grade Single Straight-Blade Receptacles" for additional wiring device products.
14. Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles" for additional wiring device products.

15. Section 262726.35 "Hospital-Grade Straight-Blade Receptacles" for additional wiring device products.
16. Section 262726.37 "Receptacles with Arc-Fault and Ground-Fault Protective Devices" for additional wiring device products.
17. Section 262726.39 "Locking Receptacles" for additional wiring device products.
18. Section 262726.41 "Pin-and-Sleeve Receptacles" for additional wiring device products.
19. Section 262726.43 "Special-Purpose Power Outlet Assemblies" for additional wiring device products.
20. Section 262726.51 "Connectors, Cords, and Plugs" for additional wiring device products.
21. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

- A. AFCI: Arc-Fault Circuit Interrupter.
- B. Commercial/Industrial-Use Cord Reel: A cord reel subject to severe use in factories, commercial garages, construction sites, and similar locations requiring a harder service-type cord.
- C. GFCI: Ground-Fault Circuit Interrupter.
- D. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.
- B. Preinstallation Coordination Meeting(s): For ceiling-mounted cable reels. Conduct meeting **[as videoconference][or][at Project site]<Insert location>** before **<Insert construction activity>**.
 1. Attendees: Installers, fabricators, representatives of manufacturers, and administrators for field tests and inspections. Notify Architect[, **Construction Manager**][, **and Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.
 - a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
 - b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
 - c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are not acceptable for submitted product.

2. Include manufacturer's sample extended warranty language.

B. Samples:

1. One for each kind of toggle switch[**and cover plate accessory**] specified, in each finish and color specified.
2. One for each kind of key lock switch[**and cover plate accessory**] specified, in each finish and color specified.
3. One for each kind of maintained-contact switch[**and cover plate accessory**] specified, in each finish and color specified.
4. One for each kind of momentary-contact switch[**and cover plate accessory**] specified, in each finish and color specified.
5. One for each kind of rocker switch[**and cover plate accessory**] specified, in each finish and color specified.
6. One for each kind of dimmer switch[**and cover plate accessory**] specified, in each finish and color specified.
7. One for each kind of fan-speed controller switch[**and cover plate accessory**] specified, in each finish and color specified.
8. One for each kind of single straight-blade receptacle[**and cover plate accessory**] specified, in each finish and color specified.
9. One for each kind of duplex straight-blade receptacle[**and cover plate accessory**] specified, in each finish and color specified.
10. One for each kind of duplex straight-blade receptacle with integral switching means[**and cover plate accessory**] specified, in each finish and color specified.
11. One for each kind of hospital-grade straight-blade receptacle[**and cover plate accessory**] specified, in each finish and color specified.
12. One for each kind of receptacle with AFCI device[**and cover plate accessory**] specified, in each finish and color specified.
13. One for each kind of receptacle with AFCI and GFCI devices[**and cover plate accessory**] specified, in each finish and color specified.
14. One for each kind of receptacle with GFCI device[**and cover plate accessory**] specified, in each finish and color specified.
15. One for each kind of locking receptacle[**and cover plate accessory**] specified, in each finish and color specified.
16. One for each kind of pin-and-sleeve receptacle specified, in each finish and color specified.
17. One for each kind of cord connector specified, in each finish and color specified.

C. Shop Drawings:

1. Wiring diagrams for duplex straight-blade receptacles with integral switching means.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.
2. Lighting Control Documentation: Floor plans indicating the following information:
 - a. As-installed locations of switches and dimmers.
 - b. Lighting zones and control strategy for each switch or dimmer, including unoccupied time-delay setting for shut-off and override time-delay setting for shut-off.
 - c. Multilevel or dimming range capability for each switch or dimmer.
 - d. Which switches or dimmers are operated by occupancy sensors, vacancy sensors, daylighting sensors, or time clocks.
3. Record floor plan Drawings indicating as-installed locations of switches and dimmers, indicating lighting zone's each device control, to verify extent of ability of the installed Work to provide occupant control for customizing environment.

4. Record floor plan Drawings indicating as-installed locations of uncontrolled and marked controlled receptacles superimposed on office furniture layout, to verify extent of ability of the installed Work to provide each occupant ability to select at least one uncontrolled receptacle and at least one controlled receptacle for powering workspace equipment. Indicate locations of UL-approved relocatable power taps and power strips, indicating means of securing protection from damage and accessibility for inspection. Indicate locations of temporary extension cords, indicating plan for replacing them with permanent wiring within 90 days.

- E. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

- A. Manufacturer's published instructions.
- B. Field Reports:
 1. Manufacturer's field reports for field quality-control support.

1.6 CLOSEOUT SUBMITTALS

- A. Warranty documentation.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra stock material.
- B. Special tools.

1.8 QUALIFICATIONS

- A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.
- B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.
- C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
 1. On-site electrical testing supervisors must possess active NICET EPT Technician [III][IV] certification.

1.9 WARRANTY FOR DEVICES

- A. Special Installer Extended Warranty: Installer warrants that installed devices perform in accordance with

specified requirements and agrees to repair or replace products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that devices perform in accordance with specified requirements and agrees to provide repair or replacement of devices that fail to perform as specified within extended warranty period.
 1. Initial Extended Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 2. Follow-On Extended Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

1.10 WARRANTY FOR CORD REELS

- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to repair or replace assemblies that fail to perform as specified within extended warranty period.
 1. Extended Warranty Period: **[Two][Three][Four]<Insert number>** years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that components of cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.
 1. Initial Extended Warranty Period: **[Three][Four][Five]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for labor, materials, and equipment.
 2. Follow-On Extended Warranty Period: **[Eight]<Insert number>** years from date of Substantial Completion; **[full][prorated]** coverage for materials only, free on board **[origin][destination]**, freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and finishes that may impact the Work>**.
- C. Accessories: **<Insert accessories included with existing product>**.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

- A. Basis for Pricing: **<Insert name of manufacturer and model number or series for existing product>**.
- B. Description: **<Insert description of existing product, including special features, options, and**

finishes that may impact the Work>.

- C. Accessories: **<Insert accessories included with existing product>.**

2.3 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

- A. Toggle Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: UL CCN WMUZ and UL 20.
5. Standard Features:
 - a. Device Color: **[Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].**
 - b. Configuration:
 - 1) General-duty, 120-277 V, 15 A, **[single pole][double pole][three way][four way].**
 - 2) General-duty, 120-277 V, 20 A, **[single pole][double pole][three way][four way].**
 - 3) Extra-heavy-duty, 120-277 V, 15 A, **[single pole][double pole][three way][four way].**
 - 4) Extra-heavy-duty, 120-277 V, 20 A, **[single pole][double pole][three way][four way].**
 - 5) Extra-heavy-duty, 120-277 V, 30 A, **[single pole][double pole][three way].**

6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Accessories:

- a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
- b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Toggle Switch with Forked Key Lock :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: UL CEN WMUZ and UL 20.
5. Standard Features:
 - a. Device Color: **[Ivory][White][Gray][Black][As indicated on architectural Drawings].**
 - b. Configuration:
 - 1) 120-277 V, 15 A, **[single pole][double pole][three way][four way].**
 - 2) 120-277 V, 20 A, **[single pole][double pole][three way][four way].**

3) 120-277 V, 30 A, **[single pole][double pole]**.

6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. Rocker Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: UL CCN WMUZ and UL 20.
5. Standard Features:
 - a. Device Color: **[Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings]**.
 - b. Configuration:
 - 1) 120-277 V, 15 A, **[single pole][three way][four way]**.
 - 2) 120-277 V, 20 A, **[single pole][double pole][three way][four way]**.

6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Accessories:

- a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
- b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Rocker Switch with Nightlight :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: UL CCN WMUZ and UL 20.
5. Standard Features:
 - a. Device Color: **[Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].**
 - b. Configuration: 120-277 V, 20 A, **[single pole][three way][four way].**

6. Sustainable Design Features:

- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
- b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
- c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
- d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
- e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Accessories:

- a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
- b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Type I Dimmer Switch :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[GE Lighting; a Savant Company]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lutron Electronics Co., Inc]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[GE Lighting; a Savant Company]**
 - c. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - d. **[Leviton Manufacturing Co., Inc.]**
 - e. **[Lutron Electronics Co., Inc]**
 - f. **[Pass & Seymour; Legrand North America, LLC]**
 - g. **<Insert manufacturer's name>**
3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: UL CCN EOYX and UL 1472.
5. Standard Features:

- a. UL 1472 Type I dimmer.
 - b. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
 - c. Switch Style: [Toggle][Rocker][Push button].
 - d. Dimming Control Style: [Slide][Rotary].
6. Sustainable Design Features:
- a. Corporate Sustainability Report: Provide **[third-party-verified]** corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
7. Accessories:
- a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.
- F. Air-Gap Fan-Speed Controller Switch :
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain products from single manufacturer.
 4. Listing Criteria: UL CCN GQHG and UL 1917.

5. Standard Features:
 - a. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
6. Sustainable Design Features:
 - a. Corporate Sustainability Report: Provide [third-party-verified]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
 - b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
 - c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
 - d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
 - e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.
7. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.5 GENERAL-GRADE SINGLE STRAIGHT-BLADE RECEPTACLES

- A. Single Straight-Blade Receptacle :
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Leviton Manufacturing Co., Inc.]
 - c. [Pass & Seymour; Legrand North America, LLC]
 - d. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Leviton Manufacturing Co., Inc.]
 - c. [Pass & Seymour; Legrand North America, LLC]
 - d. <Insert manufacturer's name>
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
4. Standard Features:
 - a. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
 - b. Configuration:
 - 1) General-duty, [NEMA 5-15R][NEMA 5-20R][NEMA 5-30R][NEMA 5-50R].
 - 2) General-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 3) General-duty, [NEMA 6-15R][NEMA 6-20R][NEMA 6-30R][NEMA 6-50R].
 - 4) General-duty, smooth face, NEMA 6-20R.
 - 5) General-duty, [NEMA 14-30R (Dryer)][NEMA 14-50R (Range)].
 - 6) Heavy-duty, [NEMA 5-30R][NEMA 5-50R].
 - 7) Heavy-duty, [NEMA 6-30R][NEMA 6-50R].
 - 8) Heavy-duty, [NEMA 7-20R][NEMA 7-30R][NEMA 7-50R].
 - 9) Heavy-duty, [NEMA 14-20R][NEMA 14-30R (Dryer)][NEMA 14-50R (Range)][NEMA 14-60R].
 - 10) Heavy-duty, [NEMA 15-20R][NEMA 15-30R][NEMA 15-50R][NEMA 15-60R].
 - 11) Heavy-duty, [NEMA 18-20R][NEMA 18-30R][NEMA 18-50R][NEMA 18-60R].
 - 12) Extra-heavy-duty, [NEMA 5-15R][NEMA 5-20R].
 - 13) Extra-heavy-duty, [NEMA 6-15R][NEMA 6-20R].
5. Other Available Features Required by the Project:
 - a. Has factory-terminated connectors on wiring device pigtails for quick installation.
6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.
- B. Tamper-Resistant, Clock Hanger Straight-Blade Receptacle :
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - b. [Pass & Seymour; Legrand North America, LLC]
 - c. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - b. [Pass & Seymour; Legrand North America, LLC]
 - c. <Insert manufacturer's name>
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

- a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

- a. Finish: **[White nylon][Ivory nylon][Brass][Stainless steel][Brushed brass][Nickel plated]**.
- b. Configuration: Recessed, smooth wallplate; **[NEMA 5-15R][NEMA 5-20R]**.

5. Other Available Features Required by the Project:

- a. Has factory-terminated connectors on wiring device pigtails for quick installation.

C. Tamper-Resistant, Floor-Mounted Display Straight-Blade Receptacle :

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
- b. **[Pass & Seymour; Legrand North America, LLC]**
- c. **<Insert manufacturer's name>**

- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
- b. **[Pass & Seymour; Legrand North America, LLC]**
- c. **<Insert manufacturer's name>**

- 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

- a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

- a. Finish: **[Brushed brass][Nickel plated]**.

5. Other Available Features Required by the Project:

- a. Has factory-terminated connectors on wiring device pigtails for quick installation.

2.6 GENERAL-GRADE DUPLEX STRAIGHT-BLADE RECEPTACLES

A. Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Leviton Manufacturing Co., Inc.]
 - c. [Pass & Seymour; Legrand North America, LLC]
 - d. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Leviton Manufacturing Co., Inc.]
 - c. [Pass & Seymour; Legrand North America, LLC]
 - d. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
 - b. Surge Protective Devices: UL 1449, Type 3.
4. Standard Features:
 - a. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
 - b. Configuration:
 - 1) General-duty, [NEMA 5-15R][NEMA 5-20R].
 - 2) General-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 3) General-duty, [NEMA 6-15R][NEMA 6-20R].
 - 4) General-duty, smooth face, [NEMA 6-15R][NEMA 6-20R].
 - 5) Heavy-duty, [NEMA 5-15R][NEMA 5-20R].
 - 6) Heavy-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 7) Heavy-duty, [NEMA 6-15R][NEMA 6-20R].
 - 8) Heavy-duty, smooth face, NEMA 6-15R.
 - 9) Heavy-duty, NEMA 7-15R.
 - 10) Extra-heavy-duty, [NEMA 5-15R][NEMA 5-20R].
 - 11) Extra-heavy-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 12) Extra-heavy-duty, [NEMA 6-15R][NEMA 6-20R].
 - 13) Extra-heavy-duty, smooth face, [NEMA 6-15R][NEMA 6-20R].
5. Other Available Features Required by the Project:
 - a. Has factory-terminated connectors on wiring device pigtails for quick installation.
6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Pass & Seymour; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Leviton Manufacturing Co., Inc.]**
 - c. **[Pass & Seymour; Legrand North America, LLC]**
 - d. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
 - b. Surge Protective Devices: UL 1449, Type 3.
4. Standard Features:
 - a. Device Color: **[Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].**
 - b. Configuration:
 - 1) General-duty, **[NEMA 5-15R][NEMA 5-20R].**
 - 2) General-duty, smooth face, **[NEMA 5-15R][NEMA 5-20R].**
 - 3) Heavy-duty, **[NEMA 5-15R][NEMA 5-20R].**
 - 4) Heavy-duty, smooth face, **[NEMA 5-15R][NEMA 5-20R].**
 - 5) Extra-heavy-duty, **[NEMA 5-15R][NEMA 5-20R].**
5. Other Available Features Required by the Project:
 - a. Has factory-terminated connectors on wiring device pigtails for quick installation.
6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Isolated Ground Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Leviton Manufacturing Co., Inc.]
 - b. [Pass & Seymour; Legrand North America, LLC]
 - c. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Leviton Manufacturing Co., Inc.]
 - b. [Pass & Seymour; Legrand North America, LLC]
 - c. <Insert manufacturer's name>
 3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
 - b. Surge Protective Devices: UL 1449, Type 3.
 4. Standard Features:
 - a. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
 - b. Configuration:
 - 1) General-duty, [NEMA 5-15R][NEMA 5-20R].
 - 2) General-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 3) Heavy-duty, [NEMA 5-15R][NEMA 5-20R].
 - 4) Heavy-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
 - 5) Extra-heavy-duty, [NEMA 5-15R][NEMA 5-20R].
 - 6) Extra heavy-duty, [NEMA 6-15R][NEMA 6-20R].
 5. Other Available Features Required by the Project:
 - a. Has factory-terminated connectors on wiring device pigtails for quick installation.
 6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.
- D. Isolated Ground Duplex Straight-Blade Receptacle with Type 3 Surge Protective Device :
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]

- c. [Leviton Manufacturing Co., Inc.]
 - d. [Pass & Seymour; Legrand North America, LLC]
 - e. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - c. [Leviton Manufacturing Co., Inc.]
 - d. [Pass & Seymour; Legrand North America, LLC]
 - e. <Insert manufacturer's name>
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
 - a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
 - b. Surge Protective Devices: UL 1449, Type 3.
4. Standard Features:
 - a. Device Color: [Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].
 - b. Configuration: Heavy-duty, smooth face, [NEMA 5-15R][NEMA 5-20R].
5. Other Available Features Required by the Project:
 - a. Has factory-terminated connectors on wiring device pigtails for quick installation.
6. Accessories:
 - a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
 - b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.
- E. Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Arrow Hart, Wiring Devices; Eaton, Electrical Sector]
 - b. [Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]
 - c. [Leviton Manufacturing Co., Inc.]
 - d. [Pass & Seymour; Legrand North America, LLC]
 - e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the

following:

- a. **[Arrow Hart, Wiring Devices; Eaton, Electrical Sector]**
 - b. **[Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated]**
 - c. **[Leviton Manufacturing Co., Inc.]**
 - d. **[Pass & Seymour; Legrand North America, LLC]**
 - e. **<Insert manufacturer's name>**
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:
- a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
 - b. Surge Protective Devices: UL 1449, Type 3.
4. Standard Features:
- a. Device Color: **[Ivory][White][Gray][Brown][Black][Red][Yellow][Orange][in accordance with NEMA WD 1][Blue][Green][Office White][Almond][Light Almond][As indicated on architectural Drawings].**
 - b. Configuration:
 - 1) General-duty, **[NEMA 5-15R][NEMA 5-20R]**; two USB-A ports.
 - 2) General-duty, **[NEMA 5-15R][NEMA 5-20R]**; two USB-C ports.
 - 3) General-duty, **[NEMA 5-15R][NEMA 5-20R]**; one USB-A port; one USB-C port.
 - 4) General-duty, smooth face, two USB-A ports.
 - 5) General-duty, smooth face, four USB-A ports.
5. Other Available Features Required by the Project:
- a. Has factory-terminated connectors on wiring device pigtails for quick installation.
6. Accessories:
