Completed Area Name: PROJECT WIDE
Completed Document Type: CEQA - Initial Study/ Mitigated Neg. Dec. (MND)
Completed Date: 06/04/2007
Comments: DTSC approved the RAWs and CEQA as final after 30-day comment period.

Completed Area Name: PROJECT WIDE
Completed Document Type: Standard Voluntary Agreement
Completed Date: 10/03/2000
Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) (Docket No. HSA-A 00/01-026) with Southern California Gas Company and Southern California Edison (Proponent). The purpose of this Agreement is for the Proponent to conduct a Site Investigation to further characterize the existing soil contamination and, if necessary, to prepare a removal action workplan and implement a removal action under the oversight of DTSC. If appropriate, the Proponent has agreed to implement a deed restriction for the Site

Completed Area Name: PROJECT WIDE
Completed Document Type: Site Characterization Workplan
Completed Date: 04/11/2007

Completed Area Name: PROJECT WIDE
Completed Document Type: Other Report
Completed Date: 08/21/2007
Comments: According to Tetra Tech, access was no longer possible to indoor locations where the sub-slab samples were previously collected. The drill rig access immediately outside and adjacent to these locations were also not possible due to the clearance underneath the building overhang. There are data gaps due to the lack of revised soil gas data from the recommended locations and not implementing changed in sampling techniques provided in DTSC's previous comments. However, DTSC does not anticipate any substantial increase in the risk number beyond the threshold value of risk = 1E-05 from vapor intrusion for this site. Therefore, DTSC recommended that Tetra Tech develop the health risk assessment pertaining to indoor-air vapor intrusion based on the data previously provided to DTSC in the RAW of October 2006 for Parcels B, and A and C. DTSC also recommended that the VOC concentrations from the samples collected from the previous and the most recent sampling event should be used to evaluate the indoor-air risk assessment to the current commercial workers. Moreover, the indoor-air risk assessment should be performed using the highest VOC concentrations that provide maximum risk and hazard values from all soil gas data performed so far.
