Comments: A & C Recycling - Preliminary Endangerment Assessment Report. Excavated, sampled, and removed metals and PAH affected soil from a former scrap metal recycling facility located on the Kaiser Steel Site. The Site was closed when background levels for soils were achieved in accordance with PEA Guidance.

Completed Area Name: OU-2
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 09/26/1995
Comments: The Final Remedial Action consisted of the design and construction of a 12.84 acre cap over contaminated By- Products Plant soils. The cap is possibly the largest engineered remedial cap ever constructed in California. Excavation, treatment and removal of hazardous substances in the cooling tower sludge bed and the blast furnace gas washer water sludge beds was also performed. Approximately 9,212 tons of hazardous metals sludge waste was treated by chemical fixation; 21,200 tons of waste was removed and disposed of off-site primarily at East Carbon Development Corporation landfill in Utah; and 370 tons of coal tar was shipped off-site for recycling. Vapor extraction of volatile organic contaminants is continuing within the capped area at the former By-Products Plant. A system of extraction wells, including a thermal oxidation unit for destruction of extracted vapors is in place and operating. DTSC also entered into an O&M Agreement for the "capped property", the "restricted property", and limited areas in the remaining operable unit #2 property. Deed restrictions were also recorded for the "capped property" and "restricted property".

The final design document which included a compilation of all approved remedial unit design documents was submitted and approved shortly before site certification, although the majority of remedial work had already been completed.
