- A. Surface Preparation: Remove tool and die marks and stretch lines from new replacement stainless steel, or blend into finish.
- B. Restored Finish: Grind and polish surfaces to produce uniform, directionally textured, polished finish to match **[existing finish][Architect's sample]**, free of cross scratches.
1. Run grain to match existing metal.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 3. Directional Satin Finish: ASTM A480/A480M, No. 4.
 4. Dull Satin Finish: ASTM A480/A480M, No. 6.
 5. Reflective, Directional Polish: ASTM A480/A480M, No. 7.
 6. Mirrorlike Reflective, Nondirectional Polish: ASTM A480/A480M, No. 8.

PART 3 - EXECUTION

3.1 DECORATIVE METAL REFINISHING SPECIALIST

- A. Decorative Metal Refinishing Specialist Firms: Subject to compliance with requirements, **[provide decorative metal refinishing by one of the following][firms that may provide decorative metal refinishing include, but are not limited to, the following]**:
1. **<Insert, in separate subparagraphs, names of decorative metal refinishing specialist firms>**.

3.2 PROTECTION

- A. Comply with each manufacturer's written instructions for protecting building and other surfaces against damage from exposure to its products. Prevent chemical solutions from coming into contact with people, motor vehicles, landscaping, buildings, and other surfaces that could be harmed by such contact.
1. Cover adjacent surfaces with materials that are proved to resist chemical solutions being used unless products being used will not damage adjacent surfaces. Use protective materials that are waterproof and UV resistant. Apply masking agents to comply with manufacturer's written instructions. Do not apply liquid masking agent to painted or porous surfaces. When no longer needed, promptly remove masking to prevent adhesive staining.
 2. Do not apply chemical solutions during winds of enough force to spread them to unprotected surfaces.
 3. Neutralize alkaline and acid wastes before disposal.

4. Dispose of runoff from operations by legal means and in a manner that prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.

3.3 DECORATIVE METAL REFINISHING, GENERAL

- A. Refinishing Appearance Standard: Refinished surfaces are to have a uniform appearance as viewed from **[20 feet (6 m)][50 feet (15 m)]<Insert distance>** away by Architect.
- B. Execution of the Work: In refinishing items, disturb remaining existing work as minimally as possible and as follows:
 1. Remove dirt and corrosion.
 2. Sequence work to minimize time before protective coatings are reapplied.
 3. Refinish items in place where possible and according to required appearance.
- C. Refinish Decorative Metal Item: Remove existing metal finishes on item unless otherwise indicated[, **including integral polished and patinated finishes,**] and reapply them.
- D. Repair Finish of Decorative Metal Item: Restore areas of deteriorated or missing finish on item and blend restored finish with existing, adjacent finish[, **including integral polished and patinated finishes**].

3.4 PREPARATORY CLEANING

- A. General: Use those methods indicated for each type of decorative metal and its location.
 1. Brushes: If using wire brushes, use brushes of same base metal composition as metal being treated. Use brushes that are resistant to chemicals being used.
 2. Spray Equipment: Use spray equipment that provides controlled application at volume and pressure indicated, measured at nozzle. Adjust pressure and volume to ensure that spray methods do not damage surfaces.
 - a. Equip units with pressure gages.
 - b. For chemical-cleaner spray application, use low-pressure tank or chemical pump suitable for chemical cleaner indicated, equipped with nozzle having a cone-shaped spray.
 - c. For water-spray application, use fan-shaped spray that disperses water at an angle of 25 to 50 degrees.
 - d. For high-pressure water-spray application, use fan-shaped spray that disperses water at an angle of at least 40 degrees.
 - e. For heated water-spray application, use equipment capable of maintaining temperature between **140 and 160 deg F (60 and 71 deg C)** at flow rates indicated.
 3. Uniformity: Perform each cleaning method in a manner that results in uniform coverage of all surfaces, including corners, contours, and interstices, and that produces an even effect without streaks or damaging surfaces.
 4. Protection: After cleaning is complete, remove protection no longer required. Remove tape and adhesive marks.
- B. Water Cleaning: Clean with **[cold][hot]** water applied by **[low][medium][high]**-pressure spray. Supplement with **[natural-fiber][or][plastic]**-bristle brush. Use small brushes to remove soil from joints and crevices.

C. Detergent Cleaning:

1. Wet surface with [cold][hot] water applied by low-pressure spray.
2. Scrub surface with detergent solution and [natural-fiber][or][plastic]-bristle brush until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that surface remains wet.
3. Rinse with [cold][hot] water applied by [low][medium][high]-pressure spray to remove detergent solution and soil.

D. Nonacidic Liquid Chemical Cleaning: Apply chemical cleaner to surfaces according to chemical-cleaner manufacturer's written instructions.

1. Wet surface with [cold][hot] water applied by low-pressure spray.
2. Apply cleaner to surface[in two applications] by brush[or low-pressure spray].
3. Let cleaner remain on surface for period [recommended in writing by chemical-cleaner manufacturer][established by mockup][of two to three minutes]<Insert requirement>.
4. Nonferrous Metals: Rinse with [cold][hot] water applied by [low][medium][high]-pressure spray to remove chemicals and soil.
5. Ferrous Metals: Do not rinse ferrous metals with water; neutralize chemical cleaner on ferrous metals as recommended in writing by manufacturer. Dry immediately with clean soft cloths. Follow direction of grain in metal.

E. Cleaning with Abrasive Pads: Clean surfaces to remove dirt[, leaving uniform patina intact,] by light rubbing with abrasive pads and water. [Rinse with cold water to remove residue. Apply rinse by low-pressure spray][Do not rinse ferrous metals with water; wipe with damp cloths to remove residue]<Insert requirement>.

F. Cleaning by Abrasive Blasting: Clean surfaces to remove dirt[, leaving uniform patina intact,] by dry blasting with specified blasting abrasive at pressure and distance from surface indicated below. [Rinse with cold water, low-pressure spray to remove residue.][Do not rinse ferrous metals with water; wipe with damp cloths to remove residue]<Insert requirement>.

1. Pressure and Distance from Surface: Maximum pressure of [60 psi (415 kPa)][100 psi (690 kPa)][200 psi (1375 kPa)]<Insert value> with specified blasting abrasive propelled from a distance of [6 to 12 inches (152 to 305 mm)][12 to 18 inches (305 to 457 mm)]<Insert dimension> from the surface.
2. Pressure and distance from surface as established by mockup.

3.5 PROTECTIVE COATING

A. Protective Hot-Wax Coating:[Pretreat cleaned copper-alloy surfaces with copper-alloy corrosion inhibitor, wipe off excess with ethanol-saturated rag, and allow surface to dry. If fresh corrosion appears, repeat process.] Apply wax coating to produce uniform appearance without runs or other surface imperfections.

1. Clean and dry surface being waxed.
2. Preheat surface to about 212 deg F (100 deg C); hot enough to melt the wax and remove water vapor and other gases within metal surface, but not hot enough to boil the wax or ignite solvents if any.
3. Apply uniform wax coating to surface, ensuring that wax coverage is complete, including recesses.[Apply second wax coating following the same process.]
4. Inspect surface and repair holidays by reheating and applying more wax.
5. Buff waxed surface to a slight shine with a lint-free cloth after wax has cooled to a hazy appearance.

- B. Protective Organic Coating: [**Pretreat cleaned copper-alloy surfaces with copper-alloy corrosion inhibitor, wipe off excess with ethanol-saturated rag, and allow surface to dry. If fresh corrosion appears, repeat process.**] Apply organic coating to produce uniform appearance without runs or other surface imperfections.

1. Clean and dry surface being coated.
2. Apply two uniform coats by air-spray method according to manufacturer's written instructions, with interim drying between coats.
3. Apply coating to a total dry film thickness of **1 mil (0.025 mm)**.
4. Protect coated surface from contamination until fully cured.

3.6 REMOVAL, REPAIR, AND REINSTALLATION

- A. General: Perform removal, repair, and reinstallation work as required in Section 024119 "Selective Demolition" and Section 050170.61 "Decorative Metal Repair."

3.7 DECORATIVE METAL REFINISHING SCHEDULE

- A. Treatment of Decorative Handrail [DMR-#]<Insert drawing designation>: Tarnished bronze railing with bronze handrail.

1. General: Perform work [in the shop][or][in the field].
2. Cleaning: [Water cleaning][Detergent cleaning][Chemical cleaning][Abrasive blasting]<Insert description>.
3. Bronze Finish: [Satin finish with statuary conversion coating on railing; satin hand-rubbed finish, lacquered, on handrail]<Insert requirement>.

- B. Treatment for Bronze Statue Finish [DMS-#]<Insert drawing designation>: Clean, repair patina finish, and coat statue.

1. General: Perform work [in the shop][or][in the field].
2. Cleaning: [Water cleaning][Detergent cleaning][Chemical cleaning][Abrasive blasting]<Insert description>.
3. Finish Repair: Selectively patinate the [nose][foot][and][previous metal repairs]<Insert description> to match the rest of the statue.
4. Protective Coating: Protective [hot-wax][organic] coating.

END OF SECTION 05 01 70 63

Task	Specification	Specification Description
05 05 19 00	05 50 00 00	Metal Fabrications

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 12 00 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural-steel materials.
2. Shrinkage-resistant grout.
3. Prefabricated building columns.
4. Shear stud connectors.

B. Related Requirements:

1. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
2. Section 053100 "Steel Decking" for field installation of shear stud connectors through deck.
3. Section 055000 "Metal Fabrications" for **[steel lintels and shelf angles not attached to structural-steel frame][miscellaneous steel fabrications]** and other steel items not defined as structural steel.
4. **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"]****[and][Section 099600 "High-Performance Coatings"]** for painting requirements.
5. Section 133419 "Metal Building Systems" for structural steel.

1.2 DEFINITIONS

- A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in ANSI/AISC 303.
- B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.
- C. Heavy Sections: Rolled and built-up sections as follows:
1. Shapes included in ASTM A6/A6M with flanges thicker than **1-1/2 inches (38 mm)**.
 2. Welded built-up members with plates thicker than **2 inches (50 mm)**.
 3. Column base plates thicker than **2 inches (50 mm)**.
- D. Protected Zone: Structural members or portions of structural members indicated as "protected zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.
- E. Demand-Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the seismic-load-resisting system and which are indicated as "demand critical" or "seismic critical" on Drawings.

1.3 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are

compatible with one another.

- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data:

1. Structural-steel materials.
2. High-strength, bolt-nut-washer assemblies.
3. Shear stud connectors.
4. Anchor rods.
5. Threaded rods.
6. Forged-steel hardware.
7. Slide bearings.
8. Prefabricated building columns.
9. Shop primer.
10. Galvanized-steel primer.
11. Etching cleaner.
12. Galvanized repair paint.
13. Shrinkage-resistant grout.

- B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental Product Declaration: For each product.
3. Health Product Declaration: For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Health Product Declaration (HPD): For each product.
11. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

- C. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
5. Identify members and connections of the seismic-load-resisting system.

6. Indicate locations and dimensions of protected zones.
 7. Identify demand-critical welds.
 8. Identify members not to be shop primed.
- D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide in accordance with AWS D1.1/D1.1M for each welded joint **[whether prequalified or qualified by testing][qualified by testing]**, including the following:
1. Power source (constant current or constant voltage).
 2. Electrode manufacturer and trade name, for demand-critical welds.
- E. Delegated Design Submittal: For structural-steel connections indicated on Drawings to comply with design loads, include analysis data **[signed and sealed by the qualified professional engineer responsible for their preparation]**.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer][fabricator][shop-painting applicators][professional engineer][testing agency]**.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- D. Mill test reports for structural-steel materials, including chemical and physical properties.
- E. Product Test Reports: For the following:
1. Bolts, nuts, and washers, including mechanical properties and chemical analysis.
 2. Direct-tension indicators.
 3. Tension-control, high-strength, bolt-nut-washer assemblies.
 4. Shear stud connectors.
 5. **<Insert product>**.
- F. Survey of existing conditions.
- G. Source quality-control reports.
- H. Field quality-control reports.

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU or is accredited by the IAS Fabricator Inspection Program for Structural Steel (Acceptance Criteria 172).
- B. Installer Qualifications: A qualified Installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, **[Category ACSE][Category CSE]**.
- C. Shop-Painting Applicator Qualifications: Qualified in accordance with AISC's Sophisticated Paint **[Endorsement P1][Endorsement P2][Endorsement P3]** or to SSPC-QP 3.

- D. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
1. Welders and welding operators performing work on bottom-flange, demand-critical welds are to pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G are to be considered separate processes for welding personnel qualification.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
- B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
 2. Clean and relubricate bolts and nuts that become dry or rusty before use.
 3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125/F3125M, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with applicable provisions of the following specifications and documents:
1. ANSI/AISC 303.
 2. ANSI/AISC 341.
 3. ANSI/AISC 360.
 4. RCSC's "Specification for Structural Joints Using High-Strength Bolts."
- B. Connection Design Information:
1. Option 1: Connection designs have been completed and connections indicated on the Drawings.
 2. Option 2: Fabricator's experienced steel detailer selects or completes connections in accordance with ANSI/AISC 303.
 - a. Select and complete connections using **[schematic details indicated][and][ANSI/AISC 360]<Insert source>**.
 - b. Use **[Load and Resistance Factor Design; data are given at factored-load level][Allowable Stress Design; data are given at service-load level]**.
 3. Option 3 and 3A: Design connections in accordance with ANSI/AISC 303 by fabricator's qualified professional engineer. Member reinforcement at connections is indicated on Drawings.
 - a. Use **[Load and Resistance Factor Design; data are given at factored-load level][Allowable Stress Design; data are given at service-load level]**.

4. Option 3 and 3B: Design connections and final configuration of member reinforcement at connections in accordance with ANSI/AISC 303 by fabricator's qualified professional engineer.

- a. Use **[Load and Resistance Factor Design; data are given at factored-load level][Allowable Stress Design; data are given at service-load level]**.

C. Moment Connections: **[Type PR, partially][Type FR, fully]** restrained.

D. Construction: **[Moment frame][Braced frame][Shear wall system][Combined system of moment frame and braced frame][Combined system of moment frame and shear walls][Combined system of braced frame and shear walls][Combined system of moment frame, braced frame, and shear walls]**.

2.2 STRUCTURAL-STEEL MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- B. W-Shapes: **[ASTM A992/A992M][ASTM A572/A572M, Grade 50 (Grade 345)][ASTM A529/A529M, Grade 50 (Grade 345)][ASTM A913/A913M, Grade 50 (Grade 345)]**.
- C. Channels, Angles, M-Shapes: **[ASTM A36/A36M][ASTM A572/A572M, Grade 50 (Grade 345)][ASTM A529/A529M, Grade 50 (Grade 345)][ASTM A913/A913M, Grade 50 (Grade 345)]**.
- D. Channels, Angles, S-Shapes: **[ASTM A36/A36M][ASTM A572/A572M, Grade 50 (Grade 345)][ASTM A529/A529M, Grade 50 (Grade 345)][ASTM A913/A913M, Grade 50 (Grade 345)]**.
- E. Plate and Bar: **[ASTM A36/A36M][ASTM A572/A572M, Grade 50 (Grade 345)][ASTM A529/A529M, Grade 50 (Grade 345)]**.
- F. Corrosion-Resisting (Weathering) Structural-Steel Shapes, Plates, and Bars: ASTM A588/A588M, **50 ksi (345 MPa)**.
- G. Cold-Formed Hollow Structural Sections: **[ASTM A500/A500M, Grade B][ASTM A500/A500M, Grade C][ASTM A1085/ASTMA1085M]** structural tubing.
- H. Corrosion-Resisting (Weathering), Cold-Formed Hollow Structural Sections: ASTM A847/A847M structural tubing.
- I. Steel Pipe: ASTM A53/A53M, Type E or Type S, Grade B.
 1. Weight Class: **[Standard][Extra strong][Double-extra strong]**.
 2. Finish: **[Black][Galvanized][Black except where indicated to be galvanized]**.
- J. Steel Castings: ASTM A216/A216M, Grade WCB, with supplementary requirement S11.
- K. Steel Forgings: ASTM A668/A668M.
- L. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS AND CONNECTORS

- A. High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125/F3125M, **Grade A325 (Grade A325M)**,

Type 1, heavy-hex steel structural bolts; **ASTM A563, Grade DH (ASTM A563M, Class 10S)**, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F959/F959M, **Type 325-1 (Type 8.8-1)**, compressible-washer type with plain finish.

- B. High-Strength A490 Bolts, Nuts, and Washers: ASTM F3125/F3125M, **Grade A490 (Grade A490M)**, Type 1, heavy-hex steel structural bolts[**or Grade F2280 tension-control, bolt-nut-washer assemblies with splined ends**]; **ASTM A563, Grade DH (ASTM A563M, Class 10S)**, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F959/F959M, **Type 490-1 (Type 10.9-1)**, compressible-washer type with plain finish.

- C. Zinc-Coated High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125/F3125M, **Grade A325 (Grade A325M)**, Type 1, heavy-hex steel structural bolts; **ASTM A563, Grade DH (ASTM A563M, Class 10S)**, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

1. Finish: **[Hot-dip zinc coating][Mechanically deposited zinc coating][Hot-dip or mechanically deposited zinc coating]**.
2. Direct-Tension Indicators: ASTM F959/F959M, **Type 325-1 (Type 8.8-1)**, compressible-washer type with **[mechanically deposited zinc coating][mechanically deposited zinc coating, baked epoxy-coated]** finish.

- D. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, **[heavy-hex][round]** head assemblies, consisting of steel structural bolts with splined ends; **ASTM A563, Grade DH (ASTM A563M, Class 10S)**, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

1. Finish: **[Plain][Mechanically deposited zinc coating]**.

- E. Shear Stud Connectors: ASTM A108, AISI C-1015 through C-1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

2.4 Prefabricated Structural Roof Frames

- A. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **<Insert manufacturer's name>**

2.5 RODS

- A. Unheaded Anchor Rods: **[ASTM F1554, Grade 36][ASTM F1554, Grade 55, weldable][ASTM A354][ASTM A449][ASTM A572/A572M, Grade 50 (Grade 345)][ASTM A36/A36M]**.

1. Configuration: **[Straight][Hooked]**.
2. Nuts: **ASTM A563 (ASTM A563M) [heavy-]hex carbon steel**.
3. Plate Washers: ASTM A36/A36M carbon steel.
4. Washers: **ASTM F436 (ASTM F436M)**, Type 1, hardened carbon steel.

5. Finish: **[Plain][Hot-dip zinc coating, ASTM A153/A153M, Class C][Mechanically deposited zinc coating, ASTM B695, Class 50]**.
- B. Headed Anchor Rods: **[ASTM F1554, Grade 36][ASTM F1554, Grade 55, weldable][ASTM A354][ASTM A449]**, straight.
1. Nuts: **ASTM A563 (ASTM A563M) [heavy-]**hex carbon steel.
 2. Plate Washers: ASTM A36/A36M carbon steel.
 3. Washers: **ASTM F436 (ASTM F436M)**, Type 1, hardened carbon steel.
 4. Finish: **[Plain][Hot-dip zinc coating, ASTM A153/A153M, Class C][Mechanically deposited zinc coating, ASTM B695, Class 50]**.
- C. Threaded Rods: **[ASTM A36/A36M][ASTM A193/A193M, Grade B7][ASTM A354, Grade BD][ASTM A449][ASTM A572/A572M, Grade 50 (Grade 345)]**.
1. Nuts: **ASTM A63 (ASTM A563M) [heavy-]**hex carbon steel.
 2. Washers: **[ASTM F436 (ASTM F436M), Type 1, hardened][ASTM A36/A36M]** carbon steel.
 3. Finish: **[Plain][Hot-dip zinc coating, ASTM A153/A153M, Class C][Mechanically deposited zinc coating, ASTM B695, Class 50]**.

2.6 FORGED-STEEL STRUCTURAL HARDWARE

- A. Clevises and Turnbuckles: Made from cold-finished carbon-steel bars, ASTM A108, AISI C-1035.
- B. Eye Bolts and Nuts: Made from cold-finished carbon-steel bars, ASTM A108, AISI C-1030.
- C. Sleeve Nuts: Made from cold-finished carbon-steel bars, ASTM A108, AISI C-1018.

2.7 SLIDE BEARINGS

- A. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Amscot Structural Products Corp.]**
 - b. **[Fluorocarbon Company Limited]**
 - c. **[GRM Custom Products]**
 - d. **[R.J. Watson Bridge & Structural Engineered Systems]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Amscot Structural Products Corp.]**
 - b. **[Fluorocarbon Company Limited]**
 - c. **[GRM Custom Products]**
 - d. **[R.J. Watson Bridge & Structural Engineered Systems]**
 - e. **<Insert manufacturer's name>**

3. Mating Surfaces: **[PTFE and PTFE][PTFE and mirror-finished stainless steel]**.
4. Coefficient of Friction: Not more than **[0.03][0.04][0.05][0.06][0.10][0.12]<Insert value>**.
5. Design Load: Not less than **[2,000 psi (13.7 MPa)][5,000 psi (34 MPa)][6,000 psi (41 MPa)]<Insert value>**.
6. Total Movement Capability: **[2 inches (50 mm)]<Insert dimension>**.

2.8 PRIMER

A. Steel Primer:

1. Comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
2. SSPC-Paint 23, latex primer.
3. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

B. Galvanized-Steel Primer: **[MPI#26][MPI#80,][MPI#134]**.

1. Etching Cleaner: MPI#25, for galvanized steel.
2. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20][ASTM A780/A780M]**.

2.9 SHRINKAGE-RESISTANT GROUT

- A. Metallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.
- B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.10 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate in accordance with ANSI/AISC 303 and to ANSI/AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel in accordance with ASTM A6/A6M and maintain markings until structural-steel framing has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, **[mechanically thermal cut,]**or punch standard bolt holes perpendicular to metal surfaces.

- D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.
- E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted in accordance with [SSPC-SP 1.][SSPC-SP 2.][SSPC-SP 3.]
- F. Shear Stud Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld using automatic end welding of headed-stud shear connectors in accordance with AWS D1.1/D1.1M and manufacturer's written instructions.
- G. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural-steel frame. Straighten as required to provide uniform, square, and true members in completed wall framing. Build up welded framing, weld exposed joints continuously, and grind smooth.
- H. Welded-Steel Door Frames: Build up welded-steel doorframes attached to structural-steel frame. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than **10 inches (250 mm)** o.c. unless otherwise indicated on Drawings.
- I. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.
 - 1. Cut, drill, or punch holes perpendicular to steel surfaces.[**Do not thermally cut bolt holes or enlarge holes by burning.**]
 - 2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
 - 3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.11 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: [**Snug tightened**][**Pretensioned**][**Slip critical**].
- B. Weld Connections: Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 - 1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

2.12 PREFABRICATED BUILDING COLUMNS

- A. Prefabricated Building Columns: Prefabricated building columns, consisting of load-bearing structural-steel members protected by concrete fireproofing encased in an outer non-load-bearing steel shell.
 - 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. [**Black Rock Fireproof Column, a division of United Steel**]
 - b. [**Dean Lally LLC / FireTrol Columns**]

- c. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Black Rock Fireproof Column, a division of United Steel]**
 - b. **[Dean Lally LLC / FireTrol Columns]**
 - c. **<Insert manufacturer's name>**
- B. Fire-Resistance Ratings: Provide prefabricated building column listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for ratings indicated, based on testing in accordance with ASTM E119.
 - 1. Fire-Resistance Design: UL Design No. **<Insert designation>**.
 - 2. Fire-Resistance Rating: **[Four hours][Three hours][Two hours][As indicated on Drawings]**.

2.13 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel in accordance with ASTM A123/A123M.
 - 1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.
 - 2. Galvanize **[lintels][shelf angles][and][welded door frames]** attached to structural-steel frame and located in exterior walls.

2.14 SHOP PRIMING

- A. Shop prime steel surfaces, except the following:
 - 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of **2 inches (50 mm)**.
 - 2. Surfaces to be field welded.
 - 3. Surfaces of high-strength bolted, slip-critical connections.
 - 4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
 - 5. Galvanized surfaces **[unless indicated to be painted]**.
 - 6. Corrosion-resisting (weathering) steel surfaces.
 - 7. Surfaces enclosed in interior construction.
- B. Surface Preparation of Steel: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces in accordance with the following specifications and standards:
 - 1. SSPC-SP 2.
 - 2. SSPC-SP 3.
 - 3. SSPC-SP 7 (WAB)/NACE WAB-4.
 - 4. SSPC-SP 14 (WAB)/NACE WAB-8.
 - 5. SSPC-SP 11.
 - 6. SSPC-SP 6 (WAB)/NACE WAB-3.
 - 7. SSPC-SP 10 (WAB)/NACE WAB-2.
 - 8. SSPC-SP 5 (WAB)/NACE WAB-1.
 - 9. SSPC-SP 8.

- C. Surface Preparation of Galvanized Steel: Prepare galvanized-steel surfaces for shop priming by thoroughly cleaning steel of grease, dirt, oil, flux, and other foreign matter, and treating with etching cleaner **[or in accordance with SSPC-SP 16]**.
- D. Priming: Immediately after surface preparation, apply primer in accordance with manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of **1.5 mils (0.038 mm)**. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
 - 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

2.15 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform shop tests and inspections.
 - 1. Allow testing agency access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
 - 2. Bolted Connections: Inspect **[and test]** shop-bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
 - 3. Welded Connections: Visually inspect shop-welded connections in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
 - a. Liquid Penetrant Inspection: ASTM E165/E165M.
 - b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
 - c. Ultrasonic Inspection: ASTM E164.
 - d. Radiographic Inspection: ASTM E94/E94M.
 - 4. In addition to visual inspection, test and inspect shop-welded shear stud connectors in accordance with requirements in AWS D1.1/D1.1M for stud welding and as follows:
 - a. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear stud connector.
 - b. Conduct tests in accordance with requirements in AWS D1.1/D1.1M on additional shear stud connectors if weld fracture occurs on shear stud connectors already tested.
 - 5. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
 - 1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated on Drawings.
 - 1. Do not remove temporary shoring supporting composite deck construction and structural-steel framing until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Set structural steel accurately in locations and to elevations indicated and in accordance with ANSI/AISC 303 and ANSI/AISC 360.
- B. Baseplates, Bearing Plates, and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
 - 1. Set plates for structural members on wedges, shims, or setting nuts as required.
 - 2. Weld plate washers to top of baseplate.
 - 3. **[Snug-tighten][Pretension]** anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - 4. Promptly pack shrinkage-resistant grout solidly between bearing surfaces and plates, so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. **[Comply with manufacturer's written installation instructions for grouting.]**
- C. Maintain erection tolerances of structural steel within ANSI/AISC 303.
- D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure. Slope roof framing members to slopes indicated on Drawings.
 - 2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.
- E. Splice members only where indicated.
- F. Do not use thermal cutting during erection **[unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M].**
- G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt and joint type specified.

1. Joint Type: **[Snug tightened][Pretensioned][Slip critical]**.
- B. Weld Connections: Comply with AWS D1.1/D1.1M **[and AWS D1.8/D1.8M]** for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 1. Comply with ANSI/AISC 303 and ANSI/AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
 2. Remove backing bars or runoff tabs **[where indicated]**, back gouge, and grind steel smooth.
 3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.
- C. Shear Stud Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld using end welding of headed-stud shear connectors in accordance with AWS D1.1/D1.1M and manufacturer's written instructions.

3.5 INSTALLATION OF PREFABRICATED BUILDING COLUMNS

- A. Install prefabricated building columns to comply with ANSI/AISC 360, manufacturer's written recommendations, and requirements of testing and inspecting agency that apply to the fire-resistance rating indicated.

3.6 REPAIR

- A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing, and repair galvanizing to comply with ASTM A780/A780M.
- B. Touchup Painting:
 1. Immediately after erection, clean exposed areas where primer is damaged or missing, and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
 2. Cleaning and touchup painting are specified in **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings.]**
- C. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

3.7 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a special inspector to perform the following special inspections:
 1. Verify structural-steel materials and inspect steel frame joint details.
 2. Verify weld materials and inspect welds.
 3. Verify connection materials and inspect high-strength bolted connections.
- B. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.

1. Bolted Connections: Inspect[**and test**] bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
2. Welded Connections: Visually inspect field welds in accordance with AWS D1.1/D1.1M.
 - a. In addition to visual inspection, test and inspect field welds in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
 - 1) Liquid Penetrant Inspection: ASTM E165/E165M.
 - 2) Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
 - 3) Ultrasonic Inspection: ASTM E164.
 - 4) Radiographic Inspection: ASTM E94/E94M.
3. Shear Stud Connectors: In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:
 - a. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 - b. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

END OF SECTION 05 12 00 00

SECTION 05 12 00 00A - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Architecturally exposed structural steel (AESS).
2. Section 051200 "Structural Steel Framing" requirements that also apply to AESS.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for **[steel lintels and shelf angles not attached to structural-steel frame][miscellaneous steel fabrications][and][other metal items]** not defined as structural steel.
2. **[Section 099113 "Exterior Painting"]****[Section 099123 "Interior Painting"]****[and]****[Section 099600 "High-Performance Coatings"]** for surface preparation and priming requirements.

1.2 DEFINITIONS

- A. AESS: Architecturally exposed structural steel.
- B. Category AESS 1: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 1 and may be designated AESS 1 or Category AESS 1 in the Contract Documents.
- C. Category AESS 2: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 2 and is designated as AESS 2 or Category AESS 2 in the Contract Documents.
- D. Category AESS 3: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 3 and is designated as AESS 3 or Category AESS 3 in the Contract Documents.
- E. Category AESS 4: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 4 and is designated as AESS 4 or Category AESS 4 in the Contract Documents.
- F. Category AESS C: Structural steel with custom characteristics that is categorized by ANSI/AISC 303, Section 10, as AESS C and is designated as AESS C or Category AESS C in the Contract Documents.
- G. SEAC/RMSCA Guide Specification: SEAC/RMSCA's "Sample Specification, Section 05 02 13: Architecturally Exposed Structural Steel."

1.3 COORDINATION

- A. Coordinate surface preparation requirements for shop-primed items.
- B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data:

1. Tension-control, high-strength, bolt-nut-washer assemblies.
2. Corrosion-resisting (weathering steel), tension-control, high-strength, bolt-nut-washer assemblies.
3. Filler.
4. Primer.
5. Galvanized-steel primer.
6. Etching cleaner.
7. Galvanized repair paint.

- B. Sustainable Design Submittals:

1. Environmental Product Declaration: For each product.
2. Health Product Declaration: For each product.
3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
4. Environmental Product Declaration: For each product.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.
7. Third-Party Certifications: For each product.
8. Third-Party Certified Life Cycle Assessment: For each product.
9. Health Product Declaration (HPD): For each product.
10. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

- C. Shop Drawings: Show fabrication of AESS components. **[Shop Drawings for structural steel may be used for AESS.]**

1. Identify AESS category for each steel member and connection, including transitions between AESS categories and between AESS and non-AESS.
2. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
3. Include embedment Drawings.
4. Indicate orientation of mill marks and HSS seams.
5. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. **[Indicate grinding, finish, and profile of welds.]**
6. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation and location of bolt heads.
7. Indicate exposed surfaces and edges and surface preparation being used.
8. Indicate special tolerances and erection requirements.
9. Indicate weep holes for HSS **[and vent holes for galvanized HSS]**.
10. Indicate surface preparation, primer, and coating requirements, including systems specified in other Sections.

- D. Samples: Submit Samples to set quality standards for AESS.

1. Two steel plates, **3/8 by 8 by 4 inches (9.5 by 200 by 100 mm)**, with long edges joined by a groove weld **[and with weld ground smooth]**.
2. Steel plate, **3/8 by 8 by 8 inches (9.5 by 200 by 200 mm)**, with one end of a short length of

rectangular steel tube, **4 by 6 by 3/8 inches (100 by 150 by 9.5 mm)**, welded to plate with a continuous fillet weld[**and with weld ground smooth and blended**].

3. Round steel tube or pipe, minimum **8 inches (200 mm)** in diameter, with end of another round steel tube or pipe, approximately **4 inches (100 mm)** in diameter, welded to its side at a 45-degree angle with a continuous fillet weld[**and with weld ground smooth and blended**].

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer][fabricator][shop-painting applicator].
- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172) and is experienced in fabricating AESS similar to that indicated on this Project.
- B. Installer Qualifications: A qualified Installer who participates in the AISC Quality Certification Program, is designated an AISC-Certified Erector, [**Category ACSE**][**Category CSE**], and is experienced in erecting AESS similar to that indicated on this Project.
- C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint [**Endorsement P1**][**Endorsement P2**][**Endorsement P3**] or SSPC-QP 3.
- D. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.
 1. Build mockup of typical portion of AESS as shown on Drawings.
 2. Coordinate painting requirements with [**Section 099113 "Exterior Painting."**][**Section 099123 "Interior Painting."**]
 3. Coordinate high-performance coatings requirements with Section 099600 "High-Performance Coatings."
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Use special care in handling AESS to prevent twisting, warping, nicking, and other damage during fabrication, delivery, and erection. Store materials to permit easy access for inspection and identification. Keep AESS members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect AESS members and packaged materials from corrosion and deterioration.
 1. Do not store AESS materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.9 FIELD CONDITIONS

- A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions

by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with requirements of ANSI/AISC 303, Sections 1 through 9 and as modified in Section 10, "Architecturally Exposed Structural Steel."

2.2 BOLTS, CONNECTORS, AND ANCHORS

- A. Tension-Control, High-Strength, Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, round-head assemblies consisting of steel structural bolts with splined ends; **ASTM A563, Grade DH, (ASTMA563M, Class 10S)** heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
 - 1. Finish: **[Plain][Mechanically deposited zinc coating]**.
- B. Corrosion-Resisting (Weathering) Steel, Tension-Control, High-Strength, Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 3, round-head assemblies consisting of steel structural bolts with splined ends; **ASTM A563, Grade DH3, (ASTM A563M, Class 10S3)** heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 3, hardened carbon-steel washers.

2.3 FILLER

- A. Polyester filler intended for use in repairing dents in automobile bodies.

2.4 PRIMER

- A. Steel Primer:
 - 1. Comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
 - 2. SSPC-Paint 23, latex primer.
 - 3. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- B. Galvanized-Steel Primer: **[MPI#26][MPI#80][MPI#134]**.
 - 1. Etching Cleaner: MPI#25, for galvanized steel.
 - 2. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20][ASTM A780/A780M]**.

2.5 FABRICATION

- A. Shop fabricate and assemble AECS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.

1. Use special care handling and fabricating AESS before and after shop painting to minimize damage to shop finish.

B. Category AESS 1:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with **3/8-inch (9.5-mm)** closure plates.
6. Limit butt and plug weld projections to **1/16 inch (1.6 mm)**.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.

C. Category AESS 2:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with **3/8-inch (9.5-mm)** closure plates.
6. Limit butt and plug weld projections to **1/16 inch (1.6 mm)**.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.

D. Category AESS 3:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.

2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with **3/8-inch (9.5-mm)** closure plates.
6. Limit butt and plug weld projections to **1/16 inch (1.6 mm)**.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.
17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
19. Orient HSS seams as indicated or away from view.
20. Align and match abutting member cross sections.
21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of **1/8 inch (3.2 mm)**. At closed joints, maintain uniform contact within **1/16 inch (1.6 mm)**.
22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.

E. Category AESS 4:

1. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
4. Make intermittent welds appear continuous, using filler or additional welding.
5. Seal weld open ends of hollow structural sections with **3/8-inch (9.5-mm)** closure plates.
6. Limit butt and plug weld projections to **1/16 inch (1.6 mm)**.
7. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
8. Remove weld spatter, slivers, and similar surface discontinuities.
9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
10. Grind tack welds smooth unless incorporated into final welds.
11. Remove backing and runoff tabs, and grind welds smooth.
12. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
13. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.

14. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
15. Conceal fabrication and erection markings from view in the completed structure.
16. Make welds uniform and smooth.
17. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
18. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
19. Orient HSS seams as indicated or away from view.
20. Align and match abutting member cross sections.
21. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of **1/8 inch (3.2 mm)**. At closed joints, maintain uniform contact within **1/16 inch (1.6 mm)**.
22. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.
23. Treat HSS seams to appear seamless.
24. Contour and blend welds and weld transitions between members, removing splatter exposed to view.
25. Fill surface imperfections with filler and sand smooth to achieve surface quality approved by Architect.
26. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.

F. Erection marks, painted marks, and other marks are permitted on **[galvanized-][corrosion-resisting (weathering)]** steel surfaces of completed structure.

G. Cleaning Corrosion-Resisting (Weathering) AESS: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6 (WAB)/NACE WAB-3.

2.6 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 1. Joint Type: **[Snug tightened][Pretensioned][Slip critical]**.
- B. Weld Connections: Comply with AWS D1.1/D1.1M **[and AWS D1.8/D1.8M]** for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

2.7 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M.
 1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
 3. Galvanize AESS **[lintels]<Insert description>** attached to structural-steel frame and located in exterior walls.

2.8 SHOP PRIMING

- A. Shop prime steel surfaces, except the following:
 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a

- depth of **2 inches (50 mm)**.
- 2. Surfaces to be field welded.
- 3. Surfaces to be high-strength bolted with slip-critical connections.
- 4. Corrosion-resisting (weathering) steel surfaces.
- 5. Galvanized surfaces [**unless indicated to be painted**].

B. Surface Preparation: Clean nongalvanized surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

- 1. SSPC-SP 2.
- 2. SSPC-SP 3.
- 3. SSPC-SP 7 (WAB)/NACE WAB-4.
- 4. SSPC-SP 14 (WAB)/NACE WAB-8.
- 5. SSPC-SP 11.
- 6. SSPC-SP 6 (WAB)/NACE WAB-3.
- 7. SSPC-SP 10 (WAB)/NACE WAB-2.
- 8. SSPC-SP 5 (WAB)/NACE WAB-1.
- 9. SSPC-SP 8.

C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner [**or according to SSPC-SP 16**].

D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of **1.5 mils (0.038 mm)**. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

- 1. Stripe paint corners, crevices, bolts, welds, and eased edges.
- 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
 - 1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments, showing dimensions, locations, angles, and elevations.
- B. Examine AECS for twists, kinks, warping, gouges, and other imperfections before erecting.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep AECS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in

place unless otherwise indicated.

3.3 ERECTION

- A. Take special care during erection to avoid marking or distorting the AESS and to minimize damage to shop painting. Set AESS accurately in locations and to elevations indicated and according to ANSI/AISC 303 and ANSI/AISC 360.
1. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Take care to avoid any blemishes, holes, or unsightly surfaces resulting from the use or removal of temporary elements.
 2. Grind tack welds smooth.
 3. Remove backing and runoff tabs, and grind welds smooth.
 4. Orient bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 5. Remove erection bolts in **[Category AESS 4]<Insert category>** AESS, fill holes with weld metal or filler, and grind or sand smooth to achieve surface quality approved by Architect.
 6. Fill weld access holes in **[Category AESS 4]<Insert category>** AESS with weld metal or filler and grind, or sand smooth to achieve surface quality as approved by Architect.
 7. Conceal fabrication and erection markings from view in the completed structure.
- B. In addition to ANSI/AISC 303, Section 10 requirements, comply with the following.
1. Erection of **[Category AESS 1][and Category AESS 2]**:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than **1/16 inch (1.6 mm)**.
 - e. Continuous welds are to be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
 2. Erection of Category AESS 3:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - c. Remove weld spatter, slivers, and similar surface discontinuities.
 - d. Grind off butt and plug weld projections larger than **1/16 inch (1.6 mm)**.
 - e. Continuous welds are to be of uniform size and profile.
 - f. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - g. Splice members only where indicated on Drawings.
 - h. No torch cutting or field fabrication is permitted.
 - i. Weld profiles, quality, and finish are to be as approved by Architect.
 - j. Make joint welds, including tack welds, appear continuous by filling intermittent welds.
 3. Erection of Category AESS 4:
 - a. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 - b. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain

- c. true alignment of members without warp exceeding specified tolerances.
 - d. Remove weld spatter, slivers, and similar surface discontinuities.
 - e. Grind off butt and plug weld projections larger than **1/16 inch (1.6 mm)**.
 - f. Continuous welds are to be of uniform size and profile.
 - g. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.
 - h. Splice members only where indicated on Drawings.
 - i. No torch cutting or field fabrication is permitted.
 - j. Weld profiles, quality, and finish are to be as approved by Architect.
 - k. Make joint welds, including tack welds, appear continuous by filling intermittent welds.
 - l. Grind welds smooth.
 - m. Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.
 - n. Oversize welds where ground, contoured, or blended, and grind to provide a smooth transition, matching profile approved by Architect.

4. Erection of Category AESS C:

- a. **<Insert requirements>**.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: **[Snug tightened][Pretensioned][Slip critical]**.
- B. Weld Connections: Comply with AWS D1.1/D1.1M **[and AWS D1.8/D1.8M]** for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

3.5 REPAIR

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and touchup galvanizing to comply with ASTM A780/A780M.
- B. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting, to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
 - 2. Cleaning and touchup painting are specified in **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings.]**
- C. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to inspect AECS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
- B. Architect will observe AECS in place to determine acceptability relating to aesthetic effect.

SECTION 05 21 00 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel joists and joist girders.
2. Primers.
3. Steel joist accessories.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 042000 "Unit Masonry" for installing bearing plates in unit masonry.
3. Section 051200 "Structural Steel Framing" for field-welded shear connectors.

1.2 DEFINITIONS

- A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."
- B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.

C. Delegated Design Submittals: For steel joist framing, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. **<Insert additional requirements if needed>.**

D. Sustainable Design Submittals:

1. <Double click to insert sustainable design text for recycled content.>
2. <Double click to insert sustainable design text for EPDs and HPDs.>
3. <Double click here to insert sustainable design text for Health Product Declaration.>
4. <Double click here to insert sustainable design text for sourcing of raw materials.>

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- C. Mill Certificates: For each type of bolt.
- D. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.
- E. Field quality control reports.
- F. Qualification Statements: For [manufacturer] [Erector] [testing agency].
- G. Delegated Design Engineer Qualifications: For steel joist framing.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications[.]" and **"Standard Specification for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**
 - 1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.
- B. Erector Qualifications: An experienced Erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.
- C. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in [state] <Insert jurisdiction> where Project is located and who is experienced in providing engineering services of the type indicated.
- D. Welding Qualifications: Qualify field-welding procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle joists as recommended in SJI's "Specifications[.]" and **"Standard Specification for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**
- B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.7 SEQUENCING

- A. Deliver steel bearing plates to be built into [cast-in-place concrete] [and] [masonry] construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design steel joist framing.
- B. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated on Drawings.
 - 1. Use **[ASD; data are given at service-load level]** **[LRFD; data are given at factored-load level]**.
 - 2. Design special joists to withstand design loads with live-load deflections no greater than the following:
 - a. Floor Joists: Vertical deflection of **[1/360]** **[1/240]** of the span.
 - b. Roof Joists: Vertical deflection of **[1/360]** **[1/240]** of the span.
- C. **<Insert requirements>**.
- D. <Double click to insert sustainable design text for recycled content.>

2.2 STEEL JOISTS AND JOIST GIRDERS

- A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- B. K-Series Steel Joist: Manufactured steel joists of type indicated in accordance with "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.
 - 1. Joist Type: **[K-series steel joists]** **[and] [KCS-type K-series steel joists]**.
 - 2. K-Series Steel Joist Substitutes: Manufactured in accordance with "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.
 - 3. Provide holes in chord members for connecting and securing other construction to joists.
 - 4. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated on Drawings, complying with SJI's "Specifications."
 - 5. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends as indicated on Drawings, complying with SJI's "Specifications."
 - 6. Do not camber joists.
 - 7. Camber joists **[in accordance with SJI's "Specifications."]** **[as indicated on Drawings.]** **<Insert camber requirements>**.
 - 8. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).
- C. Long-Span Steel Joist: Manufactured in accordance with "Standard Specification for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements[**as follows:**]**[as indicated on Drawings.]**
 - 1. Joist Type: **[LH-series long-span steel joists]** **[and] [DLH-series long-span steel joists]**.
 - 2. End Arrangement: **[Underslung]** **[Square]**.
 - 3. Top-Chord Arrangement: **[Parallel]** **[Pitched 1/8 inch per 12 inches (1:96), one way]** **[Pitched 1/8 inch per 12 inches (1:96), two ways]** **<Insert pitch>**.
 - 4. Provide holes in chord members for connecting and securing other construction to joists.

5. Camber long-span steel joists [**in accordance with SJI's "Specifications."**] [**as indicated on Drawings.**] <Insert camber requirements>.
 6. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).
- D. Composite Steel Joist: Manufactured in accordance with "Standard Specifications for Composite Steel Joists, CJ-Series" in SJI's "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice," with steel-angle top- and bottom-chord members and parallel top chord, and with [**underslung**] [**square**] ends.
1. Camber composite steel joists [**as indicated on Drawings**] <Insert camber requirements>.
- E. Joist Girders: Manufactured in accordance with "Standard Specification for Joist Girders" in SJI's "Specifications," with steel-angle top- and bottom-chord members; with end and top-chord arrangements[**as follows:**][**as indicated on Drawings.**]
1. End Arrangement: [**Underslung**] [**Underslung with bottom-chord extensions**] [**Square**].
 2. Top-Chord Arrangement: [**Parallel**] [**Pitched 1/8 inch per 12 inches (1:96), one way**] [**Pitched 1/8 inch per 12 inches (1:96), two ways**] <Insert pitch>.
 3. Provide holes in chord members for connecting and securing other construction to joist girders.
 4. Camber joist girders [**in accordance with SJI's "Specifications."**] [**as indicated on Drawings.**] <Insert camber requirements>.
 5. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).

2.3 PRIMERS

- A. Primer:
1. SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.
 2. Provide shop primer that complies with [**Section 099113 "Exterior Painting"**] and [**Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]

2.4 STEEL JOIST ACCESSORIES

- A. Bridging:
1. Provide bridging anchors and number of rows of [**horizontal**] [**or**] [**diagonal**] bridging of material, size, and type required by SJI's "Specifications"[**and "Standard Specification for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice"**] for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.
 2. Detail and fabricate in accordance with SJI's "Specifications[.][" and "**Standard Specification for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**] Furnish additional erection bridging if required for stability.
 3. Fabricate as indicated on Drawings and in accordance with SJI's "Specifications[.][" and "**Standard Specification for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**] Furnish additional erection bridging if required for stability.

- B. Fabricate steel bearing plates from ASTM A36/A36M steel with integral anchorages of sizes and thicknesses indicated on Drawings. **[Shop prime paint] [Hot-dip zinc coat in accordance with ASTM A123/A123M].**
- C. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."
- D. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction.
 - 1. Extend ends to within 1/2 inch (13 mm) of finished wall surface unless otherwise indicated on Drawings.
 - 2. Finish: **[Plain, uncoated] [Hot-dip zinc coating, ASTM A153/A153M, Class C] [Mechanically deposited zinc coating, ASTM B695, Class 50].**
- E. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325 (Grade A325M), Type 1, heavy-hex steel structural bolts; ASTM A563/A563M, Grade DH (Grade 10S), heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
 - 1. Finish: **[Plain] [Hot-dip zinc coating, ASTM A153/A153M, Class C] [Mechanically deposited zinc coating, ASTM B695, Class 50].**
- F. Welding Electrodes: Comply with AWS standards.
- G. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20] [ASTM A780/A780M].**
- H. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.5 CLEANING AND SHOP PAINTING

- A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by **[hand-tool cleaning, SSPC-SP 2] [or] [power-tool cleaning, SSPC-SP 3].**
- B. Do not prime paint joists and accessories **[to receive sprayed fire-resistive materials].**
- C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil (0.025 mm) thick.
- D. Shop priming of joists and joist accessories is specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF STEEL JOISTS AND JOIST GIRDERS

- A. Do not install joists until supporting construction is in place and secured.
- B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction in accordance with SJI's "Specifications,]" and **"Standard Specification for Composite Steel Joists, CJ-Series"** in **"Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice,]"** joist manufacturer's written instructions, and requirements in this Section.
 - 1. Before installation, splice joists delivered to Project site in more than one piece.
 - 2. Space, adjust, and align joists accurately in location before permanently fastening.
 - 3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
 - 4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.
- C. Field weld joists to supporting steel **[bearing plates] [and] [framework]**. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
- D. Bolt joists to supporting steel framework using carbon-steel bolts.
- E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.
- F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 REPAIRS

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint in accordance with ASTM A780/A780M and manufacturer's written instructions.
- B. Touchup Painting:
 - 1. Immediately after installation, clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists[, **bearing plates,**] **[abutting structural steel,]** and accessories.
 - a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
 - b. Apply a compatible primer of same type as primer used on adjacent surfaces.
 - 2. Cleaning and touchup painting are specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting.]" [Section 099600 "High-Performance Coatings.]"**

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.

- B. Visually inspect field welds in accordance with AWS D1.1/D1.1M.
- C. Visually inspect bolted connections.
- D. Prepare test and inspection reports.

SECTION 05 31 00 00 - STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Roof deck.
2. Acoustical roof deck.
3. Composite floor deck.
4. Electrified cellular floor deck.
5. Noncomposite form deck.
6. Noncomposite vented form deck.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 035216 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
3. Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.
4. Section 055000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Roof deck.
2. Acoustical roof deck.
3. Composite floor deck.
4. Electrified cellular floor deck.
5. Noncomposite form deck.
6. Noncomposite vented form deck.

B. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

C. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.

5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.
11. Health Product Declaration (HPD): For each product.
12. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Product Certificates: For each type of steel deck.
- C. Test and Evaluation Reports:
 1. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
 - a. Power-actuated mechanical fasteners.
 - b. Acoustical roof deck.
 2. Research Reports: For steel deck, from ICC-ES showing compliance with the building code.
- D. Field Quality-Control Submittals:
 1. Field quality-control reports.
- E. Qualification Statements: For **[welding personnel][and][testing agency]**.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with SDI QA/QC and the following welding codes:
 1. AWS D1.1/D1.1M.
 2. AWS D1.3/D1.3M.
- B. Electrical Raceway Units: Provide UL-labeled cellular floor-deck units complying with UL 209 and listed in UL's "Electrical Construction Equipment Directory" for use with standard header ducts and outlets for electrical distribution systems.
- C. FM Approvals' RoofNav Listing: Provide steel roof deck evaluated by FM Approvals and listed in its "RoofNav" for Class 1 fire rating and **[Class 1-60][Class 1-75][Class 1-90]** windstorm ratings. Identify materials with FM Approvals Certification markings.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
- B. Store products in accordance with SDI MOC3. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
 - 1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AISI Specifications: Comply with calculated structural characteristics of steel deck in accordance with AISI S100.
- B. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.
- C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.

2.2 ROOF DECK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[ASC Steel Deck; ASC Profiles, LLC]**
 - 2. **[Canam Buildings US Inc.; Canam Group Inc.]**
 - 3. **[Cordeck]**
 - 4. **[CSM Metal Deck]**
 - 5. **[DACS, Inc.]**
 - 6. **[Epic Metals Corporation]**
 - 7. **[Marlyn Steel Decks, Inc.]**
 - 8. **[Miami Metal Deck]**
 - 9. **[New Millennium Building Systems, LLC]**
 - 10. **[OEG Building Materials Inc]**
 - 11. **[Roof Deck, Inc]**
 - 12. **[Tristate Decking, Inc.]**
 - 13. **[Valley Joist]**
 - 14. **[Verco Decking, Inc.; a Nucor company]**
 - 15. **[Vulcraft Group; Division of Nucor Corp.]**
 - 16. **[Vulcraft/Verco Group; a division of Nucor Corp.]**
 - 17. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [ASC Steel Deck; ASC Profiles, LLC]
2. [Canam Buildings US Inc.; Canam Group Inc.]
3. [Cordeck]
4. [CSM Metal Deck]
5. [DACS, Inc.]
6. [Epic Metals Corporation]
7. [Marlyn Steel Decks, Inc.]
8. [Miami Metal Deck]
9. [New Millennium Building Systems, LLC]
10. [OEG Building Materials Inc]
11. [Roof Deck, Inc]
12. [Tristate Decking, Inc.]
13. [Valley Joist]
14. [Verco Decking, Inc.; a Nucor company]
15. [Vulcraft Group; Division of Nucor Corp.]
16. [Vulcraft/Verco Group; a division of Nucor Corp.]
17. <Insert manufacturer's name>

C. Fabrication of Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with SDI RD and with the following:

1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)] minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard][Gray][White][Gray top surface with white underside].
2. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)], [G60 (Z180)][G90 (Z275)] zinc coating.
3. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)], G60 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard][Gray][White][Gray top surface with white underside].
4. Aluminum-Zinc-Alloy-Coated Steel Sheet: ASTM A792/A792M, Structural Steel (SS), Grade 33 (230) minimum, AZ50 (AZ150) aluminum-zinc-alloy coating.
5. Deck Profile: [As indicated][Type NR, narrow rib][Type IR, intermediate rib][Type WR, wide rib][Type 3DR, deep rib][Long span].
6. Cellular Deck Profile: [As indicated][Type WR, wide rib][Type 3DR, deep rib][Long span], with bottom plate.
7. Profile Depth: [As indicated][1-1/2 inches (38 mm)][2 inches (51 mm)][3 inches (76 mm)][4-1/2 inches (114 mm)][6 inches (152 mm)][7-1/2 inches (190 mm)].
8. Design Uncoated-Steel Thickness: [As indicated][0.0295 inch (0.75 mm)][0.0358 inch (0.91 mm)][0.0474 inch (1.20 mm)][0.0598 inch (1.52 mm)][0.0747 inch (1.90 mm)].
9. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: [As indicated][0.0358/0.0358 inch (0.91/0.91 mm)][0.0358/0.0474 inch (0.91/1.20 mm)][0.0474/0.0474 inch (1.20/1.20 mm)][0.0474/0.0598 inch (1.20/1.52 mm)][0.0598/0.0474 inch (1.52/1.20 mm)][0.0598/0.0598 inch (1.52/1.52 mm)].
10. Span Condition: [As indicated][Simple span][Double span][Triple span or more].
11. Side Laps: [Overlapped][Interlocking seam][Overlapped or interlocking seam at Contractor's option].

2.3 ACOUSTICAL ROOF DECK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
1. **[ASC Steel Deck; ASC Profiles, LLC]**
 2. **[Canam Buildings US Inc.; Canam Group Inc.]**
 3. **[Cordeck]**
 4. **[DACS, Inc.]**
 5. **[Epic Metals Corporation]**
 6. **[Marlyn Steel Decks, Inc.]**
 7. **[Miami Metal Deck]**
 8. **[Roof Deck, Inc]**
 9. **[Vulcraft Group; Division of Nucor Corp.]**
 10. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[ASC Steel Deck; ASC Profiles, LLC]**
 2. **[Canam Buildings US Inc.; Canam Group Inc.]**
 3. **[Cordeck]**
 4. **[DACS, Inc.]**
 5. **[Epic Metals Corporation]**
 6. **[Marlyn Steel Decks, Inc.]**
 7. **[Miami Metal Deck]**
 8. **[Roof Deck, Inc]**
 9. **[Vulcraft Group; Division of Nucor Corp.]**
 10. **<Insert manufacturer's name>**
- C. Fabrication of Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with SDI RD and with the following:
1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), **[Grade 33 (230)][Grade 40 (275)][Grade 80 (550)]** minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: **[Manufacturer's standard][Gray][White][Gray top surface with white underside].**
 2. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), **[Grade 33 (230)][Grade 40 (275)][Grade 80 (550)]**, **[G60 (Z180)][G90 (Z275)]** zinc coating.
 3. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), **[Grade 33 (230)][Grade 40 (275)][Grade 80 (550)]**, **G60 (Z180)** zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: **[Manufacturer's standard][Gray][White][Gray top surface with white underside].**
 4. Aluminum-Zinc-Alloy-Coated Steel Sheet: ASTM A792/A792M, Structural Steel (SS), Grade **33 (230)** minimum, **AZ50 (AZ150)** aluminum-zinc-alloy coating.
 5. Deck Profile: **[As indicated][Type WR, wide rib][Type 3DR, deep rib][Long span].**
 6. Cellular Deck Profile: **[As indicated][Type WR, wide rib][Type 3DR, deep rib][Long span]**, with bottom plate.
 7. Profile Depth: **[As indicated][1-1/2 inches (38 mm)][2 inches (50 mm)][3 inches (76 mm)][4-1/2 inches (114 mm)][6 inches (152 mm)][7-1/2 inches (190 mm)].**
 8. Design Uncoated-Steel Thickness: **[As indicated][0.0295 inch (0.75 mm)][0.0358 inch (0.91**

- mm)][0.0474 inch (1.20 mm)][0.0598 inch (1.52 mm)].
9. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: **[As indicated][0.0358/0.0358 inch (0.91/0.91 mm)][0.0358/0.0474 inch (0.91/1.20 mm)][0.0474/0.0358 inch (1.20/0.91 mm)][0.0474/0.0474 inch (1.20/1.20 mm)][0.0474/0.0598 inch (1.20/1.52 mm)][0.0598/0.0474 inch (1.52/1.20 mm)][0.0598/0.0598 inch (1.52/1.52 mm)]**.
 10. Span Condition: **[As indicated][Simple span][Double span][Triple span or more]**.
 11. Side Laps: **[Overlapped][Interlocking seam][Overlapped or interlocking seam at Contractor's option]**.
 12. Acoustical Perforations: **[Deck units with manufacturer's standard perforated vertical webs][Cellular deck units with manufacturer's standard perforated flat-bottom plate welded to ribbed deck]**.
 13. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber. **<Insert actual physical properties and thicknesses of insulation>**.
 - a. Factory install sound-absorbing insulation into cells of cellular deck.
 - b. Installation of sound-absorbing insulation is specified in **<Insert Section number and title>**.
 14. Acoustical Performance: NRC **[0.65][0.75][0.80][0.85][0.90]**, tested in accordance with ASTM C423.

2.4 COMPOSITE FLOOR DECK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[ASC Steel Deck; ASC Profiles, LLC]**
 2. **[Canam Buildings US Inc.; Canam Group Inc.]**
 3. **[Cordeck]**
 4. **[CSM Metal Deck]**
 5. **[DACS, Inc.]**
 6. **[Epic Metals Corporation]**
 7. **[Marlyn Steel Decks, Inc.]**
 8. **[Miami Metal Deck]**
 9. **[New Millennium Building Systems, LLC]**
 10. **[OEG Building Materials Inc]**
 11. **[Roof Deck, Inc]**
 12. **[Tristate Decking, Inc.]**
 13. **[Verco Decking, Inc.; a Nucor company]**
 14. **[Vulcraft Group; Division of Nucor Corp.]**
 15. **[Vulcraft/Verco Group; a division of Nucor Corp.]**
 16. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[ASC Steel Deck; ASC Profiles, LLC]**
 2. **[Canam Buildings US Inc.; Canam Group Inc.]**
 3. **[Cordeck]**
 4. **[CSM Metal Deck]**
 5. **[DACS, Inc.]**
 6. **[Epic Metals Corporation]**
 7. **[Marlyn Steel Decks, Inc.]**

8. **[Miami Metal Deck]**
9. **[New Millennium Building Systems, LLC]**
10. **[OEG Building Materials Inc]**
11. **[Roof Deck, Inc]**
12. **[Tristate Decking, Inc.]**
13. **[Verco Decking, Inc.; a Nucor company]**
14. **[Vulcraft Group; Division of Nucor Corp.]**
15. **[Vulcraft/Verco Group; a division of Nucor Corp.]**
16. **<Insert manufacturer's name>**

- C. Fabrication of Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with SDI C, with the minimum section properties indicated, and with the following:

1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), **[Grade 33 (230)][Grade 40 (275)][Grade 80 (550)]** minimum, with top surface phosphatized and unpainted and underside surface shop primed with manufacturers' standard **[gray][or][white]** baked-on, rust-inhibitive primer.
2. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **[G30 (Z90)][G60 (Z180)][G90 (Z275)]** zinc coating.
3. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **[G30 (Z90)][G60 (Z180)]** zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard **[gray][white]** baked-on, rust-inhibitive primer.
4. Profile Depth: **[1-1/2 inches (38 mm)][2 inches (51 mm)][3 inches (76 mm)][As indicated]**.
5. Design Uncoated-Steel Thickness: **[0.0295 inch (0.75 mm)][0.0358 inch (0.91 mm)][0.0474 inch (1.20 mm)][0.0598 inch (1.52 mm)]**.
6. Span Condition: **[As indicated][Simple span][Double span][Triple span or more]**.

2.5 ELECTRIFIED CELLULAR FLOOR DECK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Cordeck]**
 2. **[HH Robertson]**
 3. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Cordeck]**
 2. **[HH Robertson]**
 3. **<Insert manufacturer's name>**
- C. Source Limitations for Electrified Cellular Floor Deck: Obtain cellular floor-deck units and compatible electrical components, such as preset inserts, activation kits, afterset inserts, service fittings, header ducts, and trench header ducts, from single manufacturer.
- D. Fabrication of Electrified Cellular Floor Deck: Fabricate steel sheet cellular floor-deck panels, consisting of a ribbed top section welded to a lower flat-bottom sheet with interlocking side laps, to comply with SDI C. Fabricate deck to the minimum section properties, width of panel, number, and area of cells per panel indicated.

1. Cellular Deck Type: **[Composite][Noncomposite]**.
2. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **[G60 (Z180)][G90 (Z275)]** zinc coating.
3. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **G60 (Z180)** zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard **[gray][white]** baked-on, rust-inhibitive primer.
4. Profile Depth: **[1-1/2 inches (38 mm)][2 inches (51 mm)][3 inches (76 mm)][As indicated]**.
5. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: **[0.0358/0.0358 inch (0.91/0.91 mm)][0.0358/0.0474 inch (0.91/1.20 mm)][0.0358/0.0598 inch (0.91/1.52 mm)][0.0474/0.0358 inch (1.20/0.91 mm)][0.0474/0.0474 inch (1.20/1.20 mm)][0.0474/0.0598 inch (1.20/1.52 mm)][0.0598/0.0474 inch (1.52/1.20 mm)][0.0598/0.0598 inch (1.52/1.52 mm)]**.
6. Span Condition: **[As indicated][Simple span][Double span][Triple span or more]**.
7. Factory punch holes, of size and arrangement indicated, into each deck cell at preset inserts and header duct locations.

2.6 NONCOMPOSITE FORM DECK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. **[ASC Steel Deck; ASC Profiles, LLC]**
2. **[Canam Buildings US Inc.; Canam Group Inc.]**
3. **[Cordeck]**
4. **[CSM Metal Deck]**
5. **[DACS, Inc.]**
6. **[Marlyn Steel Decks, Inc.]**
7. **[Miami Metal Deck]**
8. **[New Millennium Building Systems, LLC]**
9. **[OEG Building Materials Inc]**
10. **[Roof Deck, Inc]**
11. **[Valley Joist]**
12. **[Verco Decking, Inc.; a Nucor company]**
13. **[Vulcraft Group; Division of Nucor Corp.]**
14. **[Vulcraft/Verco Group; a division of Nucor Corp.]**
15. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[ASC Steel Deck; ASC Profiles, LLC]**
2. **[Canam Buildings US Inc.; Canam Group Inc.]**
3. **[Cordeck]**
4. **[CSM Metal Deck]**
5. **[DACS, Inc.]**
6. **[Marlyn Steel Decks, Inc.]**
7. **[Miami Metal Deck]**
8. **[New Millennium Building Systems, LLC]**
9. **[OEG Building Materials Inc]**
10. **[Roof Deck, Inc]**
11. **[Valley Joist]**
12. **[Verco Decking, Inc.; a Nucor company]**
13. **[Vulcraft Group; Division of Nucor Corp.]**
14. **[Vulcraft/Verco Group; a division of Nucor Corp.]**

15. <Insert manufacturer's name>

- C. Fabrication of Noncomposite Form Deck: Fabricate ribbed-steel sheet noncomposite deck panels used as a form to comply with SDI NC, with the minimum section properties indicated, and with the following:
1. Uncoated Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)] minimum.
 2. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)] minimum, with [top and] underside surface shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard][Gray][White][Gray top surface with white underside].
 3. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)], [G30 (Z90)][G60 (Z180)][G90 (Z275)] zinc coating.
 4. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 80 (550)], G60 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard][Gray][White][Gray top surface with white underside].
 5. Profile Depth: [9/16 inch (14 mm)][15/16 inch (24 mm)][1-5/16 inches (33 mm)][1-1/2 inches (38 mm)].
 6. Design Uncoated-Steel Thickness: [0.0149 inch (0.38 mm)][0.0179 inch (0.45 mm)][0.0239 inch (0.61 mm)][0.0295 inch (0.75 mm)][0.0358 inch (0.91 mm)][0.0474 inch (1.20 mm)][0.0598 inch (1.52 mm)].
 7. Span Condition: [As indicated][Simple span][Double span][Triple span or more].
 8. Side Laps: [Overlapped][Interlocking seam][Overlapped or interlocking seam at Contractor's option].

2.7 NONCOMPOSITE VENTED FORM DECK

- A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
1. [ASC Steel Deck; ASC Profiles, LLC]
 2. [Canam Buildings US Inc.; Canam Group Inc.]
 3. [Marlyn Steel Decks, Inc.]
 4. [Miami Metal Deck]
 5. [New Millennium Building Systems, LLC]
 6. [Roof Deck, Inc]
 7. [Verco Decking, Inc.; a Nucor company]
 8. [Vulcraft Group; Division of Nucor Corp.]
 9. [Vulcraft/Verco Group; a division of Nucor Corp.]
 10. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [ASC Steel Deck; ASC Profiles, LLC]
 2. [Canam Buildings US Inc.; Canam Group Inc.]
 3. [Marlyn Steel Decks, Inc.]
 4. [Miami Metal Deck]
 5. [New Millennium Building Systems, LLC]

6. [Roof Deck, Inc]
7. [Verco Decking, Inc.; a Nucor company]
8. [Vulcraft Group; Division of Nucor Corp.]
9. [Vulcraft/Verco Group; a division of Nucor Corp.]
10. <Insert manufacturer's name>

C. Fabrication of Noncomposite Vented Form Deck: Fabricate ribbed- and vented-steel sheet noncomposite deck panels used as a form to comply with SDI NC, and with the following:

1. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 40 (275)][Grade 80 (550)], [G30 (Z90)][G60 (Z180)][G90 (Z275)] zinc coating.
2. Galvanized- and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), [Grade 33 (230)][Grade 80 (550)], [G30 (Z90)][G60 (Z180)] zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard][Gray][White][Gray top surface with white underside].
3. Profile Depth: [9/16 inch (14 mm)][15/16 inch (24 mm)][1-5/16 inches (33 mm)][1-1/2 inches (38 mm)].
4. Design Uncoated-Steel Thickness: [0.0149 inch (0.38 mm)][0.0179 inch (0.45 mm)][0.0239 inch (0.61 mm)][0.0295 inch (0.75 mm)][0.0358 inch (0.91 mm)][0.0474 inch (1.20 mm)][0.0598 inch (1.52 mm)].
5. Span Condition: [As indicated][Simple span][Double span][Triple span or more].
6. Side Laps: [Overlapped][Interlocking seam][Overlapped or interlocking seam at Contractor's option].
7. Vent Slot Area: Manufacturer's standard vent slots providing [1-1/2]<Insert number> percent open area.

2.8 ACCESSORIES

- A. Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
- B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
- C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, **No. 10 (4.8-mm)** minimum diameter.
- D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of **33,000 psi (230 MPa)**, not less than **0.0359-inch (0.91-mm)** design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
- F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of **33,000 psi (230 MPa)**, of same material and finish as deck, and of thickness and profile [indicated][recommended by SDI standards for overhang and slab depth].
- G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.
- H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.
- I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, [0.0598 inch (1.52 mm)][0.0747 inch (1.90

mm)] thick, with factory-punched hole of **3/8-inch (9.5-mm)** minimum diameter.

- J. Shear Stud Connectors: ASTM A108, AISI C-1015 through C-1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.
- K. Flat Sump Plates: Single-piece steel sheet, **0.0747 inch (1.90 mm)** thick, of same material and finish as deck. For drains, cut holes in the field.
- L. Recessed Sump Pans: Single-piece steel sheet, **0.0747 inch (1.90 mm)** thick, of same material and finish as deck, with **3-inch- (76-mm-)** wide flanges and **[level][sloped]** recessed pans of **1-1/2-inch (38-mm)** minimum depth. For drains, cut holes in the field.
- M. Galvanizing Repair Paint: **[ASTM A780/A780M][SSPC-Paint 20 or MIL-P-21035B, with dry film containing a minimum of 94 percent zinc dust by weight].**
- N. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install deck panels and accessories in accordance with SDI C, SDI NC, and SDI RD, as applicable; manufacturer's written instructions; and requirements in this Section.
- B. Install temporary shoring before placing deck panels if required to meet deflection limitations.
- C. Locate deck bundles to prevent overloading of supporting members.
- D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
 - 1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
- E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
- F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
- G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
- H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

- I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install in accordance with deck manufacturer's written instructions.
- J. Shear Stud Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld using end welding of headed-stud shear connectors in accordance with AWS D1.1/D1.1M and manufacturer's written instructions.

3.3 INSTALLATION OF ROOF DECK

- A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than **1-1/2 inches (38 mm)** long, and as follows:
 - 1. Weld Diameter: **[5/8 inch (16 mm)][3/4 inch (19 mm)]**, nominal.
 - 2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds **[18 inches (460 mm) apart, maximum][12 inches (300 mm) apart in Zone 1 and 6 inches (150 mm) apart in Zones 2 and 3, based on roof-area definitions in FM Global Loss Prevention Data Sheet 1-28][as indicated]**.
 - 3. Weld Washers: Install weld washers at each weld location.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or **[18 inches (460 mm)][36 inches (1 m)]**, and as follows:
 - 1. Mechanically fasten with self-drilling, **No. 10 (4.8-mm-)** diameter or larger, carbon-steel screws.
 - 2. Mechanically clinch or button punch.
 - 3. Fasten with a minimum of **1-1/2-inch- (38-mm-)** long welds.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of **1-1/2 inches (38 mm)**, with end joints as follows:
 - 1. End Joints: **[Lapped 2 inches (50 mm) minimum][Butted][Lapped 2 inches (50 mm) minimum or butted at Contractor's option]**.
- D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and **[weld][mechanically fasten]** flanges to top of deck. Space **[welds][mechanical fasteners]** not more than **12 inches (300 mm)** apart with at least one **[weld][fastener]** at each corner.
 - 1. Install reinforcing channels or zees in ribs to span between supports and **[weld][or][mechanically fasten]**.
- E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels in accordance with deck manufacturer's written instructions. **[Weld][or][mechanically fasten]** to substrate to provide a complete deck installation.
 - 1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.
- F. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive in accordance with manufacturer's written instructions to ensure complete closure.
- G. Sound-Absorbing Insulation: Installation into topside ribs of deck as specified in **<Insert Section number and title>**.

3.4 INSTALLATION OF FLOOR DECK

- A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
 - 1. Weld Diameter: **[5/8 inch (16 mm)][3/4 inch (19 mm)]**, nominal.
 - 2. Weld Spacing:
 - a. Weld edge ribs of panels at each support. Space additional welds an average of **16 inches (400 mm)** apart, but not more than **18 inches (460 mm)** apart.
 - b. Space and locate welds as indicated.
 - 3. Weld Washers: Install weld washers at each weld location.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or **36 inches (1 m)**, and as follows:
 - 1. Mechanically fasten with self-drilling, **No. 10 (4.8-mm-)** diameter or larger, carbon-steel screws.
 - 2. Mechanically clinch or button punch.
 - 3. Fasten with a minimum of **1-1/2-inch- (38-mm-)** long welds.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of **[1-1/2 inches (38 mm)]<Insert dimension>**, with end joints as follows:
 - 1. End Joints: **[Lapped][Butted][Lapped or butted at Contractor's option]**.
- D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure in accordance with SDI recommendations unless otherwise indicated.
- E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, in accordance with SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.
- F. Electrified Cellular Floor Deck: Install cellular floor system with deck assembled from **[all-cellular units][alternating cellular units with noncellular composite units][units indicated]**.
 - 1. Coordinate layout and installation of trench headers, preset inserts, duct fittings, and other components specified in Section 260539 "Underfloor Raceways for Electrical Systems" with installation of electrified cellular metal floor deck.
- G. Install piercing hanger tabs at **[14 inches (355 mm)]<Insert dimension>** apart in both directions, within **9 inches (228 mm)** of walls at ends, and not more than **12 inches (305 mm)** from walls at sides unless otherwise indicated.

3.5 REPAIR

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint in accordance with ASTM A780/A780M and manufacturer's written instructions.
- B. Repair Painting:
 - 1. Wire brush and clean rust spots, welds, and abraded areas on **[both surfaces][top surface]** of prime-painted deck immediately after installation, and apply repair paint.

2. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
3. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
4. Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
 1. Special inspections and qualification of welding special inspectors for cold-formed steel floor and roof deck in accordance with quality-assurance inspection requirements of SDI QA/QC.
 - a. Field welds will be subject to inspection.
 2. Steel decking will be considered defective if it does not pass tests and inspections.
 3. Shear Stud Connectors: In addition to visual inspection, test and inspect field-welded shear connectors in accordance with requirements in AWS D1.1/D1.1M for stud welding and as follows:
 - a. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 - b. Conduct tests in accordance with requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors that are already tested.
- C. Prepare test and inspection reports.

END OF SECTION 05 31 00 00

Task	Specification	Specification Description
05 31 13 00	05 31 00 00	Steel Decking
05 31 23 00	05 31 00 00	Steel Decking
05 31 33 00	05 31 00 00	Steel Decking

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 40 00 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold-formed steel framing.
2. Load-bearing wall framing.
3. Exterior non-load-bearing wall framing.
4. Vertical deflection clips, exterior.
5. Interior non-load-bearing wall framing.
6. Vertical deflection clips, interior.
7. Joist framing.
8. Roof rafter framing.
9. Soffit framing.
10. Sill sealer/termite barrier.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
2. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies, with height limitations.
3. Section 092216 "Non-Structural Metal Framing" for standard, interior non-load-bearing, metal-stud framing, within height limitations and ceiling-suspension assemblies.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
3. Signed and sealed by the qualified professional engineer responsible for their preparation.

- C. Delegated Design Submittal: For cold-formed steel framing, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Sustainable Design Submittals:

1. <Double click to insert sustainable design text for recycled content.>
2. <Double click to insert sustainable design text for EPDs and HPDs.>

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and track.

D. Product Test Reports: For each listed product, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

E. Research Reports:

1. For nonstandard cold-formed steel framing **[post-installed anchors] [and] [power-actuated fasteners]**, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
2. For sill sealer gasket/termite barrier, showing compliance with ICC-ES AC380.

F. Delegated Design Engineer Qualifications: For cold-formed steel framing.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by International Accreditation Service (IAS) to IAS AC98 criteria for testing indicated.

B. Product Tests: Mill certificates or data from a qualified independent testing agency[, **or in-house testing with calibrated test equipment,**] indicating steel sheet complies with requirements, including base-steel thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

C. Code-Compliance Certification of Studs and Track: Provide documentation that framing members are certified in accordance with the product-certification program of **[the Steel Framing Industry Association] [the Steel Stud Manufacturers Association] [or] [the Supreme Steel Framing System Association]**.

D. Welding Qualifications: Qualify procedures and personnel in accordance with the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

- E. Comply with AISI S230 for one- and two-family dwellings.
- F. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in [state] <Insert jurisdiction> where Project is located and who is experienced in providing engineering services of the type indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer as defined in Section 014000 "Quality Requirements," to design cold-formed steel framing.
- B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.
 - 1. Design Loads: **[As indicated on Drawings] <Insert design loads>**.
 - 2. Deflection Limits: Design framing systems to withstand **[design loads]** without deflections greater than the following:
 - a. Exterior Load-Bearing Wall Framing: Horizontal deflection of **[1/240] [1/360] [1/600] [1/720]** of the wall height.
 - b. Interior Load-Bearing Wall Framing: Horizontal deflection of **[1/240] [1/360]** of the wall height under a horizontal load of 5 lbf/sq. ft. (239 Pa).
 - c. Exterior Non-Load-Bearing Framing: Horizontal deflection of **[1/240] [1/360] [1/600] [1/720]** **<Insert ratio>** of the wall height.
 - d. Interior Non-Load-Bearing Framing: Horizontal deflection of **[1/240] [1/360]** of the wall height under a horizontal load of 5 lbf/sq. ft. (239 Pa).
 - e. Floor Joist Framing: Vertical deflection of **[1/360] [1/480]** for live loads and 1/240 for total loads of the span.
 - f. Roof Rafter Framing: Vertical deflection of **[1/120] [1/240] [1/360]** of the horizontally projected span for live loads.
 - g. Ceiling Joist Framing: Vertical deflection of **[1/120] [1/240] [1/360]** of the span for live loads and 1/240 for total loads of the span.
 - 3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F (67 deg C).
 - 4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
 - a. Upward and downward movement of **[1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)]**.
 - 5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

- C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and **[ASTM C955] [AISI S200 and ASTM C955, Section 8] [AISI S240]**.
- D. Seismic Performance: Cold-formed steel framing to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7 and AISI S400] <Insert requirement>**.
- E. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Product iQ" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.
- F. Sound-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 COLD-FORMED STEEL FRAMING

- A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- B. <Double click to insert sustainable design text for recycled content.>
- C. Framing Members, General: Comply with **[ASTM C955] [AISI S200 and ASTM C955, Section 8] [AISI S240]** for conditions indicated.
- D. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
 - 1. Grade: **[ST33H (ST230H)] [ST50H (ST340H)] [As required by structural performance] <Insert grade>**.
 - 2. Coating: **[G60 (Z180), A60 (ZF180), AZ50 (AZM150), or GF30 (ZGF90)] [G90 (Z275) or equivalent] <Insert coating designation>**.
- E. Steel Sheet for Vertical Deflection Drift Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:
 - 1. Grade: **[33 (230)] [50 (340), Class 1] [As required by structural performance] <Insert grade>**.
 - 2. Coating: **G90 (Z275) <Insert coating designation>**.

2.3 LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
 - 1. Minimum Base-Steel Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>**.
 - 2. Flange Width: **[1-3/8 inches (35 mm)] [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] <Insert dimension>**.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges, and as follows:

1. Minimum Base-Steel Thickness: [0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] [Matching steel studs] <Insert dimension>.
 2. Flange Width: [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] <Insert dimension if manufacturer's standard width is insufficient>.
- C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, unpunched, with stiffened flanges, and as follows:
1. Minimum Base Steel Thickness: [0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.
 2. Flange Width: [1-3/8 inches (35 mm)] [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] <Insert dimension>.
- D. Steel Single- or Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths indicated, and as follows:
1. Minimum Base-Steel Thickness: [0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.
 2. Top Flange Width: [1-1/2 inches (38 mm)] [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] <Insert dimension>.

2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
1. Minimum Base-Steel Thickness: [0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.
 2. Flange Width: [1-3/8 inches (35 mm)] [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] <Insert dimension>.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
1. Minimum Base-Steel Thickness: [0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] [Matching steel studs] <Insert dimension>.
 2. Flange Width: [1-1/4 inches (32 mm)] <Insert dimension if manufacturer's standard width is insufficient>.
- C. Vertical Deflection Clips, Exterior: Manufacturer's standard [bypass] [head] clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Steel Thickness: **[0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
2. Flange Width: **[1 inch (25 mm) plus the design gap for one-story structures] [and] [1 inch (25 mm) plus twice the design gap for other applications] <Insert dimension>.**

- E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.5 INTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Steel Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
2. Flange Width: **[1-3/8 inches (35 mm)] [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] <Insert dimension>.**

- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Steel Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] [Matching steel studs] <Insert dimension>.**
2. Flange Width: **[1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert dimension if manufacturer's standard width is insufficient>.**

- C. Vertical Deflection Clips, Interior: Manufacturer's standard **[bypass] [head]** clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Steel Thickness: **[0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
2. Flange Width: **[1 inch (25 mm) plus the design gap for one-story structures] [and] [1 inch (25 mm) plus twice the design gap for other applications] <Insert dimension>.**

- E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.6 JOIST FRAMING

- A. Steel Joists: Manufacturer's standard C-shaped steel joists, of web depths indicated, **[unpunched] [punched with standard holes] [punched with enlarged service holes]** with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
 2. Flange Width: **[1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] <Insert dimension>, minimum.**
- B. Steel Rim Joist Track: Manufacturer's standard U-shaped steel rim joist track, of web depths indicated, unpunched or punched at joist spacing, with unstiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] [Matching steel joists] <Insert dimension>.**
 2. Flange Width: **[1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] <Insert dimension>, minimum.**

2.7 ROOF-RAFTER FRAMING

- A. Steel Rafters: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
1. Minimum Base-Steel Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
 2. Flange Width: **[1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] <Insert dimension>, minimum.**

2.8 SOFFIT FRAMING

- A. Exterior Soffit Framing: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: **[0.0329 inch (0.84 mm)] [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [0.1180 inch (2.997 mm)] <Insert dimension>.**
 2. Flange Width: **[1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] <Insert dimension>, minimum.**

2.9 FRAMING ACCESSORIES

- A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic-coated steel sheet, of same grade and coating designation used for framing members.
- B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
1. Supplementary framing.
 2. Bracing, bridging, and solid blocking.
 3. Web stiffeners.
 4. Anchor clips.
 5. End clips.
 6. Foundation clips.
 7. Gusset plates.
 8. Stud kickers and knee braces.

9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.10 ANCHORS, CLIPS, AND FASTENERS

- A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process in accordance with ASTM A123/A123M.
- B. Anchor Bolts: ASTM F1554, **[Grade 36] [Grade 55]**, threaded carbon-steel **[hex-headed bolts] [headless, hooked bolts] [headless bolts, with encased end threaded]** carbon-steel nuts, and flat, hardened-steel washers; zinc coated by **[hot-dip process in accordance with ASTM A153/A153M, Class C] [mechanically deposition according to ASTM B695, Class 50]**.
- C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, in accordance with an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC01] [ICC-ES AC193] [ICC-ES AC58] [or] [ICC-ES AC308]** as appropriate for the substrate.
 1. Uses: Securing cold-formed steel framing to structure.
 2. Type: **[Torque-controlled expansion anchor] [Torque-controlled adhesive anchor] [or] [adhesive anchor]**.
 3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/ASTM F1941M, Class Fe/Zn 5, unless otherwise indicated.
 4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless steel bolts, ASTM F593 (ISO 3506-1), and nuts, ASTM F594 (ISO 3506-1).
- D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, in accordance with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.
 1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.
- F. Welding Electrodes: Comply with AWS standards.

2.11 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: **[ASTM A780/A780M] [MIL-P-21035B] [or] [SSPC-Paint 20]**.
- B. Cement Grout: Portland cement, ASTM C476, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- C. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107/C1107M, and with a fluid consistency and 30-minute working time.
- D. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

- E. Sill Sealer Gasket: Closed-cell neoprene foam, 1/4 inch (6 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members as required.
- F. Sill Sealer Gasket/Termite Barrier: Minimum 68-mil (1.7-mm) nominal thickness, self-adhering sheet consisting of 64 mils (1.6 mm) of rubberized asphalt laminated on one side to a 4-mil- (0.10-mm-) thick, polyethylene-film reinforcement, and with release liner on adhesive side[; **formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction**].
 - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 - 2. Physical Properties:
 - a. Peel Adhesion: 17.0 lb/in (2.9 N/mm) of width when tested in accordance with ASTM D412.
 - b. Low-Temperature Flexibility: Pass at minus 25 deg F (minus 32 deg C) when tested in accordance with ASTM D146/D146M.
 - c. Water Vapor Permeance: 0.05 perm (0.44 ng/Pa x s x sq. m) maximum when tested in accordance with ASTM E96/E96M, Method B.
 - d. Resistance to Termite Penetration: Comply with ICC-ES AC380.

2.12 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, in accordance with AISI S240 and standards, manufacturer's written instructions, and requirements in this Section.
 - 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install in accordance with Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.
 - 4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, in accordance with Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.
- C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 ft. (1:960) and as follows:
 - 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative errors are not to exceed minimum fastening requirements of sheathing or other finishing materials.
 - 2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch (3 mm).

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or track to structural members indicated to receive sprayed fire-resistive materials.
- B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.
- C. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch (6 mm) to ensure a uniform bearing surface on supporting concrete or masonry construction.
- D. Install sill sealer gasket at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.
- E. Install sill sealer gasket/termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION OF COLD-FORMED STEEL FRAMING

- A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed steel framing in accordance with ASTM C1007, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 - 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch (1.6 mm).
- D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
 - 1. Cut framing members by sawing or shearing; do not torch cut.
 - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

- a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners, install in accordance with Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.
- H. Install insulation, specified in Section 072100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
- I. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 INSTALLATION OF LOAD-BEARING WALL FRAMING

- A. Install continuous top and bottom track sized to match studs. Align track accurately and securely anchor at corners and ends, and at spacings as follows:
 - 1. Anchor Spacing: **[As shown on Shop Drawings] <Insert dimension>**.
- B. Squarely seat studs against top and bottom track, with gap not exceeding 1/8 inch (3 mm) between the end of wall-framing member and the web of track.
 - 1. Fasten both flanges of studs to top and bottom track.
 - 2. Space studs as follows:
 - a. Stud Spacing: **[12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated on Shop Drawings] <Insert dimension>**.
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
- D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
- E. Align floor and roof framing over studs in accordance with AISI S240, Section C3.5.2. Where framing cannot be aligned, continuously reinforce track to transfer loads.
- F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure.
- G. Install headers over wall openings wider than stud spacing. Locate headers above openings. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.

1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.
 2. Install track and jack studs above and below wall openings. Anchor track to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
- H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.
- I. Install horizontal bridging in stud system, spaced vertically **[48 inches (1220 mm)] [as indicated on Drawings] [as indicated on Shop Drawings] <Insert dimension>**. Fasten at each stud intersection.
1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of two screws into each flange of the clip angle for framing members up to 6 inches (150 mm) deep.
 2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges, and secure solid blocking to stud webs or flanges.
 3. Bar Bridging: Proprietary bridging bars installed in accordance with manufacturer's written instructions.
- J. Install steel sheet diagonal bracing straps to both stud flanges; terminate at and fasten to reinforced top and bottom track. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
- K. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INSTALLATION OF EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Install continuous track sized to match studs. Align track accurately and securely anchor to supporting structure.
- B. Fasten both flanges of studs to **[top and]** bottom track unless otherwise indicated. Space studs as follows:
1. Stud Spacing: **[12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated on Shop Drawings] <Insert dimension>**.
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
1. Install single deep-leg deflection track and anchor to building structure.
 2. Connect vertical deflection clips to **[bypassing] [infill]** studs and anchor to building structure.
 3. Connect drift clips to cold-formed steel framing and anchor to building structure.

- E. Install horizontal bridging in wall studs, spaced vertically in rows indicated[**on Shop Drawings**] but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.
 - 1. Channel Bridging: Cold-rolled steel U-channel, welded or mechanically fastened to webs of punched studs.
 - 2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 - 3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within [**12 inches (305 mm)**] [**18 inches (450 mm)**] of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
 - 1. Install solid blocking at [**96-inch (2440-mm) centers**] [**centers indicated**] [**centers indicated on Shop Drawings**].
- G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 INSTALLATION OF INTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Install continuous track sized to match studs. Align track accurately and securely anchor to supporting structure.
- B. Fasten both flanges of studs to[**top and**] bottom track unless otherwise indicated. Space studs as follows:
 - 1. Stud Spacing: [**12 inches (305 mm)**] [**16 inches (406 mm)**] [**19.2 inches (488 mm)**] [**24 inches (610 mm)**] [**As indicated on Drawings**] <Insert dimension>.
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 - 1. Install single deep-leg deflection track and anchor to building structure.
 - 2. Connect vertical deflection clips to studs and anchor to building structure.
 - 3. Connect drift clips to cold-formed steel metal framing and anchor to building structure.
- E. Install horizontal bridging in wall studs, spaced vertically in rows indicated[**on Shop Drawings**] but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.
 - 1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
 - 2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 - 3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within [**12 inches (305 mm)**] [**18 inches (450 mm)**] of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at **[96-inch (2440-mm) centers]** **[centers indicated]** **[centers indicated on Shop Drawings]**.

- G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.7 INSTALLATION OF JOIST FRAMING

- A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated **[on Shop Drawings]**.

- B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.

1. Install joists over supporting frame with a minimum end bearing as indicated on Shop Drawings.
2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections.

- C. Space joists not more than 2 inches (51 mm) from abutting walls, and as follows:

1. Joist Spacing: **[12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated on Drawings] <Insert dimension>**.

- D. Frame openings with built-up joist headers, consisting of joist and joist track or another combination of connected joists if indicated.

- E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement.

1. Install web stiffeners to transfer axial loads of walls above.

- F. Install bridging at intervals indicated **[on Shop Drawings]**. Fasten bridging at each joist intersection as follows:

1. Joist-Track Solid Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.
2. Combination Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.

- G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

- H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.8 INSTALLATION TOLERANCES

- A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 ft. (1:960) and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.

3.9 REPAIR

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint in accordance with ASTM A780/A780M and manufacturer's written instructions.

3.10 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field and shop welds will be subject to testing and inspecting.
- C. Testing agency will report test results promptly and in writing to Contractor and Architect.
- D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.11 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

SECTION 05 50 00 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Miscellaneous framing and supports.
2. Prefabricated building columns.
3. Shelf angles.
4. Metal ladders.
5. Alternating tread devices.
6. Metal ships' ladders and pipe crossovers.
7. Metal floor plate.
8. Elevator pit sump covers.
9. Structural-steel door frames.
10. Miscellaneous steel trim.
11. Metal bollards.
12. Vehicular barrier cable systems.
13. Pipe and downspout guards.
14. Abrasive metal nosings, treads, and thresholds.
15. Cast-iron wheel guards.
16. Metal downspout boots.
17. Loose bearing and leveling plates.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.
3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

C. Related Requirements:

1. Section 042000 "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.
2. Section 051200 "Structural Steel Framing" for steel framing, supports, elevator machine beams, hoist beams, divider beams, door frames, and other steel items attached to the structural-steel framing.
3. Section 077200 "Roof Accessories" for manufactured metal roof walkways and metal roof stairs.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.

Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Nonslip aggregates and nonslip-aggregate surface finishes.
2. Fasteners.
3. Shop primers.
4. Shrinkage-resisting grout.
5. Prefabricated building columns.
6. Slotted channel framing.
7. Manufactured metal ladders.
8. Alternating tread devices.
9. Metal ships' ladders and pipe crossovers.
10. Metal bollards.
11. Vehicular barrier cable systems.
12. Pipe and downspout guards.
13. Abrasive metal nosings, treads, and thresholds.
14. Cast-iron wheel guards.
15. Metal downspout boots.

B. Shop Drawings: Show fabrication and installation details. [**Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.**]

Provide Shop Drawings for the following:

1. Miscellaneous framing and supports for applications where framing and supports are not specified in other Sections.
2. Elevator machine beams, hoist beams, and divider beams.
3. Steel shapes for supporting elevator door sills.
4. Steel girders for supporting wood frame construction.
5. Steel pipe columns for supporting wood frame construction.
6. Prefabricated building columns.
7. Shelf angles.
8. Metal ladders.
9. Alternating tread devices.
10. Metal ships' ladders and pipe crossovers.
11. Metal floor plate and supports.
12. Elevator pit sump covers.
13. Structural-steel door frames.
14. Miscellaneous steel trim including [**steel angle corner guards**][**steel edgings**][**and**][**loading-dock edge angles**].
15. Metal bollards.
16. Loose steel lintels.
17. Vehicular barrier cable systems.

C. Samples for Verification: For each type and finish of extruded [**nosing**][**and**][**tread**].

D. Delegated Design Submittals: For [**ladders**][**alternating tread devices**][**and**][**vehicular barrier cable systems**], including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental product declaration.
3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
4. Environmental Product Declaration (EPD): For each product.
5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
6. Environmental Product Declaration: For each product.
7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
8. Environmental Product Declaration: For each product.
9. Environmental Product Declaration: For each product.
10. Third-Party Certifications: For each product.
11. Third-Party Certified Life Cycle Assessment: For each product.
12. Environmental Product Declaration (EPD): Provide one of the following EPDs: critically reviewed life-cycle assessment complying with ISO 14044; internally reviewed, product-specific Type III EPD; third-party-verified, industrywide Type III EPD.
13. Health Product Declaration (HPD): For each product.
14. Health Product Declaration (HPD): Provide HPD.
15. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

1.4 INFORMATIONAL SUBMITTALS

- A. Mill Certificates: Signed by stainless steel manufacturers, certifying that products furnished comply with requirements.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- D. Research Reports: For post-installed anchors.
- E. Delegated design engineer qualifications.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, floor slabs, decks, and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS
2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design [ladders][alternating tread devices][and][vehicular barrier cable systems].
- B. Structural Performance of Aluminum Ladders: Ladders[, including landings,] are to withstand the effects of loads and stresses within limits and under conditions specified in ANSI/ASC A14.3.
- C. Structural Performance of Alternating Tread Devices: Alternating tread devices are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform Load: **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 - 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm)**.
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Alternating Tread Device Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
 - 5. Comply with applicable railing loadings in Section 055213 "Pipe and Tube Railings."
- D. Vehicular Barrier Cable Systems: Design vehicular barrier cable systems to resist a single **[6000-lbf (28.7-kN)]<Insert value>** service load and **[10,000-lbf (47.9-kN)]<Insert load>** ultimate load applied horizontally in any direction to the cable system, with anchorages or attachments capable of transferring this load to the structure. Limit deflection to **18 inches (457 mm)**. Design is to assume loads are applied at a height of **[18 inches (457 mm)]<Insert height>** above the floor or ramp surface on an area not to exceed **1 sq. ft. (0.09 sq. m)**.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.

2.2 METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- C. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- D. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site.
- E. Regional Materials: Products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- F. Indigenous Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from

materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

- G. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- I. Stainless Steel Sheet, Strip, and Plate: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316L]**.
- J. Stainless Steel Bars and Shapes: ASTM A276/A276M, **[Type 304][Type 316L]**.
- K. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.
- L. Rolled-Stainless Steel Floor Plate: ASTM A793.
- M. Abrasive-Surface Floor Plate: Steel plate **[with abrasive granules rolled into surface][or][with abrasive material metallurgically bonded to steel]**.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[IKG]**
 - b. **[Ohio Gratings, Inc]**
 - c. **[SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]**
 - d. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[IKG]**
 - b. **[Ohio Gratings, Inc]**
 - c. **[SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]**
 - d. **<Insert manufacturer's name>**
 - 3. Source Limitations: Obtain floor plate from single source from single manufacturer.
- N. Steel Tubing: ASTM A500/A500M, cold-formed steel tubing.
- O. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.
- P. Zinc-Coated Steel Wire Rope: ASTM A741.
 - 1. Wire Rope Fittings: Hot-dip galvanized-steel connectors with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
- Q. Stainless Steel Wire Rope: Wire rope manufactured from stainless steel wire complying with ASTM A492, Type 316.

1. Wire Rope Fittings: Stainless steel connectors, Type 316, with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
- R. Steel Prestressing Strand: ASTM A416/A416M, **Grade 270 (Grade 1860)**, low-relaxation, seven-wire, with **0.9-lb/sq. ft. (4.39-kg/sq. m)** zinc coating.
1. Steel Prestressing Strand Fittings: Hot-dip galvanized-steel anchors and connectors with capability to sustain, without failure, a load equal to minimum breaking strength of steel prestressing strand with which they are used.
- S. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
1. Size of Channels: **[1-5/8 by 1-5/8 inches (41 by 41 mm)]****[As indicated]****<Insert size>**.
 2. Galvanized Steel: ASTM A653/A653M, **[commercial steel, Type B]****[structural steel, Grade 33 (Grade 230)]**, with **G90 (Z275)** coating; **[0.108-inch (2.8-mm)]****[0.079-inch (2-mm)]****[0.064-inch (1.6-mm)]** nominal thickness.
 3. Cold-Rolled Steel: ASTM A1008/A1008M, **[commercial steel, Type B]****[structural steel, Grade 33 (Grade 230)]**; **[0.0966-inch (2.5-mm)]****[0.0677-inch (1.7-mm)]****[0.0528-inch (1.35-mm)]** minimum thickness; **[unfinished]****[coated with rust-inhibitive, baked-on, acrylic enamel]****[hot-dip galvanized after fabrication]**.
- T. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- U. Aluminum Plate and Sheet: **ASTM B209 (ASTM B209M)**, Alloy 6061-T6.
- V. Aluminum Extrusions: **ASTM B221 (ASTM B221M)**, Alloy 6063-T6.
- W. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.
- X. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
- Y. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
- Z. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (lead red brass) or UNS No. C84400 (lead semired brass).
- AA. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500.
- BB. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent lead nickel bronze).
- 2.3 FASTENERS
- A. General: Unless otherwise indicated, provide **[Type 304]****[Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
1. Provide stainless steel fasteners for fastening **[aluminum]****[stainless steel]****[or]****[nickel silver]**.
 2. Provide bronze fasteners for fastening bronze.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A307, Grade A (ISO 898-1, Property Class 4.6)**; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.

- C. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, **Grade A325 (Grade A325M)**, Type 3, heavy-hex steel structural bolts; **ASTM A563, Grade DH3, (ASTM A563M, Class 10S3)** heavy-hex carbon-steel nuts; and where indicated, flat washers.
- D. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, **ASTM F593 (ISO 3506-1)**; with hex nuts, **ASTM F594 (ASTM F836M)**; and, where indicated, flat washers; Alloy **[Group 1 (A1)][Group 2 (A4)]**.
- E. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
 - 1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- F. Anchors, General: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.
- G. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.
- H. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]**.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ISO 3506-1)**, and nuts, **ASTM F594 (ASTM F836M)**.
- I. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, **1-5/8 by 7/8 inches (41 by 22 mm)** by length indicated with anchor straps or studs not less than **3 inches (75 mm)** long at not more than **8 inches (200 mm)** o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B633, Class Fe/Zn 5, as needed for fastening to inserts.

2.4 MISCELLANEOUS MATERIALS

- A. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings.]**
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer that contains pigments that make it easily distinguishable from zinc-rich primer.
- C. Water-Based Primer: Emulsion type, anticorrosive primer for mildly corrosive environments that is resistant to flash rusting when applied to cleaned steel, complying with MPI#107 and compatible with topcoat.
- D. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.

- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- H. Shrinkage-Resistant Grout: Factory-packaged, nonmetallic, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- I. Concrete: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained concrete with a minimum 28-day compressive strength of **3000 psi (20 MPa)**.

2.5 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing[**and contour of welded surface matches that of adjacent surface**].
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

- J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, **1/8 by 1-1/2 inches (3.2 by 38 mm)**, with a minimum **6-inch (150-mm)** embedment and **2-inch (50-mm)** hook, not less than **8 inches (200 mm)** from ends and corners of units and **24 inches (600 mm)** o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
1. Fabricate units from slotted channel framing where indicated.
 2. Furnish inserts for units installed after concrete is placed.
- C. Fabricate supports for operable partitions from continuous steel beams of sizes **[indicated][recommended by partition manufacturer]** with attached bearing plates, anchors, and braces as **[indicated][recommended by partition manufacturer]**. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.
- D. Fabricate steel girders for wood frame construction from continuous steel shapes of sizes indicated.
1. Provide bearing plates welded to beams where indicated.
 2. Drill or punch girders and plates for field-bolted connections where indicated.
 3. Where wood nailers are attached to girders with bolts or lag screws, drill or punch holes at **24 inches (600 mm)** o.c.
- E. Fabricate steel pipe columns for supporting wood frame construction from steel pipe with steel baseplates and top plates as indicated. Drill or punch baseplates and top plates for anchor and connection bolts and weld to pipe with fillet welds all around. Make welds the same size as pipe wall thickness unless otherwise indicated.
1. Unless otherwise indicated, fabricate from Schedule 40 steel pipe.
 2. Unless otherwise indicated, provide **1/2-inch (12.7-mm)** baseplates with four **5/8-inch (16-mm)** anchor bolts and **1/4-inch (6.4-mm)** top plates.
- F. Galvanize miscellaneous framing and supports where indicated.
- G. Prime miscellaneous framing and supports with **[zinc-rich primer][primer specified in Section 099600 "High-Performance Coatings"]** where indicated.

2.7 PREFABRICATED BUILDING COLUMNS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Black Rock Fireproof Column, a division of United Steel]**
 2. **[Dean Lally LLC / FireTrol Columns]**
 3. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Black Rock Fireproof Column, a division of United Steel]**
 2. **[Dean Lally LLC / FireTrol Columns]**
 3. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain prefabricated building column from single source from single manufacturer.
- D. General: Provide prefabricated building columns consisting of load-bearing structural-steel members protected by concrete fireproofing encased in an outer non-load-bearing steel shell. Fabricate connections to comply with details shown or as needed to suit type of structure indicated.
- E. Fire-Resistance Ratings: Provide prefabricated building columns listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for ratings indicated, based on testing in accordance with ASTM E119.
1. Fire-Resistance Rating: **[4 hours][3 hours][2 hours][As indicated]**.

2.8 SHELF ANGLES

- A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive **3/4-inch (19-mm)** bolts, spaced not more than **6 inches (150 mm)** from ends and **24 inches (600 mm)** o.c., unless otherwise indicated.
1. Provide mitered and welded units at corners.
 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately **2 inches (50 mm)** larger than expansion or control joint.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. Galvanize **[and prime]** shelf angles located in exterior walls.
- D. Prime shelf angles located in exterior walls with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**
- E. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.9 METAL LADDERS

- A. General:
1. Comply with ANSI A14.3, **[except for elevator pit ladders]**.
 2. For elevator pit ladders, comply with ASME A17.1/CSA B44.
- B. Steel Ladders:
1. Space siderails **[16 inches (406 mm)][18 inches (457 mm)]** apart unless otherwise indicated.
 2. Siderails: Continuous, **[3/8-by-2-1/2-inch (9.5-by-64-mm)][1/2-by-2-1/2-inch (12.7-by-64-mm)]** steel flat bars, with eased edges.

3. Rungs: **[3/4-inch- (19-mm-) diameter][3/4-inch- (19-mm-) square][1-inch- (25-mm-) diameter][1-inch- (25-mm-) square]**, steel bars.
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
6. Nonslip Surfaces for Steel Ladders: Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1) **[IKG]**
 - 2) **[SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]**
 - 3) **<Insert manufacturer's name>**
 - b. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1) **[IKG]**
 - 2) **[SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]**
 - 3) **<Insert manufacturer's name>**
7. Source Limitations: Obtain nonslip surfaces from single source from single manufacturer.
8. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than **[1/2 inch (12 mm)][3/4 inch (19 mm)]** in least dimension.
9. Support each ladder **[at top and bottom and not more than 60 inches (1500 mm) o.c.]** with welded or bolted steel brackets.
10. Galvanize **[and prime][exterior]** ladders, including brackets.
11. Prime **[exterior]** ladders, including brackets and fasteners, with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

C. Aluminum Ladders:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Halliday Products]**
 - b. **[Kattsafe]**
 - c. **[O'Keeffe's Inc.]**
 - d. **[Precision Ladders, LLC]**
 - e. **[Royalite Manufacturing, Inc.]**
 - f. **[Thompson Fabricating, LLC]**
 - g. **[UPNOVR, Inc.]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. [Halliday Products]
 - b. [Kattsafe]
 - c. [O'Keeffe's Inc.]
 - d. [Precision Ladders, LLC]
 - e. [Royalite Manufacturing, Inc.]
 - f. [Thompson Fabricating, LLC]
 - g. [UPNOVR, Inc.]
 - h. <Insert manufacturer's name>
3. Source Limitations: Obtain aluminum ladders from single source from single manufacturer.
 4. Space siderails [16 inches (406 mm)][18 inches (457 mm)] apart unless otherwise indicated.
 5. Siderails: Continuous extruded-aluminum channels or tubes, not less than 2-1/2 inches (64 mm) deep, 3/4 inch (19 mm) wide, and 1/8 inch (3.2 mm) thick.
 6. Rungs: Extruded-aluminum tubes, not less than 3/4 inch (19 mm) deep and not less than 1/8 inch (3.2 mm) thick, with ribbed tread surfaces.
 7. Fit rungs in centerline of siderails; fasten by welding or with stainless steel fasteners or brackets and aluminum rivets.
 8. Provide platforms as indicated fabricated from [pressure-locked aluminum bar grating][or][extruded-aluminum plank grating], supported by extruded-aluminum framing. Limit openings in gratings to no more than [1/2 inch (12 mm)][3/4 inch (19 mm)] in least dimension.
 9. Support each ladder[at top and bottom and not more than 60 inches (1500 mm) o.c.] with welded or bolted aluminum brackets.
 10. Provide minimum 72-inch- (1830-mm-) high, hinged security door with padlock hasp at foot of ladder to prevent unauthorized ladder use.

2.10 ALTERNATING TREAD DEVICES

- A. Alternating Tread Devices: Fabricate alternating tread devices of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Lapeyre Stair Inc.]
 - b. [Precision Ladders, LLC]
 - c. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Lapeyre Stair Inc.]
 - b. [Precision Ladders, LLC]
 - c. <Insert manufacturer's name>
 3. Tread depth is not to be less than 5 inches (127 mm) exclusive of nosing or less than 8-1/2 inches (216 mm), including the nosing, tread width is not to be less than 7 inches (178 mm), and riser height is not to be more than 9-1/2 inches (241 mm).
 4. Tread depth is not to be less than 8-1/2 inches (216 mm) exclusive of nosing or less than 10-1/2

- inches (267 mm), including the nosing, tread width is not to be less than 7 inches (178 mm), and riser height is not to be more than 8 inches (203 mm).
5. Fabricate from [steel][stainless steel][aluminum] and assemble by welding or with stainless steel fasteners.
 6. Comply with applicable railing requirements in Section 055213 "Pipe and Tube Railings."
- B. Galvanize[and prime][exterior]steel alternating tread devices, including treads, railings, brackets, and fasteners.
 - C. Prime [exterior]steel alternating tread devices, including treads, railings, brackets, and fasteners, with [zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]

2.11 METAL SHIPS' LADDERS AND PIPE CROSSOVERS

- A. Provide metal [ships' ladders][and][pipe crossovers] where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
 1. Treads are not to be less than 5 inches (127 mm) exclusive of nosing or less than 8-1/2 inches (216 mm) including the nosing, and riser height is not to be more than 9-1/2 inches (241 mm).
 2. Fabricate [ships' ladders][and][pipe crossovers], including railings from [steel][stainless steel][aluminum].
 3. Fabricate treads[and platforms] from [welded or pressure-locked steel bar][pressure-locked stainless steel bar][pressure-locked aluminum bar][extruded-aluminum plank] grating. Limit openings in gratings to no more than [1/2 inch (12 mm)][3/4 inch (19 mm)] in least dimension.
 4. Fabricate treads[and platforms] from [rolled-steel floor][rolled-stainless steel floor][rolled-aluminum-alloy tread][abrasive-surface floor] plate.
 5. Comply with applicable railing requirements in Section 055213 "Pipe and Tube Railings."
- B. Galvanize[and prime][exterior]steel [ships' ladders][and][pipe crossovers], including treads, railings, brackets, and fasteners.
- C. Prime [exterior]steel [ships' ladders][and][pipe crossovers], including treads, railings, brackets, and fasteners, with [zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]

2.12 METAL FLOOR PLATE

- A. Fabricate from [rolled-steel floor][rolled-stainless steel floor][rolled-aluminum-alloy tread][abrasive-surface floor] plate of thickness indicated below:
 1. Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][1/4 inch (6.4 mm)][5/16 inch (8 mm)][3/8 inch (9.5 mm)][As indicated].
- B. Provide grating sections where indicated, fabricated from [welded or pressure-locked steel bar][pressure-locked stainless steel bar][pressure-locked aluminum bar][extruded-aluminum plank] grating. Limit openings in gratings to no more than [1/2 inch (12 mm)][3/4 inch (19 mm)][1 inch (25 mm)] in least dimension.
- C. Provide [steel][stainless steel][aluminum] angle supports as indicated.
- D. Include [steel][stainless steel][aluminum] angle stiffeners, and fixed and removable sections as indicated.

- E. Provide flush **[steel][stainless steel][aluminum]** bar drop handles for lifting removable sections, one at each end of each section.

2.13 ELEVATOR PIT SUMP COVERS

- A. Fabricate from **[1/8-inch (3.2-mm)][3/16-inch (4.8-mm)][rolled-steel][abrasive-surface]** floor plate with four **1-inch- (25-mm-)** diameter holes for water drainage and for lifting.
- B. Fabricate from welded or pressure-locked steel bar grating. Limit openings in gratings to no more than **[1/2 inch (12 mm)][3/4 inch (19 mm)][1 inch (25 mm)]** in least dimension.
- C. Provide steel angle supports unless otherwise indicated.

2.14 STRUCTURAL-STEEL DOOR FRAMES

- A. Fabricate structural-steel door frames from steel shapes, plates, and bars of size and to dimensions indicated, fully welded together, with **5/8-by-1-1/2-inch (16-by-38-mm)** steel channel stops, unless otherwise indicated. Plug-weld built-up members and continuously weld exposed joints. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than **10 inches (250 mm)** o.c. Reinforce frames and drill and tap as necessary to accept finish hardware.
 - 1. Provide with integrally welded steel strap anchors for securing door frames into adjoining concrete or masonry.
- B. Extend bottom of frames to floor elevation indicated with steel angle clips welded to frames for anchoring frame to floor with expansion shields and bolts.
- C. Galvanize **[and prime][exterior]** steel frames.
- D. Prime **[exterior]** steel frames with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.15 MISCELLANEOUS STEEL TRIM

- A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.
- B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.
 - 1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.
- C. Galvanize **[and prime][exterior]** miscellaneous steel trim.
- D. Prime **[exterior]** miscellaneous steel trim with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.16 METAL BOLLARDS

- A. Fabricate metal bollards from **[Schedule 80 steel pipe][Schedule 40 steel pipe][Schedule 80 stainless steel, No. 4/180-grit finish][1/4-inch (6.4-mm) wall-thickness rectangular steel tubing][steel shapes, as indicated]**.
1. Cap bollards with **1/4-inch- (6.4-mm-)** thick, **[steel][stainless steel, ASTM A480/A480M, No. 4 finish]** plate with **[flat][sloped][domed]** top.
 2. Where bollards are indicated to receive controls for door operators, provide cutouts for controls and holes for wire.
 3. Where bollards are indicated to receive light fixtures, provide cutouts for fixtures and holes for wire.
- B. Fabricate bollards with **3/8-inch- (9.5-mm-)** thick, **[steel][stainless steel, ASTM A480/A480M, No. 4 finish]** baseplates for bolting to concrete slab. Drill baseplates at all four corners for **3/4-inch (19-mm)** anchor bolts.
1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.
- C. Fabricate sleeves for bollard anchorage from steel or stainless steel **[pipe][or][tubing]** with **1/4-inch- (6.4-mm-)** thick, steel or stainless steel plate welded to bottom of sleeve. Make sleeves not less than **8 inches (200 mm)** deep and **3/4 inch (19 mm)** larger than OD of bollard.
- D. Fabricate internal sleeves for removable bollards from Schedule 80 **[steel][stainless steel]** pipe or **1/4-inch (6.4-mm)** wall-thickness **[steel][stainless steel]** tubing with an OD approximately **1/16 inch (1.5 mm)** less than ID of bollards. Match drill sleeve and bollard for **3/4-inch (19-mm) [steel][stainless steel]** machine bolt.
- E. Prime steel bollards with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.17 VEHICULAR BARRIER CABLE SYSTEMS

- A. Vehicular Barrier Cable Systems: Of diameter required by performance requirements, but not less than **1/2-inch- (12-mm-)** diameter, **[zinc-coated steel wire rope][stainless steel wire rope][zinc-coated steel prestressing strand]** with turnbuckles, toggles, machine swage terminals, and other fittings and accessories for securing to structural columns and walls and for tightening barrier cable.

2.18 PIPE AND DOWNSPOUT GUARDS

- A. Fabricate **[pipe][downspout]** guards from **3/8-inch- (9.5-mm-)** thick by **12-inch- (300-mm-)** wide, **[steel][stainless steel, ASTM A480/A480M, No. 4 finish]** plate, bent to fit flat against the wall or column at both ends and to fit around pipe with **2-inch (50-mm)** clearance between pipe and pipe guard. Drill each end for two **3/4-inch (19-mm)** anchor bolts.
- B. Galvanize **[and prime]** steel **[pipe][downspout]** guards.
- C. Prime steel **[pipe][downspout]** guards with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.19 ABRASIVE METAL NOSINGS, TREADS, AND THRESHOLDS

- A. Cast-Metal Units: Cast [iron][aluminum][**bronze (lead red or semired brass)**][**nickel silver (lead nickel bronze)**], with an integral-abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [American Safety Tread Co., Inc]
 - b. [Balco; a CSW Industrials Company]
 - c. [Barry Pattern & Foundry Co., Inc]
 - d. [Safe-T-Metal Company, Inc.]
 - e. [Wooster Products Inc]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [American Safety Tread Co., Inc]
 - b. [Balco; a CSW Industrials Company]
 - c. [Barry Pattern & Foundry Co., Inc]
 - d. [Safe-T-Metal Company, Inc.]
 - e. [Wooster Products Inc]
 - f. <Insert manufacturer's name>
 3. Source Limitations: Obtain units from single source from single manufacturer.
 4. Cross-hatched nosings, **4 inches (100 mm)** wide, with **1/4-inch- (6-mm-)** thick **1-inch (25-mm)** lip, for casting into concrete.
 5. Cross-hatched nosings, **1-1/2 inches (38-mm)** wide, **3/8-inch- (9.5-mm-)** thick **1-1/2 inch (38-mm)** lip, for casting into concrete.
 6. Cross-hatched Treads: Full depth of tread with **3/4-by-3/4-inch (19-by-19-mm)** nosing, for application over bent plate treads or existing stairs.
 7. Fluted-Saddle-Type Thresholds: **5 inches (125 mm)** wide by **1/2 inch (12 mm)** high, with tapered edges.
 8. Fluted-Interlocking or -Hook-Strip Thresholds: **5 inches (125 mm)** wide by **5/8 inch (16 mm)** high, with tapered edge.
 9. Thresholds: Plain-stepped- (stop-) type units, **5 inches (125 mm)** wide by **1/2 inch (12 mm)** high, with **1/2-inch (12-mm)** step.
- B. Extruded Units: [**Aluminum**][**Bronze**], with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [American Safety Tread Co., Inc]
 - b. [Amstep Products]
 - c. [Armstrong Products, Inc]

- d. **[Balco; a CSW Industrials Company]**
 - e. **[Nystrom, Inc.]**
 - f. **[Wooster Products Inc]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Safety Tread Co., Inc]**
 - b. **[Amstep Products]**
 - c. **[Armstrong Products, Inc]**
 - d. **[Balco; a CSW Industrials Company]**
 - e. **[Nystrom, Inc.]**
 - f. **[Wooster Products Inc]**
 - g. **<Insert manufacturer's name>**
 3. Source Limitations: Obtain units from single source from single manufacturer.
 4. Provide ribbed units, with abrasive filler strips projecting **1/16 inch (1.5 mm)** above aluminum extrusion.
 5. Provide solid-abrasive-type units without ribs.
 6. Nosings:
 - a. Square-back units, **[1-7/8 inches (48 mm)][3 inches (75 mm)][4 inches (100 mm)]** wide, for casting into concrete steps.
 - b. Beveled-back units, **[3 inches (75 mm)][4 inches (100 mm)]** wide with **1-3/8-inch (35-mm)** lip, for surface mounting on existing stairs.
 - c. Two-piece units, **3 inches (75 mm)** wide, with subchannel for casting into concrete steps.
 7. Treads: **[Square][Beveled]-back** units, full depth of tread with **1-3/8-inch (35-mm)** lip, for application over existing stairs.
 - C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
 - D. Drill for mechanical anchors and countersink. Locate holes not more than **4 inches (100 mm)** from ends and not more than **12 inches (300 mm)** o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.
 1. Provide two rows of holes for units more than **5 inches (125 mm)** wide, with two holes aligned at ends and intermediate holes staggered.
 - E. Apply bituminous paint to concealed surfaces of cast-metal units.
 - F. Apply clear lacquer to concealed surfaces of extruded units.
- 2.20 CAST-IRON WHEEL GUARDS
- A. Provide wheel guards made from cast-iron, **3/4-inch- (19-mm-)** thick, hollow-core construction, of size and shape indicated. Provide holes for countersunk anchor bolts and grouting.
 - B. Prime cast-iron wheel guards with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.21 METAL DOWNSPOUT BOOTS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[J.R. Hoe & Sons Inc.]**
 2. **[Neenah Foundry Company]**
 3. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[J.R. Hoe & Sons Inc.]**
 2. **[Neenah Foundry Company]**
 3. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain downspout boots from single source from single manufacturer.
- D. Provide downspout boots made from cast **[iron][aluminum]** in heights indicated with inlets of size and shape to suit downspouts. Provide units with flanges and holes for countersunk anchor bolts.
1. Outlet: **[Vertical, to discharge into pipe][Horizontal, to discharge into pipe][At 35 degrees from horizontal, to discharge onto splash block or pavement]**.
- E. Prime cast-iron downspout boots with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.22 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
- B. Galvanize bearing and leveling plates.
- C. Prime plates with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.23 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. Size loose lintels to provide bearing length at each side of openings equal to one-twelfth of clear span, but not less than **8 inches (200 mm)** unless otherwise indicated.
- C. Galvanize **[and prime]** loose steel lintels located in exterior walls.
- D. Prime loose steel lintels located in exterior walls with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.24 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.25 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.
- B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.26 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean galvanized surfaces of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.
- C. Shop prime iron and steel items[**not indicated to be galvanized**] unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
 - 1. Shop prime with [**universal shop primer**][**primers specified in Section 099113 "Exterior Painting"**][**primers specified in Section 099123 "Interior Painting"**] unless [**zinc-rich primer is**][**primers specified in Section 099600 "High-Performance Coatings" are**] indicated.
- D. Preparation for Shop Priming: Prepare surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**][**SSPC-SP 3, "Power Tool Cleaning."**][**requirements indicated below:**]
 - 1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 4. Other Steel Items: SSPC-SP 3, "Power Tool Cleaning."
 - 5. Galvanized-Steel Items: SSPC-SP 16, "Brush-off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals."
- E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.27 ALUMINUM FINISHES

- A. As-Fabricated Finish: AA-M12.
- B. Clear Anodic Finish: AAMA 611, Class I, AA-M12C22A41.

PART 3 - EXECUTION**3.1 INSTALLATION, GENERAL**

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
 - 1. Cast Aluminum: Heavy coat of bituminous paint.
 - 2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLATION OF MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for **[ceiling-hung toilet partitions][operable partitions][overhead doors][and][overhead grilles]** securely to, and rigidly brace from, building structure.
- C. Anchor shelf angles securely to existing construction with **[expansion anchors][anchor bolts][through bolts]**.
- D. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.
 - 1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.

- E. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installation of Bearing and Leveling Plates" Article.

- 1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.3 INSTALLATION OF PREFABRICATED BUILDING COLUMNS

- A. Install prefabricated building columns to comply with ANSI/AISC 360, "Specifications for Structural Steel Buildings," and with requirements applicable to listing and labeling for fire-resistance rating indicated.

3.4 INSTALLATION OF SHELF ANGLES

- A. Install shelf angles as required to keep masonry level, at correct elevation, and flush with vertical plane.

3.5 INSTALLATION OF METAL LADDERS

- A. Secure ladders to adjacent construction with the clip angles attached to the stringer.
- B. Install brackets as required for securing of ladders welded or bolted to structural steel or built into masonry or concrete.

3.6 INSTALLATION OF ALTERNATING TREAD DEVICES

- A. Secure top and bottom of alternating tread devices to construction to comply with manufacturer's written instructions.

3.7 INSTALLATION OF METAL SHIPS' LADDERS AND PIPE CROSSOVERS

- A. Secure top and bottom of ships' ladders to construction to comply with manufacturer's written instructions.
- B. Secure pipe crossovers to construction to comply with manufacturer's written instructions.

3.8 INSTALLATION OF METAL FLOOR PLATE

- A. Install metal floor plates flush with finished surface. Adjust as required to avoid lippage that could present a tripping hazard.

3.9 INSTALLATION OF ELEVATOR PIT SUMP COVERS

- A. Install tops of elevator sump pit cover plates and frames flush with finished surface. Adjust as required to avoid lippage that could present a tripping hazard.

3.10 INSTALLATION OF STRUCTURAL-STEEL DOOR FRAMES

- A. Fasten structural steel door frames to the floor slab by means of angle clips and expansion bolts. Anchor door jambs to adjacent construction in accordance with shop drawing details.

3.11 INSTALLATION OF MISCELLANEOUS STEEL TRIM

- A. Anchor to concrete construction to comply with manufacturer's written instructions.

3.12 INSTALLATION OF METAL BOLLARDS

- A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.
 - 1. Do not fill removable bollards with concrete.
- B. Anchor bollards to existing construction with **[expansion anchors][anchor bolts][through bolts]**. Provide four **3/4-inch (19-mm)** bolts at each bollard unless otherwise indicated.
 - 1. Embed anchor bolts at least **4 inches (100 mm)** in concrete.
- C. Anchor bollards in concrete **[with pipe sleeves preset and anchored into concrete][in formed or core-drilled holes not less than 42 inches (1050 mm) deep and 3/4 inch (19 mm) larger than OD of bollard]**. Fill annular space around bollard solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately **1/8 inch (3 mm)** toward bollard.
- D. Anchor bollards in place with concrete footings. Center and align bollards in holes **3 inches (75 mm)** above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.
- E. Anchor internal sleeves for removable bollards in **[concrete by inserting in pipe sleeves preset into concrete][formed or core-drilled holes not less than 42 inches (1050 mm) deep and 3/4 inch (19 mm) larger than OD of sleeve]**. Fill annular space around internal sleeves solidly with shrinkage-resistant grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately **1/8 inch (3 mm)** toward internal sleeve.
- F. Anchor internal sleeves for removable bollards in place with concrete footings. Center and align sleeves in holes **3 inches (75 mm)** above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace sleeves in position until concrete has cured.
- G. Place removable bollards over internal sleeves and secure with **3/4-inch (19-mm)** machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. Owner furnishes padlocks.
- H. Fill bollards solidly with concrete, mounding top surface to shed water.
 - 1. Do not fill removable bollards with concrete.

3.13 INSTALLATION OF VEHICULAR BARRIER CABLE SYSTEMS

- A. Install vehicular barrier cable systems at locations indicated, mounted at heights indicated on Drawings above the parking surface. Anchor **[wire ropes][steel prestressing strand]** to structural columns and walls and tension to withstand vehicle loading as specified in "Performance Requirements" Article with no cable tensioned less than **3000 lbf (13.3 kN)**. Do not displace supporting components.

3.14 INSTALLATION OF PIPE AND DOWNSPOUT GUARDS

- A. Provide pipe guards at exposed vertical pipes in **[parking garage][at locations indicated on Drawings]** where not protected by curbs or other barriers. Install by bolting to wall or column with expansion anchors. Provide four **3/4-inch (19-mm)** bolts at each pipe guard. Mount pipe guards with top edge **26 inches (660 mm)** above driving surface.

3.15 INSTALLATION OF ABRASIVE METAL NOSINGS, TREADS, AND THRESHOLDS

- A. Center nosings on tread widths unless otherwise indicated.
- B. For nosings embedded in concrete steps or curbs, align nosings flush with riser faces and level with tread surfaces.
- C. Seal thresholds exposed to exterior with elastomeric sealant complying with Section 079200 "Joint Sealants" to provide a watertight installation.

3.16 INSTALLATION OF CAST-IRON WHEEL GUARDS

- A. Anchor wheel guards to concrete or masonry construction to comply with manufacturer's written instructions. Fill cores solidly with concrete.

3.17 INSTALLATION OF METAL DOWNSPOUT BOOTS

- A. Anchor metal downspout boots to concrete or masonry construction to comply with manufacturer's written instructions.
- B. Secure downspouts terminations to downspouts and substrate per manufacturer's instructions.

3.18 INSTALLATION OF LOOSE BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with shrinkage-resistant grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.19 REPAIRS

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop

paint are specified in [**Section 099113 "Exterior Painting."**][**Section 099123 "Interior Painting."**]

- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 50 00 00

SECTION 05 51 00 00 - METAL FLOOR PLATE STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Industrial Class stairs with steel floor plate treads.
2. Steel railings and guards attached to metal stairs.
3. Steel handrails attached to walls adjacent to metal stairs.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs[, **railings, and guards**].
1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, [**blocking for attachment of wall-mounted handrails,**] and items with integral anchors, that are to be embedded in concrete or masonry.
 2. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.
- D. Schedule installation of railings and guards so wall attachments are made only to completed walls.
1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.3 ACTION SUBMITTALS

A. Product Data: For metal floor plate stairs and the following:

1. Metal floor plate treads.
2. Woven-wire mesh.
3. Welded-wire mesh.
4. Shop primer products.
5. Grout.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental product declaration.
3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for

- each regional material.
- 4. Environmental Product Declaration (EPD): For each product.
- 5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
- 6. Environmental Product Declaration: For each product.
- 7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
- 8. Environmental Product Declaration: For each product.
- 9. Environmental Product Declaration: For each product.
- 10. Third-Party Certifications: For each product.
- 11. Third-Party Certified Life Cycle Assessment: For each product.
- 12. Health Product Declaration (HPD): For each product.
- 13. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

C. Shop Drawings:

- 1. Include plans, elevations, sections, details, and attachments to other work.
- 2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
- 3. Include plan at each level.
- 4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.

D. Delegated Design Submittal: For stairs[, **railings, and guards**], including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the **[jurisdiction][State]** in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 - 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 - 2. Protect steel members and packaged materials from corrosion and deterioration.

3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stairs[, **railings, and guards**], including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Uniform Load: **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm)**.
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 5. Limit deflection of treads, platforms, and framing members to **[L/360]<Insert deflection ratio>**.
- C. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.
- D. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.
 1. Component Importance Factor: **<Insert requirement>**.

2.2 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For

components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

C. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

D. Abrasive-Surface Floor Plate: Steel plate [with abrasive granules rolled into surface][or][with abrasive material metallurgically bonded to steel].

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[IKG]**
 - b. **[Ross Technology Company]**
 - c. **[SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]**

- d. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [IKG]
 - b. [Ross Technology Company]
 - c. [SlipNOT Metal Safety Flooring, division of Traction Technologies Holdings, LLC]
 - d. <Insert manufacturer's name>
- 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- E. Steel Tubing for Railings and Guards: [ASTM A500/A500M (cold formed)][or][ASTM A513/A513M].
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
 - 2. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site.
 - 3. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site.
 - 4. Regional Materials: Products shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.
 - 5. Indigenous Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - 6. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - 7. Provide galvanized finish for exterior installations and where indicated.
- F. Steel Pipe for Railings and Guards: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
 - 2. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site.
 - 3. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site.
 - 4. Regional Materials: Products shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.
 - 5. Indigenous Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - 6. Regional Materials: Products shall be fabricated within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - 7. Provide galvanized finish for exterior installations and where indicated.

- G. Woven-Wire Mesh, Steel: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- H. Woven-Wire Mesh, Aluminum: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch- (4.1-mm-)** diameter, aluminum wire complying with **ASTM B211 (ASTM B211M)**, Alloy 6061-T94.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
 2. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- I. Welded-Wire Mesh: **[Diamond][Square]** pattern, **2-inch (50-mm)** welded-wire mesh, made from **0.236-inch (6.0-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- J. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.

2.3 FASTENERS

- A. General: Provide **[zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5][Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5]** where built into exterior walls.
1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated **[and capable of withstanding design loads]**.
- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for **[exterior stairs][stairs indicated to be galvanized][stairs indicated to be shop primed with zinc-rich primer]**.
- E. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM

E488/E488M, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593, and nuts, **ASTM F594 (ASTM F836M)**.

2.4 MISCELLANEOUS MATERIALS

- A. Welding Electrodes: Comply with AWS requirements.
- B. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- C. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- D. Zinc-Rich Primer: Comply with SSPC-Paint 20, **[Type I-A][Type I-B][Type I-C][Type II]**, Level **[1][2][3]**, and compatible with topcoat.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with **[SSPC-Paint 20][ASTM A780/A780M]** and compatible with paints specified to be used over it.
- G. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for **[interior][exterior]** use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, railings, guards, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs[, **railings, and guards**] in shop to greatest extent possible.
 1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.

- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Weld exposed corners and seams continuously unless otherwise indicated.
 - 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish # 3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]**.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 - 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 - 2. Locate joints where least conspicuous.
 - 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
 - 4. Provide weep holes where water may accumulate internally.

2.6 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Industrial Class, unless more stringent requirements are indicated.
- B. Stair Framing:
 - 1. Stringers: Fabricate of **[steel plates][or][steel channels]**.
 - a. Stringer Size: **[As required to comply with "Performance Requirements" Article][As indicated on Drawings]**.
 - b. Provide closures for exposed ends of channel stringers.
 - c. Finish: **[Shop primed][Painted][Galvanized]**.
 - 2. Platforms and Tread Supports: Construct of **[steel plate][or][steel channel]** headers and miscellaneous framing members as **[required to comply with "Performance Requirements" Article][indicated on Drawings]**.
 - a. Provide closures for exposed ends of channel framing.
 - b. Finish: **[Shop primed][Painted][Galvanized]**.
 - 3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers.
 - 4. Where stairs are enclosed by gypsum board **[shaft-wall]** assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.

5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Floor Plate Stairs: Form treads and platforms to configurations shown from **[rolled-steel][abrasive-surface]** floor plate of thickness **[needed to comply with performance requirements, but not less than 1/4 inch (6.4 mm)][needed to comply with performance requirements, but not less than 3/16 inch (4.8 mm)][needed to comply with performance requirements, but not less than 1/8 inch (3.2 mm)][indicated on Drawings]**.
 1. Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.
 2. Form treads with integral nosing and back edge stiffener. Form risers from steel sheet not less than **0.097 inch (2.5 mm)** thick, welded to tread nosings and stiffeners and to platforms.
 3. Form treads with integral nosing and back edge stiffener and with open risers.
 4. Weld steel supporting brackets to stringers and weld treads to brackets.
 5. Fabricate platforms with integral nosings matching treads and weld to platform framing.
 6. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
- D. Risers: **[Open][Solid]**.
- E. Toe Plates: Provide toe plates around openings and at edge of open-sided floors and platforms, and at open ends and open back edges of treads.
 1. Material and Finish: Match treads and platforms.
 2. Fabricate to dimensions and details indicated.

2.7 FABRICATION OF STAIR RAILINGS AND GUARDS

- A. Comply with applicable requirements in Section 055213 "Pipe and Tube Railings."
- B. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.
 1. Rails and Posts: **[1-5/8-inch- (41-mm-) diameter][1-1/2-inch- (38-mm-) square]** top and bottom rails and **1-1/2-inch- (38-mm-) square** posts.
 2. Picket Infill: **[1/2-inch- (13-mm-)][3/4-inch- (19-mm-)][round][square]** pickets spaced to prohibit the passage of a **4-inch (100-mm)** diameter sphere.
 3. Mesh Infill: **[Woven][Welded]-wire mesh [crimped][welded]** into **1-by-1/2-by-1/8-inch (25-by-13-by-3-mm)** steel channel frames. Orient wire mesh with **[diamonds vertical][wires perpendicular and parallel to top rail][wires horizontal and vertical]**.
 4. Intermediate Rails Infill: **[1-5/8-inch- (41-mm-) diameter][1-1/2-inch- (38-mm-) square]** intermediate rails spaced less than **[12 inches (305 mm)][21 inches (533 mm)]** clear.
- C. Welded Connections: Fabricate railings and guards with welded connections.
 1. Fabricate connections that are exposed to weather in a manner that excludes water.
 - a. Provide weep holes where water may accumulate internally.
 2. Cope components at connections to provide close fit, or use fittings designed for this purpose.
 3. Weld all around at connections, including at fittings.
 4. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 5. Obtain fusion without undercut or overlap.
 6. Remove flux immediately.

7. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]** as shown in NAAMM AMP 521.

D. Form changes in direction of railings and guards as follows:

1. As detailed.
2. By bending[**or by inserting prefabricated elbow fittings**].
3. By flush bends[**or by inserting prefabricated flush-elbow fittings**].
4. By radius bends of radius indicated[**or by inserting prefabricated elbow fittings of radius indicated**].
5. By inserting prefabricated **[elbow fittings][flush-elbow fittings][elbow fittings of radius indicated]**.

E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required.

1. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

F. Close exposed ends of railing and guard members with prefabricated end fittings.

G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.

1. Close ends of returns unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.

H. Connect posts to stair framing by direct welding unless otherwise indicated.

I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work.

1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
2. For galvanized railings and guards, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
3. For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
4. Provide type of bracket **[with flange tapped for concealed anchorage to threaded hanger bolt][with predrilled hole for exposed bolt anchorage]** and that provides **1-1/2-inch (38-mm)** clearance from inside face of handrail to finished wall surface.

J. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports.

1. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.8 FINISHES

A. Finish metal stairs after assembly.

B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- C. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."][SSPC-SP 3, "Power Tool Cleaning."][minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:]**
1. Exterior Stairs: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Interior Stairs:
 - a. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - b. SSPC-SP 3, "Power Tool Cleaning."
- D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF METAL STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces.

- a. Clean bottom surface of baseplates.
- b. Set steel stair baseplates on wedges, shims, or leveling nuts.
- c. After stairs have been positioned and aligned, tighten anchor bolts.
- d. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
- e. Promptly pack grout solidly between bearing surfaces and plates to ensure that no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints.

1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
3. Comply with requirements for welding in "Fabrication, General" Article.

3.3 INSTALLATION OF RAILINGS AND GUARDS

A. Adjust railing and guard systems before anchoring to ensure matching alignment at abutting joints with tight, hairline joints.

1. Space posts at spacing indicated or, if not indicated, as required by design loads.
2. Plumb posts in each direction, within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
3. Align rails and guards so variations from level for horizontal members and variations from parallel with rake of stairs for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
4. Secure posts, rail ends, and guard ends to building construction as follows:
 - a. Anchor posts to steel by **[welding][or][bolting]** to steel supporting members.
 - b. Anchor handrail and guard ends to concrete and masonry with steel round flanges welded to rail and guard ends and anchored with post-installed anchors and bolts.

B. Attach handrails to wall with wall brackets.

1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
2. Secure wall brackets to building construction as **required to comply with performance requirements.][follows:]**
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - b. For hollow masonry anchorage, use toggle bolts.
 - c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - d. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated]**wood backing between studs. Coordinate with stud installation to locate backing members.
 - e. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
 - f. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or

through concealed steel reinforcements.

3.4 REPAIR

A. Touchup Painting:

1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**][**Section 099600 "High-Performance Coatings."**][**Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]

- #### B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 51 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 51 13 00 - METAL PAN STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preassembled steel stairs with **[concrete-filled][precast concrete][precast terrazzo][epoxy-resin-filled][and][abrasive-coating-finished, formed-metal]** treads.
2. **[Steel tube]** railings and guards attached to metal stairs.
3. **[Steel tube]** handrails attached to walls adjacent to metal stairs.
4. Railing gates at the level of exit discharge.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs[, **railings, and guards**].
 1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, **[blocking for attachment of wall-mounted handrails,]** and items with integral anchors, that are to be embedded in concrete or masonry.
 2. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.
- D. Schedule installation of railings and guards so wall attachments are made only to completed walls.
 1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.3 ACTION SUBMITTALS

A. Product Data: For metal pan stairs and the following:

1. Perforated metal.
2. Woven-wire mesh.
3. Welded-wire mesh.
4. Prefilled metal-pan-stair treads.
5. Abrasive nosings.
6. Shop primer products.
7. Nonslip-aggregate concrete finish.
8. Abrasive-coating finish to formed-metal stairs.
9. Precast concrete treads.
10. Precast terrazzo treads.
11. Epoxy-resin-filled stair treads.

12. Handrail wall brackets.
13. Grout.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental product declaration.
3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
4. Environmental Product Declaration (EPD): For each product.
5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
6. Environmental Product Declaration: For each product.
7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
8. Environmental Product Declaration: For each product.
9. Environmental Product Declaration: For each product.
10. Third-Party Certifications: For each product.
11. Third-Party Certified Life Cycle Assessment: For each product.
12. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

C. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work.
2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
3. Include plan at each level.
4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.
5. Indicate profile and dimensions of precast terrazzo treads.
6. Indicate profile and dimensions of epoxy-resin-filled treads.

D. Samples for Verification: For each type and finish of **[nosing][precast terrazzo tread][epoxy-resin-filled tread]**.

E. Delegated Design Submittal: For stairs, **[railings and guards,][precast terrazzo treads,][epoxy-resin-filled treads]**, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the **[jurisdiction][State]** in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 - 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 - 2. Protect steel members and packaged materials from corrosion and deterioration.
 - 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
 - a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stairs, **[railings and guards,][precast terrazzo treads,][epoxy-resin-filled treads]**, including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Uniform Load: **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 - 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm)**.
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 - 5. Limit deflection of treads, platforms, and framing members to **[L/360]<Insert deflection ratio>** or **1/4 inch (6.4 mm)**, whichever is less.
- C. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:

- a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.
- D. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.
 1. Component Importance Factor: **<Insert requirement>**.

2.2 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- C. Steel Tubing for Railings and Guards: **[ASTM A500/A500M (cold formed)][or][ASTM A513/A513M]**.
 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.

- site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 7. Provide galvanized finish for exterior installations and where indicated.
- D. Steel Pipe for Railings and Guards: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 7. Provide galvanized finish for exterior installations and where indicated.
- E. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, [**either commercial steel, Type B, or** structural steel, **Grade 25 (Grade 170)**, unless another grade is required by design loads; exposed.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, [**either commercial steel, Type B, or** structural steel, **Grade 30 (Grade 205)**, unless another grade is required by design loads.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.

2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Galvanized Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, [**either commercial steel, Type B, or** structural steel, **Grade 33 (Grade 230)**, unless another grade is required by design loads.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Expanded-Metal, Carbon Steel: ASTM F1267, [**Type I (expanded)**][**Type II (expanded and flattened)**], Class 1 (uncoated).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.

- site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
7. Style Designation: **[3/4 number 13][1-1/2 number 10]<Insert designation>**.
- I. Perforated Metal, Uncoated: Cold-rolled steel sheet, ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel Type B, **[0.060 inch (1.52 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows][with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows]<Insert description>**.
 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - J. Perforated Metal, Galvanized Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, commercial steel Type B, **[0.064 inch (1.63 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>**.
 1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - K. Perforated Metal, Aluminum Sheet: **ASTM B209 (ASTM B209M)**, **[0.125 inch (3.18 mm)][0.063 inch (1.60 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>**.
 1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.

- L. Woven-Wire Mesh, Steel: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- M. Woven-Wire Mesh, Aluminum: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch- (4.1-mm-)** diameter, aluminum wire complying with **ASTM B211 (ASTM B211M)**, Alloy 6061-T94.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- N. Welded-Wire Mesh: **[Diamond][Square]** pattern, **2-inch (50-mm)** welded-wire mesh, made from **0.236-inch (6.0-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
- O. Aluminum Extrusions: **ASTM B221 (ASTM B221M)**, Alloy 6063-T6.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- P. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- Q. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- R. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (lead red brass) or No. C84400 (lead semired brass).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- S. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent lead nickel bronze).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- T. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.

2.3 ABRASIVE NOSINGS

- A. Cast-Metal Units: Cast [iron][aluminum][bronze][nickel silver], with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [American Safety Tread Co., Inc]
 - b. [Balco; a CSW Industrials Company]
 - c. [Barry Pattern & Foundry Co., Inc]
 - d. [Ecoglo, Inc.]
 - e. [Granite State Casting Co]
 - f. [Safe-T-Metal Company, Inc.]
 - g. [TrueNorth Steel]
 - h. [Wooster Products Inc]
 - i. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [American Safety Tread Co., Inc]
 - b. [Balco; a CSW Industrials Company]
 - c. [Barry Pattern & Foundry Co., Inc]
 - d. [Ecoglo, Inc.]
 - e. [Granite State Casting Co]
 - f. [Safe-T-Metal Company, Inc.]
 - g. [TrueNorth Steel]
 - h. [Wooster Products Inc]
 - i. <Insert manufacturer's name>
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
 4. Configuration: Cross-hatched units, **[3 inches (75 mm)][4 inches (100 mm)]** wide without lip.
- B. Extruded Units: **[Aluminum][Bronze]** units with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [American Safety Tread Co., Inc]
 - b. [Amstep Products]
 - c. [Armstrong Products, Inc]
 - d. [Balco; a CSW Industrials Company]
 - e. [Ecoglo, Inc.]
 - f. [Granite State Casting Co]
 - g. [Nystrom, Inc.]
 - h. [UPNOVR, Inc.]

- i. **[Wooster Products Inc]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[American Safety Tread Co., Inc]**
 - b. **[Amstep Products]**
 - c. **[Armstrong Products, Inc]**
 - d. **[Balco; a CSW Industrials Company]**
 - e. **[Ecoglo, Inc.]**
 - f. **[Granite State Casting Co]**
 - g. **[Nystrom, Inc.]**
 - h. **[UPNOVR, Inc.]**
 - i. **[Wooster Products Inc]**
 - j. **<Insert manufacturer's name>**
3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
4. Provide ribbed units, with abrasive filler strips projecting **1/16 inch (1.5 mm)** above aluminum extrusion.
5. Provide solid-abrasive units without ribs.
6. Nosings, Square-Back Units: **[1-7/8 inches (48 mm)][3 inches (75 mm)][4 inches (100 mm)]** wide, without lip.
7. Nosings, Two-Piece Units: **3 inches (75 mm)** wide, with subchannel for casting into concrete.
- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.
- E. Apply clear lacquer to concealed surfaces of extruded units set into concrete.

2.4 FASTENERS

- A. General: Provide **[zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5][Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5]** where built into exterior walls.
- 1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated[**and capable of withstanding design loads**].
- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- 1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for **[exterior stairs][stairs**

indicated to be galvanized][stairs indicated to be shop primed with zinc-rich primer].

- E. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593, and nuts, **ASTM F594 (ASTM F836M)**.

2.5 MISCELLANEOUS MATERIALS

- A. Handrail Wall Brackets: **[Cast nickel-silver,][Cast aluminum,][Cast bronze,][Cast stainless steel,]** center of rail **[2-1/2 inches (63.5 mm)][3-1/8 inches (79.4 mm)]<Insert dimension>** from face of wall.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Julius Blum & Co., Inc.]**
 - b. **[The Wagner Companies]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Julius Blum & Co., Inc.]**
 - b. **[The Wagner Companies]**
 - c. **<Insert manufacturer's name>**
- B. Welding Electrodes: Comply with AWS requirements.
- C. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Zinc-Rich Primer: Comply with SSPC-Paint 20, **[Type I-A][Type I-B][Type I-C][Type II]**, Level **[1][2][3]**, and compatible with topcoat.
- F. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish system indicated.
- G. Galvanizing Repair Paint: High-zinc-dust-content paint complying with **[SSPC-Paint 20][ASTM A780/A780M]** and compatible with paints specified to be used over it.

- H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- I. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for **[interior][exterior]** use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.
- J. Prefilled Concrete Treads:
 - 1. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with minimum 28-day compressive strength of **3000 psi (20 MPa)** and maximum aggregate size of **1/2 inch (13 mm)** unless otherwise indicated.
 - 2. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
 - 3. Plain Steel Welded-Wire Reinforcement: ASTM A1064/A10645M, **[steel,][galvanized steel,] 6 by 6 inches (152 by 152 mm)**, W1.4 by W1.4, unless otherwise indicated on Drawings.
 - a. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 - 4. Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening welded-wire reinforcement in place.
 - a. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.
- K. For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.6 PRECAST CONCRETE TREADS

- A. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of **5000 psi (35 MPa)** and a total air content of not less than 4 percent or more than 6 percent.
- B. Reinforcement: Galvanized, welded-wire reinforcement, **2 by 2 inches (50 by 50 mm)** by **0.062-inch-(1.6-mm-)** diameter steel wire; comply with ASTM A1064/A1064M, except for minimum wire size.

2.7 PRECAST TERRAZZO TREADS

- A. Precast Terrazzo Stair Treads: Epoxy terrazzo units cast in maximum lengths possible. Comply with manufacturer's written instructions for fabricating precast terrazzo units in sizes and profiles indicated.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Wausau Tile, Inc.]**
 - b. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[Wausau Tile, Inc.]**
- b. **<Insert manufacturer's name>**
3. Epoxy Resin Matrix: Manufacturer's standard recommended for use indicated.
4. Aggregates: Comply with NTMA gradation standards for mix indicated, and containing no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
5. Reinforcement: ASTM A615/A615M, **Grade 60 (Grade 420)** bars, as required by unit size, profile, and thickness.
6. Abrasive Inserts: **1/2-inch- (13-mm-)** wide, silicon carbon/epoxy mixture.
 - a. Provide three inserts, **1/2 inch (13 mm)** apart, with first insert located **1 inch (25 mm)** from nosing at adjacent stair riser locations.
7. Color: As selected by Architect from manufacturer's standard color selections.
8. Finish: Honed.
9. Surface Sealer: Slip- and stain-resistant, penetrating sealer that is chemically neutral with pH factor between 7 and 8; does not affect color or physical properties of terrazzo type indicated; is recommend by sealer manufacturer for use with specified terrazzo; and complies with NTMA guide specification for terrazzo type applicable for this Project.

2.8 EPOXY-RESIN-FILLED TREADS

- A. Epoxy-Resin-Filled Treads: **3/8-inch- (9.5-mm-)** thick, epoxy resin with **8000-psi (55 158-kPa)** compressive strength; set on steel subthread.
 1. Color: As selected by Architect from manufacturer's standard color selections.

2.9 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, **[railings and guards,]** clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs **[, railings, and guards]** in shop to greatest extent possible.
 1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.

2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Weld exposed corners and seams continuously unless otherwise indicated.
 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #1 - No evidence of welded joint][Finish #2 - Completely sanded joint with some undercutting and pinholes okay][Finish #3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]**.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 2. Locate joints where least conspicuous.
 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
 4. Provide weep holes where water may accumulate internally.

2.10 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for **[Architectural][Commercial][Service]** Class, unless more stringent requirements are indicated.
- B. Stair Framing:
 1. Stringers: Fabricate of **[steel plates][or][steel channels][or][steel rectangular tubes][as indicated on Drawings]**.
 - a. Stringer Size: **[As required to comply with "Performance Requirements" Article][As indicated on Drawings]**.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Finish: **[Shop primed][Painted][Galvanized]**.
 2. Platforms: Construct of **[steel plate][or][steel channel][or][steel rectangular tube]** headers and miscellaneous framing members as **[required to comply with "Performance Requirements" Article][indicated on Drawings]**.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Finish: **[Shop primed][Painted][Galvanized]**.
 3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers. **[If using bolts, fabricate and join so bolts are not exposed on finished surfaces.]**
 4. Where stairs are enclosed by gypsum board **[shaft-wall]** assemblies, provide hanger rods or struts to support landings from floor construction above or below.

- a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
 5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
 - C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than **0.067 inch (1.7 mm)**.
 1. Fabricate treads and landing subplatforms of exterior stairs so finished walking surfaces slope to drain.
 2. Steel Sheet, Uncoated: [**Cold**][**Hot**]-rolled steel sheet[**unless otherwise indicated**].
 3. Galvanized Steel Sheet: Galvanized steel sheet[, **where indicated**].
 4. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 5. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
 6. Shape metal pans to include nosing integral with riser.
 7. Attach abrasive nosings to risers.
 8. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
 9. Provide epoxy-resin-filled treads, reinforced with glass fibers, with non-slip-concrete aggregate finish to tread surface.
 10. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
 - a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.
 - D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than **0.097 inch (2.5 mm)**.
 1. Steel Sheet: Uncoated, hot-rolled steel sheet unless otherwise indicated.
 2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
 3. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.
 4. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.
- 2.11 FABRICATION OF STAIR RAILINGS AND GUARDS
- A. Comply with applicable requirements in [**Section 055213 "Pipe and Tube Railings."**][**Section 057300 "Decorative Metal Railings."**]
 - B. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.
 1. Rails and Posts: [**1-5/8-inch- (41-mm-) diameter**][**1-1/2-inch- (38-mm-) square**] top and bottom rails and **1-1/2-inch- (38-mm-) square** posts.
 2. Picket Infill: [**1/2-inch- (13-mm-)**][**3/4-inch- (19-mm-)**][**round**][**square**] pickets spaced to prohibit the passage of a **4-inch (100-mm)** diameter sphere.
 3. Expanded-Metal Infill: Expanded-metal panels edged with U-shaped channels made from steel sheet and not less than **0.043 inch (1.1 mm)** thick. Orient expanded metal with long dimension of

4. diamonds [parallel to top rail][perpendicular to top rail][vertical].
Perforated-Metal Infill: Perforated-metal panels edged with U-shaped channels made from metal sheet, of same metal as perforated metal, and not less than **0.043 inch (1.1 mm)** thick. Orient perforated metal with pattern [parallel to top rail][perpendicular to top rail][horizontal][vertical][as indicated on Drawings].
5. Mesh Infill: **[Woven][Welded]**-wire mesh crimped into **1-by-1/2-by-1/8-inch (25-by-13-by-3-mm)** steel channel frames. Orient wire mesh with [diamonds vertical][wires perpendicular and parallel to top rail][wires horizontal and vertical].
6. Intermediate Rails Infill: [1-5/8-inch- (41-mm-) diameter][1-1/2-inch- (38-mm-) square] intermediate rails spaced less than [12 inches (305 mm)][21 inches (533 mm)] clear.
7. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with [cam-type, self-closing][spring] hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.

C. Welded Connections: Fabricate railings and guards with welded connections.

1. Fabricate connections that are exposed to weather in a manner that excludes water.
 - a. Provide weep holes where water may accumulate internally.
2. Cope components at connections to provide close fit, or use fittings designed for this purpose.
3. Weld all around at connections, including at fittings.
4. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
5. Obtain fusion without undercut or overlap.
6. Remove flux immediately.
7. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #1 - No evidence of a welded joint][Finish #2 - Completely sanded joint, some undercutting and pinholes are okay][Finish #3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]** as shown in NAAMM AMP 521.

D. Form changes in direction of railings and guards as follows:

1. As detailed.
2. By bending[**or by inserting prefabricated elbow fittings**].
3. By flush bends[**or by inserting prefabricated flush-elbow fittings**].
4. By radius bends of radius indicated[**or by inserting prefabricated elbow fittings of radius indicated**].
5. By inserting prefabricated [elbow fittings][flush-elbow fittings][elbow fittings of radius indicated].

E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

F. Close exposed ends of railing and guard members with prefabricated end fittings.

G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.

1. Close ends of returns unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.

H. Connect posts to stair framing by direct welding unless otherwise indicated.

I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work.

1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 2. For galvanized railings and guards, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
 3. For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
 4. Provide type of bracket [**with flange tapped for concealed anchorage to threaded hanger bolt**][**with predrilled hole for exposed bolt anchorage**] and that provides **1-1/2-inch (38-mm)** clearance from inside face of handrail to finished wall surface.
- J. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports.
1. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.12 FINISHES

- A. Finish metal stairs after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- C. Preparation for Shop Priming: Prepare uncoated, ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."
- D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.

1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 3. Comply with requirements for welding in "Fabrication, General" Article.
- F. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."
 1. Install abrasive nosings with anchors fully embedded in concrete.
 2. Center nosings on tread width.
- G. Install precast concrete treads with adhesive supplied by manufacturer.
- H. Install precast terrazzo treads according to manufacturer's written instructions.

3.3 INSTALLATION OF RAILINGS AND GUARDS

- A. Adjust railing and guard systems before anchoring to ensure matching alignment at abutting joints with tight, hairline joints.
 1. Space posts at spacing indicated or, if not indicated, as required by design loads.
 2. Plumb posts in each direction, within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 3. Align rails and guards so variations from level for horizontal members and variations from parallel

- with rake of stairs for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
4. Secure posts, rail ends, and guard ends to building construction as follows:
 - a. Anchor posts to steel by **[welding][or][bolting]** to steel supporting members.
 - b. Anchor handrail and guard ends to concrete and masonry with steel round flanges welded to rail and guard ends and anchored with post-installed anchors and bolts.
 - B. Install railing gates level, plumb, and secure for full opening without interference.
 1. Attach hardware using tamper-resistant or concealed means.
 2. Adjust hardware for smooth operation.
 - C. Attach handrails to wall with wall brackets.
 1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 2. Secure wall brackets to building construction as **[required to comply with performance requirements.][follows:]**
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - b. For hollow masonry anchorage, use toggle bolts.
 - c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - d. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated]**wood backing between studs. Coordinate with stud installation to locate backing members.
 - e. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
 - f. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.4 REPAIR

- A. Touchup Painting:
 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 51 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
05 51 13 00	05 50 00 00	Metal Fabrications
05 51 13 00	05 51 00 00	Metal Floor Plate Stairs
05 51 13 00	05 71 13 00	Fabricated Metal Spiral Stairs

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 51 19 00 - METAL GRATING STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal grating stairs.
2. Steel railings and guards.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs[, **railings, and guards**].
1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, [**blocking for attachment of wall-mounted handrails,**] and items with integral anchors, that are to be embedded in concrete or masonry.
 2. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.
- D. Schedule installation of railings and guards so wall attachments are made only to completed walls.
1. Do not support railings and guards temporarily by any means that do not satisfy structural performance requirements.

1.3 ACTION SUBMITTALS

A. Product Data: For metal grating stairs and the following:

1. Gratings.
2. Woven-wire mesh.
3. Welded-wire mesh.
4. Shop primer products.
5. Grout.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental product declaration.
3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.

4. Environmental Product Declaration (EPD): For each product.
5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
6. Environmental Product Declaration: For each product.
7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
8. Environmental Product Declaration: For each product.
9. Environmental Product Declaration: For each product.
10. Third-Party Certifications: For each product.
11. Third-Party Certified Life Cycle Assessment: For each product.
12. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

C. Shop Drawings:

1. Include plans, elevations, sections, details, and attachment to other work.
2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
3. Include plan at each level.
4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.

D. Delegated Design Submittal: For stairs[, **railings, and guards**], including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the **[jurisdiction][State]** in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 2. Protect steel members and packaged materials from corrosion and deterioration.
 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.

- a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stairs[, **railings, and guards**], including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Uniform Load: **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm)**.
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Stair Framing: Capable of withstanding stresses resulting from railing and guard loads in addition to loads specified above.
 5. Limit deflection of treads, platforms, and framing members to **[L/360]<Insert deflection ratio>**.
- C. Structural Performance of Railings and Guards: Railings and guards, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - a. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.
- D. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.
 1. Component Importance Factor: **<Insert requirement>**.

2.2 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- C. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- D. Steel Bars for Grating Treads: ASTM A36/A36M or steel strip, ASTM A1011/A1011M or ASTM A1018/A1018M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.

- site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- E. Steel Wire Rod for Grating Crossbars: ASTM A510/A510M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Aluminum Bars for Grating Treads: **ASTM B221 (ASTM B221M)** extruded aluminum, alloys as follows:
1. 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 2. 6061-T1, for grating crossbars.
 3. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- G. Steel Tubing for Railings and Guards: **[ASTM A500/A500M (cold formed)][or][ASTM A513/A513M]**.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 7. Provide galvanized finish for exterior installations and where indicated.
- H. Steel Pipe for Railings and Guards: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight

(Schedule 40), unless another grade and weight are required by structural loads.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
 2. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
 3. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site.
 4. Regional Materials: Products shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 5. Indigenous Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 6. Regional Materials: Products shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- I. Provide galvanized finish for exterior installations and where indicated.
- J. Woven-Wire Mesh, Steel: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- K. Woven-Wire Mesh, Aluminum: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch- (4.1-mm-)** diameter, aluminum wire complying with **ASTM B211 (ASTM B211M)**, Alloy 6061-T94.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- L. Welded-Wire Mesh: **[Diamond][Square]** pattern, **2-inch (50-mm)** welded-wire mesh, made from **0.236-inch (6.0-mm)** nominal-diameter steel wire complying with ASTM A510/A510M.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- M. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- N. Cast-Abrasive Nosings: Cast iron, with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.

2.3 FASTENERS

- A. General: Provide **[zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5][Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5]** where built into exterior walls.
 - 1. Select fasteners for type, grade, and class required.
- B. Fasteners for Anchoring Railings and Guards to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings and guards to other types of construction indicated **[and capable of withstanding design loads]**.
- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
 - 1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for **[exterior stairs][stairs indicated to be galvanized][stairs indicated to be shop primed with zinc-rich primer]**.
- E. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.4 MISCELLANEOUS MATERIALS

- A. Welding Electrodes: Comply with AWS requirements.
- B. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings.]**
- C. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- D. Zinc-Rich Primer: Comply with SSPC-Paint 20, **[Type I-A][Type I-B][Type I-C][Type II]**, Level **[1][2][3]**, and compatible with topcoat.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with **[SSPC-Paint 20][ASTM A780/A780M]** and compatible with paints specified to be used over it.

- G. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for **[interior][exterior]** use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, railings, guards, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs[, **railings, and guards**] in shop to greatest extent possible.
1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Weld exposed corners and seams continuously unless otherwise indicated.
 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish # 3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]**.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 2. Locate joints where least conspicuous.
 3. Fabricate joints that are exposed to weather in a manner to exclude water.
 4. Provide weep holes where water may accumulate internally.

2.6 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Industrial Class,

unless more stringent requirements are indicated.

B. Stair Framing:

1. Fabricate stringers of steel **[plates][or][channels]**.
 - a. Stringer Size: **[As required to comply with "Performance Requirements" Article][As indicated on Drawings]**.
 - b. Provide closures for exposed ends of channel stringers.
 - c. Finish: **[Shop primed][Painted][Galvanized]**.
2. Construct platforms and tread supports of steel **[plate][or][channel]** headers and miscellaneous framing members as **[required to comply with "Performance Requirements" Article][indicated on Drawings]**.
 - a. Provide closures for exposed ends of channel framing.
 - b. Finish: **[Shop primed][Painted][Galvanized]**.
3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers.
4. Where stairs are enclosed by gypsum board **[shaft-wall]** assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

C. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

1. Fabricate treads and platforms from **[welded steel][or][pressure-locked steel][pressure-locked aluminum]** grating with **[1-1/4-by-3/16-inch (32-by-5-mm) bearing bars at 15/16 inch (24 mm) o.c.][1-by-3/16-inch (25-by-5-mm) bearing bars at 11/16 inch (17 mm) o.c.][1-by-1/8-inch (25-by-3-mm) bearing bars at 7/16 inch (11 mm) o.c.]** and crossbars at 4 inches (100 mm) o.c.
2. Fabricate treads and platforms from **[welded steel][or][pressure-locked steel][pressure-locked aluminum]** grating with openings in gratings no more than **[5/16 inch (8 mm)][1/2 inch (12 mm)][3/4 inch (19 mm)][1 inch (25 mm)]** in least dimension.
 - a. Surface: **[Plain][Serrated]**.
 - b. Finish: **[Shop primed][Painted][Galvanized][Mill]**.
3. Fabricate grating treads with **[rolled-steel floor plate][cast-abrasive]** nosing and with steel angle or steel plate carrier at each end for stringer connections.
 - a. Secure treads to stringers with bolts.
4. Fabricate grating platforms with nosing matching that on grating treads.
 - a. Secure grating to platform framing **[by welding][with bolts]**.

D. Risers: **[Open][Solid]**.

E. Toe Plates: Provide toe plates around openings and at edge of open-sided floors and platforms, and at open ends and open back edges of treads.

1. Material and Finish: Steel plate to match finish of other steel items.
2. Fabricate to dimensions and details indicated.

2.7 FABRICATION OF STAIR RAILINGS AND GUARDS

- A. Comply with applicable requirements in Section 055213 "Pipe and Tube Railings."
- B. Fabricate railings and guards to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of member, post spacings, wall bracket spacing, and anchorage, but not less than that needed to withstand indicated loads.
 1. Rails and Posts: **[1-5/8-inch- (41-mm-) diameter][1-1/2-inch- (38-mm-) square]** top and bottom rails and **1-1/2-inch- (38-mm-) square** posts.
 2. Picket Infill: **[1/2-inch- (13-mm)][3/4-inch (19-mm)][round][square]** pickets spaced to prohibit the passage of a **4-inch (100-mm)** diameter sphere.
 3. Mesh Infill: **[Woven][Welded]-wire mesh [crimped][welded] into 1-by-1/2-by-1/8-inch (25-by-13-by-3-mm) steel channel frames. Orient wire mesh with [diamonds vertical][wires perpendicular and parallel to top rail][wires horizontal and vertical].**
 4. Intermediate Rails Infill: **[1-5/8-inch- (41-mm-) diameter][1-1/2-inch- (38-mm-) square]** intermediate rails spaced less than **[12 inches (305 mm)][21 inches (533 mm)]** clear.
- C. Welded Connections: Fabricate railings and guards with welded connections.
 1. Fabricate connections that are exposed to weather in a manner that excludes water.
 - a. Provide weep holes where water may accumulate internally.
 2. Cope components at connections to provide close fit, or use fittings designed for this purpose.
 3. Weld all around at connections, including at fittings.
 4. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 5. Obtain fusion without undercut or overlap.
 6. Remove flux immediately.
 7. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #3 - Partially dressed weld with spatter removed][Finish #4 - Good quality, uniform undressed weld with minimal splatter]** as shown in NAAMM AMP 521.
- D. Form changes in direction of railings and guards as follows:
 1. As detailed.
 2. By bending[**or by inserting prefabricated elbow fittings**].
 3. By flush bends[**or by inserting prefabricated flush-elbow fittings**].
 4. By radius bends of radius indicated[**or by inserting prefabricated elbow fittings of radius indicated**].
 5. By inserting prefabricated **[elbow fittings][flush-elbow fittings][elbow fittings of radius indicated]**.
- E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required.
 1. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- F. Close exposed ends of railing and guard members with prefabricated end fittings.

- G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.
 - 1. Close ends of returns unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.
- H. Connect posts to stair framing by direct welding unless otherwise indicated.
- I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work.
 - 1. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
 - 2. For galvanized railings and guards, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
 - 3. For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
 - 4. Provide type of bracket [**with flange tapped for concealed anchorage to threaded hanger bolt**][**with predrilled hole for exposed bolt anchorage**] and that provides **1-1/2-inch (38-mm)** clearance from inside face of handrail to finished wall surface.
- J. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports.
 - 1. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.8 FINISHES

- A. Finish metal stairs after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 - 2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- C. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**][**SSPC-SP 3, "Power Tool Cleaning."**][**minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:**]
 - 1. Exterior Stairs: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interior Stairs:
 - a. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - b. SSPC-SP 3, "Power Tool Cleaning."
- D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 - 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF METAL STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 - 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 - 1. Grouted Baseplates: Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces.
 - a. Clean bottom surface of baseplates.
 - b. Set steel-stair baseplates on wedges, shims, or leveling nuts.
 - c. After stairs have been positioned and aligned, tighten anchor bolts.
 - d. Do not remove wedges or shims, but if protruding, cut off flush with edge of bearing plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates to ensure that no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Comply with requirements for welding in "Fabrication, General" Article.

3.3 INSTALLATION OF RAILINGS AND GUARDS

- A. Adjust railing and guard systems before anchoring to ensure matching alignment at abutting joints with tight, hairline joints.
1. Space posts at spacing indicated or, if not indicated, as required by design loads.
 2. Plumb posts in each direction, within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 3. Align rails and guards so variations from level for horizontal members and variations from parallel with rake of stairs for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
 4. Secure posts, rail ends, and guard ends to building construction as follows:
 - a. Anchor posts to steel by **[welding][or][bolting]** to steel supporting members.
 - b. Anchor handrail and guard ends to concrete and masonry with steel round flanges welded to rail and guard ends and anchored with post-installed anchors and bolts.
- B. Attach handrails to wall with wall brackets.
1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 2. Secure wall brackets to building construction as **[required to comply with performance requirements.][follows:]**
 - a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - b. For hollow masonry anchorage, use toggle bolts.
 - c. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - d. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated]**wood backing between studs. Coordinate with stud installation to locate backing members.
 - e. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
 - f. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.4 REPAIR

- A. Touchup Painting:
1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

SECTION 05 52 13 00 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel railings.
2. Aluminum railings.
3. Stainless steel railings.

B. Related Requirements:

1. Section 055113 "Metal Pan Stairs" for steel tube railings associated with metal pan stairs.
2. Section 057300 "Decorative Metal Railings" for ornamental railings fabricated from pipes and tubes and guard-infill metals.
3. Section 096900 "Access Flooring" for railings included with access flooring.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Manufacturer's product lines of mechanically connected railings.
2. Expanded metal infill panels.
3. Perforated metal infill panels.
4. Woven-wire mesh infill panels.
5. Fasteners.
6. Post-installed anchors.
7. Handrail brackets.
8. Shop primer.
9. Intermediate coats and topcoats.
10. Bituminous paint.
11. Nonshrink, nonmetallic grout.
12. Anchoring cement.
13. Metal finishes.
14. Paint products.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- E. Samples for Verification: For each type of exposed finish required.
 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters, including finish.
 2. Fittings and brackets.
 3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.
 - a. Show method of [**connecting**][**and**][**finishing**] members at intersections.
- F. Delegated Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**delegated design professional engineer**][**testing agency**].
- B. Welding certificates.
- C. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- E. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
- F. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design railings, including attachment to building construction.
- B. Structural Performance: Railings, including attachment to building construction, withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
 - 1. Provide type of bracket with **[flange tapped for concealed anchorage to threaded hanger bolt][predrilled hole for exposed bolt anchorage]** and that provides **1-1/2-inch (38-mm)** clearance from inside face of handrail to finished wall surface.

2.3 STEEL RAILINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Hollaender Mfg. Co.]**

2. [Kee Safety, Inc.]
 3. [Trex Commercial Products, Inc.]
 4. [TrueNorth Steel]
 5. [Tuttle, a Dant Clayton Division]
 6. [VIVA Railings, LLC]
 7. [Wagner Companies (The); R&B Wagner, Inc.]
 8. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [Hollaender Mfg. Co.]
 2. [Kee Safety, Inc.]
 3. [Trex Commercial Products, Inc.]
 4. [TrueNorth Steel]
 5. [Tuttle, a Dant Clayton Division]
 6. [VIVA Railings, LLC]
 7. [Wagner Companies (The); R&B Wagner, Inc.]
 8. <Insert manufacturer's name>
- C. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- D. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- E. Tubing: [ASTM A500/A500M (cold formed)][or][ASTM A513/A513M, Type 5].
- F. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
1. Provide galvanized finish for exterior installations and where indicated.
- G. Plates, Shapes, and Bars: ASTM A36/A36M.
- H. Cast Iron Fittings: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- I. Expanded Metal Infill Panels: ASTM F1267, [Type I (expanded)][Type II (expanded and flattened)], Class 1 (uncoated).
1. Style Designation: [3/4 number 13][1-1/2 number 10]<Insert designation>.
- J. Perforated-Metal Infill Panels:
1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel, Type B, [0.060 inch (1.52 mm)]<Insert dimension> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>.
 - a. Basis-of-Design Product: Provide product with perforations matching [product indicated on Drawings]<Insert manufacturer's name; product name or designation>.
 2. Galvanized-Steel Sheet: ASTM A653/A653M, G90 (Z275) coating, commercial steel Type B, [0.064 inch (1.63 mm)]<Insert dimension> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows][with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows]<Insert description>.

- a. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings]<Insert manufacturer's name; product name or designation>**.
- K. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.134-inch- (3.42-mm-)** diameter steel wire complying with **ASTM A510 (ASTM A510M)**.
 - 1. Basis-of-Design Product: Provide product with crimp pattern matching **[product indicated on Drawings]<Insert manufacturer's name; product name or designation>**.

2.4 ALUMINUM RAILINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[ATR Technologies, Inc.]**
 - 2. **[CraneVeyor Corp]**
 - 3. **[Hollaender Mfg. Co.]**
 - 4. **[Julius Blum & Co., Inc.]**
 - 5. **[Kane Innovations, Inc.]**
 - 6. **[Kattsafe]**
 - 7. **[Kee Safety, Inc.]**
 - 8. **[Moultrie Rail Systems]**
 - 9. **[Superior Aluminum Products, Inc]**
 - 10. **[Thompson Fabricating, LLC]**
 - 11. **[TimberTech, AZEK Building Products; The AZEK Company LLC]**
 - 12. **[Trex Commercial Products, Inc.]**
 - 13. **[Tri Tech, Inc.]**
 - 14. **[Tubular Specialties Manufacturing, Inc.]**
 - 15. **[Tuttle, a Dant Clayton Division]**
 - 16. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - 17. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[ATR Technologies, Inc.]**
 - 2. **[CraneVeyor Corp]**
 - 3. **[Hollaender Mfg. Co.]**
 - 4. **[Julius Blum & Co., Inc.]**
 - 5. **[Kane Innovations, Inc.]**
 - 6. **[Kattsafe]**
 - 7. **[Kee Safety, Inc.]**
 - 8. **[Moultrie Rail Systems]**
 - 9. **[Superior Aluminum Products, Inc]**
 - 10. **[Thompson Fabricating, LLC]**
 - 11. **[TimberTech, AZEK Building Products; The AZEK Company LLC]**
 - 12. **[Trex Commercial Products, Inc.]**
 - 13. **[Tri Tech, Inc.]**
 - 14. **[Tubular Specialties Manufacturing, Inc.]**
 - 15. **[Tuttle, a Dant Clayton Division]**
 - 16. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - 17. **<Insert manufacturer's name>**

- C. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- D. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- E. Extruded Bars and Tubing: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5/T52.
- F. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
 - 1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- G. Drawn Seamless Tubing: ASTM B210/B210M, Alloy 6063-T832.
- H. Plate and Sheet: **ASTM B209 (ASTM B209M)**, Alloy 6061-T6.
- I. Die and Hand Forgings: **ASTM B247 (ASTM B247M)**, Alloy 6061-T6.
- J. Castings: ASTM B26/B26M, Alloy A356.0-T6.
- K. Perforated Metal Infill Panels: Aluminum sheet, **ASTM B209 (ASTM B209M)**, Alloy 6061-T6, **[0.063 inch (1.60 mm)]<Insert dimension> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>.**
 - 1. Basis-of-Design Product: Provide product with perforations matching **[product indicated on Drawings]<Insert manufacturer's name; product name or designation>.**
- L. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch- (4.1-mm-)** diameter aluminum wire complying with ASTM B211/B211M, Alloy 6061-T94.
 - 1. Basis-of-Design Product: Provide product with crimp pattern matching **[product indicated on Drawings]<Insert manufacturer's name; product name or designation>.**

2.5 STAINLESS STEEL RAILINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[CraneVeyor Corp]**
 - 2. **[Julius Blum & Co., Inc.]**
 - 3. **[Kane Innovations, Inc.]**
 - 4. **[Stainless Fabricators, Inc]**
 - 5. **[Trex Commercial Products, Inc.]**
 - 6. **[Tri Tech, Inc.]**
 - 7. **[Tubular Specialties Manufacturing, Inc.]**
 - 8. **[Tuttle, a Dant Clayton Division]**
 - 9. **[VIVA Railings, LLC]**
 - 10. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - 11. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's**

name; product name or designation> or comparable product by one of the following:

1. [CraneVeyor Corp]
2. [Julius Blum & Co., Inc.]
3. [Kane Innovations, Inc.]
4. [Stainless Fabricators, Inc]
5. [Trex Commercial Products, Inc.]
6. [Tri Tech, Inc.]
7. [Tubular Specialties Manufacturing, Inc.]
8. [Tuttle, a Dant Clayton Division]
9. [VIVA Railings, LLC]
10. [Wagner Companies (The); R&B Wagner, Inc.]
11. <Insert manufacturer's name>

- C. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- D. Tubing: ASTM A554, [Grade MT 304][Grade MT 316L].
- E. Pipe: ASTM A312/A312M, [Grade TP 304][Grade TP 316L].
- F. Castings: ASTM A743/A743M, [Grade CF 8 or CF 20][Grade CF 8M or CF 3M].
- G. Plate and Sheet: ASTM A240/A240M or ASTM A666, [Type 304][Type 316L].
- H. Expanded Metal Infill Panels: ASTM F1267, [Type I (expanded)][Type II (expanded and flattened)], Class 3 (corrosion-resistant steel), made from stainless steel sheet, ASTM A240/A240M or ASTM A666, [Type 304][Type 316].
 1. Style Designation: [3/4 number 13][1-1/2 number 10]<Insert designation>.
- I. Perforated Metal Infill Panels: Stainless steel sheet, ASTM A240/A240M or ASTM A666, [Type 304][Type 316L], [0.062 inch (1.59 mm)]<Insert dimension> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>.
 1. Basis-of-Design Product: Provide product with perforations matching [product indicated on Drawings]<Insert manufacturer's name; product name or designation>.
- J. Woven-Wire Mesh Infill Panels: Intermediate-crimp, [diamond][square] pattern, 2-inch (50-mm) woven-wire mesh, made from 0.141-inch- (3.57-mm-) diameter stainless steel wire complying with ASTM A580/A580M, [Type 304][Type 316].
 1. Basis-of-Design Product: Provide product with crimp pattern matching [product indicated on Drawings]<Insert manufacturer's name; product name or designation>.

2.6 FASTENERS

A. Fastener Materials:

1. Ungalvanized-Steel Railing Components: Plated steel fasteners complying with ASTM F1941/F1941M, Class Fe/Zn 5 for zinc coating.
2. Hot-Dip Galvanized Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
3. Aluminum Railing Components: [Type 304][Type 316] stainless steel fasteners.
4. Stainless Steel Railing Components: [Type 304][Type 316] stainless steel fasteners.
5. Finish exposed fasteners to match appearance, including color and texture, of railings.

- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction[**and capable of withstanding design loads**].
- C. Fasteners for Interconnecting Railing Components:
 - 1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
 - 2. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
 - 3. Provide **[Phillips][tamper-resistant][square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193[**or ICC-ES AC308**].
 - 1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593, and nuts, ASTM F594.

2.7 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: **[Cast iron][Cast aluminum,][Cast stainless steel,][Cast nickel-silver,]** center of handrail **[2-1/2 inches (63.5 mm)][3-1/8 inches (79.4 mm)]<Insert dimension>** from **[face of railing][wall]**.
- B. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
 - 1. For **[aluminum][and][stainless steel]** railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings.]**
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- H. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.

- I. Intermediate Coats and Topcoats: Provide products that comply with [Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]
- J. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.
- K. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
- L. Bituminous Paint: Cold-applied asphalt emulsion, complying with ASTM D1187/D1187M.
- M. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- N. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: [At exterior locations][and][where indicated on Drawings], provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.8 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, **but not less than that required to support structural loads**].
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.
 - 2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
 - 1. Provide weep holes where water may accumulate.
 - 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with [**welded**][or][**nonwelded**] connections unless otherwise indicated.
- H. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with [**cam-type, self-closing**][**spring**] hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.

- I. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Finish #1 welds; ornamental quality with no evidence of a welded joint][Finish #2 welds; good appearance, completely sanded joint, some undercutting and pinholes okay][Finish #3 welds; utilitarian appearance not subject to view, partially dressed weld with spatter removed]**.
- J. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.
- K. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection, using an epoxy structural adhesive, if this is manufacturer's standard splicing method.
- L. Form changes in direction as follows:
 - 1. As detailed.
 - 2. **[By bending][or][by inserting prefabricated elbow fittings]**.
 - 3. **[By flush bends][or][by inserting prefabricated flush-elbow fittings]**.
 - 4. **[By radius bends of radius indicated][or][by inserting prefabricated elbow fittings of radius indicated]**.
 - 5. By bending to smallest radius that will not result in distortion of railing member.
- M. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- N. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- O. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.
- P. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- Q. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work.
 - 1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 - 2. Coordinate anchorage devices with supporting structure.
- R. For railing posts set in concrete, provide stainless steel sleeves not less than **6 inches (150 mm)** long

with inside dimensions not less than **1/2 inch (13 mm)** greater than outside dimensions of post, with metal plate forming bottom closure.

- S. For removable railing posts, fabricate slip-fit sockets from stainless steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height.
 - 1. Provide socket covers designed and fabricated to resist being dislodged.
 - 2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- T. Expanded-Metal Infill Panels: Fabricate infill panels from expanded-metal sheet of same metal as railings.
 - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as expanded metal and not less than **0.043 inch (1.1 mm)** thick.
 - 2. Orient expanded metal with long dimension of diamonds **[parallel to top rail][perpendicular to top rail][horizontal][vertical]**.
- U. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from **[steel][galvanized steel][aluminum][stainless steel][same metal as railings in which they are installed]**.
 - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than **0.043 inch (1.1 mm)** thick.
 - 2. Orient perforated metal with pattern **[parallel to top rail][perpendicular to top rail][horizontal][vertical][as indicated on Drawings]**.
- V. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into **1-by-1/2-by-1/8-inch (25-by-13-by-3-mm)** metal channel frames.
 - 1. Fabricate wire mesh and frames from same metal as railings in which they are installed.
 - 2. Orient wire mesh with **[diamonds vertical][diamonds perpendicular to top rail][wires perpendicular and parallel to top rail][wires horizontal and vertical][as indicated on Drawings]**.
- W. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.9 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 - 1. Hot-dip galvanize **[exterior][indicated]** steel railings, including hardware, after fabrication.
 - 2. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 - 3. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 - 4. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 - 5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner **[and as follows]**.

1. Comply with SSPC-SP 16.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves; however, hot-dip galvanize anchors to be embedded in exterior concrete or masonry.
- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3.]****[SSPC-SP 3.]****[requirements indicated below:]**
 1. Exterior Railings: SSPC-SP 6/NACE No. 3.
 2. Railings Indicated To Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3.
 3. Railings Indicated To Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3.
 4. Other Railings: SSPC-SP 3.
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1 for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 1. Shop prime uncoated railings with **[universal shop primer]****[primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"]** unless **[zinc-rich primer is]****[primers specified in Section 099600 "High-Performance Coatings" are]** indicated.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting."]****[Section 099600 "High-Performance Coatings."]**
 1. Color: **[As indicated by manufacturer's designations]****[Match Architect's sample]****[As selected by Architect from manufacturer's full range]**.
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.
 1. Color: **[As indicated by manufacturer's designations]****[Match Architect's sample]****[As selected by Architect from manufacturer's full range]**.

2.10 ALUMINUM FINISHES

- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Mill Finish: AA-M12, nonspecular as fabricated.
- C. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41]****[AA-M12C22A31]**.
- D. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44]****[AA-M12C22A32/A34]**.
 1. Color: **[Light bronze]****[Medium bronze]****[Dark bronze]****[Black]****[Match Architect's sample]****[As selected by Architect from full range of industry colors and color densities]**.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5**

mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- F. High-Performance Organic Finish, Two-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with **[AAMA 2604][AAMA 2605]** and containing not less than **[50][70]** percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- G. Superior Performance Organic Finish, Three-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- H. Superior Performance Organic Finish, Four-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- I. Single-Coat Superior Performance FEVE Organic Finish: Single-coat fluoroethylene vinyl ether (FEVE) fluoropolymer finish, complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- J. Two-Coat Superior Performance FEVE Organic Finish: Two-coat fluoroethylene vinyl ether (FEVE) fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- 2.11 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain with long dimension of each piece.

2. When polishing is completed, passivate and rinse surfaces.
3. Remove embedded foreign matter and leave surfaces chemically clean.

C. Stainless Steel Pipe and Tubing Finishes:

1. 180-Grit Polished Finish: Uniform, directionally textured finish.
2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
3. Polished and Buffed Finish: 320-grit finish followed by buffing [**to a high luster finish**][**to a mirror-like finish**][**to match Architect's sample**].

D. Stainless Steel Sheet and Plate Finishes:

1. Directional Satin Finish: ASTM A480/A480, No. 4.
2. High-Luster Finish: ASTM A480/A480M, No. 7.
3. Mirror Finish: ASTM A480/A480M, No. 8.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3.5 m)**.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending **2 inches (50 mm)** beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within **6 inches (150 mm)** of post.

3.4 ANCHORING POSTS

- A. Use stainless steel pipe sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than **5 inches (125 mm)** deep and **3/4 inch (20 mm)** larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material][attached to post with setscrews]**.
- D. Leave anchorage joint exposed with **[1/8-inch (3-mm) buildup, sloped away from post][anchoring material flush with adjacent surface]**.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For steel railings, weld flanges to post and bolt to metal supporting surfaces.
 - 2. For aluminum railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 3. For stainless steel railings, weld flanges to post and bolt to supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit stainless steel sockets cast in concrete.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with **[sleeves concealed within][flanges connected to][brackets on underside of rails connected to]** railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and **[welded to railing ends][or][connected to railing ends, using nonwelded connections]**.
- C. Attach handrails to walls with wall brackets[, **except where end flanges are used**]. Provide brackets

with [1-1/2-inch (38-mm)]<Insert dimension> clearance from inside face of handrail and finished wall surface.

1. Use type of bracket with [flange tapped for concealed anchorage to threaded hanger bolt][predrilled hole for exposed bolt anchorage].
2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

D. Secure wall brackets[and railing end flanges] to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
4. For steel-framed partitions, use hanger or lag bolts set into [fire-retardant-treated]wood backing between studs. Coordinate with stud installation to locate backing members.
5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads.
6. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

E. Install railing gates level, plumb, and secure for full opening without interference.

1. Attach hardware using tamper-resistant or concealed means.
2. Adjust hardware for smooth operation.

3.6 REPAIR

A. Touchup Painting:

1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]

3.7 CLEANING

- A. Clean [aluminum][and][stainless steel] by washing thoroughly with clean water and soap and rinsing with clean water.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

3.8 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings

approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 53 00 00 - EXPANDED METAL GRATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Expanded metal gratings.
2. Grating frames and supports.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for structural-steel framing system components.
2. Section 055213 "Pipe and Tube Railings" for metal pipe and tube handrails and railings.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Paint products.

B. Shop Drawings:

1. Include plans, sections, and attachment details.
2. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Delegated Design Submittals: For gratings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
- B. Mill Certificates: Signed by manufacturers of stainless steel certifying that products furnished comply with requirements.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- D. Welding certificates.
- E. Delegated design engineer qualifications.

1.4 QUALITY ASSURANCE

- A. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in [state]<Insert jurisdiction> where Project is located and who is experienced in providing engineering services of the type indicated.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:
 - 1. AWS D1.1/D1.1M.
 - 2. AWS D1.2/D1.2M.
 - 3. AWS D1.3/D1.3M.
 - 4. AWS D1.6/D1.6M.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

PART 2 - PRODUCTS**2.1 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design gratings.
- B. Structural Performance: Gratings to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Floors for Light Manufacturing: Uniform load of **125 lbf/sq. ft. (6.00 kN/sq. m)** or concentrated load of **2000 lbf (8.90 kN)**, whichever produces the greater stress.
 - 2. Floors for Heavy Manufacturing: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **3000 lbf (13.40 kN)**, whichever produces the greater stress.
 - 3. Walkways and Elevated Platforms Other Than Exits: Uniform load of **60 lbf/sq. ft. (2.87**

- kN/sq. m).
 4. Walkways and Elevated Platforms Used as Exits: Uniform load of **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 5. Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **8000 lbf (35.60 kN)**, whichever produces the greater stress.
 6. Limit deflection to **[L/360]<Insert deflection ratio>** or **1/4 inch (6.4 mm)**, whichever is less.
- C. Seismic Performance: Gratings to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]<Insert requirement>**.
1. Component Importance Factor: 1.5.

2.2 EXPANDED METAL GRATINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[All American Grating]**
 2. **[AMICO, a Gibraltar Industries company]**
 3. **[Central Expanded Metal, Inc.]**
 4. **[Grating Pacific, Inc.]**
 5. **[Nucor Grating; a Nucor company]**
 6. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[All American Grating]**
 2. **[AMICO, a Gibraltar Industries company]**
 3. **[Central Expanded Metal, Inc.]**
 4. **[Grating Pacific, Inc.]**
 5. **[Nucor Grating; a Nucor company]**
 6. **<Insert manufacturer's name>**
- C. Provide expanded metal gratings in material, finish, style, size, thickness, weight, and type indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
1. Material: **[Steel][Stainless steel][Aluminum]**.
 2. Steel Finish: **[Unfinished, oiled][Shop primed][Galvanized]**.
 3. Stainless Steel Finish: Mill finish, as fabricated.
 4. Aluminum Finish: Mill finish, as fabricated.
 5. Style Designation for Steel: **[4.27 lb][3/4 number 9]**.
 6. Style Designation for Stainless Steel: **[1-1/2 number 9][3/4 number 9]**.
 7. Size for Aluminum: **[2 lb][3/4 0.188][1-1/2 0.125]**.
 8. Type: **[I, expanded][II, expanded and flattened]**.

2.3 GRATING FRAMES AND SUPPORTS

- A. Frames and Supports for Metal Gratings: Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.

1. Unless otherwise indicated, fabricate from same basic metal as gratings.
2. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors **24 inches (600 mm)** o.c. and provide minimum anchor units in the form of steel straps **1-1/4 inches (32 mm)** wide by **1/4 inch (6 mm)** thick by **8 inches (200 mm)** long.

B. Galvanize steel frames and supports in the following locations:

1. Exterior.
2. Interior[, **where indicated**].

2.4 FASTENERS

A. General: Unless otherwise indicated, provide **[Type 304][Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless steel fasteners for fastening aluminum.
2. Provide stainless steel fasteners for fastening stainless steel.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A307, Grade A (ISO 898-1, Property Class 4.6)**; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.

C. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, nuts, and, where indicated, flat washers; **ASTM F593 (ISO 3506-1)** for bolts and **ASTM F594 (ASTM F836M)** for nuts, Alloy **[Group 1 (A1)][Group 2 (A4)]**.

D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

E. Post-Installed Anchors: **[Torque-controlled expansion][or][chemical]** anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ISO 3506-1)**, and nuts, **ASTM F594 (ASTM F836M)**.

2.5 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**

B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer

compatible with topcoat.

1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

- C. Epoxy Zinc-Rich Primer: Compatible with topcoat.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

2.6 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Uncoated Steel Sheet: ASTM A1011/A1011M, structural steel, **Grade 30 (Grade 205)**.
- D. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, **Grade 33 (Grade 230)**, with **G90 (Z275)** coating.
- E. Expanded Metal Carbon Steel: ASTM F1267, Class 1.
- F. Expanded Metal Galvanized Steel: ASTM F1267, Class 2, Grade A.
- G. Stainless Steel Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M, **[Type 304][Type 316L]**.
- H. Stainless Steel Bars and Shapes: ASTM A276/A276M, **[Type 304][Type 316L]**.
- I. Expanded Metal Stainless Steel: ASTM F1267, Class 3, made from stainless steel sheet, ASTM A240/A240M, **[Type 304][Type 316L]**.

2.7 ALUMINUM

- A. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- B. General: Provide alloy and temper recommended by aluminum producer for type of use indicated, with not less than the strength and durability properties of alloy, and temper designated below for each aluminum form required.
- C. Extruded Bars and Shapes: **ASTM B221 (ASTM B221M)**, alloys as follows:
 - 1. Alloy 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 - 2. Alloy 6061-T1, for grating crossbars.
- D. Aluminum Sheet: **ASTM B209 (ASTM B209M)**, Alloy 5052-H32.

2.8 FABRICATION

- A. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed

surfaces.

- B. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- C. Fit exposed connections accurately together to form hairline joints.
- D. Welding: Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
- E. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
 - 1. Fabricate toeplates for attaching in the field.
 - 2. Toeplate Height: **4 inches (100 mm)** unless otherwise indicated.
- F. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with bars having a thickness not less than overall grating thickness at contact points.
- G. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than **1/8 inch (3 mm)** thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.

2.9 STEEL FINISHES

- A. Finish gratings, frames, and supports after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- C. Shop prime gratings, frames, and supports[**not indicated to be galvanized**] unless otherwise indicated.
 - 1. Shop prime with [**universal shop primer**][**primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"**] unless [**zinc-rich primer is**][**primers specified in Section 099600 "High-Performance Coatings" are**] indicated.
- D. Preparation for Shop Priming: Prepare surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**][**SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."**][**requirements indicated below:**]
 - 1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

- 3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- 4. Other Items: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- E. Attach toeplates to gratings by welding at locations indicated.
- F. Field Welding: Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.

3.2 INSTALLATION OF EXPANDED METAL GRATINGS

- A. Comply with manufacturer's written instructions for installing gratings.
- B. Place units with straight edge of bond up and with long direction of diamond-shaped openings parallel to direction of span.
- C. Attach removable units to supporting members by bolting at **6-inch (150-mm)** intervals.
- D. Attach nonremovable units to supporting members by welding unless otherwise indicated. Space welds at **6-inch (150-mm)** intervals.
- E. Attach aluminum units to steel supporting members by bolting at **6-inch (150-mm)** intervals.
- F. Butt edges parallel to long direction of diamond-shaped openings and weld at every second bond point.

Place individual grating sections so diamonds of one piece are aligned with those of adjacent sections.

3.3 REPAIR

A. Repair Painting:

1. Wire brush and clean rust spots, welds, and abraded areas on prime-painted gratings immediately after installation, and apply repair paint with same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
2. Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 53 00 00

SECTION 05 53 13 00 - BAR GRATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal bar gratings.
2. Grating frames and supports.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for structural-steel framing system components.
2. Section 055119 "Metal Grating Stairs" for grating treads and landings of steel-framed stairs.
3. Section 055213 "Pipe and Tube Railings" for metal pipe and tube handrails and railings.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Clips and anchorage devices for gratings.
2. Paint products.

B. Shop Drawings:

1. Include plans, sections, and attachment details.
2. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Delegated Design Submittals: For gratings, including **[manufacturers' published load tables][analysis data signed and sealed by the qualified professional engineer responsible for their preparation]**.

D. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
- B. Mill Certificates: Signed by manufacturers of stainless steel certifying that products furnished comply with requirements.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- D. Welding certificates.
- E. Delegated design engineer qualifications.

1.4 QUALITY ASSURANCE

- A. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in **[state]<Insert jurisdiction>** where Project is located and who is experienced in providing engineering services of the type indicated.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:
 - 1. AWS D1.1/D1.1M.
 - 2. AWS D1.2/D1.2M.
 - 3. AWS D1.3/D1.3M.
 - 4. AWS D1.6/D1.6M.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

PART 2 - PRODUCTS**2.1 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design gratings.
- B. Structural Performance: Gratings to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Floors for Light Manufacturing: Uniform load of **125 lbf/sq. ft. (6.00 kN/sq. m)** or concentrated load of **2000 lbf (8.90 kN)**, whichever produces the greater stress.
 - 2. Floors for Heavy Manufacturing: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **3000 lbf (13.40 kN)**, whichever produces the greater stress.
 - 3. Walkways and Elevated Platforms Other Than Exits: Uniform load of **60 lbf/sq. ft. (2.87**

- kN/sq. m).
 - 4. Walkways and Elevated Platforms Used as Exits: Uniform load of **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 - 5. Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **8000 lbf (35.60 kN)**, whichever produces the greater stress.
 - 6. Limit deflection to **[L/360]<Insert deflection ratio>** or **1/4 inch (6.4 mm)**, whichever is less.
- C. Seismic Performance: Gratings to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]<Insert requirement>**.
- 1. Component Importance Factor: 1.5.

2.2 METAL BAR GRATINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- 1. **[All American Grating]**
 - 2. **[BarnettBates Corporation]**
 - 3. **[Borden Metal Products (Canada) Limited]**
 - 4. **[Grating Pacific, Inc.]**
 - 5. **[Grupo Metelmex, S.A. de C.V.]**
 - 6. **[IKG]**
 - 7. **[MLP Steel Company; Laurel Steel Products Division]**
 - 8. **[Neenah Foundry Company]**
 - 9. **[Nucor Grating; a Nucor company]**
 - 10. **[Ross Technology Company]**
 - 11. **[Seidelhuber Metal Products; Brodhead Steel]**
 - 12. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- 1. **[All American Grating]**
 - 2. **[BarnettBates Corporation]**
 - 3. **[Borden Metal Products (Canada) Limited]**
 - 4. **[Grating Pacific, Inc.]**
 - 5. **[Grupo Metelmex, S.A. de C.V.]**
 - 6. **[IKG]**
 - 7. **[MLP Steel Company; Laurel Steel Products Division]**
 - 8. **[Neenah Foundry Company]**
 - 9. **[Nucor Grating; a Nucor company]**
 - 10. **[Ross Technology Company]**
 - 11. **[Seidelhuber Metal Products; Brodhead Steel]**
 - 12. **<Insert manufacturer's name>**
- C. Metal Bar Grating Standards: Comply with **[NAAMM MBG 531][and][NAAMM MBG 532]**.
- D. Welded Steel Grating:**[MBG-#.]**
- 1. Bearing Bar Spacing: **[7/16 or 1/2 inch (11 or 13 mm)][11/16 inch (17 mm)][15/16 inch (24 mm)][1-3/16 inches (30 mm)][1-3/8 inches (35 mm)][1-7/8 inches (48 mm)][2-3/8 inches (60 mm)]<Insert dimension(s)> o.c.**
 - 2. Bearing Bar Depth: **[3/4 inch (19 mm)][1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][3**

inches (76 mm)][3-1/2 inches (89 mm)][4 inches (102 mm)][4-1/2 inches (114 mm)][5 inches (127 mm)][As required to comply with structural performance requirements].

3. Bearing Bar Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][As required to comply with structural performance requirements].
4. Crossbar Spacing: [2 inches (51 mm)][4 inches (102 mm)] o.c.
5. Grating Mark W-11-4 (1 x 3/16) STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
6. Grating Mark W-15-4 (1 x 1/8) STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
7. Grating Mark W-19-4 (1-1/4 x 3/16) STEEL: 1-1/4-by-3/16-inch (32-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
8. Grating Mark W-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
9. Grating Mark W-19-4 (2 x 1/4) STEEL: 2-by-1/4-inch (51-by-6.4-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
10. Grating Mark W-30-4 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars at 1-7/8 inches (60 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
11. Grating Mark: As indicated.
12. Traffic Surface: [Plain][Serrated][Knurled][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
13. Steel Finish: [Shop primed][Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface].

E. Pressure-Locked Steel Grating:[MBG-#.] Fabricated by [pressing rectangular flush-top crossbars into slotted bearing bars][or][swaging crossbars between bearing bars].

1. Bearing Bar Spacing: [7/16 or 1/2 inch (11 or 13 mm)][11/16 inch (17 mm)][15/16 inch (24 mm)][1-3/16 inches (30 mm)]<Insert dimension(s)> o.c.
2. Bearing Bar Depth: [3/4 inch (19 mm)][1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][As required to comply with structural performance requirements]<Insert depth>.
3. Bearing Bar Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][As required to comply with structural performance requirements]<Insert thickness>.
4. Crossbar Spacing: [2 inches (51 mm)][4 inches (102 mm)] o.c.
5. Grating Mark P-11-4 (1 x 3/16) STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
6. Grating Mark P-15-4 (1-1/4 x 1/8) STEEL: 1-1/4-by-1/8-inch (32-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
7. Grating Mark P-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
8. Grating Mark: As indicated.
9. Traffic Surface: [Plain][Serrated][Knurled][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
10. Steel Finish: [Shop primed][Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface].

F. Riveted Steel Grating:[MBG-#.]

1. Bearing Bar Spacing: [3/4 inch (19 mm)][1-1/8 inches (29 mm)][2-5/16 inches (59 mm)]<Insert dimension>, clear.
2. Bearing Bar Depth: [3/4 inch (19 mm)][1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][3 inches (76 mm)][3-1/2 inches (89 mm)][4 inches (102 mm)][4-1/2 inches (114 mm)][5 inches (127 mm)][As required to comply with structural performance requirements].
3. Bearing Bar Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][1/4 inch (6.4 mm)][3/8 inch (9.5 mm)]

- mm)][As required to comply with structural performance requirements].
4. Rivet Spacing: [3-1/2 inches (89 mm)][5 inches (127 mm)][7 inches (178 mm)] o.c. along bearing bar.
 5. Grating Mark R-12-3-1/2 (1 x 1/8) STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars with 3/4-inch (19-mm) clear space between bearing bars, and rivets at 3-1/2 inches (89 mm) o.c. along bearing bar.
 6. Grating Mark R-18-7 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars with 1-1/8-inch (29-mm) clear space between bearing bars, and rivets at 7 inches (178 mm) o.c. along bearing bar.
 7. Grating Mark R-37-5 (4 x 1/4) STEEL: 4-by-1/4-inch (102-by-6.4-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 8. Grating Mark R-37-5 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 9. Grating Mark: As indicated.
 10. Traffic Surface: [Plain][Serrated][Knurled][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
 11. Steel Finish: [Shop primed][Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface].
- G. Pressure-Locked, Stainless Steel Grating:[MBG-#.] Fabricated by [pressing rectangular flush-top crossbars into slotted bearing bars][or][swaging crossbars between bearing bars].
1. Bearing Bar Spacing: [7/16 or 1/2 inch (11 or 13 mm)][11/16 inch (17 mm)][15/16 inch (24 mm)][1-3/16 inches (30 mm)][1-3/8 inches (35 mm)][1-7/8 inches (48 mm)][2-3/8 inches (60 mm)]<Insert dimension(s)> o.c.
 2. Bearing Bar Depth: [3/4 inch (19 mm)][1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][3 inches (76 mm)][3-1/2 inches (89 mm)][4 inches (102 mm)][4-1/2 inches (114 mm)][5 inches (127 mm)][As required to comply with structural performance requirements].
 3. Bearing Bar Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][As required to comply with structural performance requirements].
 4. Crossbar Spacing: [2 inches (51 mm)][4 inches (102 mm)] o.c.
 5. Grating Mark P-11-4 (1 x 3/16) STAINLESS STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 6. Grating Mark P-15-2 (1 x 1/8) STAINLESS STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 2 inches (51 mm) o.c.
 7. Grating Mark P-19-4 (1-1/2 x 3/16) STAINLESS STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 8. Grating Mark P-30-4 (3 x 3/8) STAINLESS STEEL: 3-by-3/8-inch (76-by-9.5-mm) bearing bars at 1-7/8 inches (48 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 9. Grating Mark: As indicated.
 10. Traffic Surface: [Plain][Serrated][Knurled][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
 11. Finish: [Mill finish][Abrasive blasted][Electropolished].
- H. Pressure-Locked, Rectangular-Bar Aluminum Grating:[MBG-#.] Fabricated by [pressing rectangular flush-top crossbars into slotted bearing bars][or][swaging crossbars between bearing bars].
1. Bearing Bar Spacing: [7/16 or 1/2 inch (11 or 13 mm)][11/16 inch (17.5 mm)][15/16 inch (24 mm)][1-3/16 inches (30 mm)]<Insert dimension(s)> o.c.
 2. Bearing Bar Depth: [1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][As required to comply with structural performance requirements].
 3. Bearing Bar Thickness: [1/8 inch (3.2 mm)][3/16 inch (4.8 mm)][1/4 inch (6.4 mm)][As required

to comply with structural performance requirements].

4. Crossbar Spacing: [2 inches (51 mm)][4 inches (102 mm)] o.c.
5. Grating Mark P-7-4 (1 x 1/8) ALUMINUM: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 7/16 inch (11 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
6. Grating Mark P-11-4 (1 x 3/16) ALUMINUM: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
7. Grating Mark P-15-4 (1-1/2 x 3/16) ALUMINUM: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
8. Grating Mark P-19-4 (2 x 3/16) ALUMINUM: 2-by-3/16-inch (51-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
9. Grating Mark: As indicated.
10. Traffic Surface: [Plain][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
11. Aluminum Finish: [Mill finish][Class I, clear, anodized finish].

- I. Pressure-Locked, Aluminum I-Bar Grating: [MBG-#.] Fabricated by swaging crossbars between bearing bars.

1. Bearing Bar Spacing: [7/16 or 1/2 inch (11 or 13 mm)][11/16 inch (17 mm)][15/16 inch (24 mm)][1-3/16 inches (30 mm)]<Insert dimension(s)> o.c.
2. Bearing Bar Depth: [1 inch (25 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)][1-3/4 inches (44 mm)][2 inches (51 mm)][2-1/4 inches (57 mm)][2-1/2 inches (64 mm)][As required to comply with structural performance requirements].
3. Bearing Bar Flange Width: 1/4 inch (6.4 mm).
4. Crossbar Spacing: [2 inches (51 mm)][4 inches (102 mm)] o.c.
5. Grating Mark P-11-4 (1 I-Bar) ALUMINUM: 1-inch (25-mm) I-bar bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
6. Grating Mark P-15-2 (1 I-Bar) ALUMINUM: 1-inch (25-mm) I-bar bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 2 inches (51 mm) o.c.
7. Grating Mark P-19-4 (1-1/2 I-Bar) ALUMINUM: 1-1/2-inch (38-mm) I-bar bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
8. Grating Mark: As indicated.
9. Traffic Surface: [Plain][Grooved][Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive][As indicated].
10. Aluminum Finish: [Mill finish][Class I, clear, anodized finish].

2.3 GRATING FRAMES AND SUPPORTS

- A. Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 1. Unless otherwise indicated, fabricate from same basic metal as gratings.
 2. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors 24 inches (600 mm) o.c. and provide minimum anchor units in the form of steel straps 1-1/4 inches (32 mm) wide by 1/4 inch (6 mm) thick by 8 inches (200 mm) long.
- B. Galvanize steel frames and supports in the following locations:
 1. Exterior.
 2. Interior[, where indicated].

2.4 FASTENERS

- A. General: Unless otherwise indicated, provide **[Type 304][Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
1. Provide stainless steel fasteners for fastening aluminum.
 2. Provide stainless steel fasteners for fastening stainless steel.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A307, Grade A (ISO 898-1, Property Class 4.6)**; with hex nuts, **ASTM A563 (ASTM A563M)**, and, where indicated, flat washers.
- C. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, nuts, and, where indicated, flat washers; **ASTM F593 (ISO 3506-1)** for bolts and **ASTM F594 (ASTM F836M)** for nuts, Alloy **[Group 1 (A1)][Group 2 (A4)]**.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**, and, where indicated, flat washers.
1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- E. Post-Installed Anchors: **[Torque-controlled expansion][or][chemical]** anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ISO 3506-1)**, and nuts, **ASTM F594 (ASTM F836M)**.

2.5 MISCELLANEOUS MATERIALS

- A. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- C. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Steel Bars for Bar Gratings: ASTM A36/A36M or steel strip, ASTM A1011/A1011M or ASTM A1018/A1018M.
- D. Wire Rod for Bar Grating Crossbars: ASTM A510/A510M.
- E. Uncoated Steel Sheet: ASTM A1011/A1011M, structural steel, **Grade 30 (Grade 205)**.
- F. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, **Grade 33 (Grade 230)**, with **G90 (Z275)** coating.
- G. Stainless Steel Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M, **[Type 304][Type 316L]**.
- H. Stainless Steel Bars and Shapes: ASTM A276/A276M, **[Type 304][Type 316L]**.

2.7 ALUMINUM

- A. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- B. General: Provide alloy and temper recommended by aluminum producer for type of use indicated, with not less than the strength and durability properties of alloy, and temper designated below for each aluminum form required.
- C. Extruded Bars and Shapes: **ASTM B221 (ASTM B221M)**, alloys as follows:
 - 1. Alloy 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 - 2. Alloy 6061-T1, for grating crossbars.
- D. Aluminum Sheet: **ASTM B209 (ASTM B209M)**, Alloy 5052-H32.

2.8 FABRICATION

- A. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- D. Fit exposed connections accurately together to form hairline joints.

- E. Welding: Comply with AWS recommendations and the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
- F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
1. Fabricate toeplates to fit grating units and weld to units in shop unless otherwise indicated.
 2. Fabricate toeplates for attaching in the field.
 3. Toeplate Height: **4 inches (100 mm)** unless otherwise indicated.
- G. Removable Grating Sections: Fabricate with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners of type indicated or, if not indicated, as recommended by manufacturer for attaching to supports.
1. Provide no fewer than four weld lugs for each heavy-duty grating section, with each lug shop welded to two bearing bars.
 2. Provide no fewer than four saddle clips for each grating section containing rectangular bearing bars **3/16 inch (4.8 mm)** or less in thickness and spaced **15/16 inch (24 mm)** or more o.c., with each clip designed and fabricated to fit over two bearing bars.
 3. Provide no fewer than four weld lugs for each grating section containing rectangular bearing bars **3/16 inch (4.8 mm)** or less in thickness and spaced less than **15/16 inch (24 mm)** o.c., with each lug shop welded to three or more bearing bars. Interrupt intermediate bearing bars as necessary for fasteners securing grating to supports.
 4. Provide no fewer than four flange blocks for each section of aluminum I-bar grating, with block designed to fit over lower flange of I-shaped bearing bars.
 5. Furnish threaded bolts with nuts and washers for securing grating to supports.
 6. Furnish self-drilling fasteners with washers for securing grating to supports.
 7. Grating Clamps: Furnish galvanized malleable-iron flange clamp with galvanized bolt for securing grating to supports. Furnish as a system designed to be installed from above grating by one person.
- a. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
- 1) **[Kee Safety, Inc.]**
 - 2) **[Lindapter International]**
 - 3) **[LNA Solutions, a Kee Safety company]**
 - 4) **<Insert manufacturer's name>**
- b. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- 1) **[Kee Safety, Inc.]**
 - 2) **[Lindapter International]**
 - 3) **[LNA Solutions, a Kee Safety company]**
 - 4) **<Insert manufacturer's name>**
- H. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating

removal without disturbing items penetrating gratings.

1. Edge-band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.

- I. Do not notch bearing bars at supports to maintain elevation.

2.9 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I.

2.10 STEEL FINISHES

- A. Finish gratings, frames, and supports after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

- C. Shop prime gratings, frames, and supports[**not indicated to be galvanized**] unless otherwise indicated.

1. Shop prime with [**universal shop primer**][**primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"**] unless [**zinc-rich primer is**][**primers specified in Section 099600 "High-Performance Coatings" are**] indicated.

- D. Preparation for Shop Priming: Prepare surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**][**SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."**][**requirements indicated below:**]

1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
4. Other Items: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

- E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set

units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- E. Attach toeplates to gratings by welding at locations indicated.
- F. Field Welding: Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
- G. Corrosion Protection: With a heavy coat of bituminous paint, coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals.

3.2 INSTALLATION OF METAL BAR GRATINGS

- A. Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.
- B. Attach removable units to supporting members with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.
- C. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting as indicated above.

3.3 REPAIR

- A. Repair Painting:
 - 1. Wire brush and clean rust spots, welds, and abraded areas on prime-painted gratings immediately after installation, and apply repair paint with same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

05 - Metals

END OF SECTION 05 53 13 00

Task	Specification	Specification Description
05 53 13 00	01 11 19 00	No Specification Required
05 53 13 00	05 50 00 00	Metal Fabrications
05 53 13 00	05 53 00 00	Expanded Metal Gratings

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 53 16 00 - PLANK GRATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Formed-metal plank gratings.
2. Extruded-aluminum plank gratings.
3. Grating frames and supports.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for structural-steel framing system components.
2. Section 055213 "Pipe and Tube Railings" for metal pipe and tube handrails and railings.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Formed-metal plank gratings.
2. Extruded-aluminum plank gratings.
3. Paint products.

B. Shop Drawings:

1. Include plans, sections, and attachment details.
2. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Delegated Design Submittals: For gratings, including **[manufacturers' published load tables][analysis data signed and sealed by the qualified professional engineer responsible for their preparation]**.

D. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.

10. Third-Party Certified Life Cycle Assessment: For each product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
- B. Mill Certificates: Signed by manufacturers of stainless steel sheet certifying that products furnished comply with requirements.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- D. Welding certificates.
- E. Delegated design engineer qualifications.

1.4 QUALITY ASSURANCE

- A. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in **[state]<Insert jurisdiction>** where Project is located and who is experienced in providing engineering services of the type indicated.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with the following welding codes:
 - 1. AWS D1.1/D1.1M.
 - 2. AWS D1.2/D1.2M.
 - 3. AWS D1.3/D1.3M.
 - 4. AWS D1.6/D1.6M.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design gratings.
- B. Structural Performance: Gratings to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Floors for Light Manufacturing: Uniform load of **125 lbf/sq. ft. (6.00 kN/sq. m)** or concentrated load of **2000 lbf (8.90 kN)**, whichever produces the greater stress.

2. Floors for Heavy Manufacturing: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **3000 lbf (13.40 kN)**, whichever produces the greater stress.
 3. Walkways and Elevated Platforms Other Than Exits: Uniform load of **60 lbf/sq. ft. (2.87 kN/sq. m)**.
 4. Walkways and Elevated Platforms Used as Exits: Uniform load of **100 lbf/sq. ft. (4.79 kN/sq. m)**.
 5. Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of **250 lbf/sq. ft. (11.97 kN/sq. m)** or concentrated load of **8000 lbf (35.60 kN)**, whichever produces the greater stress.
 6. Limit deflection to **[L/360]<Insert deflection ratio>** or **1/4 inch (6.4 mm)**, whichever is less.
- C. Seismic Performance: Gratings to withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.
1. Component Importance Factor: 1.5.

2.2 FORMED-METAL PLANK GRATINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[AMICO, a Gibraltar Industries company]**
 2. **[Atkore Unistrut]**
 3. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 4. **[Grating Pacific, Inc.]**
 5. **[IKG]**
 6. **[Metalex]**
 7. **[Nucor Grating; a Nucor company]**
 8. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[AMICO, a Gibraltar Industries company]**
 2. **[Atkore Unistrut]**
 3. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 4. **[Grating Pacific, Inc.]**
 5. **[IKG]**
 6. **[Metalex]**
 7. **[Nucor Grating; a Nucor company]**
 8. **<Insert manufacturer's name>**
- C. C-Shaped Channels: Rolled from heavy sheet metal of thickness indicated, and punched in serrated diamond shape to produce raised slip-resistant surface and drainage holes.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[AMICO, a Gibraltar Industries company]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[IKG]**
 - d. **[Metalex]**
 - e. **[Nucor Grating; a Nucor company]**
 - f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AMICO, a Gibraltar Industries company]**
 - b. **[Cooper B-line; brand of Eaton, Electrical Sector]**
 - c. **[IKG]**
 - d. **[Metalex]**
 - e. **[Nucor Grating; a Nucor company]**
 - f. **<Insert manufacturer's name>**
3. Channel Width: **[4-3/4 inches (121 mm)][7 inches (178 mm)][9-1/2 inches (241 mm)][11-3/4 inches (298 mm)][18-3/4 inches (476 mm)][24 inches (610 mm)][As indicated][As required to comply with structural performance requirements]**.
4. Channel Depth: **[1-1/2 inches (38 mm)][2 inches (51 mm)][2-1/2 inches (64 mm)][3 inches (76 mm)][As indicated][As required to comply with structural performance requirements]**.
5. Material: **[0.074-inch- (1.9-mm-) thick steel sheet, shop primed][0.104-inch- (2.65-mm-) thick steel sheet, shop primed][0.079-inch- (2.0-mm-) thick, hot-dip galvanized-steel sheet][0.108-inch- (2.8-mm-) thick, hot-dip galvanized-steel sheet][0.074-inch- (1.9-mm-) thick steel sheet, hot-dip galvanized after fabrication][0.104-inch- (2.65-mm-) thick steel sheet, hot-dip galvanized after fabrication][0.062-inch- (1.6-mm-) thick, stainless steel sheet][0.078-inch- (2.0-mm-) thick, stainless steel sheet][0.080-inch- (2.0-mm-) thick aluminum sheet][0.100-inch- (2.5-mm-) thick aluminum sheet]**.

2.3 EXTRUDED-ALUMINUM PLANK GRATINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[AMICO, a Gibraltar Industries company]**
 2. **[IKG]**
 3. **[Ohio Gratings, Inc]**
 4. **[Seidelhuber Metal Products; Brodhead Steel]**
 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[AMICO, a Gibraltar Industries company]**
 2. **[IKG]**
 3. **[Ohio Gratings, Inc]**
 4. **[Seidelhuber Metal Products; Brodhead Steel]**
 5. **<Insert manufacturer's name>**
- C. Provide extruded-aluminum plank gratings in type, size, and finish indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
 1. Type: Extruded-aluminum planks approximately **6 inches (152 mm)** wide with multiple flanges approximately **1.2 inches (30 mm)** o.c., acting as bearing bars connected by a web that serves as a walking surface. Top surface has raised ribs to increase slip resistance.
 2. Depth: **[1 inch (25 mm)][1-1/2 inches (38 mm)][2 inches (51 mm)][As required to comply with structural performance requirements]**.
 3. Perforations: **[None][Rectangular, 19/32 by 3 inches (15 by 76 mm), with adjacent rows]**

4. **staggered** [19/32 inch (15 mm) square, with adjacent rows aligned].
Finish: Mill finish, as fabricated.

2.4 GRATING FRAMES AND SUPPORTS

- A. Frames and Supports: Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
1. Unless otherwise indicated, fabricate from same basic metal as gratings.
 2. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors **24 inches (600 mm)** o.c. and provide minimum anchor units in the form of steel straps **1-1/4 inches (32 mm)** wide by **1/4 inch (6.4 mm)** thick by **8 inches (200 mm)** long.
- B. Galvanize steel frames and supports in the following locations:
1. Exterior.
 2. Interior[, **where indicated**].

2.5 FASTENERS

- A. General: Unless otherwise indicated, provide **[Type 304][Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
1. Provide stainless steel fasteners for fastening aluminum.
 2. Provide stainless steel fasteners for fastening stainless steel.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A307, Grade A (ISO 898-1, Property Class 4.6)**; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- C. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, nuts, and, where indicated, flat washers; **ASTM F593 (ISO 3506-1)** for bolts and **ASTM F594 (ASTM F836M)** for nuts, Alloy **[Group 1 (A1)][Group 2 (A4)]**.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- E. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]** capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ISO 3506-1)**, and nuts, **ASTM F594 (ASTM F836M)**.

2.6 MISCELLANEOUS MATERIALS

- A. Shop Primers: Provide primers that comply with [Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting" and Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- C. Epoxy Zinc-Rich Primer: Compatible with topcoat.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.7 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Uncoated Steel Sheet: ASTM A1011/A1011M, structural steel, **Grade 30 (Grade 205)**.
- D. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, **Grade 33 (Grade 230)**, with **G90 (Z275)** coating.
- E. Stainless Steel Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M, [**Type 304**][**Type 316L**].
- F. Stainless Steel Bars and Shapes: ASTM A276/A276M, [**Type 304**][**Type 316L**].

2.8 ALUMINUM

- A. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25][50]<Insert value> percent.
- B. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- C. Extruded Bars and Shapes: **ASTM B221 (ASTM B221M)**, alloys as follows:
 - 1. Alloy 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 - 2. Alloy 6061-T1, for grating crossbars.
- D. Aluminum Sheet: **ASTM B209 (ASTM B209M)**, Alloy 5052-H32.

2.9 FABRICATION

- A. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- B. Fit exposed connections accurately together to form hairline joints.
- C. Welding: Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
- D. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
 - 1. Fabricate toeplates for attaching in the field.
 - 2. Toeplate Height: **4 inches (100 mm)** unless otherwise indicated.
- E. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with metal sheet or bars having a thickness not less than grating material.
 - 1. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
- F. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than **1/8 inch (3.2 mm)** thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.

2.10 ALUMINUM FINISHES

- A. Class I, Clear Anodic Finish: AA-M12C22A41 complying with AAMA 611.

2.11 STEEL FINISHES

- A. Finish gratings, frames, and supports after assembly.
- B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- C. Shop prime gratings, frames and supports[**not indicated to be galvanized**] unless otherwise indicated.
 - 1. Shop prime with [universal shop primer][primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"] unless [zinc-rich primer is][primers specified in Section 099600 "High-Performance Coatings" are] indicated.
- D. Preparation for Shop Priming: Prepare surfaces to comply with [SSPC-SP 6/NACE No. 3, "Commercial

Blast Cleaning."][SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."][requirements indicated below:]

1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 4. Other Items: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- E. Attach toeplates to gratings by welding at locations indicated.
- F. Field Welding: Comply with AWS recommendations and the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
- G. Corrosion Protection: With a heavy coat of bituminous paint, coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals.

3.2 INSTALLATION OF METAL PLANK GRATINGS

- A. Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard anchor clips and hold-down devices for bolted connections.

- B. Attach removable units to supporting members by bolting at every point of contact.
- C. Attach nonremovable units to supporting members by welding unless otherwise indicated. Comply with manufacturer's written instructions for size and spacing of welds.
- D. Attach aluminum units to steel supporting members by bolting at side channels at every point of contact and by bolting intermediate planks at each end on alternate sides. Bolt adjacent planks together at midspan.

3.3 REPAIR

- A. Repair Painting:
 - 1. Wire brush and clean rust spots, welds, and abraded areas on prime-painted gratings immediately after installation, and apply repair paint with same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- B. Repair of Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

SECTION 05 58 00 00 - HEATING_COOLING UNIT COVERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes heating-cooling unit enclosures.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.
- B. Shop Drawings: Show fabrication and installation details for heating-cooling unit enclosures.
- C. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- D. Samples for Verification: For each type of exposed finish required, prepared on **6-inch- (150-mm-)** square Samples of metal of same thickness and material indicated for the Work.
- E. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For heating-cooling unit enclosures. Show dimensions of heating-cooling units, including locations of housing penetrations and attachments, and necessary clearances.
- B. Qualification Data: For **[fabricator][organic-coating applicator][and][powder-coating applicator]**.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing heating-cooling unit enclosures similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- C. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

- D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Build mockups of typical heating-cooling unit enclosures as shown on Drawings.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver heating-cooling unit enclosures wrapped in protective coverings or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with heating-cooling unit enclosures by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design heating-cooling unit enclosures.
- B. Structural Performance: Heating-cooling unit enclosures shall withstand the effects of gravity loads and the following loads and stresses without exceeding the allowable design working stress of materials involved and without exhibiting permanent deformation in any components:
1. Live Loads: **100 lbf/sq. ft. (4.8 kN/sq. m)** or a concentrated load of **300 lbf (1.3 kN)** on an area of **4 sq. in. (26 sq. cm)**, whichever produces the greater stress.

2.2 HEATING-COOLING UNIT ENCLOSURES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Airflex Industrial, Inc.]**
 2. **[ARSCO Metals LLC]**
 3. **[Barker Metalcraft]**
 4. **[HVAC Custom Enclosure Co., LLC]**
 5. **[Wenig Company (The)]**
 6. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Airflex Industrial, Inc.]**

2. [ARSCO Metals LLC]
 3. [Barker Metalcraft]
 4. [HVAC Custom Enclosure Co., LLC]
 5. [Wenig Company (The)]
 6. <Insert manufacturer's name>
- C. Fabricate heating-cooling unit enclosures from metal of type and thickness indicated below:
1. Galvanized-Steel Sheet:
 - a. Framing: [0.108 inch (2.74 mm)][Thickness required to comply with performance requirements]<Insert thickness>.
 - b. Sills and Stools: [0.079 inch (2.01 mm)][Thickness required to comply with performance requirements]<Insert thickness>.
 - c. Front Panels and Bases: [0.064 inch (1.63 mm)]<Insert dimension>.
 - d. Concealed Panels and Trim: [0.040 inch (1.02 mm)]<Insert dimension>.
 - e. Finish: [Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat].
 2. Steel Sheet:
 - a. Framing: [0.105 inch (2.66 mm)][Thickness required to comply with performance requirements]<Insert thickness>.
 - b. Sills and Stools: [0.075 inch (1.90 mm)][Thickness required to comply with performance requirements]<Insert thickness>.
 - c. Front Panels and Bases: [0.060 inch (1.52 mm)]<Insert dimension>.
 - d. Concealed Panels and Trim: [0.036 inch (0.91 mm)]<Insert dimension>.
 - e. Finish: [Factory primed][Baked enamel][Powder coat].
- D. Weld seams and connections unless otherwise indicated or unless other methods are necessary for access to heating and cooling equipment.
- E. Incorporate stiffeners or laminated backing using noncombustible materials as needed for strength and rigidity.
1. Fill space between stiffeners with sound-deadening insulation attached to face sheet with insulation adhesive unless otherwise indicated.
 2. Coat concealed faces of metal panels more than **6 inches (150 mm)** wide with a heavy coating of sound-deadening mastic applied at the minimum rate of **20 sq. ft./gal. (0.5 sq. m/L)**.
- F. Provide louvers and grilles of size, type, and materials indicated.
1. For removable grilles, use modular units with recessed openings formed into surfaces of enclosures and without blank filler panels between grilles, so face panels and stools are continuous. Fabricate removable grilles and openings to precise tolerances to produce well-fitted assemblies free of warp or rattle, with grilles supported continuously along parallel edges and with tops flush with top of enclosure.
- G. Incorporate removable tops and fronts where indicated or needed for access to heating-cooling units and to piping, ductwork, controls, and electrical service, with panels and openings as follows:
1. Fabricate with a fitting tolerance of not less than **1/32 inch (0.8 mm)** and not more than **1/16 inch (1.6 mm)** at each edge, with face of panels flush with adjoining fixed surfaces of enclosure.
 2. Form panels for easy removal without interfering with adjoining construction or furniture. Hold panels in place with concealed clips and hardware that prevent warp and rattle.

- H. Incorporate hinged access panels in enclosures for access to heating-cooling unit controls, as either separate elements or integrated with grille openings, as indicated or needed.
- I. Coordinate construction, configuration, and dimensions of enclosures with those of heating-cooling units. Provide support for heating-cooling units and controls where indicated. Provide blind knockouts and supports for piping, ductwork, control lines, electrical conduit, and wiring where indicated or needed.
- J. Locate fixed surfaces of enclosure to coincide precisely with window mullions and partition system terminations. Provide closures at ends of units, at recessed openings in base of units, and at other locations where needed to conceal unfinished wall or floor surfaces, piping, conduit, ductwork, or heating-cooling units.
 - 1. Provide built-in partitions (bulkheads) within enclosures between heating-cooling units, located to coincide with mullions and partition system terminations. Seal partitions to faces of enclosures with compressible gaskets or mastic sealing tape, and cover both sides of partitions with sound-deadening insulation attached to partitions with insulation adhesive.

2.3 SHEET METAL

- A. Fabricate units from sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.
- B. Galvanized-Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, either commercial steel or forming steel.
- C. Steel Sheet: **[Uncoated, cold-rolled, ASTM A1008/A1008M, commercial steel, exposed][or][electrolytic zinc-coated, ASTM A879/A879M, with steel sheet substrate complying with ASTM A1008/A1008M, commercial steel, exposed].**

2.4 MISCELLANEOUS MATERIALS

- A. Gaskets: As required to seal joints in heating-cooling unit enclosures; as recommended in writing by heating-cooling unit enclosure manufacturer.
 - 1. ASTM D1056, Type 1, Class A, and grade as recommended by gasket manufacturer to obtain seal for application indicated.
 - 2. Closed-cell polyurethane foam, adhesive on two sides, and release paper protected.
- B. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded and as necessary for strength, corrosion resistance, and compatibility in fabricated items.
- C. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
 - 1. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless **[otherwise indicated][exposed fasteners are unavoidable or are the standard fastening method]**.
 - 2. Provide **[Phillips][tamper-resistant][square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Sound-Deadening Materials:

1. Insulation: Unfaced mineral-fiber blanket insulation complying with ASTM C665, Type I, and passing ASTM E136 test.
2. Mastic: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

E. Isolation Coating: Manufacturer's standard [**alkali-resistant coating**][**bituminous paint**][**epoxy coating**].

2.5 PAINTS AND COATINGS

- A. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- C. Shop Primers: Comply with [**Section 099123 "Interior Painting."**][**Section 099600 "High-Performance Coatings."**]
- D. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
- E. Shop Primer for Galvanized Steel: Water-based galvanized metal primer complying with MPI#134.
- F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble heating-cooling unit enclosures in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Coordinate dimensions and attachment methods of heating-cooling unit enclosures with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- C. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a **1/2-inch- (12-mm-)** wide hem on the concealed side, or ease edges to a radius of approximately **1/32 inch (1 mm)** and support with concealed stiffeners.
- D. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- E. Build in straps, plates, and brackets as needed to support and anchor heating-cooling unit enclosures to adjoining construction.
- F. Provide support framing, mounting, and attachment clips; splice sleeves; fasteners; and accessories needed to install heating-cooling unit enclosures.

- G. Where welding is indicated, weld joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.

2.7 GALVANIZED-STEEL SHEET FINISHES

- A. Preparing Galvanized Items for Factory Priming: Thoroughly clean galvanized decorative formed metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- B. Preparing Galvanized Items for Factory Finishing: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
- C. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- D. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- E. Baked-Enamel Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- F. Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**. Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- G. Siliconized-Polyester Coating: After cleaning and pretreating, apply manufacturer's standard epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- H. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- I. Superior-Performance Organic Finish: **[Two][Three][Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**

2.8 STEEL SHEET FINISHES

- A. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
- B. Pretreatment: Immediately after cleaning, apply a conversion coating of type suited to organic coating applied over it.
- C. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- D. Baked-Enamel Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of **2 mils (0.05 mm)**.
 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- E. Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**. Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of heating-cooling unit enclosures.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Locate and place heating-cooling unit enclosures level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install heating-cooling unit enclosures.
 1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- B. Use concealed anchorages where possible.

- C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- D. Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses.
- E. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.

3.3 ADJUSTING AND CLEANING

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099123 "Interior Painting."**][**Section 099600 "High-Performance Coatings."**][**Section 099123 "Interior Painting"** and **Section 099600 "High-Performance Coatings."**]
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

- A. Protect finishes of heating-cooling unit enclosures from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 70 00 00 - DECORATIVE METAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Decorative window security bars.
2. Decorative mechanical grilles and frames.
3. Custom door pulls.
4. Combination hall push-button stations.
5. Metal reveals at wood paneling.
6. Cast-metal rosettes at marble joints.

B. Related Requirements:

1. Section 057300 "Decorative Metal Railings" for decorative metal railings.
2. Section 057500 "Decorative Formed Metal" for decorative metal items made from sheet metal.

1.2 COORDINATION

- A. Coordinate installation of anchorages for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.
- B. Sustainable Design Submittals:
1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Shop Drawings: Show fabrication and installation details for decorative metal.
1. Include plans, elevations, component details, and attachment details.
 2. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
- D. Patterns, Models, or Plaster Castings: Made from proposed patterns for each design of custom casting required.

- E. Samples for Initial Selection: For products involving selection of color, texture, or design[**including mechanical finishes**].
- F. Samples for Verification: For each type of exposed finish.
 - 1. Sections of linear shapes.
 - 2. Full-size Samples of castings and forgings.
 - a. For custom castings, submit finished Samples showing ability to reproduce detail[, **cast-metal color,**] and quality of finish.[**Samples may be of similar previous work.**]
 - 3. Samples of [**welded**][**and**][**brazed**] joints showing quality of workmanship[**and color matching of materials**].

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**fabricator**][**organic-coating applicator**][**anodic finisher**][**powder-coating applicator**].
- B. Mill Certificates: Signed by manufacturers of stainless steel certifying that products furnished comply with requirements.
- C. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing decorative metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Installer Qualifications: Fabricator of products.
- C. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings, of type indicated, to aluminum extrusions and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- D. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- E. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- F. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.7 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups for the following types of decorative metal:
 - a. **<Insert, in separate subparagraphs, description of each decorative metal type including mockup size>.**
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store decorative metal in a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
- B. Deliver and store cast-metal products in wooden crates surrounded by enough packing material to ensure that products are not cracked or otherwise damaged.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 DECORATIVE METAL FABRICATORS

- A. Fabricator: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **<Insert manufacturer's name>.**

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.3 ALUMINUM

- A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Bars and Shapes: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5/T52.

- C. Pipe and Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
- D. Tubing: **ASTM B210 (ASTM B210M)**, Alloy 6063-T832.
- E. Plate and Sheet: **ASTM B209 (ASTM B209M)**, [**Alloy 3003-H14**][**Alloy 5005-H32**][**Alloy 6061-T6**].
- F. Forgings: **ASTM B247 (ASTM B247M)**, Alloy 6061-T6.
- G. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.4 COPPER AND COPPER ALLOYS

- A. Fabricate products from alloys indicated and temper to suit application and forming methods but with strength and stiffness not less than H01 (quarter-hard) for plate, sheet, strip, and bars and H55 (light-drawn) for tube and pipe.

2.5 BRONZE

- A. Extruded Shapes: ASTM B455, Alloy UNS C38500 (architectural bronze).
- B. Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
- C. Tube: **ASTM B135 (ASTM B135M)**, Alloy UNS C23000 (red brass, 85 percent copper).
- D. Castings: [**ASTM B62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass)**][or][**ASTM B584, Alloy UNS C86500 (No. 1 manganese bronze)**].
- E. Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).

2.6 BRASS

- A. Extruded Shapes: ASTM B249/B249M, Alloy UNS C36000 (free-cutting brass).
- B. Seamless Tube: **ASTM B135 (ASTM B135M)**, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- C. Castings: ASTM B584, Alloy UNS C85200 (high-copper yellow brass).
- D. Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).

2.7 NICKEL SILVER

- A. Extruded Shapes: ASTM B249/B249M, Alloy UNS C79600.
- B. Castings: ASTM B584, Alloy UNS C97300 (12 percent leaded nickel silver).

2.8 COPPER

- A. Tube: ASTM B75/B75M, Alloy UNS C12200 (phosphorous deoxidized, high residual phosphorous

copper).

- B. Castings: ASTM B824, with a minimum of 99.9 percent copper.
- C. Plate, Sheet, Strip, and Bars: ASTM B152/B152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.9 STAINLESS STEEL

- A. Tubing: ASTM A554, **[Grade MT 304][Grade MT 316][Grade MT 316L]**.
- B. Pipe: ASTM A312/A312M, **[Grade TP 304][Grade TP 316][Grade TP 316L]**.
- C. Castings: ASTM A743/A743M, **[Grade CF 8 or Grade CF 20][Grade CF 8M or Grade CF 3M]**.
- D. Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316][Type 316L]**.
- E. Flat Bar: ASTM A666, **[Type 304][Type 316][Type 316L]**.
- F. Bars and Shapes: ASTM A276, **[Type 304][Type 316][Type 316L]**.
- G. Wire Rope and Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Carl Stahl DecorCable, Inc.]**
 - b. **[Esmet, Inc.]**
 - c. **[Feeney Inc.]**
 - d. **[Hayn Enterprises, LLC]**
 - e. **[Johnson, C. Sherman, Co., Inc]**
 - f. **[Ronstan International Inc]**
 - g. **[Seco South, Inc.]**
 - h. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Carl Stahl DecorCable, Inc.]**
 - b. **[Esmet, Inc.]**
 - c. **[Feeney Inc.]**
 - d. **[Hayn Enterprises, LLC]**
 - e. **[Johnson, C. Sherman, Co., Inc]**
 - f. **[Ronstan International Inc]**
 - g. **[Seco South, Inc.]**
 - h. **<Insert manufacturer's name>**
 - 3. Wire Rope: **[1-by-19][7-by-7][7-by-19]<Insert designation>** wire rope made from wire complying with ASTM A492, Type 316.
 - 4. Wire-Rope Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain without failure a load equal to minimum breaking strength of wire rope with which they are used.

2.10 STEEL AND IRON

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- B. Tubing: **[ASTM A500/A500M (cold formed)][or][ASTM A513, Type 5 (mandrel drawn)]**.
- C. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
- D. Plates, Shapes, and Bars: ASTM A36/A36M.
- E. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M unless otherwise indicated.
- F. Steel Sheet, Cold Rolled: ASTM A1008/A1008M, either commercial steel or structural steel, exposed.

2.11 TITANIUM

- A. Strip, Sheet, and Plate: ASTM B265, Grade 1.
- B. Bars: ASTM B348, Grade 1.

2.12 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 - 1. Aluminum Items: **[Aluminum][Type 304 stainless steel][Type 316 stainless steel]** fasteners.
 - 2. Copper-Alloy (Bronze) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed, muntz metal (Alloy 280) fasteners where exposed]**.
 - 3. Copper-Alloy (Brass) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed, brass (Alloy 260 or 360) fasteners where exposed]**.
 - 4. Stainless Steel Items: **[Type 304][Type 316]** stainless steel fasteners.
 - 5. Titanium Items: **[Type 304][Type 316]** stainless steel fasteners.
 - 6. Uncoated-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed, Type 304 stainless steel fasteners where exposed.
 - 7. Galvanized-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating.
 - 8. Dissimilar Metals: **[Type 304][Type 316]** stainless steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.
- C. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless **[otherwise indicated][exposed fasteners are unavoidable]**.
 - 1. Provide **[Phillips][tamper-resistant][square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 **[or ICC-ES AC308]**.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or **ASTM F1941 (ASTM F1941M)**, Class Fe/Zn 5 unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ASTM F738M)**, and nuts, **ASTM F594 (ASTM F836M)**.

2.13 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- B. Brazing Rods: For copper alloys, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
- F. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings.]**
- G. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- H. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- I. Shop Primer for Galvanized Steel: **[Cementitious galvanized metal primer complying with MPI#26][Vinyl wash primer complying with MPI#80][Water-based galvanized metal primer complying with MPI#134].**
- J. Intermediate Coats and Topcoats for Steel: Provide products that comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings.]**
- K. Epoxy Intermediate Coat for Steel: Complying with MPI#77 and compatible with primer and topcoat.
- L. Polyurethane Topcoat for Steel: Complying with MPI#72 and compatible with undercoat.
- M. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.14 FABRICATION, GENERAL

- A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly.
 1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.

3. Use connections that maintain structural value of joined pieces.
 - B. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged.
 1. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes.
 2. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
 - C. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
 - D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
 - E. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
 - F. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
 - G. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.
 - H. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
 - I. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as needed to receive finish hardware, screws, and similar items unless otherwise indicated.
 - J. Comply with AWS for recommended practices in shop **[welding][and][brazing]**. **[Weld][and][braze]** behind finished surfaces without distorting or discoloring exposed side. Clean exposed **[welded][and][brazed]** joints of flux, and dress exposed and contact surfaces.
 1. Where **[welding][and][brazing]** cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Type 1 Welds: no evidence of a welded joint][Type 2 Welds: completely sanded joint, some undercutting and pinholes okay][Type 3 Welds: partially dressed weld with spatter removed][Type 4 Welds: good quality, uniform undressed weld with minimal splatter]**.
 - K. Provide castings that are sound and free of warp, cracks, blowholes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.
- 2.15 FABRICATION OF DECORATIVE WINDOW SECURITY BARS
- A. Fabricate decorative window grilles to designs indicated from steel bars and shapes of sizes and profiles indicated. Form steel bars by bending, forging, coping, mitering, and welding.
 - B. Welding: Interconnect grille members with full-length, full-penetration welds unless otherwise indicated. Use welding method that is appropriate for metal and finish indicated and that develops full strength of

members joined. Finish exposed welds and surfaces smooth, flush, and blended to match adjoining surfaces.

- C. Brackets, Fittings, and Anchors: Provide wall brackets, fittings, and anchors to connect decorative window grilles to other work unless otherwise indicated.
1. Furnish inserts and other anchorage devices to connect decorative window grilles to concrete and masonry work. Coordinate anchorage devices with supporting structure.
 2. Fabricate anchorage devices that are capable of withstanding loads indicated.

2.16 DECORATIVE MECHANICAL GRILLES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Architectural Grille]**
 2. **[Beaux-Arts Classic Products]**
 3. **[DLSS Manufacturing]**
 4. **[H&K Perforating LLC]**
 5. **[Precision Metal Fabricators, Inc.]**
 6. **[Reggio Register Company, Inc.]**
 7. **[Register & Grille Mfg. Co., Inc.]**
 8. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Architectural Grille]**
 2. **[Beaux-Arts Classic Products]**
 3. **[DLSS Manufacturing]**
 4. **[H&K Perforating LLC]**
 5. **[Precision Metal Fabricators, Inc.]**
 6. **[Reggio Register Company, Inc.]**
 7. **[Register & Grille Mfg. Co., Inc.]**
 8. **<Insert manufacturer's name>**
- C. Fabricate decorative grilles from perforated **[aluminum][brass][bronze][stainless steel][steel]** sheet or plate of thickness, size, and pattern indicated. Form perforations by punching, cutting, or drilling to produce openings of sizes and shapes indicated. Roll, press, and grind perforated metal to flatten and to remove burrs and deformations.
1. Form perforations to match existing grilles.
 2. Drawings indicate perforated metal patterns required and are based on products of one manufacturer. Perforated metal patterns produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
- D. Drill and countersink grilles for mounting screws at **2 inches (50 mm)** from corners and at **10 inches (250 mm)** or less o.c. Provide units with oval-head **[wood][self-tapping machine]** screws.
- E. Fabricate grille frames from extruded **[aluminum][brass][bronze][stainless steel][steel]** of profiles and to sizes and shapes indicated. Miter frame members at corners and connect with concealed splice plates **[welded][brazed]** to back of frames.
1. Secure grilles in frames with **0.5-inch- (12-mm-)** long **[welds][brazing]** along perimeter of grilles

- at **4 inches (100 mm)** o.c.
 - 2. Provide frame profiles to match existing frames.
 - 3. Drawings indicate frame profiles required and are based on products of one manufacturer. Similar frame profiles produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
- F. Drill and countersink frames for mounting screws at **4 inches (100 mm)** from corners and at **16 inches (400 mm)** or less o.c. Provide units with oval-head **[wood][self-tapping machine]** screws.

2.17 FABRICATION OF CUSTOM DOOR PULLS

- A. Fabricate custom door pulls from **[brass][bronze][stainless steel]** bar stock of profile indicated, fabricated to shapes indicated.
- 1. Form curves by bending to produce uniform curvature of radii indicated; maintain profile of member throughout entire bend without buckling, twisting, or otherwise deforming exposed surfaces.
 - 2. Where radii of bends are too small to avoid buckling, grind bars after bending to restore original profile.
 - 3. Drill and tap door pulls to receive through bolts for attachment to doors.
- B. Fabricate backing plates for custom door pulls from **1/8-inch (3.2-mm) [brass][bronze][stainless steel]** sheet.
- 1. Cut to shape indicated and bevel edges at a 45-degree angle for one-half thickness of metal.
 - 2. Drill and countersink holes where indicated for screws and bolts.
- C. Provide units with oval-head through bolts for mounting pulls and with oval-head wood screws for mounting backing plates.

2.18 FABRICATION OF COMBINATION HALL PUSH-BUTTON STATIONS

- A. Fabricate units of **[brass][bronze][stainless steel]** to comply with details indicated. Coordinate with elevator signal equipment to provide integrated, closely fitted assemblies.
- 1. Fabricate faceplates from **1/8-inch- (3.2-mm-)** thick sheet with edges beveled at a 45-degree angle for one-half thickness of metal.
 - 2. Provide units with rectangular, split-bowl trash receptacle, designed for recess mounting in nominal **4-inch (100-mm)** wall depth. Fabricate recessed cabinets, top rings, and split bowls of same metal as face of units; fabricate removable receptacles of drawn aluminum. Nominal dimensions of units are **10 by 10 by 3-1/2 inches (250 by 250 by 90 mm)** in depth.
 - 3. Provide units with emergency pictorial signs and text, complying with requirements of authorities having jurisdiction, indicating that in fire emergency, elevators should not be used and that stairways should be used instead. Engrave pictorial sign and text into front surface of faceplates to a depth of **1/16 inch (1.6 mm)** with engraving painted red. Make signs **5 inches (125 mm)** wide by **8 inches (200 mm)** high.
 - 4. Provide cutouts in faceplates of units for push buttons of elevator hall push-button station[, **card reader,**] and elevator key switches. Coordinate locations and sizes of cutouts so additional faceplate is not required and so faces of push buttons are flush with fronts of faceplates and key switches project beyond faceplate only by depth of bezel.

2.19 FABRICATION OF METAL REVEALS

- A. Fabricate metal reveals for wood paneling from **[3/4-by-3/4-by-1/16-inch (19-by-19-by-3-mm) extruded-bronze][3/4-by-3/4-by-0.025-inch (19-by-19-by-0.6-mm) brake-formed, stainless steel][3/4-by-3/4-by-0.015-inch (19-by-19-by-0.4-mm) brake-formed titanium]** channels.
1. Drill for mounting screws **6 inches (150 mm)** from ends of channels and not more than **24 inches (600 mm)** o.c.
 2. Locate mounting screws at same heights for all channels.
 3. Provide **[black-finished,]**hex-socket, wafer-head screws for mounting reveals.

2.20 FABRICATION OF CAST-METAL ROSETTES

- A. Fabricate cast-metal rosettes to design indicated from **[aluminum][brass][bronze][nickel silver]**. Drill and tap castings for threaded mounting studs.
1. Provide custom castings to match design indicated.
 2. Manufacturer's stock castings may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.
 3. Drawings indicate cast-metal rosette designs required and are based on products of one manufacturer. Castings produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Architect.

2.21 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.22 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm][AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm][AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
1. Color: **[Champagne][Light bronze][Medium bronze][Dark bronze][Black]<Insert color>**.
 2. **[Match Architect's sample][As selected by Architect from full range of industry colors and color densities]**.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.
- G. Superior-Performance Organic Finish: **[Two][Three][Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

2.23 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
- D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- F. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below):
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- G. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below):
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- H. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below):
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

- I. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below):
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching Architect's sample**].
- K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate)[, **with color matching Architect's sample**].
- L. Statuary Conversion Coating, Bright Relieved and Lacquered: M12-C55-M2x-O6x (Mechanical Finish: matte finish, as cast; Chemical Finish: conversion coating, sulfide; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below)[, **with color matching Architect's sample**]:
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- M. Blackened, Bright Relieved, and Lacquered: M33-O60-M2x-O6x (Mechanical Finish: directionally textured, coarse satin; Coating: black, air dried; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below)[, **with blackening and buffing matching Architect's sample**]:
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

2.24 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
- C. Stainless Steel Tubing Finishes:
 - 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 - 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 - 3. Polished and Buffed Finish: 320-grit finish followed by buffing [**to a high luster finish**][**to a mirror-like finish**][**to match Architect's sample**].
- D. Stainless Steel Sheet and Plate Finishes:
 - 1. Bright, Cold-Rolled, Unpolished Finish: ASTM A480/A480M, No. 2B.
 - 2. Directional Satin Finish: ASTM A480/A480M, No. 4.
 - 3. Dull Satin Finish: ASTM A480/A480M, No. 6.
 - 4. High Luster Finish: ASTM A480/A480M, No. 7.
 - 5. Mirror Finish: ASTM A480/A480M, No. 8.
- E. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

- F. Sputter-Coated Finish: Titanium nitride coating deposited by magnetic sputter-coating process over indicated mechanical finish.
- G. Colored, Oxide-Film Finish: Clear, oxide interference film produced by degreasing and then immersing in a mixture of chromic and sulfuric acids.
 - 1. Product: Subject to compliance with requirements, provide INCO colored stainless steel finish as developed and licensed by International Nickel Co., Ltd.
 - 2. Color: **[Match Architect's sample][As selected by Architect from finisher's full range].**

2.25 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize products made from rolled, pressed, and forged steel shapes, castings, plates, bars, and strips indicated to be galvanized to comply with ASTM A123/A123M.
 - 1. Hot-dip galvanize steel and iron hardware indicated to be galvanized to comply with ASTM A153/A153M.
 - 2. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 - 3. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. Preparing Galvanized Items for Shop Priming: After galvanizing, thoroughly clean decorative metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- C. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."][SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."][requirements indicated below:]**
 - 1. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interiors (SSPC Zone 1A): SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- D. Primer Application: Apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 - 1. Shop prime uncoated ferrous-metal surfaces with **[universal shop primer][primers specified in Section 099113 "Exterior Painting."][primers specified in Section 099123 "Interior Painting."]** unless **[zinc-rich primer is][primers specified in Section 099600 "High-Performance Coatings" are]** indicated.
 - 2. Do not apply primer to galvanized surfaces.
- E. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting."][Section 099600 "High-Performance Coatings."]**
 - 1. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**
- F. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
 - 1. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As**

selected by Architect from manufacturer's full range].

- G. Powder-Coat Finish, Nongalvanized: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**.
 4. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**
- H. Powder-Coat Finish, Galvanized: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**.
 4. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**

2.26 TITANIUM FINISHES

- A. General: Fabricate items from finished titanium stock, taking care not to damage finish during fabrication. Protect finish as needed during fabrication by applying a strippable, temporary protective covering.
- B. Dull Matte Finish: Pickled and annealed.
- C. Bright Matte Finish: Vacuum annealed.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Provide anchorage devices and fasteners where needed to secure decorative metal to in-place construction.
- B. Perform cutting, drilling, and fitting required to install decorative metal. Set products accurately in location, alignment, and elevation, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.

- C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.
- D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.
- F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
 - 1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
- G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding and requirements for welding and for finishing welded connections in "Fabrication, General" Article. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
- H. Field Brazing: Comply with requirements for brazing and for finishing brazed connections in "Fabrication, General" Article. Braze connections that are not to be left as exposed joints but cannot be shop brazed because of shipping size limitations.
- I. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 INSTALLATION OF DECORATIVE WINDOW SECURITY BARS

- A. Fasten security bar frames to concrete and masonry walls with cast-in-place or post-installed anchors. Peen exposed threads of anchors to prevent removal of security bars.

3.4 INSTALLATION OF DECORATIVE MECHANICAL GRILLES

- A. Mount decorative grilles at heights and in positions indicated, adjusting ductwork to be centered on grilles if any.
 - 1. Secure to framing and blocking with specified fasteners.
 - 2. On marble, brick, and other solid surfaces, secure with wood screws in plastic plugs.

3.5 INSTALLATION OF DECORATIVE-METAL-CLAD, HOLLOW-METAL DOORS AND FRAMES

- A. Install doors and frames to comply with requirements specified in Section 081113 "Hollow Metal Doors and Frames."

3.6 INSTALLATION OF CUSTOM DOOR PULLS

- A. Install door pulls at heights and locations shown. Install with backing plates on both sides of doors. Fasten backing plates to doors with oval-head [wood][self-tapping metal] screws and secure pulls through doors and backing plates with oval-head machine screws.

3.7 INSTALLATION OF COMBINATION HALL PUSH-BUTTON STATIONS

- A. Coordinate installation of combination hall push-button stations with installation of related elevator signal equipment components. Secure units in place with faceplate overlapping surrounding wall finish and drawn into contact with surrounding wall finish at entire perimeter of faceplate.

3.8 INSTALLATION OF METAL REVEALS AT WOOD PANELING

- A. Install metal reveals between wood panels as paneling is installed. Secure to wood grounds with specified screws.

3.9 INSTALLATION OF CAST-METAL ROSETTES AT MARBLE JOINTS

- A. Install cast-metal rosettes at intersections of marble joints where indicated. Install only after marble work is complete and joints are grouted. Secure to wall by drilling a **3/4-inch- (19-mm-)** round hole at intersection of marble joints and by filling hole with molding plaster into which threaded stud is embedded. Angle drill and rotate so bottom of hole is larger than at surface.
 - 1. Secure rosettes in place with masking tape until plaster sets. After plaster has set, remove masking tape and adhesive residue.

3.10 CLEANING AND PROTECTION

- A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
- B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

05 - Metals

- E. Protect finishes of decorative metal from damage during construction period with temporary protective coverings approved by decorative metal fabricator. Remove protective covering at time of Substantial Completion.
- F. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 70 00 00

SECTION 05 71 00 00 - DECORATIVE METAL STAIRS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes decorative metal stairs.
- B. Related Requirements:
 - 1. Section 057113 "Fabricated Metal Spiral Stairs."
 - 2. Section 093013 "Ceramic Tiling" for ceramic-tile treads and landings.
 - 3. Section 096340 "Stone Flooring" for stone treads and landings.
 - 4. Section 096400 "Wood Flooring" for wood treads and landings.
 - 5. **[Section 096613 "Portland Cement Terrazzo Flooring"]****[Section 096623 "Resinous Matrix Terrazzo Flooring"]** for field-cast terrazzo treads and landings.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs.
 - 1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
 - 2. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Product Data: For metal stairs and the following:
 - 1. Shop primer products.
 - 2. Precast concrete treads.
 - 3. Precast terrazzo treads.
 - 4. Grout.
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 - 2. Environmental product declaration.
 - 3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
 - 4. Environmental Product Declaration (EPD): For each product.
 - 5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means

- of transportation, and cost for each indigenous material.
- 6. Environmental Product Declaration: For each product.
- 7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
- 8. Environmental Product Declaration: For each product.
- 9. Environmental Product Declaration: For each product.
- 10. Third-Party Certifications: For each product.
- 11. Third-Party Certified Life Cycle Assessment: For each product.

C. Shop Drawings:

- 1. Include plans, elevations, sections, details, and attachments to other work.
- 2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
- 3. Include plan at each level.

D. Samples for Verification: For each type and finish of tread.

E. Delegated Design Submittal: For stairs, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that the engineer is licensed in the **[jurisdiction][State]** in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
 - 1. Keep members off ground and spaced by using pallets, dunnage, or other supports and spacers.
 - 2. Protect members and packaged materials from corrosion and deterioration.
 - 3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.

- a. Repair or replace damaged materials or structures as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stairs, [**and railings,**] including attachment to building construction.
- B. Structural Performance of Stairs: Metal stairs withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 1. Uniform Load: **100 lbf/sq. ft. (4.79 kN/sq. m).**
 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm).**
 3. Uniform and concentrated loads need not be assumed to act concurrently.
 4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
 5. Limit deflection of treads, platforms, and framing members to [L/360][L/720]<Insert deflection ratio> or 1/4 inch (6.4 mm), whichever is less.
- C. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to [ASCE/SEI 7]<Insert requirement>.
 1. Component Importance Factor: <Insert requirement>.

2.2 METALS

- A. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- C. Steel Tubing: [ASTM A500/A500M (cold formed)][or][ASTM A513/A513M].
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- D. Stainless Steel Bars and Shapes: ASTM A276/A276M, [Type 304][Type 316L].
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- E. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, [**either commercial steel, Type B, or**] structural steel, **Grade 25 (Grade 170)**, unless another grade is required by design loads; exposed.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.

- F. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, [**either commercial steel, Type B, or** structural steel, **Grade 30 (Grade 205)**, unless another grade is required by design loads.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- G. Galvanized-Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, [**either commercial steel, Type B, or** structural steel, **Grade 33 (Grade 230)**, unless another grade is required by design loads.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- H. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, [**Type 304**][**Type 316**], stretcher-leveled standard of flatness.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- I. Bronze Sheet: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper) or Alloy UNS C23000 (red brass, 85 percent copper).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- J. Brass Sheet: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- K. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 temper.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- L. Titanium Sheet: ASTM B265, Grade 1.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- M. Aluminum Sheet: Flat sheet complying with **ASTM B209 (ASTM B209M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties of not less than Alloy 5005-H32.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- N. Aluminum Extrusions: **ASTM B221 (ASTM B221M)**, Alloy 6063-T6.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25][50]<Insert value>** percent.
- O. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
1. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of

preconsumer recycled content not less than [25][50]<Insert value> percent.

- P. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- Q. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (lead red brass) or No. C84400 (lead semired brass).
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- R. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- S. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent lead nickel bronze).
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.
- T. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.

2.3 ABRASIVE NOSINGS

- A. Cast-Metal Units: Cast [iron][aluminum][bronze][nickel silver], with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[American Safety Tread Co., Inc]**
 - b. **[Balco; a CSW Industrials Company]**
 - c. **[Barry Pattern & Foundry Co., Inc]**
 - d. **[Granite State Casting Co]**
 - e. **[Safe-T-Metal Company, Inc.]**
 - f. **[TrueNorth Steel]**
 - g. **[Wooster Products Inc]**
 - h. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Safety Tread Co., Inc]**

- b. **[Balco; a CSW Industrials Company]**
 - c. **[Barry Pattern & Foundry Co., Inc]**
 - d. **[Granite State Casting Co]**
 - e. **[Safe-T-Metal Company, Inc.]**
 - f. **[TrueNorth Steel]**
 - g. **[Wooster Products Inc]**
 - h. **<Insert manufacturer's name>**
 3. Configuration: Cross-hatched units, **[3 inches (75 mm)][4 inches (100 mm)]** wide without lip.
 4. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- B. Extruded Units: **[Aluminum][Bronze]** units with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Safety Tread Co., Inc]**
 - b. **[Amstep Products]**
 - c. **[Armstrong Products, Inc]**
 - d. **[Balco; a CSW Industrials Company]**
 - e. **[Ecoglo, Inc.]**
 - f. **[Granite State Casting Co]**
 - g. **[Nystrom, Inc.]**
 - h. **[UPNOVR, Inc.]**
 - i. **[Wooster Products Inc]**
 - j. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Safety Tread Co., Inc]**
 - b. **[Amstep Products]**
 - c. **[Armstrong Products, Inc]**
 - d. **[Balco; a CSW Industrials Company]**
 - e. **[Ecoglo, Inc.]**
 - f. **[Granite State Casting Co]**
 - g. **[Nystrom, Inc.]**
 - h. **[UPNOVR, Inc.]**
 - i. **[Wooster Products Inc]**
 - j. **<Insert manufacturer's name>**
 3. Provide ribbed units, with abrasive filler strips projecting **1/16 inch (1.5 mm)** above aluminum extrusion.
 4. Provide solid-abrasive units without ribs.
 5. Nosings: Square-back units, **[1-7/8 inches (48 mm)][3 inches (75 mm)][4 inches (100 mm)]** wide, without lip.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.

2.4 FASTENERS

- A. General: Provide **[zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5][Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5]** where built into exterior walls.
 - 1. Select fasteners for type, grade, and class required.
- B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A; with hex nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
 - 1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for **[exterior stairs][stairs indicated to be galvanized][stairs indicated to be shop primed with zinc-rich primer]**.
- D. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593, and nuts, **ASTM F594 (ASTM F836M)**.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Electrodes: Comply with AWS requirements.
- B. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."][Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings.]**
- C. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- D. Zinc-Rich Primer: Complying with SSPC-Paint 20, **[Type I-A][Type I-B][Type I-C][Type II]**, Level **[1][2][3]**, and compatible with topcoat.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with **[SSPC-Paint 20][ASTM A780/A780M]** and compatible with paints specified to be used over it.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- H. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place

Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of **3000 psi (20 MPa)** unless otherwise indicated.

- I. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
- J. Plain Steel Welded-Wire Reinforcement: ASTM A1064/A10645M, **[steel],[galvanized steel], 6 by 6 inches (152 by 152 mm)**, W1.4 by W1.4, unless otherwise indicated on Drawings.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- K. Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place.
 - 1. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.
 - 2. For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.
- L. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for **[interior][exterior]** use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.

2.6 PRECAST CONCRETE TREADS

- A. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of **5000 psi (35 MPa)** and a total air content of not less than 4 percent or more than 6 percent.
- B. Reinforcement: Galvanized, welded-wire reinforcement, **2 by 2 inches (50 by 50 mm)** by **0.062-inch-(1.6-mm-)** diameter steel wire; comply with ASTM A1064/A1064M, except for minimum wire size.

2.7 PRECAST TERRAZZO TREADS

- A. Precast Terrazzo Stair Treads: Epoxy terrazzo units cast in maximum lengths possible. Comply with manufacturer's written instructions for fabricating precast terrazzo units in sizes and profiles indicated.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Wausau Tile, Inc.]**
 - b. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Wausau Tile, Inc.]**
 - b. **<Insert manufacturer's name>**

3. Epoxy Resin Matrix: Manufacturer's standard, recommended for use indicated.
4. Aggregates: Comply with NTMA gradation standards for mix indicated, and containing no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
5. Reinforcement: ASTM A615/A615M, **Grade 60 (Grade 420)** bars, as required by unit size, profile, and thickness.
6. Abrasive Inserts: **1/2-inch- (13-mm-)** wide, alundum oxide/epoxy mixture.
 - a. Provide three inserts, **1/2 inch (13 mm)** apart, with first insert located **1 inch (25 mm)** from nosing at adjacent stair riser locations.
7. Color: As selected from manufacturer's standard color selections.
8. Finish: Honed.
9. Surface Sealer: Slip and stain-resistant, penetrating sealer that is chemically neutral with pH factor between 7 and 12; does not affect color or physical properties of terrazzo type indicated; is recommend by sealer manufacturer for use with specified terrazzo; and complies with NTMA guide specification for terrazzo type applicable for this Project.

2.8 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs in shop to greatest extent possible.
 1. Disassemble units only as necessary for shipping and handling limitations.
 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.
 2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Weld exposed corners and seams continuously unless otherwise indicated.
 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish

Standards" for Finish #1 - No evidence of a welded joint.

- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.

1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
2. Locate joints where least conspicuous.

2.9 FABRICATION OF STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Architectural Class, unless more stringent requirements are indicated.

- B. Stair Framing:

1. Stringers: Fabricate of **[steel plates][steel channels][steel plates or channels][steel tubes][as indicated on Drawings]**.
 - a. Stringer Size: **[As required to comply with "Performance Requirements" Article][As indicated on Drawings]**.
 - b. Provide closures for exposed ends of **[channel][tube]** stringers.
 - c. Finish: **[Shop primed][Painted][Galvanized]**.
2. Platforms: Construct of steel **[plate][channel][plate or channel][rectangular tube]** headers and miscellaneous framing members as **[required to comply with "Performance Requirements" Article][indicated on Drawings]**.
 - a. Provide closures for exposed ends of **[channel][tube]** framing.
 - b. Finish: **[Shop primed][Painted][Galvanized]**.
3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers. **[If using bolts, fabricate and join so bolts are not exposed on finished surfaces.]**

- C. Subtreads, Risers, and Subplatforms:

1. Fabricate subtreads and subplatforms of steel **[plates][shapes indicated on Drawings]**.
2. Form subtreads, risers, and subplatforms to configurations indicated from **[uncoated, cold-rolled steel sheet][uncoated, hot-rolled steel sheet][galvanized steel sheet][of thickness needed to comply with performance requirements, but not less than 0.075 inch (1.9 mm) thick][of thickness indicated on Drawings]**.
3. Weld subtreads to stringers.
 - a. Locate welds on top of subtreads where they will be concealed by finished treads.
4. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads.
 - a. Weld subplatforms to platform framing.
 - b. Locate welds on top of subplatforms where they will be concealed by finished flooring.
 - c. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

2.10 STAIR RAILINGS

- A. Comply with applicable requirements in Section 057300 "Decorative Metal Railings."

1. Connect posts to stair framing by direct welding unless otherwise indicated.

2.11 FINISHES

- A. Finish metal stairs after assembly.

- B. Steel Galvanized Finish: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
2. Fill vent and drain holes that are exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

- C. Steel Shop Prime Finish:

1. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."][SSPC-SP 3, "Power Tool Cleaning."]**
2. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting.

- a. Stripe paint corners, crevices, bolts, welds, and sharp edges.

- D. Aluminum Finishes:

1. Clear Anodic Finish: AAMA 611, Class I, AA-M12C22A41.
2. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm][AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 - a. Color: **[Champagne][Light bronze][Medium bronze][Dark bronze][Black]<Insert color>**.

- E. Stainless Steel Finishes:

1. Stainless Steel Tubing Finishes:

- a. 180-Grit Polished Finish: Uniform, directionally textured finish.
- b. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
- c. Polished and Buffed Finish: 320-grit finish followed by buffing **[to a high luster finish][to a mirror-like finish][to match Architect's sample]**.

2. Stainless Steel Sheet and Plate Finishes:

- a. Directional Satin Finish: ASTM A480/A480M, No. 4.
- b. High Luster Finish: ASTM A480/A480M, No. 7.
- c. Mirror Finish: ASTM A480/A480M, No. 8.

- F. Bronze Finishes:

1. Statuary Conversion Coating over Satin Finish: CDA M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching**

Architect's sample].

2. Statuary Conversion Coating over Satin Finish, Lacquered: CDA M31-C55-O6x (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide; Coating: clear, organic, air dried, as specified below)[, **with color matching Architect's sample]**:
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
3. Hand-Rubbed Finish, Lacquered: CDA M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

G. Brass Finishes:

1. Buffed Finish, Lacquered: CDA M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
2. Hand-Rubbed Finish, Lacquered: CDA M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

H. Copper Finishes:

1. As Fabricated: CDA M12 (Matte finish as fabricated).
2. Buffed Finish: CDA M21 (Mechanical Finish: buffed, smooth specular).
3. Hand-Rubbed Finish: CDA M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
4. Medium-Satin Finish: CDA M32 (Mechanical Finish: directionally textured, medium satin).
5. Fine-Matte Finish: CDA M42 (Mechanical Finish: nondirectional finish, fine matte).
6. Buffed Finish, Lacquered: CDA M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
7. Hand-Rubbed Finish, Lacquered: CDA M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

mil (0.025 mm).

8. Medium-Satin Finish, Lacquered: CDA M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
9. Fine-Matte Finish, Lacquered: CDA M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLING METAL STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant

grouts.

- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.
- F. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."
 - 1. Install abrasive nosings with anchors fully embedded in concrete.
 - 2. Center nosings on tread width.
- G. Install precast concrete treads with adhesive supplied by manufacturer.
- H. Install precast terrazzo treads according to manufacturer's written instructions.

3.3 REPAIRS

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**][**Section 099600 "High-Performance Coatings."**][**Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 71 00 00

Task	Specification	Specification Description
05 71 00 00	05 70 00 00	Decorative Metal

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 71 13 00 - FABRICATED METAL SPIRAL STAIRS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fabricated metal spiral stairs with steel central-supporting columns, radiating treads, and railings.
- B. Related Requirements:
 - 1. Section 062023 "Interior Finish Carpentry" for wood treads.
 - 2. Section 096513 "Resilient Base and Accessories" for resilient treads.
 - 3. Section 096816 "Sheet Carpeting" for carpeting treads.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for fabricated metal spiral stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate fabricated metal spiral stairs with finish flooring materials.

1.3 ACTION SUBMITTALS

- A. Product Data: For fabricated metal spiral stairs, including railings. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for components.
- B. Shop Drawings: For fabricated metal spiral stairs and railings. Include plans, elevations, sections, details, attachments to other work, and field measurements.
- C. Samples for Initial Selection: For products involving selection of color, texture, or design.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes:
 - 1. Treads.
 - 2. Metal with painted finish.
 - 3. Railing members.
- E. Delegated Design Submittal: For fabricated metal spiral stairs and railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- F. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content

- and cost.
- 2. Environmental product declaration.
- 3. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
- 4. Environmental Product Declaration (EPD): For each product.
- 5. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
- 6. Environmental Product Declaration: For each product.
- 7. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
- 8. Environmental Product Declaration: For each product.
- 9. Environmental Product Declaration: For each product.
- 10. Third-Party Certifications: For each product.
- 11. Third-Party Certified Life Cycle Assessment: For each product.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the jurisdiction in which Project is located.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, floor slabs, decks, and other construction contiguous with fabricated metal spiral stairs by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain fabricated metal spiral stairs from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design fabricated metal spiral stairs and railings.
- B. Structural Performance of Stairs: Fabricated metal spiral stairs are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated in accordance with **[ASCE/SEI 7]<Insert requirement>**:
 - 1. Uniform Load: **[40 lbf/sq. ft. (1.92 kN/sq. m)][100 lbf/sq. ft. (4.79 kN/sq. m)]**.
 - 2. Concentrated Load: **300 lbf (1.33 kN)** applied on an area of **4 sq. in. (2580 sq. mm)**.
 - 3. Uniform and concentrated loads need not be assumed to act concurrently.
 - 4. Railing Loads: Stairs are to withstand stresses resulting from railing loads in addition to loads specified above.
 - 5. Deflection: Limit deflection of treads, landings, and framing members to **[L/360]** but not to exceed **[1/4 inch (6 mm)]**.
- C. Structural Performance of Railings: Railings are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated in accordance with **[ASCE/SEI 7]<Insert requirement>**:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
- D. Seismic Performance: Fabricated metal spiral stairs are to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]<Insert requirement>**.

2.3 SPIRAL STAIRS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Accent Stairs; ADPG, LLC]**
 - 2. **[Boston Stair]**
 - 3. **[Couturier Iron Craft, Inc.]**
 - 4. **[Custom Iron]**
 - 5. **[Duvinage LLC]**
 - 6. **[Goddard Manufacturing]**
 - 7. **[Innovative Metalcraft, LLC]**
 - 8. **[Iron Shop (The)]**
 - 9. **[Mylon Stairs]**
 - 10. **[Salter Spiral Stair]**
 - 11. **[Stairways Inc.]**
 - 12. **[Steptoe & Wife Antiques Ltd]**
 - 13. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Accent Stairs; ADPG, LLC]**
 2. **[Boston Stair]**
 3. **[Couturier Iron Craft, Inc.]**
 4. **[Custom Iron]**
 5. **[Duvirage LLC]**
 6. **[Goddard Manufacturing]**
 7. **[Innovative Metalcraft, LLC]**
 8. **[Iron Shop (The)]**
 9. **[Mylen Stairs]**
 10. **[Salter Spiral Stair]**
 11. **[Stairways Inc.]**
 12. **[Steptoe & Wife Antiques Ltd]**
 13. **<Insert manufacturer's name>**
- C. Center Column: **[Steel][or][aluminum]** pipe welded to baseplate for anchorage to floor structure. Brace column at upper floors by means of landings attached to column and floor structure unless otherwise indicated. Provide cap for column if top is exposed.
- D. Treads, Cast Metal: Cast **[aluminum][iron]** treads[**and platforms**] with integral frames, legs, and hubs.
1. Provide treads[**and platforms**] with abrasive surfaces.
- E. Treads, Metal Bar Grating: Steel-bar grating treads[**and platforms**] with welded hubs and as follows:
1. Radial grating treads.
 2. **[Abrasive][Rolled-steel, floor-plate]** nosings.
 3. Straight flanges and welded-on legs.
 4. Tapered flanges without legs.
- F. Treads, Formed Metal Plate: Formed **[steel-][aluminum-]**plate treads[**and platforms**], welded to hubs or center column, and as follows:
1. Straight flanges and welded-on legs.
 2. Tapered flanges without legs.
 3. Pan treads without legs.
 4. One-piece treads and risers, **[with][without]** legs.
 5. Rolled-steel, floor-plate wearing surfaces.
 6. Aluminum-alloy, rolled tread-plate wearing surfaces.
 7. Smooth steel-plate wearing surfaces.
 8. Rubber wearing surfaces.
 9. Plywood subtreed for covering with finish flooring specified in another Section.
- G. Treads, Metal Framed: Steel-framed treads[**and platforms**], welded to hubs or center column, and without legs; wearing surface as follows:
1. Cast iron with integral abrasive.
 2. Smooth steel plate with integral abrasive.
 3. Wood.
 4. Plywood insert for covering with finish flooring specified in another Section.
- H. Railings: Uniformly bent to spiral shape[, **and continuing at top to form guardrail around floor opening**].

1. Space balusters less than [4 inches (102 mm)][4-3/8 inches (111 mm)]<Insert dimension>, clear.
2. Space balusters to provide one baluster per tread, and less than [21 inches (533 mm)][30 inches (762 mm)]<Insert dimension>, clear.
3. Space intermediate rails less than [4 inches (101 mm)][4-3/8 inches (111 mm)][21 inches (533 mm)]<Insert dimension>, clear.
4. Locate bottom rail so that a [6-inch- (152-mm-)]<Insert dimension> diameter sphere cannot pass between the stair and rail.
5. Hand Rail:
 - a. [1-1/4- to 2-inch- (32- to 51-mm-) OD]<Insert dimension> steel [pipe][or][round tubing].
 - b. Steel of shape and size indicated.
 - c. [1-1/4- to 2-inch- (32- to 51-mm-) OD]<Insert dimension> round [aluminum][bronze][brass][stainless steel] tubing.
 - d. Extruded bronze of shape and size indicated.
 - e. Wood of shape and size indicated.
6. Top Rail:
 - a. [1-1/4- to 2-inch- (32- to 51-mm-) OD]<Insert dimension> steel [pipe][or][round tubing].
 - b. Steel of shape and size indicated.
 - c. [1-1/4- to 2-inch- (32- to 51-mm-) OD]<Insert dimension> round [aluminum][bronze][brass][stainless steel] tubing.
 - d. Extruded bronze of shape and size indicated.
 - e. Wood of shape and size indicated.
7. Balusters:
 - a. [7/8-inch- (22-mm-) OD][1-inch- (25-mm-) OD][1-1/4-inch- (32-mm-) OD]<Insert dimension> steel pipe[or round tubing].
 - b. [1/2-inch- (13-mm-) OD][5/8-inch- (16-mm-) OD]<Insert dimension> round steel [bars][tubing].
 - c. [1/2-inch- (13-mm-)][5/8-inch- (16-mm-)][3/4-inch- (19-mm-)]<Insert dimension> square steel [bars][tubing].
 - d. [5/8-inch- (16-mm-) OD][3/4-inch- (19-mm-) OD]<Insert dimension> round aluminum tubing.
8. Intermediate Rails:
 - a. [7/8-inch- (22-mm-) OD][1-inch- (25-mm-) OD][1-1/4-inch- (32-mm-) OD]<Insert dimension> steel pipe[or round tubing].
 - b. Steel pipe[or round tubing] same size as top rail.
 - c. [5/8-inch- (16-mm-) OD][3/4-inch- (19-mm-) OD]<Insert dimension> round steel [bars][tubing].
 - d. [5/8-inch- (16-mm-) OD][3/4-inch- (19-mm-) OD][1-inch- (25-mm-) OD][1-1/4-inch- (32-mm-) OD]<Insert dimension> round aluminum tubing.
 - e. Round aluminum tubing same size as top rail.

2.4 MATERIALS

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25]<Insert value> percent.

- C. Brackets, Flanges, and Anchors: Same metal and finish as supported item unless otherwise indicated.
- D. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- E. Steel Bars for Grating Treads and Platforms: ASTM A36/A36M or ASTM A1011/A1011M.
- F. Wire Rod for Grating Crossbars: ASTM A510/A510M.
- G. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or Grade D.
- H. Steel Pipe Columns: ASTM A53/A53M, Schedule 40. Provide Schedule 80 for columns larger than **NPS 4 (DN 100)** and where required to support loads.
- I. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.
- J. Steel Tubing: Either cold-formed steel tubing complying with ASTM A500/A500M or mandrel-drawn mechanical tubing complying with ASTM A513, Type 5.
- K. Iron Castings: Either gray iron complying with ASTM A48/A48M or malleable iron complying with ASTM A47/A47M unless otherwise indicated or required by structural loads.
- L. Aluminum Sheet and Plate: **ASTM B209 (ASTM B209M)**, Alloy 6061-T6.
- M. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.
- N. Aluminum Pipe and Structural Round Tubing: ASTM B429/B429M, Alloy 6063-T6.
- O. Extruded-Aluminum Tubing: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5/T52.
- P. Aluminum Castings: ASTM B26/B26M, Alloy 319.0-F.
- Q. Extruded-Bronze Handrails: ASTM B455, Alloy UNS No. C38500 (architectural bronze).
- R. Seamless Bronze Tubing: ASTM B135/B135M, Alloy UNS No. C23000 (red brass, 85 percent copper).
- S. Seamless Brass Tubing: ASTM B135/B135M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- T. Stainless Steel Tubing: ASTM A554, Grade MT 304.
- U. Stainless Steel Sheet: Sheet, Strip, Plate, and Flat Bar: ASTM A666, **[Type 304][Type 316][Type 316L]**.
- V. Stainless Steel Bars and Shapes: ASTM A276/A276M, **[Type 304][Type 316][Type 316L]**.

2.5 MISCELLANEOUS MATERIALS

- A. Fasteners: For connecting stair components and for anchoring stairs to other construction, select fasteners of type, grade, and class required to produce connections capable of withstanding design loadings.
 - 1. For aluminum, provide fasteners fabricated from Type 304 stainless steel.
 - 2. For stainless steel, provide fasteners fabricated from Type 304 stainless steel.

3. For steel and cast iron, use plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating.
4. For exterior locations, provide fasteners fabricated from Type 304 stainless steel.
- B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.
- C. Lacquer for Brass and Bronze: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products.
 1. Product: Subject to compliance with requirements, provide "Incralac" developed by International Copper Research Corporation.
- D. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting.]**
- E. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer compatible with finish paint systems indicated.
- F. Shop Primer for Galvanized Steel: Primer formulated for use over zinc-coated metal and compatible with finish paint systems indicated.
- G. Shop Primer for Aluminum: Primer formulated for use over aluminum and compatible with finish paint systems indicated.
- H. Wood for Stair Treads, Handrails, and Platforms: Laminated red oak, sanded to 120-grit smoothness. Apply uniform coat of manufacturer's standard clear sealer.
- I. Rubber Wearing Surfaces: Manufacturer's standard, **1/4-inch- (6-mm-)** thick, molded-rubber covering in pattern and color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors and patterns.

2.6 FABRICATION

- A. Assemble fabricated metal spiral stairs in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form work true to line and level with accurate angles and surfaces.
- D. Fabricate connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- E. Cut, reinforce, drill, and tap as needed to receive hardware, screws, and similar items.
- F. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. Finish exposed welds to comply with NOMMA Guideline 1, "Joint Finishes," for **[Finish #1 -No evidence of a welded joint][Finish #2 - Completely sanded joint, some undercutting and pinholes okay][Finish #3 - Partially dressed weld with spatter removed]**.
5. Finish exposed surfaces smooth and blended and, except for fillet welds, so welded surface matches contours of adjoining surfaces.

- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

2.7 STEEL AND IRON FINISHES

- A. Galvanized Finish: Hot-dip galvanize fabricated metal spiral stairs and railings after fabrication to comply with ASTM A123/A123M.
1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
- B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6 (WAB)/NACE WAB-3, "Commercial Blast Cleaning."][SSPC-SP 7 (WAB)/NACE WAB-4, "Brush-off Blast Cleaning."]**
- C. Surface Preparation of Galvanized Steel: Prepare galvanized-steel surfaces for shop priming by thoroughly cleaning steel of grease, dirt, oil, flux, and other foreign matter; treat with etching cleaner **[or][in accordance with SSPC-SP 16]**.
- D. Apply shop primer to prepared surfaces of handrails and railing components unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

2.8 ALUMINUM FINISHES

- A. Mechanical Finish: AA-M3x; sand top rails, handrails, and intermediate rails in one direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- C. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
1. Color:
 - a. **[Champagne][Light bronze][Medium bronze][Dark bronze][Black]<Insert color>.**
 - b. **[Match Architect's sample][As selected by Architect from full range of industry colors and color densities].**
- D. Conversion-Coated and Factory-Primed Finish: AA-C12C42R1x (cleaned with inhibited chemicals; acid chromate-fluoride-phosphate conversion coating; shop primer).

1. Apply shop primer with a minimum dry film thickness of **1.5 mils (0.04 mm)**.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

2.9 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Tubing Finishes:
 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 3. Polished and Buffed Finish: 320-grit finish followed by buffing **[to a high luster finish][to a mirrorlike finish][to match Architect's sample]**.
- D. Stainless Steel Sheet and Plate Finishes:
 1. Directional Satin Finish: ASTM A480/A480M, No. 4.
 2. High Luster Finish: ASTM A480/A480M, No. 7.
 3. Mirror Finish: ASTM A480/A480M, No. 8.

2.10 BRASS AND BRONZE FINISHES

- A. Buffed Finish: Mirror polished, buffed finish.
- B. Lacquered Buffed Finish: Mirror polished, buffed finish coated with lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- C. Lacquered Medium-Satin Finish: Directionally textured, medium satin, mechanical finish coated with lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- D. Statuary Conversion Coating over Satin Finish: Directionally textured, fine satin, mechanical finish with sulfide conversion coating.
 1. Color Match: Match Architect's sample.

PART 3 - EXECUTION**3.1 INSTALLATION**

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where needed for securing fabricated metal spiral stairs to in-place construction; include threaded fasteners for concrete and masonry inserts, through bolts, lag bolts, wood screws, and other connectors as required.
- B. Assemble fabricated metal spiral stair components to comply with manufacturer's written instructions, with each component aligned and in correct relation to each other, securely anchored to supporting column and adjacent structure.
- C. Do not cut, alter, or drill stair components in the field that do not fit properly. Return components that do not fit to manufacturer for adjustment.
- D. Install fabricated metal spiral stairs accurately in location, alignment, and elevation; level and plumb; and in accordance with manufacturer's written instructions.
- E. Install fabricated metal spiral stairs by welding to steel structure or to weld plates cast into concrete unless otherwise indicated.
- F. Field Welding:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

3.2 REPAIR

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with same material.
- B. For galvanized surfaces, clean field welds, bolted connections, and abraded areas and repair galvanizing in accordance with ASTM A780/A780M.
 - 1. Paint repaired areas with same material used for shop painting.

3.3 PROTECTION

- A. Protect finished tread surfaces during construction by covering with **1/2-inch- (13-mm-)** thick, plywood secured with plastic strapping or another nonmarring fastening method.

END OF SECTION 05 71 13 00

Task	Specification	Specification Description
05 71 13 00	05 70 00 00	Decorative Metal
05 71 13 00	05 71 00 00	Decorative Metal Stairs

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 73 00 00 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Aluminum decorative railings.
2. Copper-alloy decorative railings.
3. Stainless steel decorative railings.
4. Steel and iron decorative railings.

B. Related Requirements:

1. Section 055213 "Pipe and Tube Railings" for nonornamental railings fabricated from pipes and tubes.
2. Section 057313 "Glazed Decorative Metal Railings."
3. Section 061000 "Rough Carpentry" for wood blocking for anchoring railings.
4. **[Section 064013 "Exterior Architectural Woodwork"]****[Section 064023 "Interior Architectural Woodwork"]** for wood railings.

1.2 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]**<Insert location>.
 1. **<Insert participants>**.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Manufacturer's product lines of decorative metal railings assembled from standard components.
2. Illuminated rails.
3. Stainless steel cable and cable fittings.
4. Expanded metal infill panels.
5. Perforated metal infill panels.
6. Woven-wire mesh infill panels.
7. Fasteners.
8. Post-installed anchors.

9. Handrail brackets.
10. Wood rails.
11. Lacquer for copper alloys.
12. Shop primer.
13. Intermediate coats and topcoats.
14. Bituminous paint.
15. Nonshrink, nonmetallic grout.
16. Anchoring cement.
17. Metal finishes.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: Include plans, elevations, sections, and attachment details.

1. For illuminated railings, include wiring diagrams and roughing-in details.

D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].

E. Samples for Verification: For each type of exposed finish required.

1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters
2. Illuminated railing.
3. Fittings, end caps, and brackets.
4. Welded connections.
5. Brazed connections.
6. Cable and cable hardware and connections.
7. Assembled Sample of railing system, made from full-size components, including top rail, post, [**illuminated**] handrail, and guard infill. Sample need not be full height.

- a. Show method of [**connecting**][**and**][**finishing**] members at intersections.

F. Delegated Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**delegated design professional engineer**][**testing agency**].

B. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.

C. Welding certificates.

D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

E. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.

- F. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
- G. Preconstruction test reports.

1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups as shown on Drawings.
 - 2. Build mockups for each form and finish of railing, consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than **24 inches (600 mm)** in length.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage][Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups. Payment for these services will be made **[by Owner][from the testing and inspecting allowance, as authorized by Change Orders][by Contractor]**. Retesting of products that fail to meet specified requirements is to be done at Contractor's expense.
 - 1. Build laboratory mockups at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site.
 - 2. Test railings in accordance with ASTM E894 and ASTM E935.
 - 3. Notify Architect **[seven]<Insert number>** days in advance of the dates and times when laboratory mockups will be tested.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces of railings from damage by applying a strippable, temporary protective covering before shipping.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS**2.1 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design railings, including attachment to building construction.
- B. Structural Performance: Railings, including attachment to building construction, are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior railings by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: **120 deg F (67 deg C)**, ambient; **180 deg F (100 deg C)**, material surfaces.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

2.3 ALUMINUM DECORATIVE RAILINGS

- A. Aluminum Decorative Railings:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[American Structures & Design]**
 - b. **[Architectural Iron Designs, Inc.]**
 - c. **[ATR Technologies, Inc.]**
 - d. **[AZEK Building Products, Incorporated]**
 - e. **[C.R. Laurence Co., Inc.; CRH Americas, Inc.]**
 - f. **[CraneVeyor Corp]**
 - g. **[Feeney Inc.]**

- h. [Greco; CSW Industrials Inc.]
 - i. [HDI Railings]
 - j. [Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]
 - k. [Hollaender Mfg. Co.]
 - l. [Julius Blum & Co., Inc.]
 - m. [Kane Innovations, Inc.]
 - n. [Knotwood US LLC]
 - o. [Livers Bronze Co.]
 - p. [Promenaid]
 - q. [Regal Ideas, Inc.]
 - r. [Seco South, Inc.]
 - s. [Superior Aluminum Products, Inc]
 - t. [Thompson Fabricating, LLC]
 - u. [Trex Commercial Products, Inc.]
 - v. [Tri Tech, Inc.]
 - w. [Tuttle, a Dant Clayton Division]
 - x. [VIVA Railings, LLC]
 - y. [Wagner Companies (The); R&B Wagner, Inc.]
 - z. [Wylie Metals]
 - aa. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. [American Structures & Design]
 - b. [Architectural Iron Designs, Inc.]
 - c. [ATR Technologies, Inc.]
 - d. [AZEK Building Products, Incorporated]
 - e. [C.R. Laurence Co., Inc.; CRH Americas, Inc.]
 - f. [CraneVeyor Corp]
 - g. [Feeney Inc.]
 - h. [Greco; CSW Industrials Inc.]
 - i. [HDI Railings]
 - j. [Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]
 - k. [Hollaender Mfg. Co.]
 - l. [Julius Blum & Co., Inc.]
 - m. [Kane Innovations, Inc.]
 - n. [Knotwood US LLC]
 - o. [Livers Bronze Co.]
 - p. [Promenaid]
 - q. [Regal Ideas, Inc.]
 - r. [Seco South, Inc.]
 - s. [Superior Aluminum Products, Inc]
 - t. [Thompson Fabricating, LLC]
 - u. [Trex Commercial Products, Inc.]
 - v. [Tri Tech, Inc.]
 - w. [Tuttle, a Dant Clayton Division]
 - x. [VIVA Railings, LLC]
 - y. [Wagner Companies (The); R&B Wagner, Inc.]
 - z. [Wylie Metals]
 - aa. <Insert manufacturer's name>
3. Source Limitations: Obtain aluminum decorative railing components from single source from single manufacturer.

- B. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- C. Extruded Bars and Shapes, Including Extruded Tube: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5/T52.
- D. Extruded Structural Pipe and Round Tube: ASTM B429/B429M, Alloy 6063-T6.
 - 1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- E. Drawn Seamless Tube: ASTM B210/B210M, Alloy 6063-T832.
- F. Plate and Sheet: **ASTM B209 (ASTM B209M)**, [Alloy 5005-H32][Alloy 6061-T6].
- G. Die and Hand Forgings: **ASTM B247 (ASTM B247M)**, Alloy 6061-T6.
- H. Illuminated [Top][Hand] Rails: Provide internal illumination using concealed, internally wired, integrated LED [dimmable] lamps to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service.
 - 1. LED Luminaires: Comply with [Section 265119 "LED Interior Lighting"] [Section 265619 "LED Exterior Lighting"] and as follows:
 - a. Lamp Type: [Linear][Point]<Insert lamp description>.
 - b. Light Illumination: White, [standard][high] output; [80 lumens/300 mm][120 lumens/300 mm][270 lumens/300 mm]<Insert value>.
 - c. Efficacy: Minimum [80]<Insert number> lm/W.
 - d. Color Rendering Index: Minimum [65][70][80]<Insert number>.
 - e. Correlated Color Temperature: [2700 K][3000 K][3500 K]<Insert value>.
 - f. Rated Lamp Life: [50,000]<Insert number> hours at 70 percent lamp illumination output.
 - g. Beam Distribution: [Symmetric][Asymmetric][10 degrees][25 degrees][55 degrees][100 degrees]<Insert angle or angle range>.
 - h. LED Diffuser: UV-stabilized acrylic, [clear][translucent], matching rail profile.
 - i. Nominal Operating Voltage: [120 V ac][277 V ac] input; [12 V dc][24 V dc] output.
 - j. Internal Driver: [100][120] W.
 - k. UL Listing: [Damp][Dry].
 - l. IP Rating: IP67.
 - m. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Stainless Steel Cable and Cable Fittings for Aluminum Decorative Railings:
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Bergen Cable Technology, LLC]
 - b. [Carl Stahl DecorCable, Inc.]
 - c. [Esmet, Inc.]
 - d. [Feeney Inc.]
 - e. [Hayn Enterprises, LLC]
 - f. [Johnson, C. Sherman, Co., Inc.]
 - g. [Loos & Co. Inc.]
 - h. [Morse Industries]

- i. **[Ronstan International Inc]**
 - j. **[Seco South, Inc.]**
 - k. **[Ultra-tec; The Cable Connection]**
 - l. **[VIVA Railings, LLC]**
 - m. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bergen Cable Technology, LLC]**
 - b. **[Carl Stahl DecorCable, Inc.]**
 - c. **[Esmet, Inc.]**
 - d. **[Feeney Inc.]**
 - e. **[Hayn Enterprises, LLC]**
 - f. **[Johnson, C. Sherman, Co., Inc]**
 - g. **[Loos & Co. Inc.]**
 - h. **[Morse Industries]**
 - i. **[Ronstan International Inc]**
 - j. **[Seco South, Inc.]**
 - k. **[Ultra-tec; The Cable Connection]**
 - l. **[VIVA Railings, LLC]**
 - m. **<Insert manufacturer's name>**
 3. Cable: **[1-by-19][7-by-7][7-by-19]<Insert configuration>** wire cable made from wire complying with ASTM A492, Type 316, **PVC jacketed**, **<Insert color>**.
 4. Cable Diameter: **[1/8 inch (3.2 mm)][5/32 inch (4 mm)][3/16 inch (5 mm)][1/4inch (6.4 mm)]**.
 5. Cable Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of cable with which they are used.
 6. Intermediate Cable Supports: Stainless steel flat bar, **1/4 by 1 inch (6.4 by 25.4 mm)**, predrilled.
 - J. Castings: ASTM B26/B26M, Alloy A356.0-T6.
 - K. Perforated Metal Infill Panels: Aluminum sheet, **ASTM B209 (ASTM B209M)**, Alloy 6061-T6, **[0.063 inch (1.60 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8-inch (9.5-mm) o.c. in staggered rows]<Insert description>**.
 1. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
 - L. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch (4.1-mm)** nominal diameter aluminum wire complying with ASTM B211/B211M, Alloy 6061-T94.
 1. Basis-of-Design Product: Provide product with crimp pattern matching **<Insert manufacturer's name; product name or designation>**.
- 2.4 COPPER-ALLOY DECORATIVE RAILINGS
- A. Copper-Alloy Decorative Railings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. [Architectural Iron Designs, Inc.]
- b. [CraneVeyor Corp]
- c. [Julius Blum & Co., Inc.]
- d. [Lavi Industries]
- e. [Livers Bronze Co.]
- f. [Tri Tech, Inc.]
- g. [Wagner Companies (The); R&B Wagner, Inc.]
- h. [Wylie Metals]
- i. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Architectural Iron Designs, Inc.]
- b. [CraneVeyor Corp]
- c. [Julius Blum & Co., Inc.]
- d. [Lavi Industries]
- e. [Livers Bronze Co.]
- f. [Tri Tech, Inc.]
- g. [Wagner Companies (The); R&B Wagner, Inc.]
- h. [Wylie Metals]
- i. <Insert manufacturer's name>

3. Source Limitations: Obtain copper and copper alloy decorative metal railing components from single source from single manufacturer.

- B. Copper and Copper Alloys, General: Provide alloys indicated and with temper to suit application and forming methods, but with strength and stiffness of not less than Temper H01 (quarter hard) for plate, sheet, strip, and bars, and of not less than Temper H55 (light drawn) for tube and pipe.
- C. Bronze Extruded Shapes: ASTM B455, Alloy UNS C38500 (architectural bronze).
- D. Brass Extruded Shapes: ASTM B249/B249M, Alloy UNS C36000 (free-cutting brass).
- E. Nickel Silver Extruded Shapes: ASTM B249/B249M, Alloy UNS C79600.
- F. Bronze Seamless Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
- G. Bronze Seamless Tube: ASTM B135/B135M, Alloy UNS C23000 (red brass, 85 percent copper).
- H. Brass Seamless Tube: ASTM B135/B135M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- I. Copper Seamless Tube: ASTM B75/B75M, Alloy UNS C12200 (phosphorous deoxidized, high residual phosphorous copper).
- J. Bronze Castings: [Composition bronze castings complying with ASTM B62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass)][or][sand castings complying with ASTM B584, Alloy UNS C86500 (No. 1 manganese bronze)].
- K. Brass Castings: Sand castings complying with ASTM B584, Alloy UNS C85200 (high-copper yellow brass).

- L. Copper Castings: ASTM B824, with a minimum of 99.9 percent copper.
- M. Nickel Silver Castings: ASTM B584, Alloy UNS C97300 (12 percent leaded nickel silver).
- N. Bronze Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).
- O. Brass Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- P. Copper Plate, Sheet, Strip, and Bars: ASTM B152/B152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).
- Q. Stainless Steel Cable and Cable Fittings for Copper-Alloy Decorative Railings:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Bergen Cable Technology, LLC]**
 - b. **[Carl Stahl DecorCable, Inc.]**
 - c. **[Esmet, Inc.]**
 - d. **[Feeney Inc.]**
 - e. **[Hayn Enterprises, LLC]**
 - f. **[Johnson, C. Sherman, Co., Inc]**
 - g. **[Loos & Co. Inc.]**
 - h. **[Morse Industries]**
 - i. **[Ronstan International Inc]**
 - j. **[Seco South, Inc.]**
 - k. **[Ultra-tec; The Cable Connection]**
 - l. **[VIVA Railings, LLC]**
 - m. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bergen Cable Technology, LLC]**
 - b. **[Carl Stahl DecorCable, Inc.]**
 - c. **[Esmet, Inc.]**
 - d. **[Feeney Inc.]**
 - e. **[Hayn Enterprises, LLC]**
 - f. **[Johnson, C. Sherman, Co., Inc]**
 - g. **[Loos & Co. Inc.]**
 - h. **[Morse Industries]**
 - i. **[Ronstan International Inc]**
 - j. **[Seco South, Inc.]**
 - k. **[Ultra-tec; The Cable Connection]**
 - l. **[VIVA Railings, LLC]**
 - m. **<Insert manufacturer's name>**
 - 3. Cable: **[1-by-19][7-by-7][7-by-19]<Insert configuration>** wire cable made from wire complying with ASTM A492, Type 316[, **PVC jacketed**], **<Insert color>**.
 - 4. Cable Diameter: **[1/8 inch (3.2 mm)][5/32 inch (4 mm)][3/16 inch (5 mm)][1/4 inch (6.4 mm)]**.
 - 5. Cable Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability

to sustain, without failure, a load equal to minimum breaking strength of cable with which they are used.

6. Intermediate Cable Supports: Stainless steel flat bar, 1/4-by-1-inch (6.4-by-25.4-mm), predrilled.

2.5 STAINLESS STEEL DECORATIVE RAILINGS

A. Stainless Steel Decorative Railings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[AGS Stainless Inc.]**
 - b. **[Architectural Iron Designs, Inc.]**
 - c. **[Atlantis Rail Systems]**
 - d. **[C.R. Laurence Co., Inc.; CRH Americas, Inc.]**
 - e. **[CraneVeyor Corp]**
 - f. **[Greco; CSW Industrials Inc.]**
 - g. **[HDI Railings]**
 - h. **[Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]**
 - i. **[Hollaender Mfg. Co.]**
 - j. **[Julius Blum & Co., Inc.]**
 - k. **[Kane Innovations, Inc.]**
 - l. **[Lavi Industries]**
 - m. **[Livers Bronze Co.]**
 - n. **[Morse Industries]**
 - o. **[P&P Artec, Inc.]**
 - p. **[Seco South, Inc.]**
 - q. **[Trex Commercial Products, Inc.]**
 - r. **[Tri Tech, Inc.]**
 - s. **[Tuttle, a Dant Clayton Division]**
 - t. **[VIVA Railings, LLC]**
 - u. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - v. **[Wylie Metals]**
 - w. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AGS Stainless Inc.]**
 - b. **[Architectural Iron Designs, Inc.]**
 - c. **[Atlantis Rail Systems]**
 - d. **[C.R. Laurence Co., Inc.; CRH Americas, Inc.]**
 - e. **[CraneVeyor Corp]**
 - f. **[Greco; CSW Industrials Inc.]**
 - g. **[HDI Railings]**
 - h. **[Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]**
 - i. **[Hollaender Mfg. Co.]**
 - j. **[Julius Blum & Co., Inc.]**
 - k. **[Kane Innovations, Inc.]**
 - l. **[Lavi Industries]**
 - m. **[Livers Bronze Co.]**

- n. **[Morse Industries]**
 - o. **[P&P Artec, Inc.]**
 - p. **[Seco South, Inc.]**
 - q. **[Trex Commercial Products, Inc.]**
 - r. **[Tri Tech, Inc.]**
 - s. **[Tuttle, a Dant Clayton Division]**
 - t. **[VIVA Railings, LLC]**
 - u. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - v. **[Wylie Metals]**
 - w. **<Insert manufacturer's name>**
3. Source Limitations: Obtain stainless steel decorative railing components from single source from single manufacturer.
- B. Tubing: ASTM A554, **[Grade MT 304][Grade MT 316][Grade MT 316L]**.
- C. Pipe: ASTM A312/A312M, **[Grade TP 304][Grade TP 316][Grade TP 316L]**.
- D. Castings: ASTM A743/A743M, **[Grade CF 8 or CF 20][Grade CF 8M or CF 3M]**.
- E. Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316][Type 316L]**.
- F. Flat Bar: ASTM A666, **[Type 304][Type 316][Type 316L]**.
- G. Bars and Shapes: ASTM A276/A276M, **[Type 304][Type 316][Type 316L]**.
- H. Illuminated **[Top][Hand]** Rails: Provide internal illumination using concealed, internally wired, integrated LED **[dimmable]** lamps to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service.
1. LED Luminaires: Comply with **[Section 265119 "LED Interior Lighting"]****[Section 265619 "LED Exterior Lighting"]** and as follows:
- a. Lamp Type: **[Linear][Point]<Insert lamp description>**.
 - b. Light Illumination: White, **[standard][high]** output; **[80 lumens/300 mm][120 lumens/300 mm][270 lumens/300 mm]<Insert value>**.
 - c. Efficacy: Minimum **[80]<Insert number>** lm/W.
 - d. Color Rendering Index: Minimum **[65][70][80]<Insert number>**.
 - e. Correlated Color Temperature: **[2700 K][3000 K][3500 K]<Insert value>**.
 - f. Rated Lamp Life: **[50,000]<Insert number>** hours at 70 percent lamp illumination output.
 - g. Beam Distribution: **[Symmetric][Asymmetric][10 degrees][25 degrees][55 degrees][100 degrees]<Insert angle or angle range>**.
 - h. LED Diffuser: UV-stabilized acrylic, **[clear][translucent]**, matching rail profile.
 - i. Nominal Operating Voltage: **[120 V ac][277 V ac]** input; **[12 V dc][24 V dc]** output.
 - j. Internal Driver: **[100][120]** W.
 - k. UL Listing: **[Damp][Dry]**.
 - l. IP Rating: IP67.
 - m. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Stainless Steel Cable and Cable Fittings for Stainless Steel Decorative Railings:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [AGS Stainless Inc.]
- b. [Bergen Cable Technology, LLC]
- c. [Carl Stahl DecorCable, Inc.]
- d. [Esmet, Inc.]
- e. [Feeney Inc.]
- f. [Hayn Enterprises, LLC]
- g. [HDI Railings]
- h. [Johnson, C. Sherman, Co., Inc]
- i. [Loos & Co. Inc.]
- j. [Morse Industries]
- k. [Ronstan International Inc]
- l. [Seco South, Inc.]
- m. [Trex Commercial Products, Inc.]
- n. [Ultra-tec; The Cable Connection]
- o. [VIVA Railings, LLC]
- p. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [AGS Stainless Inc.]
- b. [Bergen Cable Technology, LLC]
- c. [Carl Stahl DecorCable, Inc.]
- d. [Esmet, Inc.]
- e. [Feeney Inc.]
- f. [Hayn Enterprises, LLC]
- g. [HDI Railings]
- h. [Johnson, C. Sherman, Co., Inc]
- i. [Loos & Co. Inc.]
- j. [Morse Industries]
- k. [Ronstan International Inc]
- l. [Seco South, Inc.]
- m. [Trex Commercial Products, Inc.]
- n. [Ultra-tec; The Cable Connection]
- o. [VIVA Railings, LLC]
- p. <Insert manufacturer's name>

3. Cable: [1-by-19][7-by-7][7-by-19]<Insert configuration> wire cable made from wire complying with ASTM A492, Type 316[, PVC jacketed], <Insert color>.
4. Cable Diameter: [1/8 inch (3.2 mm)][5/32 inch (4 mm)][3/16 inch (5 mm)][1/4 inch (6.4 mm)].
5. Cable Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of cable with which they are used.
6. Intermediate Cable Supports: Stainless steel flat bar, 1/4-by-1-inch (6.4-by-25.4-mm), predrilled.

- J. Expanded Metal Infill Panels: ASTM F1267, [Type I (expanded)][Type II (expanded and flattened)], Class 3 (corrosion-resisting steel), made from stainless steel sheet complying with ASTM A666, [Type 304][Type 316].

1. Style Designation: [3/4 number 13][1-1/2 number 10]<Insert designation>.

- K. Perforated Metal Infill Panels: Stainless steel sheet, ASTM A240/A240M or ASTM A666, [Type 304][Type 316L], [0.062 inch (1.59 mm)]<Insert dimension> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>.

1. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
- L. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter stainless steel wire complying with ASTM A580/A580M, **[Type 304][Type 316]**.
 1. Basis-of-Design Product: Provide product with crimp pattern matching **<Insert manufacturer's name; product name or designation>**.

2.6 STEEL AND IRON DECORATIVE RAILINGS

A. Steel and Iron Decorative Railings:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Architectural Iron Designs, Inc.]**
 - b. **[HDI Railings]**
 - c. **[Indital USA]**
 - d. **[Lawler Foundry Corporation]**
 - e. **[Livers Bronze Co.]**
 - f. **[Olin Metal Works]**
 - g. **[Regency Railings]**
 - h. **[Trex Commercial Products, Inc.]**
 - i. **[Tri Tech, Inc.]**
 - j. **[VIVA Railings, LLC]**
 - k. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - l. **[Wiemann Metalcraft]**
 - m. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Architectural Iron Designs, Inc.]**
 - b. **[HDI Railings]**
 - c. **[Indital USA]**
 - d. **[Lawler Foundry Corporation]**
 - e. **[Livers Bronze Co.]**
 - f. **[Olin Metal Works]**
 - g. **[Regency Railings]**
 - h. **[Trex Commercial Products, Inc.]**
 - i. **[Tri Tech, Inc.]**
 - j. **[VIVA Railings, LLC]**
 - k. **[Wagner Companies (The); R&B Wagner, Inc.]**
 - l. **[Wiemann Metalcraft]**
 - m. **<Insert manufacturer's name>**
3. Source Limitations: Obtain steel decorative railing components from single source from single manufacturer.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer

recycled content not less than [25]<Insert value> percent.

- C. Tubing: [ASTM A500/A500M (cold formed)][or][ASTM A513/A513M, Type 5].
- D. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
- E. Plates, Shapes, and Bars: ASTM A36/A36M.
- F. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
- G. Illuminated [Top][Hand] Rails: Provide internal illumination using concealed, internally wired, integrated LED [dimmable] lamps to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service.
 - 1. LED Luminaires: Comply with [Section 265119 "LED Interior Lighting"] [Section 265619 "LED Exterior Lighting"] and as follows:
 - a. Lamp Type: [Linear][Point]<Insert lamp description>.
 - b. Light Illumination: White, [standard][high] output; [80 lumens/300 mm][120 lumens/300 mm][270 lumens/300 mm]<Insert value>.
 - c. Efficacy: Minimum [80]<Insert number> lm/W.
 - d. Color Rendering Index: Minimum [65][70][80]<Insert number>.
 - e. Correlated Color Temperature: [2700 K][3000 K][3500 K]<Insert value>.
 - f. Rated Lamp Life: [50,000]<Insert number> hours at 70 percent lamp illumination output.
 - g. Beam Distribution: [Symmetric][Asymmetric][10 degrees][25 degrees][55 degrees][100 degrees]<Insert angle or angle range>.
 - h. LED Diffuser: UV-stabilized acrylic, [clear][translucent], matching rail profile.
 - i. Nominal Operating Voltage: [120 V ac][277 V ac] input; [12 V dc][24 V dc] output.
 - j. Internal Driver: [100][120] W.
 - k. UL Listing: [Damp][Dry].
 - l. IP Rating: IP67.
 - m. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- H. Stainless Steel Cable and Cable Fittings for Steel and Iron Decorative Railings:
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Bergen Cable Technology, LLC]
 - b. [Carl Stahl DecorCable, Inc.]
 - c. [Esmet, Inc.]
 - d. [Feeney Inc.]
 - e. [Hayn Enterprises, LLC]
 - f. [Johnson, C. Sherman, Co., Inc]
 - g. [Loos & Co. Inc.]
 - h. [Morse Industries]
 - i. [Ronstan International Inc]
 - j. [Seco South, Inc.]
 - k. [Ultra-tec; The Cable Connection]
 - l. [VIVA Railings, LLC]
 - m. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bergen Cable Technology, LLC]**
 - b. **[Carl Stahl DecorCable, Inc.]**
 - c. **[Esmet, Inc.]**
 - d. **[Feeney Inc.]**
 - e. **[Hayn Enterprises, LLC]**
 - f. **[Johnson, C. Sherman, Co., Inc]**
 - g. **[Loos & Co. Inc.]**
 - h. **[Morse Industries]**
 - i. **[Ronstan International Inc]**
 - j. **[Seco South, Inc.]**
 - k. **[Ultra-tec; The Cable Connection]**
 - l. **[VIVA Railings, LLC]**
 - m. **<Insert manufacturer's name>**
3. Cable: **[1-by-19][7-by-7][7-by-19]<Insert configuration>** wire cable made from wire complying with ASTM A492, Type 316, **[PVC jacketed]**, **<Insert color>**.
4. Cable Diameter: **[1/8 inch (3.2 mm)][5/32 inch (4 mm)][3/16 inch (5 mm)][1/4 inch (6.4 mm)]**.
5. Cable Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of cable with which they are used.
6. Intermediate Cable Supports: Stainless steel flat bar, **1/4-by-1-inch (6.4-by-25.4-mm)**, predrilled.
- I. Expanded Metal Infill Panels: ASTM F1267, **[Type I (expanded)][Type II (expanded and flattened)]**, Class 1 (uncoated).
 1. Style Designation: **[3/4 number 13][1-1/2 number 10]<Insert designation>**.
- J. Perforated Metal Infill Panels:
 1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel Type B, **[0.060 inch (1.52 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]<Insert description>**.
 - a. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
 2. Galvanized-Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, commercial steel Type B, **[0.064 inch (1.63 mm)]<Insert dimension>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows][with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows]<Insert description>**.
 - a. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
- K. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **[diamond][square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter steel wire complying with ASTM A510/A510M.
 1. Basis-of-Design Product: Provide product with crimp pattern matching **<Insert manufacturer's name; product name or designation>**.

2.7 FASTENERS

A. Fastener Materials:

1. Aluminum Railing Components: **[Type 304][Type 316]** stainless steel fasteners.
2. Copper-Alloy (Bronze) Railing Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed; muntz metal (Alloy 280) fasteners where exposed]**.
3. Copper-Alloy (Brass) Railing Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners **[where concealed; brass (Alloy 260 or Alloy 360) fasteners where exposed]**.
4. Stainless Steel Railing Components: **[Type 304][Type 316]** stainless steel fasteners.
5. Ungalvanized-Steel Railing Components: Plated-steel fasteners complying with ASTM F1941/F1941M, Class Fe/Zn 5 for electrodeposited zinc coating where concealed; Type 304 stainless steel fasteners where exposed.
6. Hot-Dip Galvanized-Steel Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
7. Dissimilar Metal Railing Components: **[Type 304][Type 316]** stainless steel fasteners.
8. Finish exposed fasteners to match appearance, including color and texture, of railings.

B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction **[and capable of withstanding design loads]**.

C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless **[otherwise indicated][exposed fasteners are unavoidable][exposed fasteners are the standard fastening method for railings indicated]**.

1. Provide **[Phillips][tamper-resistant][square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, in accordance with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 **[or ICC-ES AC308]**.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, ASTM F593 and nuts, ASTM F594.

2.8 MISCELLANEOUS MATERIALS

A. Handrail Brackets: **[Cast-aluminum,][Cast-bronze,][Cast-brass,][Cast-copper,][Cast-nickel-silver,][Cast stainless steel,][Cast-iron]** center of handrail **[2-1/2 inches (63.5 mm)][3-1/8 inches (79.4 mm)]** **<Insert dimension>** from **[face of railing][wall]**.

1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
3. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.
4. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.

B. Wood Rails:

1. Clear, straight-grained hardwood rails secured to **[recessed][exposed]** metal subrail.

- a. Species: [Ash][Cherry][Red oak][Teak][Walnut][White oak]<Insert species>.
 - b. Finish: [Manufacturer's standard][Transparent polyurethane][Penetrating oil][Acrylic impregnated].
 - c. Staining: [None][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert description or manufacturer's name and product designation>.
 - d. Profile: [Square, 1-3/4 by 1-3/4 inches (45 by 45 mm) with edges eased to 1/4-inch (6-mm) radius][Rectangular, 1-3/4 by 5 inches (45 by 127 mm) with edges eased to 1/4-inch (6-mm) radius][Round, 2-inch (50-mm) diameter][As indicated on Drawings]<Insert description>.
2. Certified Wood: Wood products shall be certified as "FSC Pure"[or "FSC Mixed Credit"] according to FSC STD-01-001 and FSC STD-40-004.
 3. Certified Wood: Wood products shall be certified as "FSC Pure"[or "FSC Mixed Credit"] according to FSC STD-01-001 and FSC STD-40-004.
 4. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
 5. Certified Wood: Wood products shall [contain not less than 60 percent][be made from] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
 6. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
 7. Hardwood rails complying with Section 064023 "Interior Architectural Woodwork."
- C. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
1. For [aluminum][and][stainless steel] railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- D. Brazing Rods: For copper-alloy railings, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.
- E. Lacquer for Copper Alloys: Clear acrylic lacquer specially developed for coating copper-alloy products.
- F. Etching Cleaner for Galvanized Metal: Compatible with coating system specified.
- G. Galvanizing Repair Paint: High-zinc-dust-content paint compatible with coating system specified.
- H. Shop Primers: Provide primers that comply with [Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- I. Epoxy Zinc-Rich Primer: Compatible with topcoat.
- J. Shop Primer for Galvanized Steel: [Cementitious galvanized metal primer][Vinyl wash primer][Water-based galvanized metal primer].
- K. Intermediate Coats and Topcoats: Provide products that comply with [Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]

- L. Epoxy Intermediate Coat: Compatible with primer and topcoat.
- M. Polyurethane Topcoat: Compatible with undercoat.
- N. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- O. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- P. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: **[At exterior locations][and][where indicated on Drawings]**, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.9 FABRICATION

- A. Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, **but not less than that required to support structural loads**].
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.
 - 2. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water.
 - 1. Provide weep holes where water may accumulate.
 - 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with **[welded][or][mechanical]** connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.

4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 welds; ornamental quality with no evidence of a welded joint.
- I. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.
- J. Brazed Connections: Connect copper and copper-alloy railings by brazing. Cope components at connections to provide close fit, or use fittings designed for this purpose. Braze corners and seams continuously.
 1. Use materials and methods that match color of base metal, minimize distortion, and develop maximum strength and corrosion resistance.
 2. Remove flux immediately.
 3. At exposed connections, finish exposed surfaces smooth and blended, so no roughness shows after finishing and brazed surface matches contours of adjoining surfaces.
- K. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings.
 1. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 2. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- L. Form changes in direction as follows:
 1. As detailed.
 2. **[By bending][or][by inserting prefabricated elbow fittings].**
 3. **[By flush bends][or][by inserting prefabricated flush-elbow fittings].**
 4. **[By radius bends of radius indicated][or][by inserting prefabricated elbow fittings of radius indicated].**
 5. By bending to smallest radius that will not result in distortion of railing member.
- M. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- N. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
- O. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is **1/4 inch (6 mm)** or less.
- P. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, handrail brackets, miscellaneous fittings, and anchors to interconnect railing members to other Work unless otherwise indicated.
 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.
- Q. Provide inserts and other anchorage devices for connecting railings to concrete or masonry Work.
 1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 2. Coordinate anchorage devices with supporting structure.
- R. For railing posts set in concrete, provide stainless steel sleeves not less than **6 inches (150 mm)** long

with inside dimensions not less than **1/2 inch (13 mm)** greater than outside dimensions of post, with metal plate forming bottom closure.

- S. For removable railing posts, fabricate slip-fit sockets from stainless steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height.
 - 1. Provide socket covers designed and fabricated to resist being dislodged.
 - 2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- T. Stainless Steel Cable Guard Infill: Fabricate cable guard infill assemblies in the shop to field-measured dimensions with fittings machine swaged.
 - 1. Minimize amount of turnbuckle take-up used for dimensional adjustment, so maximum amount is available for tensioning cable.
 - 2. Tag cable assemblies and fittings to identify installation locations and orientations for coordinated installation.
- U. Expanded-Metal Infill Panels: Fabricate infill panels from **[aluminum][stainless steel][steel]** expanded-metal sheet **[unless otherwise indicated]**.
 - 1. Edge panels with U-shaped channels made from same metal as infill; not less than **0.043 inch (1.1 mm)** thick.
 - 2. Orient expanded metal with long dimension of diamonds **[parallel to top rail][perpendicular to top rail][horizontal][vertical]**.
- V. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from **[aluminum][stainless steel][steel][galvanized steel][same metal as railings in which they are installed]**.
 - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than **0.043 inch (1.1 mm)** thick.
 - 2. Orient perforated metal with pattern **[parallel to top rail][perpendicular to top rail][horizontal][vertical]**.
- W. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into **1-by-1/2-by-1/8-inch (25-by-13-by-3-mm)** metal channel frames.
 - 1. Fabricate wire mesh and frames from **[aluminum][stainless steel][steel][unless otherwise indicated]**.
 - 2. Orient wire mesh with **[diamonds vertical][wires perpendicular and parallel to top rail][wires horizontal and vertical]**.
- X. Toe Boards: Where indicated on Drawings, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.10 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.11 ALUMINUM FINISHES

- A. Mechanical Finish: AA-M3x; sand top rails, handrails, and intermediate rails in one direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**][**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**][**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Champagne**][**Light bronze**][**Medium bronze**][**Dark bronze**][**Black**][**Match Architect's sample**][**As selected by Architect from full range of industry colors and color densities**]<Insert color>.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<Insert color and gloss>.
- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<Insert color and gloss>.
- F. High-Performance Organic Finish, Two-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with [**AAMA 2604**][**AAMA 2605**] and containing not less than [**50**][**70**] percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions[**for seacoast and severe environments**].
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<Insert color and gloss>.
- G. Superior-Performing Organic Finish, Three-Coat (Polyvinylidene Fluoride (PVDF): Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions[**for seacoast and severe environments**].
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<Insert color and gloss>.
- H. Superior-Performing Organic Finish, Four-Coat Polyvinylidene Fluoride (PVDF): Fluoropolymer finish

complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions **[for seacoast and severe environments]**.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

- I. Superior-Performing Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605, containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

- J. Superior-Performing Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605, containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

2.12 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."

- B. Buffed Finish: M21 (Mechanical Finish: Buffed, smooth specular).

- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: Directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).

- D. Medium-Satin Finish: M32 (Mechanical Finish: Directionally textured, medium satin).

- E. Fine-Matte Finish: M42 (Mechanical Finish: Nondirectional finish, fine matte).

- F. Lacquered Buffed Finish: M21-O6x (Mechanical Finish: Buffed, smooth specular; Coating: Clear organic, air dried, as specified below).

1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats in accordance with manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

- G. Lacquered Hand-Rubbed Finish: M31-M34-O6x (Mechanical Finish: Directionally textured, fine satin; Mechanical Finish: Directionally textured, hand rubbed; Coating: Clear organic, air dried, as specified below).

1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats in accordance with manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

- H. Lacquered Medium-Satin Finish: M32-O6x (Mechanical Finish: Directionally textured, medium satin; Coating: Clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats in accordance with manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- I. Lacquered Fine-Matte Finish: M42-O6x (Mechanical Finish: Nondirectional finish, fine matte; Coating: Clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats in accordance with manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: Directionally textured, fine satin; Chemical Finish: Conversion coating, sulfide)[, **with color matching Architect's sample**].
- K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: Directionally textured, uniform; Chemical Finish: Nonetched cleaned, degreased; Chemical Finish: Conversion coating, ammonium sulfate)[, **with color matching Architect's sample**].

2.13 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces.
 - 3. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Stainless Steel Tubing Finishes:
 - 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
 - 2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
 - 3. Polished and Buffed Finish: 320-grit finish followed by buffing [**to a high luster finish**][**to a mirrorlike finish**][**to match Architect's sample**].
- D. Stainless Steel Sheet and Plate Finishes:
 - 1. Directional Satin Finish: ASTM A480/A480M, No. 4.
 - 2. High-Luster Finish: ASTM A480/A480M, No. 7.
 - 3. Mirror Finish: ASTM A480/A480M, No. 8.

2.14 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 - 1. Hot-dip galvanize[**exterior**] steel and iron railings, including hardware, after fabrication.
 - 2. Hot-dip galvanize indicated steel and iron railings, including hardware, after fabrication.
 - 3. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 - 4. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 - 5. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.

6. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner[**and as follows:**]
 1. Comply with SSPC-SP 16.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves; however, hot-dip galvanize anchors to be embedded in exterior concrete or masonry.
- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3.][SSPC-SP 7/NACE No. 4.][requirements indicated below:]**
 1. Exterior Railings: SSPC-SP 6/NACE No. 3.
 2. Railings Indicated To Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3.
 3. Railings Indicated To Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3.
 4. Other Railings: SSPC-SP 7/NACE No. 4.
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1 for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 1. Shop prime uncoated railings with **[primers specified in Section 099113 "Exterior Painting"]****[primers specified in Section 099123 "Interior Painting"]** unless **[zinc-rich primer is]****[primers specified in Section 099600 "High-Performance Coatings" are]** indicated.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting."]****[Section 099600 "High-Performance Coatings."]**
 1. Color: **[As indicated by manufacturer's designations]****[Match Architect's sample]****[As selected by Architect from manufacturer's full range].**
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1 for shop painting. Apply at spreading rates recommended by coating manufacturer.
 1. Color: **[As indicated by manufacturer's designations]****[Match Architect's sample]****[As selected by Architect from manufacturer's full range].**
- I. Powder-Coat Finish for Uncoated Ferrous Metal: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:
 1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3.
 2. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness of not less than 1.5 mils (0.04 mm).
 4. Color: **[As indicated by manufacturer's designations]****[Match Architect's sample]****[As selected by Architect from manufacturer's full range].**

- J. Powder-Coat Finish for Galvanized Metal: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness of not less than **1.5 mils (0.04 mm)**.
 4. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Perform cutting, drilling, and fitting required for installing railings.
1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet (6 mm in 3 m)**.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
1. Coat concealed surfaces of **[aluminum][and][copper alloys]** that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply

with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.

- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending **2 inches (50 mm)** beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within **6 inches (150 mm)** of post.

3.4 ANCHORING POSTS

- A. Use stainless steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than **5 inches (125 mm)** deep and **3/4 inch (20 mm)** larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material][attached to post with setscrews]**.
- D. Leave anchorage joint exposed with **[1/8-inch (3-mm) buildup, sloped away from post][anchoring material flush with adjacent surface]**.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 2. For copper-alloy railings, attach posts as indicated, using fittings designed and engineered for this purpose.
 - 3. For stainless steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
 - 4. For steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with **[sleeves concealed within][flanges connected to][brackets on underside of rails connected to]** railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and **[welded to railing ends][or][connected to railing ends, using nonwelded connections]**.
- C. Attach handrails to walls with wall brackets[, **except where end flanges are used**]. Provide brackets with **[1-1/2-inch (38-mm)]<Insert dimension>** clearance from inside face of handrail and finished wall surface.
 - 1. Use type of bracket with **[flange tapped for concealed anchorage to threaded hanger]**

- bolt**~~[[predrilled hole for exposed bolt anchorage]].~~
- 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets~~[[and railing end flanges]]~~ to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - 4. For steel-framed partitions, use hanger or lag bolts set into~~[[fire-retardant-treated]]~~ wood backing between studs. Coordinate with stud installation to locate backing members.
 - 5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.
 - 6. For steel-framed partitions, fasten brackets with toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.6 REPAIR

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]**

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and to prepare test reports. Payment for these services will be made **[by Owner][from the testing and inspecting allowance, as authorized by Change Orders]**.
- B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Test railings in accordance with ASTM E894 and ASTM E935 for compliance with performance requirements.
- C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and comply with specified requirements.
- D. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

3.8 CLEANING

- A. Clean ~~[[aluminum]]~~~~[[and]]~~~~[[stainless steel]]~~ by washing thoroughly with clean water and soap, rinsing with

clean water, and wiping dry.

- B. Clean copper alloys in accordance with metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Clean **[wood rails][and][plastic handrail caps]** by wiping with a damp cloth and then wiping dry.
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

3.9 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 73 00 00

SECTION 05 73 00 00A - GLAZED DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Glazed decorative metal railings.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood blocking for anchoring railings.

1.2 DEFINITIONS

- A. Railings:** Guards, handrails, and similar devices used for protection of occupants at open-sided floor and exterior deck areas and for pedestrian guidance and support, visual separation, or wall protection.

1.3 COORDINATION AND SCHEDULING

- A. Coordinate installation of anchorages for railings.** Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference:** Conduct conference at **[Project site]<Insert location>**.

1.5 ACTION SUBMITTALS

A. Product Data:

1. Metal railings assembled from standard components.
2. Glass products.
3. Glazing cement and accessories for structural glass railings.
4. Sealant and accessories for structural glass railings.
5. Fasteners.
6. Wood rails.
7. Lacquer for copper alloys.
8. Shop primer.
9. Bituminous paint.
10. Nonshrink, nonmetallic grout.
11. Anchoring cement.

B. Sustainable Design Submittals:

1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.

- C. Shop Drawings: Include plans, elevations, sections, and attachment details.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- E. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Base channel.
 - 3. Each type of glass and glass edge required.
 - 4. Fittings and brackets.
 - 5. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, [**structural glass balusters**],[**and**][**glass-infill panels**]. Show method of finishing members at intersections. Samples need not be full height.
- F. Delegated Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**professional engineer**][**testing agency**].
- B. Mill Certificates: Signed by manufacturers of stainless steel products, certifying that products furnished comply with requirements.
- C. Product Test Reports: For tests performed by a qualified testing agency, in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358.
- D. Evaluation Reports: From ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
 - 1. For glazed decorative metal railings.
 - 2. For post-installed anchors.
- E. Preconstruction test reports.

1.7 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups as indicated on Drawings.
 - 2. Build mockups for each form and finish of glass-infill panel railing consisting of two posts, top rail, handrail, glass-infill panel, and anchorage system components that are full height and are not less than **24 inches (600 mm)** in length.
 - 3. Build mockups for each form and finish of structural glass railing consisting of top rail, structural glass, base channel, and anchorage system components that are full height and are not less than **24 inches (600 mm)** in length.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage][Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups. Payment for these services will be made **[by Owner][from the testing and inspecting allowance, as authorized by Change Orders][by Contractor]**. Retesting of products that fail to meet specified requirements is to be done at Contractor's expense.
1. Build laboratory mockups at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site.
 2. Test railings in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358.
 3. Notify Architect **[seven]<Insert number>** days in advance of the dates and times when laboratory mockups will be tested.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Manufacturer's Special Warranty for Laminated Glass: Glazed decorative metal railing manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
1. Warranty Period: **[Five][10]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazed decorative metal railings, including attachment to building construction.
- B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
1. Aluminum: The lesser of minimum yield strength divided by 1.65, or minimum ultimate tensile strength divided by 1.95.
 2. Copper Alloys: 60 percent of minimum yield strength.
 3. Stainless Steel: 60 percent of minimum yield strength.
 4. Steel: 72 percent of minimum yield strength.
 5. Glass: 25 percent of mean modulus of rupture (50 percent probability of breakage), as listed in "Mechanical Properties" in AAMA CW-12, "Structural Properties of Glass."
- C. Structural Performance: Railings, including attachment to building construction, are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:
 - a. Uniform load of **50 lbf/ft. (0.73 kN/m)** applied in any direction.
 - b. Concentrated load of **200 lbf (0.89 kN)** applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Structural Glass Railings and Glass-Infill Panels:
 - a. Concentrated load of **50 lbf (0.22 kN)** applied horizontally on an area of **1 sq. ft. (0.093 sq. m)**.
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. For structural glass railings, support each section of top rail **[and handrail]** by a minimum of three glass panels or by other means so railings will remain in place if any one glass panel fails.
 - a. Support top rail **[and handrail]** ends such that railings remains in place if end glass panel fails.
- D. Wind Loads: For exterior glazed decorative metal railings, capable of withstanding the following wind loads in accordance with the IBC and ASTM E1300:
1. Wind Load: **[As indicated on Drawings]<Insert wind load>**.
- E. Windborne-Debris-Impact Resistance: Exterior glazed decorative metal railings passing ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone **[1][2][3][4]** for **[basic][enhanced]** protection.
1. Large-Missile Test: For exterior glazing located within **[30 feet (9.1 m)]<Insert dimension>** of grade.
 2. Small-Missile Test: For exterior glazing located between **30 feet (9.1 m)** and **[60 feet (18.3 m)]<Insert dimension>** above grade.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]<Insert temperature change>**.

2.2 GLAZED DECORATIVE METAL RAILINGS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[ATR Technologies, Inc.]**
 2. **[C.R. Laurence Co., Inc.; CRH Americas, Inc.]**
 3. **[CraneVeyor Corp]**
 4. **[Glass Vice USA]**
 5. **[Greco; CSW Industrials Inc.]**
 6. **[Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]**
 7. **[Hollaender Mfg. Co.]**
 8. **[Julius Blum & Co., Inc.]**
 9. **[Livers Bronze Co.]**
 10. **[Morse Industries]**
 11. **[Southwest Metalsmiths, Inc.]**

12. [TACO Metals Inc.]
13. [Trex Commercial Products, Inc.]
14. [Tri Tech, Inc.]
15. [Tuttle, a Dant Clayton Division]
16. [VIVA Railings, LLC]
17. [Wagner Companies (The); R&B Wagner, Inc.]
18. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [ATR Technologies, Inc.]
2. [C.R. Laurence Co., Inc.; CRH Americas, Inc.]
3. [CraneVeyor Corp]
4. [Glass Vice USA]
5. [Greco; CSW Industrials Inc.]
6. [Hollaender Architectural Railing Systems; Hollaender Mfg. Co.]
7. [Hollaender Mfg. Co.]
8. [Julius Blum & Co., Inc.]
9. [Livers Bronze Co.]
10. [Morse Industries]
11. [Southwest Metalsmiths, Inc.]
12. [TACO Metals Inc.]
13. [Trex Commercial Products, Inc.]
14. [Tri Tech, Inc.]
15. [Tuttle, a Dant Clayton Division]
16. [VIVA Railings, LLC]
17. [Wagner Companies (The); R&B Wagner, Inc.]
18. <Insert manufacturer's name>

C. Source Limitations for Laminated Glass: Obtain from single source from single manufacturer.

D. Source Limitations for Decorative Metal Railing Components: Obtain from single source from single manufacturer for each component and installation method.

E. Product Options: Information on Drawings and in the Specifications establishes requirements for railing system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

2.4 ALUMINUM

- A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type

of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.

- B. Extruded Bars and Shapes, Including Extruded Tube: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5/T52.
- C. Extruded Structural Pipe and Round Tube: ASTM B429/B429M, Alloy 6063-T6.
 - 1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- D. Drawn Seamless Tubing: **ASTM B210 (ASTM B210M)**, Alloy 6063-T832.
- E. Plate and Sheet: **ASTM B209 (ASTM B209M)**, [**Alloy 5005-H32**][**Alloy 6061-T6**].
- F. Die and Hand Forgings: **ASTM B247 (ASTM B247M)**, Alloy 6061-T6.
- G. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.5 STAINLESS STEEL

- A. Tubing: ASTM A554, [**Grade MT 304**][**Grade MT 316**].
- B. Pipe: ASTM A312/A312M, [**Grade TP 304**][**Grade TP 316**].
- C. Castings: ASTM A743/A743M, [**Grade CF 8 or Grade CF 20**][**Grade CF 8M or Grade CF 3M**].
- D. Sheet, Strip, Plate, and Flat Bar: ASTM A666 or ASTM A240/A240M, [**Type 304**][**Type 316**].
- E. Bars and Shapes: ASTM A276, [**Type 304**][**Type 316**].

2.6 STEEL AND IRON

- A. Tubing: [**ASTM A500/A500M (cold formed)**][**or**][**ASTM A513/A513M**].
- B. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.

2.7 COPPER ALLOYS

- A. Copper and Copper Alloys, General: Provide alloys indicated and with temper to suit application and forming methods, but with strength and stiffness not less than Temper H01 (quarter hard) for plate, sheet, strip, and bars and Temper H55 (light drawn) for tube and pipe.
- B. Bronze Extruded Shapes: ASTM B455, Alloy UNS C38500 (architectural bronze).
- C. Brass Extruded Shapes: ASTM B249/B249M, Alloy UNS C36000 (free-cutting brass).
- D. Nickel Silver Extruded Shapes: ASTM B249/B249M, Alloy UNS C79600.
- E. Bronze Seamless Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
- F. Bronze Seamless Tube: ASTM B135/B135M Alloy UNS C23000 (red brass, 85 percent copper).

- G. Brass Seamless Tube: ASTM B135/B135M Alloy UNS C26000 (cartridge brass, 70 percent copper).
- H. Copper Seamless Tube: ASTM B75/B75M, Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).
- I. Bronze Castings: **[Composition bronze castings complying with ASTM B62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass)][or][sand castings complying with ASTM B584, Alloy UNS C86500 (No. 1 manganese bronze)]**.
- J. Brass Castings: Sand castings complying with ASTM B584, Alloy UNS C85200 (high-copper yellow brass).
- K. Copper Castings: ASTM B824, with a minimum of 99.9 percent copper.
- L. Nickel Silver Castings: ASTM B584, Alloy UNS C97300 (12 percent leaded nickel silver).
- M. Bronze Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).
- N. Brass Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- O. Copper Plate, Sheet, Strip, and Bars: ASTM B152/B152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.8 GLASS AND GLAZING PRODUCTS, GENERAL

- A. Glazing Publications: Comply with written instructions of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. NGA/GANA Publications: **["GANA Laminated Glazing Reference Manual" and]"GANA Glazing Manual."**
- B. Safety Glazing: Glazing is to comply with 16 CFR 1201, Category II.
- C. Safety Glazing Labeling: Permanently mark glass with certification label of **[the SGCC][the SGCC or another certification agency acceptable to authorities having jurisdiction][or][manufacturer]**. Label is to indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- D. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
- E. Low-Iron Float Glass: ASTM C1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent.
- F. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.
- G. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Class 1 and low-iron clear, or Class 2 (tinted) as indicated, Quality-Q3.
- H. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-

Q3.

- I. Ceramic-Coated Glass: Heat-strengthened float glass, Condition C; with ceramic enamel applied by silk-screened process; complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual" and with other requirements specified.
- J. Bent Glass: ASTM C1464, **[Kind BFT (bent, tempered)][Kind BHS, (bent, heat strengthened)][Kind BL, (bent, laminated)]**.
- K. Glazing Cement and Accessories for Structural Glass Railings: Glazing cement, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.
- L. Sealant and Accessories for Structural Glass Railings: Sealant, gaskets, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.
- M. Glazing Gaskets for Glass-Infill Panels: Glazing gaskets and related accessories as recommended or supplied by railing manufacturer for installing glass-infill panels in post-supported railings.

2.9 GLASS HANDRAILS AND GUARDS

- A. Tempered Glass Handrails and Guards: Provide products that have been tested for surface and edge compression in accordance with ASTM C1048 and for impact strength in accordance with 16 CFR 1201 for Category II materials.
 - 1. Glass Color: **[Clear][Blue][Blue-green][Bronze][Green][Gray]<Insert color>**.
 - 2. Thickness for Structural Glass Balusters: As required by structural loads, but not less than **[12.0][19.0]** mm.
 - 3. Thickness for Glass-Infill Panels: As required by structural loads, but not less than **[6.0][10.0]** mm.
 - 4. Glass Thickness: As indicated on Drawings.
- B. Laminated Glass Handrails and Guards: ASTM C1172, Type II with two plies of glass bonded together by an interlayer.
 - 1. Construction: Laminate glass with **[polyvinyl butyral interlayer][or][ionoplast polymer interlayer]** to comply with interlayer manufacturer's written instructions.
 - 2. Interlayer Thickness: **[0.030 inch (0.76 mm)][0.060 inch (1.52 mm)][0.090 inch (2.29 mm)]**.
 - 3. Kind: **[LHS (laminated heat strengthened)][LT (laminated tempered)][As indicated]**.
 - 4. Glass Color: Inner-ply **[clear][low-iron clear][blue][blue-green][bronze][green][gray]<Insert color>**; outer-ply **[clear][low-iron clear][blue][blue-green][bronze][green][gray]<Insert color>**.
 - 5. Ceramic Coating Color and Pattern: **[As selected by Architect from manufacturer's full range]<Insert manufacturer's color and pattern designation>**, applied to **[inner][outer]** glass ply.
 - 6. Interlayer Color: **[Clear][Blue-green][Bronze light][Gray]<Insert color>**.
 - 7. Interlayer Color and Pattern: **[As selected by Architect from manufacturer's full range][Match][Provide]<Insert manufacturer's color and pattern designation>**.
 - 8. Glass Plies for Structural Glass Balusters: Thickness required by structural loads, but not less than **[6.0][8.0]** mm thick each.
 - 9. Glass Plies for Glass-Infill Panels: Thickness required by structural loads, but not less than **[3.0][4.0][5.0]** mm each.
- C. Windborne-Debris-Impact-Resistant Laminated Glass Guards: ASTM C1172, Type II with two plies of glass bonded together with an interlayer.

1. Construction: Laminate glass with [polyvinyl butyral interlayer][or][ionoplast polymer interlayer] to comply with interlayer manufacturer's written instructions.
2. Interlayer Thickness: [0.060 inch (1.52 mm)][0.090 inch (2.29 mm)].
3. Kind: [LHS (laminated heat strengthened)][LT (laminated tempered)][As indicated].
4. Glass Color: Inner-ply [clear][low-iron clear][blue][blue-green][bronze][green][gray]<Insert color>; outer-ply [clear][low-iron clear][blue][blue-green][bronze][green][gray]<Insert color>.
5. Ceramic Coating Color and Pattern: [As selected by Architect from manufacturer's full range]<Insert manufacturer's color and pattern designation>, applied to [inner][outer] glass ply.
6. Interlayer Color: [Clear][Blue-green][Bronze light][Gray]<Insert color>.
7. Interlayer Color and Pattern: [As selected by Architect from manufacturer's full range][Match][Provide]<Insert manufacturer's color and pattern designation>.
8. Glass Plies for Structural Glass Balusters: Thickness required by structural loads, but not less than [6.0][8.0][10] mm thick each.
9. Glass Plies for Glass-Infill Panels: Thickness required by structural loads, but not less than [4.0][5.0] mm each.

2.10 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 1. Aluminum Components: [Type 304][Type 316] stainless steel fasteners.
 2. Stainless Steel Components: [Type 304][Type 316] stainless steel fasteners.
 3. Copper-Alloy (Bronze) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners[where concealed; muntz metal (Alloy 280) fasteners where exposed].
 4. Copper-Alloy (Brass) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners[where concealed; brass (Alloy 260 or Alloy 360) fasteners where exposed].
 5. Dissimilar Metals: [Type 304][Type 316] stainless steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated[and capable of withstanding design loads].
- C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless [otherwise indicated][exposed fasteners are unavoidable][exposed fasteners are the standard fastening method for railings indicated].
 1. Provide [Phillips][tamper-resistant][square or hex socket] flat-head machine screws for exposed fasteners unless otherwise indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to design load, in accordance with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193[or ICC-ES AC308].
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/ASTM F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy [Group 1 (A1)][Group 2 (A4)] stainless steel bolts, ASTM F593, and nuts; ASTM F594 (ASTM F836M).

2.11 MISCELLANEOUS MATERIALS

- A. Handrail Brackets: [Cast aluminum,][Cast stainless steel,][Cast bronze,][Cast brass,][Cast copper,][Cast nickel-silver,] center of rail [2-1/2 inches (63.5 mm)][3-1/8 inches (79.4 mm)]<Insert dimension> from face of structural glass balusters.

B. Wood Rails:

1. Clear, straight-grained hardwood rails secured to **[recessed][exposed]** metal subrail.
 - a. Species: **[Ash][Cherry][Red oak][Walnut][White oak]<Insert species>**.
 - b. Finish: **[Manufacturer's standard][Transparent polyurethane][Penetrating oil][Acrylic impregnated]**.
 - c. Staining: **[None][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert description or manufacturer's name and product designation>**.
 - d. Profile: **[Square, 1-3/4 by 1-3/4 inches (45 by 45 mm) with edges eased to 1/4-inch (6-mm) radius][Rectangular, 1-3/4 by 5 inches (45 by 127 mm) with edges eased to 1/4-inch (6-mm) radius][Round, 2-inch (50-mm) diameter][As indicated]<Insert description>**.
 2. Hardwood rails complying with Section 064023 "Interior Architectural Woodwork."
 3. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
 4. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
 5. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
 6. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
 7. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- C. Lacquer for Copper Alloys: Clear acrylic lacquer specially developed for coating copper-alloy products.
- D. Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- F. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- G. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
1. Water-Resistant Anchoring Cement: **[At exterior locations][and][where indicated]** provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.12 FABRICATION OF METAL RAILINGS

- A. Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, **but not less than that required to support structural loads**].
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch (1 mm)** unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- H. Form changes in direction as follows:
 - 1. As detailed.
 - 2. **[By bending][or][by inserting prefabricated elbow fittings]**.
 - 3. **[By flush bends][or][by inserting prefabricated flush-elbow fittings]**.
 - 4. **[By radius bends of radius indicated][or][by inserting prefabricated elbow fittings of radius indicated]**.
 - 5. By bending to smallest radius that will not result in distortion of railing member.
- I. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- J. Close exposed ends of hollow railing members with prefabricated end fittings.
- K. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, handrail brackets, miscellaneous fittings, and anchors to interconnect railing members to other work where indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.
- L. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
- M. For railing posts set in concrete, provide **[steel][stainless steel]** sleeves not less than **6 inches (150 mm)** long with inside dimensions not less than **1/2 inch (13 mm)** greater than outside dimensions of post, with metal plate forming bottom closure.

2.13 FABRICATION OF GLASS PANELS AND BALUSTERS

- A. Fabricate glass to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.
- B. Glass-Infill Panels: Provide **[tempered][laminated, heat-strengthened][laminated, tempered]** glass-infill panels **[for both straight and curved sections]**.
 - 1. Edge Finish: **[Clean-cut or flat-grind edges to produce smooth, square edges with slight chamfers at junctions of edges and faces]<Insert edge finishes>**.
- C. Structural Glass Balusters: Provide **[tempered][laminated, heat-strengthened][laminated, tempered]** structural glass balusters **[for both straight and curved sections]**.
 - 1. Edge Finish: **[Grind smooth and flat polish exposed edges of glass, including those at open joints, to produce smooth, square edges with glass edge finishes]**.
 - 2. Factory-bond structural glass balusters to aluminum base and top-rail channels in railing manufacturer's plant using **[glazing cement][sealant]** to comply with manufacturer's written instructions, **[unless field glazing is standard with manufacturer]**.
 - 3. Fabricate structural glass balusters to maintain equal length glass widths and uniform spacing of **[1/2 inch (13 mm)]<Insert spacing>** between glass balusters.

2.14 METAL FINISH REQUIREMENTS, GENERAL

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.15 ALUMINUM FINISHES

- A. Mechanical Finish: AA-M3x; sand top rails, handrails, and intermediate rails in one direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm][AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm][AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 - 1. Color: **[Champagne][Light bronze][Medium bronze][Dark bronze][Black][Match Architect's sample][As selected by Architect from full range of industry colors and color densities]<Insert color>**.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion

coating, and applying and baking finish.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- F. High-Performance Organic Finish, Two-Coat PVDF: Fluoropolymer finish complying with **[AAMA 2604][AAMA 2605]** and containing not less than **[50][70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions[**for seacoast and severe environments**].
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- G. Superior-Performing Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions[**for seacoast and severe environments**].
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- H. Superior-Performing Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions[**for seacoast and severe environments**].
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- I. Superior-Performing Organic Finish, Single-Coat FEVE: Fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- J. Superior-Performing Organic Finish, Two-Coat FEVE: Fluoropolymer finish complying with AAMA 2605. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions for seacoast and severe environments.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- 2.16 STAINLESS STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

C. Stainless Steel Tubing Finishes:

1. 180-Grit Polished Finish: Uniform, directionally textured finish.
2. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
3. Polished and Buffed Finish: 320-grit finish followed by buffing **[to a high luster finish][to a mirrorlike finish][to match Architect's sample]**.

D. Stainless Steel Sheet, Strip, Plate, and Bar Finishes:

1. Directional Satin Finish: ASTM A480/A480M, No. 4.
2. High Luster Finish: ASTM A480/A480M, No. 7.
3. Mirror Finish: ASTM A480/A480M, No. 8.

2.17 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system for designating copper-alloy finish systems defined in NAAMM/NOMMA 500, "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
- D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- F. Lacquered Buffed Finish: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- G. Lacquered Hand-Rubbed Finish: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- H. Lacquered Medium-Satin Finish: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- I. Lacquered Fine-Matte Finish: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below).

1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide.
 1. Color: Match Architect's sample.
- K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate)[, **with color matching Architect's sample**].

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Comply with Drawings and manufacturer's written instructions for installing glazed decorative metal railings, accessories, and other components.
- B. Windborne-Debris Resistance: Anchor glazed decorative metal railings to structure using anchoring method, fastener type, and fastening frequency identical to that used in windborne-debris-resistance testing.
- C. Perform cutting, drilling, and fitting required for installing metal railings.
 1. Fit exposed connections together to form tight, hairline joints.
 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 4. Do not weld, cut, or abrade surfaces of metal railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 5. Set posts plumb within a tolerance of **1/16 inch in 3 feet (2 mm in 1 m)**.
 6. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet (5 mm in 3 m)**.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 1. Coat concealed surfaces of **[aluminum][and][copper alloys]** that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with **[shop primer][bituminous paint]**.
- E. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- F. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.2 METAL RAILING CONNECTIONS

- A. Nonwelded Connections:
 1. Use mechanical or adhesive joints for permanently connecting railing components.

2. Use wood blocks and padding to prevent damage to railing members and fittings.
3. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

- B. Expansion Joints: Install expansion joints at locations indicated, but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending **2 inches (50 mm)** beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within **6 inches (150 mm)** of post.

3.3 METAL ANCHORING POSTS

- A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted in sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than **5 inches (125 mm)** deep and **3/4 inch (20 mm)** larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout][or][anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material][attached to post with setscrews]**.
- D. Leave anchorage joint exposed with **[1/8-inch (3-mm) buildup, sloped away from post][anchoring material flush with adjacent surface]**.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
1. For aluminum railings, attach posts as indicated using fittings designed and engineered for this purpose.
 2. For copper-alloy railings, attach posts as indicated using fittings designed and engineered for this purpose.
 3. For stainless steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.4 INSTALLATION OF GLASS BALUSTERS

- A. Structural Glass Railings:
1. Install assembly to comply with railing manufacturer's written instructions.
 2. Attach base channel to building structure, then insert and connect factory-fabricated and -assembled glass balusters **[if glass was bonded to base and top-rail channels in factory]**.
 3. For field-assembled balusters, attach base channel to building structure, insert glass in base channel, and bond with **[glazing cement][sealant]**.
 - a. Support glass balusters in base channel at quarter points with channel-shaped setting blocks that also act as shims to maintain uniform space for glazing cement.
 - b. Fill remaining space in base channel with **[glazing cement][sealant]** for uniform support of glass.

4. Adjust spacing of glass balusters so gaps between balusters are equal before securing in position.
5. Erect glass railings under direct supervision of manufacturer's authorized technical personnel.

B. Post-Supported Railings with Glass-Infill Panels:

1. Install assembly to comply with railing manufacturer's written instructions and with requirements in other Part 3 articles.
2. Erect posts and other metal railing components, and set factory-cut glass-infill panels.
3. Do not cut, drill, or alter glass-infill panels in field. Protect edges from damage.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and to prepare test reports. Payment for these services will be made **[by Owner][from the testing and inspecting allowance, as authorized by Change Orders]**.
- B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Test railings in accordance with ASTM E894, ASTM E935, ASTM E2353, and ASTM E2358 for compliance with performance requirements.
- C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and comply with specified requirements.
- D. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

3.6 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with water and soap, rinsing with clean water, and wiping dry.
- B. Clean copper alloys in accordance with metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
- D. Clean wood rails by wiping with a damp cloth and then wiping dry.

3.7 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

05 - Metals

END OF SECTION 05 73 00 00A

Task	Specification	Specification Description

SECTION 05 75 00 00 - DECORATIVE FORMED METAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Beam wraps.
2. Closures and trim.
3. Decorative-metal-clad doors and frames.
4. Escalator enclosures.
5. Filler panels.
6. Lighting coves.
7. Metal base.
8. Mullion cladding.
9. Pipe system covers.
10. Pockets for window treatment.
11. Window stools.

B. Related Requirements:

1. Section 057000 "Decorative Metal" for decorative items made primarily from plate, bars, extrusions, tubes, castings, and other forms of metal, but which may include sheet metal components.
2. Section 076100 "Sheet Metal Roofing" for items made of formed metal for roofing.
3. Section 076200 "Sheet Metal Flashing and Trim" for items made of formed metal for flashings and trim.
4. Section 077100 "Roof Specialties" for items made of formed metal for parapets and copings.

1.2 COORDINATION

- A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
- B. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim, and joint sealants, are protected against damage from the effects of weather, age, corrosion, and other causes of deterioration.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.

- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Shop Drawings: Show fabrication and installation details for decorative formed metal.
 - 1. Include plans, elevations, component details, and attachment details.
 - 2. Indicate materials and profiles of each decorative formed metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- E. Samples for Verification: For each type of exposed finish required, prepared on **6-inch- (150-mm-)** square Samples of metal of same thickness and material indicated for the Work.
- F. Delegated Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments, and necessary clearances.
- B. Qualification Data: For [**Installer**][**fabricator**][**organic-coating applicator**][**anodic finisher**][**powder-coating applicator**][**and**][**professional engineer**].
- C. Mill Certificates: Signed by stainless steel manufacturers certifying that products furnished comply with requirements.
- D. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For [**mirrorlike stainless steel finish**][**and**][**statuary conversion coating copper-alloy finish**] to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing decorative formed metal similar to that indicated for this Project and with a record of successful in-service performance as well as sufficient production capacity to produce required units.
- B. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- C. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type

indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

- D. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- E. Installer Qualifications: Fabricator of products.
- F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups for the following types of decorative formed metal:
 - a. **<Insert, in separate subparagraphs, description of each decorative metal type including mockup size>.**
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver decorative formed metal products wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.
- B. Store products on elevated platforms in a dry location.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with decorative formed metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. For decorative metal items, obtain each color, grade, finish, type, and variety of metal from single source with resources to provide products of consistent quality in appearance and physical properties.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design decorative formed metal, including attachment to building construction.
- B. Structural Performance: Decorative formed metal items, including anchors and connections, are to withstand the effects of gravity loads and the following loads and stresses without exceeding the allowable design working stress of materials involved and without exhibiting permanent deformation in any components:

1. Wind Loads on Exterior Items: **[As indicated on Drawings][20 lbf/sq. ft. (957 Pa)][30 lbf/sq. ft. (1436 Pa)]<Insert specific loads>**.

- C. Seismic Performance: Exterior decorative formed metal items, including anchors and connections, are to withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]<Insert requirement>**.

1. Component Importance Factor: 1.0.

- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: **120 deg F (67 deg C)**, ambient; **180 deg F (100 deg C)**, material surfaces.

2.3 SHEET METAL

- A. General: Fabricate products from sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]<Insert value>** percent.
- C. Aluminum Sheet: Flat sheet complying with **ASTM B209 (ASTM B209M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties of not less than Alloy 5005-H32.
- D. Galvanized-Steel Sheet: ASTM A653/A653M, **G90 (Z275)** coating, either commercial steel or forming steel.
- E. Steel Sheet: **[Uncoated, cold-rolled, ASTM A1008/A1008M, commercial steel, exposed][or][electrolytic zinc-coated, ASTM A879/A879M, with steel sheet substrate complying with ASTM A1008/A1008M, commercial steel, exposed]**.
- F. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316]**, stretcher-leveled standard of flatness.
- G. Bronze Sheet: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper) or Alloy UNS C23000 (red brass, 85 percent copper).
- H. Brass Sheet: ASTM B36/B36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).
- I. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 temper.
- J. Titanium Sheet: ASTM B265, Grade 1.

2.4 MISCELLANEOUS MATERIALS

- A. Gaskets: As required to seal joints in decorative formed metal and remain **[airtight][weathertight]**; as recommended in writing by decorative formed metal manufacturer.

1. ASTM D1056, Type 1, Class A, grade as recommended by gasket manufacturer to obtain seal for

- application indicated.
 2. Closed-cell polyurethane foam, adhesive on two sides, release paper protected.
- B. Sealants, Exterior: Elastomeric sealant complying with Section 079200 "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.
- C. Sealants, Interior: Nonsag, paintable sealant complying with Section 079200 "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.
- D. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items.
 1. Use filler metals that will match the color of metal being joined and will not cause discoloration.
- E. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
 1. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless **[otherwise indicated][exposed fasteners are unavoidable or are the standard fastening method]**.
 2. Provide **[Phillips][tamper-resistant][square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- F. Structural Anchors: For applications indicated to comply with certain design loads, provide fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193[**or ICC-ES AC308**].
- G. Nonstructural Anchors: For applications not indicated to comply with design loads, provide fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193[**or ICC-ES AC308**].
- H. Anchor Materials:
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or **ASTM F1941 (ASTM F1941M)**, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)][Group 2 (A4)]** stainless steel bolts, **ASTM F593 (ASTM F738M)**, and nuts, **ASTM F594 (ASTM F836M)**.
- I. Sound-Deadening Materials:
 1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C665, Type I, and passing ASTM E136 test.
 2. Mastic: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- J. Backing Materials: Provided or recommended by decorative formed metal manufacturer.
- K. Laminating Adhesive: Adhesive recommended by metal fabricator that will fully bond metal to metal, will prevent telegraphing and oil-canning, and is compatible with substrate and noncombustible after curing.
- L. Isolation Coating: Manufacturer's standard **[alkali-resistant coating][bituminous paint][epoxy coating]**.

2.5 PAINTS AND COATINGS

- A. Etching Cleaner for Galvanized Metal: Product formulated to remove grease and oil residue from metal surfaces and provide a clean, lightly etched surface to promote adhesion of coatings.
- B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- C. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
- D. Shop Primers: Comply with **[Section 099113 "Exterior Painting."][Section 099123 "Interior Painting."][Section 099600 "High-Performance Coatings."]**
- E. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- F. Epoxy Zinc-Rich Primer: Compatible with topcoat.
- G. Shop Primer for Galvanized Steel: **[Cementitious galvanized metal primer][Vinyl wash primer][Water-based galvanized metal primer].**
- H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble decorative formed metal items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Coordinate dimensions and attachment methods of decorative formed metal items with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- C. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a **1/2-inch- (12-mm-)** wide hem on the concealed side, or ease edges to a radius of approximately **1/32 inch (1 mm)** and support with concealed stiffeners.
- D. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 - 1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- E. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce decorative formed metal items as needed to attach and support other construction.
- F. Provide support framing, mounting and attachment clips, splice sleeves, fasteners, and accessories needed to install decorative formed metal items.

- G. Where welding or brazing is indicated, weld or braze joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.
1. Use welding and brazing procedures that will blend with and not cause discoloration of metal being joined.

2.7 BEAM WRAPS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Hi-Tech Metals, Inc]**
 2. **[Industrial Louvers Inc.]**
 3. **[Metal Sales & Service, Inc.]**
 4. **[MM Systems Corporation]**
 5. **[SAF (Southern Aluminum Finishing Company, Inc.)]**
 6. **[Southwest Metalsmiths, Inc.]**
 7. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Hi-Tech Metals, Inc]**
 2. **[Industrial Louvers Inc.]**
 3. **[Metal Sales & Service, Inc.]**
 4. **[MM Systems Corporation]**
 5. **[SAF (Southern Aluminum Finishing Company, Inc.)]**
 6. **[Southwest Metalsmiths, Inc.]**
 7. **<Insert manufacturer's name>**
- C. Form beam wraps from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.
1. Aluminum Sheet: **[0.063 inch (1.60 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
 2. Steel Sheet: **[0.060 inch (1.52 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Powder coat]**.
 3. Stainless Steel Sheet: **[0.050 inch (1.27 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[No. 2B][No. 4][No. 6][No. 7][No. 8]**.
- D. Fabricate with calk stop angle to retain backer rod and sealant.

2.8 CLOSURES AND TRIM

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Fry Reglet Corporation]**
 2. **[Pittcon Industries]**
 3. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Fry Reglet Corporation]**
 2. **[Pittcon Industries]**
 3. **<Insert manufacturer's name>**
- C. Form closures and trim from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction, **with weathertight joints at exterior installations**.
1. Aluminum Sheet: **[0.063 inch (1.60 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat]**.
 3. Steel Sheet: **[0.048 inch (1.21 mm)][Thickness required to comply with performance requirements]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Powder coat]**.
 4. Closures and trim may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view and not exposed to weather.
- D. Conceal fasteners where possible; otherwise, locate where they are as inconspicuous as possible. Size fasteners to support closures and trim, with fasteners spaced to prevent buckling or waviness in finished surfaces.
- E. Drill and tap holes needed for securing closures and trim to other surfaces.
- F. Incorporate gaskets where indicated or needed for concealed, continuous seal at abutting surfaces.
- G. Miter or cope trim members at corners and reinforce with bent metal splice plates to form tight joints.

2.9 DECORATIVE-METAL-CLAD DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide**

products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Dawson Metal Co., Inc]
2. [InKan Limited]
3. [Krieger Specialty Products Company]
4. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Dawson Metal Co., Inc]
2. [InKan Limited]
3. [Krieger Specialty Products Company]
4. <Insert manufacturer's name>

C. Laminate metal sheets, of type and thickness indicated below, to faces of [hollow-metal doors and frames][and][elevator entrances] where indicated. Use adhesive that will fully bond metal to metal and that will prevent telegraphing and oil-canning.

1. Bronze Sheet: [0.040 inch (1.02 mm)]<Insert thickness>.
 - a. Finish: [Buffed finish, lacquered][Hand-rubbed finish, lacquered][Statuary conversion coating over satin finish, lacquered].
2. Brass Sheet: [0.040 inch (1.02 mm)]<Insert thickness>.
 - a. Finish: [Buffed][Hand-rubbed] finish lacquered.
3. Stainless Steel Sheet: [0.038 inch (0.95 mm)]<Insert thickness>.
 - a. Finish: [No. 2B][No. 4][No. 6][No. 7][No. 8].
4. Titanium Sheet: [0.025 inch (0.64 mm)]<Insert thickness>.
 - a. Finish: [Dull][Bright] matte.

2.10 ESCALATOR ENCLOSURES

A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Hi-Tech Metals, Inc]
2. [Metal Sales & Service, Inc.]
3. [Southwest Metalsmiths, Inc.]
4. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Hi-Tech Metals, Inc]
2. [Metal Sales & Service, Inc.]
3. [Southwest Metalsmiths, Inc.]

4. <Insert manufacturer's name>

- C. Form escalator enclosures from metal of type and thickness indicated below. Coordinate size of enclosures, location of cutouts, and method of attachment to adjoining construction.

1. Stainless Steel Sheet: **[0.062 inch (1.59 mm)]****[Thickness required to comply with performance requirements]****<Insert thickness>**.
 - a. Finish: **[No. 2B]****[No. 4]****[No. 6]****[No. 7]****[No. 8]**.
2. Bronze Sheet: **[0.081 inch (2.05 mm)]****[Thickness required to comply with performance requirements]****<Insert thickness>**.
 - a. Finish: **[Buffed finish, lacquered]****[Hand-rubbed finish, lacquered]****[Statuary conversion coating over satin finish]**.

2.11 FILLER PANELS

- A. Form filler panels for closing ends of partition systems and for other applications indicated. Form from two sheets of metal of type and thickness indicated below, separated by channels formed from the same material, producing a panel of same thickness as **[partitions]****[mullions]** unless otherwise indicated. Incorporate reveals, trim, and concealed anchorages for attaching to adjacent surfaces.

1. Galvanized-Steel Sheet: **[0.064 inch (1.63 mm)]****<Insert thickness>**.
 - a. Finish: **[Factory primed]****[Baked enamel]****[Siliconized polyester]****[High-performance organic coating]****[Powder coat]**.
2. Steel Sheet: **[0.060 inch (1.52 mm)]****<Insert thickness>**.
 - a. Finish: **[Factory primed]****[Baked enamel]****[Powder coat]**.
3. Filler panels may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.

- B. Fill interior of panel with sound-deadening insulation permanently attached to inside panel faces.
- C. Adhesively attach gaskets to filler panel edges where they abut mullions or glazing. Use **1-inch- (25-mm-)** square material, unless otherwise indicated, set approximately **1/4 inch (6 mm)** into channeled edge of filler panel.
- D. Attach gaskets to all edges of panels that abut adjacent surfaces to form a continuous seal. Use compressible gaskets or mastic sealing tape, applied to center of panel edges to be concealed from view, unless otherwise indicated.
- E. Do not mechanically fasten filler panels to mullions.

2.12 LIGHTING COVES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following]****[provide products by one of the following]****[available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. [Fry Reglet Corporation]
2. [Gordon Inc.]
3. [Hi-Tech Metals, Inc]
4. [MM Systems Corporation]
5. [Pittcon Industries]
6. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Fry Reglet Corporation]
2. [Gordon Inc.]
3. [Hi-Tech Metals, Inc]
4. [MM Systems Corporation]
5. [Pittcon Industries]
6. <Insert manufacturer's name>

C. Form lighting covers from metal of type and thickness indicated below. Coordinate size of covers, location of cutouts for electrical wiring, and method of attachment to adjoining construction.

1. Aluminum Sheet: [0.063 inch (1.60 mm)]<Insert thickness>.
 - a. Finish: [Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic].
2. Galvanized-Steel Sheet: [0.052 inch (1.32 mm)]<Insert thickness>.
 - a. Finish: [Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat].
3. Steel Sheet: [0.048 inch (1.21 mm)]<Insert thickness>.
 - a. Finish: [Factory primed][Baked enamel][Powder coat].
4. Fabricate light covers with [hairline butt joints][tapered edges for taping and spackling].
5. Provide [mitered corners, factory welded with backplates][factory endcaps].
6. Lighting covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.

2.13 METAL BASE

A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Fry Reglet Corporation]
2. [Pittcon Industries]
3. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Fry Reglet Corporation]
2. [Pittcon Industries]
3. <Insert manufacturer's name>

- C. Form metal base from metal of type and thickness indicated below:
1. Aluminum Sheet: **[0.063 inch (1.60 mm)]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
 2. Stainless Steel Sheet: **[0.050 inch (1.27 mm)]<Insert thickness>**.
 - a. Finish: **[No. 2B][No. 4][No. 6][No. 7][No. 8]**.

2.14 MULLION CLADDING

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Hi-Tech Metals, Inc]**
 2. **[Metal Sales & Service, Inc.]**
 3. **[Southwest Metalsmiths, Inc.]**
 4. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Hi-Tech Metals, Inc]**
 2. **[Metal Sales & Service, Inc.]**
 3. **[Southwest Metalsmiths, Inc.]**
 4. **<Insert manufacturer's name>**
- C. Form mullion cladding from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.
1. Aluminum Sheet: **[0.063 inch (1.60 mm)]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat]**.
 3. Stainless Steel Sheet: **[0.050 inch (1.27 mm)]<Insert thickness>**.
 - a. Finish: **[No. 2B][No. 4][No. 6][No. 7][No. 8]**.

2.15 PIPE SYSTEM COVERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. **[ARSCO Metals LLC]**
2. **[JG Innovations, Inc.]**
3. **<Insert manufacturer's name>**

B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. **[ARSCO Metals LLC]**
2. **[JG Innovations, Inc.]**
3. **<Insert manufacturer's name>**

C. Form pipe system covers from metal of type and thickness indicated below. Coordinate size of covers, location of cutouts for piping, and method of attachment to adjoining construction.

1. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat]**.
2. Steel Sheet: **[0.048 inch (1.21 mm)]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Powder coat]**.

2.16 POCKETS FOR WINDOW TREATMENT

A. Form pockets from metal of type and thickness indicated below, with end closures. Coordinate dimensions and attachment methods with window treatment equipment, window frames, ceiling suspension system, and other related construction to produce a coordinated, closely fitting assembly.

1. Aluminum Sheet: **[0.063 inch (1.60 mm)]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)]**.
 - a. Finish: **[Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat]**.
3. Steel Sheet: **[0.048 inch (1.21 mm)]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Powder coat]**.
4. Pockets for window treatment may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.

B. Reinforce pockets for attaching window treatment equipment and hardware, or increase metal thickness.

C. Divide continuous pockets with built-in partitions located to separate adjoining drapery and blind units, to coincide with window mullions, and to receive filler panels at ends of partitions.

2.17 WINDOW STOOLS

- A. Form window stools from metal of type and thickness indicated below, with end closures:
1. Aluminum Sheet: **[0.063 inch (1.60 mm)]<Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat][Siliconized polyester][High-performance organic coating][Mill][Clear anodic][Color anodic]**.
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)]<Insert thickness>**.
 - a. Finish: **[Factory primed][Baked enamel][Siliconized polyester][High-performance organic coating][Powder coat]**.
 3. Stainless Steel Sheet: **[0.050 inch (1.27 mm)][1.3 mm]<Insert thickness>**.
 - a. Finish: **[No. 2B][No. 4][No. 6][No. 7][No. 8]**.
 4. Bronze Sheet: **[0.051 inch (1.29 mm)]<Insert thickness>**.
 - a. Finish: **[Buffed finish, lacquered][Hand-rubbed finish, lacquered][Statuary conversion coating over satin finish]**.
- B. Weld seams at end closures.
- C. Braze seams at end closures.
- D. Apply sound-deadening **[insulation][mastic]** to underside of window stools.

2.18 GENERAL FINISH REQUIREMENTS

- A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- D. Finish **[items indicated on Drawings]<Insert product>** after assembly.
- E. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.19 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm][AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm][AA-M12C22A32/A34,**

Class II, 0.010 mm] or thicker.

1. Color: **[Champagne][Light bronze][Medium bronze][Dark bronze][Black]<Insert color>**.
 2. **[Match Architect's sample][As selected by Architect from full range of industry colors and color densities]**.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.
- D. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.
- E. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.
- F. Superior-Performing Organic Finish: **[Two][Three][Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

2.20 GALVANIZED-STEEL SHEET FINISHES

- A. Preparing Galvanized Items for Factory Priming: Thoroughly clean galvanized decorative formed metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- B. Preparing Galvanized Items for Factory Finishing: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
- C. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- D. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- E. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.

1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- F. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**. Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- G. Siliconized-Polyester Coating: Immediately after cleaning and pretreating, apply manufacturer's standard epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- H. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- I. Superior-Performing Organic Finish: **[Two][Three][Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**
- 2.21 STEEL SHEET FINISHES
- A. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
- B. Pretreatment: Immediately after cleaning, apply a conversion coating of type suited to organic coating.
- C. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- D. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.
1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>.**

- E. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color and gloss>**.

2.22 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- D. Directional Satin Finish: No. 4.
- E. Dull Satin Finish: No. 6.
- F. Satin, Reflective, Directional Polish: No. 7.
- G. Mirrorlike Reflective, Nondirectional Polish: No. 8 finish.
- H. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.23 COPPER-ALLOY FINISHES

- A. Lacquered Buffed Finish: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- B. Lacquered Hand-Rubbed Finish: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- C. Lacquered Medium-Satin Finish: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.
- D. Lacquered Fine-Matte Finish: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per

manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

- E. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching Architect's sample**].
- F. Statuary Conversion Coating over Satin Finish, Lacquered: M31-C55-O6x (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide; Coating: clear, organic, air dried, as specified below)[, **with color matching Architect's sample**]:
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil (0.025 mm)**.

2.24 TITANIUM FINISHES

- A. General: Fabricate items from finished titanium sheet, taking care not to damage finish during fabrication. Protect finish as needed during fabrication by applying a strippable, temporary protective covering.
- B. Dull Matte Finish: Pickled and annealed.
- C. Bright Matte Finish: Vacuum annealed.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Locate and place decorative formed metal items level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install decorative formed metal.
 - 1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where needed to protect metal surfaces and to make a weathertight connection.
- C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- D. Install concealed gaskets, joint fillers, insulation, sealants, and flashings, as the Work progresses, to make exterior decorative formed metal items weatherproof.
- E. Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses, to make interior

decorative formed metal items soundproof or lightproof as applicable to type of fabrication indicated.

- F. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.
- G. Install decorative-formed-metal-clad doors and frames to comply with requirements specified in Section 081113 "Hollow Metal Doors and Frames."

3.3 ADJUSTING AND CLEANING

- A. Unless otherwise indicated, clean metals by washing thoroughly with water and soap, rinsing with clean water, and drying with soft cloths.
- B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
 - 2. Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**][**Section 099600 "High-Performance Coatings."**][**Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]
- D. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

- A. Protect finishes of decorative formed metal items from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

SECTION 06 10 00 00 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wood products.
2. Wood-preserved-treated lumber.
3. Fire-retardant-treated lumber.
4. Dimension lumber framing.
5. Miscellaneous lumber.
6. Plywood backing panels.
7. Metal framing anchors.

B. Related Requirements:

1. Section 061533 "Wood Patio Decking" for elevated decks, including support framing.
2. Section 061600 "Sheathing" for sheathing, subflooring, and underlayment.
3. Section 061753 "Shop-Fabricated Wood Trusses" for wood trusses made from dimension lumber.
4. Section 064013 "Exterior Architectural Woodwork" for exterior wood stairs and railings.
5. Section 064023 "Interior Architectural Woodwork" for interior wood stairs and railings.
6. Section 313116 "Termite Control" for site application of borate treatment to wood framing.

1.2 DEFINITIONS

- A. Boards or Strips:** Lumber of less than **2 inches nominal (38 mm actual)** size in least dimension.
- B. Dimension Lumber:** Lumber of **2 inches nominal (38 mm actual)** size or greater but less than **5 inches nominal (114 mm actual)** size in least dimension.
- C. Exposed Framing:** Framing not concealed by other construction.
- D. SBX:** An inorganic boron used to prevent termites and fungal decay.
- E. Lumber grading agencies, and abbreviations used to reference them, include the following:**
1. NeLMA: Northeastern Lumber Manufacturers' Association.
 2. NLGA: National Lumber Grades Authority.
 3. RIS: Redwood Inspection Service.
 4. SPIB: The Southern Pine Inspection Bureau.
 5. WCLIB: West Coast Lumber Inspection Bureau.
 6. WWPA: Western Wood Products Association.

1.3 ACTION SUBMITTALS

- A. Product Data:** For each type of product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

B. Sustainable Design Submittals:

1. Chain-of-Custody Qualification Data: For manufacturer and vendor.

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates:

1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.5 QUALITY ASSURANCE

- A. Certified Wood: Provide an invoice, including vendor's chain-of-custody number, product cost, and entity being invoiced.
- B. Vendor Qualifications: Provide proof of use of vendors that are certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS

- A. Lumber: Comply with DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
1. Factory mark each piece of lumber with grade stamp of grading agency.

2. For exposed lumber indicated to receive a stained or natural finish, **[mark grade stamp on end or back of each piece][or][omit grade stamp and provide certificates of grade compliance issued by grading agency]** .
3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry wood products.
4. Dress lumber, S4S, unless otherwise indicated.

B. Maximum Moisture Content:

1. Boards: **[15][19]** percent.
2. Dimension Lumber: **[15 percent][19 percent][15 percent for 2-inch nominal (38-mm actual) thickness or less; 19 percent for more than 2-inch nominal (38-mm actual) thickness][15 percent for 2-inch nominal (38-mm actual) thickness or less; no limit for more than 2-inch nominal (38-mm actual) thickness][19 percent for 2-inch nominal (38-mm actual) thickness or less; no limit for more than 2-inch nominal (38-mm actual) thickness]** unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

A. Wood-Preservative-Treated Lumber by Pressure Process: AWP A U1, use categories as follows:

1. UC1, Interior/Dry: Interior construction continuously protected from weather or other sources of moisture. Include **[all rough carpentry.][the following items:]**
 - a. Wood sills, sleepers, blocking, **[furring,][stripping,]** and similar concealed members in contact with masonry or concrete.
 - b. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - c. Wood floor plates that are installed over concrete slabs-on-grade.
 - d. Wood furniture.
 - e. Wood millwork.
2. UC2, Interior/Damp: Interior construction protected from weather, but may be subject to sources of moisture. Include **[all rough carpentry.][the following items:]**
 - a. Wood sills, sleepers, blocking, **[furring,][stripping,]** and similar concealed members in contact with masonry or concrete.
 - b. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - c. Wood floor plates that are installed over concrete slabs-on-grade.
 - d. Wood millwork.
 - e. Wood flooring.
3. UC3A, Above Ground, Protected (Commodity Specification A): Coated wood products in exterior construction not in contact with ground but exposed to all weather cycles including intermittent wetting. Include **[all rough carpentry.][the following items:]**
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than **18 inches (460 mm)** above the ground in crawlspaces or unexcavated areas.
 - c. Wood siding and trim.

4. UC3A, Above Ground, Protected (All Other Commodity Specifications): Wood products in exterior

construction not in contact with ground, exposed to all weather cycles but either coated and installed in a manner that prevents prolonged wetting, or fully protected from liquid water by building design and construction. Include **[all rough carpentry.]****[the following items:]**

- a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than **18 inches (460 mm)** above the ground in crawlspaces or unexcavated areas.
 - c. Wood floor plates that are installed over concrete slabs-on-grade.
 - d. Wood siding and trim.
 - e. Wood sheathing.
5. UC3B, Above Ground, Exposed (Commodity Specification A): Uncoated wood products in exterior construction not in contact with ground, exposed to all weather cycles including intermittent wetting, but with sufficient air circulation for wood to dry. Include **[all rough carpentry.]****[the following items:]**
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than **18 inches (460 mm)** above the ground in crawlspaces or unexcavated areas.
 - c. Wood decking, railings, and joists and beams for decks that are not critical to the performance and safety of the entire system/construction and that are in locations easily accessible for maintenance, repair, or replacement.
6. UC3B, Above Ground, Exposed (All Other Commodity Specifications): Uncoated wood products in exterior construction not in contact with ground, exposed to all weather cycles including prolonged wetting. Include **[all rough carpentry.]****[the following items:]**
 - a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood framing members that are less than **18 inches (460 mm)** above the ground in crawlspaces or unexcavated areas.
7. UC4A, Ground Contact, General Use (Commodity Specification A): Non-critical wood products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, and wood products not in contact with ground but with ground contact-type hazards or that are critical or hard to replace. Include **[all rough carpentry.]****[the following items:]**
 - a. Wood framing members that are less than **6 inches (152 mm)** above the ground.
 - b. Joists and beams when they are difficult to maintain, repair, or replace and are critical to the performance and safety of the entire system/construction.
8. UC4A, Ground Contact, General Use (All Other Commodity Specifications): Non-critical wood products in contact with ground and exposed to all weather cycles, normal exposure conditions. Include **[all rough carpentry.]****[the following items:]**
 - a. Wood fence, deck, and guardrail posts.
 - b. Wood utility poles.
9. UC4B, Ground Contact, Heavy Duty (Commodity Specification A): Critical or difficult-to-replace wood products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, high decay potential, and saltwater splash. Include **[all rough carpentry.]****[the following items:]**

- a. Wood foundations.
- 10. UC4C, Ground Contact, Extreme Duty (Commodity Specification A): Critical structural wood products in contact with ground and exposed to all weather cycles including continuous or prolonged wetting, severe environments, and extreme decay potential. Include **[all rough carpentry.]****[the following items:]**
 - a. Wood foundation piling.
- 11. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. **[Do not use inorganic boron (SBX) for sill plates.]**
- 12. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
- 13. After treatment, redry **[boards]****[dimension lumber]** to 19 percent maximum moisture content.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
 - 1. For exposed lumber indicated to receive a stained or natural finish, **[mark end or back of each piece]****[or]****[omit marking and provide certificates of treatment compliance issued by inspection agency]** .
- D. Application: Treat **[all rough carpentry unless otherwise indicated.]****[items indicated on Drawings, and the following:]**
 - 1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - 2. Wood sills, sleepers, blocking, **[furring,]****[stripping,]** and similar concealed members in contact with masonry or concrete.
 - 3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - 4. Wood framing members that are less than **18 inches (460 mm)** above the ground in crawlspaces or unexcavated areas.
 - 5. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED LUMBER

- A. General: Where fire-retardant-treated materials are indicated, materials are to comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 ft. (3.2 m)** beyond the centerline of the burners at any time during the test.
 - 1. Treatment is not to promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.
 - 3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when

tested in accordance with ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.

4. Design Value Adjustment Factors: Treated lumber is to be tested in accordance with ASTM D5664 and design value adjustment factors are to be calculated in accordance with ASTM D6841. **[For enclosed roof framing, framing in attic spaces, and where high temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.]**
- C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent. **[Kiln-dry plywood after treatment to maximum moisture content of 15 percent.]**
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency and other information required by authorities having jurisdiction.
 1. For exposed lumber indicated to receive a stained or natural finish, **[mark end or back of each piece][or][omit marking and provide certificates of treatment compliance issued by testing agency]** .
- E. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat **[all rough carpentry unless otherwise indicated.][items indicated on Drawings, and the following:]**
 1. Framing for raised platforms.
 2. Framing for stages.
 3. Concealed blocking.
 4. Framing for non-load-bearing partitions.
 5. Framing for non-load-bearing exterior walls.
 6. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
 7. Plywood backing panels.

2.4 DIMENSION LUMBER FRAMING

- A. Non-Load-Bearing Interior Partitions by Grade:
 1. Grade: **[Construction or No. 2][Construction, Stud, or No. 3][Standard, Stud, or No. 3]** .
 2. Application: **[All interior partitions][Interior partitions not indicated as load bearing]** .
 3. Species:
 - a. Hem-fir (north); NLGA.
 - b. Southern pine or mixed southern pine; SPIB.
 - c. Spruce-pine-fir; NLGA.
 - d. Hem-fir; WCLIB, or WWPA.
 - e. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 - f. Northern species; NLGA.
 - g. Eastern softwoods; NeLMA.
 - h. Western woods; WCLIB or WWPA.
- B. Load-Bearing Partitions by Grade:
 1. Grade: **[No. 2][Construction or No. 2][Construction, Stud, or No. 3]** .

2. Application: **[Exterior walls][and][interior load-bearing partitions]** .
3. Species:

- a. Hem-fir (north); NLGA.
- b. Southern pine; SPIB.
- c. Douglas fir-larch; WCLIB or WWPA.
- d. Southern pine or mixed southern pine; SPIB.
- e. Spruce-pine-fir; NLGA.
- f. Douglas fir-south; WWPA.
- g. Hem-fir; WCLIB or WWPA.
- h. Douglas fir-larch (north); NLGA.
- i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.

C. Machine Stress-Rated (MSR) Lumber Partitions:

1. Grade: Any species of MSR dimension lumber with a grade of not less than **[2400f-2.0E][2100f-1.8E][1650f-1.5E]<Insert grade>** .
2. Application: **[Exterior walls][and][interior load-bearing partitions]** .

D. Load-Bearing Partitions by Performance:

1. Performance Requirement: Any species and grade with a modulus of elasticity of at least **[1,500,000 psi (10 350 MPa)][1,300,000 psi (8970 MPa)][1,100,000 psi (7590 MPa)][1,000,000 psi (6900 MPa)][900,000 psi (6210 MPa)]** and an extreme fiber stress in bending of at least **[1000 psi (6.9 MPa)][850 psi (5.86 MPa)][700 psi (4.83 MPa)][600 psi (4.14 MPa)][500 psi (3.45 MPa)]** for 2-inch nominal (38-mm actual) thickness and 12-inch nominal (286-mm actual) width for single-member use.
2. Application: **[Exterior walls][and][interior load-bearing partitions]** .

E. Ceiling Joists:

1. Grade: **[Construction or No. 2][Construction, Stud, or No. 3][Standard, Stud, or No. 3]** .
2. Species:
 - a. Hem-fir (north); NLGA.
 - b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWPA.
 - d. Douglas fir-larch (north); NLGA.
 - e. Southern pine or mixed southern pine; SPIB.
 - f. Spruce-pine-fir; NLGA.
 - g. Hem-fir; WCLIB or WWPA.
 - h. Douglas fir-south; WWPA.
 - i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 - j. Northern species; NLGA.
 - k. Eastern softwoods; NeLMA.
 - l. Western woods; WCLIB or WWPA.

F. Joists, Rafters, and Other Framing by Grade:

1. Grade: **[Select Structural][No. 1][No. 2][Construction or No. 2][Construction, Stud, or No. 3]** .
2. Species:
 - a. Hem-fir (north); NLGA.
 - b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWPA.
 - d. Southern pine or mixed southern pine; SPIB.

- e. Spruce-pine-fir; NLGA.
- f. Douglas fir-south; WWPA.
- g. Hem-fir; WCLIB or WWPA.
- h. Douglas fir-larch (north); NLGA.
- i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.

G. Joists, Rafters, and Other Framing by Performance:

- 1. Performance Requirement: Any species and grade with a modulus of elasticity of at least [1,500,000 psi (10 350 MPa)][1,300,000 psi (8970 MPa)][1,100,000 psi (7590 MPa)][1,000,000 psi (6900 MPa)][900,000 psi (6210 MPa)] and an extreme fiber stress in bending of at least [1000 psi (6.9 MPa)][850 psi (5.86 MPa)][700 psi (4.83 MPa)][600 psi (4.14 MPa)][500 psi (3.45 MPa)] for 2-inch nominal (38-mm actual) thickness and 12-inch nominal (286-mm actual) width for single-member use.

H. Exposed Framing: Hand-select material [**indicated to receive a stained or natural finish**] for uniformity of appearance and freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot-holes, shake, splits, torn grain, and wane.

1. Species and Grade:

- a. As indicated above for load-bearing construction of same type.
- b. Hem-fir (north); [**Select Structural**][**No. 1**] grade; NLGA.
- c. Southern pine; [**Select Structural**][**No. 1**][**No. 2**] grade; SPIB.
- d. Douglas fir-larch; [**Select Structural**][**No. 1**] grade; WCLIB or WWPA.
- e. Mixed southern pine; [**Select Structural**][**No. 1**][**No. 2**] grade; SPIB.
- f. Spruce-pine-fir; [**Select Structural**][**No. 1**] grade; NLGA.
- g. Douglas fir-south; [**Select Structural**][**No. 1**] grade; WWPA.
- h. Hem-fir; [**Select Structural**][**No. 1**] grade; WCLIB or WWPA.
- i. Douglas fir-larch (north); [**Select Structural**][**No. 1**] grade; NLGA.
- j. Spruce-pine-fir (south); [**Select Structural**][**No. 1**] grade; NeLMA, WCLIB, or WWPA.
- k. Eastern hemlock-balsam fir or eastern hemlock-tamarack; [**Select Structural**][**No. 1**] grade; NeLMA.
- l. Beech-birch-hickory; [**Select Structural**][**No. 1**] grade; NeLMA.
- m. Northern red oak; [**Select Structural**][**No. 1**] grade; NeLMA.
- n. Redwood; [**Clear Heart Structural**][**Clear Structural**][**Select Structural**][**No. 1**] grade; RIS.
- o. Mixed oak; [**Select Structural**][**No. 1**] grade; NeLMA.
- p. Mixed maple; [**Select Structural**][**No. 1**] grade; NeLMA.
- q. Western cedars; [**Select Structural**][**No. 1**] grade; WCLIB or WWPA.

2.5 MISCELLANEOUS LUMBER

A. Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

- 1. Blocking.
- 2. Nailers.
- 3. Rooftop equipment bases and support curbs.
- 4. Cants.
- 5. Furring.
- 6. Grounds.
- 7. Utility shelving.

B. Dimension Lumber Items:

1. Grade: **[Construction or No. 2][Standard, Stud, or No. 3]** .
2. Species: **[Any species.][Any of the following species:][The following species:]**
 - a. Hem-fir (north); NLGA.
 - b. Mixed southern pine or southern pine; SPIB.
 - c. Spruce-pine-fir; NLGA.
 - d. Hem-fir; WCLIB or WWPA.
 - e. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 - f. Western woods; WCLIB or WWPA.
 - g. Northern species; NLGA.
 - h. Eastern softwoods; NeLMA.

C. Utility Shelving:

1. Lumber Moisture Content: **[15][19]** percent maximum.
2. Species and Grade:
 - a. Eastern white pine, Idaho white, lodgepole, ponderosa, or sugar pine; **[Premium or No. 2 Common (Sterling)][Standard or No. 3 Common]** grade; NeLMA, NLGA, WCLIB, or WWPA.
 - b. Mixed southern pine or southern pine; No. **[1][2]** grade; SPIB.
 - c. Hem-fir or hem-fir (north); **[Select Merchantable or No. 1 Common][Construction or No. 2 Common]** grade; NLGA, WCLIB, or WWPA.
 - d. Spruce-pine-fir (south) or spruce-pine-fir; **[Select Merchantable or No. 1 Common][Construction or No. 2 Common]** grade; NeLMA, NLGA, WCLIB, or WWPA.

D. Concealed Boards:

1. Lumber Moisture Content: **[15][19]** percent maximum.
2. Species and Grade: **[Any of the following:][The following:]**
 - a. Mixed southern pine or southern pine; No. **[2][3]** grade; SPIB.
 - b. Hem-fir or hem-fir (north); **[Construction or No. 2 Common][Standard or No. 3 Common]** grade; NLGA, WCLIB, or WWPA.
 - c. Spruce-pine-fir (south) or spruce-pine-fir; **[Construction or No. 2 Common][Standard or No. 3 Common]** grade; NeLMA, NLGA, WCLIB, or WWPA.
 - d. Eastern softwoods; No. **[2][3]** Common grade; NeLMA.
 - e. Northern species; No. **[2][3]** Common grade; NLGA.
 - f. Western woods; **[Construction or No. 2 Common][Standard or No. 3 Common]** grade; WCLIB or WWPA.

E. Roofing Nailers: Structural- or No. 2-grade lumber or better; kiln-dried Douglas fir, southern pine, or wood having similar decay-resistant properties.

F. Wood Blocking: For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

G. Wood Furring: For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.6 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1.
1. Grade: **[Exterior, A-C][Exterior, C-C Plugged][Exposure 1, C-D Plugged][, fire-retardant treated]** .
 2. Thickness: As indicated on the drawings or, if not indicated, not less than **[1/2-inch (13-mm)][3/4-inch (19-mm)]** nominal thickness.

2.7 FASTENERS

- A. General: Fasteners are to be of size and type indicated and comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than **1-1/2 inches (38 mm)** into wood substrate.
1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners **[with hot-dip zinc coating complying with ASTM A153/A153M or ASTM F2329][of Type 304 stainless steel]** .
 2. For redwood, use **[brass/bronze][stainless steel][hot-dip galvanized-steel]** fasteners.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC01][ICC-ES AC58][ICC-ES AC193][or][ICC-ES AC308]** as appropriate for the substrate.

2.8 ACCESSORIES

- A. Metal Framing Anchors:
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[MiTek Industries, Inc.]**
 - b. **[Simpson Strong-Tie Co., Inc.]**
 - c. **[Tamlyn]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[MiTek Industries, Inc.]**
 - b. **[Simpson Strong-Tie Co., Inc.]**
 - c. **[Tamlyn]**
 - d. **<Insert manufacturer's name>**

3. Post Bases: Adjustable-socket type for bolting in place with standoff plate to raise post **1 inch (25 mm)** above base and with **2-inch- (50-mm-)** minimum side cover, socket **0.062 inch (1.6 mm)** thick, and standoff and adjustment plates **0.108 inch (2.8 mm)** thick.
4. Joist Ties: Flat straps, with holes for fasteners, for tying joists together over supports.
 - a. Width: **[3/4 inch (19 mm)][1-1/4 inches (32 mm)]** .
 - b. Thickness: **[0.050 inch (1.3 mm)][0.062 inch (1.6 mm)]** .
 - c. Length: **[16 inches (400 mm)][24 inches (600 mm)][As indicated]** .
5. Rafter Tie-Downs: Bent strap tie for fastening rafters or roof trusses to wall studs below, **1-1/2 inches (38 mm)** wide by **0.050 inch (1.3 mm)** thick. [**Tie fastens to side of rafter or truss, face of top plates, and side of stud below.**]
6. Rafter Tie-Downs (Hurricane or Seismic Ties): Bent strap tie for fastening rafters or roof trusses to wall studs below, **2-1/4 inches (57 mm)** wide by **0.062 inch (1.6 mm)** thick. Tie fits over top of rafter or truss and fastens to both sides of rafter or truss, face of top plates, and side of stud below.
7. Floor-to-Floor Ties: Flat straps, with holes for fasteners, for tying upper floor wall studs to band joists and lower floor studs, **1-1/4 inches (32 mm)** wide by **0.050 inch (1.3 mm)** thick by **36 inches (914 mm)** long.
8. Hold-Downs: Brackets for bolting to wall studs and securing to foundation walls with anchor bolts or to other hold-downs with threaded rods and designed with first of two bolts placed seven bolt diameters from reinforced base.
 - a. Bolt Diameter: **[5/8 inch (15.8 mm)][3/4 inch (19 mm)]** .
 - b. Width: **[2-1/2 inches (64 mm)][3-3/16 inches (81 mm)]** .
 - c. Body Thickness: **[0.108 inch (2.8 mm)][0.138 inch (3.5 mm)]** .
 - d. Base Reinforcement Thickness: **[0.108 inch (2.8 mm)][0.239 inch (6.1 mm)]** .
9. Wall Bracing:
 - a. T-shaped bracing made for letting into studs in saw kerf, **1-1/8 inches (29 mm)** wide by **9/16 inch (14 mm)** deep by **0.034 inch (0.85 mm)** thick with hemmed edges.
 - b. Angle bracing made for letting into studs in saw kerf, **15/16 by 15/16 by 0.040 inch (24 by 24 by 1 mm)** thick with hemmed edges.
10. Materials: Unless otherwise indicated, fabricate from the following materials:
 - a. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, **G60 (Z180)** coating designation.
 - 1) Use for interior locations unless otherwise indicated.
 - b. Heavy-Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M; structural steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); **G185 (Z550)** coating designation; and not less than **0.036 inch (0.9 mm)** thick.
 - 1) Use for wood-preservative-treated lumber and where indicated.
 - c. Stainless steel bars and shapes complying with ASTM A276/A276M.
 - 1) Stainless Steel: Type **[304][316]** .
 - 2) Use for exterior locations and where indicated.

B. Sill-Sealer Gasket:

1. Glass-fiber-resilient insulation, fabricated in strip form, for use as a sill sealer; **1-inch (25-mm)** nominal thickness, compressible to **1/32 inch (0.8 mm)**; selected from manufacturer's standard widths to suit width of sill members indicated.
 2. Closed-cell neoprene foam, **1/4 inch (6.4 mm)** thick, selected from manufacturer's standard widths to suit width of sill members indicated.
- C. Sill-Sealer Gasket and Termite Barrier: Self-adhering sheet consisting of **64 mils (1.6 mm)** of rubberized asphalt laminated on one side to a **4-mil- (0.10-mm-)** thick, polyethylene-film reinforcement, and with release liner on adhesive side [; **formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction**] .
- D. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than **0.025 inch (0.6 mm)**.
1. Compound Material: [**Butyl rubber**][or][**rubberized asphalt**] .
- E. Adhesives for Gluing Furring and Sleepers to Concrete or Masonry: Formulation complying with ASTM D3498 that is approved for use indicated by adhesive manufacturer.
1. Verify adhesives have a VOC content of **[70]<Insert number>** g/L or less.
 2. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 4. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.
- F. Water-Repellent Preservative: Formulation containing 3-iodo-2-propynyl butylcarbamate, combined with an insecticide containing chlorpyrifos as its active ingredient.

PART 3 - EXECUTION

3.1 INSTALLATION OF ROUGH CARPENTRY, GENERAL

- A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- B. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate [**furring,**] nailers, blocking, [**grounds,**] and similar supports to comply with requirements for attaching other construction.
- C. Plywood Backing Panels: Install backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. [**Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.**]
- D. Metal Framing Anchors: Install anchors to comply with manufacturer's written instructions. Install

fasteners through each fastener hole.

- E. Sill-Sealer Gasket: Install gasket to form continuous seal between sill plates and foundation walls.
- F. Sill-Sealer Gasket and Termite Barrier: Install gasket and termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.
- G. Do not splice structural members between supports unless otherwise indicated.
- H. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than **16 inches (406 mm)** o.c.
- I. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:
 - 1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than **96 inches (2438 mm)** o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
 - 2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than **96 inches (2438 mm)** o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and **2-inch nominal (38-mm actual)** thickness.
 - 3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than **100 sq. ft. (9.3 sq. m)** and to solidly fill space below partitions.
 - 4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than **20 ft. (6 m)** o.c.
- J. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- K. Field Application of Preservative Treatment: Comply with AWP A M4 for applying field treatment to cut surfaces of preservative-treated lumber.
 - 1. Use inorganic boron (SBX) for items that are continuously protected from liquid water.
 - 2. Use copper naphthenate for items not continuously protected from liquid water.
- L. Flexible Flashing: Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- M. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
 - 1. Table 2304.10.1, "Fastening Schedule," in ICC's "International Building Code" (IBC).
 - 2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's "International Residential Code for One- and Two-Family Dwellings."
 - 3. ICC-ES evaluation report for fastener.
- N. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight

connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 INSTALLATION OF ROOFING NAILERS

- A. Install roofing nailers where indicated on Drawings and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Securely attach roofing nailers to substrates by anchoring and fastening to withstand bending, shear, or other stresses imparted by Project wind loads and fastener-resistance loads as designed in accordance with ASCE/SEI 7.
- C. Securely attach roofing nailers to substrate to resist the designed outward and upward wind loads indicated on Drawings and in accordance with SPRI ED-1, Tables A6 and A7.

3.3 INSTALLATION OF WOOD BLOCKING

- A. Install wood blocking where indicated on Drawings and where required for [**screeding or**] attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than **1-1/2 inches (38 mm)** wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.4 INSTALLATION OF WOOD FURRING

- A. Install wood furring level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- B. Furring to Receive Plywood or Hardboard Paneling: Install **1-by-3-inch nominal- (19-by-63-mm actual-)** size furring [**horizontally**][**and**][**vertically**] at [**24 inches (610 mm)**][**600 mm**] o.c.
- C. Furring to Receive Gypsum Board or Plaster Lath: Install **1-by-2-inch nominal- (19-by-38-mm actual-)** size furring vertically at [**16 inches (406 mm)**][**400 mm**] o.c.

3.5 INSTALLATION OF WALL AND PARTITION FRAMING

- A. General: Provide single bottom plate and double top plates using members of **2-inch nominal (38-mm actual)** thickness whose widths equal that of studs, except single top plate may be used for non-load-bearing partitions [**and for load-bearing partitions where framing members bearing on partition are located directly over studs**] . Fasten plates to supporting construction unless otherwise indicated.
 - 1. For exterior walls, provide [**2-by-6-inch nominal- (38-by-140-mm actual-)**][**2-by-4-inch nominal- (38-by-89-mm actual-)**] size wood studs spaced [**24 inches (610 mm)**][**16 inches (406 mm)**][**600 mm**][**400 mm**] o.c. unless otherwise indicated.
 - 2. For interior partitions and walls, provide [**2-by-6-inch nominal- (38-by-140-mm actual-)**][**2-by-4-inch nominal- (38-by-89-mm actual-)**][**2-by-3-inch nominal- (38-by-64-mm actual-)**] size wood studs spaced [**24 inches (610 mm)**][**16 inches (406 mm)**][**600 mm**][**400 mm**] o.c. unless

- otherwise indicated.
- 3. Provide continuous horizontal blocking at midheight of partitions more than **96 inches (2438 mm)** high, using members of **2-inch nominal (38-mm actual)** thickness and of same width as wall or partitions.
- B. Construct corners and intersections with three or more studs [, **except that two studs may be used for interior non-load-bearing partitions**] .
- C. Frame openings with multiple studs and headers. Provide nailed header members of thickness equal to width of studs. Support headers on jamb studs.
 - 1. For non-load-bearing partitions, provide double-jamb studs and headers not less than **4-inch nominal (89-mm actual)** depth for openings **48 inches (1200 mm)** and less in width, **6-inch nominal (140-mm actual)** depth for openings **48 to 72 inches (1200 to 1800 mm)** in width, **8-inch nominal (184-mm actual)** depth for openings **72 to 120 inches (1800 to 3000 mm)** in width, and not less than **10-inch nominal (235-mm actual)** depth for openings **10 to 12 ft. (3 to 3.6 m)** in width.
 - 2. For load-bearing walls, provide double-jamb studs for openings **60 inches (1500 mm)** and less in width, and triple-jamb studs for wider openings. Provide headers of depth indicated [**or, if not indicated, in accordance with Table R602.7(1) or Table R602.7(2), as applicable, in ICC's "International Residential Code for One- and Two-Family Dwellings"**] .
- D. Provide diagonal bracing in [**exterior walls, at both walls of each external corner**][**walls, at locations indicated on Drawings**] , at 45-degree angle, full-story height unless otherwise indicated. Use [**1-by-4-inch nominal- (19-by-89-mm actual-) size boards, let-in flush with faces of studs**][**metal wall bracing, let into studs in saw kerf**] .

3.6 INSTALLATION OF FLOOR JOIST FRAMING

- A. General: Install floor joists with crown edge up and support ends of each member with not less than **1-1/2 inches (38 mm)** of bearing on wood or metal, or **3 inches (76 mm)** on masonry. Attach floor joists as follows:
 - 1. Where supported on wood members, by [**toe nailing or by**] using metal framing anchors.
 - 2. Where framed into wood supporting members, by using wood ledgers as indicated or, if not indicated, by using metal joist hangers.
- B. Fire Cuts: At joists built into masonry, bevel cut ends **3 inches (76 mm)** and do not embed more than **4 inches (102 mm)**.
- C. Frame openings with headers and trimmers supported by metal joist hangers; double headers and trimmers where span of header exceeds **48 inches (1200 mm)**.
- D. Do not notch in middle third of joists; limit notches to one-sixth depth of joist, one-third at ends. Do not bore holes larger than one-third depth of joist; do not locate closer than **2 inches (50 mm)** from top or bottom.
- E. Provide solid blocking of **2-inch nominal (38-mm actual)** thickness by depth of joist at ends of joists unless nailed to header or band.
- F. Lap members framing from opposite sides of beams, girders, or partitions not less than **4 inches (102 mm)** or securely tie opposing members together. Provide solid blocking of **2-inch nominal (38-mm actual)** thickness by depth of joist over supports.
- G. Anchor members paralleling masonry with **1/4-by-1-1/4-inch (6.4-by-32-mm)** metal strap anchors

spaced not more than **96 inches (2438 mm)** o.c., extending over and fastening to three joists. Embed anchors at least **4 inches (102 mm)** into grouted masonry with ends bent at right angles and extending **4 inches (102 mm)** beyond bend.

- H. Provide solid blocking between joists under jamb studs for openings.
- I. Under non-load-bearing partitions, provide double joists separated by solid blocking equal to depth of studs above.
 - 1. Provide triple joists separated as above, under partitions receiving ceramic tile and similar heavy finishes or fixtures.
- J. Provide bridging of type indicated below, at intervals of **96 inches (2438 mm)** o.c., between joists.
 - 1. Diagonal wood bridging formed from bevel-cut, **1-by-3-inch nominal- (19-by-64-mm actual-)** size lumber, double-crossed and nailed at both ends to joists.
 - 2. Steel bridging installed to comply with bridging manufacturer's written instructions.

3.7 INSTALLATION OF CEILING JOIST AND RAFTER FRAMING

- A. Ceiling Joists: Install with crown edge up and complying with requirements specified above for floor joists. Face nail to ends of parallel rafters.
 - 1. Where ceiling joists are at right angles to rafters, provide additional short joists parallel to rafters from wall plate to first joist; nail to ends of rafters and to top plate, and nail to first joist or anchor with framing anchors or metal straps. Provide **1-by-8-inch nominal- (19-by-184-mm actual-)** size or **2-by-4-inch nominal- (38-by-89-mm actual-)** size stringers spaced **48 inches (1200 mm)** o.c. crosswise over main ceiling joists.
- B. Rafters: Notch to fit exterior wall plates and [**toe nail or**] use metal framing anchors. Double rafters to form headers and trimmers at openings in roof framing, if any, and support with metal hangers. Where rafters abut at ridge, place directly opposite each other and nail to ridge member or use metal ridge hangers.
 - 1. At valleys, provide double-valley rafters of size indicated or, if not indicated, of same thickness as regular rafters and **2 inches (50 mm)** deeper. Bevel ends of jack rafters for full bearing against valley rafters.
 - 2. At hips, provide hip rafter of size indicated or, if not indicated, of same thickness as regular rafters and **2 inches (50 mm)** deeper. Bevel ends of jack rafters for full bearing against hip rafter.
- C. Provide collar beams (ties) as indicated or, if not indicated, provide **1-by-6-inch nominal- (19-by-140-mm actual-)** size boards between every third pair of rafters, but not more than **48 inches (1219 mm)** o.c. Locate below ridge member, at third point of rafter span. Cut ends to fit roof slope and nail to rafters.
- D. Provide special framing as indicated for eaves, overhangs, dormers, and similar conditions if any.

3.8 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

SECTION 06 13 00 00 - HEAVY TIMBER CONSTRUCTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Timber.
2. Round wood poles.
3. Preservative-treated wood material.
4. Timber connectors.
5. Miscellaneous materials.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for dimension lumber items associated with heavy timber framing.
2. Section 061516 "Wood Roof Decking."
3. Section 061800 "Glued-Laminated Construction."

1.2 DEFINITIONS

- A. Timbers:** Lumber of **5 inches nominal (114 mm actual)** or greater in least dimension.
- B. Poles:** Round wood members, called either "poles" or "posts" in the referenced standards.
- C. Inspection agencies, and the abbreviations used to reference them, include the following:**
1. NeLMA: Northeastern Lumber Manufacturers' Association.
 2. NHLA: National Hardwood Lumber Association.
 3. NLGA: National Lumber Grades Authority.
 4. SPIB: Southern Pine Inspection Bureau (The).
 5. WCLIB: West Coast Lumber Inspection Bureau.
 6. WWPA: Western Wood Products Association.

1.3 ACTION SUBMITTALS

A. Product Data: For **[preservative-treated wood products][and][timber connectors]**.

1. For preservative-treated wood products. Include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
2. For timber connectors. Include installation instructions.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
2. Environmental Product Declaration (EPD): For each product.

3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
11. Chain-of-Custody Qualification Data: For manufacturer and vendor.

C. Shop Drawings: For heavy timber framing. Show layout, dimensions of each member, and details of connections.

D. Samples: Not less than **[5 inches (127 mm)][7 inches (178 mm)][9 inches (229 mm)]<Insert dimension>** wide by **24 inches (600 mm)** long, showing the range of variation to be expected in appearance, including surface texture, of wood products. **[Apply a coat of penetrating sealer to Samples.]**

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates:

1. For timbers specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by ALSC's Board of Review.
2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained. **[For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.]**

B. Certificates of Inspection: Issued by lumber-grading agency for exposed timber not marked with grade stamp.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Schedule delivery of materials to avoid extended on-site storage and to avoid delaying the Work.
- B. Store materials under cover and protected from weather and contact with damp or wet surfaces. Provide for air circulation within and around stacks and under temporary coverings.

PART 2 - PRODUCTS

2.1 WOOD MATERIALS, GENERAL

- A. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- D. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- E. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- I. Certified Wood: Wood products shall [**contain not less than 60 percent**][**be made from**] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- J. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.

2.2 TIMBER

- A. Comply with DOC PS 20 and with grading rules of lumber-grading agencies certified by ALSC's Board of Review as applicable.
 - 1. Factory mark each item of timber with grade stamp of grading agency.
 - 2. For exposed timber indicated to receive a stained or natural finish, apply grade stamps to surfaces that are not exposed to view, or omit grade stamps and provide certificates of grade compliance issued by grading agency.
- B. Timber Species and Grade:
 - 1. Balsam fir, Douglas fir-larch, Douglas fir-larch (North), eastern hemlock tamarack (North), hem-fir, southern pine, western hemlock, or western hemlock (North); **[Select Structural][No. 1][No. 2]**, NeLMA, NLGA, SPIB, WCLIB, or WWPA.
 - 2. Alaska cedar; **[Select Structural][No. 1][No. 2]**, WCLIB.
 - 3. Douglas fir-larch or Douglas fir-larch (North); **[Dense Select Structural][Select Structural][No. 1 Dense][No. 1][No. 2]**, NLGA, WCLIB, or WWPA.
 - 4. Hem-fir or hem-fir (North); **[Select Structural][No. 1][No. 2]**, NLGA, WCLIB, or WWPA.
 - 5. Southern pine; **[Dense Select Structural][Select Structural][No. 1 Dense][No. 1][No. 2 Dense][No. 2]**, SPIB.
 - 6. **[Beech-birch-hickory][Mixed maple][Mixed oak][Northern red oak][Red maple][Red oak][White oak]**; **[Select Structural][No. 1][No. 2]**, NeLMA.
 - 7. **[Mixed hardwoods][Mixed oak][Red oak][White oak]<Insert species>**; **[Select Dimension][Common Dimension][Sound Square Edge]**, NHLA.
- C. Structural Properties: Provide any species and grade that, for moisture content provided, complies with required structural properties.
 - 1. Allowable Stress Ratings for 12-Inch Nominal (286-mm Actual) Depth: **[Fb 1500 psi (10.3 MPa) and E 1,500,000 psi (10 340 MPa)][Fb 1300 psi (9.0 MPa) and E 1,300,000 psi (8 960 MPa)][As indicated on Drawings]<Insert values>**.
- D. Moisture Content: Provide timber with 19 percent maximum moisture content at time of dressing **[or provide timber that is unseasoned at time of dressing but with 19 percent maximum moisture content at time of installation]**.
- E. Dressing: Provide **[dressed timber (S4S)][timber that is rough sawn (Rgh)]** unless otherwise indicated.

2.3 ROUND WOOD POLES

- A. Round Wood Poles: Clean-peeled wood poles complying with ASTM D3200; with at least 80 percent of inner bark removed and with knots and limbs cut flush with the surface.
- B. Species: **<Insert species required>**.

2.4 PRESERVATIVE-TREATED WOOD MATERIAL

- A. Pressure-treat materials with waterborne preservative according to AWPA U1; Use Category UC2 **[for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground]**.

- B. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
 - 1. For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not contain colorants, bleed through, or otherwise adversely affect finishes.
- C. Use process that includes water-repellent treatment.
- D. Use process that does not include water repellents or other substances that might interfere with application of indicated finishes.
- E. After treatment, redry materials to 19 percent maximum moisture content.
- F. Mark treated materials with treatment quality mark of an inspection agency approved by ALSC's Board of Review.
 - 1. For exposed items indicated to receive a stained or natural finish, **[mark each piece on surface that is not exposed][or][omit marking and provide certificates of treatment compliance issued by inspection agency].**
- G. Application: **[Treat all heavy timber framing unless otherwise indicated.][Treat items indicated on Drawings and the following:]**
 - 1. Sills and similar members in contact with masonry or concrete.
 - 2. Timber framing members less than **18 inches (460 mm)** above grade.

2.5 TIMBER CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - 1. **[Halfen USA, Inc.]**
 - 2. **[Simpson Strong-Tie Co., Inc.]**
 - 3. **[USP Structural Connectors]**
 - 4. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Halfen USA, Inc.]**
 - 2. **[Simpson Strong-Tie Co., Inc.]**
 - 3. **[USP Structural Connectors]**
 - 4. **<Insert manufacturer's name>**
- C. Fabricate beam seats from **[steel][stainless steel]** with **[0.239-inch (6-mm)][3/16-inch (5-mm)][3/8-inch (9.5-mm)]** bearing plates, **3/4-inch- (19-mm-)** diameter-by-**12-inch- (300-mm-)** long deformed bar anchors, and **0.239-inch (6-mm)** side plates.
- D. Fabricate beam hangers from **[steel][stainless steel]** with **0.179-inch (4.6-mm)** stirrups and **0.239-inch (6-mm)** top plates.
- E. Fabricate strap ties from **[steel][stainless steel]**, **[2-1/2 inches (63 mm) wide by 0.179 inch (4.6 mm)][3 inches (75 mm) wide by 0.239 inch (6 mm)]** thick.

- F. Fabricate tie rods from round steel bars with upset threads connected with forged-steel turnbuckles complying with ASTM A668/A668M.
- G. Provide bolts, **3/4 inch (19 mm)** unless otherwise indicated, complying with **ASTM A307, Grade A (ASTM F568M, Property Class 4.6)**; provide nuts complying with **ASTM A563 (ASTM A563M)**; and, where indicated, provide flat washers.
- H. Provide stainless steel bolts, **3/4 inch (19 mm)** unless otherwise indicated, complying with **ASTM F593, Alloy Group 1 or 2 (ASTM F738M, Grade A1 or A4)**; provide nuts complying with **ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or A4)**; and, where indicated, provide flat washers.
- I. Provide shear plates, **[2-5/8 inches (66.7 mm)][4 inches (102 mm)]** in diameter, complying with ASTM D5933.
- J. Materials: Unless otherwise indicated, fabricate from the following materials:
 - 1. Structural-steel shapes, plates, and flat bars complying with ASTM A36/A36M.
 - 2. Round steel bars complying with ASTM A575, Grade M 1020.
 - 3. Hot-rolled steel sheet complying with ASTM A1011/A1011M, Structural Steel, Type SS, Grade 33.
 - 4. Stainless steel plate, sheet, and strip complying with ASTM 240/A240M or ASTM A666, **[Type 304][Type 316]**.
 - 5. Stainless steel flat bars complying with ASTM A666, **[Type 304][Type 316]**.
 - 6. Stainless steel bars and shapes complying with ASTM A276, **[Type 304][Type 316]**.
- K. Finish steel assemblies and fasteners with rust-inhibitive primer, **2-mil (0.05-mm)** dry film thickness.
- L. Hot-dip galvanize steel assemblies and fasteners after fabrication to comply with ASTM A123/A123M or ASTM A153/A153M.

2.6 MISCELLANEOUS MATERIALS

- A. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.
- B. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.

2.7 FABRICATION

- A. Camber: Fabricate horizontal members and inclined members with a slope of less than 1:1, with natural convex bow (crown) up, to provide camber.
- B. Shop fabricate members by cutting and restoring exposed surfaces to match specified surfacing. Finish exposed surfaces to remove planing or surfacing marks, and to provide a finish equivalent to that produced by machine sanding with No. 120 grit sandpaper.
- C. Predrill for fasteners and assembly of units.
- D. Where preservative-treated members are indicated, fabricate (cut, drill, surface, and sand) before treatment to greatest extent possible. Where fabrication must be done after treatment, apply a field-treatment preservative to comply with AWPA M4.

1. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
 2. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.
- E. Coat crosscuts with end sealer.
- F. Seal Coat: After fabricating and surfacing each unit, apply a saturation coat of penetrating sealer on surfaces of each unit except for treated wood where the treatment included a water repellent.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Erect heavy timber framing true and plumb. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.
1. Install horizontal and sloping members with crown edge up, and provide not less than **4 inches (102 mm)** of bearing on supports. Provide continuous members unless otherwise indicated; tie together over supports with metal strap ties if not continuous.
 2. Handle and temporarily support heavy timber framing to prevent surface damage, compression, and other effects that might interfere with indicated finish.
- B. Framing Built into Masonry: Provide **1/2-inch (13-mm)** clearance at tops, sides, and ends of members built into masonry, and bevel cut ends **3 inches (76 mm)**; do not embed more than **4 inches (102 mm)** unless otherwise indicated.
- C. Cutting: Avoid extra cutting after fabrication. Where field fitting is unavoidable, comply with requirements for shop fabrication.
- D. Fitting: Fit members by cutting and restoring exposed surfaces to match specified surfacing.
1. Predrill for fasteners using timber connectors as templates.
 2. Finish exposed surfaces to remove planing or surfacing marks, and to provide a finish equivalent to that produced by machine sanding with No. 120 grit sandpaper.
 3. Coat crosscuts with end sealer.
 4. Where preservative-treated members must be cut during erection, apply a field-treatment preservative to comply with AWP A M4.
 - a. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
 - b. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.
- E. Install timber connectors as indicated.
1. Unless otherwise indicated, install bolts with same orientation within each connection and in similar connections.
 2. Install bolts with orientation as indicated or, if not indicated, as directed by Architect.

3.2 ADJUSTING

- A. Repair damaged surfaces and finishes after completing erection. Replace damaged heavy timber framing if repairs are not approved by Architect.

END OF SECTION 06 13 00 00

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 13 23 00	06 13 00 00	Heavy Timber Construction

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 15 00 00 - WOOD ROOF DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid-sawn wood roof decking.
2. Glued-laminated wood roof decking.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for dimension lumber items associated with wood roof decking.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For glued-laminated wood roof decking, include installation instructions and data on lumber, adhesives, and fabrication.
2. For preservative-treated wood products, include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
2. Environmental Product Declaration (EPD): For each product.
3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
11. Chain-of-Custody Qualification Data: For manufacturer and vendor.

C. Samples: **24 inches (600 mm)** long, showing the range of variation to be expected in appearance of wood roof decking.

1.3 INFORMATIONAL SUBMITTALS

- A. Research/Evaluation Reports: For glued-laminated wood roof decking indicated to be of diaphragm design and construction, from ICC-ES.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Schedule delivery of wood roof decking to avoid extended on-site storage and to avoid delaying the Work.
- B. Store materials under cover and protected from weather and contact with damp or wet surfaces. Provide for air circulation within and around stacks and under temporary coverings. Stack wood roof decking with surfaces that are to be exposed in the final Work protected from exposure to sunlight.

PART 2 - PRODUCTS

2.1 WOOD ROOF DECKING, GENERAL

- A. General: Comply with DOC PS 20 and with applicable grading rules of inspection agencies certified by ALSC's Board of Review.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- J. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.

2.2 SOLID-SAWN WOOD ROOF DECKING

- A. Standard for Solid-Sawn Wood Roof Decking: Comply with AITC 112.
- B. Roof Decking Species:
 - 1. Balsam fir, Douglas fir-larch, Douglas fir-larch (North), hem-fir, hem-fir (North), southern pine, spruce pine-fir (North), western hemlock, or western hemlock (North).
 - 2. **[Alaska cedar][Balsam fir][Douglas fir-larch or Douglas fir-larch (North)][Eastern spruce][Hem-fir or hem-fir (North)][Southern pine]<Insert species>**.
- C. Roof Decking Nominal Size: **[2 by 6][2 by 8][3 by 6][4 by 6]**.
- D. Roof Decking Grade:
 - 1. **[Select(ed)][Commercial]** Decking.
 - 2. **[Dense Standard][Dense Select][Select][Dense Commercial][Commercial]** Decking.
 - 3. **[Select(ed) Decking or Select Dex][Commercial Decking or Commercial Dex]**.
- E. Grade Stamps: Factory mark each item with grade stamp of grading agency. Apply grade stamp to surfaces that are not exposed to view.
- F. Moisture Content: Provide wood roof decking with **[15][19]** percent maximum moisture content at time of dressing.
- G. Face Surface: **[Rough sanded or wire brushed][Saw textured][Smooth]**.
- H. Edge Pattern: **[Beaded edge][Bullnosed][Channel grooved][Vee grooved]**.

2.3 GLUED-LAMINATED WOOD ROOF DECKING

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **[Structural Wood Systems; A Division of Harrison Industries]**
 2. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. **[Structural Wood Systems; A Division of Harrison Industries]**
 2. **<Insert manufacturer's name>**
- C. Face Species: **[Alaska cedar][Douglas fir-larch or Douglas fir-larch (North)][Ponderosa pine][Southern pine][Western cedars or western cedars (North)]<Insert species>**.
- D. Roof Decking Nominal Size: **[2 by 6][2 by 8][3 by 6][3 by 8][4 by 6][4 by 8][5 by 6][5 by 8]**.
- E. Roof Decking Configuration: For glued-laminated wood roof decking indicated to be of diaphragm design and construction, provide tongue-and-groove configuration that complies with research/evaluation report.
- F. Face Grade:
1. Custom or Supreme: Clear face is required. Occasional pieces may contain a small knot or minor characteristic that does not detract from the overall appearance.
 2. Decorative: Sound knots and natural characteristics are allowed, including chipped edge knots, short end splits, seasoning checks, and some pin holes. Face knot holes, stains, end slits, skips, roller splits, and planer burns are not allowed.
 3. Service: Face knot holes, stains, end splits, skips, roller splits, planer burns, and other nonstrength-reducing characteristics are allowed. Strength-reducing characteristics are not allowed.
- G. Moisture Content: Provide wood roof decking with 15 percent maximum moisture content at time of dressing.
- H. Face Surface: **[Rough sanded or wire brushed][Saw textured][Smooth]**.
- I. Edge Pattern: **[Beaded edge][Bullnosed][Channel grooved][Vee grooved]**.
- J. Laminating Adhesive: Wet-use type complying with ASTM D2559.

2.4 PRESERVATIVE TREATMENT

- A. Pressure treat wood roof decking in accordance with AWP A U1; Use Category UC2.
1. For laminated roof decking, treat lumber before gluing.
- B. Preservative Chemicals: **[Inorganic boron (SBX)][Acceptable to authorities having jurisdiction and containing no arsenic or chromium]**.

1. For exposed items indicated to receive a stained or natural finish, use products that do not contain colorants, bleed through, or otherwise adversely affect finishes.
- C. Use process that includes water-repellent treatment.
- D. Use process that does not include water repellents or other substances that might interfere with application of indicated finishes.
- E. After treatment, redry materials to **[15][19]** percent maximum moisture content.
- F. After dressing and fabricating roof decking, apply **[inorganic boron][copper naphthenate]** in accordance with AWPA M4 to surfaces cut to a depth of more than **1/16 inch (1.5 mm)**.

2.5 ACCESSORY MATERIALS

- A. Fasteners for Solid-Sawn Roof Decking: Provide fastener size and type complying with AITC 112 for thickness of deck used.
- B. Fasteners for Glued-Laminated Roof Decking: Provide fastener size and type complying with requirements in "Installation" Article for installing laminated roof decking.
- C. Nails: Common; complying with ASTM F1667, Type I, Style 10.
- D. Spikes: Round; complying with ASTM F1667, Type III, Style 3.
- E. Fastener Material: Hot-dip galvanized steel.
- F. Bolts for Anchoring Roof Decking to Walls: Carbon steel; complying with **ASTM A307 (ASTM F568M)** with **ASTM A563 (ASTM A563M)** hex nuts and, where indicated, flat washers[, **all hot-dip zinc coated**].
- G. Installation Adhesive: For glued-laminated wood roof decking indicated to be of diaphragm design and construction, provide adhesive that complies with research/evaluation report.
- H. Sealants: Latex, complying with applicable requirements in Section 079200 "Joint Sealants" and recommended by sealant manufacturer and manufacturer of substrates for intended application.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Bostik; Arkema]**
 - b. **[May National Associates, Inc.; a subsidiary of Sika Corporation]**
 - c. **[Pecora Corporation]**
 - d. **[Permthane; a Holcim brand]**
 - e. **[Tremco Incorporated]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Bostik; Arkema]**

- b. [May National Associates, Inc.; a subsidiary of Sika Corporation]
- c. [Pecora Corporation]
- d. [Permthane; a Holcim brand]
- e. [Tremco Incorporated]
- f. <Insert manufacturer's name>

- I. Penetrating Sealer: Clear sanding sealer complying with Section 099300 "Staining and Transparent Finishing" and compatible with topcoats specified for use over it.

2.6 FABRICATION

- A. Shop Fabrication: Where preservative-treated roof decking is indicated, complete cutting, trimming, surfacing, and sanding before treating.
- B. Predrill roof decking for lateral spiking to adjacent units to comply with AITC 112.
- C. Seal Coat: After fabricating and surfacing roof decking, apply a saturation coat of penetrating sealer[in fabrication shop].
- D. Apply indicated finish materials to comply with Section 099300 "Staining and Transparent Finishing" in fabrication shop.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and support framing in areas to receive wood roof decking for compliance with installation tolerances and other conditions affecting performance of wood roof decking.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install solid-sawn wood roof decking to comply with AITC 112.
 - 1. Locate end joints for [two-span continuous lay-up][combination simple and two-span continuous lay-up][controlled random lay-up][lay-up indicated].
- B. Install laminated wood roof decking to comply with manufacturer's written instructions.
 - 1. Locate end joints for [two-span continuous lay-up][combination simple and two-span continuous lay-up][controlled random lay-up][lay-up indicated].
 - 2. Nail each course of glued-laminated wood roof decking at each support with one nail slant nailed above the tongue and one nail straight nailed through the face.
 - a. Use 12d nails for 2-by-6 and 2-by-8 roof decking.
 - b. Use 30d nails for 3-by-6 and 3-by-8 roof decking.
 - c. Use 60d nails for 4-by-6 and 4-by-8 roof decking. Predrill roof decking to prevent splitting.
 - d. Use 30d tongue nails in bottom tongue and 3/8-inch (10-mm) face spikes for 5-by-6 and 5-by-8 roof decking. Predrill roof decking at spikes to prevent splitting.

3. Slant nail each course of glued-laminated wood roof decking to the tongue of the adjacent course at **30 inches (750 mm)** o.c. and within **12 inches (300 mm)** of the end of each unit. Stagger nailing **15 inches (380 mm)** in adjacent courses.
 - a. Use 6d nails for 2-by-6 and 2-by-8 roof decking.
 - b. Use 8d nails for 3-by-6 and 3-by-8 roof decking.
 - c. Use 10d nails for 4-by-6 and 4-by-8 roof decking.
 - d. Use 16d nails for 5-by-6 and 5-by-8 roof decking.
4. Glue adjoining roof decking courses together by applying a **3/8-inch (10-mm)** bead of adhesive to the top of tongues, according to research/evaluation report.
- C. Anchor wood roof decking, where supported on walls, with bolts as indicated.
- D. Where preservative-treated roof decking must be cut during erection, apply a field-treatment preservative to comply with AWPA M4.
 1. For solid-sawn roof decking, use inorganic boron (SBX).
 2. For laminated roof decking, use copper naphthenate.
- E. Apply joint sealant to seal roof decking at exterior walls at the following locations:
 1. Between roof decking and supports located at exterior walls.
 2. Between roof decking and exterior walls that butt against underside of roof decking.
 3. Between tongues and grooves of roof decking over exterior walls and supports at exterior walls.

3.3 ADJUSTING

- A. Repair damaged surfaces and finishes after completing erection. Replace damaged roof decking if repairs are not approved by Architect.

3.4 PROTECTION

- A. Provide water-resistive barrier over roof decking as the Work progresses to protect roof decking until roofing is applied.
- B. If, despite protection, **[inorganic boron (SBX)-treated]** roof decking becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 15 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 15 00 00A - WOOD PATIO DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wood decking.
2. Wood stair treads.
3. Wood railings.
4. Wood benches.
5. Plastic decking.

B. Related Requirements:

1. Section 072500 "Weather Barriers" for flexible flashing used with patio decking.
2. Section 076200 "Sheet Metal Flashing and Trim" for sheet metal flashing used with patio decking.

1.2 DEFINITIONS

- A. Boards: Lumber of less than **2 inches nominal (38 mm actual)** in thickness and **2 inches nominal (38 mm actual)** or greater in width.
- B. Dimension Lumber: Lumber of **2 inches nominal (38 mm actual)** or greater but less than **5 inches nominal (114 mm actual)** in least dimension.
- C. Timber: Lumber of **5 inches nominal (114 mm actual)** or greater in least dimension.
- D. Lumber grading agencies, and the abbreviations used to reference them, include the following:
1. NeLMA: Northeastern Lumber Manufacturers' Association.
 2. NLGA: National Lumber Grades Authority.
 3. RIS: Redwood Inspection Service.
 4. SPIB: The Southern Pine Inspection Bureau.
 5. WCLIB: West Coast Lumber Inspection Bureau.
 6. WWPA: Western Wood Products Association.

1.3 ACTION SUBMITTALS

A. Product Data: For **[preservative-treated wood products][plastic decking][and][metal framing anchors]**.

1. For preservative-treated wood products. Include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
2. For **[plastic decking][and][metal framing anchors]**. Include installation instructions.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point

of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.

2. Environmental Product Declaration (EPD): For each product.
3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
11. Chain-of-Custody Qualification Data: For manufacturer and vendor.

- C. Samples: For plastic decking, not less than **24 inches (600 mm)** long, showing the range of variation to be expected in appearance of decking, including surface texture.

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates:

1. For lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by ALSC's Board of Review.
2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained. **[For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.]**

- B. Certificates of Inspection: Issued by lumber grading agency for exposed wood products not marked with grade stamp.

C. Evaluation Reports: For the following, from ICC-ES:

1. Preservative-treated wood products.
2. Plastic decking.
3. Expansion anchors.
4. Metal framing anchors.
5. Decking fasteners.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

- B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.

- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials under cover and protected from weather and contact with damp or wet surfaces. Stack lumber flat with spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.
- B. Handle and store plastic lumber to comply with manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 LUMBER, GENERAL

- A. Comply with DOC PS 20 and with grading rules of lumber grading agencies certified by ALSC's Board of Review as applicable. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by ALSC's Board of Review.
1. Factory mark each item with grade stamp of grading agency.
 2. For items that are exposed to view in the completed Work, **[mark grade stamp on end or back of each piece][or][omit grade stamp and provide certificates of grade compliance issued by grading agency]**.
 3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry wood products.
 4. Provide dressed lumber, S4S, unless otherwise indicated.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to

FSC STD-01-001 and FSC STD-40-004.

- I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- J. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- L. Maximum Moisture Content:
 - 1. Boards: **[15][19]** percent.
 - 2. Dimension Lumber: **[15 percent][19 percent][15 percent for 2-inch nominal (38-mm actual) thickness or less; 19 percent for more than 2-inch nominal (38-mm actual) thickness][15 percent for 2-inch nominal (38-mm actual) thickness or less; no limit for more than 2-inch nominal (38-mm actual) thickness][19 percent for 2-inch nominal (38-mm actual) thickness or less; no limit for more than 2-inch nominal (38-mm actual) thickness]**.
 - 3. Timber. **[19 percent][No limit]**.

2.2 WOOD DECKING

- A. Hand select wood for freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot holes, shake, splits, torn grain, and wane.
- B. Dimension Lumber Decking:
 - 1. **[No. 2][Construction or No. 2]** grade and **[any of]** the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWP.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWP.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - 2. **[Deck Heart or Construction Heart][Deck Common or Construction Common]** redwood; RIS.
- C. Radius-Edged Board Decking: **[1-1/4-inch (32-mm)][1-inch (25-mm)][3/4-inch (19-mm)]** actual thickness of **[any of]** the following species and grades:
 - 1. Douglas fir-larch or Douglas fir-south, **[Patio 1][Patio 2]**; WWP.
 - 2. Douglas fir-larch, **[Select Dex][Commercial Dex]**; WCLIB.
 - 3. Douglas fir-larch (North), **[Select Patio][Commercial Patio]**; NLGA.
 - 4. Hem-fir, **[Patio 1][Patio 2]**; WWP.
 - 5. Hem-fir, **[Select Dex][Commercial Dex]**; WCLIB.
 - 6. Hem-fir (North), **[Select Patio][Commercial Patio]**; NLGA.
 - 7. Redwood, **[Heart Clear][Heart B or Select Heart]**; RIS.
 - 8. Southern pine, **[Premium][Standard]**; SPIB.
 - 9. Western red cedar, **[Patio 1][Patio 2]**; WWP.

10. Western red cedar, [Select Dex][Commercial Dex]; WCLIB.
 11. Western red cedar (North), [Select Patio][Commercial Patio]; NLGA.
- D. S4S Board Decking: [1-1/4-inch (32-mm)][1-inch (25-mm)][3/4-inch (19-mm)] actual thickness radius-edged, with one face free of planer skip, machine burn, and torn or chipped grain.
1. Species: [Ipe][Teak][Cumaru][Garapa][Goncalo alves]<Insert name>.
 2. Grade Characteristics:
 - a. Clear[**one face; small pin knots and worm holes allowed on back face**].
 - b. Sound; small pin knots, worm holes, and fixed knots allowed.
 - c. All heart[**one face**].
 - d. Straight grained and parallel cut.
 - e. Free of heart centers.
 - f. No decay, incipient decay, honeycomb, knot holes, shakes, splits, or wane.
 - g. No discoloration.

2.3 WOOD STAIR TREADS

- A. Hand select wood for freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot holes, shake, splits, torn grain, and wane.
- B. Radius-Edged Board Stair Treads: [1-1/4-inch (32-mm)][1-inch (25-mm)][3/4-inch (19-mm)] actual thickness of[**any of**] the following species and grades:
1. Douglas fir-larch or Douglas fir-south, [Patio 1][Patio 2]; WWPA.
 2. Douglas fir-larch, [Select Dex][Commercial Dex]; WCLIB.
 3. Douglas fir-larch (North), [Select Patio][Commercial Patio]; NLGA.
 4. Hem-fir, [Patio 1][Patio 2]; WWPA.
 5. Hem-fir, [Select Dex][Commercial Dex]; WCLIB.
 6. Hem-fir (North), [Select Patio][Commercial Patio]; NLGA.
 7. Redwood, [Heart Clear][Heart B or Select Heart]; RIS.
 8. Southern pine, [Premium][Standard]; SPIB.
 9. Western red cedar, [Patio 1][Patio 2]; WWPA.
 10. Western red cedar, [Select Dex][Commercial Dex]; WCLIB.
 11. Western red cedar (North), [Select Patio][Commercial Patio]; NLGA.
- C. Half-Round or Rounded-Edged Nosing Board Stair Treads: [1-1/4-inch (32-mm)][1-inch (25-mm)][3/4-inch (19-mm)] actual thickness of[**any of**] the following species and grades:
1. Douglas fir, C & Btr VG (Vertical Grain) stepping; NLGA, WCLIB, or WWPA.
 2. Hem-fir, C & Btr VG (Vertical Grain) stepping; NLGA, WCLIB, or WWPA.
 3. Redwood, [Heart Clear][Heart B or Select Heart]; RIS.
 4. Southern pine, [Edge Grain B & B stepping][Near Rift B & B stepping][B & B stepping]; SPIB.
- D. S4S Board Stair Treads: [1-1/4-inch (32-mm)][1-inch (25-mm)][3/4-inch (19-mm)] actual thickness radius-edged, with one face free of planer skip, machine burn, and torn or chipped grain.
1. Species: [Ipe][Teak][Cumaru][Garapa][Goncalo alves]<Insert name>.
 2. Grade Characteristics:
 - a. Clear[**one face; small pin knots and worm holes allowed on back face**].
 - b. Sound; small pin knots, worm holes, and fixed knots allowed.
 - c. All heart[**one face**].
 - d. Straight grained and parallel cut.

- e. Free of heart centers.
- f. No decay, incipient decay, honeycomb, knot holes, shakes, splits, or wane.
- g. No discoloration.

2.4 WOOD RAILINGS

- A. Hand select wood for freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot holes, shake, splits, torn grain, and wane.
- B. Dimension Lumber Railing Members:
 - 1. **[Select Structural][No. 1][No. 2][Construction or No. 2]** grade and **[any of]** the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWPA.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWPA.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - e. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWPA.
 - 2. **[Heart Clear][Heart B or Select Heart]** redwood; RIS.
- C. Railing Boards: **[Any of the following species and grades:]**
 - 1. Douglas fir, C & Btr finish or C Select; NLGA, WCLIB, or WWPA.
 - 2. Hem-fir, C & Btr finish or C Select; NLGA, WCLIB, or WWPA.
 - 3. Redwood, **[Heart Clear][Heart B or Select Heart]**; RIS.
 - 4. Southern pine, B & B finish; SPIB.
- D. Radius-Edged Railing Boards: **[Ipe][Teak]** S4S boards, **[same grade as decking][clear][clear all heart][, straight grained and parallel cut].**

2.5 WOOD BENCHES

- A. Dimension Lumber for Benches:
 - 1. **[Select Structural][No. 1]** grade and **[any of]** the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWPA.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWPA.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - e. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWPA.
 - 2. **[Heart Clear][Heart B or Select Heart]** redwood; RIS.
- B. Boards for Benches: **[Any of the following species and grades:]**
 - 1. Douglas fir, C & Btr finish or C Select; NLGA, WCLIB, or WWPA.
 - 2. Hem-fir, C & Btr finish or C Select; NLGA, WCLIB, or WWPA.
 - 3. Redwood, **[Heart Clear][Heart B or Select Heart]**; RIS.
 - 4. Southern pine, **[Edge Grain B & B finish][Near Rift B & B finish][B & B finish]**; SPIB.

- C. Radius-Edged Boards for Benches: **[Ipe][Teak]** S4S boards, **[same grade as decking][clear][clear all heart][, straight grained and parallel cut]**.

2.6 DIMENSION LUMBER FRAMING

A. Deck and Stair Framing:

1. **[Select Structural][No. 1][No. 2][Construction or No. 2][Construction, Stud, or No. 3]** grade and **[any of]** the following species:
 - a. Hem-fir (North); NLGA.
 - b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWP.
 - d. Mixed southern pine; SPIB.
 - e. Spruce-pine-fir; NLGA.
 - f. Douglas fir-south; WWP.
 - g. Hem-fir; WCLIB or WWP.
 - h. Douglas fir-larch (North); NLGA.
 - i. Spruce-pine-fir (South); NeLMA, WCLIB, or WWP.
2. Any species and grade with a modulus of elasticity of at least **[1,500,000 psi (10 350 MPa)][1,300,000 psi (8970 MPa)][1,100,000 psi (7590 MPa)][1,000,000 psi (6900 MPa)][900,000 psi (6210 MPa)]** and an extreme fiber stress in bending of at least **[1000 psi (6.9 MPa)][850 psi (5.86 MPa)][700 psi (4.83 MPa)][600 psi (4.14 MPa)][500 psi (3.45 MPa)]** for 2-inch nominal (38-mm actual) thickness and 12-inch nominal (286-mm actual) width for single-member use.

2.7 POSTS

A. Dimension Lumber Posts: **[No. 2][Construction or No. 2][Construction, Stud, or No. 3]** grade and **[any of]** the following species:

1. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWP.
2. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWP.
3. Mixed southern pine; SPIB.
4. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWP.
5. Northern species; NLGA.
6. Eastern softwoods; NeLMA.
7. Western woods; WCLIB or WWP.

B. Timber Posts:

1. Balsam fir, Douglas fir-larch, Douglas fir-larch (North), eastern hemlock tamarack (North), hem-fir, southern pine, western hemlock, or western hemlock (North); **[No. 1][No. 2]**; NeLMA, NLGA, SPIB, WCLIB, or WWP.
2. Alaska cedar; **[No. 1][No. 2]**; WCLIB.
3. Southern pine; **[No. 1][No. 2]**; SPIB.

C. Round Wood Poles: Clean-peeled wood poles complying with ASTM D3200, with at least 80 percent of inner bark removed and with knots and limbs cut flush with the surface.

1. Species: **<Insert species required>**.

2.8 PRESERVATIVE-TREATED LUMBER

- A. Pressure treat boards and dimension lumber with waterborne preservative in accordance with AWP A U1; Use Category UC3b[**for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground**].
- B. Pressure treat timber with waterborne preservative in accordance with AWP A U1; Use Category UC4a.
- C. Pressure treat poles with waterborne preservative in accordance with AWP A U1; Use Category UC4a.
- D. Preservative Chemicals: Acceptable to authorities having jurisdiction.
 - 1. Do not use chemicals containing arsenic or chromium **[except for timber posts][except for poles]**.
- E. Use process[**for boards and dimension lumber**] that includes water-repellent treatment.
- F. Use process[**for boards and dimension lumber**] that does not include water repellents or other substances that might interfere with application of indicated finishes.
- G. After treatment, redry **[boards][dimension lumber][timber][and][poles]** to 19 percent maximum moisture content.
- H. Mark treated wood with treatment quality mark of an inspection agency approved by ALSC's Board of Review.
 - 1. For items indicated to receive a stained or natural finish, **[mark each piece on surface that will not be exposed][or][omit marking and provide certificates of treatment compliance issued by inspection agency]**.
- I. Application: **[Treat all wood unless otherwise indicated.][Treat items indicated on Drawings and the following:]**
 - 1. Framing members[**less than 18 inches (460 mm) above grade**].
 - 2. Sills and ledgers.
 - 3. Members in contact with masonry or concrete.
 - 4. Posts.
 - 5. Round wood poles.
 - 6. Decking.
 - 7. Stair treads.

2.9 PLASTIC DECKING

- A. Plastic Lumber, General: Products acceptable to authorities having jurisdiction with current model code evaluation reports that show compliance with building code in effect for Project for indicated type of construction.
 - 1. Allowable loads and spans, as documented in evaluation reports or in information referenced in evaluation reports, are not to be less than design loads and spans indicated.
- B. Composite Plastic Lumber: **[Solid][or][hollow]** shapes made from a mixture of cellulose fiber and polyethylene or polypropylene.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Fiberon]
 - c. [Green Bay Decking, LLC]
 - d. [Midwest Manufacturing]
 - e. [MoistureShield; Oldcastle APG, Inc., CRH Americas, Inc.]
 - f. [NewTechWood America, Inc.]
 - g. [TimberTech, AZEK Building Products; The AZEK Company LLC]
 - h. [Trex Company, Inc.]
 - i. [UFP Construction; a UFP Industries Company]
 - j. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Fiberon]
 - c. [Green Bay Decking, LLC]
 - d. [Midwest Manufacturing]
 - e. [MoistureShield; Oldcastle APG, Inc., CRH Americas, Inc.]
 - f. [NewTechWood America, Inc.]
 - g. [TimberTech, AZEK Building Products; The AZEK Company LLC]
 - h. [Trex Company, Inc.]
 - i. [UFP Construction; a UFP Industries Company]
 - j. <Insert manufacturer's name>

3. Decking Standard: [ICC-ES AC109][or][ICC-ES AC174].
4. Decking Size: [7/8 by 5-1/2 inches (22 by 140 mm) actual][1-1/4 by 6 nominal, 1 by 5-1/2 inches (25 by 140 mm) actual][1-1/2 by 6 nominal, 1-1/4 by 5-1/2 inches (32 by 140 mm) actual][1-1/4 by 6 inches (32 by 152 mm) actual][1-3/8 by 3-1/2 inches (35 by 89 mm) actual][1-3/8 by 5-1/2 inches (35 by 140 mm) actual][2 by 6 nominal, 1-1/2 by 5-1/2 inches (38 by 140 mm) actual]<Insert dimensions>.
5. Configuration: Provide product with grooved edges designed for fastening with concealed decking fasteners.
6. Surface Texture: [Woodgrain][Smooth][Manufacturer's standard]<Insert finish>.
7. Color: [As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color>.

- C. All-Plastic Lumber: [Solid][or][hollow] shapes made from high-density polyethylene (HDPE), PVC, polystyrene, or cellular PVC with no cellulose fiber.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Genova Products, Inc.]
 - c. [Interplast Group, Ltd.]
 - d. [L.B. Plastics, Inc.]
 - e. [Re-Plast Products, Inc.]

- f. **[RENEW Plastics, a division of N.E.W. Plastics Corp]**
 - g. **[Veka Inc.]**
 - h. **[Westech]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Genova Products, Inc.]**
 - c. **[Interplast Group, Ltd.]**
 - d. **[L.B. Plastics, Inc.]**
 - e. **[Re-Plast Products, Inc.]**
 - f. **[RENEW Plastics, a division of N.E.W. Plastics Corp]**
 - g. **[Veka Inc.]**
 - h. **[Westech]**
 - i. **<Insert manufacturer's name>**
3. Decking Standard: ICC-ES AC174.
4. Decking Size: **[1 by 6 inches (25 by 152 mm) actual][1-1/4 by 6 nominal, 1 by 5-1/2 inches (25 by 140 mm) actual][1-1/2 by 6 nominal, 1-1/4 by 5-1/2 inches (32 by 140 mm) actual][2 by 4 nominal, 1-1/2 by 3-1/2 inches (38 by 89 mm) actual][2 by 6 nominal, 1-1/2 by 5-1/2 inches (38 by 140 mm) actual][1-5/8 by 5-3/4 inches (41 by 146 mm) actual]<Insert dimensions>**.
5. Configuration: Provide product with **[grooved edges designed for fastening with concealed decking fasteners][or][tongue-and-groove edges designed for concealed fastening]**.
6. Surface Texture: **[Woodgrain][Smooth][Manufacturer's standard]<Insert finish>**.
7. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color>**.

2.10 FASTENERS

- A. General: Provide fasteners of size and type indicated, acceptable to authorities having jurisdiction, and that comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than **1-1/2 inches (38 mm)** into wood substrate.
- 1. Use **[stainless steel][fasteners with hot-dip zinc coating complying with ASTM A153/A153M or ASTM F2329]** unless otherwise indicated.
 - 2. For pressure-preservative-treated wood, use stainless steel fasteners.
 - 3. For **[plastic][wood]** decking, use stainless steel fasteners **[where fasteners are exposed to view]**.
 - 4. For redwood, use **[brass/bronze][stainless steel][hot-dip galvanized-steel]** fasteners.
- B. Nails: ASTM F1667.
- C. Power-Driven Fasteners: ICC-ES AC70.
- D. Wood Screws and Lag Screws: ASME B18.2.1, ASME B18.6.1, or ICC-ES AC233.
- E. Carbon-Steel Bolts: **ASTM A307 (ASTM F568M)** with **ASTM A563 (ASTM A563M)** hex nuts and, where indicated, flat washers all hot-dip zinc coated.
- F. Stainless Steel Bolts: **ASTM F593, Alloy Group 1 or 2 (ASTM F738M, Grade A1 or Grade A4);** with **ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or Grade A4)** hex nuts and, where

indicated, flat washers.

- G. Postinstalled Anchors: Stainless steel, **[chemical][or][torque-controlled expansion]** anchors with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing in accordance with ASTM E488 conducted by a qualified independent testing and inspecting agency.
 - 1. Stainless steel bolts and nuts complying with **ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or Grade A4).**

2.11 METAL FRAMING ANCHORS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Tamlyn]**
 - 2. **[USP Structural Connectors]**
 - 3. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Tamlyn]**
 - 2. **[USP Structural Connectors]**
 - 3. **<Insert manufacturer's name>**
- C. Allowable Design Loads: Provide products with allowable design loads, as published by manufacturer, that meet or exceed those **[indicated on Drawings][of basis-of-design products][of products of manufacturers listed]**. Manufacturer's published values are to be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.
- D. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, **[G60 (Z180)][G90 (Z270)][G185 (Z550)]** coating designation.
- E. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316]**.
- F. Joist Hangers: U-shaped, with **2-inch- (50-mm-)** long seat and **1-1/4-inch- (32-mm-)** wide nailing flanges at least 85 percent of joist depth.
 - 1. Thickness: **[0.050 inch (1.3 mm)][0.062 inch (1.6 mm)]**.
- G. Top Flange Hangers: U-shaped joist hangers, full depth of joist, formed from metal strap with tabs bent to extend over and be fastened to supporting member.
 - 1. Strap Width: **[1-1/2 inches (38 mm)][2 inches (50 mm)]**.
 - 2. Thickness: **[0.050 inch (1.3 mm)][0.062 inch (1.6 mm)]**.
- H. Post Bases: Adjustable-socket type for bolting in place with standoff plate to raise post **1 inch (25 mm)** above base and with **2-inch- (50-mm-)** minimum side cover, socket **0.062 inch (1.6 mm)** thick, and standoff and adjustment plates **0.108 inch (2.8 mm)** thick.

- I. Joist Ties: Flat straps, with holes for fasteners, for tying joists together over supports.

1. Width: [3/4 inch (19 mm)][1-1/4 inches (32 mm)].
2. Thickness: [0.050 inch (1.3 mm)][0.062 inch (1.6 mm)].
3. Length: [16 inches (400 mm)][24 inches (600 mm)][As indicated].

2.12 CONCEALED DECKING FASTENERS

- A. Deck Splines: Corrosion-resistant metal or plastic splines that fit in grooves routed into the sides of decking material and are fastened to deck framing with screws. Splines provide uniform spacing of decking material.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Grabber Construction Products, Inc.]**
 - b. **[Ipe Clip Fastener Company Inc. (The)]**
 - c. **[M. M. Products, Inc.]**
 - d. **[Titan Metal Werks, Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Grabber Construction Products, Inc.]**
 - b. **[Ipe Clip Fastener Company Inc. (The)]**
 - c. **[M. M. Products, Inc.]**
 - d. **[Titan Metal Werks, Inc.]**
 - e. **<Insert manufacturer's name>**

- B. Deck Clips: Black-oxide-coated, stainless steel clips designed to be fastened to deck framing with screws, and to secure decking material with teeth that also provide uniform spacing of decking material.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[FastenMaster; a division of OMG, Inc.]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[FastenMaster; a division of OMG, Inc.]**
 - b. **<Insert manufacturer's name>**

- C. Deck Tracks: Formed metal strips designed to be fastened to deck framing and to secure decking material from underside with screws. Made from epoxy-powder-coated, hot-dip galvanized steel or stainless steel.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Grabber Construction Products, Inc.]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Grabber Construction Products, Inc.]**
 - b. **<Insert manufacturer's name>**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of projections and substances detrimental to application.
- B. Prime wood[**indicated to be painted**], including both faces and edges. Cut to required lengths and prime ends. Comply with requirements in Section 099113 "Exterior Painting."
- C. Stain wood[**indicated to be stained**], including both faces and edges. Cut to required lengths and stain ends. Comply with requirements in Section 099300 "Staining and Transparent Finishing."

3.3 INSTALLATION, GENERAL

- A. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit work to other construction; scribe and cope as needed for accurate fit.
- B. Framing Standard: Comply with AF&PA WCD1 unless otherwise indicated.
- C. Install wood decking[**and stair treads**] with crown up (bark side down).
- D. Install plastic lumber to comply with manufacturer's written instructions.
- E. Secure decking to framing with **[deck splines][deck clips][deck tracks][or][screws]**.
- F. Install metal framing anchors to comply with manufacturer's written instructions.
- G. Do not splice structural members between supports unless otherwise indicated.

- H. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
- I. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of members or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- J. Apply copper naphthenate field treatment to comply with AWPA M4, to cut surfaces of preservative-treated lumber.
- K. Securely attach exterior rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
 - 1. ICC-ES AC70 for power-driven fasteners.
 - 2. "Fastening Schedule" in ICC's International Building Code.
 - 3. "Fastener Schedule for Structural Members" and "Alternate Attachments" in ICC's International Residential Code for One- and Two-Family Dwellings.
- L. Use common wire nails unless otherwise indicated. Select fasteners of size that do not fully penetrate members where opposite side is exposed to view. Make tight connections between members. Install fasteners without splitting wood; do not countersink nail heads unless otherwise indicated.
- M. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced and with adjacent rows staggered.

3.4 INSTALLATION OF ELEVATED DECK JOIST FRAMING

- A. General: Install joists with crown edge up and support ends of each member with not less than **1-1/2 inches (38 mm)** of bearing on wood or metal, or **3 inches (76 mm)** on masonry. Attach floor joists where framed into wood supporting members by using wood ledgers as indicated or, if not indicated, by using metal joist hangers. Do not notch joists.
- B. Frame openings with headers and trimmers supported by metal joist hangers; double headers and trimmers where span of header exceeds **48 inches (1200 mm)**.
- C. Lap members framing from opposite sides of beams or girders not less than **4 inches (102 mm,)** or securely tie opposing members together. Provide solid blocking of **2-inch nominal (38-mm actual)** thickness by depth of joist over supports.
- D. Provide solid blocking of **2-inch nominal (38-mm actual)** thickness by depth of joist at intervals of **96 inches (2438 mm)** o.c., between joists.

3.5 INSTALLATION OF STAIRS

- A. Provide stair framing members of size, space, and configuration indicated or, if not indicated, to comply with the following requirements:
 - 1. Stringer Size: **2 by 12 inches nominal (38 by 286 mm actual)**, minimum.
 - 2. Notching: Notch stringers to receive treads, risers, and supports; leave at least **3-1/2 inches (89 mm)** of effective depth.
 - 3. Stringer Spacing: At least three stringers for each **36-inch (914-mm)** clear width of stair.

- B. Provide stair framing with no more than **[3/16-inch (4.7-mm) variation between adjacent treads and risers and no more than] 3/8-inch (9.5-mm)** variation between largest and smallest treads and risers within each flight.
- C. Treads and Risers: Secure by gluing and **[nailing][screwing]** to carriages. Countersink fastener heads, fill flush, and sand filler. Extend treads over carriages **[and finish with bullnose edge]**.

3.6 INSTALLATION OF RAILINGS

- A. Balusters: Fit to railings, **[glue, and][nail][screw]** in place. Countersink fastener heads, fill flush, and sand filler.
- B. Newel Posts: Secure to stringers and risers with **[through bolts][lag screws][countersunk-head wood screws and glue]**.
- C. Railings: Secure wall rails with metal brackets. Fasten freestanding railings to newel posts and to trim at walls with countersunk-head wood screws or rail bolts **[and glue]**.

END OF SECTION 06 15 00 00A

THIS PAGE INTENTIONALLY LEFT BLANK

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 15 13 00	06 10 00 00	Rough Carpentry
06 15 13 00	06 15 00 00	Wood Roof Decking
06 15 13 00	06 15 00 00a	Wood Patio Decking

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 16 00 00 - SHEATHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Composite nail base insulated roof sheathing.
5. Subflooring.
6. Underlayment.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for plywood backing panels.
2. Section 072500 "Weather Barriers" for water-resistive barrier applied over wall sheathing.

1.2 DEFINITIONS

- A. ABAA: The Air Barrier Association of America.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference **[at Project site][by web conference]<Insert location>** .

1. Review air-barrier and water-resistant glass-mat gypsum sheathing requirements and installation, special details, transitions, mockups, air-leakage testing, protection, and work scheduling that covers air-barrier and water-resistant glass-mat gypsum sheathing.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Indicate component materials and dimensions and include construction and application details.
1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5516.
 4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

5. For air-barrier and water-resistant glass-mat gypsum sheathing, include manufacturer's technical data and tested physical and performance properties of products.

B. Shop Drawings: For air-barrier and water-resistant glass-mat gypsum sheathing assemblies.

1. Show locations and extent of sheathing, accessories, and assemblies specific to Project conditions.
2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
3. Include details of interfaces with other materials that form part of air barrier.

C. Sustainable Design Submittals:

1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
2. Chain-of-Custody Qualification Data: For manufacturer and vendor.
3. Laboratory Test Reports: For composite wood products, indicating compliance with the formaldehyde emissions evaluation.
4. Product Data: For installation adhesives, indicating VOC content.
5. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer [, **including list of ABAA-certified installers and supervisors employed by Installer, who work on Project**][and][testing and inspecting agency] .
- B. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.
- C. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.
- D. Evaluation Reports: For the following, from ICC-ES:
1. Preservative-treated plywood.
 2. Fire-retardant-treated plywood.
 3. Foam-plastic sheathing.
 4. Air-barrier and water-resistant glass-mat gypsum sheathing.
 5. Power-driven fasteners.
- E. Field Quality Control Reports: For specified tests and inspections.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer of air-barrier and water-resistant glass-mat gypsum sheathing.
1. Installer is to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and is to employ ABAA-certified installers and supervisors on Project.
- B. Testing Agency Qualifications:

1. For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
2. For testing and inspecting agency providing tests and inspections related to air-barrier and water-resistant glass-mat gypsum sheathing meeting the requirements as follows:
 - a. Independent agency, qualified in accordance with ASTM E329 for testing indicated, and certified by ABAA.
- C. Certified Wood: Provide an invoice, including vendor's chain-of-custody number, product cost, and entity being invoiced.
- D. Vendor Qualifications: Provide proof of use of vendors that are certified for chain of custody by an FSC-accredited certification body.

1.7 MOCKUPS

- A. Build mockups to set quality standards for materials and execution [**and for preconstruction testing**] .
 1. Build integrated mockups of exterior wall assembly [**as indicated on Drawings**][, 150 sq. ft. (14 sq. m)]<Insert requirement> , incorporating backup wall construction, window, storefront, door frame and sill, ties and other penetrations, and flashing to demonstrate crack and joint treatment and sealing of gaps, terminations, and penetrations of air-barrier sheathing assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of sheathing before external insulation and cladding are installed.
 - b. Include junction with roofing membrane [, **building corner condition**],[and][**foundation wall intersection**] .
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: [**Owner will engage**][**Engage**] a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier and water-resistant glass-mat gypsum sheathing assemblies are to comply with performance requirements, as evidenced by reports based on mockup testing by a qualified testing agency.
 1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage in accordance with [**ASTM E1186, chamber pressurization or depressurization with smoke tracers**][**ASTM E1186, chamber depressurization with detection liquids**]<Insert requirement> .
 2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate in accordance with [**ASTM E783**][or][**ASTM E2357**] .
 3. Notify Architect [**seven**]<Insert number> days in advance of the dates and times when mockups will be tested.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested in accordance with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
- B. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing Performance: Air-barrier and water-resistant glass-mat gypsum sheathing assembly, and seals with adjacent construction, are to be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies are to be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations [**tie-ins to installed waterproofing**][**tie-ins to other installed air barriers**], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

2.2 WOOD STRUCTURAL PANEL PRODUCTS

- A. General: Wood structural panels include plywood, mat-formed (nonveneer) panels such as oriented strand board, and composite panels, which are veneer-faced panels with mat-formed cores.
- B. Emissions: Products are to meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Certified Wood: Verify the following wood products are certified as "FSC Pure" [**or "FSC Mixed Credit"**] in accordance with FSC STD-01-001 and FSC STD-40-004.
 - 1. Plywood.
 - 2. Oriented strand board.
 - 3. Particleboard underlayment.
 - 4. Hardboard underlayment.
- D. Certified Wood: Verify the following wood products are labeled in accordance with the AF&PA's Sustainable Forestry Initiative, certified as "FSC Pure" in accordance with FSC STD-01-001 and FSC STD-40-004, or certified and labeled in accordance with the standards of the Programme for Endorsement of Forest Certification.
 - 1. Plywood.
 - 2. Oriented strand board.
 - 3. Particleboard underlayment.
 - 4. Hardboard underlayment.

- E. Certified Wood: Verify the following wood products are certified in accordance with the American Tree Farm System's "ATFS 2021 Standards of Sustainability," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
 - 1. Plywood.
 - 2. Oriented strand board.
 - 3. Particleboard underlayment.
 - 4. Hardboard underlayment.
- F. Thickness: As needed to comply with requirements specified, but not less than thickness indicated on Drawings.
- G. Factory mark panels to indicate compliance with applicable standard.

2.3 PRESERVATIVE-TREATED PLYWOOD

- A. Preservative-Treated Plywood by Pressure Process: AWP U1, use categories as follows:
 - 1. UC2, Interior/Damp: For interior construction not in contact with ground but may be subject to moisture.
 - 2. UC3B, Above Ground, Exposed: For exterior construction not in contact with ground, exposed to all weather cycles including prolonged wetting.
 - 3. UC4A, Ground Contact: For wood panels in contact with ground and exposed to all weather cycles, normal exposure conditions.
 - 4. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
- B. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
- C. Application: **[Treat all plywood unless otherwise indicated][Treat items indicated on Drawings][and plywood in contact with masonry or concrete or used with roofing, flashing, vapor barriers, and waterproofing]** .

2.4 Glass Fiber-Reinforced Cementitious Panels

- A. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **<Insert manufacturer's name>**

2.5 FIRE-RETARDANT-TREATED PLYWOOD

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than

10.5 ft. (3.2 m) beyond the centerline of the burners at any time during the test.

1. Treatment must not promote corrosion of metal fasteners.
2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated on Drawings.
3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when tested in accordance with ASTM D3201/D3201M at 92 percent relative humidity. Use where exterior type is not indicated.
4. Design Value Adjustment Factors: Treated lumber plywood is to be tested in accordance with ASTM D5516 and design value adjustment factors are to be calculated in accordance with ASTM D6305. Span ratings after treatment are to be not less than span ratings specified. [**For roof sheathing and where high-temperature fire-retardant treatment is indicated, span ratings for temperatures up to 170 deg F (76 deg C) are to be not less than span ratings specified.**]

- C. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- D. Identify fire-retardant-treated plywood with appropriate classification marking of qualified testing agency.
- E. Application: **[Treat all plywood unless otherwise indicated.][Treat plywood indicated on Drawings, and the following:]**
 1. Roof [**and wall**] sheathing within **48 inches (1220 mm)** of [**fire**][**party**] walls.
 2. Roof sheathing.
 3. Subflooring and underlayment for raised platforms.

2.6 Subflooring and Underlayment: Cementitious Reinforced Subfloor

- A. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **<Insert manufacturer's name>**

2.7 WALL SHEATHING

- A. Plywood Sheathing, Walls:
 1. Classification: **[DOC PS 1][Either DOC PS 1 or DOC PS 2]** , **[Exterior, Structural I][Exterior][Exposure 1, Structural I][Exposure 1]** sheathing.
 2. Span Rating: Not less than **[16/0][20/0][24/0][32/16]** .
 3. Nominal Thickness: Not less than **[11/32 inch (8.7 mm)][3/8 inch (9.5 mm)][1/2 inch (13 mm)]** .
- B. Oriented-Strand-Board Sheathing, Walls:
 1. Classification: DOC PS 2, **[Exposure 1, Structural I][Exposure 1]** sheathing.
 2. Span Rating: Not less than **[16/0][20/0][24/0][24/16][32/16]** .
 3. Nominal Thickness: Not less than **[5/16 inch (7.9 mm)][3/8 inch (9.5 mm)][1/2 inch (13 mm)]** .
- C. Paper-Surfaced Gypsum Sheathing: ASTM C1396/C1396M, gypsum sheathing; with water-resistant-treated core and with water-repellent paper bonded to core's face, back, and long edges.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :
 - a. [American Gypsum]
 - b. [CertainTeed; SAINT-GOBAIN]
 - c. [Georgia-Pacific Gypsum LLC]
 - d. [USG Corporation]
 - e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [American Gypsum]
 - b. [CertainTeed; SAINT-GOBAIN]
 - c. [Georgia-Pacific Gypsum LLC]
 - d. [USG Corporation]
 - e. <Insert manufacturer's name>
 3. Type and Thickness: [Regular, 1/2 inch (13 mm)][Type X, 5/8 inch (15.9 mm)] thick.
 4. Edge and End Configuration: [V-shaped, tongue-and-groove long edges; square ends][Square] .
 5. Size: [24 by 96 inches (610 by 2438 mm) for horizontal][48 by 96 inches (1219 by 2438 mm) for vertical][48 by 108 inches (1219 by 2743 mm) for vertical][600 by 2400 mm for horizontal][1200 by 2400 mm for vertical][1200 by 2750 mm for vertical] installation.
- D. Glass-Mat Gypsum Sheathing, Walls: ASTM C1177/C1177M.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Continental Building Products Inc.]
 - c. [Georgia-Pacific Gypsum LLC]
 - d. [Gold Bond Building Products, LLC provided by National Gypsum Company]
 - e. [USG Corporation]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Continental Building Products Inc.]
 - c. [Georgia-Pacific Gypsum LLC]
 - d. [Gold Bond Building Products, LLC provided by National Gypsum Company]
 - e. [USG Corporation]
 - f. <Insert manufacturer's name>
 3. Type and Thickness: [Regular, 1/2 inch (13 mm)][Type X, 5/8 inch (15.9 mm)] thick.
 4. Size: [48 by 96 inches (1219 by 2438 mm)][48 by 108 inches (1219 by 2743 mm)][48 by 120 inches (1219 by 3048 mm)][1200 by 2400 mm][1200 by 2750 mm][1200 by 3050 mm] for

vertical installation.

- E. Air-Barrier and Water-Resistant Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M, Type X, coated fiberglass mat gypsum sheathing with integral weather-resistant barrier and air barrier complying with ASTM E2178.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[Georgia-Pacific Gypsum LLC]**
 - b. **[Tremco Commercial Sealants and Waterproofing, part of Tremco CPG]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Georgia-Pacific Gypsum LLC]**
 - b. **[Tremco Commercial Sealants and Waterproofing, part of Tremco CPG]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 3. Thickness: **5/8 inch (15.9 mm)** thick.
 4. Size: **[48 by 96 inches (1219 by 2438 mm)][48 by 108 inches (1219 by 2743 mm)][48 by 120 inches (1219 by 3048 mm)][1200 by 2400 mm][1200 by 2750 mm][1200 by 3050 mm]** for vertical installation.
 5. Edges: Square.
 6. Flashing and Transitions Strips: As acceptable to sheathing manufacturer.
 7. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)]<Insert value>** pressure difference when tested in accordance with ASTM E2178.
 8. Vapor Permeance: Minimum **[20 perms (580 ng/Pa x s x sq. m)]<Insert value>** when tested in accordance with ASTM E96/E96M, Desiccant Method, Procedure A.
 9. Sheathing Assembly Air Leakage: Maximum **[0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa)]<Insert value>** when tested in accordance with ASTM E2357.
 10. Fire Propagation Characteristics: Complies with NFPA 285 testing as part of an approved assembly.
 11. UV Resistance: Can be exposed to sunlight for **[30][90][180]<Insert number>** days in accordance with manufacturer's written instructions.
 12. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by sheathing manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- F. Cellulose Fiber-Reinforced Gypsum Sheathing: ASTM C1278/C1278M, gypsum sheathing.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following] :

- a. [USG Corporation]
 - b. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [USG Corporation]
 - b. <Insert manufacturer's name>
 3. Type and Thickness: [Regular, 1/2 inch (13 mm)][Type X, 5/8 inch (15.9 mm)] thick.
 4. Size: [48 by 96 inches (1219 by 2438 mm)][48 by 108 inches (1219 by 2743 mm)][48 by 120 inches (1219 by 3048 mm)][1200 by 2400 mm][1200 by 2750 mm][1200 by 3050 mm] .
- G. Cementitious Backer Units, Walls: ASTM C1325, Type A.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :
 - a. [C-Cure]
 - b. [Custom Building Products]
 - c. [FinPan, Inc.]
 - d. [USG Corporation]
 - e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [C-Cure]
 - b. [Custom Building Products]
 - c. [FinPan, Inc.]
 - d. [USG Corporation]
 - e. <Insert manufacturer's name>
 3. Thickness: [1/2 inch (12.7 mm)][5/8 inch (15.9 mm)][As indicated on Drawings] .
- H. Fiberboard Sheathing: ASTM C208, Type IV, cellulosic fiberboard sheathing with square edges.
1. Grade: [1 (Regular)][2 (Structural)] .
 2. Thickness: [1/2 inch (13 mm)][25/32 inch (20 mm)] .
- I. Extruded-Polystyrene-Foam Sheathing: ASTM C578, Type IV, in manufacturer's standard lengths and widths with tongue-and-groove or shiplap long edges as standard with manufacturer.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :
 - a. [DiversiFoam Products]
 - b. [HydroBlok]

- c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [DiversiFoam Products]
 - b. [HydroBlok]
 - c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
 3. Thickness: [3/4 inch (19 mm)][1 inch (25 mm)][As indicated on Drawings] .
 4. Flame Propagation Test: Materials and construction are to be tested in accordance with NFPA 285.
- J. Foil-Faced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type I or Type II, Class 2, rigid, cellular, polyisocyanurate thermal insulation. Foam-plastic core and facings are to have a flame-spread index of 25 or less when tested individually.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Carlisle Coatings & Waterproofing Inc]
 - c. [Elevate; Amrize Building Envelope LLC]
 - d. [Hunter Panels; a Carlisle Company]
 - e. [Rmax, A Business Unit of Sika Corporation]
 - f. [The Dow Chemical Company]
 - g. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Carlisle Coatings & Waterproofing Inc]
 - c. [Elevate; Amrize Building Envelope LLC]
 - d. [Hunter Panels; a Carlisle Company]
 - e. [Rmax, A Business Unit of Sika Corporation]
 - f. [The Dow Chemical Company]
 - g. <Insert manufacturer's name>
 3. Thickness: [7/16 inch (11.1 mm)][1/2 inch (13 mm)][5/8 inch (15.9 mm)][3/4 inch (19 mm)][1 inch (25 mm)][As indicated on Drawings] .
 4. Flame Propagation Test: Materials and construction are to be tested in accordance with NFPA 285.

2.8 ROOF SHEATHING

A. Plywood Sheathing, Roofs :

1. Classification: **[DOC PS 1][Either DOC PS 1 or DOC PS 2]** , **[Exterior, Structural I][Exterior][Exposure 1, Structural I][Exposure 1]** sheathing.
2. Span Rating: Not less than **[16/0][20/0][24/0][32/16][40/20][48/24]** .
3. Nominal Thickness: Not less than **[15/32 inch (11.9 mm)][1/2 inch (13 mm)]** .

B. Oriented-Strand-Board Sheathing, Roofs :

1. Classification: DOC PS 2, **[Exposure 1, Structural I][Exposure 1]** sheathing.
2. Span Rating: Not less than **[16/0][20/0][24/0][24/16][32/16][40/20][48/24]** .
3. Nominal Thickness: Not less than **[7/16 inch (11.1 mm)][15/32 inch (11.9 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)][3/4 inch (19 mm)]** .

2.9 PARAPET SHEATHING

A. Plywood Sheathing, Parapets :

1. Classification: **[DOC PS 1][Either DOC PS 1 or DOC PS 2]** , **[Exterior, Structural I][Exterior][Exposure 1, Structural I][Exposure 1]** sheathing.
2. Span Rating: Not less than **[16/0][20/0][24/0][32/16][40/20][48/24]** .
3. Nominal Thickness: Not less than **[15/32 inch (11.9 mm)][1/2 inch (13 mm)]** .

B. Oriented-Strand-Board Sheathing, Parapets :

1. Classification: DOC PS 2, **[Exposure 1, Structural I][Exposure 1]** sheathing.
2. Span Rating: Not less than **[16/0][20/0][24/0][24/16][32/16][40/20][48/24]** .
3. Nominal Thickness: Not less than **[7/16 inch (11.1 mm)][15/32 inch (11.9 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)][3/4 inch (19 mm)]** .

C. Glass-Mat Gypsum Roof Boards, Parapets: ASTM C1177/C1177M.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[Gold Bond Building Products, LLC provided by National Gypsum Company]**
 - d. **[USG Corporation]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[Gold Bond Building Products, LLC provided by National Gypsum Company]**
 - d. **[USG Corporation]**
 - e. **<Insert manufacturer's name>**

3. Type and Thickness: **[Regular, 1/2 inch (13 mm)][Type X, 5/8 inch (15.9 mm)]** thick.
4. Size: **[48 by 96 inches (1219 by 2438 mm)][48 by 108 inches (1219 by 2743 mm)][48 by 120 inches (1219 by 3048 mm)][1200 by 2400 mm][1200 by 2750 mm][1200 by 3050 mm]** for vertical installation.

D. Cementitious Backer Units, Parapets: ASTM C1325, Type A.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[C-Cure]**
 - b. **[Custom Building Products]**
 - c. **[FinPan, Inc.]**
 - d. **[USG Corporation]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[C-Cure]**
 - b. **[Custom Building Products]**
 - c. **[FinPan, Inc.]**
 - d. **[USG Corporation]**
 - e. **<Insert manufacturer's name>**
3. Thickness: **[1/2 inch (12.7 mm)][5/8 inch (15.9 mm)][As indicated on Drawings]** .

2.10 COMPOSITE NAIL BASE INSULATED ROOF SHEATHING

A. Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type V with DOC PS 2, Exposure 1 oriented strand board on one face.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Cornell Performance Building Products, a Subsidiary of GAF]**
 - c. **[Hunter Panels; a Carlisle Company]**
 - d. **[Johns Manville; a Berkshire Hathaway company]**
 - e. **[Rmax, A Business Unit of Sika Corporation]**
 - f. **[The Dow Chemical Company]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Cornell Performance Building Products, a Subsidiary of GAF]**

- c. **[Hunter Panels; a Carlisle Company]**
 - d. **[Johns Manville; a Berkshire Hathaway company]**
 - e. **[Rmax, A Business Unit of Sika Corporation]**
 - f. **[The Dow Chemical Company]**
 - g. **<Insert manufacturer's name>**
3. Polyisocyanurate-Foam Thickness: **[1 inch (25 mm)][1-1/2 inches (38 mm)][2 inches (50 mm)][2-1/2 inches (64 mm)][3 inches (76 mm)][3-1/2 inches (89 mm)][4 inches (102 mm)]** .
 4. Oriented-Strand-Board Nominal Thickness: **[7/16 inch (11.1 mm)][5/8 inch (15.9 mm)]** .
- B. Vented, Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: ASTM C1289, Type II, Class 1, with DOC PS 2, Exposure 1 oriented strand board adhered to spacers on one face.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]** :
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Cornell Performance Building Products, a Subsidiary of GAF]**
 - c. **[Hunter Panels; a Carlisle Company]**
 - d. **[Johns Manville; a Berkshire Hathaway company]**
 - e. **[Rmax, A Business Unit of Sika Corporation]**
 - f. **[The Dow Chemical Company]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Cornell Performance Building Products, a Subsidiary of GAF]**
 - c. **[Hunter Panels; a Carlisle Company]**
 - d. **[Johns Manville; a Berkshire Hathaway company]**
 - e. **[Rmax, A Business Unit of Sika Corporation]**
 - f. **[The Dow Chemical Company]**
 - g. **<Insert manufacturer's name>**
 3. Polyisocyanurate-Foam Thickness: **[1 inch (25 mm)][1-1/2 inches (38 mm)][2 inches (50 mm)][2-1/2 inches (64 mm)][3 inches (76 mm)][3-1/2 inches (89 mm)][4 inches (102 mm)]** .
 4. Oriented-Strand-Board Nominal Thickness: **[7/16 inch (11.1 mm)][5/8 inch (15.9 mm)]** .
 5. Spacers: Wood furring strips or blocks not less than **3/4 inch (19 mm)** thick and spaced not more than **[12 inches (300 mm)][16 inches (400 mm)][24 inches (600 mm)]** o.c.

2.11 SUBFLOORING

A. Plywood Combination Subfloor-Underlayment :

1. Classification: DOC PS 1, **[Exterior, Structural I, C-C Plugged][Exterior, C-C Plugged][Exposure 1, Structural I, Underlayment][Exposure 1, Underlayment]** single-floor panels.
2. Span Rating: Not less than **[16][20][24][32][48]** .
3. Nominal Thickness: Not less than **[23/32 inch (18.3 mm)][7/8 inch (22.2 mm)][1 inch (25 mm)]** .
4. Edge Detail: **[Square][Tongue and groove]** .
5. Surface Finish: Fully sanded face.

- B. Oriented-Strand-Board Combination Subfloor-Underlayment :
 - 1. Classification: DOC PS 2, Exposure 1 single-floor panels.
 - 2. Span Rating: Not less than [16][20][24][32][48] .
 - 3. Nominal Thickness: Not less than [23/32 inch (18.3 mm)][7/8 inch (22.2 mm)][1 inch (25 mm)] .
 - 4. Edge Detail: [Square][Tongue and groove] .
 - 5. Surface Finish: [Fully sanded][Resin-impregnated overlay] face.
- C. Plywood Subflooring :
 - 1. Classification: [DOC PS 1][Either DOC PS 1 or DOC PS 2] , [Exterior, Structural I][Exterior][Exposure 1, Structural I][Exposure 1] single-floor panels or sheathing.
 - 2. Span Rating: Not less than [16][20][24][32][48][or][32/16][40/20][48/24] .
 - 3. Nominal Thickness: Not less than [23/32 inch (18.3 mm)][7/8 inch (22.2 mm)][1 inch (25 mm)] .
- D. Oriented-Strand-Board Subflooring :
 - 1. Classification: DOC PS 2, Exposure 1 [, Structural I sheathing][single-floor panels or sheathing] .
 - 2. Span Rating: Not less than [16][20][24][32][48][or][32/16][40/20][48/24][60/32] .
 - 3. Nominal Thickness: Not less than [23/32 inch (18.3 mm)][7/8 inch (22.2 mm)][1 inch (25 mm)] .

2.12 UNDERLAYMENT

- A. General: Provide underlayment in nominal thicknesses indicated or, if not indicated, not less than **1/4 inch (6.4 mm)** over smooth subfloors and not less than **3/8 inch (9.5 mm)** over board or uneven subfloors.
- B. Plywood Underlayment for Resilient Flooring :
 - 1. Classification: DOC PS 1, [Exterior A-C][Exterior B-C][Exterior, C-C Plugged][Exposure 1 Underlayment] with fully sanded face.
- C. Plywood Underlayment for Ceramic Tile :
 - 1. Classification: DOC PS 1, Exterior, C-C Plugged, not less than **5/8-inch (15.9-mm)** nominal thickness.
- D. Plywood Underlayment for Carpet :
 - 1. Classification: DOC PS 1, [Exterior, C-C Plugged][Exposure 1, Underlayment][Interior, Underlayment] .
- E. Particleboard Underlayment : ANSI A208.1, [Grade PBU][Grade M-2] .
 - 1. Verify particleboard is made without urea formaldehyde.
 - 2. Verify particleboard has formaldehyde emission rates not greater than 0.09 ppm when tested in accordance with ASTM D6007 or ASTM E1333.
- F. Hardboard Underlayment : ANSI A135.4, Class 4 (Service), Surface S1S; with back side sanded.

2.13 MISCELLANEOUS MATERIALS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacturer.
 - 1. For [roof][parapet][and][wall] sheathing, provide fasteners **[with hot-dip zinc coating complying with ASTM A153/A153M][of Type 304 stainless steel]** .
 - 2. For [roof][parapet][and][wall] sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Screws for Fastening Sheathing to Wood Framing: ASTM C1002.
- E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended in writing by screw manufacturer for material being fastened.
- F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended in writing by sheathing manufacturer for thickness of sheathing to be attached.
 - 1. For steel framing less than **0.0329 inch (0.835 mm)** thick, use screws that comply with ASTM C1002.
 - 2. For steel framing from **0.033 to 0.112 inch (0.84 to 2.84 mm)** thick, use screws that comply with ASTM C954.
- G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended in writing by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours in accordance with ASTM B117. Provide washers or plates if recommended by sheathing manufacturer.
- H. Sealant for Paper-Surfaced and Glass-Mat Gypsum Sheathing: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended in writing by sheathing manufacturer for application indicated and complying with requirements for elastomeric sealants specified in Section 079200 "Joint Sealants."
- I. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended in writing by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
 - 1. Sheathing Tape: Self-adhering glass-fiber tape, minimum **2 inches (50 mm)** wide, **10 by 10 or 10 by 20 threads/inch (390 by 390 or 390 by 780 threads/m)**, of type recommended in writing by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.
- J. Sheathing Tape for Foam-Plastic Sheathing: Pressure-sensitive plastic tape recommended in writing by sheathing manufacturer for sealing joints and penetrations in sheathing.
- K. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with **[APA AFG-01][ASTM D3498]** that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

1. Verify adhesive has a VOC content of [50][70]<Insert number> g/L or less.
2. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
4. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 1. Table 2304.10.1, "Fastening Schedule," in the ICC's "International Building Code."
 2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's "International Residential Code for One- and Two-Family Dwellings."
 3. ICC-ES evaluation report for fastener.
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- E. Coordinate [wall][parapet][and][roof] sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 INSTALLATION OF WOOD STRUCTURAL PANELS

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.

B. Fastening Methods: Fasten panels as indicated below:

1. Combination Subfloor-Underlayment:
 - a. **[Glue and nail][Nail]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch (3 mm)** apart at edges and ends.
2. Subflooring:
 - a. **[Glue and nail][Nail][Nail or staple]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch (3 mm)** apart at edges and ends.
3. Wall and Roof Sheathing:
 - a. **[Nail][Nail or staple]** to wood framing. [**Apply a continuous bead of glue to framing members at edges of wall sheathing panels.**]
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch (3 mm)** apart at edges and ends.
4. Underlayment:
 - a. **[Nail][Nail or staple]** to subflooring.
 - b. Space panels **1/32 inch (0.8 mm)** apart at edges and ends.
 - c. Fill and sand edge joints of underlayment receiving resilient flooring immediately before installing flooring.

3.3 INSTALLATION OF GYPSUM SHEATHING

- A. Comply with GA-253 and with manufacturer's written instructions.
1. Fasten gypsum sheathing to wood framing with **[nails][or][screws]** .
 2. Fasten gypsum sheathing to cold-formed metal framing with screws.
 3. Install panels with a **3/8-inch (9.5-mm)** gap where non-load-bearing construction abuts structural elements.
 4. Install panels with a **1/4-inch (6.4-mm)** gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent panels without forcing. Abut ends over centers of studs, and stagger end joints of adjacent panels not less than one stud spacing. Attach at perimeter and within field of panel to each stud.
1. Space fasteners approximately **8 inches (200 mm)** o.c. and set back a minimum of **3/8 inch (9.5 mm)** from edges and ends of panels.
 2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.

1. Space fasteners approximately **8 inches (200 mm)** o.c. and set back a minimum of **3/8 inch (9.5 mm)** from edges and ends of panels.
2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

E. Seal sheathing joints in accordance with sheathing manufacturer's written instructions.

1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

3.4 INSTALLATION OF AIR-BARRIER AND WATER-RESISTANT GLASS-MAT GYPSUM SHEATHING

A. Install accessory materials in accordance with sheathing manufacturer's written instructions and details to form a seal with adjacent construction, to seal fasteners, and ensure continuity of air and water barrier.

1. Coordinate the installation of sheathing with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install transition strip on roofing membrane or base flashing, so that a minimum of **3 inches (75 mm)** of coverage is achieved over each substrate.

B. Connect and seal sheathing material continuously to air barriers specified under other Sections as well as to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

D. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply **[transition strip][preformed silicone extrusion]**, so that a minimum of **3 inches (75 mm)** of coverage is achieved over each substrate. Maintain **3 inches (75 mm)** of full contact over solid bearing to perimeter frames, with not less than **1 inch (25 mm)** of full contact.

1. Transition Strip: Roll firmly to enhance adhesion.
2. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.

E. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of sheathing material with foam sealant.

F. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

G. Seal top of through-wall flashings to sheathing with an additional **6-inch- (150-mm-)** wide transition strip.

H. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal

counterflashings or ending in reglets with termination mastic.

- I. Repair punctures, voids, and deficient lapped seams in strips and transition strips extending **6 inches (150 mm)** beyond repaired areas in strip direction.

3.5 INSTALLATION OF CEMENTITIOUS BACKER UNITS

- A. Install panels and treat joints in accordance with ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.6 INSTALLATION OF FIBERBOARD SHEATHING

- A. Comply with ASTM C846 and with manufacturer's written instructions.
- B. Fasten fiberboard sheathing panels to intermediate supports and then at edges and ends. Use galvanized roofing nails [**or galvanized staples**] ; comply with manufacturer's recommended spacing and referenced fastening schedule. Drive fasteners flush with surface of sheathing and locate perimeter fasteners at least **3/8 inch (9.5 mm)** from edges and ends.
- C. Install sheathing vertically with long edges parallel to, and centered over, studs. Install solid wood blocking where end joints do not occur over framing. Allow **1/8-inch (3-mm)** open space between edges and ends of adjacent units. Stagger horizontal joints if any.
- D. Cover sheathing as soon as practical after installation to prevent deterioration from wetting.

3.7 INSTALLATION OF FOAM-PLASTIC SHEATHING

- A. Comply with manufacturer's written instructions.
- B. Foam-Plastic Wall Sheathing: Install vapor-relief strips or equivalent for permitting escape of moisture vapor that otherwise would be trapped in stud cavity behind sheathing.
- C. Apply sheathing tape to joints between foam-plastic sheathing panels and at items penetrating sheathing. Apply at upstanding flashing to overlap both flashing and sheathing.

3.8 INSTALLATION OF PARTICLEBOARD UNDERLAYMENT

- A. Comply with CPA's recommendations for type of subfloor indicated. Fill and sand gouges, gaps, and chipped edges. Sand uneven joints flush.
 1. Fastening Method: [**Glue and nail**][**Nail**][**Nail or staple**] underlayment to subflooring.

3.9 INSTALLATION OF HARDBOARD UNDERLAYMENT

- A. Comply with CPA's recommendations and hardboard manufacturer's written instructions for preparing and applying hardboard underlayment.
 1. Fastening Method: [**Nail**][**Nail or staple**] underlayment to subflooring.

3.10 FIELD QUALITY CONTROL

- A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.
- B. Testing and Inspecting Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.
- C. Inspections: Air-barrier and water-resistant glass-mat gypsum sheathing, accessories, and installation are subject to inspection for compliance with requirements. **[Inspections may include the following:]**
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 - 3. Termination mastic has been applied on cut edges.
 - 4. Strips and transition strips have been firmly adhered to substrate.
 - 5. Compatible materials have been used.
 - 6. Transitions at changes in direction and structural support at gaps have been provided.
 - 7. Connections between assemblies (sheathing and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 - 8. All penetrations have been sealed.
- D. Tests: As determined by testing agency from among the following tests:
 - 1. Air-Leakage-Location Testing: Air-barrier sheathing assemblies will be tested for evidence of air leakage in accordance with **[ASTM E1186, chamber pressurization or depressurization with smoke tracers][ASTM E1186, chamber depressurization using detection liquids]<Insert requirement>** .
 - 2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate in accordance with **[ASTM E783][or][ASTM E2357]** .
- E. Air barriers will be considered defective if they do not pass tests and inspections.
- F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.
- G. Prepare test and inspection reports.

END OF SECTION 06 16 00 00

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 16 23 00	06 10 00 00	Rough Carpentry
06 16 23 00	06 16 00 00	Sheathing
06 16 33 00	06 10 00 00	Rough Carpentry
06 16 33 00	06 16 00 00	Sheathing

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 17 00 00 - ENGINEERED STRUCTURAL WOOD

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural composite lumber.
2. Prefabricated wood I-joists.
3. Engineered rim boards.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for dimension lumber items associated with engineered structural wood.
2. Section 061753 "Shop-Fabricated Wood Trusses" for wood trusses made from dimension lumber.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference:** Conduct conference at **[Project site]<Insert location>**.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on adhesives, fabrication, and protection.
2. For preservative-treated wood products, include manufacturer's written instructions for handling, storing, installing, and finishing treated material.
3. For connectors, include installation instructions.

B. Shop Drawings:

1. Submit wood floor and roof-framing layouts including dimension lumber, engineered wood products, and plated wood trusses. Include computer-generated design calculations for representative joist and beam types.
2. Identify location and magnitude of design loads on layouts and in member calculations.
3. Include alternate span loading design results in design calculations.
4. Identify metal connectors (joist, beam, post cap, anchors, etc.) by manufacturer and model number. Include a list of accessories required for installation at each connector (blocking, squash blocks, stiffeners, fasteners, etc.). Include allowable design loads for selected metal connectors in design calculation analysis.
5. Identify manufacturer's recommended installation details in layouts.
6. Provide documentation that allowable design stresses comply with allowable design properties of each product indicated.
7. Include large-scale details of connections.
8. Fastener Patterns: Full-size templates for fasteners in exposed framing.

C. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.
11. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
12. Chain-of-Custody Qualification Data: For manufacturer and vendor.
13. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
14. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
15. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
16. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
17. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
18. Product Data: For adhesives, indicating VOC content.
19. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

1.4 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For preservative-treated wood products, from manufacturer. Indicate type of preservative used and net amount of preservative retained.
- B. Research Reports: For engineered structural wood, from **[ICC-ES][or][recognized third-party testing laboratory]**.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that **[participates in a recognized quality-assurance program, complies with quality-control procedures in ASTM D5055 or ASTM D5456, and involves third-party inspection by an independent testing and inspecting agency acceptable to Architect and authorities having jurisdiction][and][is certified for chain of custody by an FSC-accredited certification body]**.
- B. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store, stack, and handle engineered wood products to comply with recommendations of APA EWS E705.
 - 1. Store wrapped or banded together until ready for installation, on level well-drained area. Do not store in direct contact with the ground. Use stickers to separate bundles, spaced as recommended in writing by manufacturer.
 - 2. Store I-joists level with the webs vertically.
- B. Do not stack other material on top of structural composite lumber or I-joists.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of engineered wood product from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Engineered Wood Products: Acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.
 - 1. Allowable design stresses, as published by manufacturer, are to meet or exceed those indicated. Manufacturer's published values are to be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.3 STRUCTURAL COMPOSITE LUMBER

- A. Laminated-Veneer Lumber (LVL): **[Preservative-treated, structural][Structural]** composite lumber made from wood veneers with grain primarily parallel to member lengths, evaluated and monitored in accordance with ASTM D5456, and manufactured with exterior-type adhesive complying with ASTM D2559.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Louisiana-Pacific Corporation]**
 - b. **[Pacific Woodtech Corporation]**
 - c. **[RedBuilt]**
 - d. **[Roseburg]**
 - e. **[West Fraser]**
 - f. **[Weyerhaeuser Company]**
 - g. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. [Louisiana-Pacific Corporation]
- b. [Pacific Woodtech Corporation]
- c. [RedBuilt]
- d. [Roseburg]
- e. [West Fraser]
- f. [Weyerhaeuser Company]
- g. <Insert manufacturer's name>

3. Allowable Stresses:

- a. Extreme Fiber Stress in Bending, Edgewise (Fb): [3100 psi (21.3 MPa)][2800 psi (19.3 MPa)][2750 psi (18.9 MPa)][2400 psi (16.5 MPa)][2250 psi (15.5 MPa)][1800 psi (12.4 MPa)]<Insert value> for 12-inch nominal- (286-mm actual-) depth members.
- b. Modulus of Elasticity, Edgewise (E): [2,000,000 psi (13 700 MPa)][1,800,000 psi (12 400 MPa)][1,500,000 psi (10 300 MPa)]<Insert value>.
- c. Minimum Modulus of Elasticity (Em): [1,500,000 psi (10 300 MPa)][980,000 psi (6 757 MPa)][750,000 psi (5 171 MPa)]<Insert value>.
- d. Horizontal Shear (Fv): [290 psi (2.0 MPa)][285 psi (1.97 MPa)][225 psi (1.55 MPa)]<Insert value>.
- e. Tension Parallel to Grain (Ft): [2100 psi (14.5 MPa)][1800 psi (12.4 MPa)][1500 psi (10.3 MPa)][1100 psi (7.58 MPa)]<Insert value>.
- f. Allowable Compression Stress, Parallel to the Grain (Fc): [3200 psi (22.06 MPa)][2350 psi (16.2 MPa)][1025 psi (7.07 MPa)][1800 psi (12.4 MPa)][750 psi (5.2 MPa)]<Insert value>.

4. Moisture Protection: Factory seal [face,]edge and ends with manufacturer's standard water-resistant coating.

B. Parallel-Strand Lumber (PSL): [Preservative-treated, structural][Structural] composite lumber made from wood strand elements with grain primarily parallel to member lengths, evaluated and monitored in accordance with ASTM D5456, and manufactured with exterior-type adhesive complying with ASTM D2559.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Weyerhaeuser Company]
- b. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Weyerhaeuser Company]
- b. <Insert manufacturer's name>

3. Allowable Stresses:

- a. Extreme Fiber Stress in Bending, Edgewise (Fb): [2900 psi (20.0 MPa)][2700 psi (18.6 MPa)][2500 psi (17.2 MPa)]<Insert value> for 12-inch nominal- (286-mm actual-) depth members.
- b. Modulus of Elasticity, Edgewise (E): [2,000,000 psi (13 700 MPa)][1,800,000 psi (12 400 MPa)]<Insert value>.
- c. Minimum Modulus of Elasticity (Em): [1,170,000 psi (8 066 MPa)][915,000 psi (6 308

- MPa)][750,000 psi (5 171 MPa)]<Insert value>.
 - d. Horizontal Shear (Fv): [290 psi (2.0 MPa)][260 psi (1.79 MPa)][230 psi (1.6 MPa)]<Insert value>.
 - e. Tension Parallel to Grain (Ft): [2300 psi (15.86 MPa)][2150 psi (14.8 MPa)][1995 psi (13.8 MPa)]<Insert value>.
 - f. Allowable Compression Stress, Parallel to the Grain (Fc): [2900 psi (20.0 MPa)][2700 psi (18.6 MPa)][2500 psi (17.2 MPa)]<Insert value>.
 4. Moisture Protection: Factory seal [face,]edge and ends with manufacturer's standard water-resistant coating.
- C. Laminated-Strand Lumber (LSL): [**Preservative-treated, structural**][**Structural**] composite lumber made from wood flake strands with grain primarily parallel to member lengths, evaluated and monitored in accordance with ASTM D5456, and manufactured with exterior-type adhesive complying with ASTM D2559.
 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - a. [Tolko Industries, LTD]
 - b. [Weyerhaeuser Company]
 - c. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Tolko Industries, LTD]
 - b. [Weyerhaeuser Company]
 - c. <Insert manufacturer's name>
 3. Allowable Stresses:
 - a. Extreme Fiber Stress in Bending, Edgewise (Fb): [2900 psi (20.0 MPa)][2360 psi (16.3 MPa)][1900 psi (13.1 MPa)]<Insert value> for 12-inch nominal- (286-mm actual-) depth members.
 - b. Modulus of Elasticity, Edgewise (E): [2,000,000 psi (13 700 MPa)][1,550,000 psi (10 686 MPa)][1,300,000 psi (8 963 MPa)]<Insert value>.
 - c. Minimum Modulus of Elasticity (Em): [1,300,000 psi (8 963 MPa)][1,067,000 psi (7 356 MPa)][915,000 psi (6 308 MPa)][661,000 psi (4 557 MPa)]<Insert value>.
 - d. Horizontal Shear (Fv): [625 psi (4.3 MPa)][525 psi (3.62 MPa)][410 psi (2.83 MPa)]<Insert value>.
 - e. Tension Parallel to Grain (Ft): [3025 psi (20.86 MPa)][2100 psi (14.5 MPa)][1750 psi (12.1 MPa)][1300 psi (9.0 MPa)]<Insert value>.
 - f. Allowable Compression Stress, Parallel to the Grain (Fc): [2505 psi (17.3 MPa)][1950 psi (13.4 MPa)][1650 psi (11.4 MPa)]<Insert value>.
 4. Moisture Protection: Factory seal [face,]edge and ends with manufacturer's standard water-resistant coating.

2.4 PREFABRICATED WOOD I-JOISTS

- A. Prefabricated Units: [**Fire-rated**]I-shaped in cross section, made with solid or structural composite

lumber flanges and wood-based structural webs, let into and bonded to flanges. Comply with material requirements of, and with structural capacities established and monitored in accordance with, ASTM D5055.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Boise Cascade Wood Products, L.L.C.]**
 - b. **[Louisiana-Pacific Corporation]**
 - c. **[Nascor Systems]**
 - d. **[Pacific Woodtech Corporation]**
 - e. **[RedBuilt]**
 - f. **[Roseburg]**
 - g. **[Stark Truss Company, Inc]**
 - h. **[Weyerhaeuser Company]**
 - i. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Boise Cascade Wood Products, L.L.C.]**
 - b. **[Louisiana-Pacific Corporation]**
 - c. **[Nascor Systems]**
 - d. **[Pacific Woodtech Corporation]**
 - e. **[RedBuilt]**
 - f. **[Roseburg]**
 - g. **[Stark Truss Company, Inc]**
 - h. **[Weyerhaeuser Company]**
 - i. **<Insert manufacturer's name>**
3. Flange Material: **[Laminated-veneer][or][machine stress-rated (MSR)]** lumber.
4. Web Material: OSB, Exposure 1 **[with factory-applied fire-resistant panels or intumescent laminate]**.
 - a. Field-applied coatings, panels, and membranes are unacceptable.
5. Structural Properties: Depths and design values not less than those indicated.
6. Identification Marks:
 - a. Comply with APA PRI-400. Factory mark I-joists with APA-EWS trademark indicating nominal joist depth, joist series, referenced standard (APA PRI-400) or APA Product Report number, and manufacturing plant number.
 - b. Factory mark I-joists with manufacturer's name, joist series, mill identification, manufacturing date and time, name of third-party inspection agency, and ICC/CCMC code report number. Repeat identification marks at minimum **12 ft. (3.66 m)** intervals.

2.5 ENGINEERED RIM BOARDS

- A. Prefabricated, structural **[fire-resistant]** panel complying with APA PRR 410, APA PRR 401, or ASTM D7672 for wood frame construction and research or evaluation report for I-joists.

1. Manufacturer: Provide products by same manufacturer as I-joists.
2. Material: **[OSB][or][LVL]**.
3. Thickness: **[1 inch (25 mm)][1-1/8 inches (28 mm)][1-1/4 inches (32 mm)][1-1/2 inches (38 mm)]**.
4. Identification Marks: Comply with APA PRR-401, **[rim board][rim board plus]** grade.
 - a. Factory mark rim board with APA-EWS trademark indicating thickness, grade, and compliance with APA-EWS standard.
 - b. Factory mark rim boards with manufacturer's name, rim board series, mill identification, manufacturing date and time, name of third-party inspection agency, and ICC/CCMC code report number. Repeat identification marks at minimum **12 ft. (3.66 m)** intervals.

2.6 PRESERVATIVE TREATMENT

- A. Description: Preservative treatment; AWPAC U1; Use Category UC2[**for interior construction not in contact with ground, Use Category UC3B for exterior construction not in contact with ground, and Use Category UC4A for items in contact with ground**].
 1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. **[Do not use inorganic boron (SBX) for sill plates.]**
 2. For exposed items indicated to receive a stained or natural finish, chemical formulations must not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.

2.7 FASTENERS

- A. General: Fasteners are to be of size and type indicated and to comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than **1-1/2 inches (38 mm)** into wood substrate.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- D. Wood Screws and Lag Screws: ASME B18.2.1, ASME B18.6.1, or ICC-ES AC233.
- E. Carbon Steel Bolts: ASTM A307 with **ASTM A563 (ASTM A563M)** hex nuts and, where indicated, flat washers all hot-dip zinc coated.
- F. Stainless Steel Bolts: ASTM F593, Alloy Group 1 or 2; with **ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or Grade A4)** hex nuts and, where indicated, flat washers.
- G. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC01][ICC-ES AC58][ICC-ES AC193][or][ICC-ES AC308]** as appropriate for the substrate.

2.8 METAL FRAMING ANCHORS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. [MiTek Industries, Inc.]
 2. [Tamlyn]
 3. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
1. [MiTek Industries, Inc.]
 2. [Tamlyn]
 3. <Insert manufacturer's name>
- C. Allowable design loads, as published by manufacturer, are to meet or exceed those [indicated][of basis-of-design products][of products of manufacturers listed]. Manufacturer's published values are to be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by qualified independent testing agency. Framing anchors are to be punched for fasteners adequate to withstand same loads as framing anchors.
- D. I-Joist Hangers: U-shaped joist hangers with seat and nailing flanges, full depth of joist, as indicated on Drawings. Nailing flanges provide lateral support at joist top chord.
1. Thickness: [0.040 inch (1.0mm)][0.050 inch (1.3 mm)][0.062 inch (1.6 mm)]<Insert thickness>.
 2. Finish: [Galvanized][Stainless steel][Black paint][Black powder coat][Hot-dip galvanized].
- E. Top Flange Hangers: U-shaped joist hangers, full depth of joist, formed from metal strap with tabs bent to extend over and be fastened to supporting member.
1. Strap Width: [1-1/2 inches (38 mm)][2 inches (50 mm)].
 2. Thickness: [0.050 inch (1.3 mm)][0.062 inch (1.6 mm)]<Insert thickness>.
- F. Bridging: Rigid, V-section, nailless type, 0.050 inch (1.3 mm) thick, length to suit joist size and spacing.
- G. Post Bases: Adjustable-socket type for bolting in place with standoff plate to raise post 1 inch (25 mm) above base and with 2-inch- (50-mm-) minimum side cover, socket 0.062 inch (1.6 mm) thick, and standoff and adjustment plates 0.108 inch (2.8 mm) thick.
- H. Joist Ties: Flat straps, with holes for fasteners, for tying joists together over supports.
1. Width: [3/4 inch (19 mm)][1-1/4 inches (32 mm)].
 2. Thickness: [0.050 inch (1.3 mm)][0.062 inch (1.6 mm)].
 3. Length: [16 inches (400 mm)][24 inches (600 mm)][As indicated].
- I. Materials: Unless otherwise indicated, fabricate from the following materials:
1. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, G60 (Z180) coating designation.
 - a. Use for interior locations unless otherwise indicated.
 2. Hot-Dip, Heavy-Galvanized Steel Sheet: ASTM A653/A653M; structural steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); G185 (Z550) coating designation; and not less than 0.036 inch (0.9 mm) thick.
 - a. Use for wood-preservative-treated lumber and where indicated.

3. Stainless steel bars and shapes complying with ASTM A276/A276M, [Type 304][Type 316].
 - a. Use for exterior locations and where indicated.

2.9 MISCELLANEOUS MATERIALS

A. Sill-Sealer Gaskets:

1. Glass-fiber-resilient insulation, fabricated in strip form, for use as sill sealer; **1-inch (25-mm)** nominal thickness, compressible to **1/32 inch (0.8 mm)**; selected from manufacturer's standard widths to suit width of sill members indicated.
2. Closed-cell neoprene foam, **1/4 inch (6.4 mm)** thick, selected from manufacturer's standard widths to suit width of sill members indicated.
3. Self-adhering sheet consisting of **64 mils (1.6 mm)** of rubberized asphalt laminated on one side to **4-mil- (0.10-mm-)** thick, polyethylene-film reinforcement, and with release liner on adhesive side; **formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction**.

- B. Flexible Flashing: Composite, self-adhesive, flashing product consisting of pliable, **[butyl rubber][or][rubberized-asphalt]** compound, bonded to high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce overall thickness of not less than **0.025 inch (0.6 mm)**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Verify that joist flange widths match hanger widths.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Do not install in direct contact with concrete or masonry.
- B. Where wood-preservative-treated members are installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- C. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
1. Use treatment approved in writing by manufacturer.

3.3 INSTALLATION OF STRUCTURAL COMPOSITE LUMBER

- A. Install to comply with ESR report, manufacturer's written instructions, and applicable code.
1. Install in dry, covered conditions where average in-service moisture content of lumber is 16 percent or less.

2. Install metal framing connections in accordance with AWC's "National Design Specification (NDS) for Wood Construction." Install fasteners through each fastener hole.
 - a. Connections based on NDS or manufacturer's test or code reports.
 3. Install lumber plumb and level. Accurately fit, align, securely fasten, and install free from distortion or defects.
 4. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.
- B. Cutting: Confirm size and location of field cutting, notching, and drilling with ESR report, registered design professional, and manufacturer.

3.4 INSTALLATION OF PREFABRICATED WOOD I-JOISTS

- A. Install to comply with ESR report, manufacturer's written instructions, and applicable code.
1. Install in dry, covered conditions where in-service moisture content of wood does not exceed 16 percent.
 2. Install metal framing connections in accordance with AWC's "National Design Specification (NDS) for Wood Construction." Install fasteners through each fastener hole.
 3. Install joists with top and bottom flanges within **1/2 inch (12.7 mm)** of true vertical alignment, and support ends of each member with not less than **1-3/4 inches (44.5 mm)** for end bearing and **3-1/2 inches (76 mm)** for intermediate bearings.
 4. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.
 5. Provide lateral restraint at supports to prevent rotation, and along the compression flange of each joist.
 6. Completely install and properly nail hangers, rim joists, rim boards, blocking panels, and x-bracing as each joist is set.
- B. Cantilevered portions of joists must not exceed a maximum length equal to one-third the adjacent span, and support only uniform loads, unless designed by a design professional and approved by authorities having jurisdiction.
1. Temporarily secure ends of cantilevers with strut lines on both top and bottom flanges. Remove only as required to install permanent sheathing.
- C. Cutting: Do not splice structural members between supports unless otherwise indicated.
1. Do not cut, drill, or notch I-joist top and bottom flanges except for cutting to length.

3.5 INSTALLATION OF ENGINEERED RIM BOARDS

- A. Install at bearing walls perpendicular to and supported by I-joists that require full-depth blocking, or rim joists, at supports.
- B. Sill Sealer Gasket: Install to form continuous seal between sill plates and foundation walls.

3.6 PROTECTION

- A. Protect wood that has been treated with SBX from weather. If, despite protection, SBX-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

SECTION 06 17 53 00 - SHOP-FABRICATED WOOD TRUSSES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood products.
 - 2. Preservative-treated lumber.
 - 3. Fire-retardant-treated lumber.

1.2 ALLOWANCES

- A. Provide wood truss bracing under the Metal-Plate-Connected Truss Bracing Allowance as specified in Section 012100 "Allowances."

1.3 DEFINITIONS

- A. Metal-Plate-Connected Wood Trusses: Planar structural units consisting of metal-plate-connected members fabricated from dimension lumber and cut and assembled before delivery to Project site.

1.4 ACTION SUBMITTALS

- A. Product Data: For **[wood-preservative-treated lumber,][fire-retardant-treated lumber,]** metal-plate connectors, metal truss accessories, and fasteners.
 - 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification from treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - 2. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification from treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - 3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
 - 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to truss fabricator.
- B. Sustainable Design Submittals:
 - 1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
 - 2. Environmental Product Declaration (EPD): For each product.
 - 3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
 - 4. Environmental Product Declaration: For each product.

5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
11. Chain-of-Custody Qualification Data: For manufacturer and vendor.

C. Shop Drawings: Show fabrication and installation details for trusses.

1. Show location, pitch, span, camber, configuration, and spacing for each type of truss required.
2. Indicate sizes, stress grades, and species of lumber.
3. Indicate locations of permanent bracing required to prevent buckling of individual truss members due to design loads.
4. Indicate locations, sizes, and materials for permanent bracing required to prevent buckling of individual truss members due to design loads.
5. Indicate type, size, material, finish, design values, orientation, and location of metal connector plates.
6. Show splice details and bearing details.

D. Delegated Design Submittals: For metal-plate-connected wood trusses indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[metal connector-plate manufacturer][professional engineer][and][fabricator]**.
- B. Material Certificates: For dimension lumber specified to comply with minimum specific gravity. Indicate species and grade selected for each use and specific gravity.
- C. Product Certificates: For metal-plate-connected wood trusses, signed by officer of truss-fabricating firm.
- D. Evaluation Reports: For the following, from ICC-ES:
 1. Wood-preservative-treated lumber.
 2. Fire-retardant-treated wood.
 3. Metal-plate connectors.
 4. Metal truss accessories.

1.6 QUALITY ASSURANCE

- A. Metal Connector-Plate Manufacturer Qualifications: A manufacturer that is a member of TPI and that complies with quality-control procedures in TPI 1 for manufacture of connector plates.
 1. Manufacturer's responsibilities include providing professional engineering services needed to assume engineering responsibility.
 2. Engineering Responsibility: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

- B. Fabricator Qualifications: Shop that **[participates in a recognized quality-assurance program, complies with quality-control procedures in TPI 1, and involves third-party inspection by an independent testing and inspecting agency acceptable to Architect and authorities having jurisdiction][and][is certified for chain of custody by an FSC-accredited certification body]**.
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- E. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- F. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- G. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Handle and store trusses to comply with recommendations in SBCA BCSI, "Building Component Safety Information: Guide to Good Practice for Handling, Installing, Restraining, & Bracing Metal Plate Connected Wood Trusses."
 - 1. Store trusses flat, off of ground, and adequately supported to prevent lateral bending.
 - 2. Protect trusses from weather by covering with waterproof sheeting, securely anchored.
 - 3. Provide for air circulation around stacks and under coverings.
- B. Inspect trusses showing discoloration, corrosion, or other evidence of deterioration. Discard and replace trusses that are damaged or defective.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design metal-plate-connected wood trusses.
- B. Structural Performance: Metal-plate-connected wood trusses are to be capable of withstanding design loads within limits and under conditions indicated. Comply with requirements in TPI 1 unless more stringent requirements are specified below.
 - 1. Design Loads: As indicated.
 - 2. Maximum Deflection under Design Loads:
 - a. Roof Trusses: Vertical deflection of **[1/180][1/240][1/360]** of span.
 - b. Floor Trusses: Vertical deflection of **[1/360][1/480][1/600]** of span.

- C. Comply with applicable requirements and recommendations of TPI 1, TPI DSB, and SBCA BCSI.
- D. Wood Structural Design Standard: Comply with applicable requirements in AF&PA's "National Design Specifications for Wood Construction" and its "Supplement."
- E. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- G. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- H. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- I. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- J. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- K. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- L. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- M. Certified Wood: Wood products shall [**contain not less than 60 percent**][**be made from**] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- N. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.

2.2 WOOD PRODUCTS

- A. Lumber: DOC PS 20 and applicable rules of any rules-writing agency certified by the American Lumber Standard Committee (ALSC) Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. For exposed lumber indicated to receive a stained or natural finish, omit grade stamp and provide certificates of grade compliance issued by grading agency.

3. Provide dressed lumber, S4S.
4. Provide dry lumber with **[15][19]** percent maximum moisture content at time of dressing.
- B. Minimum Chord Size for Roof Trusses: **[2 by 6 inches nominal (38 by 140 mm actual) for top chords][2 by 6 inches nominal (38 by 140 mm actual) for bottom chords][2 by 6 inches nominal (38 by 140 mm actual) for both top and bottom chords]**.
- C. Minimum Specific Gravity for Top Chords: **[0.50]<Insert value>**.
- D. Permanent Bracing: Provide wood bracing that complies with requirements for miscellaneous lumber in Section 061000 "Rough Carpentry."

2.3 PRESERVATIVE-TREATED LUMBER

- A. Preservative Treatment by Pressure Process: AWP A U1; Use Category UC2**[for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground]**.
 1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
 2. For exposed trusses indicated to receive a stained or natural finish, use chemical formulations that do not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
 1. For exposed trusses indicated to receive a stained or natural finish, **[mark end or back of each piece][or][omit marking and provide certificates of treatment compliance issued by inspection agency]**.
- D. Application: Treat **[all trusses unless otherwise indicated][trusses where indicated on Drawings]**.

2.4 FIRE-RETARDANT-TREATED LUMBER

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products according to test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
 1. Use treatment that does not promote corrosion of metal fasteners.
 2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.
 3. Interior Type A: Treated materials are to have a moisture content of 28 percent or less when tested in accordance with ASTM D3201 at 92 percent relative humidity. Use for interior locations

where exterior type is not indicated.

4. Design Value Adjustment Factors: Treated lumber is to be tested in accordance with ASTM D5664, and design value adjustment factors is to be calculated in accordance with ASTM D6841. **For enclosed roof framing and framing in attic spaces, and where high-temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.]**

- C. Kiln-dry lumber after treatment to a maximum moisture content of **[15][19]** percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.
 1. For exposed trusses and bracing indicated to receive a stained or natural finish, **[mark end or back of each piece][or][omit marking and provide certificates of treatment compliance issued by inspection agency].**
- E. For exposed trusses indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat **[all trusses unless otherwise indicated.][items indicated on Drawings, and the following:]**
 1. Floor trusses.
 2. Roof trusses.
 3. **<Insert category of trusses required to be treated>.**

2.5 METAL CONNECTOR PLATES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:]**
 1. **[Alpine, a division of ITW Inc.]**
 2. **[Cherokee Metal Products, Inc.; Masengill Machinery Company]**
 3. **[Eagle Metal Products]**
 4. **[MiTek Industries, Inc.]**
 5. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **[Alpine, a division of ITW Inc.]**
 2. **[Cherokee Metal Products, Inc.; Masengill Machinery Company]**
 3. **[Eagle Metal Products]**
 4. **[MiTek Industries, Inc.]**
 5. **<Insert manufacturer's name>**
- C. Fabricate connector plates to comply with TPI 1.
- D. Hot-Dip Galvanized-Steel Sheet: ASTM A653/A653M; Structural Steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); **G60 (Z180)** coating designation; and not less than **0.036 inch (0.9 mm)** thick.

1. Use for interior locations unless otherwise indicated.
- E. Hot-Dip Heavy-Galvanized-Steel Sheet: ASTM A653/A653M; Structural Steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); **G185 (Z550)** coating designation; and not less than **0.036 inch (0.9 mm)** thick.
 1. Use for wood-preservative-treated lumber and where indicated.
- F. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316]**, and not less than **0.035 inch (0.88 mm)** thick.
 1. Use for exterior locations[, **wood-preservative-treated lumber,**][**fire-retardant treated lumber,**] and where indicated.

2.6 FASTENERS

- A. Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 1. Provide fasteners for use with metal framing anchors that comply with written recommendations of metal framing manufacturer.
 2. Where trusses are exposed to weather, in ground contact, made from pressure-preservative treated wood, or in area of high relative humidity, provide fasteners **[with hot-dip zinc coating complying with ASTM A153/A153M][of Type 304 stainless steel]**.
- B. Nails, Brads, and Staples: ASTM F1667.

2.7 METAL FRAMING ANCHORS AND ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 1. **<Insert manufacturer's name>**
- C. Allowable design loads, as published by manufacturer, are to comply with or exceed those **[indicated][of basis-of-design products][of products of manufacturers listed]**. Manufacturer's published values are to be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency. Framing anchors are to be punched for fasteners adequate to withstand same loads as framing anchors.
- D. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, **G60 (Z180)** coating designation.
 1. Use for interior locations unless otherwise indicated.
- E. Hot-Dip Heavy-Galvanized-Steel Sheet: ASTM A653/A653M; Structural Steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); **G185**

(Z550) coating designation; and not less than **0.036 inch (0.9 mm)** thick.

1. Use for wood-preserved-treated lumber and where indicated.

F. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, **[Type 304][Type 316]**.

1. Use for exterior locations and where indicated.

G. Truss Tie-Downs: Bent strap tie for fastening roof trusses to wall studs below, **1-1/2 inches (38 mm)** wide by **0.050 inch (1.3 mm)** thick. **[Tie fastens to one side of truss, top plates, and side of stud below.]**

H. Truss Tie-Downs (Hurricane or Seismic Ties): Bent strap tie for fastening roof trusses to wall studs below, **2-1/4 inches (57 mm)** wide by **0.062 inch (1.6 mm)** thick. Tie fits over top of truss and fastens to both sides of truss, top plates, and one side of stud below.

I. Roof Truss Clips: Angle clips for bracing bottom chord of roof trusses at non-load-bearing walls, **1-1/4 inches (32 mm)** wide by **0.050 inch (1.3 mm)** thick. Clip is fastened to truss through slotted holes to allow for truss deflection.

J. Floor Truss Hangers: U-shaped hangers, full depth of floor truss, with **1-3/4-inch- (44-mm-)** long seat; formed from metal strap **0.062 inch (1.6 mm)** thick with tabs bent to extend over and be fastened to supporting member.

K. Roof Truss Bracing/Spacers: U-shaped channels, **1-1/2 inches (38 mm)** wide by **1 inch (25 mm)** deep by **0.040 inch (1.0 mm)** thick, made to fit between two adjacent trusses and accurately space them apart, and with tabs having metal teeth for fastening to trusses.

L. Drag Strut Connectors: Angle clip with one leg extended for fastening to the side of girder truss.

1. Angle clip is **3 by 3 by 0.179 by 8 inches (76 by 76 by 4.55 by 203 mm)** with extended leg **8 inches (203 mm)** long. Connector has galvanized finish.
2. Angle clip is **3 by 3 by 0.239 by 10-1/2 inches (76 by 76 by 6.07 by 267 mm)** with extended leg **10-1/2 inches (267 mm)** long. Connector has painted finish.

2.8 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: SSPC-Paint 20, with dry film containing a minimum of 92 percent zinc dust by weight.

2.9 FABRICATION

A. Cut truss members to accurate lengths, angles, and sizes to produce close-fitting joints.

B. Fabricate metal connector plates to sizes, configurations, thicknesses, and anchorage details required to withstand design loads for types of joint designs indicated.

C. Assemble truss members in design configuration indicated; use jigs or other means to ensure uniformity and accuracy of assembly, with joints closely fitted to comply with tolerances in TPI 1. Position members to produce design camber indicated.

1. Fabricate wood trusses within manufacturing tolerances in TPI 1.

- D. Connect truss members by metal connector plates located and securely embedded simultaneously in both sides of wood members by air or hydraulic press.

2.10 SOURCE QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform special inspections.
 - 1. Provide special inspector with access to fabricator's documentation of detailed fabrication and quality-control procedures that provide a basis for inspection control of the workmanship and the fabricator's ability to conform to approved construction documents and referenced standards.
 - 2. Provide special inspector with access to places where wood trusses are being fabricated to perform inspections.
- B. Correct deficiencies in Work that special inspections indicate do not comply with the Contract Documents.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install wood trusses only after supporting construction is in place and is braced and secured.
- B. If trusses are delivered to Project site in more than one piece, assemble trusses before installing.
- C. Hoist trusses in place by lifting equipment suited to sizes and types of trusses required, exercising care not to damage truss members or joints by out-of-plane bending or other causes.
- D. Install and brace trusses according to TPI recommendations and as indicated.
- E. Install trusses plumb, square, and true to line and securely fasten to supporting construction.
- F. Space trusses [**16 inches (406 mm) o.c.**][**24 inches (610 mm) o.c.**][**as indicated**]; adjust and align trusses in location before permanently fastening.
- G. Anchor trusses securely at bearing points; use metal truss tie-downs or floor truss hangers as applicable. Install fasteners through each fastener hole in metal framing anchors according to manufacturer's fastening schedules and written instructions.
- H. Securely connect each truss ply required for forming built-up girder trusses.
 - 1. Anchor trusses to girder trusses as indicated.
- I. Install and fasten permanent bracing during truss erection and before construction loads are applied. Anchor ends of permanent bracing where terminating at walls or beams.
 - 1. Install bracing to comply with Section 061000 "Rough Carpentry."
 - 2. Install and fasten strongback bracing vertically against vertical web of parallel-chord floor trusses at centers indicated.
- J. Install wood trusses within installation tolerances in TPI 1.
- K. Do not alter trusses in field. Do not cut, drill, notch, or remove truss members.

- L. Replace wood trusses that are damaged or do not comply with requirements.
 - 1. Damaged trusses may be repaired according to truss repair details signed and sealed by the qualified professional engineer responsible for truss design, when approved by Architect.

3.2 REPAIRS AND PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect wood trusses from weather. If, despite protection, wood trusses become wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- C. Repair damaged galvanized coatings on exposed surfaces in accordance with ASTM A780/A780M and manufacturer's written instructions.

3.3 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform special inspections to verify that temporary installation restraint/bracing and the permanent individual truss member restraint/bracing are installed in accordance with the approved truss submittal package.

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 17 53 00	06 17 00 00	Engineered Structural Wood

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 18 00 00 - GLUED-LAMINATED CONSTRUCTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural glued-laminated timber.
2. Timber connectors.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for dimension lumber items associated with structural glued-laminated timber.
2. Section 061300 "Heavy Timber Construction" for framing using **[timbers][and][round wood poles]**.
3. Section 061516 "Wood Roof Decking" for glued-laminated wood roof decking.

1.2 DEFINITIONS

- A. Structural Glued-Laminated (Glulam) Timber: An engineered, stress-rated timber product assembled from selected and prepared wood laminations bonded together with adhesives and with the grain of the laminations approximately parallel longitudinally.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on lumber, adhesives, fabrication, and protection.
2. For preservative-treated wood products. Include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
3. For connectors. Include installation instructions.

B. Sustainable Design Submittals:

1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
2. Chain-of-Custody Qualification Data: For manufacturer and vendor.
3. Product Data: For laminating adhesives, indicating that product contains no urea formaldehyde.
4. Laboratory Test Reports: For laminating adhesives, indicating compliance with requirements for low-emitting materials.
5. Laboratory Test Reports: For laminating adhesives, indicating compliance with requirements for low-emitting materials.
6. Product Data: For laminating adhesives, indicating that product contains no urea formaldehyde.
7. Product Data: For laminating adhesives, indicating that product contains no urea formaldehyde.

C. Shop Drawings:

1. Show layout of structural glued-laminated timber system and full dimensions of each member.
2. Indicate species and laminating combination.

3. Include large-scale details of connections.

D. Samples: Full width and depth, **24 inches (600 mm)** long, showing the range of variation to be expected in appearance of structural glued-laminated timber[**including variations due to specified treatment**].

1. Apply specified factory finish to three sides of half length of each Sample.

E. Delegated Design Submittal: For structural glued-laminated timber and timber connectors.

1.4 INFORMATIONAL SUBMITTALS

A. Certificates of Conformance: Issued by a qualified testing and inspecting agency indicating that structural glued-laminated timber complies with requirements in ANSI A190.1.

B. Material Certificates: For preservative-treated wood products, from manufacturer. Indicate type of preservative used and net amount of preservative retained.

C. Research/Evaluation Reports: For **[structural glued-laminated timber][and][timber connectors]**, from ICC-ES.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: **[An AITC- or APA-EWS-licensed firm][certified for chain of custody by an FSC-accredited certification body]**.

B. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

C. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.

D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

E. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with provisions in AITC 111.

B. Individually wrap members using plastic-coated paper covering with water-resistant seams.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality

Requirements," to design structural glued-laminated timber and connectors.

- B. Structural Performance: Structural glued-laminated timber and connectors are to withstand the effects of structural loads shown on Drawings without exceeding allowable design working stresses listed in ANSI 117 or determined according to ASTM D3737 and acceptable to authorities having jurisdiction.
- C. Seismic Performance: Structural glued-laminated timber and connectors are to withstand the effects of earthquake motions determined according to [ASCE/SEI 7]<Insert requirement>.

2.2 STRUCTURAL GLUED-LAMINATED TIMBER

- A. General: Provide structural glued-laminated timber that complies with ANSI A190.1 and ANSI 117 or research/evaluation reports acceptable to authorities having jurisdiction.
 - 1. Factory mark each piece of structural glued-laminated timber with AITC Quality Mark or APA-EWS trademark. Place mark on surfaces that are not exposed in the completed Work.
 - 2. Provide structural glued-laminated timber made from single species.
 - 3. Provide structural glued-laminated timber made from solid lumber laminations; do not use laminated veneer lumber.
 - 4. Provide structural glued-laminated timber made with wet-use adhesive complying with ANSI A190.1.
 - 5. Adhesives: Do not use adhesives that contain urea formaldehyde.
 - 6. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 7. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 8. Adhesives: Do not use adhesives that contain urea formaldehyde.
 - 9. Adhesives: Do not use adhesives that contain urea formaldehyde.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to

FSC STD-01-001 and FSC STD-40-004.

- I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- J. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- L. Species and Grades for Structural Glued-Laminated Timber:
 1. **[Alaska cedar][Douglas fir-larch][Southern pine][Any species]<Insert species>** in grades needed to comply with "Performance Requirements" Article.
 2. **[Alaska cedar][Douglas fir-larch][Southern pine][Any species]<Insert species>** that complies with **[structural properties][combination symbols][beam stress classifications]** indicated.
- M. Species and Grades: For **[beams][and][purlins]**.
 1. Species and Beam Stress Classification: **[Ponderosa pine, 16F-1.3E][Alaska cedar, 20F-1.5E][Eastern spruce, 20F-1.5E][Any species, 20F-1.5E][Any species, 24F-1.7E][Douglas fir-larch, 24F-1.8E][Southern pine, 24F-1.8E][Douglas fir-larch or southern pine, 24F-1.8E][Southern pine, 30F-2.1E]<Insert species and beam stress classification>**.
 2. Lay-up: **[Balanced][Either balanced or unbalanced]**.
 3. Species and Combination Symbol: **<Insert species and combination symbol>**.
- N. Species and Grades for Arches:
 1. Species and Beam Stress Classification: **[Alaska cedar, 20F-1.5E][Eastern spruce, 20F-1.5E][Any species, 20F-1.5E][Any species, 24F-1.7E][Douglas fir-larch, 24F-1.8E][Southern pine, 24F-1.8E][Douglas fir-larch or southern pine, 24F-1.8E]<Insert species and beam stress classification>**.
 2. Lay-up: **[Balanced][Either balanced or unbalanced]**.
 3. Species and Combination Symbol: **[Alaska cedar, 20F-V13 WS][Douglas fir-larch, 24F-V8 WS][Southern pine, 24F-V5 SP][Alaska cedar, 20F-V12 WS][Douglas fir-larch, 24F-V4 WS][Southern pine, 24F-V3 SP]<Insert species and combination symbol>**.
- O. Species and Grades for **[Columns][and][Truss Members]**:
 1. Species and Combination Symbol: **[Alaska cedar, 70][Douglas fir-larch, 1][Douglas fir-larch, 3][Southern pine, 47][Southern pine, 50]<Insert species and combination symbol>**.
- P. Appearance Grade: **[Premium][Architectural][Industrial][Framing]**, complying with AITC 110.
 1. For Premium and Architectural appearance grades, fill voids as required by AITC 110.**[For Premium appearance grade, use clear wood inserts, of matching grain and color, for filling voids and knot holes more than 1/4 inch (6 mm) wide.]**

2.3 PRESERVATIVE TREATMENT

- A. Preservative Treatment: Where preservative-treated structural glued-laminated timber is indicated, comply with AWP A U1, Use **[Category 1][Category 2][Category 3A][Category 3B][Category 4A]**.
 - 1. Use preservative solution without **[water repellents or]** substances that might interfere with application of indicated finishes.
 - 2. Do not incise structural glued-laminated timber or wood used to produce structural glued-laminated timber.
- B. Preservative: **[One of the following:]**
 - 1. Oxine copper (copper-8-quinolinolate) in a light petroleum solvent.
 - 2. Pentachlorophenol in light petroleum solvent.
 - 3. Copper naphthenate in a light petroleum solvent.
 - 4. Ammoniacal zinc copper arsenate (ACZA) in a water solution.
 - 5. Chromated copper arsenate (CCA) in a water solution.
 - 6. Ammoniacal copper quat Type A (ACQ-C) in a water solution.
 - 7. Propiconazole tebuconazole imidacloprid (PTI) in a water emulsion.
- C. After dressing members, apply a copper naphthenate field-treatment preservative to comply with AWP A M4 to surfaces cut to a depth of more than **1/16 inch (1.5 mm)**.

2.4 TIMBER CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **[Simpson Strong-Tie Co., Inc.]**
 - 2. **[USP Structural Connectors]**
 - 3. **<Insert manufacturer's name>**
- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - 1. **[Simpson Strong-Tie Co., Inc.]**
 - 2. **[USP Structural Connectors]**
 - 3. **<Insert manufacturer's name>**
- C. Fabricate beam seats from **[steel][stainless steel]** with **[0.239-inch (6-mm)][3/16-inch (5-mm)][3/8-inch (9.5-mm)]** bearing plates, **3/4-inch- (19-mm-)** diameter-by-**12-inch- (300-mm-)** long deformed bar anchors, and **0.239-inch (6-mm)** side plates.
- D. Fabricate arch base shoes from **[steel][stainless steel]** with **1-inch (25-mm)** baseplates and **3/8-inch (9.5-mm)** side plates.
- E. Fabricate beam hangers from **[steel][stainless steel]** with **0.179-inch (4.6-mm)** stirrups and **0.239-inch (6-mm)** top plates.
- F. Fabricate hinge connectors from **[steel][stainless steel]** with **0.179-inch (4.6-mm)** side plates and **[3/4-inch (19-mm)][1-inch (25-mm)]** top and bottom plates.
- G. Fabricate strap ties from **[steel][stainless steel]**, **[2-1/2 inches (63 mm) wide by 0.179 inch (4.6 mm)][3 inches (75 mm) wide by 0.239 inch (6 mm)]** thick.

- H. Fabricate tie rods from round steel bars with upset threads connected with forged-steel turnbuckles complying with ASTM A668/A668M.
- I. Provide bolts, **3/4 inch (19 mm)** unless otherwise indicated, complying with **ASTM A307, Grade A (ASTM F568M, Property Class 4.6)**; nuts complying with **ASTM A563 (ASTM A563M)**; and, where indicated, flat washers.
- J. Provide shear plates, **[2-5/8 inches (66.7 mm)][4 inches (102 mm)]** in diameter, complying with ASTM D5933.
- K. Materials: Unless otherwise indicated, fabricate from the following materials:
 - 1. Structural-steel shapes, plates, and flat bars complying with ASTM A36/A36M.
 - 2. Round steel bars complying with ASTM A575, Grade M 1020.
 - 3. Hot-rolled steel sheet complying with ASTM A1011/A1011M, Structural Steel, Type SS, Grade 33.
 - 4. Stainless steel flat bars complying with ASTM A666, **[Type 304][Type 316]**.
 - 5. Stainless steel bars and shapes complying with ASTM A276, **[Type 304][Type 316]**.
 - 6. Stainless steel plate, sheet, and strip complying with ASTM A240/A240M or ASTM A666, **[Type 304][Type 316]**.
- L. Finish steel assemblies and fasteners with rust-inhibitive primer, **2-mil (0.05-mm)** dry film thickness.
- M. Hot-dip galvanize steel assemblies and fasteners after fabrication to comply with ASTM A123/A123M or ASTM A153/A153M.

2.5 MISCELLANEOUS MATERIALS

- A. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.
- B. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.

2.6 FABRICATION

- A. Shop fabricate for connections to greatest extent possible, including cutting to length and drilling bolt holes.
 - 1. Dress exposed surfaces as needed to remove planing and surfacing marks.
- B. Camber: Fabricate horizontal and inclined members of less than 1:1 slope with either circular or parabolic camber equal to 1/500 of span.
- C. Where preservative-treated members are indicated, fabricate (cut, drill, surface, and sand) before treatment to greatest extent possible. Where fabrication must be done after treatment, apply a field-treatment preservative to comply with AWPA M4.
 - 1. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
 - 2. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.

- D. End-Cut Sealing: Immediately after end cutting each member to final length[**and after preservative treatment**], apply a saturation coat of end sealer to ends and other cross-cut surfaces, keeping surfaces flood coated for not less than 10 minutes.
- E. Seal Coat: After fabricating, sanding, and end-coat sealing, apply a heavy saturation coat of penetrating sealer on surfaces of each unit[**except for preservative-treated wood where treatment included a water repellent**].

2.7 FACTORY FINISHING

- A. Clear Finish: Manufacturer's standard, resistant to mildew and fungus.
 - 1. Water repellent.
 - 2. Film-forming two-coat, [varnish][urethane].
- B. Semitransparent Stain Finish: Manufacturer's standard oil-based stain, resistant to mold and fungus.
 - 1. Color: [As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color>.
- C. Solid-Color Stain Finish: Manufacturer's standard [oil-based][latex] penetrating stain, resistant to mildew and fungus.
 - 1. Color: [As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color>.
- D. Painted Finish: Acrylic latex system.
 - 1. Prime Coat: Stain blocking primer as recommended by topcoat manufacturer.
 - 2. Intermediate Coat: Matching topcoat.
 - 3. Topcoat: High-performance architectural coating, [low sheen][eggshell][satin][semigloss].
 - 4. Color: [Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert color>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates in areas to receive structural glued-laminated timber, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Erect structural glued-laminated timber true and plumb and with uniform, close-fitting joints. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.
 - 1. Handle and temporarily support glued-laminated timber to prevent surface damage, compression,

and other effects that might interfere with indicated finish.

- B. Framing Built into Masonry: Provide **1/2-inch (13-mm)** clearance at tops, sides, and ends of members built into masonry; bevel cut ends **3 inches (76 mm)**; and do not embed more than **4 inches (102 mm)** unless otherwise indicated.
- C. Cutting: Avoid extra cutting after fabrication. Where field fitting is unavoidable, comply with requirements for shop fabrication.
- D. Fit structural glued-laminated timber by cutting and restoring exposed surfaces to match specified surfacing[**and finishing**].
 - 1. Predrill for fasteners using timber connectors as templates.
 - 2. Finish exposed surfaces to remove planing or surfacing marks and to provide a finish equivalent to that produced by machine sanding with No. 120 grit sandpaper.
 - 3. Coat cross cuts with end sealer.
 - 4. Where preservative-treated members must be cut during erection, apply a field-treatment preservative to comply with AWP A M4.
 - a. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
 - b. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.
- E. Install timber connectors as indicated.
 - 1. Unless otherwise indicated, install bolts with same orientation within each connection and in similar connections.
 - 2. Install bolts with orientation as indicated or, if not indicated, as directed by Architect.

3.3 ADJUSTING

- A. Repair damaged surfaces[**and finishes**] after completing erection. Replace damaged structural glued-laminated timber if repairs are not approved by Architect.

3.4 PROTECTION

- A. Do not remove wrappings on individually wrapped members until they no longer serve a useful purpose, including protection from weather, sunlight, soiling, and damage from work of other trades.
 - 1. Coordinate wrapping removal with finishing work. Retain wrapping where it can serve as a painting shield.
 - 2. Slit underside of wrapping to prevent accumulation of moisture inside the wrapping.

END OF SECTION 06 18 00 00

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 18 13 00	06 18 00 00	Glued-Laminated Construction
06 18 16 00	06 10 00 00	Rough Carpentry

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 20 00 00 - EXTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior trim.
2. Lumber siding.
3. Plywood siding.
4. Engineered wood siding.
5. Lumber soffits.
6. Plywood soffits.
7. Engineered wood soffits.

1.2 DEFINITIONS

- A. MDO:** Plywood with a medium-density overlay on the face.
- B. PVC:** Polyvinyl chloride.

1.3 ACTION SUBMITTALS

- A. Product Data:** For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.
1. Include data for wood-preservative treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained. Include chemical-treatment manufacturer's written instructions for finishing treated material.
 2. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced before shipment to Project site to levels specified.
- B. Sustainable Design Submittals:**
1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
 2. Environmental Product Declaration (EPD): For each product.
 3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
 4. Environmental Product Declaration: For each product.
 5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
 6. Environmental Product Declaration: For each product.
 7. Environmental Product Declaration: For each product.
 8. Third-Party Certifications: For each product.

9. Third-Party Certified Life Cycle Assessment: For each product.
10. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
11. Chain-of-Custody Qualification Data: For manufacturer and vendor.

- C. Samples: For each exposed product and for each color and texture specified.
- D. Samples for Initial Selection: For each type of product involving selection of colors, profiles, or textures.
- E. Samples for Verification:
1. For each species and cut of lumber and panel products, with half of exposed surface finished; **50 sq. in. (300 sq. cm)** for lumber and **8 by 10 inches (200 by 250 mm)** for panels.
 2. For engineered wood [siding][and][soffits], **50 sq. in. (300 sq. cm)** for board types and **8 by 10 inches (200 by 250 mm)** for panels.
 3. For cellular PVC trim, with half of exposed surface finished; **50 sq. in. (300 sq. cm)**.
 4. For foam-plastic moldings, with half of exposed surface finished; **50 sq. in. (300 sq. cm)**.

1.4 INFORMATIONAL SUBMITTALS

- A. Compliance Certificates:
1. For lumber that is not marked with grade stamp.
 2. For preservative-treated wood that is not marked with treatment-quality mark.
- B. Evaluation Reports: For the following, from ICC-ES:
1. Wood-preservative-treated wood.
 2. Cellular PVC trim.
 3. Foam-plastic moldings.
- C. Sample Warranties: For manufacturer's warranties.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation.

1. Protect materials from weather by covering with waterproof sheeting, securely anchored.
2. Provide for air circulation around stacks and under coverings.

1.7 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecast weather conditions permit work to be performed and at least one coat of specified finish can be applied without exposure to rain, snow, or dampness.
- B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

1.8 WARRANTY

- A. Engineered Wood Manufacturer's Warranty: Manufacturer agrees to repair or replace components of engineered wood siding [soffits][and][trim] that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, deformation or deterioration beyond normal weathering.
 2. Warranty Period for Factory-Applied Finish: [Five]<Insert number> years from date of Substantial Completion.
 3. Warranty Period: Siding [Soffits][and][Trim] (Excluding Finish), [25]<Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Regional Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
 1. Exterior trim.
 2. Exterior [lumber][plywood][hardboard] siding.
 3. Exterior [plywood][hardboard] soffits.
 4. Exterior [stairs][and][railings].
- B. Regional Materials: The following wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
 1. Exterior trim.
 2. Exterior [lumber][plywood][hardboard] siding.
 3. Exterior [plywood][hardboard] soffits.
 4. Exterior [stairs][and][railings].
- C. Indigenous Materials: The following wood products shall be manufactured within **500 miles (800 km)** of

Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

D. Regional Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

E. Certified Wood: The following wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-00 and FSC STD-40-004.

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

F. Certified Wood: The following wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

G. Certified Wood: The following wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

H. Certified Wood: The following wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "Technical Barriers to Trade."

1. Exterior trim.
2. Exterior **[lumber][plywood][hardboard]** siding.
3. Exterior **[plywood][hardboard]** soffits.
4. Exterior **[stairs][and][railings]**.

- I. Certified Wood: The following wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
 1. Exterior trim.
 2. Exterior [lumber][plywood][hardboard] siding.
 3. Exterior [plywood][hardboard] soffits.
 4. Exterior [stairs][and][railings].
- J. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with applicable rules of any rules-writing agency certified by the American Lumber Standard Committee's (ALSC) Board of Review. Grade lumber by an agency certified by the ALSC's Board of Review to inspect and grade lumber under the rules indicated.
 1. Factory mark each piece of lumber with grade stamp of inspection agency, indicating grade, species, moisture content at time of surfacing, and mill.
 2. For exposed lumber, mark grade stamp on end or back of each piece[, or omit grade stamp and provide certificates of grade compliance issued by inspection agency].
- K. Softwood Plywood: DOC PS 1.
- L. Hardboard: ANSI A135.4.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Water-Repellent Preservative Treatment by Nonpressure Process: AWWA N1; dip, spray, flood, or vacuum-pressure treatment.
 1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, combined with an insecticide containing chlorpyrifos (CPF)]<Insert requirement>.
 2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
 3. Application: [Items not required to be pressure-preservative treated][Exterior trim][and][wood siding]<Insert application>.
- B. Preservative Treatment by Pressure Process: AWWA U1; Use Category [UC3a][UC3b].
 1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent, respectively.
 2. Preservative Chemicals: Acceptable to authorities having jurisdiction[and containing no arsenic or chromium].
 3. For exposed items indicated to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes.
 4. Do not use material that is warped or does not comply with requirements for untreated material.
 5. Mark lumber with treatment-quality mark of an inspection agency approved by the ALSC's Board of Review.
 - a. For exposed lumber indicated to receive a stained or natural finish, [mark end or back of each piece][or][omit marking and provide certificates of treatment compliance issued by inspection agency].
 6. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
 - a. For exposed plywood indicated to receive a stained or natural finish, mark back of each

piece.

7. Application: **[Where indicated on Drawings][All exterior lumber and plywood]<Insert application>.**

2.3 EXTERIOR TRIM

A. Lumber Trim for Transparent Finish (Stain or Clear Finish):

1. Species and Grade:
 - a. Redwood; RIS **[Clear All Heart][Heart B][Clear][Grade B]**.
 - b. Western red cedar; NLGA, WCLIB, or WWPA **[Clear Heart VG (Vertical Grain)][Clear Heart][Grade A][Grade B]**.
 - c. Hem-fir; pressure-preservative treated; NLGA, WCLIB, or WWPA **[1 Common][2 Common]**.
 - d. Southern pine; pressure-preservative treated; SPIB **[B & B][C & Btr][D]**.
2. Maximum Moisture Content: **[19][15] percent[with at least 85 percent of shipment at 12 percent or less].**
3. Finger Jointing: **[Not allowed][Allowed if made with wet-use adhesive complying with ASTM D5572].**
4. Face Surface: **[Surfaced (smooth)][Saw textured].**

B. Lumber Trim for Opaque Finish (Painted Finish):

1. Species and Grade:
 - a. Redwood; RIS **[Clear][Grade B]**.
 - b. Western red cedar; NLGA, WCLIB, or WWPA **[Grade A][Grade B]**.
 - c. Hem-fir; NLGA, WCLIB, or WWPA **[Prime or D finish][1 Common][2 Common]**.
 - d. Eastern white pine, eastern hemlock-balsam fir-tamarack, eastern spruce, or white woods; NeLMA, NLGA, WCLIB, or WWPA **[D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)]**.
 - e. Northern white cedar; NeLMA or NLGA **[D Select][1 Common][2 Common]**.
2. Maximum Moisture Content: **[19][15] percent[with at least 85 percent of shipment at 12 percent or less].**
3. Finger Jointing: **[Not allowed][Allowed if made with wet-use adhesive complying with ASTM D5572].**
4. Face Surface: **[Surfaced (smooth)][Saw textured].**
5. Factory Priming: Factory coated on both faces and all edges, with exterior primer compatible with topcoats specified.

C. Moldings for Transparent Finish (Stain or Clear Finish): MMPA WM 4, N-grade wood moldings, without finger jointing, made from kiln-dried stock to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."

1. Species: **[Redwood][Western red cedar][Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine]<Insert species>.**
2. Brick-Mold Pattern: WWMPA WM 180, 1-1/4 by 2 inches (32 by 51 mm).
3. Drip-Cap Pattern: WWMPA WM 197, 11/16 by 1-5/8 inches (17 by 41 mm).
4. Bed-Mold Pattern: WWMPA WM 75, 9/16 by 1-5/8 inches (14 by 41 mm).
5. Screen-Bead Pattern: WWMPA WM 144, 1/4 by 3/4 inch (6 by 19 mm).

- D. Moldings for Opaque Finish (Painted Finish): MMPA WM 4, P-grade wood moldings, made from kiln-dried stock to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
1. Species: **[Redwood][Western red cedar][Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine]<Insert species>**.
 2. Finger Jointing: **[Not allowed][Allowed if made with wet-use adhesive complying with ASTM D5572]**.
 3. Factory Priming: Factory coated on both faces and all edges, with exterior primer compatible with topcoats specified.
 4. Brick-Mold Pattern: WWMPA WM 180, **1-1/4 by 2 inches (32 by 51 mm)**.
 5. Drip-Cap Pattern: WWMPA WM 197, **11/16 by 1-5/8 inches (17 by 41 mm)**.
 6. Bed-Mold Pattern: WWMPA WM 75, **9/16 by 1-5/8 inches (14 by 41 mm)**.
 7. Screen-Bead Pattern: WWMPA WM 144, **1/4 by 3/4 inch (6 by 19 mm)**.
- E. MDO Trim: Exterior Grade B-B MDO plywood.
- F. Primed Hardboard Trim: ANSI A135.6, primed with manufacturer's standard exterior primer. Recommended by manufacturer for exterior use.
- G. Cellular PVC Trim: Extruded, expanded PVC with a small-cell microstructure, recommended by manufacturer for exterior use, made from UV- and heat-stabilized rigid material.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[AZEK Building Products, Incorporated]**
 - b. **[CertainTeed; SAINT-GOBAIN]**
 - c. **[Kleer Lumber]**
 - d. **[Kommerling USA]**
 - e. **[Plasticlad, LLC]**
 - f. **[Ply-Trim, Inc.]**
 - g. **[VERSATEX Building Products, LLC]**
 - h. **[Vi-Lux Building Products Inc.]**
 - i. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AZEK Building Products, Incorporated]**
 - b. **[CertainTeed; SAINT-GOBAIN]**
 - c. **[Kleer Lumber]**
 - d. **[Kommerling USA]**
 - e. **[Plasticlad, LLC]**
 - f. **[Ply-Trim, Inc.]**
 - g. **[VERSATEX Building Products, LLC]**
 - h. **[Vi-Lux Building Products Inc.]**
 - i. **<Insert manufacturer's name>**
 3. Density: Not less than **31 lb/cu. ft. (500 kg/cu. m)**.
 4. Heat Deflection Temperature: Not less than **130 deg F (54 deg C)**, in accordance with ASTM D648.
 5. Coefficient of Thermal Expansion: Not more than **4.5 x 10⁽⁻⁵⁾ inches/inch x deg F (8.1 x 10⁽⁻⁵⁾ mm/mm x deg C)**.

6. Water Absorption: Not more than 1 percent, in accordance with ASTM D570.
7. Flame-Spread Index: 75 or less, in accordance with ASTM E84.

H. Foam-Plastic Moldings: Molded product of shapes indicated, recommended by manufacturer for exterior use, with a tough outer skin on exposed surfaces; factory primed. Exposed surfaces are not to be shaped after molding.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Architectural Mall, Inc]**
 - b. **[Carter Millwork]**
 - c. **[Chemcrest Inc.; a division of Foamcore]**
 - d. **[Diamond Mfg., Inc.]**
 - e. **[Focal Point Products]**
 - f. **[Fypon LLC]**
 - g. **[Melton Classics Inc.]**
 - h. **[Vintage Mouldings Manufacturing Ltd.]**
 - i. **[Worthington Millwork, LLC.]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Architectural Mall, Inc]**
 - b. **[Carter Millwork]**
 - c. **[Chemcrest Inc.; a division of Foamcore]**
 - d. **[Diamond Mfg., Inc.]**
 - e. **[Focal Point Products]**
 - f. **[Fypon LLC]**
 - g. **[Melton Classics Inc.]**
 - h. **[Vintage Mouldings Manufacturing Ltd.]**
 - i. **[Worthington Millwork, LLC.]**
 - j. **<Insert manufacturer's name>**
3. Density: Not less than **20 lb/cu. ft. (320 kg/cu. m)**.
4. Flame-Spread Index: Not more than **[75]<Insert number>** when tested in accordance with ASTM E84.
5. Thickness: Not more than **1/2 inch (12.7 mm)**.
6. Width: Not more than **8 inches (204 mm)**.
7. Patterns: **[As indicated by manufacturer's designations][Match Architect's samples]**.

2.4 LUMBER SIDING

- A. Provide kiln-dried lumber siding complying with DOC PS 20[, **factory coated with exterior primer compatible with topcoats specified**].
- B. Species and Grade:
 1. Redwood; RIS **[Clear All Heart VG][Clear All Heart][Clear VG (Vertical Grain)][Clear][Grade B]**.

2. Western red cedar; NLGA, WCLIB, or WWPB [Clear VG (Vertical Grain) Heart][Grade A][Grade B].
3. Spruce-pine-fir; NeLMA, NLGA, WCLIB, or WWPB [1 Common][2 Common].
4. Pressure-preservative-treated hem-fir; NLGA, WCLIB, or WWPB [Prime or D finish][1 Common][2 Common].
5. Eastern white pine, eastern hemlock-balsam fir-tamarack, eastern spruce, or white woods; NeLMA, NLGA, WCLIB, or WWPB [D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)].
6. Northern white cedar; NeLMA or NLGA [D Select][1 Common][2 Common].
7. Pressure-preservative-treated southern pine; SPIB [B & B][C & Btr][D][1 Common][2 Common].

C. Pattern:

1. Bevel siding, S1S2E, actual overall dimensions of [5-1/2 by 11/16 inch (140 by 17 mm)][5-1/2 by 3/4 inch (140 by 19 mm)][7-1/4 by 3/4 inch (184 by 19 mm)][9-1/4 by 3/4 inch (235 by 19 mm)][9-1/4 by 1-3/32 inches (235 by 28 mm)], measured on the face and thick edge.
2. Drop siding, SPIB or WWPB pattern No. 105, actual face width (coverage) and thickness of [4-7/8 by 9/16 inch (124 by 14 mm)][4-7/8 by 23/32 inch (124 by 18 mm)][6-5/8 by 23/32 inch (168 by 18 mm)][8-5/8 by 23/32 inch (219 by 18 mm)].
3. V-edge, smooth-faced tongue and groove, actual face width (coverage) and thickness of [3-1/8 by 9/16 inch (79 by 14 mm)][3-1/8 by 23/32 inch (79 by 18 mm)][5-1/8 by 23/32 inch (130 by 18 mm)][6-7/8 by 23/32 inch (175 by 18 mm)].

2.5 PLYWOOD SIDING

A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Georgia-Pacific Gypsum LLC]
2. [Hardel Mutual Plywood Corporation]
3. [Hood Industries]
4. [Pacific Wood Laminates, Inc]
5. [Roseburg]
6. [RoyOMartin]
7. [SDS Lumber Company]
8. [Stimson Lumber Company]
9. [Swanson Group]
10. [Weyerhaeuser Company]
11. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Georgia-Pacific Gypsum LLC]
2. [Hardel Mutual Plywood Corporation]
3. [Hood Industries]
4. [Pacific Wood Laminates, Inc]
5. [Roseburg]
6. [RoyOMartin]
7. [SDS Lumber Company]
8. [Stimson Lumber Company]
9. [Swanson Group]
10. [Weyerhaeuser Company]
11. <Insert manufacturer's name>

- C. Plywood Type: APA-rated siding[, **pressure-preservative treated**,][, **factory coated with exterior acrylic latex stain**,] in panel sizes indicated.
 - 1. Face Grade, Surface: 303-[OC][OL][NR][SR].
 - 2. Face Grade, Patches: 303-[6][18][30]-[S][W][S/W].
- D. Thickness: [11/32 inch (8.7 mm)][3/8 inch (9.5 mm)][15/32 inch (11.9 mm)][1/2 inch (12.7 mm)][19/32 inch (15.1 mm)][5/8 inch (15.9 mm)][**As indicated**].
- E. Face Species: [**Southern pine**][**Douglas fir**][**Western red cedar**][**Redwood**].
- F. Pattern: [**Plain**][**Channel groove; grooves 4 inches (101.6 mm) o.c.**][**Texture 1-11; grooves 4 inches (101.6 mm) o.c.**][**Reverse board and batten; grooves 12 inches (304.8 mm) o.c.**]
- G. Surface: [**Smooth**][**Rough sawn**].

2.6 ENGINEERED WOOD SIDING

- A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
 - 1. [**Collins Products LLC**]
 - 2. [**Georgia-Pacific Gypsum LLC**]
 - 3. [**Louisiana-Pacific Corporation**]
 - 4. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - 1. [**Collins Products LLC**]
 - 2. [**Georgia-Pacific Gypsum LLC**]
 - 3. [**Louisiana-Pacific Corporation**]
 - 4. <Insert manufacturer's name>
- C. Engineered Wood Siding: ANSI A135.6, primed with manufacturer's standard exterior primer.
 - 1. Type:
 - a. **7/16-inch- (11-mm-) thick by [6-inch- (152-mm-)][8-inch- (203-mm-)] wide lap siding.**
 - b. **1/2-inch- (12.7-mm-) thick by 8-inch- (203-mm-) wide, beaded-edge lap siding.**
 - c. **7/16-inch- (11-mm-) thick, shiplap-edge panels; with grooves 3-5/8 inches (92 mm) o.c., simulating wood drop siding.**
 - d. **1/2-inch- (12.7-mm-) thick, shiplap-edge panels; with grooves 5-1/2 inches (140 mm) o.c., simulating wood drop siding.**
 - e. **7/16-inch- (11-mm-) thick, square-edge flat panels; without grooves.**
 - f. **7/16-inch- (11-mm-) thick, shiplap-edge panels; channel grooved with grooves 8 inches (203 mm) o.c.**
 - 2. Texture: [**Smooth**][**Wood grain**][**Shingle**][**Stucco**].
- D. Colors, Textures, and Patterns: [**As indicated by manufacturer's designations**][**Match Architect's samples**][**As selected by Architect from manufacturer's full range**].

2.7 LUMBER SOFFITS

- A. Provide kiln-dried lumber siding complying with DOC PS 20[, **factory coated with exterior primer compatible with topcoats specified**].
- B. Species and Grade:
1. Redwood; RIS [**Clear All Heart**][**Clear**][**Grade B**].
 2. Western red cedar; NLGA, WCLIB, or WWPA [**Grade A**][**Grade B**].
 3. Spruce-pine-fir; NeLMA, NLGA, WCLIB, or WWPA [**1 Common**][**2 Common**].
 4. Hem-fir; NLGA, WCLIB, or WWPA [**Prime or D finish**][**1 Common**][**2 Common**].
 5. Eastern white pine, eastern hemlock-balsam fir-tamarack, eastern spruce, or white woods; NeLMA, NLGA, WCLIB, or WWPA [**D Select (Quality)**][**Finish or 1 Common (Colonial)**][**Premium or 2 Common (Sterling)**].
 6. Northern white cedar; NeLMA or NLGA [**D Select**][**1 Common**][**2 Common**].
 7. Southern pine; SPIB [**B & B**][**C & Btr**][**D**][**1 Common**][**2 Common**].
- C. Pattern:
1. V-edge, smooth-faced tongue and groove, actual face width (coverage) and thickness of [**3-1/8 by 9/16 inch (79 by 14 mm)**][**3-1/8 by 23/32 inch (79 by 18 mm)**][**5-1/8 by 23/32 inch (130 by 18 mm)**][**6-7/8 by 23/32 inch (175 by 18 mm)**].
 2. Rounded-edge channel groove, tongue and groove, actual face width (coverage) and thickness of [**3-1/8 by 9/16 inch (79 by 14 mm)**][**3-1/8 by 23/32 inch (79 by 18 mm)**][**5-1/8 by 23/32 inch (130 by 18 mm)**][**6-7/8 by 23/32 inch (175 by 18 mm)**].
 3. Edge and center bead, tongue and groove, actual face width (coverage) and thickness of [**3-1/8 by 9/16 inch (79 by 14 mm)**][**3-1/8 by 23/32 inch (79 by 18 mm)**][**5-1/8 by 23/32 inch (130 by 18 mm)**][**6-7/8 by 23/32 inch (175 by 18 mm)**], measured at 19 percent moisture content.
 4. Beaded ceiling, tongue and groove, actual face width (coverage) and thickness of [**3-1/8 by 3/8 inch (79 by 9.5 mm)**][**3-1/8 by 7/16 inch (79 by 11 mm)**].

2.8 PLYWOOD SOFFITS

- A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:
1. [**Georgia-Pacific Gypsum LLC**]
 2. [**Hardel Mutual Plywood Corporation**]
 3. [**Hood Industries**]
 4. [**Pacific Wood Laminates, Inc**]
 5. [**Roseburg**]
 6. [**RoyOMartin**]
 7. [**SDS Lumber Company**]
 8. [**Stimson Lumber Comapny**]
 9. [**Swanson Group**]
 10. [**Weyerhaeuser Company**]
 11. <Insert manufacturer's name>
- B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:
1. [**Georgia-Pacific Gypsum LLC**]
 2. [**Hardel Mutual Plywood Corporation**]
 3. [**Hood Industries**]

4. [Pacific Wood Laminates, Inc]
5. [Roseburg]
6. [RoyOMartin]
7. [SDS Lumber Company]
8. [Stimson Lumber Company]
9. [Swanson Group]
10. [Weyerhaeuser Company]
11. <Insert manufacturer's name>

C. Plywood Type: Exterior, [Grade A-C][Grade B-C][Grade C-C, plugged and touch sanded][APA-rated siding].

1. Face Grade, Surface: 303-[OC][OL][NR][SR].
2. Face Grade, Patches: 303-[6][18][30]-[S][W][S/W].

D. Thickness: [11/32 inch (8.7 mm)][3/8 inch (9.5 mm)][15/32 inch (11.9 mm)][1/2 inch (12.7 mm)][19/32 inch (15.1 mm)][As indicated].

E. Face Species: [Southern pine][Douglas fir][Western red cedar][Redwood].

F. Pattern: [Plain][Channel groove; grooves 4 inches (101.6 mm) o.c.][Texture 1-11; grooves 4 inches (101.6 mm) o.c.]

G. Surface: [Smooth][Rough sawn].

2.9 ENGINEERED WOOD SOFFITS

A. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

1. [Collins Products LLC]
2. [Georgia-Pacific Gypsum LLC]
3. [Louisiana-Pacific Corporation]
4. <Insert manufacturer's name>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Collins Products LLC]
2. [Georgia-Pacific Gypsum LLC]
3. [Louisiana-Pacific Corporation]
4. <Insert manufacturer's name>

C. Engineered Wood Soffits: ANSI A135.6, primed with manufacturer's standard exterior primer.

1. Type: [7/16-inch- (11-mm-)][1/2-inch- (12.7-mm-)] thick flat panels.
2. Texture: [Smooth][Wood grain][Stucco].
3. Colors, Textures, and Patterns: [As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range].

2.10 MISCELLANEOUS MATERIALS

- A. Fasteners for Exterior Finish Carpentry: Provide nails or screws, in sufficient length to penetrate not less than **1-1/2 inches (38 mm)** into wood substrate.
 - 1. For face-fastening siding, provide ringed-shank siding nails[**or hot-dip galvanized-steel siding nails**][**unless otherwise indicated**].
 - 2. For redwood, provide [**stainless steel**][**hot-dip galvanized-steel**] fasteners.
 - 3. For prefinished items, provide matching prefinished aluminum fasteners where face fastening is required.
 - 4. For pressure-preservative-treated wood, provide [**stainless steel**][**hot-dip galvanized-steel**] fasteners.
 - 5. For applications not otherwise indicated, provide [**stainless steel**][**hot-dip galvanized-steel**][**or**][**aluminum**] fasteners.
- B. Wood Glue: Waterproof resorcinol glue recommended by manufacturer for exterior carpentry use.
- C. Adhesive for Cellular PVC Trim: Product recommended by trim manufacturer.
- D. Flashing: Comply with requirements in Section 076200 "Sheet Metal Flashing and Trim" for flashing materials installed in exterior finish carpentry.
 - 1. Horizontal Joint Flashing for Panel Siding: Preformed, [**galvanized-steel**][**aluminum**][**prefinished-aluminum**][**stainless steel**], Z-shaped flashing.
- E. Insect Screening for Soffit Vents: [**Aluminum, 18-by-16-inch (1.6-by-1.4-mm) black mesh**][**PVC-coated glass-fiber black fabric, 18-by-14-inch (1.8-by-1.4-mm) or 18-by-16-inch (1.6-by-1.4-mm) mesh**][**Stainless steel, 18-by-18-inch (1.4-by-1.4-mm) mesh**].
- F. Continuous Soffit Vents: Aluminum hat channel shape with [**stamped louvers**][**perforations**], **2 inches (51 mm)** wide and in lengths not less than **96 inches (2438 mm)**.
 - 1. Net-Free Area: [**4 sq. in./linear ft. (280 sq. cm/m)**][**6 sq. in./linear ft. (420 sq. cm/m)**][**8 sq. in./linear ft. (560 sq. cm/m)**] <Insert value>.
 - 2. Finish: [**Mill finish**][**White paint**][**Brown paint**] <Insert description>.
- G. Round Soffit Vents:
 - 1. Stamped aluminum louvered vents, [**2 inches (51 mm)**][**2-1/2 inches (64 mm)**][**3 inches (76 mm)**][**4 inches (102 mm)**] <Insert dimension> in diameter, made to be inserted in round holes cut in soffit.
 - a. Finish: [**Mill finish**][**White paint**][**Brown paint**] <Insert description>.
 - 2. Molded-plastic louvered vents, [**2 inches (51 mm)**][**2-1/2 inches (64 mm)**][**3 inches (76 mm)**][**4 inches (102 mm)**] <Insert dimension> in diameter, made to be inserted in round holes cut in soffit.
- H. Sealants: Latex, complying with ASTM C834 [**Type OP, Grade NF**] <Insert type and grade> and applicable requirements in Section 079200 "Joint Sealants," and recommended by sealant and substrate manufacturers for intended application.
 - 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

- a. [Bostik; Arkema]
- b. [Franklin International]
- c. [Pecora Corporation]
- d. [Permthane; a Holcim brand]
- e. [Tremco Incorporated]
- f. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Bostik; Arkema]
- b. [Franklin International]
- c. [Pecora Corporation]
- d. [Permthane; a Holcim brand]
- e. [Tremco Incorporated]
- f. <Insert manufacturer's name>

2.11 FABRICATION

- A. Back out or kerf backs of standing and running trim wider than **5 inches (125 mm)**, except members with ends exposed in finished work.
- B. Ease edges of lumber less than **1 inch (25 mm)** in nominal thickness to **1/16-inch (1.5-mm)** radius and edges of lumber **1 inch (25 mm)** or more in nominal thickness to **1/8-inch (3-mm)** radius.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of projections and substances detrimental to application.
- B. Prime lumber and moldings to be painted, including both faces and edges, unless factory primed.
 - 1. Cut to required lengths and prime ends.
 - 2. Comply with requirements in Section 099113 "Exterior Painting."

3.3 INSTALLATION, GENERAL

- A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, or too small to fabricate with proper jointing arrangements.
 - 1. Do not use manufactured units with defective surfaces, sizes, or patterns.
- B. Install exterior finish carpentry level, plumb, true, and aligned with adjacent materials.
 - 1. Use concealed shims where necessary for alignment.
 - 2. Scribe and cut exterior finish carpentry to fit adjoining work.
 - 3. Refinish and seal cuts as recommended by manufacturer.
 - 4. Install to tolerance of **1/8 inch in 96 inches (3 mm in 2438 mm)** for level and plumb. Install adjoining exterior finish carpentry with **1/32-inch (0.8-mm)** maximum offset for flush installation and **1/16-inch (1.5-mm)** maximum offset for reveal installation.
 - 5. Coordinate exterior finish carpentry with materials and systems in or adjacent to it.
 - 6. Provide cutouts for mechanical and electrical items that penetrate exterior finish carpentry.

3.4 INSTALLATION OF STANDING AND RUNNING TRIM

- A. Install flat-grain lumber with bark side exposed to weather.
- B. Install cellular PVC trim to comply with manufacturer's written instructions.
- C. Install trim with minimum number of joints as is practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than **24 inches (610 mm)** long, except where necessary.
 - 1. Use scarf joints for end-to-end joints.
 - 2. Stagger end joints in adjacent and related members.
- D. Fit exterior joints to exclude water.
 - 1. Cope at returns and miter at corners to produce tight-fitting joints, with full-surface contact throughout length of joint.
 - 2. Plane backs of casings to provide uniform thickness across joints, where necessary for alignment.
- E. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.

3.5 INSTALLATION OF SIDING

- A. Install siding to comply with manufacturer's written instructions[**and warranty requirements**].
- B. Horizontal Lumber Siding:
 - 1. Apply starter strip along bottom edge of sheathing or sill.
 - 2. Install first course of siding, with lower edge at least **1/8 inch (3 mm)** below starter strip and subsequent courses lapped **1 inch (25 mm)** over course below.
 - a. Nail at each stud.
 - b. Do not allow nails to penetrate more than one thickness of siding.

3. Leave **1/8-inch (3-mm)** gap at trim and corners unless otherwise recommended by manufacturer, and apply sealant.
4. Butt joints only over framing or blocking, nailing top and bottom on each side and staggering joints in subsequent courses.
5. Install prefabricated outside corners as recommended by manufacturer of siding materials.

C. Diagonal Lumber Siding:

1. Begin application at corner, with tongue edge up.
2. Install subsequent courses with tongue-and-groove edges tightly fitted together.
 - a. Nail at each stud.
3. Leave **1/8-inch (3-mm)** gap at trim and corners unless otherwise recommended by manufacturer, and apply sealant.
4. Butt joints only over framing or blocking, nailing top and bottom on each side and staggering joints in subsequent courses.
5. Install prefabricated outside corners as recommended by manufacturer of siding materials.

D. Plywood Siding:

1. Install panels with edges over framing or blocking.
2. Nail at **6 inches (150 mm)** o.c. at panel perimeter and **12 inches (300 mm)** o.c. at intermediate supports unless manufacturer recommends closer spacing.
3. Leave **1/16-inch (1.5-mm)** gap between adjacent panels and **1/8-inch (3-mm)** gap at perimeter, openings, and horizontal joints unless otherwise recommended by panel manufacturer.
4. Seal butt joints at inside and outside corners and at trim locations.
5. Install continuous metal flashing at horizontal panel joints.
6. Apply battens and corner trim as indicated. [**Countersink nail heads, fill flush, and sand filler.**]
7. Conceal fasteners to greatest practical extent[**by countersinking and filling,**] by placing in grooves of siding pattern or by concealing with applied trim or battens as detailed.
 - a. Do not nail through overlapping pieces.

E. Engineered Wood Siding:

1. Install engineered wood siding to comply with manufacturer's written instructions.
2. Install panels with edges over framing or blocking.
3. Leave **3/16-inch (5-mm)** gap at perimeter, openings, and horizontal panel joints unless otherwise recommended by panel manufacturer.
4. Seal butt joints at inside and outside corners and at trim locations.
5. Install continuous metal flashing at horizontal panel joints.
6. Apply battens and corner trim as indicated.
7. Conceal fasteners to greatest practical extent by placing in grooves of siding pattern or by concealing with applied trim or battens as detailed.

F. Flashing: Install metal flashing as indicated on Drawings and as recommended by siding manufacturer.

G. Finish: Apply finish within two weeks of installation.

3.6 ADJUSTING

- A. Replace exterior finish carpentry that is damaged or does not comply with requirements.

1. Exterior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

B. Adjust joinery for uniform appearance.

3.7 CLEANING

A. Clean exterior finish carpentry on exposed and semiexposed surfaces.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

3.8 PROTECTION

A. Protect installed products from damage from weather and other causes during construction.

B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 06 20 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 20 00 00A - INTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior trim.
2. Paneling.
3. Shelving and clothes rods.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for furring, blocking, and other carpentry work not exposed to view[**and for framing exposed to view**].
2. Section 064023 "Interior Architectural Woodwork" for shop-fabricated carpentry.
3. Section 099123 "Interior Painting" for priming and backpriming of interior finish carpentry.

1.2 DEFINITIONS

- A. MDF:** Medium-density fiberboard.
- B. MDO:** Plywood with a medium-density overlay on the face.
- C. PVC:** Polyvinyl chloride.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Interior trim.
2. Paneling.
3. Shelving and clothes rods.

B. Product Data Submittals: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

1. Include data for wood-preservative treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained. Include chemical-treatment manufacturer's written instructions for finishing treated material.
2. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced before shipment to Project site to levels specified.

C. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.

2. Environmental Product Declaration (EPD): For each product.
3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.
10. Environmental Product Declaration (EPD): Provide one of the following EPDs: critically reviewed life-cycle assessment complying with ISO 14044; internally reviewed, product-specific Type III EPD; third-party-verified, industrywide Type III EPD.
11. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
12. Chain-of-Custody Qualification Data: For manufacturer and vendor.
13. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
14. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
15. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
16. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
17. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
18. Product Data: For installation adhesives, indicating VOC content.
19. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

D. Samples: For each exposed product and for each color and texture specified.

E. Samples for Initial Selection: For each type of product involving selection of colors, profiles, or textures.

F. Samples for Verification:

1. For each species and cut of lumber and panel products with nonfactory-applied finish, with half of exposed surface finished; **50 sq. in. (300 sq. cm)** for lumber and **8 by 10 inches (200 by 250 mm)** for panels.
2. For foam-plastic moldings, with half of exposed surface finished; **50 sq. in. (300 sq. cm)**.
3. For each finish system and color of lumber and panel products with factory-applied finish, **50 sq. in. (300 sq. cm)** for lumber and **8 by 10 inches (200 by 250 mm)** for panels.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
- C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation.
 - 1. Protect materials from weather by covering with waterproof sheeting, securely anchored.
 - 2. Provide for air circulation around stacks and under coverings.
- B. Deliver interior finish carpentry materials only when environmental conditions comply with requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions comply with requirements specified for installation areas.

1.6 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet-work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
 - 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Regional Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
 - 1. Interior trim.
 - 2. Fire-rated interior door[**and sidelight**] frames.
 - 3. Interior [**plywood**][**hardboard**][**board**] paneling.
 - 4. Shelving[**and clothes rods**].
 - 5. Interior [**stairs**][**and**][**railings**].
- B. Regional Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site.
 - 1. Interior trim.
 - 2. Fire-rated interior door[**and sidelight**] frames.
 - 3. Interior [**plywood**][**hardboard**][**board**] paneling.
 - 4. Shelving[**and clothes rods**].

-
5. Interior **[stairs][and][railings]**.
- C. Regional Materials: The following wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
1. Interior trim.
 2. Fire-rated interior door **[and sidelight]** frames.
 3. Interior **[plywood][hardboard][board]** paneling.
 4. Shelving **[and clothes rods]**.
 5. Interior **[stairs][and][railings]**.
- D. Indigenous Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
1. Interior trim.
 2. Fire-rated interior door **[and sidelight]** frames.
 3. Interior **[plywood][hardboard][board]** paneling.
 4. Shelving **[and clothes rods]**.
 5. Interior **[stairs][and][railings]**.
- E. Regional Materials: The following wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
1. Interior trim.
 2. Fire-rated interior door **[and sidelight]** frames.
 3. Interior **[plywood][hardboard][board]** paneling.
 4. Shelving **[and clothes rods]**.
 5. Interior **[stairs][and][railings]**.
- F. Certified Wood: The following wood products shall be certified as "FSC Pure" **[or "FSC Mixed Credit"]** according to FSC STD-01-00 and FSC STD-40-004.
1. Interior trim.
 2. Fire-rated interior door **[and sidelight]** frames.
 3. Interior **[plywood][hardboard][board]** paneling.
 4. Shelving **[and clothes rods]**.
 5. Interior **[stairs][and][railings]**.
- G. Certified Wood: The following wood products shall be certified as "FSC Pure" **[or "FSC Mixed Credit"]** according to FSC STD-01-001 and FSC STD-40-004.
1. Interior trim.
 2. Fire-rated interior door **[and sidelight]** frames.
 3. Interior **[plywood][hardboard][board]** paneling.
 4. Shelving **[and clothes rods]**.
 5. Interior **[stairs][and][railings]**.
- H. Certified Wood: The following wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest

Certification.

1. Interior trim.
 2. Fire-rated interior door[**and sidelight**] frames.
 3. Interior [**plywood**][**hardboard**][**board**] paneling.
 4. Shelving[**and clothes rods**].
 5. Interior [**stairs**][**and**][**railings**].
- I. Certified Wood: The following wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
1. Interior trim.
 2. Fire-rated interior door[**and sidelight**] frames.
 3. Interior [**plywood**][**hardboard**][**board**] paneling.
 4. Shelving[**and clothes rods**].
 5. Interior [**stairs**][**and**][**railings**].
- J. Certified Wood: The following wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
1. Interior trim.
 2. Fire-rated interior door[**and sidelight**] frames.
 3. Interior [**plywood**][**hardboard**][**board**] paneling.
 4. Shelving[**and clothes rods**].
 5. Interior [**stairs**][**and**][**railings**].
- K. Composite Wood Products: Products shall be made without urea formaldehyde.
- L. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- M. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
- N. Composite Wood Products: Formaldehyde emission rates shall not be greater than the following when tested according to ASTM D6007 or ASTM E1333:
1. Hardwood Plywood: 0.05 ppm.
 2. Particleboard: 0.09 ppm.
 3. MDF More Than **5/16 Inch (8 mm)** Thick: 0.11 ppm.
 4. MDF **5/16 Inch (8 mm)** or Less in Thickness: 0.13 ppm.
- O. Composite Wood Products: Products shall be made without urea formaldehyde.
- P. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with applicable rules of any rules-writing agency certified by the American Lumber Standard Committee's (ALSC) Board of Review. Grade lumber by an agency certified by the ALSC's Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber, mark grade stamp on end or back of each piece[, **or omit grade stamp and provide certificates of grade compliance issued by grading agency**].

Q. Softwood Plywood: DOC PS 1.

R. Hardboard: ANSI A135.4.

S. MDF: ANSI A208.2, [**Grade 130**]**<Insert grade>**.

T. Particleboard: ANSI A208.1, [**Grade M-2**]**[Grade M-2-Exterior Glue]**.

U. Melamine-Faced Particleboard: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with ISO 4586-3, Grade VGS.

1. Color: [**White**]**[Black]****[Gray]****[As indicated by manufacturer's designations]****[Match Architect's samples]****[As selected by Architect from manufacturer's full range]****<Insert color>**.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

A. Preservative Treatment by Pressure Process: AWP U1; Use Category [**UC1**]**[UC2]**.

1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent, respectively.
2. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
3. For exposed items indicated to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes.
4. Do not use material that is warped or does not comply with requirements for untreated material.
5. Mark lumber with treatment-quality mark of an inspection agency approved by the ALSC's Board of Review.
 - a. For exposed lumber indicated to receive a stained or natural finish, [**mark end or back of each piece**]**[or]****[omit marking and provide certificates of treatment compliance issued by inspection agency]**.
6. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
 - a. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.
7. Application: [**Where indicated on Drawings**]**[All interior lumber and plywood]****<Insert application>**.

2.3 INTERIOR TRIM

A. Softwood Lumber Trim for Transparent Finish (Stain or Clear Finish):

1. Species and Grade:

- a. Eastern white pine; NeLMA or NLGA [C Select][D Select][Finish or 1 Common][Premium or 2 Common].
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPA [C Select (Choice)][D Select (Quality)][1 Common (Colonial)][2 Common (Sterling)].
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [C Select (Choice)][D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)].
 - d. White woods; WWPA [C Select][D Select][1 Common][2 Common].
 - e. Douglas fir-larch or Douglas fir south; NLGA, WCLIB, or WWPA [Superior or C & Btr][Prime or D] finish.
 - f. Southern pine; SPIB [B & B][C & Btr] finish.
 - g. Western red cedar; NLGA, WCLIB, or WWPA [Clear Heart][Grade A][Grade B].
2. Maximum Moisture Content: [19][15] percent[with at least 85 percent of shipment at 12 percent or less].
 3. Finger Jointing: [Allowed][Not allowed].
 4. Face Surface: [Surfaced (smooth)][Saw textured].
- B. Hardwood Lumber Trim for Transparent Finish (Stain or Clear Finish):
1. Species and Grade: [Red oak][White maple][Alder][Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar]<Insert species>; NHLA [Clear][A Finish][B Finish].
 2. Maximum Moisture Content: [13][10][9]<Insert number> percent.
 3. Finger Jointing: Not allowed.
 4. Gluing for Width: [Allowed][Not allowed][Use for lumber trim wider than 6 inches (150 mm)].
 5. Veneered Material: [Allowed][Not allowed][Use for lumber trim wider than 6 inches (150 mm)].
 6. Face Surface: [Surfaced (smooth)][Saw textured].
 7. Matching: Selected for compatible grain and color.
- C. Lumber Trim for Opaque Finish (Painted Finish):
1. Species and Grade:
 - a. Eastern white pine; NeLMA or NLGA [D Select][Finish or 1 Common][Premium or 2 Common].
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPA [D Select (Quality)][1 Common (Colonial)][2 Common (Sterling)].
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPA [D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)].
 - d. White woods; WWPA [D Select][1 Common][2 Common].
 - e. Douglas fir-larch or Douglas fir south; NLGA, WCLIB, or WWPA [Superior or C & Btr][Prime or D] finish.
 - f. Spruce-pine-fir; NeLMA, NLGA, WCLIB, or WWPA [1 Common][2 Common].
 - g. Alder, aspen, basswood, cottonwood, gum, magnolia, soft maple, sycamore, tupelo, or yellow poplar; NHLA [A Finish][B Finish].
 2. Maximum Moisture Content for Softwoods: [19][15] percent[with at least 85 percent of shipment at 12 percent or less].
 3. Maximum Moisture Content for Hardwoods: [13][10][9]<Insert number> percent.
 4. Finger Jointing: [Allowed][Not allowed].
 5. Face Surface: [Surfaced (smooth)][Saw textured].
 6. Optional Material: Primed MDF of same actual dimensions as lumber indicated may be used in lieu of lumber.

- D. Softwood Moldings for Transparent Finish (Stain or Clear Finish): MMPA WM 4, N-grade wood moldings. Made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
- Species: **[Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine][Southern pine][Western red cedar][Douglas fir]<Insert species>**.
 - Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
 - Finger Jointing: Not allowed.
 - Matching: Selected for compatible grain and color.
 - Base Pattern: **[WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee][WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch][WM 753, 9/16-by-3-1/4-inch (14-by-83-mm) beaded-edge][WM 620, 9/16-by-4-1/4-inch (14-by-108-mm) ogee][WM 750, 9/16-by-4-1/4-inch (14-by-108-mm) beaded-edge]** base.
 - Shoe-Mold Pattern: **[WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round][WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round][WM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee]** shoe mold.
 - Casing Pattern: **[WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell][WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge][WM 376, 11/16-by-2-1/4-inch (17-by-57-mm) beaded-edge]** casing.
 - Mull-Casing Pattern: **[WM 957, 3/8-by-1-3/4-inch (9.5-by-44-mm) beaded-edge][WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose][WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge]** casing.
 - Stop Pattern: **[WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch][WM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee][WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose]** stop.
 - Chair-Rail Pattern: **WM 297, 11/16-by-3-inch (17-by-76-mm)** chair rail.
- E. Hardwood Moldings for Transparent Finish (Stain or Clear Finish): MMPA WM 4, N-grade wood moldings made to patterns included in MMPA's "HWM/Series Hardwood Moulding Patterns."
- Species: **[Red oak][White maple][Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar]<Insert species>**.
 - Maximum Moisture Content: 9 percent.
 - Finger Jointing: Not allowed.
 - Matching: Selected for compatible grain and color.
 - Optional Material: Kiln-dried softwood or MDF, with exposed surfaces veneered with species indicated, may be used in lieu of solid wood.
 - Base Pattern: **[HWM 633, 7/16-by-3-1/4-inch (11-by-83-mm) ogee][HWM 713, 7/16-by-3-1/4-inch (11-by-83-mm) ranch][HWM 753, 7/16-by-3-1/4-inch (11-by-83-mm) beaded-edge][WM 620, 7/16-by-4-1/4-inch (11-by-108-mm) ogee]** base.
 - Shoe-Mold Pattern: **[HWM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round][HWM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round][HWM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee]** shoe mold.
 - Casing Pattern: **[HWM 328, 1/2-by-2-1/4-inch (13-by-57-mm) clamshell][HWM 366, 1/2-by-2-1/4-inch (13-by-57-mm) featheredge][HWM 376, 1/2-by-2-1/4-inch (13-by-57-mm) beaded-edge]** casing.
 - Mull-Casing Pattern: **[HWM 989, 3/16-by-2-inch (5-by-51-mm) square-edge][HWM 988, 3/8-by-1-1/2-inch (9.5-by-38-mm) featheredge][HWM 987, 3/8-by-2-inch (9.5-by-51-mm) featheredge]** casing.
 - Stop Pattern: **[HWM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch][HWM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee][HWM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose]** stop.
 - Chair-Rail Pattern: **HWM 297, 11/16-by-3-inch (17-by-76-mm)** chair rail.
- F. Moldings for Opaque Finish (Painted Finish): Made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
- Softwood Moldings: MMPA WM 4, P grade.

- a. Species: **[Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine]<Insert species>**.
 - b. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
 2. Hardwood Moldings: MMPA WM 4, P-grade.
 - a. Species: **[Aspen, basswood, cottonwood, gum, magnolia, soft maple, tupelo, or yellow poplar]<Insert species>**.
 - b. Maximum Moisture Content: 9 percent.
 3. Finger Jointing: **[Allowed][Not allowed]**.
 4. Optional Material: Primed MDF.
 5. Base Pattern: **[WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee][WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch][WM 753, 9/16-by-3-1/4-inch (14-by-83-mm) beaded-edge][WM 620, 9/16-by-4-1/4-inch (14-by-108-mm) ogee][WM 750, 9/16-by-4-1/4-inch (14-by-108-mm) beaded-edge]** base.
 6. Shoe-Mold Pattern: **[WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round][WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round][WM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee]** shoe mold.
 7. Casing Pattern: **[WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell][WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge][WM 376, 11/16-by-2-1/4-inch (17-by-57-mm) beaded-edge]** casing.
 8. Mull-Casing Pattern: **[WM 957, 3/8-by-1-3/4-inch (9.5-by-44-mm) beaded-edge][WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose][WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge]** casing.
 9. Stop Pattern: **[WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch][WM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee][WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose]** stop.
 10. Chair-Rail Pattern: WM 297, 11/16-by-3-inch (17-by-76-mm) chair rail.
- G. PVC-Wrapped Moldings: MMPA WM 2 and made to patterns included in MMPA's "WM/Series Softwood Moulding Patterns."
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Nickell Moulding Company, Inc.]**
 - b. **[Zamma Corporation]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Nickell Moulding Company, Inc.]**
 - b. **[Zamma Corporation]**
 - c. **<Insert manufacturer's name>**
 3. Base Pattern: **[WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee][WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch]** base.
 4. Shoe-Mold Pattern: **[WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round][WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round]** shoe mold.
 5. Casing Pattern: **[WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell][WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge]** casing.

6. Mull-Casing Pattern: **[WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose][WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge]** casing.
7. Stop Pattern: **[WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch][WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose]** stop.
8. Chair-Rail Pattern: **WM 297, 11/16-by-3-inch (17-by-76-mm)** chair rail.
9. Colors, Textures, and Grain Patterns: **[As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range]**.

H. Foam-Plastic Moldings: Molded product of shapes indicated, with a tough outer skin on exposed surfaces; factory primed. Exposed surfaces are not to be shaped after molding.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Architectural Mall, Inc]**
 - b. **[Carter Millwork]**
 - c. **[Chemcrest Inc.; a division of Foamcore]**
 - d. **[Diamond Mfg., Inc.]**
 - e. **[Focal Point Products]**
 - f. **[Fypon LLC]**
 - g. **[Melton Classics Inc.]**
 - h. **[Vintage Mouldings Manufacturing Ltd.]**
 - i. **[Worthington Millwork, LLC.]**
 - j. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Architectural Mall, Inc]**
 - b. **[Carter Millwork]**
 - c. **[Chemcrest Inc.; a division of Foamcore]**
 - d. **[Diamond Mfg., Inc.]**
 - e. **[Focal Point Products]**
 - f. **[Fypon LLC]**
 - g. **[Melton Classics Inc.]**
 - h. **[Vintage Mouldings Manufacturing Ltd.]**
 - i. **[Worthington Millwork, LLC.]**
 - j. **<Insert manufacturer's name>**
3. Density: Not less than **20 lb/cu. ft. (320 kg/cu. m)**.
4. Flame-Spread Index: Not more than **[75]<Insert number>** when tested according to ASTM E84.
5. Thickness: Not more than **1/2 inch (12.7 mm)**.
6. Width: Not more than **8 inches (204 mm)**.
7. Patterns: **[As indicated by manufacturer's designations][Match Architect's samples]**.

2.4 PANELING

- A. Hardwood Veneer Plywood Paneling: Manufacturer's stock hardwood plywood panels complying with HPVA HP-1.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Chesapeake Plywood LLC]
 - b. [Holland Southwest International]
 - c. [Houston Plywood Industry, Inc.]
 - d. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Chesapeake Plywood LLC]
 - b. [Holland Southwest International]
 - c. [Houston Plywood Industry, Inc.]
 - d. <Insert manufacturer's name>
 3. Face Veneer Species and Cut: [Rotary-cut white birch][Plain-sliced red oak][Plain-sliced hickory]<Insert species and cut>.
 4. Veneer Matching: [Random match][Selected for similar color and grain].
 5. Backing Veneer Species: [Same species as face veneer][Any hardwood compatible with face species].
 6. Construction: Veneer core.
 7. Thickness: [1/8 inch (3.2 mm)][5/32 inch (4 mm)][3/16 inch (5 mm)][1/4 inch (6.4 mm)][5/16 inch (7.9 mm)][7/16 inch (11 mm)].
 8. Panel Size:
 - a. [48 by 96 inches (1219 by 2438 mm)][48 by 120 inches (1219 by 3048 mm)].
 - b. [1200 by 2400 mm][1200 by 3000 mm].
 9. Glue Bond: Type II (interior).
 10. Face Pattern: Manufacturer's standard [V][channel]-grooved pattern, with grooves at edges, center, and third points of panels, and at other locations to provide pattern resembling random-width boards.
 11. Finish: [Manufacturer's standard, transparent, UV-resistant, protective finish][As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range].
- B. Hardboard Paneling: Interior factory-finished hardboard paneling complying with ANSI A135.5.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Chesapeake Plywood LLC]
 - b. [Georgia-Pacific Gypsum LLC]
 - c. [Marlite, Inc.]
 - d. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Chesapeake Plywood LLC]

- b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[Marlite, Inc.]**
 - d. **<Insert manufacturer's name>**
 - 3. Thickness: **[1/8 inch (3.2 mm)][5/32 inch (4 mm)][1/4 inch (6.4 mm)]**.
 - 4. Finish: **[Class I][Class II]**.
 - 5. Surface-Burning Characteristics: As follows, tested according to ASTM E84:
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 - 6. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range]**.
- C. Board Paneling, MMPA: Interior wood-board paneling complying with MMPA WM 9.
- 1. Species: **[Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine][Southern pine][Western red cedar][Figured red gum]<Insert species>**.
 - 2. Grade: **[Clear No. 1][Clear No. 2][Knotty No. 1][Knotty No. 2][Finger jointed]**.
 - 3. Maximum Moisture Content: **[15 percent with at least 85 percent of shipment at 12 percent or less][9 percent]**.
 - 4. Pattern: **[V-joint, tongue and groove, PT 82][Beaded ceiling, PT 85][Beveled-edge channel, shiplapped, PT 82][As indicated]**.
 - 5. Net Coverage Width: Not less than **[5-1/16 inches (128 mm)][6-3/4 inches (171 mm)][8-3/4 inches (222 mm)]**.
- D. Board Paneling:
- 1. Species and Grade:
 - a. Eastern white pine; NeLMA or NLGA **[C Select][D Select][Finish or 1 Common][Premium or 2 Common]**.
 - b. Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NLGA or WWPB **[C Select (Choice)][D Select (Quality)][1 Common (Colonial)][2 Common (Sterling)]**.
 - c. Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPB **[C Select (Choice)][D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)]**.
 - d. Southern pine; SPIB **[B & B][C & Btr][No. 2]** Paneling.
 - e. Western red cedar; NLGA, WCLIB, or WWPB **[Clear Heart][Grade A][Grade B]**.
 - 2. Maximum Moisture Content: **[19][15] percent [with at least 85 percent of shipment at 12 percent or less]**.
 - 3. Pattern:
 - a. V-joint, tongue and groove, **[NeLMA EWP 4][SPIB SPP 54][or][WWPB WP 4]**.
 - b. Pickwick, tongue and groove, **[NeLMA EWP 2][SPIB SPP 52][or][WWPB WP 2]**.
 - c. Rounded-edge channel groove, tongue and groove, **[SPIB SPP 60][or][WWPB WP 6]**.
 - d. Edge and center bead, tongue and groove, **[NeLMA E & CB][or][WWPB E & CB Ceiling]**.
 - 4. Net Coverage Width: Not less than **[5-1/16 inches (128 mm)][6-3/4 inches (171 mm)][8-3/4 inches (222 mm)]**.

2.5 SHELVING AND CLOTHES RODS

- A. Shelving: **[Exposed][Closet][Utility]** shelving, made from **[the following material][one of the following materials]**, 3/4 inch (19 mm) thick:
1. Particleboard with **[radiused and filled][or][solid-wood]** front edge.
 2. MDF with **[radiused][or][solid-wood]** front edge.
 3. MDO softwood plywood with solid-wood edge.
 4. Melamine-faced particleboard with **[radiused and filled][applied-PVC]** front edge.
 5. Wood boards as specified above for **[lumber trim for opaque][softwood lumber trim for transparent][hardwood lumber trim for transparent]** finish.
 6. Softwood Boards:
 - a. Kiln-dried eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; NeLMA, NLGA, or WWPB **[C Select (Choice)][D Select (Quality)][Finish or 1 Common (Colonial)][Premium or 2 Common (Sterling)]**.
 - b. Kiln-dried Douglas fir-larch, Douglas fir south, or hem-fir; SPIB **[Superior or C & Btr][Prime or D]** finish; NLGA, WCLIB, or WWPB; or southern pine; **[B & B][C]** finish.
- B. Shelf Cleats: **[3/4-by-3-1/2-inch (19-by-89-mm) boards][3/4-by-5-1/2-inch (19-by-140-mm) boards][3/4-by-5-1/2-inch (19-by-140-mm) boards with hole and notch to receive clothes rods]**, as specified above for **[shelving][lumber trim for opaque finish][softwood lumber trim for transparent finish][hardwood lumber trim for transparent finish]**.
- C. Shelf Brackets with Rod Support: BHMA A156.16, B04051; prime-painted formed steel.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[A&M Hardware, Inc.]**
 - b. **[EPCO, Engineered Products Co.]**
 - c. **[Knappe & Vogt Manufacturing Company]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[A&M Hardware, Inc.]**
 - b. **[EPCO, Engineered Products Co.]**
 - c. **[Knappe & Vogt Manufacturing Company]**
 - d. **<Insert manufacturer's name>**
- D. Shelf Brackets without Rod Support: BHMA A156.16, B04041; prime-painted formed steel.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[A&M Hardware, Inc.]**
 - b. **[Centerline Brackets; Centerline Steel, LLC]**
 - c. **[EPCO, Engineered Products Co.]**
 - d. **[Knappe & Vogt Manufacturing Company]**

e. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [A&M Hardware, Inc.]
- b. [Centerline Brackets; Centerline Steel, LLC]
- c. [EPCO, Engineered Products Co.]
- d. [Knape & Vogt Manufacturing Company]
- e. <Insert manufacturer's name>

- E. Standards for Adjustable Shelf Brackets: BHMA A156.9, B04102; [powder-coat-finished][brass-finished][zinc-plated] steel.
- F. Adjustable Shelf Brackets: BHMA A156.9, B04112; [powder-coat-finished steel][brass-finished steel][zinc-plated steel][bronze-anodized aluminum][black-anodized aluminum][natural aluminum].
- G. Standards for Adjustable Shelf Supports: BHMA A156.9, B04071; [powder-coat-finished][brass-finished][zinc-plated] steel.
- H. Adjustable Shelf Supports: BHMA A156.9, B04081 or B04091; [powder-coat-finished][brass-finished][zinc-plated] steel.
- I. Wood Clothes Rods: 1-1/2-inch- (38-mm-) diameter, clear, kiln-dried [hardwood][Douglas fir or southern pine].
- J. Metal Clothes Rods: 1-5/16-inch- (33-mm-) diameter, [aluminum tubes][chrome-plated-steel tubes][color-coated-steel tubes][stainless steel tubes][chrome-plated-steel telescoping tubes with end brackets for mounting on shelf cleats].
- K. Wood Rod Flanges: Clear, kiln-dried, [Douglas fir or southern pine][eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine][red oak][white maple][aspen, basswood, cottonwood, sap gum, white maple, or yellow poplar]<Insert species> turnings[with clear finish].
- L. Metal Rod Flanges: [Aluminum][Chrome-plated steel][Stainless steel].

2.6 MISCELLANEOUS MATERIALS

- A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.
- B. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.
 - 1. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of

- Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
 6. Adhesives shall have a VOC content of [30]<Insert value> g/L or less.
- C. Installation Adhesive for Foam-Plastic Moldings: Product recommended for indicated use by foam-plastic molding manufacturer.
1. Adhesives shall have a VOC content of [50]<Insert value> g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. Paneling Adhesive: Comply with paneling manufacturer's written instructions for adhesives.
1. Adhesives shall have a VOC content of [50]<Insert value> g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m,

and that of acetaldehyde shall not exceed 9 mcg/cu. m.

- E. Multipurpose Construction Adhesive: Formulation, complying with ASTM D3498, that is recommended for indicated use by adhesive manufacturer.
1. Adhesives shall have a VOC content of [70]<Insert value> g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.7 FABRICATION

- A. Back out or kerf backs of the following members, except those with ends exposed in finished work:
1. Interior standing and running trim, except shoe and crown molds.
 2. Wood-board paneling.
- B. Ease edges of lumber less than **1 inch (25 mm)** in nominal thickness to **1/16-inch (1.5-mm)** radius and edges of lumber **1 inch (25 mm)** or more in nominal thickness to **1/8-inch (3-mm)** radius.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of projections and substances detrimental to application.

- B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours[**unless longer conditioning is recommended by manufacturer**].

3.3 INSTALLATION, GENERAL

- A. Do not use materials that are unsound; warped; improperly treated or finished; inadequately seasoned; too small to fabricate with proper jointing arrangements; or with defective surfaces, sizes, or patterns.
- B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials.
 - 1. Use concealed shims where necessary for alignment.
 - 2. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
 - 3. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.
 - 4. Install to tolerance of **1/8 inch in 96 inches (3 mm in 2438 mm)** for level and plumb. Install adjoining interior finish carpentry with **1/32-inch (0.8-mm)** maximum offset for flush installation and **1/16-inch (1.5-mm)** maximum offset for reveal installation.
 - 5. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

3.4 INSTALLATION OF INTERIOR TRIM

- A. Install trim with minimum number of joints as is practical, using full-length pieces from maximum lengths of lumber available.
 - 1. Do not use pieces less than **24 inches (610 mm)** long, except where necessary.
 - 2. Stagger joints in adjacent and related standing and running trim.
 - 3. **[Cope][Miter]** at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint.
 - 4. Use scarf joints for end-to-end joints.
 - 5. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.
 - 6. Match color and grain pattern of trim for transparent finish (stain or clear finish) across joints.
 - 7. Install trim after gypsum-board joint finishing operations are completed.
 - 8. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting.
 - 9. Fasten to prevent movement or warping.
 - 10. Countersink fastener heads on exposed carpentry work and fill holes.

3.5 INSTALLATION OF PANELING

- A. Plywood Paneling: Select and arrange panels on each wall to minimize noticeable variations in grain character and color between adjacent panels.
 - 1. Leave **1/4-inch (6-mm)** gap to be covered with trim at top, bottom, and openings.
 - 2. Install with uniform tight joints between panels.
 - 3. Attach panels to supports with manufacturer's recommended panel adhesive and fasteners.
 - 4. Space fasteners and adhesive as recommended by panel manufacturer.
 - 5. Conceal fasteners to greatest practical extent.
 - 6. Arrange panels with grooves and joints over supports.
 - a. Fasten to supports with nails of type and at spacing recommended by panel manufacturer.
 - b. Use fasteners with prefinished heads matching groove color.

- B. Hardboard Paneling: Install according to manufacturer's written instructions.
 - 1. Leave **1/4-inch (6-mm)** gap to be covered with trim at top, bottom, and openings.
 - 2. Butt adjacent panels with moderate contact.
 - 3. Use fasteners with prefinished heads matching paneling color.
 - 4. Wood Stud or Furring Substrate: Install with **1-inch (25-mm)** annular-ring shank hardboard nails.
 - 5. Plaster or Gypsum-Board Substrate: Install with **1-5/8-inch (41-mm)** annular-ring shank hardboard nails.
 - 6. Nailing: Space nails **4 inches (100 mm)** o.c. at panel perimeter and **8 inches (200 mm)** o.c. at intermediate supports unless otherwise required by manufacturer.
- C. Board Paneling: Install according to manufacturer's written instructions.
 - 1. Arrange in random-width pattern suggested by manufacturer unless boards or planks are of uniform width.
 - 2. Install in full lengths without end joints.
 - 3. Stagger end joints in random pattern to uniformly distribute joints on each wall.
 - 4. Install with uniform end joints with only end-matched (tongue-and-groove) joints within each field of paneling.
 - 5. Install with uniform end joints. Locate end joints only over furring or blocking.
 - 6. Select and arrange boards on each wall to minimize noticeable variations in grain character and color between adjacent boards.
 - 7. Install with uniform tight joints between boards.
 - 8. Fasten paneling by face nailing, setting nails, and filling over nail heads.
 - 9. Fasten paneling with trim screws, set below face and filled.
 - 10. Fasten paneling by blind nailing through tongues.
 - 11. Fasten paneling with paneling system manufacturer's concealed clips.
 - 12. Fasten paneling to gypsum wallboard with panel adhesive.

3.6 INSTALLATION OF SHELVING AND CLOTHES RODS

- A. Cut shelf cleats at ends of shelves about **1/2 inch (13 mm)** less than width of shelves and sand exposed ends smooth.
 - 1. Install shelf cleats by fastening to framing or backing with finish nails or trim screws, set below face and filled.
 - 2. Space fasteners not more than **16 inches (400 mm)** o.c. [**Use two fasteners at each framing member or fastener location for cleats 4 inches nominal (89 mm actual) in width and wider.**]
 - 3. Apply a bead of multipurpose construction adhesive to back of shelf cleats before installing.
 - 4. Remove adhesive that is squeezed out after fastening shelf cleats in place.
- B. Install shelf brackets according to manufacturer's written instructions, spaced not more than **[32 inches (800 mm)][36 inches (900 mm)]** o.c. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
- C. Install standards for adjustable shelf supports according to manufacturer's written instructions. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Space fasteners not more than **12 inches (300 mm)** o.c.
- D. Install standards for adjustable shelf brackets according to manufacturer's written instructions, spaced not more than **36 inches (900 mm)** o.c. and within **6 inches (150 mm)** of ends of shelves. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.

- E. Cut shelves to neatly fit openings with only enough gap to allow shelves to be removed and reinstalled.
 - 1. Install shelves, fully seated on cleats, brackets, and supports.
 - 2. Fasten shelves to cleats with finish nails or trim screws, set flush.
 - 3. Fasten shelves to brackets to comply with bracket manufacturer's written instructions.
- F. Install rod flanges for rods as indicated.
 - 1. Fasten to shelf cleats, framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
 - 2. Install rods in rod flanges.

3.7 ADJUSTING

- A. Replace interior finish carpentry that is damaged or does not comply with requirements.
 - 1. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.
- B. Adjust joinery for uniform appearance.

3.8 CLEANING

- A. Clean interior finish carpentry on exposed and semiexposed surfaces.
- B. Restore damaged or soiled areas and touch up factory-applied finishes if any.

3.9 PROTECTION

- A. Protect installed products from damage from weather and other causes during construction.
- B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.
 - 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

SECTION 06 40 00 00 - EXTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior standing and running trim for transparent finish.
2. Exterior standing and running trim for opaque finish.
3. Exterior frames and jambs for transparent finish.
4. Exterior frames and jambs for opaque finish.
5. Exterior shutters for transparent finish.
6. Exterior shutters for opaque finish.
7. Exterior stairs and railings.
8. Preservative-treated-wood material.
9. Fire-retardant-treated wood material.
10. Shutter hardware.
11. Miscellaneous materials.
12. Shop priming.
13. Shop finishing.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing exterior architectural woodwork that are concealed within other construction before exterior architectural woodwork installation.
2. Section 062013 "Exterior Finish Carpentry" for exterior carpentry exposed to view that is not specified in this Section.

1.2 COORDINATION

- ##### A.
- Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that exterior architectural woodwork can be supported and installed as indicated.

1.3 PREINSTALLATION MEETINGS

- ##### A.
- Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

- ##### A.
- Product Data: For each type of product.

B.

Wood-Preservative Treatment:

1. Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Indicate type of preservative used and net amount of preservative retained.

3. Include chemical-treatment manufacturer's written instructions for finishing treated material and manufacturer's written warranty.
- C. Fire-Retardant Treatment: Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- D. Waterborne Treatments: For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
- E. Sustainable Design Submittals:
1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
 3. Environmental Product Declaration (EPD): For each product.
 4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
 5. Environmental Product Declaration: For each product.
 6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
 7. Environmental Product Declaration: For each product.
 8. Environmental Product Declaration: For each product.
 9. Third-Party Certifications: For each product.
 10. Third-Party Certified Life Cycle Assessment: For each product.
 11. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
- F. Shop Drawings:
1. Include dimensioned plans, elevations, sections, and attachment details.
 2. Show **[large-scale][full-size]** details.
 3. Show locations and sizes of furring, blocking, and hanging strips, including blocking and reinforcement concealed by construction and specified in other Sections.
 4. Apply **[AWI Quality Certification][WI Certified Compliance]** Program label to Shop Drawings.
- G. Samples: For each exposed product and for each color and finish specified.
1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
- H. Samples for Initial Selection: For each type of exposed finish.
1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.

- I. Samples for Verification: For the following:
 1. Lumber for Exterior Wood-Stain Finish: Not less than **5 inches (125 mm)** wide by **12 inches (300 mm)** long, for each species, with one-half of exposed surface finished.
 2. Lumber for Transparent Finish: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 3. Lumber and Panel Products with Shop-Applied Opaque Finish: **5 inches (125 mm)** wide by **12 inches (300 mm)** long for lumber and **[8 by 10 inches (200 by 250 mm)][12 by 12 inches (300 by 300 mm)]** for panels, for each finish system and color.
 - a. Finish **[entire][one-half of]** exposed surface.
 4. Shutter Hardware: Full-size samples for each type and size of hardware in each finish, and color required.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[architectural woodwork manufacturer][and][Installer]**.
- B. Evaluation Reports: For **[preservative-treated][and][fire-retardant-treated]** wood materials, from ICC-ES.
- C. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: **[AWI Quality Certification Program][WI Certified Compliance Program]** certificates.

1.7 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
 1. Manufacturer's Certification: Licensed participant in **[AWI's Quality Certification Program][WI's Certified Compliance Program]**.
- B. Installer Qualifications: **[Fabricator of products][Licensed participant in AWI's Quality Certification Program][Licensed participant in WI's Certified Compliance Program]**.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 1. Build mockups of **[typical exterior architectural woodwork as shown on Drawings]<Insert description>**.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with Architectural Woodwork Standards, Section 2.
- B. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
 - 1. Handle and store fire-retardant-treated wood to comply with chemical-treatment manufacturer's written instructions.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation of exterior architectural woodwork only when existing and forecasted weather conditions permit work to be performed and at least one coat of specified finish to be applied without exposure to rain, snow, or dampness.
- B. Field Measurements: Where exterior architectural woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.
 - 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being concealed by construction, and indicate measurements on Shop Drawings.
- C. Established Dimensions: Where exterior architectural woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 ARCHITECTURAL WOODWORK MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **<Insert, in separate subparagraphs, names for preapproved architectural woodworking firms>.**

2.2 ARCHITECTURAL WOODWORK, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of exterior architectural woodwork indicated for construction, finishes, installation, and other requirements.
 - 1. Provide **[labels][and][certificates]** from **[AWI][WI]** certification program indicating that woodwork**[and installation]** complies with requirements of grades specified.
 - a. This project has been registered with AWI as AWI Quality Certification Program Number **<Insert number>.**

- b. Contractor is to register the Work under this Section with the AWI Quality Certification Program at www.awiqcp.org or by calling 800-345-0991.
- 2. The Contract Documents contain requirements that are more stringent than the Architectural Woodwork Standards. Comply with Contract Documents and the Architectural Woodwork Standards.
 - B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
 - C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
 - D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
 - E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
 - G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
 - H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
 - I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
 - J. Certified Wood: Wood products shall [**contain not less than 60 percent**][**be made from**] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
 - K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- 2.3 EXTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH
 - A. Architectural Woodwork Standards Grade: [**Premium**][**Custom**][**Economy**].
 - B. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.
 - C. Wood Species: [**All-heart redwood**][**Western red cedar**][**Ponderosa pine or sugar pine**][**Eastern**

white pine]<Insert species>.

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.4 EXTERIOR STANDING AND RUNNING TRIM FOR OPAQUE FINISH

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Backout or groove backs of flat trim members, and kerf backs of other wide, flat members, except for members with ends exposed in finished work.
- C. Wood Species: **[All-heart redwood][Western red cedar][Ponderosa pine or sugar pine][Eastern white pine, sugar pine, or western white pine][Any closed-grain hardwood]<Insert species>.**
 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
 2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.5 EXTERIOR FRAMES AND JAMBS FOR TRANSPARENT FINISH

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Wood Species: **[Teak][All-heart redwood][Western red cedar][White oak][Ponderosa pine or sugar pine]<Insert species>.**
 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
 2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.6 EXTERIOR FRAMES AND JAMBS FOR OPAQUE FINISH

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Wood Species: **[All-heart redwood][Western red cedar][Ponderosa pine][Ponderosa pine or sugar pine][Eastern white pine, sugar pine, or western white pine][Any closed-grain hardwood]<Insert species>.**
 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
 2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.7 EXTERIOR SHUTTERS FOR TRANSPARENT FINISH

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Wood Species: **[Teak][African mahogany][All-heart redwood][Ponderosa pine or sugar pine]<Insert species>.**

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.8 EXTERIOR SHUTTERS FOR OPAQUE FINISH

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Wood Species: **[All-heart redwood][Ponderosa pine][Ponderosa pine or sugar pine]<Insert species>**.
 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
 2. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.9 EXTERIOR STAIRS AND RAILINGS

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- B. Hand select wood for freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot holes, shake, splits, torn grain, and wane.
- C. Stair Treads:
 1. **[1-1/4-inch- (32-mm-)][1-inch- (25-mm-)]** thick, kiln-dried[, **pressure-preservative-treated**] stepping with half-round or rounded edge nosing, of any of the following:
 - a. Douglas fir, NLGA, WCLIB, or WWPA C & Btr VG (Vertical Grain) stepping.
 - b. Hem-fir, NLGA, WCLIB, or WWPA C & Btr VG (Vertical Grain) stepping.
 - c. Southern pine, SPIB B & B stepping.
 2. **[1-1/4-inch- (32-mm-)][1 inch- (25 mm-)]** actual thickness, kiln-dried with half-round or rounded edge nosing.
 - a. Redwood, RIS **[Deck Heart or Construction Heart][Deck Common or Construction Common]**.
 - b. Redwood, RIS **[Heart Clear][Heart B or Select Heart]**.
 - c. Western red cedar, WWPA **[Patio 1][Patio 2]**.
 - d. Western red cedar, WCLIB **[Select Dex][Commercial Dex]**.
 - e. Western red cedar (North), NLGAS **[Select Patio][Commercial Patio]**.
 3. **[1-1/4-inch- (32-mm-)][1-inch- (25-mm-)][3/4-inch- (19-mm-)]** actual thickness radius-edged S4S boards, with one face free of planer skip, machine burn, and torn or chipped grain.
 - a. Species: **[Ipe][Teak][Cumaru][Garapa][Goncalo alves]<Insert name>**.
 - b. Grade Characteristics:
 - 1) Clear[**one face; small pin knots and worm holes allowed on back face**].
 - 2) Sound; small pin knots, worm holes, and fixed knots allowed.
 - 3) All heart[**one face**].
 - 4) Straight grained and parallel cut.
 - 5) Free of heart centers.
 - 6) No decay, incipient decay, honeycomb, knot holes, shakes, splits, or wane.

- 7) No discoloration.

D. Stair Risers:

1. **3/4-inch- (19-mm-)** thick, kiln-dried[, **pressure-preservative-treated**] finish boards, of any of the following:
 - a. Douglas fir, NLGA, WCLIB, or WWPA C & Btr or Superior finish.
 - b. Hem-fir, NLGA, WCLIB, or WWPA C & Btr or Superior finish.
 - c. Southern pine, SPIB B & B.
2. **3/4-inch- (19-mm-)** actual thickness, kiln-dried with half-round or rounded edge nosing.
 - a. Redwood, RIS [**Deck Heart or Construction Heart**][**Deck Common or Construction Common**].
 - b. Redwood, RIS [**Heart Clear**][**Heart B or Select Heart**].
 - c. Western red cedar, WWPA [**Patio 1**][**Patio 2**].
 - d. Western red cedar, WCLIB [**Select Dex**][**Commercial Dex**].
 - e. Western red cedar (North), NLGAS [**Select Patio**][**Commercial Patio**].
3. **3/4-inch- (19-mm-)** actual thickness radius-edged S4S boards, with one face free of planer skip, machine burn, and torn or chipped grain.
 - a. Species: [**Ipe**][**Teak**][**Cumaru**][**Garapa**][**Goncalo alves**]<Insert name>.
 - b. Grade Characteristics:
 - 1) Clear[**one face; small pin knots and worm holes allowed on back face**].
 - 2) Sound; small pin knots, worm holes, and fixed knots allowed.
 - 3) All heart[**one face**].
 - 4) Straight grained and parallel cut.
 - 5) Free of heart centers.
 - 6) No decay, incipient decay, honeycomb, knot holes, shakes, splits, or wane.
 - 7) No discoloration.

E. Railing Members:

1. Clear, kiln-dried, solid, [**yellow poplar**][**pressure-preservative-treated Douglas fir**][**pressure-preservative-treated southern pine**]; railing stock of pattern indicated on Drawings.
2. [**Select Structural**][**No. 1**][**No. 2**][**Construction or No. 2**] grade and[**any of**] the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWPA.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWPA.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - e. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWPA.
3. Redwood, RIS [**Heart Clear**][**Heart B or Select Heart**].
4. Any of the following species and grades:
 - a. Douglas fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - b. Hem-fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - c. Redwood, RIS [**Heart Clear**][**Heart B or Select Heart**].
 - d. Southern pine, SPIM B & B finish.

5. Radius-edged [Ipe][Teak] S4S boards, [same grade as stair treads][clear][clear all heart][, straight grained and parallel cut].

F. Balusters:

1. 1-1/16-inch- (27-mm-) square, clear, kiln-dried, solid, [yellow poplar][pressure-preservative-treated Douglas fir][pressure-preservative-treated southern pine].
2. 1-1/16-inch- (27-mm-) square, [Select Structural][No. 1][No. 2][Construction or No. 2] grade, and[any of] the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWPA.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWPA.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - e. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWPA.
3. 1-1/16-inch- (27-mm-) square, redwood, RIS [Heart Clear][Heart B or Select Heart].
4. 1-1/16-inch- (27-mm-) square,[and any of the following species and grades:]
 - a. Douglas fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - b. Hem-fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - c. Redwood, RIS [Heart Clear][Heart B or Select Heart].
 - d. Southern pine, SPIM B & B finish.
5. 1-1/16-inch- (27-mm-) square, radius-edged [Ipe][Teak] S4S boards, [same grade as stair treads][clear][clear all heart][, straight grained and parallel cut].

G. Newel Posts:

1. 2-3/4-inch- (70-mm-) square, clear, kiln-dried, [yellow poplar][pressure-preservative-treated Douglas fir][pressure-preservative-treated southern pine], turned newel posts of pattern and size indicated on Drawings.
2. 2-3/4-inch- (70-mm-) square, [Select Structural][No. 1][No. 2][Construction or No. 2] grade, and[any of] the following species:
 - a. Hem-fir or hem-fir (North); NLGA, WCLIB, or WWPA.
 - b. Douglas fir-larch, Douglas fir-larch (North), or Douglas fir-south; NLGA, WCLIB, or WWPA.
 - c. Mixed southern pine; SPIB.
 - d. Redwood; RIS.
 - e. Spruce-pine-fir or spruce-pine-fir (South); NeLMA, NLGA, WCLIB, or WWPA.
3. 2-3/4-inch- (70-mm-) square, redwood, RIS [Heart Clear][Heart B or Select Heart].
4. 2-3/4-inch- (70-mm-) square,[and any of the following species and grades:]
 - a. Douglas fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - b. Hem-fir, NLGA, WCLIB, or WWPA C & Btr finish or C Select.
 - c. Redwood, RIS [Heart Clear][Heart B or Select Heart].
 - d. Southern pine, SPIM B & B finish.
5. 2-3/4-inch- (70-mm-) square, radius-edged [Ipe][Teak] S4S boards, [same grade as stair treads][clear][clear all heart][, straight grained and parallel cut].

2.10 WOOD MATERIALS

- A. Hardboard: ANSI A135.4.

- B. Softwood Plywood: DOC PS 1, exterior[, **medium-density overlay**].

2.11 PRESERVATIVE-TREATED-WOOD MATERIAL

- A. Preservative-Treated-Wood Materials: Provide with water-repellent preservative treatment complying with AWWA N1 (dip, spray, flood, or vacuum-pressure treatment).
1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, **combined with a compatible EPA-registered insecticide**].
 2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
- B. Extent of Preservative-Treated Wood Materials: Treat wood materials [**unless otherwise indicated on Drawings**][**except items indicated to be fire-retardant treated**][**Insert requirements**].
1. Items fabricated from the following wood species need not be treated:
 - a. **[Redwood]**[**All-heart redwood**].
 - b. **[Western red cedar]**[**All-heart western red cedar**].
 - c. White oak.
 - d. African mahogany.
 - e. Honduras mahogany.
 - f. Ipe.
 - g. Dark red meranti.
 - h. Teak.

2.12 FIRE-RETARDANT-TREATED WOOD MATERIAL

- A. Fire-Retardant-Treated Wood Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products according to test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of the Architectural Woodwork Standards for the grade specified. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Exterior Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E84 after being subjected to accelerated weathering according to ASTM D2898, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained, transparent, or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.

4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

C. Extent of Fire-Retardant-Treated Wood Materials:

1. Exterior architectural woodwork located more than **40 feet (12.192 m)** above grade.
2. Exterior architectural woodwork in locations with a fire-separation distance of **5 feet (1.524 m)** or less.
3. **[Where indicated on Drawings]<Insert requirements>**.

2.13 SHUTTER HARDWARE

A. Offset Strap Hinges: For inset shutters and with tapered strap. Shutters can lift off pintles after installation. Provide top and bottom hinges for each shutter and matching wood screws for installation.

1. Offset: **[1/2 inch (13 mm)][1-1/2 inches (38 mm)][2-1/4 inches (57 mm)][3-1/4 inches (83 mm)]<Insert dimension>**.
2. Strap Length: **[10 inches (254 mm)][12 inches (300 mm)][14 inches (356 mm)][16 inches (406 mm)]<Insert dimension>**.
3. Strap Width: **[1-3/4 inches (45 mm)]<Insert dimension>** at widest point.
4. Pintle Plate: **[3-1/2 by 1-1/2 by 1/8 inches (89 by 38 by 3 mm)]<Insert dimensions>**.
5. Pintle Diameter: **[3/8 inch (10 mm)]<Insert dimension>**.
6. Material and Finish: **[Zinc-chromate-plated steel with black finish]<Insert requirements>**.

B. New York-Style Hinges: Offset type for full-inset shutters. Provide top and bottom hinges for each shutter and matching wood screws for installation.

1. Overall Hinge Dimensions: **[4-1/4 by 5 inches (108 by 127 mm)][6 by 6-3/4 inches (152 by 172 mm)]<Insert dimensions>**.
2. Offset: **[1-1/16 inches (27 mm)][1-1/4 inches (32 mm)][2-1/8 inches (54 mm)][2-1/4 inches (57 mm)]<Insert dimension>**.
3. Pintle Plate: **[2 by 1-1/8 inches (51 by 29 mm)][3-1/8 by 1-1/8 inches (79 by 29 mm)][3-5/8 by 1-3/16 inches (92 by 30 mm)]<Insert dimensions>**.
4. Material and Finish: **[Cast iron with rust-inhibiting primer and black matte powder-coated polyurethane finish][Galvanized steel][Solid bronze with wax finish]<Insert requirements>**.

C. L-Type Hinges: Offset type for inset shutters; with tapered long-leg of L-shape oriented horizontally. Shutters can lift off pintles after installation. Provide top and bottom hinges[**and matching middle, straight-plate hinge**] for each shutter and matching wood screws for installation.

1. L-Shape Plate: **[5-inch- (127-mm-) long vertical leg and 6-inch- (152-mm-) long horizontal leg]<Insert requirements>**.
2. Maximum Leg Width: **[1-3/8 inches (35 mm)]<Insert dimension>**.
3. Offset: **[1/2 inch (13 mm)][1-1/2 inches (38 mm)][2-1/4 inches (57 mm)]<Insert dimension>**.
4. Pintle Plate: **[3-1/2 by 1-1/2 by 1/8 inch (89 by 38 by 3 mm)]<Insert dimensions>**.
5. Pintle Diameter: **[3/8 inch (10 mm)]<Insert dimension>**.
6. Material and Finish: **[Zinc-chromate-plated steel with wrought-iron black finish]<Insert requirements>**.

D. Connecticut-Style Hinges: Strap-type, loose-joint hinges with threaded pintle. Provide top and bottom hinges[**and matching middle hinge**] for each shutter and matching wood screws for installation.

1. Type: **[No offset][1-1/4-inch (32-mm) offset][2-3/16-inch (56-mm) offset]<Insert description>**.
2. Strap Dimensions: **[1 by 4-1/4 inches (25 by 108 mm)][1 by 6-1/2 inches (25 by 165 mm)]<Insert dimensions>**.

- mm)]<Insert dimensions>.
3. Pintle: [2-3/8 inches (60 mm) long with 5/16-inch- (8-mm-) diameter thread][2-3/4 inches (70 mm) long with 1/4-inch- (6-mm-) diameter thread][4-1/2 inches (114 mm) long with 3/8-inch- (10-mm-) diameter thread][4-1/2 inches (114 mm) long with 7/16-inch- (11-mm-) diameter thread]<Insert requirements>.
4. Material and Finish: [Galvanized steel][Stainless steel with black finish]<Insert requirements>.

E. Bermuda-Style Hinges: For top-hung shutters. Provide [two]<Insert number> hinges and one matching, shutter stay per shutter. Provide matching wood screws for installation.

1. Overall Hinge Dimensions: [6-3/16 by 3-1/2 inches (157 by 89 mm)]<Insert dimensions>.
2. Hinge Leg Width: Approximately [1-1/16 inches (27 mm)]<Insert dimension>.
3. Hinge Material Thickness: Approximately [1/4 inch (6 mm)]<Insert dimension>.
4. Shutter Stay: [24-inch- (610-mm-)]<Insert dimension> long.
5. Material and Finish: [Cast iron and coated with a black textured powder coat]<Insert requirements>.

F. Shutter Dogs: For holding shutters in open position.

1. Type: [Traditional scroll design]<Insert requirements>.
2. Overall Dimensions: [6-3/4 by 2-3/8 inches (172 by 60 mm)][8-1/8 by 3-1/4 inches (206 by 83 mm)]<Insert dimensions>.
3. Material and Finish: [Steel with rough black, rust-inhibiting finish]<Insert requirements>.

2.14 FASTENERS

A. General: Provide fasteners of size and type indicated, acceptable to authorities having jurisdiction, and that comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than 1-1/2 inches (38 mm) into wood substrate.

1. Use [stainless steel][fasteners with hot-dip zinc coating complying with ASTM A153/A153M or ASTM F2329/F2329M] unless otherwise indicated.
2. For pressure-preservative-treated wood, use stainless steel fasteners.
3. For redwood, use [brass/bronze][stainless steel][hot-dip galvanized-steel] fasteners.

B. Nails: ASTM F1667.

C. Power-Driven Fasteners: ICC-ES AC70.

D. Wood Screws and Lag Screws: ASME B18.2.1, ASME B18.6.1, or ICC-ES AC233.

E. Carbon-Steel Bolts: **ASTM A307** with **ASTM A563 (ASTM A563M)** hex nuts and, where indicated, flat washers all hot-dip zinc coated.

F. Stainless Steel Bolts: **ASTM F593, Alloy Group 1 or 2**; with **ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or Grade A4)** hex nuts and, where indicated, flat washers.

G. Postinstalled Anchors: Stainless steel, [chemical][or][torque-controlled expansion] anchors with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing according to ASTM E488/E488M conducted by a qualified independent testing and inspecting agency.

1. Stainless steel bolts and nuts complying with **ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or Grade A4)**.

2.15 MISCELLANEOUS MATERIALS

- A. Blocking, Shims, and Nailers: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.
 1. Wood-Preservative Treatment: By pressure process, AWP A U1; Use Category UC3b.
 - a. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
 - b. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
 - c. Mark lumber with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee's (ALSC) Board of Review.
 2. Fire-Retardant Treatment: Complying with requirements; provide [where indicated on Drawings]<Insert requirements>.

2.16 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate exterior architectural woodwork to dimensions, profiles, and details indicated.
 1. Ease edges to radius indicated for the following:
 - a. Edges of Solid-Wood (Lumber) Members: **1/16 inch (1.5 mm)** unless otherwise indicated.
 - b. Edges of Rails and Similar Members More Than 3/4 Inch (19 mm) Thick: **1/8 inch (3 mm)**.
- C. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site.
 1. Disassemble components only as necessary for shipment and installation.
 2. Where necessary for fitting at site, provide allowance for scribing, trimming, and fitting.
 3. Notify Architect seven days in advance of the dates and times exterior architectural woodwork fabrication will be complete.
 4. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled.
 - a. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting.
 - b. Verify that parts fit as intended, and check measurements of assemblies against field measurements indicated on approved Shop Drawings before disassembling for shipment.

2.17 SHOP PRIMING

- A. Preparations for Finishing: Comply with the Architectural Woodwork Standards for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing exterior architectural woodwork, as applicable to each unit of work.
- B. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork.[**Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.**]

- C. Exterior Architectural Woodwork for Opaque Finish: Shop prime all surfaces with one coat of wood primer as specified in Section 099113 "Exterior Painting."
- D. Exterior Architectural Woodwork for Transparent Finish:
 - 1. Shop seal surfaces to be concealed
 - 2. Shop seal exposed surfaces with stain (if specified), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."

2.18 SHOP FINISHING

- A. Finish exterior architectural woodwork [**with transparent finish**][**indicated on Drawings**] at fabrication shop. Defer only final touchup, cleaning, and polishing until after installation.
- B. Preparation for Finishing: Comply with the Architectural Woodwork Standards for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing exterior architectural woodwork, as applicable to each unit of work.
 - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of exterior architectural woodwork. Apply two coats to end-grain surfaces.
- C. Transparent Finish: Comply with Section 099300 "Staining and Transparent Finishing."
- D. Opaque Finish: Comply with Section 099113 "Exterior Painting."

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition exterior architectural woodwork to average prevailing humidity conditions at Project site.
- B. Before installing exterior architectural woodwork, examine shop-fabricated work for completion, and complete work as required, including removing packing and backpriming concealed surfaces.

3.2 INSTALLATION

- A. Grade: Install exterior architectural woodwork to comply with same grade as item to be installed.
- B. Assemble exterior architectural woodwork, and complete fabrication at Project site to the extent that it was not completed during shop fabrication.
- C. Install exterior architectural woodwork level, plumb, true in line, and without distortion.
 - 1. Shim as required with concealed shims.
 - 2. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)**.
- D. Standing and Running Trim:
 - 1. Install with minimum number of joints possible, using full-length pieces (from maximum length of

- lumber available) to greatest extent possible.
- 2. Do not use pieces less than **[36 inches (900 mm)][60 inches (1500 mm)][96 inches (2400 mm)]** long, except where shorter single-length pieces are necessary.
- 3. Scarf running joints and stagger in adjacent and related members.
- E. Scribe and cut exterior architectural woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- F. Preservative-Treated Wood Materials: Where field cut or drilled, treat cut ends and drilled holes according to AWWPA M4.
- G. Fire-Retardant-Treated Wood Materials: Install fire-retardant-treated materials to comply with chemical treatment manufacturer's written instructions.
- H. Anchor exterior architectural woodwork to anchors or blocking built in or directly attached to substrates.
 - 1. Secure with countersunk, concealed fasteners and blind nailing.
 - 2. Use fine finishing nails **[or finishing screws]** for exposed fastening, countersunk and filled flush with exterior architectural woodwork.
 - 3. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced and with adjacent rows staggered.
 - 4. For shop-finished items, use filler matching finish of items being installed.
- I. Stair and Railing Installation:
 - 1. Treads and Risers:
 - a. Install stair tread with crown side up (bark side down).
 - b. Secure treads and risers by gluing and nailing to carriages.
 - 1) Extend treads over carriages **[and finish with bullnose edge]**.
 - c. Countersink nail heads, fill flush, and sand filler.
 - 2. Balusters:
 - a. Fit balusters to treads, glue, and nail in place.
 - b. Countersink nail heads, fill flush, and sand filler.
 - c. Let into railings and glue in place.
 - 3. Newel Posts: Secure newel posts to stringers and risers with **[through bolts][lag screws][countersunk-head wood screws and glue]**.
 - 4. Railings:
 - a. Secure wall rails with metal brackets.
 - b. Fasten freestanding railings to newel posts and to trim at walls with glue and countersunk-head wood screws or rail bolts.
 - 5. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced and with adjacent rows staggered.
 - 6. Install stairs with no more than **3/16-inch (4.7-mm)** variation between adjacent treads and risers and with no more than **3/8-inch (10-mm)** variation between largest and smallest treads and risers within each flight.
- J. Touch up finishing work specified in this Section after installation of exterior architectural woodwork.

1. Fill nail holes with matching filler where exposed.
2. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.

K. Field Finishing: See **[Section 099113 "Exterior Painting"]****[and]****[Section 099300 "Staining and Transparent Finishing"]** for final finishing of installed exterior architectural woodwork.

3.3 FIELD QUALITY CONTROL

A. Inspections: Provide inspection of installed Work through **[AWI's Quality Certification Program]****[WI's Certified Compliance Program]** certifying that woodwork, including installation, complies with requirements of the Architectural Woodwork Standards for the specified grade.

1. Inspection entity is to prepare and submit report of inspection.

3.4 REPAIR

A. Repair damaged and defective exterior architectural woodwork, where possible, to eliminate functional and visual defects **[and to result in exterior architectural woodwork being in compliance with requirements of the Architectural Woodwork Standards for the specified grade]**.

B. Where not possible to repair, replace defective woodwork.

3.5 CLEANING

A. Clean exterior architectural woodwork on exposed and semiexposed surfaces.

END OF SECTION 06 40 00 00

SECTION 06 40 00 00A - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior standing and running trim for transparent finish.
2. Interior standing and running trim for opaque finish.
3. Closet and utility shelving.
4. Interior frames and jambs for transparent finish.
5. Interior frames and jambs for opaque finish.
6. Interior wood stairs and railings.
7. Preservative-treated wood material.
8. Fire-retardant-treated wood material.
9. Miscellaneous materials.
10. Shop priming.
11. Shop finishing.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing interior architectural woodwork that are concealed within other construction before interior architectural woodwork installation.
2. Section 062023 "Interior Finish Carpentry" for interior carpentry exposed to view that is not specified in this Section.

1.2 COORDINATION

- A.** Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that interior architectural woodwork can be supported and installed as indicated.

1.3 PREINSTALLATION MEETINGS

- A.** Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Anchors.
2. Adhesives.
3. Shop finishing materials.

B. Wood-Preservative Treatment:

1. Include data and warranty information from chemical-treatment manufacturer and certification by

- treating plant that treated materials comply with requirements.
 2. Indicate type of preservative used and net amount of preservative retained.
 3. Include chemical-treatment manufacturer's written instructions for finishing treated material and manufacturer's written warranty.
- C. Fire-Retardant Treatment: Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- D. Waterborne Treatments: For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
- E. Sustainable Design Submittals:
1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
 2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
 3. Environmental Product Declaration (EPD): For each product.
 4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
 5. Environmental Product Declaration: For each product.
 6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
 7. Environmental Product Declaration: For each product.
 8. Environmental Product Declaration: For each product.
 9. Third-Party Certifications: For each product.
 10. Third-Party Certified Life Cycle Assessment: For each product.
 11. Environmental Product Declaration (EPD): Provide one of the following EPDs: critically reviewed life-cycle assessment complying with ISO 14044; internally reviewed, product-specific Type III EPD; third-party-verified, industrywide Type III EPD.
 12. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
 13. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
 14. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 15. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
 16. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
 17. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
 18. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
 19. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
 20. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
 21. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
 22. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
- F. Shop Drawings:
1. Include the following:

- a. Dimensioned plans, elevations, and sections.
 - b. Attachment details.
 2. Show **[large-scale][full-size]** details.
 3. Show locations and sizes of furring, blocking, and hanging strips, including blocking and reinforcement concealed by construction and specified in other Sections.
 4. Apply **[AWI Quality Certification][WI Certified Compliance]** Program label to Shop Drawings.
 - G. Samples: For each exposed product and for each shop-applied color and finish specified.
 1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 - H. Samples for Initial Selection: For each type of shop-applied exposed finish.
 1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 - I. Samples for Verification: For the following:
 1. Lumber for Transparent Finish: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 2. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished interior architectural woodwork.
 3. Lumber and Panel Products with Shop-Applied Opaque Finish: **5 inches (125 mm) wide by 12 inches (300 mm) long** for lumber and **[8 by 10 inches (200 by 250 mm)][12 by 12 inches (300 by 300 mm)]** for panels, for each finish system and color.
 - a. Finish **[entire][one-half of]** exposed surface.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For **[architectural woodwork manufacturer][and][Installer]**.
 - B. Product Certificates: For the following:
 1. Composite wood products.
 2. Adhesives.
 - C. Evaluation Reports: For **[preservative-treated][and][fire-retardant-treated]** wood materials, from ICC-ES.
 - D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: **[AWI Quality Certification Program][WI Certified Compliance Program]** certificates.

1.7 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
 - 1. Manufacturer's Certification: Licensed participant in **[AWI's Quality Certification Program][WI's Certified Compliance Program]**.
 - 2. Installer Qualifications: **[Manufacturer of products][and][Licensed participant in AWI's Quality Certification Program][Licensed participant in WI's Certified Compliance Program]**.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of **[typical interior architectural woodwork as shown on Drawings]<Insert description>**.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with the Architectural Woodwork Standards, Section 2.
- B. Do not deliver interior architectural woodwork until painting and similar finish operations that might damage woodwork have been completed in installation areas.
- C. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
 - 1. Handle and store fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions.

1.9 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install interior architectural woodwork until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install interior architectural woodwork until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F (16 and 32 deg C)** and relative humidity between **[25 and 55][43 and 70][20 and 50]<Insert number>** percent during the remainder of the construction period.
- C. Field Measurements: Where interior architectural woodwork is indicated to fit to other construction,

verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being concealed by construction, and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where interior architectural woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Frames: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
1. Smoke- and Draft-Control Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.
- B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing in accordance with NFPA 257 or UL 9.

2.2 ARCHITECTURAL WOODWORK

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
1. **<Insert, in separate subparagraphs, names of preapproved architectural woodworking firms>.**

2.3 WOODWORK, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels][and][certificates]** from **[AWI][WI]** certification program indicating that woodwork**[and installation]** complies with requirements of grades specified.
 - a. This project has been registered with AWI as AWI Quality Certification Program Number **<Insert number>.**
 2. The Contract Documents contain requirements that are more stringent than the Architectural Woodwork Standards. Comply with Contract Documents and Architectural Woodwork Standards.

- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- J. Certified Wood: Wood products shall [**contain not less than 60 percent**][**be made from**] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.

2.4 INTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH

- A. Architectural Woodwork Standards Grade: [**Premium**][**Custom**][**Economy**].
- B. Hardwood Lumber:
 - 1. Wood Species and Cut: [**Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.**]
 - 2. Species: [**Red oak**][**White oak**][**White ash**][**Hickory**]<Insert species>.
 - 3. Cut: [**Plain sliced/plain sawn**][**Rift cut/rift sawn**][**Quarter cut/quarter sawn**].
 - 4. Wood Moisture Content: [**5 to 10**][**8 to 13**][**4 to 9**] percent.
 - 5. Provide split species on trim that faces areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.

6. For trim items[**other than base**] wider than available lumber, use veneered construction. Do not glue for width.
 - a. For veneered base, use hardwood lumber core, glued for width.
7. For base wider than available lumber, glue for width. Do not use veneered construction.
8. For rails thicker than available lumber, use veneered construction. Do not glue for thickness.

C. Softwood Lumber:

1. Wood Species and Cut:[**Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.**]
2. Species: [Eastern white pine][Sugar pine][Western white pine][Douglas fir]<Insert species>.
3. Cut: [Plain sawn]<Insert cut>.
4. Wood Moisture Content: [5 to 10][8 to 13][4 to 9] percent.
5. Provide split species on trim that faces areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.
6. For trim items[**other than base**] wider than available lumber, use veneered construction. Do not glue for width.
 - a. For veneered base, use softwood lumber core, glued for width.
7. For base wider than available lumber, glue for width. Do not use veneered construction.
8. For rails thicker than available lumber, use veneered construction. Do not glue for thickness.
9. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.

2.5 INTERIOR STANDING AND RUNNING TRIM FOR OPAQUE FINISH

- A. Architectural Woodwork Standards Grade: [Premium][Custom][Economy].
 1. Wood Species: [Any closed-grain hardwood][Eastern white pine, sugar pine, or western white pine]<Insert species>.
 2. Wood Moisture Content: [5 to 10][8 to 13][4 to 9] percent.

2.6 CLOSET AND UTILITY SHELVING

- A. Architectural Woodwork Standards Grade: [Premium][Custom][Economy].
- B. Shelf Material: **3/4-inch (19-mm) [solid lumber][veneer-faced panel product with solid-lumber edge][veneer-faced panel product with veneer edge banding][thermally fused laminate panel with solid-lumber edge][thermally fused laminate panel with PVC T-mold edge][MDF with solid-lumber edge][particleboard with solid-lumber edge][MDF with radiused edge][particleboard with radiused and filled edge].**
- C. Cleats: **3/4-inch (19-mm) [solid lumber][thermally fused laminate panel][panel product].**
- D. Wood Species: [Red oak][Match species indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated][Match species indicated for door to closet where shelving is located][Any closed-grain hardwood][Eastern white pine, sugar pine, or western white pine]<Insert species>.

- E. Wood Closet Rods: **1-1/2-inch- (38-mm-)** diameter, [**red oak**][**hardwood**][**Douglas fir or southern pine**]**<Insert species>**.
- F. Metal Closet Rods: **1-5/16-inch- (33-mm-)** diameter, [**aluminum**][**chrome-plated-steel**][**color-coated-steel**][**stainless steel**] tubes complying with BHMA A156.16, L03131.
- G. Wood Rod Flanges: Clear, kiln-dried, [**red oak**][**hardwood**][**Douglas fir or southern pine**][**eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine**]**<Insert species>** turnings.
- H. Metal Rod Flanges: [**Aluminum**][**Chrome-plated steel**][**Stainless steel**].
- I. Wood Finish: [**Transparent**][**Opaque**][**As indicated on Drawings or in schedules**]**<Insert requirements>**.

2.7 INTERIOR FRAMES AND JAMBS FOR TRANSPARENT FINISH

- A. Architectural Woodwork Standards Grade: [**Premium**][**Custom**][**Economy**].
- B. Wood Species and Cut: [**Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.**]
 - 1. Species: [**Red oak**][**White oak**][**White ash**][**Hickory**]**<Insert species>**.
 - 2. Cut: [**Plain sliced/plain sawn**][**Rift cut/rift sawn**][**Quarter cut/quarter sawn**].
 - 3. Wood Moisture Content: [**5 to 10**][**8 to 13**][**4 to 9**] percent.
 - 4. Provide split species on frames and jambs that face areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.
- C. For frames or jambs wider than available lumber, use veneered construction. Do not glue for width.
 - 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
- D. Fire-Rated Interior Frames and Jambs: Products fabricated from fire-retardant particleboard or fire-retardant MDF with veneered exposed surfaces and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing in accordance with NFPA 252.
 - 1. Fire Rating: 20 minutes.

2.8 INTERIOR FRAMES AND JAMBS FOR OPAQUE FINISH

- A. Architectural Woodwork Standards Grade: [**Premium**][**Custom**][**Economy**].
- B. Wood Species: [**Any closed-grain hardwood**][**Eastern white pine, sugar pine, or western white pine**]**<Insert species>**.
 - 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
 - 2. Wood Moisture Content: [**5 to 10**][**8 to 13**][**4 to 9**] percent.
- C. Fire-Rated Interior Frames and Jambs: Products fabricated from fire-retardant particleboard with veneered exposed surfaces or fire-retardant MDF and listed and labeled by a testing and inspecting

agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing in accordance with NFPA 252.

1. Fire Rating: 20 minutes.

2.9 INTERIOR WOOD STAIRS AND RAILINGS

- A. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.

- B. Wood for Transparent Finish:

1. Species and Cut:

- a. Stringers: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- b. Risers: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- c. Treads: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- d. Railings: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- e. Balusters: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- f. Newels: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.
- g. Moldings: **[Red oak, plain sawn][Red oak, quarter sawn][Hard maple, plain sawn]<Insert species and cut>**.

2. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.

- C. Wood for Opaque Finish:

1. Species: **[Any closed-grain hardwood][Eastern white pine, sugar pine, or western white pine][Any closed-grain hardwood, except that eastern white pine, sugar pine, or western white pine may be used for risers, stringers, and moldings]<Insert species>**.
2. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.

- D. Rough Carriage Stairs:

1. Laminated veneer lumber, made with an exterior-type adhesive complying with ASTM D2559, and with the following allowable design values as determined in accordance with ASTM D5456:
 - a. Extreme Fiber Stress in Bending, Edgewise: **[3100 psi (21.3 MPa)][2900 psi (20.0 MPa)][2600 psi (17.9 MPa)][2250 psi (15.5 MPa)]<Insert value>** for 12-inch nominal- (286-mm actual-) depth members.
 - b. Modulus of Elasticity, Edgewise: **[2,000,000 psi (13 800 MPa)][1,800,000 psi (12 400 MPa)][1,500,000 psi (10 300 MPa)]<Insert value>**.
2. Wood Grade: **[Select Structural][No. 1][No. 2]**, kiln-dried to 15 percent maximum moisture content.
 - a. Acceptable Species:
 - 1) Hem-fir (north).
 - 2) Southern pine.

- 3) Douglas fir-larch.
- 4) Douglas fir-larch (north).
- 5) Spruce-pine-fir.
- 6) Hem-fir.
- 7) Douglas fir-south.
- 8) Spruce-pine-fir (south).

E. Finishes for Stair Parts:

1. Treads: **[Transparent][Opaque]**.
2. Risers: **[Transparent][Opaque]**.
3. Stringers: **[Transparent][Opaque]**.
4. Balusters: **[Transparent][Opaque]**.
5. Handrails: **[Transparent][Opaque]**.
6. Scotia, Cove, and Other Moldings: **[Transparent][Opaque]**.

F. Handrail Brackets: **[Cast nickel-silver][Cast aluminum][Cast bronze][Cast stainless steel]** with wall flange drilled **[for exposed anchor][and tapped for concealed hanger bolt]** and with support arm for screwing to underside of rail. Size to provide **1-1/2-inch (38-mm)** clearance between handrail and face of wall.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Julius Blum & Co., Inc.]**
 - b. **[The Wagner Companies]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Julius Blum & Co., Inc.]**
 - b. **[The Wagner Companies]**
 - c. **<Insert manufacturer's name>**

G. Handrail/Bumper Rail Brackets: Pairs of extruded-aluminum channels: one for fastening to back of rail and one for fastening to face of wall, assembled in overlapping fashion and fastened together at top and bottom with self-tapping screws. Size to provide **1-1/2-inch (38-mm)** clearance between handrail and wall.

2.10 HARDWOOD SHEET MATERIALS

A. Composite Wood Products: Provide materials that comply with requirements of the Architectural Woodwork Standards for each type of interior architectural woodwork and quality grade specified unless otherwise indicated.

1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
2. Composite Wood Products: Products shall be made without urea formaldehyde.
3. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of

4. Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
5. Composite Wood Products: Formaldehyde emission rates shall not be greater than the following when tested according to ASTM D6007 or ASTM E1333:
 - a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than **5/16 Inch (8 mm)** Thick: 0.11 ppm.
 - d. MDF **5/16 Inch (8 mm)** or Less in Thickness: 0.13 ppm.
6. Composite Wood Products: Products shall be made without urea formaldehyde.
7. Medium-Density Fiberboard (MDF): ANSI A208.2, **[Grade 130]<Insert grade>**.
8. Particleboard: ANSI A208.1, **[Grade M-2][Grade M-2-Exterior Glue]**.
9. Softwood Plywood: DOC PS 1[, **medium-density overlay**].
10. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

2.11 PRESERVATIVE-TREATED-WOOD MATERIAL

- A. Preservative-Treated-Wood Materials: Provide with water-repellent preservative treatment complying with AWWA N1 (dip, spray, flood, or vacuum-pressure treatment).
 1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, **combined with a compatible EPA-registered insecticide**].
 2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
- B. Extent of Preservative-Treated Wood Materials: Treat **[interior architectural woodwork in contact with concrete or masonry]<Insert requirements>**.
 1. Items fabricated from the following wood species need not be treated:
 - a. **[Redwood][All-heart redwood]**.
 - b. **[Western red cedar][All-heart western red cedar]**.
 - c. White oak.
 - d. African mahogany.
 - e. Honduras mahogany.
 - f. Ipe.
 - g. Dark red meranti.
 - h. Teak.

2.12 FIRE-RETARDANT-TREATED WOOD MATERIAL

- A. Fire-Retardant-Treated Wood Materials: Where fire-retardant-treated materials are indicated, use materials complying with requirements that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products in accordance with test method indicated by a qualified testing agency.
 1. Use treated materials that comply with requirements of the Architectural Woodwork Standards. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.

3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained, transparent, or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment, and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture, to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less in accordance with ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
 3. For panels **3/4 inch (19 mm)** thick and less, comply with ANSI A208.1 for Grade M-2, except for the following minimum properties: modulus of rupture, **1600 psi (11 MPa)**; modulus of elasticity, **300,000 psi (2070 MPa)**; internal bond, **80 psi (550 kPa)**; and screw-holding capacity on face and edge, **250 and 225 lbf (1100 and 1000 N)**, respectively.
 4. For panels **13/16 to 1-1/4 inches (20 to 32 mm)** thick, comply with ANSI A208.1 for Grade M-1, except for the following minimum properties: modulus of rupture, **1300 psi (9 MPa)**; modulus of elasticity, **250,000 psi (1720 MPa)**; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf (1100 and 780 N)**, respectively.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard (MDF) panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture, to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less in accordance with ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Roseburg]
 - b. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [Roseburg]
 - b. <Insert manufacturer's name>

2.13 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Nailers: **[Softwood or hardwood lumber][Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.
 - 1. Preservative Treatment: Provide softwood lumber treated by pressure process, AWPA U1; Use Category UC3b.
 - a. Provide **[where indicated][where in contact with concrete or masonry]<Insert requirements>**.
 - b. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
 - c. Preservative Chemicals: Acceptable to authorities having jurisdiction **[and containing no arsenic or chromium]**.
 - d. Mark lumber with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee's (ALSC) Board of Review.
 - 2. Fire-Retardant Treatment: Complying with requirements; provide **[where indicated]<Insert requirements>**.
- B. Provide self-drilling screws for metal-framing supports, as recommended by metal-framing manufacturer.
- C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage.
 - 1. Provide metal expansion sleeves or expansion bolts for post-installed anchors.
 - 2. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- D. Adhesives: Do not use adhesives that contain urea formaldehyde.
- E. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- G. Adhesives: Do not use adhesives that contain urea formaldehyde.

- H. Adhesives: Do not use adhesives that contain urea formaldehyde.
- I. Installation Adhesive: Product recommended by fabricator for each substrate for secure anchorage.
 - 1. Adhesives shall have a VOC content of [70]<Insert value> g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.14 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate interior architectural woodwork to dimensions, profiles, and details indicated.
 - 1. Ease edges to radius indicated for the following:
 - a. Edges of Solid-Wood (Lumber) Members: **1/16 inch (1.5 mm)** unless otherwise indicated.
 - b. Edges of Rails and Similar Members More Than 3/4 Inch (19 mm) Thick: **1/8 inch (3 mm)**.
- C. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site.
 - 1. Disassemble components only as necessary for shipment and installation.
 - 2. Where necessary for fitting at site, provide allowance for scribing, trimming, and fitting.
 - 3. Notify Architect seven days in advance of the dates and times interior architectural woodwork fabrication will be complete.
 - 4. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled.
 - a. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting.
 - b. Verify that parts fit as intended, and check measurements of assemblies against field measurements indicated on approved Shop Drawings before disassembling for shipment.
- D. Stairs: Cut rough carriages to accurately fit treads and risers.
 - 1. Glue treads to risers, and glue and nail treads and risers to carriages.
 - 2. House [wall][and][face] stringers, and glue and wedge treads and risers.
 - 3. Fabricate stairs with treads and risers no more than **1/8 inch (3 mm)** from indicated position and no more than **1/16 inch (1.5 mm)** out of relative position for adjacent treads and risers.

2.15 SHOP PRIMING

- A. Preparations for Finishing: Comply with the Architectural Woodwork Standards for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing interior architectural woodwork, as applicable to each unit of work.
- B. Interior Architectural Woodwork for Opaque Finish: Shop prime with one coat of wood primer as specified in Section 099123 "Interior Painting."
 - 1. Backpriming: Apply one coat of primer, compatible with finish coats, to concealed surfaces of woodwork. **[Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.]**
- C. Interior Architectural Woodwork for Transparent Finish: Shop-seal concealed surfaces with required pretreatments and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."
 - 1. Backpriming: Apply one coat of sealer, compatible with finish coats, to concealed surfaces of woodwork. **[Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.]**

2.16 SHOP FINISHING

- A. Finish interior architectural woodwork **[with transparent finish][indicated on Drawings]** at fabrication shop. Defer only final touchup, cleaning, and polishing until after installation.
- B. Preparation for Finishing: Comply with Architectural Woodwork Standards, Section 5 for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing interior architectural woodwork, as applicable to each unit of work.
 - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of interior architectural woodwork. Apply two coats to end-grain surfaces.
- C. Transparent Finish:
 - 1. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
 - 2. Finish System:
 - a. 1: Lacquer, Nitrocellulose.
 - b. 2: Lacquer, Pre Catalyzed.
 - c. 3: Lacquer, Post Catalyzed.
 - d. 4: Latex Acrylic, Water Based.
 - e. 5: Varnish, Conversion.
 - f. 6: Oil, Synthetic Penetrating.
 - g. 7: Vinyl, Catalyzed.
 - h. 8: Acrylic Cross Linking, Water Based.
 - i. 9: UV Curable, Acrylated Epoxy, Polyester, or Urethane.
 - j. 10: UV Curable, Water Based.
 - k. 11: Polyurethane, Catalyzed.
 - l. 12: Polyurethane, Water Based.
 - m. 13: Polyester, Catalyzed.
 - 3. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.

4. Staining: **[None required][Match approved sample for color][Match Architect's sample]**.
5. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
6. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
7. Sheen: **[Flat, 15-30][Satin, 31-45][Semigloss, 46-60][Gloss, 61-100]** gloss units measured on 60-degree gloss meter in accordance with ASTM D523.

D. Opaque Finish:

1. Architectural Woodworking Standards Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
2. Finish System:
 - a. 1: Lacquer, Nitrocellulose.
 - b. 2: Lacquer, Pre Catalyzed.
 - c. 3: Lacquer, Post Catalyzed.
 - d. 4: Latex Acrylic, Water Based.
 - e. 5: Varnish, Conversion.
 - f. 7: Vinyl, Catalyzed.
 - g. 8: Acrylic Cross Linking, Water Based.
 - h. 9: UV Curable, Acrylated Epoxy, Polyester, or Urethane.
 - i. 10: UV Curable, Water Based.
 - j. 11: Polyurethane, Catalyzed.
 - k. 12: Polyurethane, Water Based.
 - l. 13: Polyester, Catalyzed.
3. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
4. Sheen: **[Flat, 15-30][Satin, 31-45][Semigloss, 46-60][Gloss, 61-100]** gloss units measured on 60-degree gloss meter in accordance with ASTM D523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition interior architectural woodwork to humidity conditions in installation areas for not less than 72 hours prior to beginning of installation.
- B. Before installing interior architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming of concealed surfaces.

3.2 INSTALLATION

- A. Grade: Install interior architectural woodwork to comply with same grade as item to be installed.
- B. Assemble interior architectural woodwork and complete fabrication at Project site to the extent that it was not completed during shop fabrication.
- C. Install interior architectural woodwork level, plumb, true in line, and without distortion.
 1. Shim as required with concealed shims.

2. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)**.
- D. Scribe and cut interior architectural woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Preservative-Treated Wood: Where cut or drilled in field, treat cut ends and drilled holes in accordance with AWP A M4.
- F. Fire-Retardant-Treated Wood: Install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- G. Anchor interior architectural woodwork to anchors or blocking built in or directly attached to substrates.
 1. Secure with countersunk, concealed fasteners and blind nailing.
 2. Use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with interior architectural woodwork.
 3. For shop-finished items, use filler matching finish of items being installed.
- H. Standing and Running Trim:
 1. Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible.
 2. Do not use pieces less than **[36 inches (900 mm)][60 inches (1500 mm)][96 inches (2400 mm)]** long, except where shorter single-length pieces are necessary.
 3. Scarf running joints and stagger in adjacent and related members.
 4. Fill gaps, if any, between top of base and wall with **[plastic wood filler; sand smooth; and finish same as wood base if finished][latex sealant, painted to match wall]**.
 5. Install standing and running trim with no more variation from a straight line than **1/8 inch in 96 inches (3 mm in 2400 mm)**.
- I. Stairs: Securely anchor carriages to supporting substrates.
 1. Install stairs with treads and risers no more than **1/8 inch (3 mm)** from indicated position.
 2. Secure with countersunk, concealed fasteners and blind nailing.
 3. Use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with wood surface.
- J. Railings:
 1. Install rails with no more than **1/8 inch in 96-inch (3 mm in 2400-mm)** variation from a straight line.
 2. Stair Rails: Glue and dowel or pin balusters to treads and railings, and railings to newel posts.
 - a. Secure with countersunk, concealed fasteners and blind nailing.
 - b. Use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with wood surface.
 3. Wall Rails: Support rails on wall brackets securely fastened to wall framing.
 - a. Space rail brackets not more than **<Insert dimension>** o.c.

3.3 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through **[AWI's Quality Certification Program][WI's**

Certified Compliance Program] certifying that woodwork, including installation, complies with requirements of the Architectural Woodwork Standards for the specified grade.

1. Inspection entity is to prepare and submit report of inspection.

3.4 REPAIR

- A. Repair damaged and defective interior architectural woodwork, where possible, to eliminate functional and visual defects[**and to result in interior architectural woodwork being in compliance with requirements of Architectural Woodwork Standards for the specified grade**].
- B. Where not possible to repair, replace defective woodwork.
- C. Shop Finish: Touch up finishing work specified in this Section after installation of interior architectural woodwork.
 1. Fill nail holes with matching filler where exposed.
 2. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.
- D. Field Finish: See [**Section 099123 "Interior Painting"**][and][**Section 099300 "Staining and Transparent Finishing"**] for final finishing of installed interior architectural woodwork not indicated to be shop finished.

3.5 CLEANING

- A. Clean interior architectural woodwork on exposed and semiexposed surfaces.

END OF SECTION 06 40 00 00A

SECTION 06 41 00 00 - ARCHITECTURAL WOOD CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wood-veneer-faced casework for transparent finish.
2. Wood-veneer-faced casework for opaque finish.
3. Plastic-laminate-clad casework.
4. Wood materials.
5. Glass.
6. Casework hardware.
7. Accessories.
8. Shop finishing.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.
2. Section 092216 "Non-Structural Metal Framing" for standard, interior non-load-bearing, metal-stud-framing required for anchoring cabinets.
3. [Section 123616 "Metal Countertops."][Section 123619 "Wood Countertops."][Section 123623.13 "Plastic-Laminate-Clad Countertops."][Section 123640 "Stone Countertops."][Section 123661 "Simulated Stone Countertops."]

1.2 ALLOWANCES

- A. See Section 012100 "Allowances" for description of allowances affecting items specified in this Section.
- B. Wood Veneer Allowance: Wood veneer for architectural cabinets is part of [Wood Veneer Allowance]<Insert name of allowance>. Allowance includes the cost of veneer that is wasted due to selection, cutting, and trimming.

1.3 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.
- B. Coordinate wood species, veneer, cut, grade, matching, finishing, and other requirements with [wood doors][wood paneling]<Insert item> as specified in [Section 064216 "Flush Wood Paneling."][Section 081416 "Flush Wood Doors."][Section 123553.19 "Wood Laboratory Casework."><Insert Section number and title.>
- C. Hardware Coordination: Distribute copies of approved hardware schedule specified in [Section 087100 "Door Hardware"][Section 087111 "Door Hardware (Descriptive Specification)"] to manufacturer of architectural cabinets; coordinate Shop Drawings and fabrication with hardware requirements.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference [at Project site][by web conference]<Insert location>.
 - 1. Review locations and method of attachment of backing required for casework installation.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include panel material description and finish.
 - 2. Include glazing.
 - 3. Include accessories.
 - 4. Include hardware.
 - 5. Include shop finishing.
- B. Shop Drawings:
 - 1. Plans, elevations, sections, and attachment details.
 - a. Show large-scale details.
 - b. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - c. Show locations and sizes of cutouts and holes for items installed in architectural cabinets.
 - d. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 - 2. Apply AWI's Quality Certification Program (hereafter AWI QCP) label to Shop Drawings.
- C. Samples for Initial Selection: For each exposed product and for each color and finish specified, in manufacturer's standard size.
- D. Samples for Verification: Provide a minimum of three samples showing the full range of color and/or grain to be expected in the finished work, for the following.
 - 1. Lumber for Transparent Finish: Not less than **8 inches (200 mm)** long by **3/4 inch (19 mm)** thick, and as wide as practical, for each species and cut, finished on one side and one edge.
 - 2. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished cabinets. Samples to show the full range of color and grain to be expected.
 - 3. Veneer Panel for Transparent Finish: **8 by 8 inches (200 mm by 200 mm)** by **1/4 inch (6.4 mm)**, representative of and selected from flitches to be used for transparent-finished casework.
 - 4. Lumber and Panel Products with Shop-Applied Opaque Finish: Not less than **8 inches (200 mm)** long by **3/4 inches (19 mm)** thick, and as wide as practical, for each species and cut for lumber and **8 by 10 inches (200 by 250 mm)** for panels, for each finish system and color.
 - a. Finish [entire][one-half of] exposed surface.
 - 5. Plastic Laminates: **8 by 8 inches (200 by 200 mm)**, for each type, color, pattern, and surface finish required.
 - a. Provide one Sample applied to core material with specified edge material applied to one edge.

6. Thermally Fused Laminate (TFL) Panels: **8 by 10 inches (200 by 250 mm)**, for each color, pattern, and surface finish.
 - a. Provide edgebanding on one edge.
7. Corner Pieces:
 - a. Cabinet-front frame joints between stiles and rails and at exposed end pieces, **18 inches (450 mm)** high by **18 inches (450 mm)** wide by **6 inches (150 mm)** deep.
 - b. Miter joints for standing trim.
8. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.

E. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating percentage of postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
3. Product Data: Verify compliance with requirements for Forest Stewardship Council U.S. (FSC).
4. Laboratory Test Reports: For composite wood products, indicating compliance with the formaldehyde emissions evaluation.
5. Product Data: For installation adhesives, indicating VOC content.
6. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.
7. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
8. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

1.6 INFORMATIONAL SUBMITTALS

- A. Test Reports: Valid AWI "Performance Quality Test Report" indicating compliance with specified ANSI/AWI 0641 Structural Performance Duty Level.
- B. Certification Reports:
 1. Provide **[labels][and][certificates]** from AWI QCP indicating woodwork **[complies][and installation comply]** with requirements of aesthetic grade and duty level specified.
 - a. Project has been registered with AWI as AWI QCP Number **<Insert number>**.
 - b. Register the Work of this Section with AWI's Quality Certification Program.
 2. The Contract Documents contain requirements that are more stringent than the referenced woodwork quality standard. Comply with requirements of the Contract Documents in addition to those of the referenced quality standard.
- C. Product Certificates: For **[each type of product.][the following:]**
 1. Composite wood products.
 2. Thermally fused laminate (TFL) panels.
 3. Glass.
 4. Adhesives.
- D. Field quality control reports.

- E. Qualification Statements: For **[manufacturer][and][Installer]**.

1.7 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: AWI QCP Certificate.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

- 1. Manufacturer's Certification: Licensed participant in AWI's Quality Certification Program.

- B. Installer Qualifications: **[Manufacturer of products][Licensed participant in AWI QCP]**.

1.9 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

- 1. Build mockups of **[typical architectural cabinets as indicated on Drawings]<Insert description>**.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.11 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F (16 and 32 deg C)** and relative humidity between **[25 and 45][30 and 55][43 and 65]<Insert numbers>** percent during the remainder of the construction period.
- C. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 1. **<Insert, in separate subparagraphs, names of preapproved woodworking firms>.**

2.2 PERFORMANCE REQUIREMENTS

- A. Unless otherwise indicated, comply with ANSI/AWI 0641 for duty level and grade of architectural cabinets indicated for construction, finishes, installation, and other requirements.
 1. Provide **[labels][and][certificates]** from AWI QCP indicating that **woodwork [complies][and installation comply]** with requirements of aesthetic grade and duty level specified.

2.3 WOOD-VENEER-FACED CASEWORK FOR TRANSPARENT FINISH

- A. Architectural Woodwork Institute (AWI) Standard:
 1. Structural Performance Duty Level: **[1][2][3][4][As indicated on Drawings]**.
 2. Aesthetic Performance Grade: **[Premium][Custom][Economy][As indicated on Drawings]**.
 3. Product Data: Verify materials were fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
 4. Product Data: Verify materials were fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, multiply the distance by 0.25 to determine the distance to Project site.
 5. Certified Wood: Verify wood products are certified as "FSC Pure"[**or "FSC Mixed Credit"**] in accordance with FSC STD-01-001 and FSC STD-40-004.
 6. Certified Wood: Verify wood products are labeled in accordance with the AF&PA's Sustainable Forestry Initiative, certified as "FSC Pure" in accordance with FSC STD-01-001 and FSC STD-40-004, or certified and labeled in accordance with the standards of the Programme for Endorsement of Forest Certification.
 7. Certified Wood: Verify wood products are certified in accordance with the American Tree Farm System's "ATFS 2021 Standards of Sustainability," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
 8. Verify adhesives have a VOC content of **[30]<Insert number> g/L** or less.
- B. Casework Construction Type: **[Frameless][Face frame]**.

C. Door and Drawer-Front:

1. Design: **[Flush panel][Stile and rail]**.
2. Style: **[Flush overlay][Reveal overlay][Flush inset]**.
 - a. Reveal Dimension: **[1/2 inch (13 mm)][As determined by hinge type and clearance][As indicated on Drawings]<Insert dimension>**.

D. Exposed Exterior Surfaces:**[As indicated on Drawings.]**

1. Species: **[Red oak][White oak][White ash][White birch][Select white maple][As indicated on Drawings]<Insert species>**.
2. Cut: **[Plain sliced/plain sawn][Rift cut/rift sawn][Quarter cut/quarter sawn]**.
3. Grain Direction: **[Vertically for drawer fronts, doors, and fixed panels][Horizontally for drawer fronts, doors, and fixed panels][Vertically for doors and fixed panels, horizontally for drawer fronts][As indicated on Drawings]**.
4. Veneer Matching:
 - a. Matching of Veneer Leaves: **[Book][Slip][Random]** match.
 - b. Veneer Matching within Panel Face: **[Running][Balance][Center-balance]** match.
 - c. Veneer Matching within Room: Provide cabinet veneers in each room or other space from a single flitch with doors, drawer fronts, and other surfaces matched in a sequenced set with continuous match where veneers are interrupted perpendicular to the grain.
 - d. Blueprint Matching: Match veneers on casework[, **wall paneling,**][and][doors] in room indicated on Drawings.
5. Edgeband: **[Solid wood][Veneer]** matching exposed surfaces.

E. Exposed Interior Surfaces:**[As indicated on Drawings.]**

1. Species: **[Match exposed exterior surfaces][Red oak][White oak][White ash][White birch][Select white maple][As indicated on Drawings]<Insert species>**.
2. Cut: **[Match exposed exterior surfaces][Plain sliced/plain sawn][Rift cut/rift sawn][Quarter cut/quarter sawn]**.
3. Veneer Matching: Match exposed exterior surfaces.
4. Edgeband: **[Solid wood][Veneer][Match exposed exterior surfaces]**.

F. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: **[Same species wood veneer panel indicated for exposed surfaces][Thermally fused laminate (TFL) panels][High-pressure decorative laminate (HDPL)][Compatible species to that indicated for exposed surfaces, stained to match]<Insert requirements>**.
2. Drawer Subfronts, Backs, and Sides: **[Solid-hardwood lumber, same species indicated for exposed surfaces][Solid-hardwood lumber, stained to match species indicated for exposed surfaces][Solid birch or maple hardwood lumber][Seven- or nine-ply hardwood plywood with no internal voids][Thermally fused laminate (TFL) panels]<Insert requirements>**.
3. Drawer Bottoms: **[Hardwood plywood][Thermally fused laminate (TFL) panels]<Insert requirements>**.
4. Shelves: **[Adjustable][Fixed]**.
 - a. Loading Capacity: **[40 lb/sq. ft][50 lb/sq. ft]**.
5. Edgeband: **[Wood veneer compatible for color and grain of exposed surfaces][PVC or**

polyester][Match exposed surfaces]<Insert requirements>.

2.4 WOOD-VENEER-FACED CASEWORK FOR OPAQUE FINISH

A. Architectural Woodwork Institute (AWI) Standard:

1. Structural Performance Duty Level: [1][2][3][4][As indicated on Drawings].
2. Aesthetic Performance Grade: [Premium][Custom][Economy][As indicated on Drawings].
3. Product Data: Verify materials were fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
4. Product Data: Verify materials were fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, multiply the distance by 0.25 to determine the distance to Project site.
5. Certified Wood: Verify wood products are certified as "FSC Pure"[or "FSC Mixed Credit"] in accordance with FSC STD-01-001 and FSC STD-40-004.
6. Certified Wood: Verify wood products are labeled in accordance with the AF&PA's Sustainable Forestry Initiative, certified as "FSC Pure" in accordance with FSC STD-01-001 and FSC STD-40-004, or certified and labeled in accordance with the standards of the Programme for Endorsement of Forest Certification.
7. Certified Wood: Verify wood products are certified in accordance with the American Tree Farm System's "ATFS 2021 Standards of Sustainability," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
8. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in CARB 93120, "Airborne Toxic Control Measure (ATCM) for Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
9. Composite Wood Products: Verify formaldehyde emission rates are not greater than the following when tested in accordance with ASTM D6007 or ASTM E1333:
 - a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than 5/16 Inch (8 mm) Thick: 0.11 ppm.
 - d. MDF 5/16 Inch (8 mm) or Less in Thickness: 0.13 ppm.
10. Verify adhesives have a VOC content of [30]<Insert number> g/L or less.

B. Casework Construction Type: [Frameless][Face frame].

C. Door and Drawer-Front:

1. Design: [Flush panel][Stile and rail].
2. Style: [Flush overlay][Reveal overlay][Flush inset].
 - a. Reveal Dimension: [1/2 inch (13 mm)][As determined by hinge type and clearance][As indicated on Drawings]<Insert dimension>.

D. Exposed Exterior Surfaces: [Any closed-grain hardwood suitable for opaque finish][Medium-density fiberboards (MDF)][Medium-density overlay (MDO)].

1. Edgeband: [Solid wood][Veneer] matching exposed surfaces.

E. Exposed Interior Surfaces: [Any closed-grain hardwood suitable for opaque finish][Medium-density fiberboards (MDF)][Medium-density overlay (MDO)].

1. Edgeband: **[Solid wood][Veneer][Match exposed exterior surfaces]**.

F. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: **[Match materials indicated for exposed surfaces][Thermally fused laminate (TFL) panels]<Insert requirements>**.
2. Drawer Sides and Backs: **[Solid birch or maple hardwood lumber][Seven- or nine-ply hardwood plywood with no interior voids][Thermally fused laminate (TFL) panels]<Insert requirements>**.
3. Drawer Bottoms: **[Hardwood plywood][Thermally fused laminate (TFL) panels]<Insert requirements>**.
4. Shelves: **[Fixed][Adjustable]**.
 - a. Loading Capacity: **[40 lb/sq. ft][50 lb/sq. ft]**.
5. Edgeband:
 - a. Edges of Veneer Panels: **[Solid wood][Veneer][Veneer tape]** compatible for color and grain of exposed surfaces.
 - b. Edges of Thermally Fused Laminate (TFL) Panels: **[PVC or ABS, 0.018-inch (0.460-mm) minimum thickness][PVC, 3.0 mm thick]**.

2.5 PLASTIC-LAMINATE-CLAD CASEWORK

A. Architectural Woodwork Institute (AWI) Standard:

1. Structural Performance Duty Level: **[1][2][3][4][As indicated on Drawings]**.
2. Aesthetic Performance Grade: **[Premium][Custom][Economy][As indicated on Drawings]**.
3. Product Data: Verify materials were fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
4. Product Data: Verify materials were fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, multiply the distance by 0.25 to determine the distance to Project site.
5. Certified Wood: Verify wood products are certified as "FSC Pure"[or "FSC Mixed Credit"] in accordance with FSC STD-01-001 and FSC STD-40-004.
6. Certified Wood: Verify wood products are labeled in accordance with the AF&PA's Sustainable Forestry Initiative, certified as "FSC Pure" in accordance with FSC STD-01-001 and FSC STD-40-004, or certified and labeled in accordance with the standards of the Programme for Endorsement of Forest Certification.
7. Certified Wood: Verify wood products are certified in accordance with the American Tree Farm System's "ATFS 2021 Standards of Sustainability," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
8. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in CARB 93120, "Airborne Toxic Control Measure (ATCM) for Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
9. Composite Wood Products: Verify formaldehyde emission rates are not greater than the following when tested in accordance with ASTM D6007 or ASTM E1333:
 - a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than 5/16 Inch (8 mm) Thick: 0.11 ppm.

- d. MDF 5/16 Inch (8 mm) or Less in Thickness: 0.13 ppm.
- 10. Verify adhesives have a VOC content of [30]<Insert number> g/L or less.
- B. Casework Construction Type: [Frameless][Face frame].
- C. Door and Drawer-Front:
 - 1. Design: [Flush panel][Stile and rail].
 - 2. Style: [Flush][Reveal] overlay.
 - a. Reveal Dimension: [1/2 inch (13 mm)][As determined by hinge type and clearance][As indicated on Drawings]<Insert dimension>.
- D. High-Pressure Decorative Laminate (HDPL): ISO 4586-3, grades as indicated or, if not indicated, as required by quality standard.
 - 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [ABET Inc.]
 - b. [Formica Corporation]
 - c. [Laminart LLC]
 - d. [Pionite; a Panolam Industries International, Inc. brand]
 - e. [Wilsonart LLC]
 - f. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [ABET Inc.]
 - b. [Formica Corporation]
 - c. [Laminart LLC]
 - d. [Pionite; a Panolam Industries International, Inc. brand]
 - e. [Wilsonart LLC]
 - f. <Insert manufacturer's name>
- E. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
 - 1. As indicated by laminate manufacturer's designations.
 - 2. Match Architect's sample.
 - 3. As selected by Architect from laminate manufacturer's full range in the following categories:
 - a. Solid colors, [gloss][matte] finish.
 - b. Solid colors with core same color as surface, [gloss][matte] finish.
 - c. Wood grains, [gloss][matte] finish.
 - d. Patterns, [gloss][matte] finish.
- F. Exposed Exterior Surfaces:
 - 1. Plastic-Laminate Grade: [HGP][HGS][VGS].
 - 2. Pattern Direction: [Vertically for drawer fronts, doors, and fixed panels][Horizontally for

- drawer fronts, doors, and fixed panels**][As indicated on Drawings].
3. Edgebanding: **[High-pressure decorative laminate (HDPL)]****[PVC or ABS, 0.018-inch (0.460-mm) minimum thickness]****[PVC, 3.0 mm thick]**.

G. Exposed Interior Surfaces: **[High-pressure decorative laminate (HDPL) the same color and pattern as exposed exterior surfaces]****[Thermally fused laminate (TFL) the same color and pattern as exterior surfaces]**.

1. Edgebanding: **[High-pressure decorative laminate (HDPL)]****[PVC or ABS, 0.018-inch (0.460-mm) minimum thickness]****[PVC, 3.0 mm thick]**.

H. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: **[High-pressure decorative laminate (HDPL) cabinet liner Grade CLS, ISO 4586-3]****[Thermally fused laminate (TFL) panels]**.
2. Drawer Sides and Backs: **[Solid-hardwood lumber]****[Seven- or nine-ply plywood with no internal voids]****[Thermally fused laminate (TFL) panels with PVC or polyester edgebanding]**.
3. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate (HDPL), ISO 4583-3, grade to match exposed surface.
4. Drawer Bottoms: **[Hardwood plywood]****[Thermally fused laminate (TFL) panels]**.
5. Shelves: **[Fixed]****[Adjustable]**.

a. Loading Capacity: **[40 lb/sq. ft]****[50 lb/sq. ft]**.

6. Edgebanding: **[High-pressure decorative laminate (HDPL)]****[PVC or ABS, 0.018-inch (0.460-mm) minimum thickness]****[PVC, 3.0 mm thick]**.

2.6 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (75 mm)** wide.
2. Wood Moisture Content:
 - a. Non-Climate-Controlled Environments: **[7 to 12]****[9 to 15]****[10 to 15]** percent.
 - b. Climate-Controlled Environments: **[4 to 9]****[6 to 10]****[8 to 13]** percent.

B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
2. Recycled Content: Provide manufacturer documentation for recycled content, indicating postconsumer and preconsumer recycled content.
3. Product Data: For recycled content, indicating percentage of postconsumer and preconsumer recycled content and cost.
4. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in CARB 93120, "Airborne Toxic Control Measure (ATCM) for Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
5. Composite Wood Products: Verify formaldehyde emission rates are not greater than the following when tested in accordance with ASTM D6007 or ASTM E1333:

- a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than 5/16 Inch (8 mm) Thick: 0.11 ppm.
 - d. MDF 5/16 Inch (8 mm) or Less in Thickness: 0.13 ppm.
6. Medium-Density Fiberboard (MDF): ANSI A208.2, [**Grade 130**]**<Insert grade>**.
 7. Particleboard (Medium Density): ANSI A208.1, [**Grade M-2**]**[Grade M-2-Exterior Glue]**.
 8. Softwood Plywood: DOC PS 1, [**medium-density overlay**].
 9. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
 10. Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper [**and complying with requirements of AWI 300**].

2.7 GLASS

- A. Float Glass for Cabinet Doors: ASTM C1036, Type I, [**Class 1 (clear)**]**[Class 2 or 3 (tinted)]**, Quality-Q3.
 1. Thickness: [**3.0 mm**]**[4.0 mm]****[5.0 mm]****[6.0 mm]**.
 2. Tint Color: [**Blue-green**]**[Bronze]****[Green]****[Gray]****<Insert color>**.
- B. Tempered Float Glass for Cabinet Doors: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated), complying with ANSI Z97.1.
 1. Door Inserts: Type I, [**Class 1 (clear)**]**[Class 2 or 3 (tinted)]**, Quality-Q3.
 - a. Thickness: [**6.0 mm**]**<Insert thickness>**.
 - b. Tint Color: [**Blue-green**]**[Bronze]****[Green]****[Gray]****<Insert color>**.
 2. Frameless Sliding Doors: Type I, [**Class 1 (clear)**]**[Class 2 or 3 (tinted)]**, Quality-Q3.
 - a. Thickness: [**6.0 mm**]**<Insert thickness>**.
 - b. Tint Color: [**Blue-green**]**[Bronze]****[Green]****[Gray]****<Insert color>**.
 - c. Unframed Glass Doors: Grind smooth and polish exposed edges and corners.
- C. Laminated Glass for Cabinet Doors: ASTM C1172, Type II, complying with ANSI Z97.1.
 1. Thickness: [**6.0 mm**]**<Insert thickness>**.
 2. Tint Color: [**Blue-green**]**[Bronze]****[Green]****[Gray]****<Insert color>**.
- D. Mirror Glass for Cabinet Doors: ASTM C1503, Mirror [**Select**]**[Glazing]**, Quality-Q3.
 1. Thickness: [**3.0 mm**]**[4.0 mm]****[5.0 mm]****[6.0 mm]**.
- E. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Section 088113 "Decorative Glass Glazing."
- F. Tempered Float Glass for Cabinet Shelves: ASTM C1048, Kind FT, Condition A, Type I, [**Class 1 (clear)**]**[Class 2 or 3 (tinted)]**, Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
 1. Thickness: [**3.0 mm**]**[4.0 mm]****[5.0 mm]****[6.0 mm]**.
 2. Tint Color: [**Blue-green**]**[Bronze]****[Green]****[Gray]****<Insert color>**.

2.8 CASEWORK HARDWARE

- A. Cabinet Hardware: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in **[Section 087100 "Door Hardware."][Section 087111 "Door Hardware (Descriptive Specification)."]**
- B. Hinges:
 - 1. Butt Hinges: **2-3/4-inch (70-mm)**, Grade 1 five-knuckle steel hinges made from **0.095-inch- (2.4-mm-)** thick metal, and as follows:
 - a. Semi-Concealed Hinges, Back Mounted, for Flush Doors: ANSI/BHMA A156.9, B01361.
 - b. Semi-Concealed Hinges, Back Mounted, for Overlay Doors: ANSI/BHMA A156.9, B01511.
 - 2. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, **[95-110][115-140][160-180]** degrees of opening[, **self-closing**][, **with integral soft-close damper**].
- C. Pulls and Knobs:
 - 1. Back-Mounted Pulls: ANSI/BHMA A156.9, B02011, **3-inch (75-mm)** centers.
 - 2. Wire Pulls: Back mounted, **[solid metal][plastic]**, **4 inches (100 mm) long, 5/16 inch (8 mm) in diameter****[5 inches (127 mm) long, 5/16 inch (8 mm) in diameter]**.
 - 3. Back-Mounted Knobs: ANSI/BHMA A156.9, B02041.
- D. Catches and Latches:
 - 1. Magnetic Catches: ANSI/BHMA A156.9, B03141.
 - 2. Push-in Magnetic Catches: ANSI/BHMA A156.9, B03132.
 - 3. Roller Catches, Double Rollers: ANSI/BHMA A156.9, B03072.
 - 4. Ball Friction Catches: ANSI/BHMA A156.9, B03013.
- E. Shelf Rests and Standards:
 - 1. Adjustable Shelf Standards and Supports: **[ANSI/BHMA A156.9, B04071; with shelf rests, B04081][ANSI/BHMA A156.9, B04102; with shelf brackets, B04112]**.
 - 2. Shelf Rests: ANSI/BHMA A156.9, B04013; **[metal][plastic][two-pin plastic with shelf hold-down clip]**.
- F. Drawer Slides: ANSI/BHMA A156.9.
 - 1. Standard Duty (Grade 1 and Grade 2): **[Side mount][Undermount][and extending under bottom edge of drawer]**.
 - 2. Heavy-Duty (Grade 1HD-100 and Grade 1HD-200): **[Side mount][Undermount]**.
 - a. Type: **[Full][Full overtravel][Partial]** extension.
 - b. Material: **[Aluminum][Epoxy-coated polymer][Galvanized-steel ball-bearing][Stainless steel][Zinc-plated ball-bearing]** slides.
 - c. Motion Feature: **[Push to open][and][soft close dampener][self-closing mechanism]**.
 - 3. Drawer Types:
 - a. Pencil drawers not more than **3 inches (75 mm)** high and not more than **24 inches (600 mm)** wide provide **[50 lb (22.7 kg)]<Insert weight>** load capacity.
 - b. General-purpose drawers more than **3 inches (75 mm)** high, but not more than **6 inches**

- (150 mm) high and not more than 24 inches (600 mm) wide, provide [75 lb (34 kg)]<Insert weight> load capacity.
 - c. File drawers more than 6 inches (150 mm) high or more than 24 inches (600 mm) wide provide [100 lb (45 kg)]<Insert weight> load capacity.
 - d. Lateral file drawers more than 6 inches (150 mm) high and more than 24 inches (600 mm), but not more than 30 inches (762 mm) wide, provide [150 lb (68 kg)]<Insert weight> load capacity.
 - e. Lateral file drawers more than 6 inches (150 mm) high and more than 30 inches (762 mm) wide provide [200 lb (90.7 kg)]<Insert weight> load capacity.
 - f. Computer keyboard tray provides [75 lb (34 kg)]<Insert weight> load capacity.
- G. Tracks for Sliding Glass Doors: [Surface][Recessed] mounting, ANSI/BHMA A156.9, B07063; [plastic][aluminum].
- H. Locks for Drawer and Hinged-Doors: [Cylindrical (cam)][Mortise] type, five-pin tumbler, brass with chrome-plated finish, and complying with ANSI/BHMA A156.11, Grade 1.
- 1. Provide a minimum of two keys per lock and six master keys.
 - 2. Provide locks [where indicated][on every door and drawer].
- I. Door Bumpers: Manufacturer's standard self-adhering clear silicone pads.
- J. Hardware Finish:
- 1. Exposed Hardware: Provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
 - a. Dark, Oxidized, Satin Bronze, Oil Rubbed: ANSI/BHMA 613 for bronze base; ANSI/BHMA 640 for steel base.
 - b. Bright Brass, Clear Coated: ANSI/BHMA 605 for brass base; ANSI/BHMA 632 for steel base.
 - c. Bright Brass, Vacuum Coated: ANSI/BHMA 723 for brass base; ANSI/BHMA 729 for zinc-coated-steel base.
 - d. Satin Brass, Blackened, Bright Relieved, Clear Coated: ANSI/BHMA 610 for brass base; ANSI/BHMA 636 for steel base.
 - e. Satin Chromium Plated: ANSI/BHMA 626 for brass or bronze base; ANSI/BHMA 652 for steel base.
 - f. Bright Chromium Plated: ANSI/BHMA 625 for brass or bronze base; ANSI/BHMA 651 for steel base.
 - g. Satin Stainless Steel: ANSI/BHMA 630.
 - 2. Concealed Hardware: Manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.9 ACCESSORIES

- A. Grommets:
- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Doug Mockett & Company, Inc.]
 - b. [Hafele America Co.]

- c. **[W.W. Grainger, Inc.]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Doug Mockett & Company, Inc.]**
 - b. **[Hafele America Co.]**
 - c. **[W.W. Grainger, Inc.]**
 - d. **<Insert manufacturer's name>**
3. Wire-Management Grommets: Circular, grommets and matching caps with slot for wire passage.
- a. Finish: **[Metal][Molded plastic]**.
 - b. Outside Diameter: **[1-1/4 inches (32 mm)][2 inches (51 mm)]<Insert dimension>**.
 - c. Color: **[Brushed, nickel plated][Polished, chrome plated][Black, epoxy coated][Brown][Black]<Insert finish>**.
4. Power/Data Grommets: UL-listed **[recessed][pop-up]** grommet.
- a. Power Outlets: **[Two][Three][Five]**.
 - b. USB Charger: **[Type A][Type B][1 Dual]<Insert type>**.
5. Paper Slot Grommet: **[12 inches (305 mm)][17 inches (432 mm)]** long by **1-3/4 inches (45 mm)** wide by **1 inch (25 mm)** deep; molded-plastic, paper-slot liner with **1/4 inch (6.4 mm)** lip.
- a. Color: **[Brown][Black]<Insert color>**.

2.10 FABRICATION

- A. Fabricate architectural cabinets to dimensions, profiles, and details indicated. Ease sharp edges and corners.
- B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of dates and times architectural cabinet fabrication will be complete.
 - 2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- D. Install glass to comply with applicable requirements in Section 088000 "Glazing" and in NGA's "GANA Glazing Manual."
 - 1. For glass in wood frames, secure glass with removable stops.

2. For exposed glass edges, polish and grind smooth.

2.11 SHOP FINISHING

- A. Finish architectural cabinets at manufacturer's shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. Shop-finish transparent-finished architectural cabinets at manufacturer's shop as specified in this Section. See Section 099123 "Interior Painting" for field finishing of opaque-finished architectural cabinets.
- C. Drawings indicate items that are required to be shop finished. Finish these items at manufacturer's shop as specified in this Section. See **[Section 099123 "Interior Painting"]** and **[Section 099300 "Staining and Transparent Finishing"]** for field finishing of architectural cabinets.
- D. Shop Priming: Shop apply the prime coat including backpriming, if any, for **[transparent-finished]** items specified to be field finished. See **[Section 099123 "Interior Painting"]** and **[Section 099300 "Staining and Transparent Finishing"]** for material and application requirements.
- E. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural cabinets, as applicable to each unit of work.
 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of cabinets.
- F. Transparent Finish:
 1. Aesthetic Performance Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
 2. Finish System: **[TR-1, lacquer, nitrocellulose][TR-2A, lacquer, post-catalyzed][TR-2B, lacquer, pre-catalyzed][TR-3, latex acrylic, water-based][TR-4, varnish, conversion][TR-5, oil, synthetic penetrating][TR-6, polyurethane, catalyzed][TR-7, acrylic crosslinking, water-based][TR-8, acrylated epoxy, polyester, or urethane, UV-cure][TR-9, UV curable, water-based][TR-10, vinyl, catalyzed][TR-11, polyurethane, water-based][TR-12, polyester, catalyzed]**.
 3. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to cabinets made from closed-grain wood before staining and finishing.
 4. Staining: **[None required][Match approved sample for color][Match Architect's sample]**.
 5. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
 6. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
 7. Sheen: **[Flat, 15-30][Satin, 31-45][Semigloss, 46-60][Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D523.
- G. Opaque Finish:
 1. Aesthetic Performance Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
 2. Finish System: **[OP-1, lacquer, nitrocellulose][OP-2A, lacquer, post-catalyzed][OP-2B, lacquer, pre-catalyzed][OP-3, latex acrylic, water-based][OP-4, varnish, conversion][OP-5, oil, synthetic penetrating][OP-6, polyurethane, catalyzed][OP-7, acrylic crosslinking, water-based][OP-8, acrylated epoxy, polyester, or urethane, UV-cure][OP-9, UV curable, water-based][OP-10, vinyl, catalyzed][OP-11, polyurethane, water-based][OP-12, polyester, catalyzed]**.
 3. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.

4. Sheen: **[Flat, 15-30][Satin, 31-45][Semigloss, 46-60][Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D523.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of the Work.
 1. Confirm location and adequacy of blocking and supports required for installation.
 2. Verify size and locations of cutouts for appliances, special equipment, sinks, plumbing, and other items to be mounted in or adjacent to casework.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.3 INSTALLATION OF CASEWORK

- A. Install casework to comply with requirements of the structural and aesthetic performance specified.
- B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
- C. Install cabinets level, plumb, and true in line to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)** using concealed shims.
 1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 3. Maintain veneer sequence matching of cabinets with transparent finish.
- D. Anchor cabinets in accordance with AWI requirements or tested method to anchors or blocking built in or directly attached to framing or substrates.
 1. Install cabinets to comply with seismic requirements as indicated on Drawings.
- E. Shop Finishes: Touch up finishing after installation of architectural cabinets. Fill nail holes with matching filler.
 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.
 - a. Use filler matching finish of items being installed.

- F. Field Finishing: See [Section 099123 "Interior Painting"] [and] [Section 099300 "Staining and Transparent Finishing"] for finishing of installed architectural cabinets.

3.4 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through AWI's Quality Certification Program certifying that casework, including installation, complies with requirements of ANSI/AWI 0620 for the specified grade.
1. AWI QCP Inspector to prepare and submit inspection report.

3.5 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where impossible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware and other moving parts to function smoothly.
- C. Clean cabinets on exposed and semiexposed surfaces. Touch up finishes to restore damaged or soiled areas.

SECTION 06 41 13 00 - RESIDENTIAL CABINETS

DESCRIPTION OF WORK

This specification covers the furnishing and installation of materials for residential cabinets. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

GENERAL

Definitions

1. Supply and Delivery Only: Include supply and delivery to site(s) FOB destination freight prepaid. Unless otherwise specified or scheduled, unloading and handling at site is by Owner.

System Description

2. Performance Requirements:
 - a. Comply with test procedures and required performances of ANSI/KCMA A161.1.
 - 1) Tests: Performed on standard 760 mm (30 inch) wall and base cabinets.
 - b. Drawers and Drawer Hardware for HUD Severe Use: Apply 330 N (75 pound) point load to exterior edge of drawer extended 150 mm (6 inches) from its closed position for period of 15 minutes.
 - 1) Successful Test: No failure in any part of drawer assembly or operating system and drawer remain operable with no mechanical interference with any part of cabinet assembly.

Submittals

3. Product Data: Submit product data for cabinets and countertops.
4. Shop Drawings: Submit Shop Drawings for cabinets and countertops for each type of kitchen.
5. Samples: Submit samples of following for selection:
 - a. Wood veneers with stain finishes.
 - b. Plastic laminate patterns and colors.
6. Quality Assurance/Control Submittals:
 - a. Certificates: Manufacturer's written certification that cabinets and countertops meet or exceed specified requirements.

Quality Assurance

7. Certifications:
 - a. Cabinets: Continuously tested, certified and display label or seal of Kitchen Cabinet Manufacturer's Association (KCMA) or Southern California Association of Cabinet Manufacturers Association in accordance with ANSI Z34.1.
 - 1) HUD Severe Use Cabinets: Bear KCMA Certification Seal and additional label indicating conformance to HUD Severe Use specifications.
 - 2) Normal/Elderly Use: Bear KCMA Certification Seal.
8. Regulatory Requirements: Comply with following:
 - a. Accessibility:
 - 1) Architectural Barriers Act of 1968 as amended (42 USC 4152-4157) and HUD implementing - regulations (24 CFR Part 40).
 - a) Uniform Federal Accessibility Standards (UFAS).
 - 2) Section 504 of the Rehabilitation Act of 1973 as amended (29 USC 794) and HUD implementing regulations 24 CFR Part 8.
 - 3) Fair Housing Accessibility Guidelines (24 CFR Chapter 1).

- 4) Americans with Disabilities Act of 1990 (ADA) (28 CFR Part 35).
9. Mock-ups:
 - a. Install mock-up of cabinets and countertops in kitchen as part of kitchen renovation mock-up.
 - b. Install mock-up of cabinets and countertops in bathroom as part of bathroom renovation mock-up.
 - c. Locations: As directed.
 - d. Approved Mock-up: Standard for rest of work.
 - e. Approved Mock-up: May remain part of completed project.

Delivery, Storage, And Handling

10. Packing, Shipping, Handling, and Unloading:
 - a. Do not deliver cabinets until building or storage area is enclosed and sufficiently dry to prevent damage from excessive changes in moisture content.
 - b. Protect casework and equipment from damage during delivery, storage, installation and subsequent building operations.

Scheduling

11. Scheduling and Completion: Comply with requirements of Detailed Scope of Work.

Project Conditions

12. Field Measurements: Field measure spaces to receive cabinets before beginning fabrication.
 - a. Cabinets: Conform to building lines and neatly fitted around openings, pipes, and other obstructions.

PRODUCTS**Normal/Elderly Use Cabinets**

13. Cabinets: Standard size factory manufactured, assembled and finished for normal/elderly and severe use as scheduled. Comply with:
 - a. HUD Minimum Property Standards for Housing, Paragraph 611-1.
 - b. ANSI/KCMA A161.1.
14. Cabinet Construction: Hardwood face frames and reveal overlay construction.
 - a. Base and Wall Cabinets: Same construction and same appearance.
15. Cabinet Materials:
 - a. Plywood: ANSI/HPMA HP and PS 1.
 - b. Particleboard, ANSI A208.1, medium density.
 - c. Pressure Treated Lumber: AWWA C2.
 - d. Cabinet Hardware: ANSI/BHMA A156.9.
 - 1) Cabinet Hardware: Finishing requirements of ANSI/BHMA A156, corrosion resisting.
16. Vanity Cabinets: Sizes as indicated.
 - a. Size if Not Indicated: 460 mm (18 inches) to 610 mm (24 inches) wide and 410 mm (16 inches) to 530 mm (21 inches) deep.
17. Cabinet Finish: Comply with ANSI/KCMA A161.1 finish test and performance requirements.
 - a. Exposed Surfaces and Interior of Cabinet: Factory finished consisting of stain, sealer and top coat, lightly sanded between application.
 - 1) Sealer and Top Coats: Oven dried.
 - 2) Stain Color: Selected from manufacturer's standard colors.
 - b. Toe Kick: Painted as directed.
 - c. Alternate Finish: High-pressure Decorative Laminates (HPDL) may be supplied in lieu of finish described above.
 - 1) HPDL: Comply with NEMA LD 3, Type GP 28, 0.7 mm (0.028 inch) thickness.
18. Fillers and Molding: Use scribe mould and fillers to assure accurate job fit.
 - a. Molding and Fillers: Outside corners, scribes, cove molding, and trim molding.

- b. Fillers: Include comer base fillers, base fillers, and wall fillers.
- c. Cove Molding: Hardwood.
- d. Finish: Match cabinet finish.
- 19. Joint Sealant: Mildew resistant one-component silicone; FS TT-S-001543A, Class A; ASTM C 920, Type S, Grade NS. Class 25, Uses NT, G, and A.
 - a. Color: As selected from manufacturer's standard line.

HUD Severe Use Cabinets

- 20. Wall and Base Cabinets: Comply with requirements under Cabinets - General above.
 - a. Construct to produce sturdy and rigid construction.
 - b. Wall and Base Cabinets and Countertops: Constructed of solid lumber and/or exterior grade plywood with wood veneer core.
 - 1) Particleboard, flakeboard, fiberboard, or hardboard not allowed.
 - c. Base Cabinets:
 - 1) Parts Touching Floor: Pressure treated solid lumber.
 - 2) Provide integral toe space of minimum 75 mm (3 inches) by 75 mm (3 inches).
 - 3) Toe Kicks: 19.1 mm (3/4 inch) net thickness, pressure treated solid lumber.
- 21. Face Frames: 19.1 mm (3/4 inches) net thick kiln dried solid hardwood, free of knots and selected for light uniform color suitable for stain finish.
 - a. Frames: Mortised and tenoned, dovetailed or doweled. glued and stapled under pressure and filled and sanded.
 - b. Vertical End Members (Stiles): Minimum 38 mm (1-1/2 inch) net width.
 - c. Vertical Center Members between Doors and Drawers (Mulls): Minimum 50 mm (2 inches) net width.
 - d. Horizontal Members (Rails): 44 mm (1-3/4 inches) net width.
 - e. Stiles and Top and Bottom Rails: Dadoed to receive ends, bottoms and tops.
- 22. Doors and Door Hardware:
 - a. Doors: 19.1 mm (3/4 inch) thick 7-ply A-D grade exterior hardwood plywood with no more than one veneer joint on face.
 - b. Edges: Reversed shaped to form continuous finger grip around sides.
 - c. Edges: Filled and sanded smooth prior to finish.
 - d. Edges: May be treated with hot foil transfer.
 - e. Edges: May be covered with 9.5 mm (3/8 inch) by 19.1 mm (3/4 inch) reverse shaped hardwood bands.
 - f. Acceptable Hardwoods: Beech, birch, maple or oak suitable for stain finish.
 - g. Hinges: Manufacturer's standard heavy duty with self closing feature, face mount or semi concealed type.
- 23. Drawers and Drawer Hardware:
 - a. Fronts Construction and Finish: Same as doors.
 - b. Sides and Backs: Minimum 17.4 mm (11/16 inch) net thickness Grade C solid lumber with sides dovetailed or mortised and tenoned into fronts.
 - c. Backs: Dadoed into sides.
 - d. Bottoms: Minimum 6.4 mm (1/4 inch) softwood or hardwood exterior plywood let into front, sides and back.
 - e. Drawer Parts: Glued and nailed or stapled together.
 - f. Mount drawers on metal side rails with 34 kg (75 pound) loading capacity.
 - g. Cabinet Members or Guides: Attached at rear to 19.1 mm (3/4 inch) solid lumber hanging rail or 12.7 mm (1/2 inch) solid lumber or plywood block which is attached to 19.1 mm (3/4 inch) solid lumber hanging rail by use of metal rear mount brackets or by continuous wraparound method.
- 24. Installation Cleats: Minimum 19.1 mm (3/4 inch) by 89 mm (3-1/2 inches) net thickness S4S, Grade C, kiln dried solid lumber, dadoed to receive bottoms and tops.
 - a. Provide two horizontal members running full length of cabinet at top and bottom.
 - b. Base Cabinets with Drawers: Side mount drawer slide bracket(s) rigidly attached to 12.7 mm (1/2 inch) thick plywood or wood block which is rigidly attached to top cleat. See "Drawers" paragraph above for alternate mounting.

25. End Panels:
 - a. Exposed End Panels: Minimum 2-2 Grade, 12.7 mm (1/2 inch) thick 5-ply exterior hardwood plywood, selected for light uniform color.
 - b. Ends Not Exposed : May be 12.7 mm (1/2 inch) exterior softwood plywood, Grade A-D, with Grade A side to inside of cabinet.
 - c. Ends: Dadoed minimum of 6 mm (1/4 inch) deep to receive shelves, bottoms and tops.
 - d. Ends: Let into dado in face frame.
 - e. Base Cabinet End Panels: Stop 89 mm (3-1/2 inches) above floor and supported by 19.1 mm (3/4 inch) by 89 mm (3-1/2 inch) pressure treated solid lumber member.
26. Shelves and Wall Cabinet Bottoms: 12.7 mm (1/2 inch) thick Grade 2-2 exterior hardwood plywood or Grade A-D exterior softwood plywood with wood banded front edge or 19.1 mm (3/4 inch) net thickness solid lumber.
 - a. Shelves: Let into dadoes of end panels and braced behind mulls.
 - b. Bottoms: Let into (rabbet or dado, manufacturer's choice) ends, cleats and front frames.
 - c. Shelves and Bottoms: Glued and stapled.
 - d. Optional Adjustable Shelves: 19.1 mm (3/4 inch) thick Grade 2-2 exterior hardwood plywood of Grade A-D exterior softwood plywood with wood banded front edge or 19.1 mm (3/4 inch) net thickness solid lumber.
 - 1) Shelves: Support as necessary to comply with shelf deflection provisions of ANSI/KCMA A161.1.
 - 2) Shelves: When loaded at 73.3 kg/sq. m (15 PSF) for seven days shall not deflect more than 1.6 mm (1/16 inch) per 305 mm (linear foot) between supports.
 - 3) Maximum Deflection: 6.4 mm (1/4 inch) between supports.
27. Backs: Provide on cabinets (optional on sink bases depending on job conditions).
 - a. Backs: Minimum 6.4 mm (1/4 inch) thick Grade 2-2 exterior hardwood plywood or A-D grade exterior softwood plywood.
 - b. Backs: Securely glued and stapled to ends, 89 mm (3-1/2 inch) cleats and shelves of cabinet.
 - c. Backs: May be let into dado of ends and cleats or may be applied flush with ends and cleats.
28. Base Bottoms: 12.7 mm (1/2 inch) thick Grade 2-2 exterior hardwood plywood or A-C Grade exterior softwood plywood.
 - a. Bottoms: Let into (rabbet or dado, manufacturer's choice) end panels, front rails and installation cleats.
 - b. Bottom: Supported by 19.1 mm (3/4 inch) net thickness pressure treated solid lumber braces 610 mm (24 inches) OC running front to rear of cabinet and resting on finished floor.

Countertops

29. Plastic Laminate Countertops: ANSI A161.2.
 - a. Type: Post-formed with integral backsplashes.
 - 1) Front Edges: No-drip.
 - 2) Backsplashes: Minimum 100 mm (4 inches) high with cove beveled molding with Type A curved top and scribe edge.
 - 3) Provide backsplashes at juncture of countertop with back and side walls.
 - b. Materials: High pressure plastic laminated to 19.1 mm (3/4 inch) thick exterior plywood.
 - 1) Particleboard, flakeboard, fiberboard, or hardboard not allowed.
 - c. Plastic Laminate: NEMA LD 3, Type PF42, 1.1 mm. (0.042 inch) thickness.
 - 1) Colors, patterns, finishes as selected from manufacturer's standard offering.
 - d. Perimeter of Bottom of Countertops and Sink Cut-outs: Sealed with varnish.
30. Cultured Marble Countertops: ANSI Z124.3 and HUD UM 73a.
 - a. Cast in molds with integral lavatory bowls to achieve required shape and configuration in coordination with vanity cabinets and plumbing trim.
 - b. Integral Lavatory Bowls: Recessed oval shape.
 - c. Holes for Plumbing Trim: Coordinate with Division 15 Section "Plumbing."

- d. Provide radius corners and edges.
- e. Backsplashes: Provide where counters meet walls including at back and at sides.
- f. Finish: Polished.

Metal Grease Splash Material

- 31. Stainless Steel: AISI Type 304, nonmagnetic sheets, free of buckles, waves, and surface imperfections, No. 4 polished finish on exposed surfaces, 24 gage, sanded edges.

Wall Cabinet Soffit Material

- 32. Gypsum Board or Plaster.
- 33. Wood:
 - a. Exposed Wood Soffit Face: 6.4 mm (1/4 inch) 3-ply birch-faced cabinet grade plywood.
 - b. Blocking: Hemlock-Fir No. 2.

Source Quality Control

- 34. Testing: Performed under Third Party Administrator who is in compliance with ANSI Z34.1.

EXECUTION

Examination

- 35. Site Verification of Conditions:
 - a. Existing Conditions: Examine spaces to verify that they are ready to receive cabinets and countertops.
 - b. Verify grounds, blocking and supports for proper location and support of cabinets before beginning installation. Verify location of mechanical and electrical rough-ins to assure proper match with installed equipment.
 - c. Survey each kitchen and bath to verify dimensions for cabinets and countertops.

Preparation

- 36. Protection: Protect adjacent elements from damage and disfiguration.
 - a. Repair or replace damaged elements.
- 37. Remove and dispose of existing cabinets and countertops.

Installation

- 38. General: Deliver, uncrate, place in proper location and assemble cabinets and countertops in accordance with manufacturer's recommendations and approved Shop Drawings.
- 39. Cabinets: Set cabinets accurately in place, level, and plumb.
 - a. Maintain distance between bottom of wall cabinets and top of countertop between 380 and 455 mm (15 and 18 inches).
 - b. Scribe and secure to floor and walls.
 - c. Provide connecting and attaching devices, closures, and trim members as required for complete installation.
 - d. Install items complete and adjust moving parts to operate smoothly.
 - e. Wall Cabinets: Hang from masonry walls or secure directly to wall studs.
 - f. Scribe and closely fit casework to adjacent work.
 - g. Vanity Cabinet: Seal joint between cabinets and walls with joint sealant.
- 40. Countertops: Secure to casework and walls with concealed fasteners.
 - a. Plastic Laminate Post-Formed Countertops: Miter inside corner joints. a. Seal cut edge of plywood at sink opening with spar varnish.
 - b. Seal joints between countertops and walls with joint sealant.
- 41. Sinks, Lavatories, and Trim: Provided and installed under Division 15 Section "Plumbing."
- 42. Metal Grease Splash: Install on wall full width of range from top of range to bottom of range hood. Secure to wall with appropriate rounded head fasteners at perimeter.
- 43. Wall Cabinet Soffits:
 - a. Gypsum Board or Plaster.

- b. Wood: Provide plywood soffit with backup blocking above cabinets where existing drywall drop soffit does not exist.
 - 1) Blocking: Provide blocking required to secure drop soffit plywood material in its intended location above new wall cabinets.
 - 2) Plywood Facing: Trim butt edge conditions with solid wood strip pieces to match. Trim corner conditions with solid wood premilled corner to match. Secure facing materials with fine finish nails and fill nail holes.
 - 3) Finish to match cabinet finish.

Adjusting And Cleaning

- 44. Adjusting: Adjust and lubricate moving parts to operate smoothly.
- 45. Cleaning: Comply with requirements of Detailed Scope of Work.

SECTION 06 42 16 00 - FLUSH WOOD PANELING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Flush wood paneling (wood-veneer wall surfacing).
2. Fire-retardant-treated materials.
3. Installation materials.

B. Related Requirements:

1. Section 057000 "Decorative Metal" for metal reveals at wood paneling.
2. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing paneling that is concealed within other construction before paneling installation.

1.2 ALLOWANCES

- ##### A. Wood Veneer Allowance:
- Wood veneer for paneling is part of **[Wood Veneer Allowance]<Insert name of allowance>**. Allowance includes the cost of veneer that is wasted due to selection, cutting, and trimming.

1.3 COORDINATION

- ##### A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

1.4 PREINSTALLATION MEETINGS

- ##### A. Preinstallation Conference:
- Conduct conference at **[Project site]<Insert location>**.

1.5 ACTION SUBMITTALS

- ##### A. Product Data:
- For each type of product.

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

- ##### B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.

4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.
11. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
12. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
13. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
14. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
15. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
16. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
17. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
18. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
19. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
20. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
21. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
22. Product Data: For installation adhesives, indicating VOC content.
23. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For flush wood paneling.

1. Include plans, elevations, sections, and attachment details.
2. Show details full size.
3. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
4. For paneling produced from premanufactured sets, show finished panel sizes, set numbers, sequence numbers within sets, and method of cutting panels to produce indicated sizes.
5. For paneling veneered in fabrication shop, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
6. Apply **[AWI Quality Certification][WI Certified Compliance]** Program label to Shop Drawings.

D. Samples: For each exposed product and for each color and finish specified, in manufacturer's or fabricator's standard size.

E. Samples for Initial Selection: For each type of exposed finish.

F. Samples for Verification: For the following:

1. Lumber for Transparent Finish: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished

- on one side and one edge.
- 2. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished paneling.
- 3. Veneer-Faced Panel Products for Transparent Finish: **[8 by 10 inches (200 by 250 mm)][12 by 12 inches (300 by 300 mm)][12 by 24 inches (300 by 600 mm)]**, for each species and cut. Include at least one face-veneer seam and finish as specified.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer][fabricator]**.
- B. Product Certificates: For each type of product.
- C. Quality Standard Compliance Certificates: **[AWI Quality Certification Program][WI Certified Compliance Program]**.
- D. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Shop Certification: **[AWI's Quality Certification Program accredited participant][WI's Certified Compliance Program licensee]**.
- C. Installer Qualifications: **[Fabricator of products][AWI's Quality Certification Program accredited participant][WI's Certified Compliance Program licensee]**.

1.8 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of **[typical paneling as shown on Drawings]<Insert description>**.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver paneling until painting and similar operations that might damage paneling have been completed in installation areas. Store paneling in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install paneling until building is enclosed, wet-work is complete, and HVAC system is operating and will maintain temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.

- B. Environmental Limitations with Humidity Control: Do not deliver or install paneling until building is enclosed, wet-work is complete, and HVAC system is operating and will maintain temperature between **60 and 90 deg F (16 and 32 deg C)** and relative humidity between **[25 and 55][43 and 70][17 and 50]<Insert numbers>** percent during the remainder of the construction period.
- C. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed/concealed by construction and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where paneling is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of paneling **[and][wood-veneer-faced architectural cabinets][ornamental woodwork][wood trim][wood frames][and][wood doors faced with veneers from same flitches as paneling]**.

2.2 PANELING FABRICATORS

- A. Fabricators: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available fabricators offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **<Insert, in separate subparagraphs, names and contact information for preapproved woodworking firms>**.

2.3 PANELING, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of flush wood paneling (wood-veneer wall surfacing) indicated for construction, finishes, installation, and other requirements.
 - 1. Provide inspections of fabrication and installation together with labels and certificates from **[AWI][WI]** certification program indicating that woodwork complies with requirements of grades specified.
 - 2. The Contract Documents contain requirements that are more stringent than the referenced woodwork quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500**

miles (800 km) of Project site.

- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

2.4 FLUSH WOOD PANELING (WOOD-VENEER WALL SURFACING)

- A. Grade: **[Premium][Custom][Economy]**.
- B. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- C. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- D. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- E. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- F. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- G. Wood Species and Cut: **[White oak, rift sliced][Select white ash, plain sliced][Sycamore, plain sliced][Cherry, plain sliced][Butternut, plain sliced][Avodire, quarter sliced]<Insert species and cut>**.
- H. Veneer Matching Method:
 - 1. Adjacent Veneer Leaves: **[Book][Slip][Pleasant (Random)]** match.
 - 2. Within Panel Face: **[Running][Balance][Center-balance]** match.
 - 3. Adjacent Veneer Leaves and within Panel Face: Slip, center-balance, or book match.
- I. Panel-Matching Method:

1. No matching is required between adjacent panels. Select and arrange panels for similarity of grain pattern and color between adjacent panels.
 2. **[Premanufactured panel sets used full width][Premanufactured panel sets selectively reduced in width][Made-to-order, sequence-matched panels][Made-to-order, blueprint-matched panels and components]** within each separate area.
 - a. See Section 011000 "Summary" for requirements concerning flitches reserved by Architect.
- J. Vertical Panel-Matching Method: **[Continuous end match; veneer leaves of upper panels are continuations of veneer leaves of lower panels][Architectural end book match; veneer leaves are individually book matched from lower panels to upper panels][Architectural end slip match; veneer leaves are individually slip matched from lower panels to upper panels][Panel end book match; panels are book matched from lower panels to upper panels][Panel end slip match; panels are slip matched from lower panels to upper panels].**
- K. Panel Core Construction: **[Hardwood veneer-core plywood][Particleboard or MDF][Fire-retardant particleboard or fire-retardant MDF].**
1. Thickness: **[3/4 inch (19 mm)][As indicated on Drawings].**
- L. Exposed Panel Edges: **[Inset solid-wood or wood-veneer matching faces][Legs of metal channels forming reveals][Applied solid-wood banding 11/16 inch (18 mm) thick by depth of panels][Applied bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels]<Insert description>.**
- M. Panel Reveals: **[Matte black plastic laminate][Bronze sheet][Stainless steel sheet][Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick][Stainless steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick]<Insert description>.**
- N. Fire-Retardant-Treated Paneling: Panels are to consist of wood-veneer and fire-retardant particleboard or fire-retardant, medium-density fiberboard (MDF). Panels are to have a flame-spread index of **[25][75]** or less and a smoke-developed index of 450 or less per ASTM E84, and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
- O. Assemble panels by gluing and concealed fastening.
- 2.5 MATERIALS
- A. Materials, General: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
- B. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.
- C. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
 2. Composite Wood Products: Products shall be made without urea formaldehyde.
 3. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce

- Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
5. Composite Wood Products: Formaldehyde emission rates shall not be greater than the following when tested according to ASTM D 6007 or ASTM E 1333:
 - a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than **5/16 Inch (8 mm)** Thick: 0.11 ppm.
 - d. MDF **5/16 Inch (8 mm)** or Less in Thickness: 0.13 ppm.
 6. Composite Wood Products: Products shall be made without urea formaldehyde.
 7. MDF: ANSI A208.2, [**Grade 130**]**<Insert grade>**.
 8. Particleboard (Medium Density): ANSI A208.1, [**Grade M-2**]**[Grade M-2-Exterior Glue]**.
 9. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
- D. Adhesives: Do not use adhesives that contain urea formaldehyde.
- E. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- G. Adhesives: Do not use adhesives that contain urea formaldehyde.
- H. Adhesives: Do not use adhesives that contain urea formaldehyde.

2.6 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement procedures during treatment and drying processes

that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of paneling.

- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
 3. For panels **3/4 inch (19 mm)** thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi (11 MPa)**; modulus of elasticity, **300,000 psi (2070 MPa)**; internal bond, **80 psi (550 kPa)**; and screw-holding capacity on face and edge, **250 and 225 lbf (1100 and 1000 N)**, respectively.
 4. For panels **13/16 to 1-1/4 inches (20 to 32 mm)** thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi (9 MPa)**; modulus of elasticity, **250,000 psi (1720 MPa)**; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf (1100 and 780 N)**, respectively.
- D. Fire-Retardant Fiberboard: MDF panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**

2.7 INSTALLATION MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber][Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
- C. Installation Adhesive: Product recommended by panel fabricator for each substrate for secure anchorage.
 - 1. Adhesives shall have a VOC content of **[70]<Insert value>** g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.8 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Arrange paneling in shop or other suitable space in proposed sequence for examination by Architect. Mark units with temporary sequence numbers to indicate position in proposed layout.
 - 1. Lay out one elevation at a time if approved by Architect.
 - 2. Notify Architect seven days in advance of the date and time when layout will be available for viewing.
 - 3. Provide lighting of similar type and level as that of final installation for viewing layout unless otherwise approved by Architect.
 - 4. Rearrange paneling as directed by Architect until layout is approved.
 - 5. Do not trim end units and other nonmodular-size units to less than modular size until after Architect's approval of layout. **[Indicate trimming by masking edges of units with nonmarking material.]**
 - 6. Obtain Architect's approval of layout before start of assembly. Mark units and Shop Drawings with assembly sequence numbers based on approved layout.
- C. Complete fabrication, including assembly, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times paneling fabrication will be complete.

- D. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

2.9 SHOP FINISHING

- A. General: Finish paneling at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. Shop Priming: Shop apply the prime coat including backpriming, if any, for **[transparent-finished]** paneling specified to be field finished. See Section 099300 "Staining and Transparent Finishing" for material and application requirements.
- C. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.

1. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling.

- D. Transparent Finish:

1. Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
2. Finish: System - **[1, nitrocellulose lacquer][2, precatalyzed lacquer][3, postcatalyzed lacquer][4, water-based latex acrylic][5, conversion varnish][6, synthetic penetrating oil][7, catalyzed vinyl][8, water-based crosslinking acrylic][9, UV curable acrylated epoxy, polyester, or urethane][10, water-based UV curable][11, catalyzed polyurethane][12, water-based polyurethane][13, catalyzed polyester]**.
3. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
4. Staining: **[None required][Match approved sample for color][Match Architect's sample]**.
5. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
6. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
7. Sheen: **[Flat, 15-30][Satin, 31-45][Semigloss, 46-60][Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition paneling to humidity conditions in installation areas.
- B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install paneling to comply with quality standard grade of paneling to be installed.
- B. Install paneling level, plumb, true in line, and without distortion. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)**. Install with no more than **1/16 inch in 96-inch (1.6 mm in 2400-mm)** vertical cup or bow and **1/8 inch in 96-inch (3 mm in 2400-mm)** horizontal variation from a true plane.
 - 1. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **[1/32 inch (0.8 mm)][1/16 inch (1.5 mm)]**.
- C. Anchor paneling to supporting substrate with **[concealed panel-hanger clips][splined connection strips][blind nailing]**.
 - 1. Do not use face fastening unless **[covered by trim][otherwise indicated]**.
- D. Complete finishing work specified in this Section to extent not completed at shop or before installation of paneling. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.
- E. See Section 099300 "Staining and Transparent Finishing" for final finishing of installed paneling.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective paneling, where possible, to eliminate defects. Where not possible to repair, replace paneling. Adjust for uniform appearance.
- B. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

SECTION 06 42 19 00 - PLASTIC-LAMINATE-FACED WOOD PANELING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plastic-laminate-faced wood paneling.

B. Related Requirements:

1. Section 057000 "Decorative Metal" for metal reveals at plastic-laminate-faced wood paneling.
2. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing paneling that is concealed within other construction before paneling installation.

1.2 COORDINATION

- A.** Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

1.3 PREINSTALLATION MEETINGS

- A.** Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Plastic-laminate-faced wood paneling.

B. Product Data Submittals: For each product.

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

C. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point

of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.

7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.
11. Environmental Product Declaration (EPD): Provide one of the following EPDs: critically reviewed life-cycle assessment complying with ISO 14044; internally reviewed, product-specific Type III EPD; third-party-verified, industrywide Type III EPD.
12. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
13. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
14. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
15. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
16. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
17. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
18. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
19. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
20. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
21. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
22. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
23. Product Data: For installation adhesives, indicating VOC content.
24. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

D. Shop Drawings: For plastic-laminate-faced wood paneling.

1. Include plans, elevations, sections, and attachment details.
2. Show details full size.
3. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
4. Apply **[AWI Quality Certification][WI Certified Compliance]** Program label to Shop Drawings.

E. Samples: For each exposed product and for each color and texture specified, in manufacturer's or fabricator's standard size.

F. Samples for Initial Selection: For each type of plastic laminate.

G. Samples for Verification: For each type of exposed laminate, **[8 by 10 inches (200 by 250 mm)][12 by 12 inches (300 by 300 mm)]**.

1. Provide one Sample applied to core material **[and with specified edge material applied to one edge]**.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[Installer][fabricator]**.

- B. Product Certificates: For each type of product.
- C. Quality Standard Compliance Certificates: **[AWI Quality Certification Program][WI Certified Compliance Program]**.
- D. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
 - 1. Shop Certification: **[AWI's Quality Certification Program accredited participant][WI's Certified Compliance Program licensee]**.
- B. Installer Qualifications: **[Fabricator of products][AWI's Quality Certification Program accredited participant][WI's Certified Compliance Program licensee]**.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of **[typical paneling as indicated on Drawings]<Insert description>**.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver paneling until painting and similar operations that might damage paneling have been completed in installation areas. Store paneling in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.8 FIELD CONDITIONS

- A. Environmental Limitations without Humidity Control: Do not deliver or install paneling until building is enclosed, wet-work is complete, and HVAC system is operating and will maintain temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
- B. Environmental Limitations with Humidity Control: Do not deliver or install paneling until building is enclosed, wet-work is complete, and HVAC system is operating and will maintain temperature between **60 and 90 deg F (16 and 32 deg C)** and relative humidity between **[25 and 55][43 and 70][17 and 50]<Insert numbers>** percent during the remainder of the construction period.
- C. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed/concealed by construction and indicate measurements on Shop Drawings.
- D. Established Dimensions: Where paneling is indicated to fit to other construction, establish dimensions

for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS**2.1 PANELING FABRICATORS**

- A. Fabricators: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available fabricators offering products that may be incorporated into the Work include, but are not limited to, the following]**:

1. **<Insert, in separate subparagraphs, names and contact information for preapproved woodworking firms>.**

2.2 PANELING, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of plastic-laminate-faced wood paneling (decorative laminate surfacing) indicated for construction, finishes, installation, and other requirements.
1. Provide inspections including installation together with labels and certificates from **[AWI][WI]** certification program indicating that woodwork complies with requirements of grades specified.
 2. The Contract Documents contain requirements that are more stringent than the referenced woodwork quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

2.3 PLASTIC-LAMINATE-FACED WOOD PANELING

- A. Grade: **[Premium][Custom][Economy]**.

- B. Certified Wood: Wood products shall be certified as "FSC Pure"[or **"FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- C. Certified Wood: Wood products shall be certified as "FSC Pure"[or **"FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- D. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- E. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- F. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- G. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed surfaces complying with the following requirements:
 - 1. As indicated by manufacturer's designations.
 - 2. Match Architect's samples.
 - 3. As selected by Architect from laminate manufacturer's full range in the following categories:
 - a. Solid colors, **[gloss][matte]** finish.
 - b. Solid colors with core same color as surface, **[gloss][matte]** finish.
 - c. Wood grains, **[gloss][matte]** finish.
 - d. Patterns, **[gloss][matte]** finish.
 - 4. Grain Direction: **[Vertical][Horizontal]**.
- H. Panel Core: **[Particleboard or MDF][Fire-retardant particleboard or fire-retardant MDF]**.
 - 1. Thickness: **[3/4 inch (19 mm)][As indicated on Drawings]**.
- I. Exposed Panel Edges: **[Plastic-laminate matching faces][Legs of metal channels forming reveals][Applied solid-wood banding 11/16 inch (18 mm) thick by depth of panels][Applied bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels]<Insert description>**.
- J. Panel Reveals: **[Matte black plastic laminate][Bronze sheet][Stainless steel sheet][Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick][Stainless steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick]<Insert description>**.
- K. Adhesives for Bonding Plastic Laminate: **[Type I, waterproof type][Type II water-resistant type]** as selected by fabricator to comply with requirements .
 - 1. Adhesive for Bonding Edges: Hot-melt adhesive[or **adhesive specified above for faces**].
- L. Fire-Retardant-Treated Paneling: Panels are to consist of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant, medium-density fiberboard (MDF). Panels are to have a flame-spread index of **[25][75]** or less and a smoke-developed index of 450 or less per ASTM E84, and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.

- M. Assemble panels by gluing and concealed fastening.

2.4 MATERIALS

- A. Materials, General: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
- B. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.
- C. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
 - 1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
 - 2. Composite Wood Products: Products shall be made without urea formaldehyde.
 - 3. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
 - 5. Composite Wood Products: Formaldehyde emission rates shall not be greater than the following when tested according to ASTM D6007 or ASTM E1333:
 - a. Hardwood Plywood: 0.05 ppm.
 - b. Particleboard: 0.09 ppm.
 - c. MDF More Than **5/16 Inch (8 mm)** Thick: 0.11 ppm.
 - d. MDF **5/16 Inch (8 mm)** or Less in Thickness: 0.13 ppm.
 - 6. Composite Wood Products: Products shall be made without urea formaldehyde.
 - 7. MDF: ANSI A208.2, **[Grade 130]<Insert grade>**.
 - 8. Particleboard (Medium Density): ANSI A208.1, **[Grade M-2][Grade M-2-Exterior Glue]**.

2.5 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
 - 1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
 - 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 - 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.

1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of paneling.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E84.
1. For panels **3/4 inch (19 mm)** thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi (11 MPa)**; modulus of elasticity, **300,000 psi (2070 MPa)**; internal bond, **80 psi (550 kPa)**; and screw-holding capacity on face and edge, **250 and 225 lbf (1100 and 1000 N)**, respectively.
 2. For panels **13/16 to 1-1/4 inches (20 to 32 mm)** thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi (9 MPa)**; modulus of elasticity, **250,000 psi (1720 MPa)**; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf (1100 and 780 N)**, respectively.
 3. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
 4. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
- D. Fire-Retardant Fiberboard: MDF panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**

2.6 INSTALLATION MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber][Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
- C. Installation Adhesive: Product recommended by panel fabricator for each substrate for secure anchorage.
 - 1. Adhesives shall have a VOC content of **[70]<Insert value>** g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.7 FABRICATION

- A. Complete fabrication, including assembly, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify Architect seven days in advance of the dates and times paneling fabrication will be complete.
- B. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition paneling to humidity conditions in installation areas.

- B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install paneling to comply with quality standard grade of paneling to be installed.
- B. Install paneling level, plumb, true in line, and without distortion. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)**. Install with no more than **1/16 inch in 96-inch (1.6 mm in 2400-mm)** vertical cup or bow and **1/8 inch in 96-inch (3 mm in 2400-mm)** horizontal variation from a true plane.
 - 1. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **1/32 inch (0.8 mm)** **1/16 inch (1.5 mm)**.
- C. Anchor paneling to supporting substrate with **[concealed panel-hanger clips][splined connection strips][blind nailing]**. Do not use face fastening unless **[covered by trim][otherwise indicated]**.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective paneling, where possible, to eliminate defects. Where not possible to repair, replace paneling. Adjust for uniform appearance.
- B. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 42 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 42 19 00A - PLASTIC PANELING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plastic sheet paneling.
2. Factory-laminated plastic sheet paneling.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring for installing plastic paneling.
2. Section 064219 "Plastic-Laminate-Faced Wood Paneling."
3. Section 102600 "Wall and Door Protection" for corner guards installed over plastic paneling.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Data: For adhesives, indicating VOC content.
3. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
4. Product Data: For sealants, indicating VOC content.
5. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
6. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
7. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
8. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
9. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.

C. Samples: For plastic paneling[**and trim accessories**], in manufacturer's standard sizes.

1.3 QUALITY ASSURANCE

A. Testing Agency: [**Acceptable to authorities having jurisdiction**][**FM Approvals**].

1.4 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and

weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain plastic paneling and trim accessories from single manufacturer.

2.2 PLASTIC SHEET PANELING

- A. Glass-Fiber-Reinforced Plastic Paneling: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D5319. **[Panels are to be USDA accepted for incidental food contact.]**
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Crane Composites, Inc.]**
 - b. **[Glasteel]**
 - c. **[Marlite, Inc.]**
 - d. **[Newcourt, Inc.]**
 - e. **[Nudo]**
 - f. **[Parkland Plastics]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Crane Composites, Inc.]**
 - b. **[Glasteel]**
 - c. **[Marlite, Inc.]**
 - d. **[Newcourt, Inc.]**
 - e. **[Nudo]**
 - f. **[Parkland Plastics]**
 - g. **<Insert manufacturer's name>**
 3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
 6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25][200]<Insert value>** or less.
 - b. Smoke-Developed Index: 450 or less.
 8. Nominal Thickness: Not less than **[0.075 inch (1.9 mm)][0.09 inch (2.3 mm)][0.12 inch (3.0 mm)]**.
 9. Surface Finish: **[Smooth][Molded pebble texture][Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
 10. Color: **[White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
- B. Unreinforced Polypropylene Paneling:** Solid polypropylene panels made from no less than 80 percent recycled material. **[Panels are to be USDA accepted for incidental food contact.]**
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Parkland Plastics]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Parkland Plastics]**
 - b. **<Insert manufacturer's name>**
 3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
 6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 200 or less.
 - b. Smoke-Developed Index: 450 or less.
 8. Nominal Thickness: Not less than **[0.06 inch (1.5 mm)][0.09 inch (2.3 mm)]**.
 9. Surface Finish: **[Smooth][Molded pebble texture][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full**

range].

10. Color: **[White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**

C. Unreinforced PVC Paneling: Solid polyvinyl chloride panels. **[Panels are to be USDA accepted for incidental food contact.]**

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Acoustic Ceiling Products, LLC]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Acoustic Ceiling Products, LLC]**
 - b. **<Insert manufacturer's name>**
3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
8. Nominal Thickness: Not less than **0.03 inch (0.75 mm)**.
9. Surface Finish: **[Smooth][Molded pebble texture][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**
10. Color: **[White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].**

D. Biobased Plastic Paneling: Solid paneling made from biobased modified polyactide resin with flame retardant and integral color.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. **[Alpar Architectural Products, LLC]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Alpar Architectural Products, LLC]**
 - b. **<Insert manufacturer's name>**
3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
- a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
8. Nominal Thickness: Not less than **0.04 inch (1.0 mm)**.
9. Surface Finish: Suede texture.
10. Color: **[White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.

2.3 FACTORY-LAMINATED PLASTIC SHEET PANELING

- A. Factory-Laminated Glass-Fiber-Reinforced Plastic Paneling: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D5319, laminated to **[plywood][oriented strand board][fire-retardant particleboard][gypsum board][high-impact gypsum board][water-resistant gypsum board]**. **[Panels are to be USDA accepted for incidental food contact.]**
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. **[Arcoplast]**
 - b. **[Citadel Architectural Products, Inc.]**
 - c. **[Crane Composites, Inc.]**
 - d. **[Glasteel]**
 - e. **[Newcourt, Inc.]**
 - f. **[Nudo]**

- g. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Arcoplast]
 - b. [Citadel Architectural Products, Inc.]
 - c. [Crane Composites, Inc.]
 - d. [Glasteel]
 - e. [Newcourt, Inc.]
 - f. [Nudo]
 - g. <Insert manufacturer's name>
3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: [25][200]<Insert value> or less.
 - b. Smoke-Developed Index: 450 or less.
8. Glass-Fiber-Reinforced Plastic Panel Nominal Thickness: Not less than [0.03 inch (0.76 mm)][0.05 inch (1.3 mm)][0.075 inch (1.9 mm)][0.09 inch (2.3 mm)].
9. Surface Finish: [Smooth][Molded pebble texture][Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].
10. Color: [White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].
11. Plywood: DOC PS 1, Exterior B-C, [1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][1/2 inch (12.7 mm)][5/8 inch (15.9 mm)][3/4 inch (19.1 mm)] thick.
12. Oriented Strand Board: DOC PS 2, Exposure 1, [1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][1/2 inch (12.7 mm)][3/4 inch (19.1 mm)] thick.
13. Fire-Retardant Particleboard: Product complying with ANSI A208.1, Grade M-S, except for modulus of rupture; with flame-spread index of 25 or less in accordance with ASTM E84; and [3/8 inch (9.5 mm)][1/2 inch (12.7 mm)] thick.
14. Gypsum Board: ASTM C1396/C1396M, [Regular, 1/2 inch (12.7 mm)][Type X, 5/8 inch (15.9 mm)].
15. High-Impact Gypsum Board: ASTM C1396/C1396M, 5/8 inch (15.9 mm), with Type X core, and [0.010-inch (0.254-mm)][0.020-inch (0.508-mm)][0.030-inch (0.762-mm)][0.081-inch (2.057-mm)] plastic film laminated to back side for greater resistance to penetration (impact resistance).
16. Water-Resistant Gypsum Board: ASTM C1396/C1396M or ASTM C1178/C1178M, 5/8 inch (15.9 mm), Type X, with water-resistant core and surfaces.

- B. Factory-Laminated PVC Paneling: Solid polyvinyl chloride sheet, laminated to [plywood][oriented strand board][fire-retardant particleboard][gypsum board][high-impact gypsum board][water-resistant gypsum board]. [Panels are USDA accepted for incidental food contact.]
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Newcourt, Inc.]
 - b. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Newcourt, Inc.]
 - b. <Insert manufacturer's name>
 3. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
 6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 8. Nominal Thickness: Not less than **0.015 inch (0.38 mm)**.
 9. Surface Finish: [Smooth][Molded pebble texture][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].
 10. Color: [White][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range].
 11. Plywood: DOC PS 1, Exterior B-C, [1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][1/2 inch (12.7 mm)][5/8 inch (15.9 mm)][3/4 inch (19.1 mm)] thick.
 12. Oriented Strand Board: DOC PS 2, Exposure 1, [1/4 inch (6.4 mm)][3/8 inch (9.5 mm)][1/2 inch (12.7 mm)][3/4 inch (19.1 mm)] thick.
 13. Fire-Retardant Particleboard: Product complying with ANSI A208.1, Grade M-S, except for modulus of rupture; with flame-spread index of 25 or less in accordance with ASTM E84; and [3/8 inch (9.5 mm)][1/2 inch (12.7 mm)] thick.
 14. Gypsum Board: ASTM C1396/C1396M, [Regular, 1/2 inch (12.7 mm)][Type X, 5/8 inch (15.9 mm)].
 15. High-Impact Gypsum Board: ASTM C1396/C1396M, 5/8 inch (15.9 mm), with Type X core, and [0.010-inch (0.254-mm)][0.020-inch (0.508-mm)][0.030-inch (0.762-mm)][0.081-inch (2.057-

- mm)] plastic film laminated to back side for greater resistance to penetration (impact resistance).
16. Water-Resistant Gypsum Board: ASTM C1396/C1396M or ASTM C1178/C1178M, 5/8 inch (15.9 mm), Type X, with water-resistant core and surfaces.

2.4 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard **[one-piece][two-piece, snap-on]** vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, **[outside corners,]** and caps as needed to conceal edges.
1. Color: **[White][Match panels][As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
- B. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.
- C. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.
- D. Adhesive: As recommended by plastic paneling manufacturer.
1. Adhesives shall have a VOC content of **[50]<Insert value>** g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- E. Sealant: **[Mildew-resistant, single-component, neutral-curing silicone][Mildew-resistant, single-component, neutral-curing or acid-curing silicone][Latex]** sealant recommended by plastic paneling manufacturer and complying with requirements in Section 079200 "Joint Sealants."
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall

- not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
5. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
- B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- C. Clean substrates of substances that could impair adhesive bond, including oil, grease, dirt, and dust.
- D. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- E. Lay out paneling before installing. Locate panel joints **[where indicated][to provide equal panels at ends of walls not less than half the width of full panels][so that trimmed panels at corners are not less than 12 inches (300 mm) wide]**.
 1. Mark plumb lines on substrate at **[trim accessory][panel joint]** locations for accurate installation.
 2. Locate **[trim accessories][panel joints]** to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

- A. Install plastic paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
 1. Drill oversized fastener holes in panels and center fasteners in holes.
 2. Apply sealant to fastener holes before installing fasteners.

- D. Install factory-laminated panels using concealed mounting splines in panel joints.
- E. Install trim accessories with [adhesive][and][nails][or][staples]. [**Do not fasten through panels.**]
- F. Fill grooves in trim accessories with sealant before installing panels, and bed inside corner trim in a bead of sealant.
- G. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- H. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- I. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION 06 42 19 00A

06 - Wood, Plastics, and Composites

Task	Specification	Specification Description
06 42 19 00	06 40 00 00	Exterior Architectural Woodwork
06 42 19 00	06 40 00 00a	Interior Architectural Woodwork

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 44 00 00 - ORNAMENTAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior ornamental woodwork for transparent finish.
2. Exterior ornamental woodwork for opaque finish.
3. Interior ornamental woodwork for transparent finish.
4. Interior ornamental woodwork for opaque finish.
5. Wood furring, blocking, shims, and hanging strips for installing ornamental woodwork items that are not concealed within other construction.
6. Shop priming of exterior ornamental woodwork.
7. Shop priming of interior ornamental woodwork.
8. Shop finishing of exterior ornamental woodwork.
9. Shop finishing of interior ornamental woodwork.

B. Related Requirements:

1. **[Section 061000 "Rough Carpentry"]**[Section 061052 "Miscellaneous Rough Carpentry"] for wood furring, blocking, shims, and hanging strips required for installing ornamental woodwork that are concealed within other construction before ornamental woodwork installation.
2. Section 062013 "Exterior Finish Carpentry" for exterior carpentry exposed to view that is not specified in this Section.
3. Section 062023 "Interior Finish Carpentry" for interior carpentry exposed to view that is not specified in this Section.

1.2 COORDINATION

- ##### A.
- Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that interior ornamental woodwork can be supported and installed as indicated.

1.3 PREINSTALLATION MEETINGS

- ##### A.
- Preinstallation Conference: Conduct conference at **[Project site]**<Insert location>.

1.4 ACTION SUBMITTALS

A. Product Data: For the following:

1. Composite wood products.
2. Fire-retardant-treated materials.
3. Finishing materials and processes.
4. Wood-Preservative Treatment:

- a. Include data and warranty from chemical-treatment manufacturer and certification by

- treating plant that treated materials to comply with requirements.
- b. Indicate type of preservative used and net amount of preservative retained.
- c. Include chemical-treatment manufacturer's written instructions for finishing treated material and manufacturer's written warranty.

- 5. Fire-Retardant Treatment: Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials to comply with requirements.
- 6. Waterborne Treatments: For products receiving a waterborne treatment, Include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

B. Sustainable Design Submittals:

- 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- 2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
- 3. Environmental Product Declaration (EPD): For each product.
- 4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
- 5. Environmental Product Declaration: For each product.
- 6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
- 7. Environmental Product Declaration: For each product.
- 8. Environmental Product Declaration: For each product.
- 9. Third-Party Certifications: For each product.
- 10. Third-Party Certified Life Cycle Assessment: For each product.
- 11. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
- 12. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
- 13. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
- 14. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
- 15. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
- 16. Product Data: For adhesives, indicating that product contains no urea formaldehyde.
- 17. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
- 18. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
- 19. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
- 20. Product Data: For composite wood products, indicating compliance with requirements for formaldehyde emissions.
- 21. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.

C. Shop Drawings: Show location of each item, including the following:

- 1. Dimensioned plans, elevations, and sections.
- 2. Attachment devices, and other components.
- 3. Show **[large-scale][full-size]** details.

4. Show locations and sizes of furring, blocking, and hanging strips, including blocking and reinforcement concealed by construction and specified in other Sections.
 5. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 6. Apply **[AWI Quality Certification][WI Certified Compliance]** Program label to Shop Drawings.
- D. Samples: For each exposed product and for each shop-applied color and finish specified.
1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
- E. Samples for Initial Selection: For each type of shop-applied exposed finish.
1. Size:
 - a. Panel Products: **12 inches by 12 inches (300 mm by 300 mm)**.
 - b. Lumber Products: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
- F. Samples for Verification:
1. Lumber for Exterior Wood-Stain Finish: Not less than **5 inches (125 mm)** wide by **12 inches (300 mm)** long, for each species, with one-half of exposed surface finished.
 2. Lumber for Transparent Finish: Not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long][5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 3. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished ornamental woodwork.
 4. Lumber and Panel Products with Shop-Applied Opaque Finish: **5 inches (125 mm)** wide by **12 inches (300 mm)** long for lumber and **[8 by 10 inches (200 by 250 mm)][12 by 12 inches (300 by 300 mm)]** for panels, for each finish system and color, with **[one-half of]** exposed surface finished.
 - a. Finish **[entire][one-half of]** exposed surface.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For **[ornamental woodwork manufacturer][and][Installer]**.
 - B. Product Certificates: For **[each type of product.][the following:]**
 1. Composite wood products.
 2. Adhesives.
 - C. Evaluation Reports: For **[wood-preserved-treated][and][fire-retardant-treated]** wood materials, from ICC-ES.
 - D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Quality Standard Compliance Certificates: **[AWI Quality Certification Program][WI Certified Compliance Program]** certificates.

1.7 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
 - 1. Manufacturer's Certification: Licensed participant in **[AWI's Quality Certification Program][WI's Certified Compliance Program]**.
- B. Installer Qualifications: **[Manufacturer of products][and][Licensed participant in AWI's Quality Certification Program][Licensed participant in WI's Certified Compliance Program]**.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockups of **<Insert description>**.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with Architectural Woodwork Standards, Section 2.
- B. Do not deliver interior ornamental woodwork until painting and similar operations that could damage woodwork have been completed in installation areas.
- C. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
 - 1. Handle and store fire-retardant-treated wood to comply with chemical-treatment manufacturer's written instructions.

1.9 FIELD CONDITIONS

- A. Weather Limitations for Exterior Work: Proceed with installation of exterior ornamental woodwork only when existing and forecasted weather conditions permit work to be performed and at least one coat of specified finish is to be applied without exposure to rain, snow, or dampness.
- B. Environmental Limitations for Interior Work without Humidity Control: Do not deliver or install interior ornamental woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupancy for the remainder of the construction period.
- C. Environmental Limitations for Interior Work with Humidity Control: Do not deliver or install interior ornamental woodwork until building is enclosed, wet-work is complete, and HVAC system is operating

and maintaining temperature between **60 and 90 deg F (16 and 32 deg C)** and relative humidity between **[25 and 55][43 and 70][20 and 50]<Insert humidity range>** percent during the remainder of the construction period.

- D. Field Measurements: Where ornamental woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.
 - 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being concealed by construction, and indicate measurements on Shop Drawings.
- E. Established Dimensions: Where ornamental woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 ORNAMENTAL WOODWORK MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1. **<Insert in separate subparagraphs, names of preapproved ornamental woodworking firms>**.

2.2 ORNAMENTAL WOODWORK, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of ornamental woodwork indicated for construction, finishes, installation, and other requirements.
 - 1. Provide **[labels][and][certificates]** from **[AWI][WI]** certification program indicating that woodwork, **including installation,** complies with requirements of grades specified.
 - a. This project has been registered with AWI as AWI Quality Certification Program Number **<Insert number>**.
 - b. Contractor is to register the Work under this Section with the AWI Quality Certification Program at www.awiqcp.org or by calling 800-345-0991.
 - 2. The Contract Documents contain requirements that are more stringent than the Architectural Woodwork Standards. Comply with Contract Documents and Architectural Woodwork Standards.
- B. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

- E. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- F. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- J. Certified Wood: Wood products shall [**contain not less than 60 percent**][**be made from**] certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- K. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.

2.3 EXTERIOR ORNAMENTAL WORK FOR TRANSPARENT FINISH

- A. Exterior ornamental work for transparent finish includes the following:
 - 1. Balustrades.
 - 2. Columns.
 - 3. Cupolas.
 - 4. Pediment heads.
 - 5. Pilasters.
 - 6. <Insert description>.
- B. Architectural Woodwork Standards Grade: [**Premium**][**Custom**][**Economy**].
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- E. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- F. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site

from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

- G. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- J. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- K. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- L. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- M. Wood Species: **[Teak][African mahogany][All-heart redwood][Western red cedar][Ponderosa pine or sugar pine]<Insert species>**.
 - 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
- N. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.4 EXTERIOR ORNAMENTAL WORK FOR OPAQUE FINISH

- A. Exterior ornamental work for opaque finish includes the following:
 - 1. Balustrades.
 - 2. Columns.
 - 3. Cupolas.
 - 4. Pediment heads.
 - 5. Pilasters.
 - 6. **<Insert description>**.
- B. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.

- E. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- F. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001 and FSC STD-40-004.
- J. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- K. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- L. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- M. Wood Species: **[All-heart redwood][Western red cedar][Ponderosa pine][Ponderosa pine or sugar pine][Eastern white pine, sugar pine, or western white pine][Any closed-grain hardwood][Softwood plywood]<Insert species>**.
 - 1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches (76 mm)** wide.
- N. Wood Moisture Content: **[9 to 15][10 to 15][7 to 12]** percent.

2.5 INTERIOR ORNAMENTAL WORK FOR TRANSPARENT FINISH

- A. Interior ornamental work for transparent finish includes the following:
 - 1. Altar.
 - 2. Balustrades.
 - 3. Columns.
 - 4. Grilles.
 - 5. Judge's bench.
 - 6. Lectern.
 - 7. Mantels.

8. Pediment heads.
 9. Pilasters.
 10. Pulpit.
 11. Witness stand.
 12. <Insert description>.
- B. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- E. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- F. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- J. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- K. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- L. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the standards of the Programme for Endorsement of Forest Certification.
- M. Wood Species and Cut: **[Match species and cut indicated for other types of transparent-finished ornamental woodwork located in same area of building unless otherwise indicated.]**
1. Species: **[Red oak][White oak][White ash][Hickory]<Insert species>**.
 2. Cut: **[Plain sliced/plain sawn][Rift cut/rift sawn][Quarter cut/quarter sawn][Any cut]**.
- N. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.

2.6 INTERIOR ORNAMENTAL WORK FOR OPAQUE FINISH

- A. Interior ornamental work for opaque finish includes the following:
1. Altar.
 2. Balustrades.
 3. Columns.
 4. Grilles.
 5. Lectern.
 6. Mantels.
 7. Pediment heads.
 8. Pilasters.
 9. Pulpit.
 10. **<Insert description>**.
- B. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy]**.
- C. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- D. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site.
- E. Regional Materials: Wood products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
- F. Indigenous Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- G. Regional Materials: Wood products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
- H. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- I. Certified Wood: Wood products shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001 and FSC STD-40-004.
- J. Certified Wood: Wood products shall be labeled according to the AF&PA's Sustainable Forestry Initiative, be certified as "FSC Pure" according to FSC STD-01-001 and FSC STD-40-004, or be certified and labeled according to the standards of the Programme for Endorsement of Forest Certification.
- K. Certified Wood: Wood products shall **[contain not less than 60 percent][be made from]** certified wood tracked through a chain-of-custody process. Certified wood documentation shall be provided by sources certified through a forest certification system with principles, criteria, and standards developed using ISO/IEC Guide 59 or the World Trade Organization's "WTO Agreement on Technical Barriers to Trade."
- L. Certified Wood: Wood products shall be certified according to the American Tree Farm System's "AFF Standard," the AF&PA's Sustainable Forestry Initiative, FSC STD-01-001 and FSC STD-40-004, or the

standards of the Programme for Endorsement of Forest Certification.

- M. Wood Species: **[Any closed-grain hardwood][Eastern white pine, sugar pine, or western white pine]<Insert species>**.
- N. Wood Moisture Content: **[5 to 10][8 to 13][4 to 9]** percent.

2.7 WOOD MATERIALS

- A. Composite Wood Products: Provide materials that comply with requirements of the Architectural Woodwork Standards for each type of ornamental woodwork and quality grade specified unless otherwise indicated.
 - 1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- B. Composite Wood Products: Products shall be made without urea formaldehyde.
- C. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
- E. Composite Wood Products: Formaldehyde emission rates shall not be greater than the following when tested according to ASTM D 6007 or ASTM E 1333:
 - 1. Hardwood Plywood: 0.05 ppm.
 - 2. Particleboard: 0.09 ppm.
 - 3. MDF More Than **5/16 Inch (8 mm)** Thick: 0.11 ppm.
 - 4. MDF **5/16 Inch (8 mm)** or Less in Thickness: 0.13 ppm.
- F. Composite Wood Products: Products shall be made without urea formaldehyde.
 - 1. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

2.8 PRESERVATIVE-TREATED WOOD MATERIALS

- A. Preservative-Treated Wood Materials: Provide with water-repellent preservative treatment complying with AWWA N1 (dip, spray, flood, or vacuum-pressure treatment).
 - 1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, **combined with a compatible EPA registered insecticide**].
 - 2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
- B. Extent of Preservative Treated Wood Materials: Treat **[exterior ornamental woodwork indicated on Drawings][exterior ornamental woodwork unless otherwise indicated on Drawings][interior ornamental woodwork in contact with concrete or masonry]<Insert requirements>**.

1. Items fabricated from the following wood species need not be treated:

- a. **[Redwood][All-heart redwood].**
- b. **[Western red cedar][All-heart western red cedar].**
- c. White oak.
- d. African mahogany.
- e. Honduras mahogany.
- f. Ipe.
- g. Dark red meranti.
- h. Teak.

2.9 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products in accordance with test method indicated by a qualified testing agency.
 1. Use treated materials that comply with requirements of Architectural Woodwork Standards for the grade specified. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
 1. For exterior applications, use materials that comply with testing requirements after being subjected to accelerated weathering in accordance with ASTM D2898.
 2. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 3. For items indicated to receive a stained, transparent or natural finish, use organic resin chemical formulation.
 4. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 5. Mill lumber before treatment, and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture, to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less in accordance with ASTM E84.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**

- c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Arauco North America]**
 - b. **[Timber Products, Inc.]**
 - c. **<Insert manufacturer's name>**
3. For panels **3/4 inch (19 mm)** thick and less, comply with ANSI A208.1 for Grade M-2, except for the following minimum properties: modulus of rupture, **1600 psi (11 MPa)**; modulus of elasticity, **300,000 psi (2070 MPa)**; internal bond, **80 psi (550 kPa)**; and screw-holding capacity on face and edge, **250 and 225 lbf (1100 and 1000 N)**, respectively.
4. For panels **13/16 to 1-1/4 inches (20 to 32 mm)** thick, comply with ANSI A208.1 for Grade M-1, except for the following minimum properties: modulus of rupture, **1300 psi (9 MPa)**; modulus of elasticity, **250,000 psi (1720 MPa)**; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf (1100 and 780 N)**, respectively.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard (MDF) panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less in accordance with ASTM E84.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Roseburg]**
 - b. **<Insert manufacturer's name>**

2.10 FASTENERS

- A. General: Provide fasteners of size and type indicated, acceptable to authorities having jurisdiction, and that comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than **1-1/2 inches (38 mm)** into wood substrate.
 1. Use **[stainless steel][fasteners with hot-dip zinc coating complying with ASTM A153/A153M or ASTM F2329/F2329M]** unless otherwise indicated.
 2. For pressure-preservative-treated wood, use stainless steel fasteners.
 3. For redwood, use **[brass/bronze][stainless steel][hot-dip galvanized-steel]** fasteners.
- B. Nails: ASTM F1667.
- C. Power-Driven Fasteners: ICC-ES AC70.
- D. Wood Screws and Lag Screws: ASME B18.2.1, ASME B18.6.1, or ICC-ES AC233.

- E. Carbon-Steel Bolts: ASTM A307 with **ASTM A563 (ASTM A563M)** hex nuts and, where indicated, flat washers all hot-dip zinc coated.
- F. Stainless Steel Bolts: ASTM F593, Alloy Group 1 or 2; with **ASTM F594, Alloy Group 1 or 2 (ASTM F836M, Grade A1 or Grade A4)** hex nuts and, where indicated, flat washers.
- G. Postinstalled Anchors: Stainless steel, **[chemical][or][torque-controlled expansion]** anchors with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing in accordance with ASTM E488/E488M conducted by a qualified independent testing and inspecting agency.
 - 1. Stainless steel bolts and nuts complying with **ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or Grade A4)**.

2.11 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, Hanging Strips, and Nailers: Softwood or hardwood lumber[, **pressure-preservative treated**][, **fire-retardant treated**], kiln dried to less than 15 percent moisture content.
 - 1. Wood-Preservative Treatment: By pressure process, AWP A U1; Use Category UC3b.
 - a. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
 - b. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
 - c. Mark lumber with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee's (ALSC) Board of Review.
 - 2. Fire-Retardant Treatment: Complying with requirements; provide **[where indicated on Drawings]<Insert requirements>**.
- B. Adhesives: Do not use adhesives that contain urea formaldehyde.
- C. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. Adhesives: Do not use adhesives that contain urea formaldehyde.
- F. Adhesives: Do not use adhesives that contain urea formaldehyde.
- G. Installation Adhesive: Product recommended by fabricator for each substrate for secure anchorage.
 - 1. Adhesives shall have a VOC content of **[70]<Insert value>** g/L or less.
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical

- Emissions from Indoor Sources Using Environmental Chambers."
4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.12 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate ornamental woodwork to dimensions, profiles, and details indicated.
 1. Ease edges to radius indicated for the following:
 - a. Edges of Solid-Wood (Lumber) Members: **1/16 inch (1.5 mm)** unless otherwise indicated.
 - b. Edges of Rails and Similar Members More Than **3/4 inch (19 mm)** Thick: **1/8 inch (3 mm)**.
- C. Complete fabrication, including assembly[**and finishing**], to maximum extent possible before shipment to Project site.
 1. Disassemble components only as necessary for shipment and installation.
 2. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 3. Notify Architect seven days in advance of the dates and times ornamental woodwork fabrication will be complete.
 4. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled.
 - a. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting.
 - b. Verify that parts fit as intended, and check measurements of assemblies against field measurements indicated on approved Shop Drawings before disassembling for shipment.

2.13 SHOP PRIMING

- A. Preparations for Finishing: Comply with the Architectural Woodwork Standards for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing ornamental woodwork, as applicable to each unit of work.
- B. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of ornamental woodwork.[**Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.**]
- C. Exterior Ornamental Woodwork for Opaque Finish: Shop prime all surfaces with one coat of wood primer specified in Section 099113 "Exterior Painting."
- D. Exterior Ornamental Woodwork for Transparent Finish:

1. Shop seal surfaces to be concealed.
2. Shop seal exposed surfaces with stain (if specified), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."

E. Interior Ornamental Woodwork for Opaque Finish: Shop prime with one coat of wood primer specified in Section 099123 "Interior Painting."

1. Backpriming: Apply one coat of primer, compatible with finish coats, to concealed surfaces of woodwork. **[Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.]**

F. Interior Ornamental Woodwork for Transparent Finish: Shop seal with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."

1. Backpriming: Apply one coat of sealer, compatible with finish coats, to concealed surfaces of woodwork. **[Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.]**

2.14 SHOP FINISHING

A. Finish ornamental woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

B. Shop finish transparent-finished ornamental woodwork at fabrication shop as specified in this Section. Refer to **[Section 099113 "Exterior Painting"]** and **[Section 099123 "Interior Painting"]** for field finishing opaque-finished ornamental woodwork.

C. Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to **[Section 099113 "Exterior Painting"]** **[Section 099123 "Interior Painting"]** and **[Section 099300 "Staining and Transparent Finishing"]** for field finishing ornamental woodwork not indicated to be shop finished.

D. Transparent Finish for Exterior Items: Comply with Section 099300 "Staining and Transparent Finishing."

E. Opaque Finish for Exterior Items: Comply with Section 099113 "Exterior Painting."

F. Transparent Finish for Interior Items:

1. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
2. Finish System - 1: Lacquer, Nitrocellulose.
3. Finish System - 2: Lacquer, Pre Catalyzed.
4. Finish System - 3: Lacquer, Post Catalyzed.
5. Finish System - 4: Latex Acrylic, Water-Based.
6. Finish System - 5: Varnish, Conversion.
7. Finish System - 6: Oil, Synthetic Penetrating.
8. Finish System - 7: Vinyl, Catalyzed.
9. Finish System - 8: Acrylic Cross Linking, Water-Based.
10. Finish System - 9: UV Curable, Acrylated Epoxy, Polyester, or Urethane.
11. Finish System - 10: UV curable, Water-Based.
12. Finish System - 11: Polyurethane, Catalyzed.
13. Finish System - 12: Polyurethane, Water-Based.

14. Finish System - 13: Polyester, Catalyzed.
15. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
16. Staining: **[None required][Match approved sample for color][Match Architect's sample]**.
17. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
18. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
19. Sheen: **[Flat, 8-14][Satin, 15-25][Satin Gloss, 26-49][Semigloss, 50-70][Gloss, 71-90]** gloss units measured on 60-degree gloss meter in accordance with ASTM D523.

G. Opaque Finish for Interior Items:

1. Architectural Woodwork Standards Grade: **[Premium][Custom][Economy][Same as item to be finished]**.
2. Finish System - 1: Lacquer, Nitrocellulose.
3. Finish System - 2: Lacquer, Pre Catalyzed.
4. Finish System - 3: Lacquer, Post Catalyzed Lacquer.
5. Finish System - 4: Latex Acrylic, Water-Based.
6. Finish System - 5: Varnish, Conversion.
7. Finish System - 7: Vinyl, Catalyzed.
8. Finish System - 8: Acrylic Cross Linking, Water-Based.
9. Finish System - 9: UV Curable, Acrylated Epoxy, Polyester, or Urethane.
10. Finish System - 10: UV Curable, Water-Based.
11. Finish System - 11: Polyurethane, Catalyzed.
12. Finish System - 12: Polyurethane, Water-Based.
13. Finish System - 13: Polyester, Catalyzed.
14. Color: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
15. Sheen: **[Flat, 8-14][Satin, 15-25][Satin Gloss, 26-49][Semigloss, 50-70][Gloss, 71-90]** gloss units measured on 60-degree gloss meter in accordance with ASTM D523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition ornamental woodwork to average prevailing humidity conditions in installation areas for not less than 72 hours prior to beginning of installation.
- B. Before installing ornamental woodwork, examine shop-fabricated work for completion, and complete work as required, including removing packing and backpriming concealed surfaces.

3.2 INSTALLATION

- A. Grade: Install ornamental woodwork to comply with same grade as item to be installed.
- B. Assemble ornamental woodwork, and complete fabrication at Project site to the extent that it was not completed during shop fabrication.
- C. Install ornamental woodwork level, plumb, true in line, and without distortion.
 1. Shim as required with concealed shims.
 2. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3 mm in 2400 mm)**.

- D. Scribe and cut ornamental woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Preservative-Treated Wood: Where cut or drilled, treat cut ends and drilled holes in accordance with AWPA M4.
- F. Fire-Retardant-Treated Wood: Install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- G. Anchor ornamental woodwork to anchors or blocking built in or directly attached to substrates.
 - 1. Secure with countersunk, concealed fasteners and blind nailing.
 - 2. Use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with ornamental woodwork.
 - 3. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced and with adjacent rows staggered.
 - 4. For shop-finished items, use filler matching finish of items being installed.

3.3 FIELD QUALITY CONTROL

- A. Inspections: Provide inspection of installed Work through **[AWI's Quality Certification Program][WI's Certified Compliance Program]** certifying that woodwork, including installation, complies with requirements of the Architectural Woodwork Standards for the specified grade.
 - 1. Inspection entity is to prepare and submit report of inspection.

3.4 REPAIR

- A. Repair damaged and defective ornamental woodwork, where possible, to eliminate functional and visual defects[**and to result in interior ornamental woodwork being in compliance with requirements of Architectural Woodwork Standards for the specified grade**].
- B. Where not possible to repair, replace defective Work.
- C. Shop Finish: Touch up finishing work specified in this Section after installation of ornamental woodwork.
 - 1. Fill nail holes with matching filler where exposed.
 - 2. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.
- D. Field Finish: See **[Section 099123 "Interior Painting"]**[and]**[Section 099300 "Staining and Transparent Finishing"]** for final finishing of installed ornamental woodwork not indicated to be shop finished.

SECTION 06 74 13 00 - FIBERGLASS REINFORCED GRATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Glass-fiber-reinforced plastic gratings.
 - 2. Grating frames and supports.

1.2 COORDINATION

- A. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

- A. Product Data: For glass-fiber-reinforced plastic gratings.
- B. Shop Drawings: Include plans, sections, details, and attachments to other work.
- C. Delegated Design Submittal: For gratings, including **[manufacturer's published load tables] [analysis data signed and sealed by the qualified professional engineer responsible for their preparation]**.

1.4 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design gratings.
- B. Structural Performance: Gratings are to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
 - 1. Uniform load of 125 lbf/sq. ft. (6.00 kN/sq. m) or concentrated load of 2000 lbf (8.90 kN), whichever produces the greater stress.
 - 2. Uniform load of 250 lbf/sq. ft. (11.97 kN/sq. m) or concentrated load of 3000 lbf (13.40 kN), whichever produces the greater stress.
 - 3. Walkways and Elevated Platforms Other Than Exits: Uniform load of 60 lbf/sq. ft. (2.87 kN/sq. m).

4. Walkways and Elevated Platforms Used as Exits: Uniform load of 100 lbf/sq. ft. (4.79 kN/sq. m).
5. Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of 250 lbf/sq. ft. (11.97 kN/sq. m) or concentrated load of 8000 lbf (35.60 kN), whichever produces the greater stress.
6. Limit deflection to **[L/360]** **<Insert deflection ratio>** or 1/4 inch (6.4 mm), whichever is less.

C. Seismic Performance: Gratings are to withstand the effects of earthquake motions determined in accordance with **[ASCE/SEI 7]** **<Insert requirement>**.

1. Component Importance Factor: 1.5.

2.2 GLASS-FIBER-REINFORCED PLASTIC GRATINGS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>

B. Molded Glass-Fiber-Reinforced Gratings: Bar gratings made by placing glass-fiber strands that have been saturated with thermosetting plastic resin in molds in alternating directions to form interlocking bars without voids and with a high resin content.

1. Configuration: **[1-1/2-inch- (38-mm-) square mesh, 1 inch (25 mm) thick]** **[1-1/2-inch- (38-mm-) square mesh, 1-1/4 inches (32 mm) thick]** **[1-1/2-inch- (38-mm-) square mesh, 1-1/2 inches (38 mm) thick]** **[2-inch- (51-mm-) square mesh, 2 inches (51 mm) thick]** **[1-1/2-inch- (38-mm-) square mesh, thickness as required to comply with structural performance requirements]** **[As required to comply with structural performance requirements]** **<Insert configuration>**.
2. Weight: **[2.5 lb/sq. ft. (12.2 kg/sq. m)]** **[2.7 lb/sq. ft. (13.2 kg/sq. m)]** **[3.2 lb/sq. ft. (15.6 kg/sq. m)]** **[3.5 lb/sq. ft. (17.1 kg/sq. m)]** **[3.7 lb/sq. ft. (18.1 kg/sq. m)]** **[4.1 lb/sq. ft. (20.0 kg/sq. m)]** **[5.0 lb/sq. ft. (24.4 kg/sq. m)]** **<Insert value>**.
3. Resin: **[Polyester]** **[Vinylester]** **<Insert description>**.
 - a. Flame-Spread Index: 25 or less when tested in accordance with ASTM E84.
 - b. USDA Acceptance: Accepted for food-processing applications.
4. Color: **[Beige]** **[Gray]** **[Green]** **[Orange]** **[Yellow]** **[Manufacturer's standard]**.
5. Traffic Surface: **[Plain, meniscus]** **[Applied abrasive finish]** **[As indicated]**.

C. Pultruded Glass-Fiber-Reinforced Gratings: Bar gratings assembled from components made by simultaneously pulling glass fibers and extruding thermosetting plastic resin through a heated die under pressure to produce a product without voids and with a high glass-fiber content.

1. Configuration: **[I4010; 1-inch (25-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open)]** **[I6010; 1-inch (25-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open)]** **[I4015; 1-1/2-inch (38-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open)]** **[I6015; 1-1/2-inch (38-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open)]** **[T3320; 2-inch (51-mm) T-bars spaced 1-1/2 inches (38 mm) o.c. (33 percent open)]** **[T5020; 2-inch (51-mm) T-bars spaced 2 inches (51 mm) o.c. (50 percent open)]** **[As required to comply with structural performance requirements]** **<Insert configuration>**.
2. Weight: **[2.35 lb/sq. ft. (11.5 kg/sq. m)]** **[2.83 lb/sq. ft. (13.8 kg/sq. m)]** **[3.10 lb/sq. ft. (15.1 kg/sq. m)]** **[3.41 lb/sq. ft. (16.6 kg/sq. m)]** **[4.10 lb/sq. ft. (20.0 kg/sq. m)]** **[4.13 lb/sq. ft. (20.2 kg/sq. m)]** **<Insert value>**.
3. Resin Type: **[Polyester]** **[Vinylester]** **<Insert description>**.
 - a. Flame-Spread Index: 25 or less when tested in accordance with ASTM E84.
 - b. USDA Acceptance: Accepted for food-processing applications.

4. Color: **[Beige] [Gray] [Green] [Orange] [Yellow] [Manufacturer's standard]**.
5. Traffic Surface: **[Plain, grooved] [Applied abrasive finish] [As indicated]**.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide **[Type 304] [Type 316]** stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A (ISO 898-1, Property Class 4.6); with hex nuts, ASTM A563/A563M; and, where indicated, flat washers.
- C. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, nuts, and, where indicated, flat washers; ASTM F593 (ISO 3506-1) for bolts and ASTM F594 (ISO 3506-1) for nuts, Alloy **[Group 1 (A1)] [Group 2 (A4)]**.
- D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563/A563M; and, where indicated, flat washers.
- E. Post-Installed Anchors: **[Torque-controlled expansion anchors] [or] [chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.
 1. Material for Interior Locations: Carbon-steel components are zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: ASTM F593 (ISO-3506-1) for bolts and ASTM F594 (ISO 3506-1) for nuts, Alloy **[Group 1 (A1)] [Group 2 (A4)]**.

2.4 FABRICATION

- A. Shop Assembly: Shop fabricate grating sections to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form gratings from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- D. Fit exposed connections accurately together to form hairline joints.
- E. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
- F. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.

2.5 GRATING FRAMES AND SUPPORTS

- A. Frames and Supports for Glass-Fiber-Reinforced Plastic Gratings: Fabricate from glass-fiber-reinforced plastic shapes of sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 - 1. Unless otherwise indicated, use shapes made from same resin as gratings.
 - 2. Equip units indicated to be cast into concrete or built into masonry with integral anchors.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.

3.2 INSTALLATION OF GLASS-FIBER-REINFORCED PLASTIC GRATINGS

- A. Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard stainless steel anchor clips and hold-down devices for bolted connections.

SECTION 07 01 50 19 - PREPARATION FOR REROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. The Work of This Section Includes:

1. Full roof tear-off.
2. Partial roof tear-off.
3. Temporary roofing.
4. Roof re-cover preparation.
5. Base flashing removal.
6. Fastener pull-out testing.
7. Disposal.

B. Related Requirements:

1. Section 011000 "Summary" for use of premises and for phasing requirements.
2. Section 015000 "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for reroofing preparation.

1.2 ALLOWANCES

- A. Allowance for removal of existing wet insulation, and replacement with new insulation, is specified under Section 012100 "Allowances."
- B. Allowance for removal of existing deteriorated metal roof deck, and replacement with new metal roof deck, is specified under Section 012100 "Allowances."
- C. Allowance for removal of existing deteriorated wood roof deck, and replacement with new wood deck, is specified under Section 012100 "Allowances."
- D. Allowance for removal of existing deteriorated wood nailers and curbs, and replacement with new wood, is specified under Section 012100 "Allowances."
- E. Allowance for removal of existing deteriorated parapet wall sheathing, and replacement with new sheathing, is specified under Section 012100 "Allowances."

1.3 UNIT PRICES

- A. Work of this Section is affected by [insulation removal and replacement unit price][metal deck removal and replacement unit price][roof sheathing removal and replacement unit price][and][parapet wall sheathing removal and replacement unit price]<Insert name of unit price>.

1.4 DEFINITIONS

- A. EPS: Molded (expanded) polystyrene.

- B. Full Roof Tear-off: Removal of existing roofing system down to existing **[roof deck][concrete fill]**.
- C. OSB: Oriented strand board.
- D. Partial Roof Tear-off: Removal of selected components and accessories from existing roofing system.
- E. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to work of this Section.
- F. Roof Re-Cover Preparation: Existing roofing system is to remain and be prepared for new roof installed over it.

1.5 PREINSTALLATION MEETINGS

- A. Preliminary Roofing Conference: Before starting removal Work, conduct conference at **[Project site]<Insert location>**.
 - 1. Meet with Owner, Architect, **[Construction Manager,]** Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
 - 2. Review methods and procedures related to roofing tear-off, including, but not limited to, the following:
 - a. Reroofing preparation, including roofing system manufacturer's written instructions.
 - b. Temporary protection requirements for existing roofing system components that are to remain.
 - c. Existing roof drains and roof drainage during each stage of reroofing, and roof-drain plugging and plug removal.
 - d. Construction schedule and availability of materials, Installer's personnel, equipment, and facilities needed to avoid delays.
 - e. Existing roof deck conditions requiring Architect notification.
 - f. Existing roof deck removal procedures and Owner notifications.
 - g. Condition and acceptance of existing roof deck and base flashing substrate for reuse.
 - h. Structural loading limitations of roof deck during reroofing.
 - i. Base flashings, special roofing details, drainage, penetrations, equipment curbs, and condition of other construction that affect reroofing.
 - j. HVAC shutdown and sealing of air intakes.
 - k. Shutdown of fire-suppression, -protection, and -alarm and -detection systems.
 - l. Asbestos removal and discovery of asbestos-containing materials.
 - m. Governing regulations and requirements for insurance and certificates if applicable.
 - n. Existing conditions that may require Architect notification before proceeding.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Temporary Roofing Submittal: Product data and description of temporary roofing system.
 - 1. If temporary roof remains in place, include surface preparation requirements needed to receive permanent roof, and submit a letter from roofing manufacturer stating acceptance of the temporary roof and that its inclusion does not adversely affect the new roofing system's resistance to fire and wind **[or specified special warranty][or its FM Approvals rating]**.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
 - 1. Include certificate that Installer is approved by warrantor of existing roofing system.
 - 2. Include certificate that Installer is licensed to perform asbestos abatement.
- B. Field Test Reports: Fastener pull-out test report.
- C. Photographs or Video: Show existing conditions of adjoining construction and site improvements, including exterior and interior finish surfaces, that might be misconstrued as having been damaged by reroofing operations.
 - 1. Submit before Work begins.
- D. Landfill Records: Indicate receipt and acceptance of **demolished roofing materials and** hazardous wastes, such as asbestos-containing materials, by a landfill facility licensed to accept them.

1.8 CLOSEOUT SUBMITTALS

- A. Certified statement from **<Insert name of manufacturer for existing warranted roof system>** stating that existing roof warranty has not been affected by Work performed under this Section.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: **[Approved by warrantor of existing roofing system to work on existing roofing][and][licensed to perform asbestos abatement in the state or jurisdiction where Project is located]**.
- B. Regulatory Requirements:
 - 1. Comply with governing EPA notification regulations before beginning roofing removal.
 - 2. Comply with hauling and disposal regulations of authorities having jurisdiction.

1.10 FIELD CONDITIONS

- A. Existing Roofing System: **[Built-up asphalt][Built-up coal-tar][APP-modified bituminous][SBS-modified bituminous][EPDM][CSPE][KEE][PVC][TPO][APP-modified bituminous protected membrane][SBS-modified bituminous protected membrane][Fluid-applied protected membrane][Coated foamed]<Insert roof type>** roofing.
- B. Owner **[will][will not]** occupy portions of building immediately below reroofing area.
 - 1. Conduct reroofing so Owner's operations are not disrupted.
 - 2. Provide Owner with not less than **[72]<Insert number>** hours' written notice of activities that may affect Owner's operations.
 - 3. Coordinate work activities daily with Owner so Owner has adequate advance notice to place protective dust and water-leakage covers over sensitive equipment and furnishings, shut down HVAC and fire-alarm or -detection equipment if needed, and evacuate occupants from below work area.
 - 4. Before working over structurally impaired areas of deck, notify Owner to evacuate occupants from below affected area.

- a. Verify that occupants below work area have been evacuated before proceeding with work over impaired deck area.
- C. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.
- D. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.
- E. Conditions existing at time of inspection for bidding will be maintained by Owner as far as practical.
 - 1. A roof moisture survey of existing roofing system is available for Contractor's reference.
 - 2. The results of an analysis of test cores from existing roofing system are available for Contractor's reference.
 - 3. Construction Drawings[**and Project Manual**] for existing roofing system are provided for Contractor's convenience and information, but they are not a warranty of existing conditions. They are intended to supplement rather than serve in lieu of Contractor's own investigations. Contractor is responsible for conclusions derived from existing documents.
- F. Limit construction loads on existing roof areas to remain, and existing roof areas scheduled to be reroofed to **<Insert load>** for rooftop equipment wheel loads and **<Insert load>** for uniformly distributed loads.
- G. Weather Limitations: Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.
 - 1. Remove only as much roofing in one day as can be made watertight in the same day.
- H. Hazardous Materials:
 - 1. It is not expected that hazardous materials, such as asbestos-containing materials, will be encountered in the Work.
 - a. Hazardous materials will be removed by Owner before start of the Work.
 - b. Existing roof will be left no less watertight than before removal.
 - 2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner.
 - a. Hazardous materials will be removed by Owner under a separate contract.
 - 3. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 - a. Hazardous material remediation is specified elsewhere in the Contract Documents.
 - b. Do not disturb hazardous materials or items suspected of containing hazardous materials except according to procedures specified elsewhere in the Contract Documents.
 - c. Coordinate reroofing preparation with hazardous material remediation to prevent water from entering existing roofing system or building.

1.11 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during reroofing, by methods and with materials so as not to void existing roofing system warranty issued by

<Insert name of manufacturer for existing warranted roof system>.

1. Notify warrantor before proceeding with the Work.
2. Notify warrantor of existing roofing system on completion of reroofing, and obtain documentation verifying that existing roofing system has been inspected and warranty remains in effect.
 - a. Submit documentation at Project closeout.

PART 2 - PRODUCTS

2.1 TEMPORARY PROTECTION MATERIALS

- A. EPS Insulation: ASTM C578.
- B. Plywood: DOC PS 1, Grade CD, Exposure 1.
- C. OSB: DOC PS 2, Exposure 1.

2.2 TEMPORARY ROOFING MATERIALS

- A. Design and selection of materials for temporary roofing are Contractor's responsibilities.
- B. Sheathing Paper: Red-rosin type, minimum **3 lb/100 sq. ft. (0.16 kg/sq. m)**.
- C. Base Sheet: ASTM D4601/D4601M, Type II, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet.
- D. Glass-Fiber Felts: ASTM D2178/D2178M, Type IV, asphalt-impregnated, glass-fiber felt.
- E. Asphalt Primer: ASTM D41/D41M.
- F. Roofing Asphalt: ASTM D312/D312M, Type III or IV.
- G. Base Sheet Fasteners: Capped head, factory-coated steel fasteners, listed in FM Approvals' RoofNav.

2.3 INFILL AND REPLACEMENT MATERIALS

- A. Use infill materials matching existing roofing system materials unless otherwise indicated.
 1. Infill materials are specified in [Section 075113 "Built-up Asphalt Roofing"] [Section 075116 "Built-up Coal Tar Roofing"] [Section 075213 "Atactic-Polypropylene (APP) Modified Bituminous Membrane Roofing"] [Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"] [Section 075316 "Chlorosulfonate-Polyethylene (CSPE) Roofing"] [Section 075323 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing"] [Section 075416 "Ketone Ethylene Ester (KEE) Roofing"] [Section 075419 "Polyvinyl-Chloride (PVC) Roofing"] [Section 075423 "Thermoplastic-Polyolefin (TPO) Roofing"] unless otherwise indicated.
- B. Steel deck is specified in Section 053100 "Steel Decking."
- C. Wood blocking, curbs, and nailers are specified in Section 061000 "Rough Carpentry."

- D. Plywood roof sheathing is specified in Section 061600 "Sheathing."
- E. Parapet Sheathing:
 - 1. ASTM C1177/C1177M or ASTM C1278/C1278M water-resistant gypsum substrate; [1/4 inch (6 mm)][3/8 inch (10 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)] thick.
 - 2. **[Pressure-preservative][Exterior fire-retardant]**-treated plywood wall sheathing, [19/32 inch (15 mm)]<Insert dimension> thick, complying with Section 061600 "Sheathing."
- F. Fasteners: Factory-coated steel fasteners with metal or plastic plates listed in FM Approvals' RoofNav, and acceptable to new roofing system manufacturer.

2.4 AUXILIARY REROOFING MATERIALS

- A. General: Use auxiliary reroofing preparation materials recommended by roofing system manufacturer for intended use and compatible with components of **[existing and]**new roofing system.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect existing roofing system that is not to be reroofed.
 - 2. Loosely lay **1-inch- (25-mm-)** minimum thick, EPS insulation over existing roofing in areas not to be reroofed.
 - a. Loosely lay **15/32-inch (12-mm)** plywood or OSB panels over EPS. Extend EPS past edges of plywood or OSB panels a minimum of **1 inch (25 mm)**.
 - 3. Limit traffic and material storage to areas of existing roofing that have been protected.
 - 4. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.
 - 5. Comply with requirements of existing roof system manufacturer's warranty requirements.
- B. Seal or isolate windows that may be exposed to airborne substances created in removal of existing materials.
- C. Shut off rooftop utilities and service piping before beginning the Work.
- D. Test existing roof drains to verify that they are not blocked or restricted.
 - 1. Immediately notify Architect of any blockages or restrictions.
- E. Coordinate with Owner to shut down air-intake equipment in the vicinity of the Work.
 - 1. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.
- F. During removal operations, have sufficient and suitable materials on-site to facilitate rapid installation of temporary protection in the event of unexpected rain.

- G. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday.
 - 1. Prevent debris from entering or blocking roof drains and conductors.
 - a. Use roof-drain plugs specifically designed for this purpose.
 - b. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.
 - 2. If roof drains are temporarily blocked or unserviceable due to roofing system removal or partial installation of new roofing system, provide alternative drainage method to remove water and eliminate ponding.
 - a. Do not permit water to enter into or under existing roofing system components that are to remain.

3.2 ROOF TEAR-OFF

- A. Notify Owner each day of extent of roof tear-off proposed for that day[**and obtain authorization to proceed**].
- B. Lower removed roofing materials to ground and onto lower roof levels, using dust-tight chutes or other acceptable means of removing materials from roof areas.
- C. Remove aggregate ballast from roofing.[**Store aggregate ballast for reuse in manner not to exceed structural loading limitations of roof deck.**]
- D. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing using a power broom.
- E. Remove pavers and accessories from roofing.
 - 1. Store and protect pavers and accessories for reuse in manner not to exceed structural loading limitations of roof deck.
 - 2. Discard cracked pavers.
- F. Remove ballast, protection mat, and EPS insulation from protected roofing membrane.
 - 1. Discard EPS insulation that is damaged or exceeds [8 lb/cu. ft. (128 kg/cu. m)]<Insert value>.
 - 2. Store EPS insulation for reuse and protect it from physical damage.
 - 3. Store ballast for reuse in manner not to exceed structural loading limitations of roof deck.
- G. Full Roof Tear-off: [Where indicated on Drawings, remove][Remove] existing roofing and other roofing system components down to the existing [roof deck][concrete fill].
 - 1. Remove [substrate board][vapor retarder][roof insulation][and][cover board].
 - 2. Remove base flashings and counter flashings.
 - 3. Remove perimeter edge flashing and gravel stops.
 - 4. Remove copings.
 - 5. Remove expansion-joint covers.
 - 6. Remove flashings at pipes, curbs, mechanical equipment, and other penetrations.
 - 7. Remove roof drains indicated on Drawings to be removed.
 - 8. Remove wood blocking, curbs, and nailers.
 - 9. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry.
 - a. Remove unadhered bitumen, unadhered felts, and wet felts.

10. Remove excess asphalt from steel deck.
 - a. A maximum of **15 lb/100 sq. ft. (0.72 kg/sq. m)** of asphalt is permitted to remain on steel decks.
11. Remove fasteners from deck **[or cut fasteners off slightly above deck surface]**.
- H. Partial Roof Tear-off: **[Where indicated on Drawings, remove][Remove]** existing roofing down to **[existing cover board][existing insulation]<Insert substrate>** and immediately check for presence of moisture.
 1. **[Engage][Owner will engage]** a qualified testing agency to perform the following test:
 - a. Coordinate with Owner's testing agency to schedule times for tests and inspections immediately after removal.
 2. Survey exposed substrate that is to remain using infrared color thermography according to ASTM C1153.
 - a. Prepare survey report of initial scan indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
 3. Survey exposed substrate that is to remain using electrical capacitance/impedance testing according to ASTM D7954/D7954M.
 - a. Prepare survey report indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
 4. Survey exposed substrate that is to remain using nuclear hydrogen detection testing according to SPRI/RCI NT-1.
 - a. Prepare survey report indicating locations of entrapped moisture, if any, and area calculations of locations of entrapped moisture.
 5. Remove wet or damp materials below existing roofing and above deck as directed by Architect.
 - a. **[Removal is paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.]**
 6. Inspect wood blocking, curbs, and nailers for deterioration and damage.
 - a. If wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
 - b. **[Removal is paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.]**
 7. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry.
 - a. Remove unadhered bitumen, unadhered felts, and wet felts.
 8. Remove excess asphalt from steel deck that is exposed by removal of wet or damp materials.
 - a. A maximum of **15 lb/100 sq. ft. (0.72 kg/sq. m)** of asphalt is permitted to remain on steel decks.

9. Remove fasteners from deck[**or cut fasteners off slightly above deck surface**].

3.3 DECK PREPARATION

- A. Inspect deck after tear-off of roofing system.
- B. If broken or loose fasteners that secure deck panels to one another or to structure are observed, or if deck appears or feels inadequately attached, immediately notify Architect.
 1. Do not proceed with installation until directed by Architect.
- C. If deck surface is unsuitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify Architect.
 1. Do not proceed with installation until directed by Architect.
- D. Provide additional deck securement as indicated on Drawings.
- E. Replace steel deck as indicated on Drawings.
- F. Replace steel deck as directed by Architect.
 1. Deck replacement will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- G. Prepare and paint steel deck surface.
 1. Painting and preparation for painting is specified in Section 099113 "Exterior Painting."
- H. Replace plywood roof sheathing as indicated on Drawings.
- I. Replace plywood roof sheathing as directed by Architect.
 1. Roof sheathing replacement will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.

3.4 INFILL MATERIALS INSTALLATION

- A. Immediately after roof tear-off, and inspection and repair, if needed, of deck, fill in tear-off areas to match existing roofing system construction.
 1. Installation of infill materials is specified in [**Section 075113 "Built-up Asphalt Roofing."**][**Section 075116 "Built-up Coal Tar Roofing."**][**Section 075213 "Atactic-Polypropylene (APP) Modified Bituminous Membrane Roofing."**][**Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing."**][**Section 075316 "Chlorosulfonate-Polyethylene (CSPE) Roofing."**][**Section 075323 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing."**][**Section 075416 "Keytone Ethylene Ester (KEE) Roofing."**][**Section 075419 "Polyvinyl-Chloride (PVC) Roofing."**][**Section 075423 "Thermoplastic-Polyolefin (TPO) Roofing."**]
 2. Installation of wood blocking, curbs, and nailers is specified in Section 061000 "Rough Carpentry."
- B. Install new roofing patch over roof infill area.

1. If new roofing is installed the same day tear-off is made, roofing patch is not required.

3.5 TEMPORARY ROOFING

- A. Install approved temporary roofing over area to be reroofed.
- B. Install temporary roofing over area to be reroofed.
 1. **[Install two glass-fiber felts][Mechanically fasten base sheet and install a glass-fiber felt]**, lapping each sheet **19 inches (483 mm)** over preceding sheet.
 2. Embed glass-fiber felt in a solid mopping of hot roofing asphalt applied within equiviscous temperature range.
 3. Glaze-coat completed surface with hot roofing asphalt.
- C. Remove temporary roofing before installing new roofing.
- D. Prepare temporary roof to receive new roofing **[according to approved temporary roofing proposal][by patching and repairing temporary roofing]<Insert preparation method>**.
 1. Restore temporary roofing to watertight condition.
 2. Obtain approval for temporary roof substrate from roofing manufacturer and Architect before installing new roof.

3.6 ROOF RE-COVER PREPARATION

- A. Remove blisters, ridges, buckles, **[mechanically attached roofing fastener buttons projecting above roofing,]** and other substrate irregularities from existing roofing that inhibit new recover boards from conforming to substrate.
 1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.
 2. Scarify surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new recover boards.
 3. Broom clean existing substrate.
 4. Coordinate with Owner's inspector to schedule times for tests and inspections.
 5. Verify that existing substrate is dry.
 - a. Spot check substrates with an electrical capacitance moisture-detection meter.
 6. Remove materials that are wet or damp.
 - a. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- B. Remove blisters, ridges, buckles, **[mechanically attached roofing fastener buttons projecting above roofing,]** and other substrate irregularities from existing roofing that inhibit new **[recover boards][roofing]** from conforming to substrate.
 1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.
 2. Shave surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new **[recover boards][roofing]**.

3. Broom clean existing substrate.
 4. Coordinate with Owner's inspector to schedule times for tests and inspections.
 5. Verify that existing substrate is dry before proceeding with installation.
 - a. Spot check substrates with an electrical capacitance moisture-detection meter.
 6. Remove materials that are wet and damp.
 - a. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
 - C. Remove blisters and areas of roofing not fully adhered.
 - D. Remove[**mechanically attached roofing fastener buttons projecting above roofing and other**] substrate irregularities that inhibit new recover boards from conforming to substrate.
 1. Remove loose aggregate from aggregate-surfaced, built-up bituminous roofing with a power broom.
 2. Clean substrate of contaminants, such as dirt, debris, oil, and grease, that can affect adhesion of coated foamed roofing.
 3. Power vacuum the existing roof surface.
 - a. If recommended by foam manufacturer, prime dried surface at recommended rate with recommended primer.
 4. Scarify surface of coated polyurethane roofing as necessary to achieve a suitable substrate for new roofing.
 5. Provide additional uplift securement for existing roofing system with new screws and plates applied to each roof zone at the following densities:
 - a. Field of roof, one fastener for each **<Insert area>**.
 - b. Corners of roof, one fastener for each **<Insert area>**.
 - c. Perimeters of roof, one fastener for each **<Insert area>**. Width of perimeter zone of roof is **<Insert dimension>**.
 6. Verify that surface is dry by pressing litmus paper to surface areas most likely to retain moisture, such as shaded areas and low spots.
 - a. If paper changes color, surface is too wet to apply foam.
 7. Build up isolated low spots on existing roofing with sprayed foam specified in Section 075700 "Coated Foamed Roofing" to prevent ponding.
- 3.7 BASE FLASHING REMOVAL
- A. Remove existing base flashings.
 1. Clean substrates of contaminants, such as asphalt, sheet materials, dirt, and debris.
 - B. Do not damage metal counterflashings that are to remain.
 1. Replace metal counterflashings damaged during removal with counterflashings [**of same metal, weight or thickness, and finish as existing.**][specified in Section 076200 "Sheet Metal Flashing and Trim."][specified in Section 077100 "Roof Specialties."]

- C. Inspect parapet sheathing, wood blocking, curbs, and nailers for deterioration and damage.
 - 1. If parapet sheathing, wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
- D. Remove existing parapet sheathing and replace with new parapet sheathing to comply with Section 061600 "Sheathing."
 - 1. If parapet framing, wood blocking, curbs, or nailers have deteriorated, immediately notify Architect.
- E. When directed by Architect, replace parapet framing, wood blocking, curbs, and nailers to comply with **[Section 054000 "Cold-Formed Metal Framing."][Section 061000 "Rough Carpentry."]**

3.8 FASTENER PULL-OUT TESTING

- A. **[Perform][Retain independent testing and inspecting agency to conduct]** fastener pull-out tests according to SPRI FX-1, and submit test report to **[Architect][and][roofing manufacturer]** before installing new roofing system.
 - 1. Obtain **[Architect's][roofing manufacturer's]** approval to proceed with specified fastening pattern.
 - a. **[Architect][Roofing manufacturer]** may furnish revised fastening pattern commensurate with pull-out test results.

3.9 DISPOSAL

- A. Collect demolished materials and place in containers.
 - 1. Promptly dispose of demolished materials.
 - 2. Do not allow demolished materials to accumulate on-site.
 - 3. Storage or sale of demolished items or materials on-site is not permitted.
- B. Transport and legally dispose of demolished materials off Owner's property.

END OF SECTION 07 01 50 19

SECTION 07 01 50 81 - BUILT-UP COAL TAR ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Built-up coal tar roofing.
2. Roofing membrane sheet materials.
3. Base flashing sheet materials.
4. Bitumen materials.
5. Accessory roofing materials.
6. Substrate board.
7. Vapor retarder.
8. Roof insulation.
9. Insulation accessories and cover board.
10. Electronic leak detection (ELD) materials.
11. Coating materials.
12. Walkways.

B. Section includes the installation of sound-absorbing insulation strips in ribs of roof deck. Sound-absorbing insulation strips are furnished under Section 053100 "Steel Decking."

C. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking, and for wood-based, structural-use roof deck panels.
2. Section 061600 "Sheathing" for wood-based, structural-use roof deck panels.
3. Section 072100 "Thermal Insulation" for insulation beneath the roof deck.
4. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
5. Section 077100 "Roof Specialties" for **[premanufactured copings][roof edge fasciae][gravel stops][reglets][roof edge flashings][counterflashings]**.
6. Section 077129 "Manufactured Roof Expansion Joints" for premanufactured roof expansion-joint assemblies.
7. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
8. Section 221423 "Storm Drainage Piping Specialties" for roof drains.

1.2 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.3 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at **[Project site]<Insert location>**.

1. Meet with Owner, **[Construction Manager,]** Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative,

- deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at **[Project site]<Insert location>**.

1. Meet with Owner, **[Construction Manager,]** Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Built-up coal tar roof system.
2. Roofing membrane sheet materials.
3. Base flashing sheet materials.
4. Bitumen materials.
5. Accessory roofing materials.
6. Substrate board.
7. Vapor retarder.
8. Roof insulation.
9. Insulation accessories and cover board.
10. Electronic leak detection (ELD) materials.
11. Coating materials.
12. Walkways.

B. Product Data Submittals:

1. For insulation and roof system component fasteners, include copy of **[FM Approvals' RoofNav][SPRI's Directory of Roof Assemblies]** listing.

- C. Sustainable Design Submittals:
 - 1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
- D. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:
 - 1. Layout and thickness of insulation.
 - 2. Base flashings and built-up terminations.
 - 3. Flashing details at penetrations.
 - 4. Tapered insulation, including slopes.
 - 5. Roof plan showing orientation of steel roof deck and roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
 - 6. Crickets, saddles, and tapered edge strips, including slopes.
 - 7. Insulation-fastening patterns for corner, perimeter, and field-of-roof locations.
 - 8. Tie-in with adjoining air barrier.
- E. Samples for Verification: For the following products:
 - 1. Flashing Sheet: Samples of **[manufacturer's standard colors for selection by Architect][specified color]**.
 - 2. Aggregate surfacing material in gradation **[and color]** required.
 - 3. Walkway Pads or Rolls: Samples of **[manufacturer's standard colors for selection by Architect][specified color]**.
- F. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer][manufacturer][and][testing agency]**.
- B. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of compliance with performance requirements.
 - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Product Test Reports: For roof insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.
- D. Evaluation Reports: For components of roofing system, from ICC-ES.
- E. Field Test Reports:
 - 1. Concrete internal relative humidity test reports.
 - 2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.
- F. Field quality-control reports.

- G. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.
- B. Certified statement from existing roof membrane manufacturer, stating that existing roof warranty has not been affected by Work performed under this Section.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is **[UL listed][listed in FM Approvals' RoofNav][listed in SPRI's Directory of Roof Assemblies]** for roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer.
 - 1. Protect stored liquid material from direct sunlight.
 - 2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.
 - 1. Store in a dry location.
 - 2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed in accordance with manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes roofing membrane, base flashings, [roof insulation,][fasteners,][cover boards,][vapor retarder][substrate board,][roof pavers,] and other components of roofing system.
 - 2. Warranty Period: [10][15][20]<Insert number> years from date of Substantial Completion.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system, such as roofing membrane, base flashing, [roof insulation,][fasteners,][cover boards,][substrate boards,][vapor retarders,][roof pavers] and [walkway products,] for the following warranty period:
 - 1. Warranty Period: [Two]<Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and flashings to withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings to remain watertight.
 - 1. Accelerated Weathering: Roof membrane to withstand 2000 hours of exposure when tested in accordance with ASTM G152, ASTM G154, or ASTM G155.
 - 2. Impact Resistance: Roof membrane to resist impact damage when tested in accordance with ASTM D3746/D3746M, ASTM D4272/D4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.
- B. Material Compatibility: Roofing materials to be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.
- C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested in accordance with FM Approvals 4474, UL 580, or UL 1897:
 - 1. Zone 1 (Roof Area Field): <Insert lbf/sq. ft. (kPa)>.
 - 2. Zone 2 (Roof Area Perimeter): <Insert lbf/sq. ft. (kPa)>.
 - a. Location: From roof edge to <Insert dimension> inside roof edge.
 - 3. Zone 3 (Roof Area Corners): <Insert lbf/sq. ft. (kPa)>.
 - a. Location: <Insert dimension> in each direction from each building corner.
- D. FM Approvals' RoofNav Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
 - 1. Fire/Windstorm Classification: [Class 1A-60][Class 1A-75][Class 1A-90][Class 1A-105][Class

1A-120]<Insert class>.

2. Hail-Resistance Rating: FM 1-34 **[MH][SH][VSH]**.

E. SPRI's Directory of Roof Assemblies Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in SPRI's Directory of Roof Assemblies for roof assembly identical to that specified for this Project.

1. Wind Uplift Load Capacity: **[60 psf][75 psf][90 psf][105 psf][120 psf]<Insert capacity>**.

F. Solar Reflectance Index: Not less than **[78][29]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

G. Solar Reflectance Index (SRI): Three-year-aged SRI not less than **[64][32]** or initial SRI not less than **[82][39]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

H. Solar Reflectance Index: Not less than **[78][29]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

I. Solar Reflectance Index (SRI): Three-year-aged SRI not less than **[64][15]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

J. Solar Reflectance Index: Not less than **[78][29]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

K. Energy Star Listing: Roofing system to be listed on the DOE's Energy Star "Roof Products Qualified Product List" for **[low][steep]**-slope roof products.

L. Energy Performance: Roofing system to have an initial solar reflectance of not less than **[0.70]<Insert value>** and an emissivity of not less than **[0.75]<Insert value>** when tested in accordance with ANSI/CRRS S100.

M. Exterior Fire-Test Exposure: ASTM E108 or UL 790, **[Class A][Class B][Class C]**; for application and roof slopes indicated; testing by a qualified testing agency.

1. Identify products with appropriate markings of applicable testing agency.

N. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated.

1. Identify products with appropriate markings of applicable testing agency.

2.2 BUILT-UP COAL TAR ROOFING

A. Built-up Coal Tar Roof System: See the following articles for individual roof materials required.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

a. **[Durapax LLC]**

b. **[Hickman Engineered Systems]**

- c. **[Koppers Performance Chemicals]**
 - d. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Durapax LLC]**
 - b. **[Hickman Engineered Systems]**
 - c. **[Koppers Performance Chemicals]**
 - d. **<Insert manufacturer's name>**
- B. Source Limitations: Obtain components for roofing system from **[same manufacturer as roofing membrane][or][manufacturer approved by roofing membrane manufacturer]**.

2.3 ROOFING MEMBRANE SHEET MATERIALS

- A. Asphalt-Coated, Glass-Fiber-Mat Base Sheet: ASTM D4601/D4601M, **[Type I][Type II]**, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
- B. Asphalt-Coated, Glass-Fiber-Mat Venting Base Sheet: ASTM D4897/D4897M, Type II, venting, nonperforated, asphalt-impregnated and -coated, glass-fiber base sheet with mineral granule surfacing on bottom surface.
- C. Asphalt-Coated, Organic-Felt Base Sheet: ASTM D2626/D2626M, asphalt-saturated and -coated organic felt, dusted with fine mineral surfacing on both sides.
- D. Organic-Felt Ply Sheet: ASTM D227/D227M, coal tar-saturated organic felt.
- E. Glass-Fiber Ply Sheet: ASTM D4990, Type I, coal-tar-impregnated, glass-fiber felt with the physical properties of ASTM D2178/D2178M, **[Type IV][Type VI]**.

2.4 BASE FLASHING SHEET MATERIALS

- A. Asphalt-Impregnated, Glass-Fiber-Mat Backer Sheet: ASTM D2178/D2178M, Type IV, asphalt-impregnated, glass-fiber felt.
- B. Polyester Backer Sheet: Roofing manufacturer's standard spun-bonded, nonwoven, polyester-reinforced fabric, of standard color and weight, suitable for application method specified.
- C. SBS-Modified Bitumen, Granule-Surfaced Flashing Sheet: ASTM D6164/D6164M, Type I or II, Grade G, polyester-reinforced, granule-surfaced base flashing; suitable for application method specified, and as follows:
 - 1. Granule Color: **[White][Gray][Tan]<Insert color>**.
- D. Polyester Flashing Sheet: Roofing manufacturer's standard asphalt-coated, polyester-reinforced fabric, base flashing, suitable for application method specified.
- E. Fabric Termination: Roofing manufacturer's standard polyester cloth, suitable for application and for reinforcing top seal of base flashing.

2.5 BITUMEN MATERIALS

- A. Asphalt Primer: ASTM D41/D41M.
- B. Coal Tar Primer: ASTM D43/D43M.
- C. Coal Tar Pitch: ASTM D450/D450M, Type I.
- D. Roofing Asphalt: ASTM D312/D312M, **[Type III][Type IV][Type III or IV as recommended by roofing system manufacturer for application]<Insert type>**.
- E. SEBS-Modified Roofing Asphalt: ASTM D6152/D6152M.

2.6 ACCESSORY ROOFING MATERIALS

- A. General: Accessory materials recommended by built-up roofing manufacturer for intended use and compatible with roofing components.
 - 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
 - 2. Adhesives and sealants shall comply with the following limits for VOC content:
 - a. Plastic Foam Adhesives: 50 g/L.
 - b. Gypsum Board and Panel Adhesives: 50 g/L.
 - c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Fiberglass Adhesives: 80 g/L.
 - e. Contact Adhesives: 80 g/L.
 - f. PVC Welding Compounds: 510 g/L.
 - g. Other Adhesives: 250 g/L.
 - h. Single-Ply Roof Membrane Sealants: 450 g/L.
 - i. Nonmembrane Roof Sealants: 300 g/L.
 - j. Sealant Primers for Nonporous Substrates: 250 g/L.
 - k. Sealant Primers for Porous Substrates: 775 g/L.
 - 3. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 4. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 5. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 6. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 7. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.

- C. Roof Vents: As recommended by roof membrane manufacturer.
 - 1. Size: Not less than **4-inch (100-mm)** diameter.
- D. Sheathing Paper: Red-rosin type, minimum **3 lb/100 sq. ft. (0.16 kg/sq. m)**.
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately **1 by 1/8 inch (25 by 3 mm)** thick; with anchors.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- F. Cold-Applied Trichloroethylene Asphalt Adhesive: ASTM D3019, Type III, roof system manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive, specially formulated for compatibility and use with roofing system and base flashings.
- G. Cold-Applied Asphalt Adhesive: ASTM D4479/D4479M, Type I or Type II, roof system manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive, specially formulated for compatibility and use with roofing system and base flashings.
- H. Cold-Applied Polymer-Modified Asphalt Adhesive: Roof membrane manufacturer's standard solvent-and asbestos-free, cold-applied adhesive, specially formulated for compatibility and use with roofing system, base flashings, and aggregate surfacing adhesive.
- I. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required by roofing manufacturer for application.
- J. SBS-Modified Asphalt Flashing Cement: Roofing manufacturer's standard, asbestos free, of consistency required for application.
- K. Coal Tar Roofing Cement: ASTM D5643/D5643M, coal-tar-based roofing cement, asbestos free.
- L. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening built-up roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing manufacturer.
 - 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- M. Aggregate Surfacing: ASTM D1863/D1863M, No. 6 or No. 67, clean, dry, opaque, **[water-worn gravel or crushed stone, free of sharp edges][crushed slag, free of sharp edges]**.
- N. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

2.7 SUBSTRATE BOARD

- A. Gypsum Board, Type X: ASTM C1396/C1396M.
 - 1. Thickness: **5/8 inch (16 mm)**.
 - 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- B. Glass-Mat Gypsum Roof Substrate Board: ASTM C1177/C1177M, water-resistant gypsum board.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 3. Thickness: **[1/4 inch (6 mm)][1/2 inch (13 mm)][Type X, 5/8 inch (16 mm)]**.
 4. Surface finish: **[Factory primed][Unprimed]**.
 5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- C. Fiber-Reinforced Gypsum Roof Board: ASTM C1278/C1278M, cellulosic-fiber reinforced, water-resistant gypsum board.
1. Thickness: **[1/4 inch (6 mm)][3/8 inch (10 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)]**.
 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- D. Perlite Board: ASTM C728, seal coated.
1. Thickness: **[3/4 inch (19 mm)][1 inch (25 mm)]**.
 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- E. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.

2.8 VAPOR RETARDER

- A. Polyethylene Film: ASTM D4397, **[6 mils (0.15 mm)][10 mils (0.25 mm)]** thick, minimum, with maximum permeance rating of **[0.13 perm (0.04 metric perm)][0.76 perm (0.050 metric perm)]**.
1. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
 2. Adhesive: Manufacturer's standard lap adhesive, FM Global approved for vapor-retarder application.
- B. Laminated Sheet Vapor Retarder: Two layers, fire-retardant polyethylene laminate, reinforced with cord

grid.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Reef Industries, Inc.]**
 - b. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Reef Industries, Inc.]**
 - b. **<Insert manufacturer's name>**
3. Permeance Rating: Not more than **0.062 perm (3.556 ng/Pa x s x sq. m)** when tested in accordance with ASTM E96/E96M.
4. Flame Spread Index: Not more than 5 when tested in accordance with ASTM E84.
5. Smoke-Developed Index: Not more than 35 when tested in accordance with ASTM E84.
6. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
- C. Rubberized Asphalt Sheet Vapor Retarder, Self-Adhering: ASTM D1970/D1970M polyethylene film laminated to layer of rubberized asphalt adhesive, minimum **40-mil (1.0-mm)** total thickness; maximum permeance rating of **0.1 perm (6 ng/Pa x s x sq. m)**; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
- D. Butyl Rubber Sheet Vapor Retarder, Self-Adhering: Polyethylene film laminated to layer of butyl rubber adhesive, minimum **30-mil (0.76-mm)** total thickness; maximum permeance rating of **0.1 perm (6 ng/Pa x s x sq. m)**; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
- E. Glass-Fiber Felts: ASTM D2178/D2178M, Type IV, asphalt impregnated.

2.9 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured **[or approved]** by roof membrane manufacturer, **[approved for use in FM Approvals' RoofNav-listed roof assemblies][, approved for use in SPRI's Directory of Roof Assemblies listed roof assemblies]**.
- B. Polyisocyanurate Board Insulation: ASTM C1289, **[Type II, Class 1, Grade 2][Type II, Class I, Grade 3]**, felt or glass-fiber mat facer on both major surfaces.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Atlas Polyiso Roof and Wall Insulation]**
 - c. **[Carlisle Syntec Systems]**
 - d. **[CertainTeed; SAINT-GOBAIN]**
 - e. **[Dyplast Products]**

- f. [Elevate; Holcim Building Envelope]
 - g. [GAF]
 - h. [Hunter Panels; a Carlisle company]
 - i. [Insulfoam; a Carlisle Company]
 - j. [Johns Manville; a Berkshire Hathaway company]
 - k. [Rmax, A Business Unit of Sika Corporation]
 - l. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Atlas Polyiso Roof and Wall Insulation]
 - c. [Carlisle Syntec Systems]
 - d. [CertainTeed; SAINT-GOBAIN]
 - e. [Dyplast Products]
 - f. [Elevate; Holcim Building Envelope]
 - g. [GAF]
 - h. [Hunter Panels; a Carlisle company]
 - i. [Insulfoam; a Carlisle Company]
 - j. [Johns Manville; a Berkshire Hathaway company]
 - k. [Rmax, A Business Unit of Sika Corporation]
 - l. <Insert manufacturer's name>
 3. Compressive strength: [20 psi (138 kPa)][25 psi (172 kPa)].
 4. Size: [48 by 48 inches (1219 by 1219 mm)][48 by 96 inches (1219 by 2438 mm)].
 5. Thickness:
 - a. Base Layer: [1-1/2 inches (38 mm)]<Insert thickness>.
 - b. Upper Layer: <Insert thickness>.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
- C. Composite Polyisocyanurate Board Insulation: ASTM C1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other surface.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Atlas Polyiso Roof and Wall Insulation]
 - c. [CertainTeed; SAINT-GOBAIN]
 - d. [Elevate; Holcim Building Envelope]
 - e. [GAF]
 - f. [Homasote Company]
 - g. [Hunter Panels; a Carlisle company]
 - h. [Insulfoam; a Carlisle Company]
 - i. [Johns Manville; a Berkshire Hathaway company]
 - j. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Atlas Polyiso Roof and Wall Insulation]**
 - c. **[CertainTeed; SAINT-GOBAIN]**
 - d. **[Elevate; Holcim Building Envelope]**
 - e. **[GAF]**
 - f. **[Homasote Company]**
 - g. **[Hunter Panels; a Carlisle company]**
 - h. **[Insulfoam; a Carlisle Company]**
 - i. **[Johns Manville; a Berkshire Hathaway company]**
 - j. **<Insert manufacturer's name>**
3. Facer: **[Type IV, cellulosic-fiber-insulating-board facer, Grade 2, 1/2 inch (13 mm) thick][Type V, oriented strand board facer, 7/16 inch (11 mm) thick][Type VII, glass-mat-faced gypsum board facer, 1/4 inch (6 mm) thick]<Insert material>**.
 4. Size: **[48 by 48 inches (1219 by 1219 mm)][48 by 96 inches (1219 by 2438 mm)]**.
 5. Thickness: **<Insert thickness>**.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- D. Perlite Board Insulation: ASTM C728, Type I, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[GAF]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[GAF]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **<Insert manufacturer's name>**
 3. Thermal Resistance: R-value of 2.78 per 1 inch (25 mm).
 4. Size: **[48 by 48 inches (1219 by 1219 mm)][48 by 96 inches (1219 by 2438 mm)]**.
 5. Thickness:
 - a. Base Layer: **[1-1/2 inches (38 mm)]<Insert thickness>**.
 - b. Upper Layer: **<Insert thickness>**.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- E. Cellulosic-Fiber Board Insulation: ASTM C208, Type II, Grade 1, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[GAF]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[Homasote Company]**
 - d. **[Huebert Fiberboard Inc]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[GAF]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[Homasote Company]**
 - d. **[Huebert Fiberboard Inc]**
 - e. **<Insert manufacturer's name>**
 3. Thermal Resistance: R-value of 2.78 per 1 inch (25 mm).
 4. Size: **[48 by 48 inches (1219 by 1219 mm)][48 by 96 inches (1219 by 2438 mm)]**.
 5. Thickness:
 - a. Base Layer: **[1 inch (25 mm)][2 inches (51 mm)]<Insert thickness>**.
 - b. Upper Layer: **<Insert thickness>**.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- F. Cellular-Glass Board Insulation: ASTM C552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Pittsburgh Corning Corporation]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Pittsburgh Corning Corporation]**
 - b. **<Insert manufacturer's name>**
 3. Thermal Resistance: R-value of 3.44 per 1 inch (25 mm).
 4. Size: **24 by 48 inches (600 by 1219 mm)**.
 5. Thickness: **<Insert thickness>**.
 6. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.

- G. Mineral Wool Insulation - Multidensity: ASTM C726, Type I, Class 1, comprising monolithic fibrous material having an upper layer with a **11.2-lb/cu. ft. (180-kg/cu. m)** density, and a lower layer of **7.5-lb/cu. ft. (120-kg/cu. m)** density.
1. Thermal Resistance: R-value of 3.8 per 1 inch (25 mm).
 2. Size: **48 by 48 inches (1219 by 1219 mm)**.
 3. Thickness:
 - a. Base Layer: **[2 inches (51 mm)]<Insert thickness>**.
 - b. Upper Layer: **<Insert thickness>**.
 4. Face Treatment: Bitumen coating.
 5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- H. Mineral Wool Insulation - Single Density: ASTM C726, Type II, Class 1, comprising monolithic fibrous material having a **12.5-lb/cu. ft. (200-kg/cu. m)** density.
1. Thermal Resistance: R-value of 4.0 per 1 inch (25 mm).
 2. Size: **48 by 48 inches (1219 by 1219 mm)**.
 3. Thickness: **1 inch (25 mm)**.
 4. Face Treatment: Bitumen coating.
 5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- I. Tapered Insulation: Provide factory-tapered insulation boards
1. Material: **[Match roof insulation]<Insert material>**.
 2. Minimum Thickness: **1/4 inch (6 mm)**.
 3. Slope:
 - a. Roof Field: **[1/4 inch per foot (1:48)]<Insert slope>** unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: **[1/2 inch per foot (1:24)]<Insert slope>** unless otherwise indicated on Drawings.
 4. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.

2.10 INSULATION ACCESSORIES AND COVER BOARD

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatible with other roofing system components.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation[**and cover board**] to substrate, and acceptable to roofing manufacturer.
1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
1. Modified asphaltic, asbestos-free, cold-applied adhesive.

2. Bead-applied, low-rise, one-component or multicomponent urethane adhesive.
3. Full-spread, spray-applied, low-rise, two-component urethane adhesive.
4. Adhesives and sealants shall comply with the following limits for VOC content:
 - a. Plastic Foam Adhesives: 50 g/L.
 - b. Gypsum Board and Panel Adhesives: 50 g/L.
 - c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Fiberglass Adhesives: 80 g/L.
 - e. Contact Adhesives: 80 g/L.
 - f. PVC Welding Compounds: 510 g/L.
 - g. Other Adhesives: 250 g/L.
 - h. Single-Ply Roof Membrane Sealants: 450 g/L.
 - i. Nonmembrane Roof Sealants: 300 g/L.
 - j. Sealant Primers for Nonporous Substrates: 250 g/L.
 - k. Sealant Primers for Porous Substrates: 775 g/L.
5. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
6. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
8. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
9. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. Insulation Cant Strips: **[ASTM C728, perlite insulation board][ASTM C208, Type II, Grade 1, cellulosic-fiber insulation board]**.
- E. Wood Nailer Strips: Comply with requirements in Section 061000 "Rough Carpentry."
- F. Tapered Edge Strips: **[ASTM C728, perlite insulation board][ASTM C208, Type II, Grade 1, cellulosic-fiber insulation board]**.
- G. Cellulosic-Fiber Insulation Cover Board: ASTM C208, Type II, Grade 2, high-density cellulosic-fiber insulation board, having a minimum compressive strength of **40 psi (276 kPa)**.
 1. Thickness: **[1/2 inch (13 mm)][1 inch (25 mm)]<Insert thickness>**.
 2. Surface Finish: **[Primed one side][Primed two sides with non-asphaltic primer][Integral coating, six sides][Unprimed]<Insert finish>**.
 3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- H. Oriented Strand Board: DOC PS 2, Exposure 1, **7/16 inch (11 mm)** thick.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content

not less than **<Insert value>** percent.

- I. Glass-Mat Gypsum Cover Board: ASTM C1177/C1177M, water-resistant gypsum board.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Georgia-Pacific Gypsum LLC]**
 - c. **[USG Corporation]**
 - d. **<Insert manufacturer's name>**
 - 3. Thickness: **[1/4 inch (6 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)]**.
 - 4. Surface Finish: **[Fiberglass facer][Factory primed][Unprimed]**.
 - 5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- J. Fiber-Reinforced Gypsum Roof Board: ASTM C1278/C1278M, cellulosic-fiber reinforced, water-resistant gypsum board.
 - 1. Thickness: **[1/4 inch (6 mm)][3/8 inch (10 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)]**.
 - 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- K. Fiber-Reinforced Cementitious Cover Board: ASTM C1325.
 - 1. Thickness: **[7/16 inch (11 mm)][1/2 inch (13 mm)][5/8 inch (16 mm)]**.
 - 2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.
- L. Fiber-Reinforced Recycled Plastic Cover Board: Cellulose fiber blended with recycled plastic board.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Continuous Materials, LLC]**
 - b. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Continuous Materials, LLC]**

b. <Insert manufacturer's name>

3. Thickness: [1/4 inch (6 mm)][1/2 inch (13 mm)].
4. Surface finish: [Fiberglass facer][Paper facer].
5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.

M. Polyisocyanurate Insulation Cover Board: ASTM C1289 Type II, Class 4, Grade 1, 1/2 inch (13 mm) thick, having a minimum compressive strength of 80 psi (551 kPa).

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.

N. Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass fiber.

2.11 ELECTRONIC LEAK DETECTION (ELD) MATERIALS

A. Conductive Medium: Materials providing less than 104 ohms per square as determined in accordance with ASTM D4496 and approved by roof membrane manufacturer.

1. Electrically Conductive Primer: Water-based, non-flammable, nonmetallic low-VOC primer[, **UL listed and FM Global approved**].

a. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- 1) [Detec Systems]
- 2) <Insert manufacturer's name>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- 1) [Detec Systems]
- 2) <Insert manufacturer's name>

2. Grounding Screen: [Welded, stainless steel mesh][Aluminum screen], for use with vector mapping system[, **FM Global approved**].

a. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- 1) [ILD International Leak Detection]
- 2) <Insert manufacturer's name>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- 1) [ILD International Leak Detection]
 - 2) <Insert manufacturer's name>
 3. Electrically Conductive Fabric: Non-abrasive felt.
 - a. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - 1) [ILD International Leak Detection]
 - 2) <Insert manufacturer's name>
 - b. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - 1) [ILD International Leak Detection]
 - 2) <Insert manufacturer's name>
 - B. Leak Detection and Moisture-Monitoring System: Permanent, embedded leak detection and moisture-monitoring system.
 1. Sensors measuring moisture content[, temperature, and vapor drive], placed [below roof insulation][over vapor barrier] and connected to a monitoring program, with a notification indicating location of breach.
 2. Sensors measuring moisture content[, temperature, and vapor drive], in a conductive fabric placed below roof membrane and connected to a monitoring program, with a notification indicating location of breach.
 3. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Detec Systems]
 - b. [ILD International Leak Detection]
 - c. <Insert manufacturer's name>
 4. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Detec Systems]
 - b. [ILD International Leak Detection]
 - c. <Insert manufacturer's name>
- 2.12 COATING MATERIALS
- A. Roof Coating:
 1. ASTM D2824/D2824M, [Type I, nonfibered][Type III, fibered, asbestos-free] aluminum-pigmented asphaltic coating.
 2. ASTM D6083, acrylic elastomer emulsion coating, formulated for use on bituminous roof surfaces.

- a. Color: **[White][Gray][Tan]<Insert color>**.

2.13 WALKWAYS

- A. Walkway Pads: **[Mineral-granule-surfaced, reinforced asphaltic composition][Polymer-modified, reconstituted solid-rubber, surface-textured]**, slip-resisting pads, manufactured as a traffic pad for foot traffic and acceptable to built-up roofing manufacturer, **[3/8 inch (10 mm)][1/2 inch (13 mm)][3/4 inch (19 mm)]** thick, minimum.
1. Pad Size: Approximately **[36 by 60 inches (914 mm by 1524 mm)]<Insert size>**.
 2. Color: Contrasting with cap sheet.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:
1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of **1/16 inch (1.6 mm)** out of plane relative to adjoining deck.
 5. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 6. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than **[75]<Insert number>** percent, or as recommended by roofing system manufacturer, when tested in accordance with ASTM F2170.
 - a. Test Frequency: One test probe per each **[1000 sq. ft. (93 sq. m)]<Insert area>**, or portion thereof, of roof deck, with not less than three test probes.
 - b. Submit test reports within 24 hours of performing tests.
 7. Verify that concrete-curing compounds that impair adhesion of roofing components to roof deck have been removed.
 8. Verify that joints in precast concrete roof decks have been grouted flush with top of concrete.
 9. Verify that minimum curing period recommended by roofing system manufacturer for lightweight insulating concrete roof decks has passed.
 10. Verify that any damaged sections of cementitious wood-fiber decks have been repaired or replaced.
 11. Verify that adjacent cementitious wood-fiber panels are vertically aligned to within **1/8 inch (3 mm)** at top surface.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation in accordance with roofing manufacturer's written instructions.
 - 1. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.
 - 1. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Prime surface of concrete deck with **[asphalt][coal tar]** primer at a rate of **3/4 gal./100 sq. ft. (0.3 L/sq. m)**, and allow primer to dry.
- D. Perform fastener-pullout tests in accordance with roof system manufacturer's written instructions.
 - 1. Submit test result within 24 hours of performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- E. Install sound-absorbing insulation strips in ribs of acoustical roof decks in accordance with acoustical roof deck manufacturer's written instructions.

3.3 INSTALLATION OF ROOFING, GENERAL

- A. Install roofing system in accordance with roofing manufacturer's written instructions, **[FM Approvals' RoofNav][SPRI's Directory of Roof Assemblies]** assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast.
 - 1. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roof membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition **[and to not void warranty for existing roofing system]**.
- D. Coordinate installation and transition of roofing system component serving as an air barrier with air barrier specified under **[Section 072713 "Modified Bituminous Sheet Air Barriers."][Section 072715 "Nonbituminous Self-Adhering Sheet Air Barriers."][Section 072726 "Fluid-Applied Membrane Air Barriers."]**
- E. Bitumen Heating:
 - 1. Heat bitumen to its equiviscous temperature, measured at the mop cart or mechanical spreader immediately before application.
 - 2. Circulate bitumen during heating.
 - 3. Do not raise bitumen temperature above equiviscous temperature range more than one hour before time of application.
 - 4. Do not exceed bitumen manufacturer's recommended temperature limits during bitumen heating.
 - 5. Do not heat bitumen within **25 deg F (14 deg C)** of flash point.
 - 6. Discard bitumen maintained for more than four hours at a temperature exceeding **325 deg F (163**

deg C) for coal tar pitch[**or finished blowing temperature for roofing asphalt**].

7. Apply hot roofing asphalt within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.

- F. SEBS-Modified Asphalt Heating: Heat and apply roofing asphalt in accordance with roofing manufacturer's written instructions.
- G. Substrate-Joint Penetrations: Prevent coal tar pitch, roofing asphalt, and adhesives from penetrating substrate joints, entering building, or damaging roofing components or adjacent building construction.

3.4 INSTALLATION OF SUBSTRATE BOARD

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than **24 inches (600 mm)** in adjacent rows.
 1. At steel roof decks, install substrate board at right angle to flutes of deck.
 - a. Locate end joints over crests of steel roof deck.
 2. Tightly butt substrate boards together.
 3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 4. Fasten substrate board to top flanges of steel deck in accordance with recommendations in [**FM Approvals' "RoofNav" listed roof assembly requirements for specified Windstorm Resistance Classification**][**SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity**] and FM Global Property Loss Prevention Data Sheet 1-29.
 5. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof in accordance with roofing system manufacturer's written instructions.
 6. Loosely lay substrate board over roof deck.

3.5 INSTALLATION OF VAPOR RETARDER

- A. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum **2 and 6 inches (51 and 150 mm)**, respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 2. Continuously seal side and end laps with [**tape**][**adhesive**].
- B. Laminate Sheet: Loosely lay laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of **2 and 6 inches (51 and 150 mm)**, respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 2. Continuously seal side and end laps with tape.
- C. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of **3-1/2 and 6 inches (90 and 150 mm)**, respectively.

1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 2. Seal laps by rolling.
- D. Built-Up Vapor Retarder: Install two glass-fiber felt plies lapping each felt **19 inches (483 mm)** over preceding felt.
1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
 2. Embed each felt in a solid mopping of hot roofing asphalt.
 3. Glaze coat completed surface with hot roofing asphalt.
- E. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.6 INSTALLATION OF INSULATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Install one lapped base sheet course and mechanically fasten to substrate in accordance with roofing membrane manufacturer's written instructions.
- D. Nailer Strips: Mechanically fasten **4-inch nominal- (89-mm actual-)** width, wood nailer strips of same thickness as insulation perpendicular to sloped roof deck, spaced **[16 feet (4.88 m)]<Insert dimensions>** apart for roof slopes greater than **[1/4 inch per 12 inches (1:48)][1/2 inch per 12 inches (1:24)]**.
- E. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing membrane with vertical surfaces or angle changes greater than 45 degrees.
- F. Installation Over Metal Decking:
1. Install base layer of insulation with **[joints staggered not less than 24 inches (600 mm) in adjacent rows][end joints staggered not less than 12 inches (300 mm) in adjacent rows][and with long joints continuous at right angle to flutes of decking]**.
 - a. Retain first subparagraph below when insulation is installed directly over metal decking.
 - b. Locate end joints over crests of decking.
 - c. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - d. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - e. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - f. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - g. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - h. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.

- i. Mechanically attach base layer of insulation[**and substrate board**] using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation in accordance with requirements in **[FM Approvals' RoofNav for specified Windstorm Resistance Classification][SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity]**.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install upper layers of insulation[**and tapered insulation**], with joints of each layer offset not less than **12 inches (305 mm)** from previous layer of insulation.
 - a. Staggered end joints within each layer not less than **24 inches (600 mm)** in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than **12 inches (300 mm)** in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - f. Trim insulation so that water flow of water is unrestricted.
 - g. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - h. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - i. Adhere each layer of insulation to substrate using adhesive in accordance with FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

G. Installation Over Wood and Wood Panel Decking:

1. Mechanically fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to [**wood**][**wood panel**] decks.
 - a. Lap edges a minimum of **2 inches (50 mm)**, or as recommended by roof membrane manufacturer
 - b. Lap ends a minimum of **6 inches (150 mm)**, or as recommended by roof membrane manufacturer.
 - c. Fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] in accordance with requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - d. Fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install base layer of insulation with [**joints staggered not less than 24 inches (600 mm) in adjacent rows**][**end joints staggered not less than 12 inches (300 mm) in adjacent rows**].

- a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - d. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - e. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - f. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - g. Mechanically attach base layer of insulation[**and substrate board**] using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to **[wood][wood panel]** decks.
 - 1) Fasten insulation in accordance with requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
 - h. Adhere base layer of insulation to substrate using adhesive as follows:
 - 1) Set base layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set base layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set base layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation[**and tapered insulation**], with joints of each layer offset not less than **12 inches (305 mm)** from previous layer of insulation.
- a. Staggered end joints within each layer not less than **24 inches (600 mm)** in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than **12 inches (300 mm)** in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - f. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - g. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - h. Adhere each layer of insulation to substrate using adhesive in accordance with SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive,

firmly pressing and maintaining insulation in place.

H. Installation Over Concrete Decks:

1. Install base layer of insulation with **[joints staggered not less than 24 inches (600 mm) in adjacent rows][end joints staggered not less than 12 inches (300 mm) in adjacent rows]**.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - b. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - c. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - d. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - e. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - f. Adhere base layer of insulation to **[concrete roof deck][vapor retarder]** in accordance with **[FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification][SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Prime surface of concrete deck with asphalt primer at rate of **3/4 gal./100 sq. ft. (0.3 L/sq. m)**, and allow primer to dry.
 - 2) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 3) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
2. Install upper layers of insulation **[and tapered insulation]**, with joints of each layer offset not less than **12 inches (300 mm)** from previous layer of insulation.
 - a. Staggered end joints within each layer not less than **24 inches (600 mm)** in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than **12 inches (300 mm)** in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - f. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - g. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - h. Adhere each layer of insulation to substrate using adhesive in accordance with **[FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification][SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29, as follows:

- 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
- 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
- 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

I. Installation Over Cementitious Wood-Fiber Decks:

1. Mechanically fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to cementitious wood fiber decks.
 - a. Fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] in accordance with requirements in SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity.
 - b. Fasten [**sheathing paper**][**APP-modified bitumen fiberglass-mat base sheet**][**asphalt-coated fiberglass-mat base sheet**] to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install base layer of insulation with [**joints staggered not less than 24 inches (600 mm) in adjacent rows**][**end joints staggered not less than 12 inches (300 mm) in adjacent rows**].
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - d. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - e. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - f. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - g. Adhere base layer of insulation to slip sheet in accordance with SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation[**and tapered insulation**], with joints of each layer offset not less than **12 inches (300 mm)** from previous layer of insulation.
 - a. Staggered end joints within each layer not less than **24 inches (600 mm)** in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than **12 inches (300 mm)** in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.

- e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
- f. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
- g. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
- h. Adhere each layer of insulation to substrate using adhesive in accordance with SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

J. Installation Over Lightweight Insulating Concrete Decks:

- 1. Mechanically fasten vented base sheet to lightweight insulating concrete roof deck, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight insulating concrete decks.
 - a. Fasten vented base sheet in accordance with requirements in **[FM Approvals' RoofNav for specified Windstorm Resistance Classification][SPRI's Directory of Roof Assemblies for specified Wind Uplift Load Capacity]**.
 - b. Fasten vented base sheet to resist uplift pressure at corners, perimeter, and field of roof.
- 2. Install base layer of insulation with **[joints staggered not less than 24 inches (600 mm) in adjacent rows][end joints staggered not less than 12 inches (300 mm) in adjacent rows]**.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - d. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - e. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - f. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - g. Adhere base layer of insulation to vented base sheet in accordance with **[FM Approvals' RoofNav listed roof assembly requirements][SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly

pressing and maintaining insulation in place.

3. Install upper layers of insulation[**and tapered insulation**], with joints of each layer offset not less than **12 inches (300 mm)** from previous layer of insulation.
 - a. Staggered end joints within each layer not less than **24 inches (600 mm)** in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than **12 inches (300 mm)** in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than **1/4 inch (6 mm)** in width.
 - e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus **24 inches (600 mm)**.
 - 1) Trim insulation so that the flow of water is not restricted.
 - f. Fill gaps exceeding **1/4 inch (6 mm)** with insulation.
 - g. Cut and fit insulation within **1/4 inch (6 mm)** of nailers, projections, and penetrations.
 - h. Adhere each layer of insulation to substrate using adhesive in accordance with **[FM Approvals' RoofNav listed roof assembly requirements][SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]**and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.7 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines, with end joints staggered between rows. Offset joints of insulation below a minimum of **6 inches (150 mm)** in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that the flow of water is not restricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Adhere cover board to substrate using adhesive in accordance with **[FM Approvals' RoofNav listed roof assembly requirements or specified Windstorm Resistance Classification][SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity]** and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
 - a. Set cover board in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F (14 deg C)** of equiviscous temperature.
 - b. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - c. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

- B. Install sheathing paper over cover board and immediately beneath roof membrane.

3.8 INSTALLATION OF ELD COMPONENTS

- A. Install conductive medium over **[cover board][insulation][and on vertical locations to receive roof membrane]** in accordance with manufacturer's written instructions.
- B. Install sensors, **[wire loop][conductive fabric]**, connections, and accessory items required for complete system in accordance with manufacturer's written instructions.

3.9 INSTALLATION OF BUILT-UP ROOFING

- A. Install built-up roofing in accordance with roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing" and as follows:
 - 1. Base Sheet: **[One][One, installed over sheathing paper]**.
 - 2. Number of Organic Felt Ply Sheets: **[Two][Three][Four]<Insert number>**.
 - 3. Number of Glass-Fiber Ply Sheets: **[One, top ply][Two][Three][Four]<Insert number>**.
 - 4. Surfacing: Aggregate.
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel **[and Owner's testing and inspection agency]**.
- C. Where roof slope exceeds **[1/4 inch per 12 inches (1:48)][1/2 inch per 12 inches (1:24)]<Insert slope>**, install roofing ply sheets parallel with slope.
 - 1. Backnail roofing ply sheets to **[nailer strips][substrate]** in accordance with roofing system manufacturer's written instructions.
- D. Coordinate installation of roofing, so insulation and other components of roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
 - 1. Provide tie-offs at end of each day's work to cover exposed roofing membrane sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
 - 2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
 - 3. Remove and discard temporary seals before beginning work on adjoining roofing.
- E. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of **2 inches (51 mm)** and **6 inches (150 mm)**, respectively.
- F. Install lapped base sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
 - 1. Mechanically fasten to substrate.
 - 2. Spot or strip mop to substrate with hot roofing asphalt.
 - 3. Adhere to substrate **[in a solid mopping of hot roofing asphalt][using cold-applied asphalt adhesive][using cold-applied polymer-modified asphalt adhesive]**.

- G. Monolithic Membrane: Install **[two][three][four]** ply sheets, starting at low point of roof.
1. Align ply sheets without stretching.
 2. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane.
 - a. Shingle in direction to shed water.
 3. Extend ply sheets over and terminate beyond cants.
 4. Embed each ply sheet in a solid mopping of hot coal tar pitch to form a uniform membrane without ply sheets touching.
 - a. Mopping Weights: For interply and other moppings, unless otherwise indicated, apply solid moppings of hot coal tar pitch between ply sheets at a minimum rate of **20 lb/100 sq. ft. (1 kg/sq. m)**.
- H. Composite Membrane: Install **[two][three][four]** organic-felt ply sheets, starting at low point of roof.
1. Align organic-felt ply sheets without stretching.
 2. Shingle side laps of organic-felt ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane.
 - a. Shingle in direction to shed water.
 3. Install finish layer of one lapped coal tar, glass-fiber ply sheet course over shingled organic-felt ply sheets, starting at low point of built-up roofing.
 - a. Offset laps from laps of preceding ply sheets and align coal tar, glass-fiber ply sheet without stretching.
 - b. Lap in direction to shed water.
 4. Extend ply sheets over and terminate beyond cants.
 5. Embed each ply sheet in a solid mopping of hot coal tar pitch applied at rate required by roofing system manufacturer, to form a uniform membrane without ply sheets touching.
 - a. Mopping Weights: For interply and other moppings, unless otherwise indicated, apply solid moppings of hot coal tar pitch between ply sheets at a minimum rate of **20 lb/100 sq. ft. (1 kg/sq. m)**.
- I. Glaze coat roofing membrane surface with hot coal tar pitch applied at a rate of **10 to 15 lb/100 sq. ft. (0.5 to 0.75 kg/sq. m)**, if aggregate surfacing is not applied immediately.
- J. Aggregate Surfacing: After installing and testing roofing membrane, base flashing, and stripping, promptly apply flood coat to roof surface with **70 lb/100 sq. ft. (3.5 kg/sq. m)** of hot coal tar pitch. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
1. Aggregate Weight: **[400 lb/100 sq. ft. (20 kg/sq. m)][300 lb/100 sq. ft. (15 kg/sq. m)]**.

3.10 INSTALLATION OF FLASHING AND STRIPPING

- A. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof; secure to substrates in accordance with roofing system manufacturer's written instructions and as follows:

1. Prime substrates with asphalt primer if required by roofing system manufacturer.
 2. Install single backer sheet and adhere to substrate in [a solid mopping of hot roofing asphalt][asphalt roofing cement][SBS-modified asphalt roofing cement][cold-applied adhesive][cold-applied polymer-modified asphalt adhesive].
 3. Install [two][three] backer sheets and adhere to substrate in [a solid mopping of hot roofing asphalt][asphalt roofing cement].
 4. Flashing Sheet Application, Hot: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than **425 deg F (218 deg C)**. Apply hot roofing asphalt to back of flashing sheet if recommended by roofing manufacturer.
 5. Flashing Sheet Application, Cold: Adhere flashing sheet to substrate in [SBS-modified asphalt roofing cement][asphalt roofing cement].
- B. Extend base flashing up walls or parapets a minimum of **8 inches (200 mm)** above built-up roofing and **4 inches (100 mm)** onto field of built-up roofing.
- C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
1. Securely fasten top termination of base flashing with continuous metal termination bar anchored into substrate.
 2. Seal top termination of base flashing[**with a strip of glass-fiber fabric set in asphalt roofing cement**].
- D. Install liquid flashing system in accordance with manufacturer's recommendations.
1. Extend liquid flashing not less than **3 inches (76 mm)** in all directions from edges of item being flashed.
 2. Embed granules, matching color of roof membrane, into wet compound.
- E. Apply roof coatings to smooth base flashings in accordance with manufacturer's written instructions, by spray, roller, or other suitable application method.
- F. Install stripping in accordance with roofing system manufacturer's written instructions, where metal flanges and edgings are set on roofing membrane.
1. Install flashing sheet stripping in a cold-applied adhesive or in a solid mopping of hot coal tar pitch, and extend onto roofing membrane.
 2. Install stripping of no fewer than two roofing ply sheets, setting each ply in a continuous coal tar roofing cement or in a solid mopping of hot coal tar pitch, and extend onto roofing membrane **4 inches (100 mm)** and **6 inches (150 mm)**, respectively.
- G. Roof Drains: Set [**30-by-30-inch (760-by-760-mm)**]**<Insert dimensions>** **4-pound (1.8-kg)** lead flashing in bed of asphalt roofing cement on completed built-up roofing.
1. Cover metal flashing with built-up roofing cap sheet stripping, and extend a minimum of [**4 inches (100 mm)**][**6 inches (150 mm)**] beyond edge of metal flashing onto field of built-up roofing.
 2. Clamp built-up roofing, metal flashing, and stripping into roof-drain clamping ring.
 3. Install stripping in accordance with roofing manufacturer's written instructions.

3.11 INSTALLATION OF WALKWAYS

- A. Walkway Pads: Install walkway pads, using units of size indicated or, if not indicated, of manufacturer's standard size, in accordance with walkway pad manufacturer's written instructions.
1. Sweep away loose aggregate surfacing, and set walkway pads in additional flood coat of hot coal

- tar pitch.
2. Install walkways at following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
 3. Provide **3-inch (76-mm)** clearance between adjoining pads.

3.12 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.
- B. Perform the following tests:
 1. Flood Testing: Flood test each roofing area for leaks, in accordance with recommendations in ASTM D5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of **[2-1/2 inches (65 mm)]<Insert depth>** with a minimum depth of **[1 inch (25 mm)]<Insert depth>** and not exceeding a depth of **[4 inches (100 mm)]<Insert depth>**. Maintain **2 inches (51 mm)** of clearance from top of base flashing.
 - c. Flood each area for **[24][48][72]** hours.
 - d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is the responsibility of the Contractor.
 - e. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.
 2. Infrared Thermography: Testing agency surveys entire roof area using infrared color thermography in accordance with ASTM C1153.
 - a. Perform tests before overlying construction is placed.
 - b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing or nuclear hydrogen detection testing.
 - c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - d. Testing agency to prepare survey report of initial scan indicating locations of entrapped moisture, if any.

3. Electrical Capacitance/Impedance Testing: Testing agency surveys entire roof area for entrapped water within roof assembly in accordance with ASTM D7954/D7954M.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of entrapped moisture, if any.
 4. Nuclear Hydrogen Detection Testing: Testing agency surveys entire roof area for entrapped water within roof assembly in accordance with ANSI/SPRI/RCI NT-1.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of entrapped moisture, if any.
 5. Low-Voltage ELD Testing: Testing agency surveys entire roof area and flashings to locate discontinuities in the roof membrane using low-voltage **[horizontal membrane scanning platform][membrane electric field vector mapping][or][vertical membrane scanning]** in accordance with ASTM D8231.
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 6. High-Voltage Membrane Testing: Testing agency surveys entire **[roof area,][flashings,][and][parapet walls]** to locate discontinuity in the roof membrane using an electrically charged metal "broom head."
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
- C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing system as follows:
1. Determine approximate quantities of components within built-up roofing in accordance with ASTM D3617/D3617M.
 2. Examine test specimens for interply voids in accordance with ASTM D3617/D3617M and to comply with criteria established in Appendix 3 in ARMA/NRCA's "Quality Control Guidelines for

- the Application of Built-up Roofing."
3. Repair areas where test cuts were made in accordance with built-up roofing manufacturer's written instructions.
 - D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
 1. Notify Architect and Owner 48 hours in advance of date and time of inspection.
 - E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
 - F. Roofing system will be considered defective if it does not pass tests and inspections.
 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.13 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period.
 1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing components that do not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.14 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
 1. Owner: **<Insert name of Owner>**.
 2. Owner Address: **<Insert address>**.
 3. Building Name/Type: **<Insert information>**.
 4. Building Address: **<Insert address>**.
 5. Area of Work: **<Insert information>**.
 6. Acceptance Date: _____.
 7. Warranty Period: **<Insert time>**.
 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and

defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/s)>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 11 13 00 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold-applied, cut-back-asphalt dampproofing.
2. Cold-applied, emulsified-asphalt dampproofing.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for bituminous vapor retarders under slabs-on-grade.
2. **[Section 042000 "Unit Masonry"] [Section 042200 "Concrete Unit Masonry"]** for mortar parge coat on masonry surfaces.
3. **[Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"]** for waterproofing.

1.2 ACTION SUBMITTALS

- ##### A. Product Data:
- For each type of product.

1.3 FIELD CONDITIONS

- ##### A. Weather Limitations:
- Proceed with application only when existing and forecasted weather conditions permit dampproofing to be performed in accordance with to manufacturers' written instructions.
- ##### B. Ventilation:
- Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has cured.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- ##### A.
- Obtain primary dampproofing materials and primers from single source from single manufacturer. Provide **[protection course] [drainage panels] [and]** auxiliary materials recommended in writing by manufacturer of primary materials.

2.2 PERFORMANCE REQUIREMENTS

- ##### A. VOC Content:
- Products are to comply with VOC content limits of authorities having jurisdiction unless otherwise indicated.

07 - Thermal And Moisture Protection

2.3 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Trowel Coats: ASTM D4586/D4586M, Type I, Class 1, fibered.
- C. Brush and Spray Coats: ASTM D4479/D4479M, Type I, fibered[**or nonfibered**].

2.4 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Trowel Coats: ASTM D1227/D1227M, Type II, Class 1.
- C. Fibered Brush and Spray Coats: ASTM D1227/D1227M, Type II, Class 1.
- D. Brush and Spray Coats: ASTM D1227/D1227M, Type III, Class 1.

2.5 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with each other and with bituminous dampproofing.
- B. Cut-Back-Asphalt Primer: ASTM D41/D41M.
- C. Emulsified-Asphalt Primer: ASTM D1227/D1227M, Type III, Class 1, except diluted with water as recommended in writing by manufacturer.
- D. Asphalt-Coated Glass Fabric: ASTM D1668/D1668M, Type I.
- E. Patching Compound: [**Epoxy or latex-modified repair mortar**] [**Asbestos-free fibered mastic**] of type recommended in writing by dampproofing manufacturer.

2.6 PROTECTION COURSE

- A. Protection Course, Asphaltic: ASTM D6506/D6506M; semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners.
 - 1. Thickness: Nominal [**1/8 inch (3 mm)**] [**1/4 inch (6 mm)**] [**1/8 inch (3 mm) for vertical applications; 1/4 inch (6 mm) elsewhere**].
 - 2. Adhesive: Rubber-based solvent type recommended in writing by dampproofing manufacturer for protection course type.
- B. Protection Course, Extruded-Polystyrene Board Insulation, Faced: Fan folded, faced on [**one side**] [**or both sides**] with plastic film, nominal thickness 1/4 inch (6 mm), with a compressive strength of not less than 8 psi (55 kPa) when tested in accordance with ASTM D1621, and maximum water absorption by volume of 0.6 percent when tested in accordance with ASTM C272/C272M.
- C. Protection Course, Extruded-Polystyrene Board Insulation, Unfaced: ASTM C578, Type X, 1/2 inch (13 mm) thick.

- D. Protection Course, Molded-Polystyrene Board Insulation: ASTM C578, Type I, 0.90 lb/cu. ft. (15 kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.
- E. Smooth-surfaced roll roofing complying with ASTM D6380/D6380M, Class S, Type III.

2.7 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel acceptable to dampproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side of the core, with or without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert value>**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2.8 INSULATION DRAINAGE PANELS

- A. Insulation Drainage Panels:
 - 1. Comply with Section 072100 "Thermal Insulation" for insulation drainage panels.
 - 2. Unfaced or geotextile-faced, extruded-polystyrene board insulation in accordance with ASTM C578, Type IV, 25-psi (173-kPa), or Type VI, 40-psi (276-kPa), minimum compressive strength; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
 - 3. <Double click here to find, evaluate, and insert list of manufacturers and products.>

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for surface smoothness, maximum surface moisture content, and other conditions affecting performance of the Work.
- B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with dampproofing manufacturer's written application instructions. Provide clean, dust-free, and dry substrates for dampproofing.
- B. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.
- C. Clean substrates of projections and substances detrimental to dampproofing work; fill voids, seal joints, and remove bond breakers if any.

- D. Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections[; **cover with asphalt-coated glass fabric**].

3.3 INSTALLATION OF BITUMINOUS DAMPPROOFING, GENERAL

- A. Comply with dampproofing manufacturer's written application instructions for cure time between coats and drying time before backfilling unless otherwise indicated.
 - 1. Apply dampproofing to provide continuous plane of protection.
 - 2. Apply additional coats if recommended in writing by manufacturer or to achieve a smooth surface and uninterrupted coverage.
- B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of 6 inches (150 mm) over outside face of footing.
 - 1. Extend dampproofing 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
 - 2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where indicated as "reinforced," by embedding an 8-inch- (200-mm-) wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.
- C. Where dampproofing exterior face of inner wythe of exterior masonry cavity walls, lap dampproofing at least 1/4 inch (6 mm) onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.
 - 1. Extend dampproofing over outer face of structural members and concrete slabs that interrupt inner wythe.
 - 2. Lap dampproofing at least 1/4 inch (6 mm) onto shelf angles supporting veneer.
- D. Where dampproofing interior face of above-grade, exterior [**concrete**] [**and**] [**masonry**] [**single-wythe masonry**] walls, continue dampproofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by dampproofing wall before constructing intersecting walls.

3.4 INSTALLATION OF COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. Concrete Foundations and Parged Masonry Foundation Walls: Apply [**two brush or spray coats at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat**] [**or**] [**one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m)**].
- B. Unparged Masonry Foundation Walls: Apply [**primer and two brush or spray coats at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat**] [**or**] [**primer and one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m)**].
- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- E. Concrete Backup for Masonry Veneer Assemblies: Apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

- F. Masonry Backup for Masonry Veneer Assemblies: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.5 INSTALLATION OF COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Concrete Foundations and Parged Masonry Foundation Walls: Apply **[two brush or spray coats at not less than 1.5 gal./100 sq. ft. (0.6 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat]** **[one fibered brush or spray coat at not less than 3 gal./100 sq. ft. (1.2 L/sq. m)]** **[or]** **[one trowel coat at not less than 4 gal./100 sq. ft. (1.6 L/sq. m)].**
- B. Unparged Masonry Foundation Walls: Apply **[primer and two brush or spray coats at not less than 1.5 gal./100 sq. ft. (0.6 L/sq. m) for first coat and 1 gal./100 sq. ft. (0.4 L/sq. m) for second coat]** **[primer and one fibered brush or spray coat at not less than 3 gal./100 sq. ft. (1.2 L/sq. m)]** **[or]** **[primer and one trowel coat at not less than 5 gal./100 sq. ft. (2 L/sq. m)].**
- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than 1.25 gal./100 sq. ft. (0.5 L/sq. m).
- E. Concrete Backup for Masonry Veneer Assemblies: Apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- F. Masonry Backup for Masonry Veneer Assemblies: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- H. Interior Face of Exterior Concrete Walls: Where above grade and indicated to be furred and finished, apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- I. Interior Face of Exterior Masonry Walls: Where above grade and indicated to be furred and finished, apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.6 INSTALLATION OF PROTECTION COURSE

- A. Install protection course over completed-and-cured dampproofing. Comply with dampproofing-material and protection-course manufacturers' written instructions for attaching protection course.
 - 1. Support protection course over cured coating with spot application of adhesive type recommended in writing by protection-board manufacturer.
 - 2. Install protection course **[on same day]** **[within 24 hours]** of dampproofing installation (while coating is tacky) to ensure adhesion.

3.7 INSTALLATION OF DRAINAGE PANELS

- A. Molded-Sheet Drainage Panels: Install panels over completed-and-cured dampproofing, with geotextile facing away from wall substrate, in accordance with manufacturer's written instructions. Use adhesive or another method that does not penetrate dampproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. Install [thermal insulation specified in Section 072100 "Thermal Insulation,"] [protection course] before installing drainage panels.
- B. Insulation Drainage Panels: Install panels over completed-and-cured dampproofing. Use adhesive or another method that does not penetrate dampproofing. Cut and fit panels to within 3/4 inch (19 mm) of projections and penetrations.
 - 1. Ensure that drainage channels are aligned and free of obstructions.

3.8 PROTECTION

- A. Protect installed drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where panels are subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- B. Correct dampproofing that does not comply with requirements; repair substrates and reapply dampproofing.

END OF SECTION 07 11 13 00

07 - Thermal And Moisture Protection

Task	Specification	Specification Description
07 11 13 00	07 14 16 00	Cold Fluid-Applied Waterproofing
07 11 19 00	07 53 23 00	Ethylene-Propylene-Diene-Monomer (EPDM) Roofing
07 13 00 00	03 01 30 71	Self-Adhering Sheet Waterproofing
07 13 13 00	07 11 13 00	Bituminous Dampproofing
07 13 13 00	03 01 30 71	Self-Adhering Sheet Waterproofing

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 13 53 00 - ELASTOMERIC SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Elastomeric sheet waterproofing.
2. Accessory waterproofing system materials.
3. Protection course.
4. Molded-sheet drainage panels.
5. Electronic leak-detection (ELD) materials.
6. Plaza-deck pavers.

B. Related Requirements:

1. Section 031000 "Concrete Forming and Accessories" for forms and waterstops.
2. Section 072100 "Thermal Insulation" for below-grade foundation insulation.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
4. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.
5. Section 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for deck expansion-joint assemblies that interface with waterproofing.

1.2 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation work, including fill[, **other waterproofing systems**][, **under-slab vapor retarders**][, **under-slab insulation**][and][, **subdrainage systems**].
- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations through waterproofing.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference [at **Project site**][by **web conference**]<Insert **location**>.
 1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
 2. Review transitions within waterproofing system and between waterproofing and adjacent air barrier.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- C. Samples: For the following products:
1. **8-by-8-inch (200-by-200-mm)** square of waterproofing and flashing sheet.
 2. **4-by-4-inch (100-by-100-mm)** square of drainage panel.
 3. Plaza-deck paver, **[4-by-4-inch (100-by-100-mm) square][full sized]**, in each color and texture required.
 4. Paver pedestal assembly.
- D. Sustainable Design Submittals:
1. Product Data: For waterproofing, providing information for testing in compliance with ASHRAE 160-2016.2009.
 2. Product Data: For waterproofing, providing information for testing in compliance with CCR, Title 24, Part 2, Section 1202 and Ch. 14.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Statements: For Installer.
- B. Field quality control reports.
- C. Sample warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Entity that employs installers and supervisors who are trained and **[certified][approved]** by waterproofing manufacturer.

1.7 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 1. Build for each typical waterproofing installation including **pavers and** accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. (9.3 sq. m) in area][As indicated on Drawings]**.
 - b. Description: Each type of **[wall][deck][and][plaza]<Insert description>** installation.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 1. Warranty Period: [10][20]<Insert number> years from date of Substantial Completion.
- B. Installer's Special Warranty: Specified form, [**on warranty form at end of this Section,**] signed by Installer, covering Work of this Section, for warranty period of [two]<Insert number> years.
 1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, [and][plaza-deck pavers][, including paver pedestal assembly].

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Waterproofing System: Obtain waterproofing materials [and][**protection course**][**drainage panels**] from [**same manufacturer as waterproofing membrane**][or][**manufacturer approved by waterproofing membrane manufacturer**].
- B. Plaza-Deck Paving: Obtain plaza-deck pavers[**and paver pedestals**] from single source from single manufacturer.

2.2 ELASTOMERIC SHEET WATERPROOFING

- A. EPDM Rubber Sheet: ASTM D6134/D6134M, Type I, **60-mil- (1.5-mm-)** thick flexible sheet, unreinforced, formed from EPDM.
 1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

- a. [Carlisle Coatings & Waterproofing Inc]
- b. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Carlisle Coatings & Waterproofing Inc]
- b. <Insert manufacturer's name>

2.3 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by waterproofing manufacturer for intended use and compatibility with one another and with sheet waterproofing.
 - 1. Furnish liquid-type accessory materials that comply with VOC limits of authorities having jurisdiction.
- B. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing or **60-mil- (1.5-mm-)** thick, uncured EPDM, as required by manufacturer.
- C. Exposed Sheet Flashing: **60-mil- (1.5-mm-)** thick EPDM, cured or uncured, as required by manufacturer.
- D. Bonding Adhesives: For bonding waterproofing sheets and sheet flashings to substrates and projections.
- E. Splicing Cement and Cleaner: Single-component butyl splicing cement and solvent-based splice cleaner.
 - 1. Butyl Gum Tape: **30-mil- (0.76-mm-)** thick by **6-1/4-inch- (160-mm-)** wide, uncured butyl with polyethylene release film.
- F. Lap Sealant: Single-component sealant.
- G. In-Seam Sealant: Single-component sealant.
- H. Water-Cutoff Mastic: Butyl mastic sealant.
- I. Waterproofing and Sheet-Flashing Accessories: Sealants, pourable sealers, cone and vent flashings, inside and outside corner flashings, termination reglets, and other accessories recommended by waterproofing manufacturer for intended use.
- J. Metal Termination Bars: Manufacturer's standard aluminum bars, approximately **1 inch (25 mm)** wide, prepunched, with fasteners.

2.4 PROTECTION COURSE

- A. Protection course material of type and thickness as recommended in writing by waterproofing manufacturer for each Project condition.

2.5 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70 (0.21-mm)** sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)]<Insert values>**.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Hydrotech, Inc.]**
 - b. **[Carlisle Coatings & Waterproofing Inc]**
 - c. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - d. **[GCP Applied Technologies Inc.]**
 - e. **[ISI Building Products]**
 - f. **[Polyguard Products, Inc.]**
 - g. **[Urethane Polymers International, Inc. (UPI)]**
 - h. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[American Hydrotech, Inc.]**
 - b. **[Carlisle Coatings & Waterproofing Inc]**
 - c. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - d. **[GCP Applied Technologies Inc.]**
 - e. **[ISI Building Products]**
 - f. **[Polyguard Products, Inc.]**
 - g. **[Urethane Polymers International, Inc. (UPI)]**
 - h. **<Insert manufacturer's name>**
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel without Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70 (0.21-mm)** sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)]<Insert values>**.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Hydrotech, Inc.]**
 - b. **[Carlisle Coatings & Waterproofing Inc]**
 - c. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - d. **[GCP Applied Technologies Inc.]**
 - e. **[Hyload; IKO Industries, Inc.]**
 - f. **[ISI Building Products]**
 - g. **[Polyguard Products, Inc.]**
 - h. **[Soprema, Inc.]**

- i. **[Urethane Polymers International, Inc. (UPI)]**
 - j. **[W. R. Meadows, Inc]**
 - k. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[American Hydrotech, Inc.]**
 - b. **[Carlisle Coatings & Waterproofing Inc]**
 - c. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - d. **[GCP Applied Technologies Inc.]**
 - e. **[Hyload; IKO Industries, Inc.]**
 - f. **[ISI Building Products]**
 - g. **[Polyguard Products, Inc.]**
 - h. **[Soprema, Inc.]**
 - i. **[Urethane Polymers International, Inc. (UPI)]**
 - j. **[W. R. Meadows, Inc]**
 - k. **<Insert manufacturer's name>**
- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40 (0.43-mm)** sieve, laminated to one side of the core and a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)]<Insert value>**.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[GCP Applied Technologies Inc.]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[GCP Applied Technologies Inc.]**
 - b. **<Insert manufacturer's name>**
- D. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel without Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40 (0.425-mm)** sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)]<Insert value>**.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[American Hydrotech, Inc.]**

- b. [Carlisle Coatings & Waterproofing Inc]
 - c. [CETCO is a subsidiary of Minerals Technologies Inc.]
 - d. [Hyload; IKO Industries, Inc.]
 - e. [Polyguard Products, Inc.]
 - f. [Soprema, Inc.]
 - g. [Urethane Polymers International, Inc. (UPI)]
 - h. [W. R. Meadows, Inc]
 - i. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [American Hydrotech, Inc.]
 - b. [Carlisle Coatings & Waterproofing Inc]
 - c. [CETCO is a subsidiary of Minerals Technologies Inc.]
 - d. [Hyload; IKO Industries, Inc.]
 - e. [Polyguard Products, Inc.]
 - f. [Soprema, Inc.]
 - g. [Urethane Polymers International, Inc. (UPI)]
 - h. [W. R. Meadows, Inc]
 - i. <Insert manufacturer's name>
- E. Molded-Sheet Collector-Panel System with Polymeric Film: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven-geotextile facing with an apparent opening size not exceeding **No. 40 (0.425-mm)** sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 17 gpm per ft. (112 to 211 L/min. per m)]<Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings]<Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
- a. [GCP Applied Technologies Inc.]
 - b. [ISI Building Products]
 - c. [Polyguard Products, Inc.]
 - d. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [GCP Applied Technologies Inc.]
 - b. [ISI Building Products]
 - c. [Polyguard Products, Inc.]
 - d. <Insert manufacturer's name>
- F. Molded-Sheet Collector-Panel System Wrapped with Geotextile: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; wrapped with a nonwoven-geotextile facing with an apparent opening size not exceeding **No. 40 (0.425-mm)** sieve; and with a vertical flow

rate through the core of [21 to 82 gpm per ft. (261 to 1018 L/min. per m)]<Insert values> and a minimum horizontal, in-plane flow rate [as indicated on Drawings][of 21 gpm per ft. (261 L/min. per m)]<Insert value>. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Carlisle Coatings & Waterproofing Inc]
 - b. [CETCO is a subsidiary of Minerals Technologies Inc.]
 - c. [W. R. Meadows, Inc]
 - d. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Carlisle Coatings & Waterproofing Inc]
 - b. [CETCO is a subsidiary of Minerals Technologies Inc.]
 - c. [W. R. Meadows, Inc]
 - d. <Insert manufacturer's name>

2.6 ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Conductive Medium: Electrically conductive material specifically designed to enable ELD testing procedures as approved in writing by waterproofing membrane manufacturer.
 1. Conductive medium to be located directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Moisture-Monitoring System: Permanently embedded, continuously monitored moisture-detection system.
 1. Sensors measuring moisture content to be placed within waterproofing system and connected to a monitoring program, with a notification indicating location of breach.

2.7 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: [Brick][Concrete][Asphalt-block] pavers specified in Section 321400 "Unit Paving."
- B. Stone Plaza-Deck Pavers: [Granite][Limestone][Marble][Quartz-based stone][Slate][Travertine]<Insert type> pavers specified in Section 321400 "Unit Paving."
- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, [square edged][with top edges beveled 3/16 inch (5 mm)], manufactured for use as plaza-deck pavers; [7500 psi (52 MPa)][6500 psi (45 MPa)]<Insert value> minimum compressive strength, ASTM C140/C140M; absorption not greater than 5 percent, ASTM C140/C140M; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance in accordance with ASTM C67/C67M.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Carlisle Coatings & Waterproofing Inc]
 - b. [Hanover Architectural Products]
 - c. [Hastings Pavement Company, LLC]
 - d. [Roofblok Limited]
 - e. [Sunny Brook Pressed Concrete, Co.]
 - f. [Tile Tech Pavers]
 - g. [Wausau Tile, Inc.]
 - h. [Westile Roofing Products; an Oldcastle company]
 - i. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Carlisle Coatings & Waterproofing Inc]
 - b. [Hanover Architectural Products]
 - c. [Hastings Pavement Company, LLC]
 - d. [Roofblok Limited]
 - e. [Sunny Brook Pressed Concrete, Co.]
 - f. [Tile Tech Pavers]
 - g. [Wausau Tile, Inc.]
 - h. [Westile Roofing Products; an Oldcastle company]
 - i. <Insert manufacturer's name>
 3. Thickness: [2 inches (51 mm)][2-3/8 inches (60 mm)]<Insert dimension>.
 4. Face Size: [12 inches (305 mm) square][12 by 24 inches (305 by 610 mm)][18 inches (457 mm) square][24 inches (610 mm) square][As indicated]<Insert dimension(s) and shape>.
 5. Color and Texture: [As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert requirement>.
- D. Plaza-Deck Paver Metal Straps: Securement strapping fabricated from stainless steel, a minimum of **3 inches (75 mm)** wide by **0.031 inch (0.8 mm)** thick with stainless steel anchors.
- E. Paver Pedestals: Paver-support assembly, [standard with paver manufacturer][or][as named below], including [fixed-height][adjustable or stackable] pedestals, shims, and spacer tabs for joint spacing of [1/8 inch (3 mm)][3/16 inch (5 mm)][1/8 to 3/16 inch (3 to 5 mm)].
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Envirospec, Inc.]
 - b. [Hanover Architectural Products]
 - c. [Roofblok Limited]
 - d. [Sunny Brook Pressed Concrete, Co.]
 - e. [Wausau Tile, Inc.]
 - f. [Westile Roofing Products; an Oldcastle company]
 - g. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Envirospec, Inc.]**
 - b. **[Hanover Architectural Products]**
 - c. **[Roofblok Limited]**
 - d. **[Sunny Brook Pressed Concrete, Co.]**
 - e. **[Wausau Tile, Inc.]**
 - f. **[Westile Roofing Products; an Oldcastle company]**
 - g. **<Insert manufacturer's name>**
3. Fill: As recommended in writing by pedestal manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate preparations and other conditions affecting performance of waterproofing.
 1. Verify that concrete substrate has cured and aged for minimum time recommended in writing by waterproofing manufacturer.
 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by waterproofing manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written installation instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D4258.
- F. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.3 INSTALLATION OF ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Install conductive medium directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Install sensors, connections, and accessory items required for complete continuously monitored moisture-detection system in accordance with waterproofing manufacturer's written installation instructions.

3.4 INSTALLATION OF ELASTOMERIC SHEET WATERPROOFING

A. Fully Adhered Elastomeric Sheet Waterproofing:

- 1. Install fully adhered sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions and in accordance with recommendations in ASTM D6134/D6134M.
- 2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- 3. Apply bonding adhesive to substrates at required rate and allow it to partially dry.
- 4. Apply bonding adhesive to sheets and firmly adhere sheets to substrates. Do not apply bonding adhesive to splice area of sheet.
- 5. Install fully adhered sheets and accessory materials to tie into existing waterproofing.
- 6. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.
- 7. Horizontal Application: Apply sheets with side laps shingled with slope of deck where possible.
 - a. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.

B. Partially Adhered Elastomeric Sheet Waterproofing:

- 1. Install partially adhered sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions.
- 2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- 3. Apply bonding adhesive to the following areas of substrates and to each sheet at required rate and allow it to partially dry:
 - a. Upper 25 percent of length of each sheet and **18 inches (457 mm)** around perimeter of each sheet.
- 4. Firmly adhere sheets to substrate. Do not apply bonding adhesive to splice area of sheet.
- 5. Install partially adhered sheets and accessory materials to tie into existing waterproofing.
- 6. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

C. Compartmented, Loosely Laid Elastomeric Sheet Waterproofing:

- 1. Install compartmented, loosely laid sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions.
- 2. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- 3. Apply continuous beads of water-cutoff mastic, of size recommended in writing by waterproofing

manufacturer, to substrates in a **60-by-60-inch (1500-by-1500-mm)** grid pattern before installing sheet.

4. Apply sheets with side laps shingled with slope of deck where possible.
5. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.
6. Install compartmented, loosely laid sheets and accessory materials to tie into existing waterproofing.
7. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

- D. Cement Splice: Clean splice areas, apply splicing cement and in-seam sealant, and firmly roll side and end laps of overlapping sheets in accordance with manufacturer's written instructions to produce a splice not less than **6 inches (150 mm)** wide and to ensure a watertight seam installation. Apply lap sealant and seal edges of sheet terminations.
- E. Cement and Tape Splice: Clean splice areas, apply splicing cement and butyl gum tape, and firmly roll side and end laps of overlapping sheets in accordance with manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal edges of sheet terminations.
- F. Install sheet flashings and preformed flashing accessories and adhere to substrates in accordance with waterproofing manufacturer's written installation instructions.
- G. Form wall flashings using exposed sheet flashing.
- H. Extend deck sheet waterproofing to form wall flashings.
1. Flash penetrations and field-formed inside and outside corners with uncured sheet flashing.
 2. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight installation. Apply lap sealant and seal edges of sheet-flashing terminations.
- I. Cover expansion joints and discontinuous deck-to-wall or deck-to-deck joints by extending deck sheet waterproofing over joints.
- J. Terminate and seal top of sheet flashings[**with mechanically anchored termination bars**].

3.5 INSTALLATION OF PROTECTION COURSE

- A. Install protection course over waterproofing membrane in accordance with manufacturer's written instructions and before beginning subsequent construction operations. Minimize exposure of membrane.
1. Molded-sheet drainage panels may be used in place of a separate protection course for vertical applications when approved by waterproofing manufacturer.

3.6 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, in accordance with manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

1. For vertical applications, install protection course before installing drainage panels.

3.7 INSTALLATION OF PLAZA-DECK PAVERS

- A. Install pavers in accordance with manufacturer's written instructions.
- B. Install paver pedestals and accessories to required elevations. Adjust for final level and slope of paved surfaces.
- C. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- D. Install pavers to vary no more than **1/16 inch (1.6 mm)** in elevation between adjacent pavers and no more than **1/16 inch (1.6 mm)** from surface plane elevation of individual paver.
- E. Limit variation in paving installation to within **1/4 inch in 10 ft. (6 mm in 3 m)]<Insert dimensions>** of surface plane in any direction; noncumulative.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests.
- B. Perform the following tests before overlying construction is placed:
 1. ELD Testing: Testing agency surveys entire horizontal waterproofed area and flashings to locate discontinuities in the system assembly using ELD in accordance with ASTM D7877 and ASTM D8231.
 - a. After testing, repair areas of discontinuities, repeat tests, and make further repairs until waterproofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - b. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 2. Flood Testing: Flood test each completed horizontal waterproofed area for leaks, in accordance with recommendations in ASTM D5957. Install temporary containment assemblies, plug, or dam drains, and flood with potable water.
 - a. Flood to an average depth of **[2-1/2 inches (63 mm)]<Insert depth>** with a minimum depth of **[1 inch (25 mm)]<Insert depth>** and not exceeding a depth of **[4 inches (100 mm)]<Insert depth>**. Maintain **2 inches (50 mm)** of clearance from top of base flashing.
 - b. Flood each area for **[24][48][72]** hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing and flashing installations are watertight.
 - 1) Cost of retesting is the responsibility of Contractor.
 - d. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final

survey report.

- C. Manufacturer's Field Service: Engage a[**full-time**] site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.
 - 1. Final Inspection: Arrange for waterproofing system manufacturer's technical personnel to inspect system installation on completion, in presence of Architect, and to prepare inspection report.
 - 2. Notify Architect[**and Owner**] 48 hours in advance of date and time of inspection.
 - 3. Repair or remove and replace components of waterproofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional Tests and Inspections:
 - 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.
 - 2. Waterproofing system will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.9 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed waterproofing from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 07 13 53 00

07 - Thermal And Moisture Protection

Task	Specification	Specification Description
07 13 53 00	03 01 30 71	Self-Adhering Sheet Waterproofing

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 13 54 00 - THERMOPLASTIC SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermoplastic sheet waterproofing.
2. Accessory waterproofing system materials.
3. Protection course.
4. Drainage panels.
5. Electronic leak-detection (ELD) materials.
6. Plaza-deck pavers.

B. Related Requirements:

1. Section 072100 "Thermal Insulation" for general building insulation.
2. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
3. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.
4. Section 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for deck expansion-joint assemblies that interface with waterproofing.

1.2 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete substrate work, including fill[, **other waterproofing systems**][, **under-slab vapor retarders**][, **under-slab insulation**][and][, **subdrainage systems**].
- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations through waterproofing.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [at Project site][by web conference]<Insert location>.
 1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
 2. Review transitions within waterproofing system and between waterproofing and adjacent air barrier.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance

- properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1. Include layout drawings showing locations of submembrane containment strips[**and control test drains**].
2. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

C. Samples: For the following products:

1. **8-by-8-inch (200-by-200-mm)** square of waterproofing and flashing sheet.
2. **4-by-4-inch (100-by-100-mm)** square of drainage panel.
3. Plaza-deck paver, **[4-by-4-inch (100-by-100-mm) square][full sized]**, in each color and texture required.
4. Paver pedestal assembly.

D. Sustainable Design Submittals:

1. Product Data: For waterproofing, providing information for testing in compliance with ASHRAE 160-2016.2009.
2. Product Data: For waterproofing, providing information for testing in compliance with CCR, Title 24, Part 2, Section 1202 and Ch. 14.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Statements: For Installer.
- B. Field quality control reports.
- C. Sample warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Entity that employs installers and supervisors who are trained and **[certified][approved]** by waterproofing manufacturer.

1.7 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 1. Build for each typical waterproofing installation including[**pavers and**] accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. (9.3 sq. m) in area][As indicated on Drawings]**.
 - b. Description: Each type of **[deck][and][plaza]<Insert description>** installation.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Do not permit asphaltic materials or polystyrene insulation to contact PVC materials.
- C. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 1. Warranty Period: **[Five][10][20]<Insert number>** years from date of Substantial Completion.
- B. Installer's Special Warranty: Specified form, **[on warranty form at end of this Section,]** signed by Installer, covering Work of this Section, for warranty period of **[two]<Insert number>** years.
 1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, **[and][plaza-deck pavers][, including paver pedestal assembly].**

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Waterproofing System: Obtain waterproofing materials **[and][protection course][drainage panels]** from **[same manufacturer as waterproofing membrane][or][manufacturer approved by waterproofing membrane manufacturer].**
- B. Plaza-Deck Paving: Obtain plaza-deck pavers **[and paver pedestals]** from single source from single manufacturer.

2.2 THERMOPLASTIC SHEET WATERPROOFING

- A. PVC Sheet: **[60-mil- (1.5-mm-)][80-mil- (2.0-mm-)]** thick, PVC membrane with integral pigments, stabilizers, UV absorbers, biocide, and nonwoven fiberglass reinforcement; with the following properties measured in accordance with standard test methods referenced:
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [CETCO is a subsidiary of Minerals Technologies Inc.]
- b. [Sika Corporation]
- c. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [CETCO is a subsidiary of Minerals Technologies Inc.]
- b. [Sika Corporation]
- c. <Insert manufacturer's name>

3. Tensile Strength: **1500 psi (10.3 MPa)** minimum; ASTM D638.
4. Elongation at Break: 240 percent minimum, machine direction; ASTM D638.
5. Seam Strength: 90 percent minimum of tensile strength; ASTM D638.
6. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D638 after 168 hours at **194 deg F (90 deg C)**; ASTM D3045.
7. Tear Resistance: **21 lbf (95 N)** minimum; ASTM D1004.
8. Low-Temperature Bend: Pass at **minus 40 deg F (minus 40 deg C)**; ASTM D2136.
9. Linear Dimension Change: 0.002 percent maximum after 6 hours at **176 deg F (80 deg C)**; ASTM D1204.
10. Water Absorption: 2.5 percent maximum weight gain after 168 hours' immersion at **158 deg F (70 deg C)**; ASTM D570.
11. Dynamic Puncture Resistance: **117.7 ft. pdl (5 J)** minimum; ASTM D5635/D5635M.

- B. Self-Adhered PVC Sheet: **120-mil- (3.0-mm-)** thick, composite sheet composed of **60-mil- (1.5-mm-)** thick, PVC membrane with integral pigments, stabilizers, biocide, and nonwoven fiberglass reinforcement; a **60-mil- (1.5-mm-)** thick, nonpermeable, closed-cell-foam backing layer; and a pressure-sensitive adhesive coating; with the following properties measured in accordance with standard test methods referenced:

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Sika Corporation]
- b. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Sika Corporation]
- b. <Insert manufacturer's name>

3. Tensile Strength: **1500 psi (10.3 MPa)** minimum; ASTM D638.
4. Elongation at Break: 240 percent minimum, machine direction; ASTM D638.
5. Seam Strength: 90 percent minimum of tensile strength; ASTM D638.
6. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D638 after 168 hours at **194 deg F (90 deg C)**; ASTM D3045.
7. Tear Resistance: **21 lbf (95 N)** minimum; ASTM D1004.

8. Linear Dimension Change: 0.002 percent maximum after 6 hours at **176 deg F (80 deg C)**; ASTM D1204.
9. Dynamic Puncture Resistance: **949.2 ft. pdl (40 J)** minimum; ASTM D5635/D5635M.

2.3 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Furnish accessory materials as recommended in writing by waterproofing manufacturer for intended use and compatibility with one another and with sheet waterproofing.
 1. Furnish liquid-type accessory materials that comply with VOC limits of authorities having jurisdiction.
- B. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing.
- C. Exposed PVC Sheet Flashing: PVC-sheet flashing [**60 mils (1.5 mm)**][**80 mils (2.0 mm)**][**96 mils (2.4 mm)**] thick; PVC with integral pigments, stabilizers, UV absorbers, and biocide; reinforced with nonwoven fiberglass.
- D. Surface Conditioner: Manufacturer's standard waterborne surface treatment to bind residual surface dust and efflorescence to substrate.
- E. Bonding Adhesives: For bonding waterproofing sheets[, **containment strips**,] and sheet flashings to substrates.
- F. Containment Strip: Manufacturer's standard asphalt-resistant, **60-mil- (1.5-mm-)** thick, containment strip; reinforced with nonwoven fiberglass; **12 inches (300 mm)** wide.
- G. Geotextile Leveling Layer: Manufacturer's standard **0.22-inch- (5.59-mm-)** thick, nonwoven polypropylene fabric.
- H. Separation Layer: Manufacturer's standard **0.16-inch- (4.06-mm-)** thick, nonwoven polypropylene fabric.
- I. Waterproofing and Sheet-Flashing Accessories: Sealants, pourable sealers, termination reglets, clamps, compression bars, tapes, preformed cone and stack flashings, and other accessories recommended in writing by waterproofing manufacturer for intended use.
- J. Control Test Drain: Manufacturer's standard assembly to verify the absence or presence of leaks from underside of waterproofed slab.
- K. Metal Termination Bars: Manufacturer's standard stainless steel or aluminum bars, prepunched, with noncorrosive fasteners.

2.4 PROTECTION COURSE

- A. Protection course material of type and thickness as recommended in writing by waterproofing manufacturer for each Project condition.

2.5 DRAINAGE PANELS

- A. Composite Drainage Panels: Drainage panel acceptable to waterproofing manufacturer and consisting of a nonbiodegradable core of fused, entangled filaments or a three-dimensional drainage net; with a

geotextile facing on both sides.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - b. **[Sika Corporation]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CETCO is a subsidiary of Minerals Technologies Inc.]**
 - b. **[Sika Corporation]**
 - c. **<Insert manufacturer's name>**

2.6 ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Conductive Medium: Electrically conductive material specifically designed to enable ELD testing procedures as approved in writing by waterproofing membrane manufacturer.
 1. Conductive medium to be located directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Moisture-Monitoring System: Permanently embedded, continuously monitored moisture-detection system.
 1. Sensors measuring moisture content to be placed within waterproofing system and connected to a monitoring program, with a notification indicating location of breach.

2.7 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: **[Brick][Concrete][Asphalt-block]** pavers specified in Section 321400 "Unit Paving."
- B. Stone Plaza-Deck Pavers: **[Granite][Limestone][Marble][Quartz-based stone][Slate][Travertine]<Insert type>** pavers specified in Section 321400 "Unit Paving."
- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, **[square edged][with top edges beveled 3/16 inch (5 mm)]**, manufactured for use as plaza-deck pavers; **[7500 psi (52 MPa)][6500 psi (45 MPa)]<Insert value>** minimum compressive strength, ASTM C140/C140M; absorption not greater than 5 percent, ASTM C140/C140M; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance in accordance with ASTM C67/C67M.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [Carlisle Coatings & Waterproofing Inc]
 - b. [Hanover Architectural Products]
 - c. [Hastings Pavement Company, LLC]
 - d. [Roofblok Limited]
 - e. [Sunny Brook Pressed Concrete, Co.]
 - f. [Tile Tech Pavers]
 - g. [Wausau Tile, Inc.]
 - h. [Westile Roofing Products; an Oldcastle company]
 - i. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Carlisle Coatings & Waterproofing Inc]
 - b. [Hanover Architectural Products]
 - c. [Hastings Pavement Company, LLC]
 - d. [Roofblok Limited]
 - e. [Sunny Brook Pressed Concrete, Co.]
 - f. [Tile Tech Pavers]
 - g. [Wausau Tile, Inc.]
 - h. [Westile Roofing Products; an Oldcastle company]
 - i. <Insert manufacturer's name>
 3. Thickness: [2 inches (51 mm)][2-1/2 inches (64 mm)]<Insert dimension>.
 4. Face Size: [12 inches (305 mm) square][12 by 24 inches (305 by 610 mm)][18 inches (457 mm) square][24 inches (610 mm) square][As indicated]<Insert dimension(s) and shape>.
 5. Color and Texture: [As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]<Insert requirement>.
- D. Plaza-Deck Paver Metal Straps: Securement strapping fabricated from stainless steel, a minimum of 3 inches (75 mm) wide by 0.031 inch (0.8 mm) thick with stainless steel anchors.
- E. Paver Pedestals: Paver-support assembly, [standard with paver manufacturer][or][named below], including [fixed-height][adjustable or stackable] pedestals, shims, and spacer tabs for joint spacing of [1/8 inch (3 mm)][3/16 inch (5 mm)][1/8 to 3/16 inch (3 to 5 mm)].
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Envirospec, Inc.]
 - b. [Hanover Architectural Products]
 - c. [Roofblok Limited]
 - d. [Sunny Brook Pressed Concrete, Co.]
 - e. [Wausau Tile, Inc.]
 - f. [Westile Roofing Products; an Oldcastle company]
 - g. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Envirospec, Inc.]

- b. [Hanover Architectural Products]
- c. [Roofblok Limited]
- d. [Sunny Brook Pressed Concrete, Co.]
- e. [Wausau Tile, Inc.]
- f. [Westile Roofing Products; an Oldcastle company]
- g. <Insert manufacturer's name>

- 3. Fill: As recommended in writing by pedestal manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.
 - 1. Verify that concrete substrate has cured and aged for minimum time recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by waterproofing manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with waterproofing manufacturer's written installation instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks in accordance with ASTM D4258.
- F. Prepare, treat, and seal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.3 INSTALLATION OF ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Install conductive medium directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Install sensors, connections, and accessory items required for complete continuously monitored

moisture-detection system in accordance with waterproofing manufacturer's written installation instructions.

3.4 INSTALLATION OF THERMOPLASTIC SHEET WATERPROOFING

A. Fully Adhered Thermoplastic Sheet Waterproofing:

1. Install self-adhered sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions.
 - a. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - b. Install laps shingled with slope of deck where possible.
 - c. Install flashings concurrently with deck sheet.
 - d. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - e. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - f. Install sheets and auxiliary materials to tie into adjoining waterproofing.
2. Apply surface conditioner, at required rate, to substrates to receive waterproofing. Apply only at temperatures greater than **25 deg F (minus 4 deg C)** and rising.
3. Apply and firmly adhere sheets to substrate; butt adjoining sheets tightly. Apply only when the membrane, air, and substrate temperatures are greater than **40 deg F (5 deg C)** and rising. Apply a minimum **8-inch- (203-mm-)** wide cover strip centered over joints and lap edges; hot-air weld cover strip to deck sheet.
4. Hot-air weld three-way overlaps or T-joints with a **4-inch- (102-mm-)** round or square patch.
5. Unless terminations and deck-sheet waterproofing perimeter are sealed with flashings, secure them with mechanically anchored metal termination bar. Seal edge of termination with sealant.
6. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over deck sheet in accordance with membrane manufacturer's written instructions, and hot-air-weld flashing to deck sheet; securely seal flashing sheet in place with clamping ring.
7. Perform field quality-control testing before subsequent work.

B. Loosely Laid Thermoplastic Sheet Waterproofing:

1. Install loosely laid sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions.
 - a. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - b. Install laps shingled with slope of deck where possible.
 - c. Install flashings concurrently with deck sheet.
 - d. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - e. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - f. Install sheets and auxiliary materials to tie into adjoining waterproofing.
2. Install geotextile leveling layer over entire area to receive deck sheet. Lap edges at least **4 inches (102 mm)** and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric using scissors or utility blades; do not use

- welding equipment to cut fabric.
- 3. Apply deck sheet over area, lapping edges at least **3 inches (76 mm)** for machine welding or at least **4 inches (102 mm)** for hand welding. Hot-air weld sheets.
- 4. Hot-air weld three-way overlaps or T-joints with a **4-inch- (102-mm-)** round or square patch.
- 5. Secure perimeter of deck sheet with manufacturer's standard metal termination bars and accessories as recommended by manufacturer for each condition.
- 6. At deck drains, spread sealant bed over drain flange and lap membrane into drain flange in accordance with membrane manufacturer's written installation instructions; securely seal sheets in place with clamping ring.
- 7. Perform field quality-control testing before subsequent work.

C. Compartmented, Loosely Laid Thermoplastic Sheet Waterproofing:

- 1. Install compartmented, loosely laid sheets over entire area to receive waterproofing in accordance with manufacturer's written installation instructions.
 - a. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - b. Install laps shingled with slope of deck where possible.
 - c. Install flashings concurrently with deck sheet.
 - d. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - e. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - f. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- 2. Construct a test containment grid before beginning installation. Perform manufacturer's recommended peel test on the test containment grid and on each day's completed waterproofing work before resuming the following day's installation.
- 3. Install submembrane containment grid to form compartments secured by containment strips. Also, install containment strips at the base of walls, curbs, penetrations, terminations, and transitions and at the perimeter of the installation. Secure containment grid to substrate with bonding adhesive.
- 4. Install geotextile leveling layer over entire area between containment strips. Lap edges at least **4 inches (102 mm)** and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric even with edges of containment strips using scissors or utility blades; do not use welding equipment to cut fabric.
- 5. Control-Test-Drain Installation: Drill **1-inch- (25-mm-)** diameter hole through the substrate at or near the low point of each compartment and install control test drain, in accordance with manufacturer's written instructions, so as to enable verification of the absence or presence of leaks from underside of waterproofed slab.
- 6. Apply deck sheet over area, lapping edges at least **3 inches (76 mm)** for machine welding or at least **4 inches (102 mm)** for hand welding. Hot-air weld the sheet to containment strips.
- 7. Hot-air weld three-way overlaps or T-joints with a **4-inch- (102-mm-)** round or square patch.
- 8. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over containment strips in accordance with membrane manufacturer's written instructions, and hot-air weld flashing to containment strips; securely seal flashing sheet in place with clamping ring.
- 9. Perform field quality-control testing before subsequent work.
- 10. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

D. Form wall flashings exposed in final construction using exposed sheet flashing; otherwise, use

concealed sheet flashing.

- E. Lap sheet flashings over deck sheet or containment strips. Flash penetrations and field-formed inside and outside corners with sheet flashing.
- F. Extend flashings a minimum of **8 inches (203 mm)** above the overburden unless otherwise indicated on Drawings and acceptable to waterproofing manufacturer.
- G. Hot-air weld joints with deck sheet or containment strips and end laps of overlapping sheet flashings and accessories to ensure a watertight seam installation.
- H. Hot-air weld three-way overlaps or T-joints with a **4-inch- (102-mm-)** round or square patch.
- I. Secure flashings along top edge with mechanically anchored metal termination bar or with mechanically anchored metal reglet for subsequent metal counterflashing. Seal top of termination with sealant.
- J. Terminate deck sheet at expansion joints and discontinuous deck-to-wall or deck-to-deck joints. Bridge and cover joints with sheet flashing and joint accessories in accordance with manufacturer's written instructions for each type of joint.

3.5 INSTALLATION OF PROTECTION COURSE

- A. Install protection course immediately after waterproofing-membrane manufacturer's inspection and acceptance of the waterproofing installation.
- B. Install protection course over sheet waterproofing in accordance with manufacturer's written installation instructions and before beginning subsequent construction operations. Minimize exposure of membrane.

3.6 INSTALLATION OF DRAINAGE PANELS

- A. Install drainage panels immediately after waterproofing-membrane manufacturer's inspection and acceptance of the waterproofing installation. Minimize exposure of membrane.
- B. Place and secure drainage panels directly over the waterproofing membrane, in accordance with waterproofing manufacturer's written installation instructions.
- C. Trim drainage panels to fit closely around penetrations and at the base of drains to ensure that water flows freely from composite into drain openings.

3.7 INSTALLATION OF PLAZA-DECK PAVERS

- A. Install pavers in accordance with manufacturer's written installation instructions.
- B. Install paver pedestals and accessories to required elevations. Adjust for final level and slope of paved surfaces.
- C. **[Loosely lay pavers on pedestals][Seat pavers on pedestals and install bolted plate in accordance with manufacturer's written installation instructions]**, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.

1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- D. Install pavers to vary no more than **1/16 inch (1.6 mm)** in elevation between adjacent pavers and no more than **1/16 inch (1.6 mm)** from surface plane elevation of individual paver.
- E. Limit variation in paving installation to within [**1/4 inch in 10 ft. (6 mm in 3 m)**]**<Insert dimensions>** of surface plane in any direction; noncumulative.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests.
- B. Perform the following tests before overlying construction is placed:
 1. ELD Testing: Testing agency surveys entire horizontal waterproofed area and flashings to locate discontinuities in the system assembly using ELD in accordance with ASTM D7877 and ASTM D8231.
 - a. After testing, repair areas of discontinuities, repeat tests, and make further repairs until waterproofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - b. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 2. Flood Testing: Flood test each completed horizontal waterproofed area for leaks, in accordance with recommendations in ASTM D5957. Install temporary containment assemblies, plug, or dam drains, and flood with potable water.
 - a. Flood to an average depth of [**2-1/2 inches (63 mm)**]**<Insert depth>** with a minimum depth of [**1 inch (25 mm)**]**<Insert depth>** and not exceeding a depth of [**4 inches (100 mm)**]**<Insert depth>**. Maintain **2 inches (50 mm)** of clearance from top of base flashing.
 - b. Flood each area for [**24**][**48**][**72**] hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing and flashing installations are watertight.
 - 1) Cost of retesting is the responsibility of Contractor.
 - d. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.
- C. Manufacturer's Field Service: Engage a **[full-time]** site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.
 1. Final Inspection: Arrange for waterproofing system manufacturer's technical personnel to inspect system installation on completion, in presence of Architect, and to prepare inspection report.
 2. Notify Architect **[and Owner]** 48 hours in advance of date and time of inspection.
 3. Repair or remove and replace components of waterproofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional Tests and Inspections:

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.
2. Waterproofing system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.9 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

END OF SECTION 07 13 54 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 14 13 00 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hot fluid-applied rubberized asphalt waterproofing.
2. Accessory waterproofing system materials.
3. Protection course.
4. Molded-sheet drainage panels.
5. Insulation drainage panels.
6. Electronic leak detection (ELD) materials.
7. Plaza-deck pavers.

B. Related Requirements:

1. Section 072100 "Thermal Insulation" for below-grade foundation insulation.
2. Section 075556 "Fluid-Applied Protected Membrane Roofing" for hot fluid-applied rubberized asphalt roofing system.
3. Section 079100 "Preformed Joint Seals" for foundation-wall expansion joints that interface with waterproofing.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.
6. Section 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for plaza expansion-joint assemblies that interface with waterproofing.
7. Section 221423 "Storm Drainage Piping Specialties" for plaza-deck drains.
8. Section 321400 "Unit Paving" for plaza-deck pavers set on setting beds.
9. Section 334600 "Subdrainage" for molded-sheet drainage panel.

1.2 DEFINITIONS

- A. Compatible: Material that will not adversely affect adjacent materials, is chemically compatible with adjacent materials, and where required for bond, achieves adhesive compatibility with adjacent materials.
- B. Chemical Compatibility: Material that will not breakdown, deteriorate, degrade, or prematurely fail when in contact with another material. Material that will not cause chemical breakdown, deterioration, degradation, staining, or premature failure of another material.
- C. Adhesive Compatibility: Material that will develop bond strength or provide a suitable surface for another material to develop bond strength complying with requirements when in contact with another material.

1.3 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation work, including fill[, **other waterproofing systems**] [, **under-slab vapor retarders**] [, **under-slab insulation**] [**and**] [, **subdrainage systems**].

- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations through waterproofing.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** **<Insert location>**.
 - 1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
 - 2. Review transitions within waterproofing system and between waterproofing and adjacent air barrier.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings:
 - 1. Indicate locations and extent of waterproofing.
 - 2. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, expansion-joint conditions, tie-ins with adjoining waterproofing, and other termination conditions.
 - 3. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported plaza-deck pavers.
- C. Samples: For the following materials:
 - 1. Drainage panel, 4 by 4 inch (100 by 100 mm).
 - 2. Plaza-deck paver, **[4 by 4 inch (100 by 100 mm)] [full sized]**.
 - 3. Paver pedestal assembly.
- D. Sustainable Design Submittals:
 - 1. <Double click to insert sustainable design text for moisture control>

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Statements: For **[Installer]** **[and]** **[testing agency]**.
- B. Field quality control reports.
- C. Sample warranties.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Entity that employs installers and supervisors who are trained and **[certified]** **[approved]** by waterproofing manufacturer.

1.8 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
1. Build mockups for each typical waterproofing installation including **[pavers and]** accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. (9.3 sq. m) in area]** **[As indicated on Drawings]**.
 - b. Description: Each type of **[wall]** **[deck]** **[and]** **[plaza]** **<Insert description>** installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer. Protect stored materials in accordance with manufacturer's written instructions.
- B. Remove and replace materials that cannot be applied within their stated shelf life.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.
1. Do not apply waterproofing to frozen, damp, or wet substrates, or when temperature is below 0 deg F (minus 18 deg C).
 2. Do not apply waterproofing when snow, rain, fog, or mist are present, or when such weather conditions are imminent during application and curing period.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.11 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or remove and replace waterproofing that fails to remain watertight within specified warranty period.
1. Warranty includes leak remediation, including repair, removal, and replacement of **[protection boards]** **[drainage panels]** **[and]** **[pedestals and pavers on plaza decks]**.
 2. Pavers Warranty: Pavers must not dish or warp, nor crack, split, or disintegrate in freeze-thaw conditions.

3. Warranty Period: **[Five]** **[10]** **<Insert number>** years from date of Substantial Completion.
- B. Installer's Special Warranty: Submit warranty**[, on warranty form at end of this Section,]** signed by Installer, covering the Work of this Section, for warranty period of **[two]** **<Insert number>** years from date of Substantial Completion.
 1. Warranty includes leak remediation, including repair, removal, and replacement of **[protection boards]** **[drainage panels]** **[and]** **[pedestals and pavers on plaza decks]**.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Waterproofing System: Obtain waterproofing materials **[and]** **[protection course]** **[molded-sheet drainage panels]** **[insulation drainage panels]** from **[same manufacturer as waterproofing membrane]** **[or]** **[manufacturer approved by waterproofing membrane manufacturer]**.
- B. Plaza-Deck Paving: Obtain plaza-deck pavers**[and paver pedestal assembly]** from single source from single manufacturer for consistent quality in appearance and physical properties.

2.2 HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

- A. Single-Component Waterproofing: **[Reinforced]** **[Unreinforced]**; 100 percent solids rubberized asphalt membrane.
 1. **<Double click here to find, evaluate, and insert list of manufacturers and products.>**
 2. Flow: 1/8 inch (3.2 mm) maximum at 140 deg F (60 deg C) in accordance with ASTM D5329.
 3. Flash Point: Not less than 500 deg F (260 deg C) and not less than 77 deg F (25 deg C) above the manufacturer's maximum recommended application temperature in accordance with ASTM D92.
 4. Water-Vapor Permeance: 0.027 perm in accordance with ASTM E96/E96M, Procedure E.
 5. Crack Bridging Capability: No cracking, splitting, or loss of adhesion in accordance with ASTM C1305/C1305M.
 6. **<Insert requirements>**.

2.3 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.
- B. Asphalt Primer: ASTM D41/D41M.
- C. Elastomeric Sheet Flashing: Manufacturer's standard uncured neoprene flashing sheet.
 1. Adhesive: Manufacturer's standard contact adhesive.
- D. SBS-Modified Bituminous Sheet Flashing: ASTM D6164/D6164M, Grade G, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet; granular surfaced; suitable for application method specified, **[white]** **[gray]** **[tan]** **<Insert color>**.

1. Backer Sheet: ASTM D6164/D6164M, Grade S, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet; smooth surfaced; suitable for application method specified.
- E. Metal Termination Bars: Manufacturer's standard, predrilled, stainless steel or aluminum termination bars; approximately 1 by 1/8 inch (25 by 3.2 mm) thick; with stainless steel anchors.
- F. Reinforcing Fabric: Manufacturer's standard fiberglass mesh or spun-bonded polyester fabric.

2.4 PROTECTION COURSE

- A. Protection Course, Asphaltic: ASTM D6506/D6506M; semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
 1. Thickness: Nominal **[1/8 inch (3.2 mm)] [1/4 inch (6.4 mm)] [1/8 inch (3.2 mm) for vertical applications; 1/4 inch (6.4 mm) elsewhere]**.
- B. Protection Course, Extruded-Polystyrene Board Insulation, Faced: Fan folded, faced on **[one side] [or] [both sides]** with plastic film, nominal thickness 1/4 inch (6.4 mm), with compressive strength of not less than 8 psi (55 kPa) when tested in accordance with ASTM D1621, and maximum water absorption by volume of 0.6 percent when tested in accordance with ASTM C272/C272M.
- C. Protection Course, Extruded-Polystyrene Board Insulation, Unfaced: ASTM C578, Type X, 1/2 inch (13 mm) thick.
- D. Protection Course, Molded-Polystyrene Board Insulation: ASTM C578, Type I, 0.90 lb/cu. ft. (15 kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.

2.5 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21 mm) sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert values>**.
 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21 mm) sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert values>**.
 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43 mm) sieve, laminated to one side of the core and a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)] <Insert value>**.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- D. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43 mm) sieve, laminated to one side of the core, without a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)] <Insert value>**.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- E. Molded-Sheet Collector-Panel System with Polymeric Film: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425 mm) sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 17 gpm per ft. (112 to 211 L/min. per m)] <Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- F. Molded-Sheet Collector-Panel System Wrapped with Geotextile: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; wrapped with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425 mm) sieve; and with a vertical flow rate through the core of **[21 to 97 gpm per ft. (261 to 1197 L/min. per m)] <Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings] [of 21 gpm per ft. (261 L/min. per m)] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2.6 INSULATION DRAINAGE PANELS

- A. Unfaced, Wall-Insulation Drainage Panels, Type IV: ASTM C578, 25 psi (173 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplapped or channel edges and with one side having grooved drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- B. Geotextile-Faced, Wall-Insulation Drainage Panels, Type IV: ASTM C578, 25 psi (173 kPa) minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- C. Unfaced, Wall-Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplapped or channel edges and with one side having grooved drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- D. Geotextile-Faced, Wall-Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- E. Unfaced, Plaza-Deck, Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- F. Geotextile-Faced, Plaza-Deck, Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength extruded-polystyrene board insulation, fabricated with tongue-and-groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven geotextile filter fabric.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- G. Unfaced, Plaza-Deck, Insulation Drainage Panels, Type VII: ASTM C578, 60 psi (414 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- H. Geotextile-Faced, Plaza-Deck, Insulation Drainage Panels, Type VII: ASTM C578, 60 psi (414 kPa) minimum compressive strength; extruded-polystyrene board insulation, fabricated with tongue-and-groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven geotextile filter fabric.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- I. Mortar-Faced, Extruded-Polystyrene Board Insulation: ASTM C578, Type VI, 1.8 lb/cu. ft. (29 kg/cu. m) minimum density, 40 psi (276 kPa) minimum compressive strength, with tongue-and-groove edges on long dimension, and latex-modified cement mortar topping, **[3/8 inch (9 mm) thick, 4.5 lb/sq. ft. (19.5 kg/sq. m)] [15/16 inch (23 mm) thick, 11 lb/sq. ft. (53.7 kg/sq. m)]**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

2.7 ELECTRONIC LEAK DETECTION (ELD) MATERIALS

- A. Conductive Medium: Electrically conductive material specifically designed to enable ELD testing procedures as approved in writing by waterproofing membrane manufacturer.
1. Conductive medium to be located directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Moisture-Monitoring System: Permanently embedded, continuously monitored moisture-detection system.
1. Sensors measuring moisture content to be placed within waterproofing system and connected to a monitoring program, with a notification indicating location of breach.

2.8 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: **[Brick]** **[Concrete]** **[Asphalt-block]** **<Insert type>** pavers specified in Section 321400 "Unit Paving."
- B. Stone Plaza-Deck Pavers: **[Granite]** **[Limestone]** **[Marble]** **[Quartz-based stone]** **[Slate]** **[Travertine]** **<Insert type>** pavers specified in Section 321400 "Unit Paving."
- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, **[square edged]** **[with top edges beveled 3/16 inch (5 mm)]**, manufactured for use as plaza-deck pavers; **[7500 psi (52 MPa)]** **[6500 psi (45 MPa)]** **<Insert value>** minimum compressive strength when tested in accordance with ASTM C140/C140M; absorption not greater than 5 percent when tested in accordance with ASTM C140/C140M; and no breakage and maximum 1 percent mass loss, freeze-thaw resistance, when tested in accordance with ASTM C67/C67M.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - 2. Thickness: **[2 inches (51 mm)]** **[2-3/8 inches (60 mm)]** **<Insert dimension>**.
 - 3. Face Size: **[12 inches (305 mm) square]** **[12 by 24 inches (305 by 610 mm)]** **[18 inches (457 mm) square]** **[24 inches (610 mm) square]** **[As indicated]** **<Insert dimension(s) and shape>**.
 - 4. Color and Texture: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** **<Insert requirement>**.
 - 5. Provide pavers with holes or slots to permit rain flowing across plaza to drain through grate into roof drains.
- D. Plaza-Deck Paver Metal Straps: Securement strapping fabricated from stainless steel, a minimum of 3 inches (75 mm) wide by 0.031 inch (0.8 mm) thick with stainless steel anchors.
- E. Paver Pedestals: Paver-support assembly, **[standard with paver manufacturer]** **[or]** **[as named below]**, including **[fixed-height]** **[adjustable or stackable]** pedestals, shims, and spacer tabs for joint spacing of **[1/8 inch (3.2 mm)]** **[3/16 inch (5 mm)]** **[1/8 to 3/16 inch (3.2 to 5 mm)]**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - 2. Fill: As recommended in writing by pedestal manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that concrete has cured and aged for minimum time period as recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits as recommended in writing by waterproofing manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare substrates in accordance with waterproofing manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate in accordance with ASTM D4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces in accordance with ASTM D4258.
- E. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, holes, and other voids.
- F. Coordinate with Owner for impact to air-intake equipment in the vicinity of the Work. Cover or filter air-intake louvers before proceeding with work that could affect indoor air quality or that could activate smoke detectors in the ductwork.

3.3 PREPARATION AT TERMINATIONS, PENETRATIONS, AND CORNERS

- A. Prepare surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, sleeves, and corners in accordance with waterproofing manufacturer's written instructions and to recommendations in **[ASTM C898/C898M]** **[and]** **[ASTM C1471/C1471M]**.

3.4 TREATMENT OF JOINTS AND CRACKS

- A. Prepare, treat, rout, and fill joints and cracks in substrate in accordance with waterproofing manufacturer's written instructions and to recommendations in **[ASTM C898/C898M]** **[and]** **[ASTM C1471/C1471M]**. Before coating surfaces, remove dust and dirt from joints and cracks in accordance with ASTM D4258.
 - 1. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches (150 mm) on each side of moving joints and cracks, or joints and cracks exceeding 1/8 inch (3.2 mm) thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied rubberized asphalt over elastomeric sheet.
 - 2. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches (150 mm) on each side of nonmoving joints and cracks not exceeding 1/8 inch (3.2 mm) thick, and beyond roof drains and penetrations.
 - a. Apply second layer of hot fluid-applied rubberized asphalt over reinforcing fabric.
- B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches (150 mm) on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied rubberized asphalt over elastomeric sheet.

3.5 INSTALLATION OF ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Install conductive medium directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Install sensors, connections, and accessory items required for complete continuously monitored moisture-detection system in accordance with waterproofing manufacturer's written installation instructions.

3.6 INSTALLATION OF SHEET FLASHING

- A. Install sheet flashing at terminations of waterproofing membrane in accordance with manufacturer's written instructions.
- B. Prime substrate with asphalt primer.
- C. Install sheet flashing and adhere to deck and wall substrates in a layer of hot rubberized asphalt.
- D. Bond modified bituminous flashing sheet to substrate as follows:
 - 1. Adhere SBS-modified bituminous[**backer sheet and**] flashing sheet to substrate in a layer of hot fluid-applied rubberized asphalt, or torch apply APP-modified bituminous flashing sheet to substrate as standard with manufacturer.
- E. Extend sheet flashing up walls or parapets a minimum of 8 inches (200 mm) above plaza-deck pavers and 6 inches (150 mm) onto deck to be waterproofed.
- F. Install termination bars and mechanically fasten to top of sheet flashing at terminations and perimeter of waterproofing.

3.7 INSTALLATION OF HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

- A. General: Apply waterproofing in accordance with manufacturer's written instructions.
- B. Start installing waterproofing in presence of manufacturer's technical representative.
- C. Apply primer over prepared substrate at manufacturer's recommended rate and allow it to dry.
- D. Heat rubberized asphalt in accordance with manufacturer's written instructions.
 - 1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
- E. Unreinforced Waterproofing Membrane Applications: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to form a uniform, unreinforced, seamless membrane, **[180-mil (4.5-mm) minimum thickness] [180-mil (4.5-mm) average thickness, but not less than 125 mils (3.2 mm) thick]**.
- F. Reinforced Waterproofing Membrane Applications: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils (2.3 mm); embed reinforcing fabric, overlapping sheets 2 inches (50 mm); spread another 125-mil- (3.2-mm-) thick layer to provide a uniform, reinforced, seamless membrane 215 mils (5.5 mm) thick.

- G. Cure waterproofing, taking care to prevent contamination and damage to membrane.

3.8 INSTALLATION OF PROTECTION COURSE

- A. Cover waterproofing with protection course with overlapped joints before membrane is subject to **[backfilling] [construction or vehicular traffic]**.
 - 1. For horizontal applications, install protection course loose laid over fully cured membrane.
 - 2. For vertical applications, set protection course in nominally cured membrane, which will act as an adhesive. If membrane cures before application of protection course, use adhesive.

3.9 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels in accordance with waterproofing manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing.
- B. Molded-Sheet Collector-Panel System: Install in accordance with waterproofing manufacturer's written instructions. Connect to piped subdrainage system specified in Section 334600 "Subdrainage."

3.10 INSTALLATION OF INSULATION DRAINAGE PANELS

- A. Install insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
- B. Ensure that drainage channels are aligned and free of obstructions.
- C. On vertical surfaces, set insulation drainage panel in adhesive or tape applied in accordance with manufacturer's written instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panel in accordance with manufacturer's written instructions. Stagger end joints and tightly abut board insulation.

3.11 INSTALLATION OF PLAZA-DECK PAVERS

- A. Install pavers in accordance with manufacturer's written instructions.
- B. Install paver pedestals and accessories to required elevations in accordance with manufacturer's written installation instructions. Adjust for final level and slope of paved surfaces.
- C. **[Loosely lay pavers on pedestals] [Seat pavers on pedestals and install bolted plate in accordance with manufacturer's written installation instructions]**, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- D. Install pavers to not vary more than 1/16 inch (1.6 mm) in elevation between adjacent pavers or more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.
- E. Limit variation in paving installation to within **[1/4 inch in 10 ft. (6.4 mm in 3 m)] <Insert dimensions>** of surface plane in any direction; noncumulative.

3.12 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
 - 1. Testing agency to verify thickness of waterproofing during application for each **[600 sq. ft. (56 sq. m)]** **<Insert dimension>** of installed waterproofing or part thereof.
- B. Perform the following tests before overlying construction is placed:
 - 1. ELD Testing: Testing agency surveys entire horizontal waterproofed area and flashings to locate discontinuities in the system assembly using ELD in accordance with ASTM D7877 and ASTM D8231.
 - a. After testing, repair areas of discontinuities, repeat tests, and make further repairs until waterproofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - b. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 - 2. Flood Testing: Flood test each completed horizontal waterproofed area for leaks, in accordance with recommendations in ASTM D5957. Install temporary containment assemblies, plug, or dam drains, and flood with potable water.
 - a. Flood to an average depth of **[2-1/2 inches (63 mm)]** **<Insert depth>** with a minimum depth of **[1 inch (25 mm)]** **<Insert depth>** and not exceeding a depth of **[4 inches (100 mm)]** **<Insert depth>**. Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - b. Flood each area for **[24]** **[48]** **[72]** hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - d. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.
- C. Manufacturer's Field Service: Engage a **[full-time]** site representative qualified by waterproofing system manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components and to furnish daily reports to Architect.
 - 1. Final Inspection: Arrange for waterproofing system manufacturer's technical personnel to inspect system installation on completion, in presence of Architect, and to prepare inspection report.
 - 2. Notify Architect **[and Owner]** 48 hours in advance of date and time of inspection.
 - 3. Repair or remove and replace components of waterproofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional Tests and Inspections:
 - 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.
 - 2. Waterproofing system will be considered defective if it does not pass tests and inspections.

- E. Prepare test and inspection reports.

3.13 PROTECTION, REPAIR, AND CLEANING

- A. Protect waterproofing system from damage and wear during remainder of construction period.
- B. Protect installed [**protection course**] [**drainage panels**] from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where material is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Correct deficiencies in or remove waterproofing system that does not comply with requirements, repair substrates, and repair or reinstall waterproofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 14 16 00 - COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Polyether waterproofing.
2. Polyurethane waterproofing.
3. Polymer rubber gel waterproofing.
4. Rubber waterproofing.
5. Cold-applied rubberized asphalt waterproofing.
6. Latex waterproofing.
7. Accessory waterproofing system materials.
8. Protection course.
9. Molded-sheet drainage panels.
10. Insulation drainage panels.
11. Electronic leak-detection (ELD) materials.
12. Plaza-deck pavers.

B. Related Requirements:

1. Section 071800 "Traffic Coatings" for exposed, fluid-applied membrane with an integral wearing surface.
2. Section 072100 "Thermal Insulation" for below-grade foundation insulation.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
4. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for exterior expansion-joint assemblies that interface with waterproofing.
5. Section 079513.19 "Parking Deck Expansion Joint Cover Assemblies" for deck expansion-joint assemblies that interface with waterproofing.
6. Section 221423 "Storm Drainage Piping Specialties" for plaza-deck drains.
7. Section 321400 "Unit Paving" for plaza-deck pavers set on setting beds.
8. Section 334600 "Subdrainage" for molded-sheet drainage panels.

1.2 DEFINITIONS

- A. **Compatible:** Material that will not adversely affect adjacent materials, is chemically compatible with adjacent materials, and where required for bond, achieves adhesive compatibility with adjacent materials.
- B. **Chemical Compatibility:** Material that will not break down, deteriorate, degrade, or prematurely fail when in contact with another material. Material that will not cause chemical breakdown, deterioration, degradation, staining, or premature failure of another material.
- C. **Adhesive Compatibility:** Material that will develop bond strength or provide a suitable surface for another material to develop bond strength complying with requirements when in contact with another material.

1.3 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation work, including fill[, **other waterproofing systems**] [, **under-slab vapor retarders**] [, **under-slab insulation**] [and] [, **subdrainage systems**].
- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations in waterproofing.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] <Insert location>.
 - 1. Review waterproofing requirements, including, but not limited to, the following:
 - a. Surface preparation specified in other Sections.
 - b. Minimum concrete curing period.
 - c. Forecasted weather conditions.
 - d. Special details and sheet flashings.
 - e. Repairs.
 - f. Field quality control.
 - g. <Insert agenda items>.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings:
 - 1. Indicate locations and extent of waterproofing.
 - 2. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, expansion-joint conditions, tie-ins with adjoining waterproofing, and other termination conditions.
 - 3. Include setting drawings indicating layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- C. Samples: For the following materials:
 - 1. Cured sample of waterproofing membrane on suitable rigid substrate, 8 by 8 inches (200 by 200 mm).
 - 2. Flashing sheet, 8 by 8 inches (200 by 200 mm).
 - 3. Membrane-reinforcing fabric, 8 by 8 inches (200 by 200 mm).
 - 4. Drainage panel, 4 by 4 inches (100 by 100 mm).
 - 5. Plaza-deck paver, [**4 by 4 inches (100 by 100 mm)**] [**full sized**].
 - 6. Paver pedestal assembly.
- D. Sustainable Design Submittals:

1. <Double click to insert sustainable design text for moisture control>

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer]** **[and]** **[testing agency]**.
- B. Field quality control reports.
- C. Sample warranties.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Entity that employs installers and supervisors who are trained and **[certified]** **[approved]** by waterproofing manufacturer.

1.8 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 1. Build mockup for each typical waterproofing installation, including **[pavers and]** accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: **[100 sq. ft. (9.3 sq. m) in area]** **[As indicated on Drawings]**.
 - b. Description: Each type of **[wall]** **[deck]** **[and]** **[plaza deck]** **<Insert description>** installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer. Protect stored materials in accordance with manufacturer's written instructions.
- B. Remove and replace materials that cannot be applied within their stated shelf life.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.
 1. Do not apply waterproofing to frozen, damp, or wet substrates, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.
 2. Do not apply waterproofing when snow, rain, fog, or mist are present, or when such weather conditions are imminent during application and curing period.

- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.11 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or remove and replace waterproofing that fails to remain watertight within specified warranty period.
 - 1. Warranty includes leak remediation, including repair, removal, and replacement of **[protection course] [drainage panels] [and] [pedestals and pavers on plaza decks]**.
 - 2. Pavers Warranty: Pavers must not dish or warp, nor crack, split, or disintegrate in freeze-thaw conditions.
 - 3. Warranty Period: **[Five] [10] <Insert number>** years from date of Substantial Completion.
- B. Installer's Special Warranty: Submit warranty[, **on warranty form at end of this Section,**] signed by Installer, covering the Work of this Section, for warranty period of **[two] <Insert number>** years from date of Substantial Completion.
 - 1. Warranty includes leak remediation, including repair, removal, and replacement of **[protection course] [drainage panels] [and] [pedestals and pavers on plaza decks]**.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Waterproofing System: Obtain waterproofing materials **[and] [protection course] [molded-sheet drainage panels] [insulation drainage panels]** from **[same manufacturer as waterproofing membrane] [or] [manufacturer approved by waterproofing membrane manufacturer]**.
- B. Plaza-Deck Paving: Obtain plaza-deck pavers~~]~~ **and paver pedestal assembly]** from single source from single manufacturer for consistent quality in appearance and physical properties.

2.2 POLYETHER WATERPROOFING

- A. STPE Waterproofing: Single-component, silyl-terminated polyether~~]~~ **complying with ASTM C836/C836M]**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - 2. Tensile Strength: 900 psi (6.2 MPa) minimum; ASTM D638.
 - 3. Elongation at Break: 300 percent minimum; ASTM D638.
 - 4. Water Vapor Permeance: 0.1 perm (5.7 ng/Pa x s x sq. m), maximum, ASTM E96/E96M.
 - 5. Hydrostatic-Head Resistance: **[200 ft. (60 m)] <Insert dimension>** of water, minimum; ASTM D5385/D5385M.

2.3 POLYURETHANE WATERPROOFING

- A. Single-Component, Modified Polyurethane Waterproofing: **[ASTM C836/C836M] [and] [coal-tar free]**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- B. Single-Component, Reinforced, Modified Polyurethane Waterproofing: **[ASTM C836/C836M]** **[and]** **[coal-tar free]**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- C. Two-Component, Polyurethane Waterproofing:**[ASTM C836/C836M.]**
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- D. Two-Component, Reinforced, Polyurethane Waterproofing:**[ASTM C836/C836M.]**
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- E. PUMA Waterproofing: Two-component, polyurethane methacrylate; ASTM C1305/C1305M.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 2. Tensile Strength: 900 psi (6.2 MPa) minimum; ASTM D638.
 3. Elongation at Break: 400 percent minimum; ASTM D638.
 4. Water Vapor Permeance: 0.003 perm (0.172 ng/Pa x s x sq. m), maximum, ASTM E96/E96M.
- F. PMMA Waterproofing: Two-component, polymethyl methacrylate; ASTM C836/C836M, reinforced with polyester fleece layer.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 2. Thickness: Not less than 90 mils; ASTM D5147/D5147M (Section 6).
 3. Elongation at Peak Load: Average 35%; ASTM D5147/D5147M (Section 7).
 4. Tear Strength: Not less than 90 lbf (0.4 kN); ASTM D5147/D5147M (Section 8).
 5. Low-Temperature Flexibility: Minus 4 deg F (minus 20 deg C); ASTM D5147/D5147M (Section 12).

2.4 POLYMER RUBBER GEL WATERPROOFING

- A. Single-Component, Polymer-Modified Rubber Gel (PRG) Waterproofing: Spray-applied, composite system composed of non-Newtonian thixotropic, noncuring, flexible, self-healing polymer rubberized bituminous emulsion, polyethylene sheet membrane, and other proprietary ancillary components.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 2. Solids Content: 99 percent minimum; ASTM D1353/D1353M.
 3. Puncture Resistance: Minimum 90 lb.; ASTM D1709.
 4. Hardness: Minimum 100; ASTM C836/C836M.
 5. Tensile Strength: Minimum 50 lb., ASTM D412.
 6. Elongation Percentage: Minimum 300; ASTM C1135.
 7. Adhesion to Concrete: Rating of 1 (Excellent); ASTM D412.
 8. Water Vapor Permeance: 0.005 perm, maximum, ASTM E96/E96M.
- B. Single-Component, Polymer-Modified Rubber Gel (PRG) Injection Restorative Membrane Waterproofing System: Elastomeric, noncuring, flexible, self-healing, chemical-resistant polymer rubberized bituminous emulsion formulated for repairing and restoring damaged waterproofing membrane systems.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 2. Solids Content: Minimum 75 percent; ASTM D1353/D1353M.
 3. Viscosity at Application: Minimum 150,000 cP; ASTM D2196.

2.5 RUBBER WATERPROOFING

- A. Single-Component, Rubber Waterproofing: ASTM C836/C836M; solvent based; coal-tar free.
1. Hydrostatic-Head Resistance: 69.3 ft. (21.1 m) minimum; **[ASTM C1306/C1306M]** **[ASTM E154/E154M]**.
- B. Two-Component, Rubber Waterproofing: ASTM C836/C836M; coal-tar free.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Hydrostatic-Head Resistance: **[200 ft. (60 m)]** **<Insert dimension>** of water, minimum; ASTM D5385/D5385M.
- C. Two-Component, Reinforced, Rubber Waterproofing: ASTM C836/C836M; coal-tar free.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Hydrostatic-Head Resistance: **[200 ft. (60 m)]** **<Insert dimension>** of water, minimum; ASTM D5385/D5385M.

2.6 COLD-APPLIED RUBBERIZED ASPHALT WATERPROOFING

- A. Single-Component, Rubberized Asphalt Waterproofing: **[ASTM C836/C836M]**; water-based, polymer-modified rubberized asphalt waterproofing.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Elongation at Break: 360 percent minimum; ASTM D412.
 3. Water Vapor Permeance: 0.03 perm (1.72 ng/Pa x s x sq. m), maximum, ASTM E96/E96M.
 4. Hydrostatic-Head Resistance: **[200 ft. (60 m)]** **<Insert dimension>** of water, minimum; ASTM D5385/D5385M.
- B. Single-Component, Reinforced, Rubberized Asphalt Waterproofing: **[ASTM C836/C836M]**; water-based, polymer-modified rubberized asphalt waterproofing.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Elongation at Break: 360 percent minimum; ASTM D412.
 3. Water Vapor Permeance: 0.03 perm (1.72 ng/Pa x s x sq. m), maximum, ASTM E96/E96M.
 4. Hydrostatic-Head Resistance: **[200 ft. (60 m)]** **<Insert dimension>** of water, minimum; ASTM D5385/D5385M.
- C. Two-Component, Rubberized Asphalt Waterproofing: Water-based, polymer-modified rubberized asphalt.
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Elongation at Break: 360 percent minimum; ASTM D412.

2.7 LATEX WATERPROOFING

- A. Latex-Based Waterproof Coating with Biocide:
1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 2. Hydrostatic Pressure Resistance: **[10 psi (69 kPa)]** **[12 psi (83 kPa)]** **[15 psi (103 kPa)]** **[20 psi (140 kPa)]** **<Insert value>** minimum; ASTM D7088.

3. Resistance to Wind-Driven Rain: **[98 mph (44 m/s)] [140 mph (63 m/s)]** <Insert value> minimum; ASTM D6904.

2.8 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.
- B. Primer: Liquid **[waterborne] [solvent-borne]** primer as recommended in writing for substrate by waterproofing manufacturer.
- C. Surface Conditioner: Liquid, waterborne surface conditioner as recommended in writing for substrate by waterproofing manufacturer.
- D. Sheet Flashing: Manufacturer's standard flashing sheet.
 1. Adhesive: Manufacturer's standard contact adhesive.
- E. Metal Termination Bars: Manufacturer's standard, predrilled, stainless steel or aluminum termination bars; approximately 1 by 1/8 inch (25 by 3.2 mm) thick; with stainless steel anchors.
- F. Reinforcing Fabric: Manufacturer's standard fiberglass mesh or spun-bonded polyester fabric.
- G. Detailing Seam Tape: Manufacturer's standard detailing tape.
- H. Joint Sealant: **[Single-component] [Multicomponent]** polyurethane sealant, compatible with waterproofing; **[ASTM C920, Type M, Class 25 or greater; Grade NS for sloping and vertical applications and Grade P for deck applications; Use NT exposure] [as specified in Section 079200 "Joint Sealants"]** <Insert requirement>; and as recommended in writing by waterproofing manufacturer for substrate and joint conditions.
- I. Backer Rod: Closed-cell polyethylene foam.

2.9 PROTECTION COURSE

- A. Protection Course, Asphaltic: ASTM D6506/D6506M; semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners:
 1. Thickness: Nominal **[1/8 inch (3.2 mm)] [1/4 inch (6.4 mm)] [1/8 inch (3.2 mm) for vertical applications; 1/4 inch (6.4 mm) elsewhere]**.
- B. Protection Course, Extruded-Polystyrene Board Insulation, Faced: Fan folded, faced on **[one side] [or] [both sides]** with plastic film, nominal thickness 1/4 inch (6.4 mm), with compressive strength of not less than 8 psi (55 kPa) when tested in accordance with ASTM D1621/D1621M, and maximum water absorption by volume of 0.6 percent when tested in accordance with ASTM C272/C272M.
- C. Protection Course, Extruded-Polystyrene Board Insulation, Unfaced: ASTM C578, Type X, 1/2 inch (13 mm) thick.
- D. Protection Course, Molded-Polystyrene Board Insulation: ASTM C578, Type I, 0.90 lb/cu. ft. (15 kg/cu. m) minimum density, 1-inch (25-mm) minimum thickness.

2.10 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21 mm) sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert values>**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a needle-punched nonwoven-geotextile facing with an apparent opening size not exceeding No. 70 (0.21 mm) sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert values>**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels with Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43 mm) sieve, laminated to one side of the core and a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)] <Insert value>**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- D. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.43 mm) sieve, laminated to one side of the core, without a polymeric film bonded to the other side; and with a horizontal flow rate through the core of not less than **[2.8 gpm per ft. (35 L/min. per m)] <Insert value>**.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- E. Molded-Sheet Collector-Panel System with Polymeric Film: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425 mm) sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 17 gpm per ft. (112 to 211 L/min. per m)] <Insert values>** and a minimum horizontal, in-plane flow rate **[as indicated on Drawings] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- F. Molded-Sheet Collector-Panel System Wrapped with Geotextile: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; wrapped with a nonwoven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425 mm) sieve; and with a vertical flow rate through the core of **[21 to 97 gpm per ft. (261 to 1197 L/min. per m)] <Insert values>** and a

minimum horizontal, in-plane flow rate [as indicated on Drawings] [of 21 gpm per ft. (261 L/min. per m)] <Insert requirement>. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2.11 INSULATION DRAINAGE PANELS

- A. Unfaced, Wall-Insulation Drainage Panels, Type IV: ASTM C578, 25 psi (173 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplapped or channel edges and with one side having grooved drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- B. Geotextile-Faced, Wall-Insulation Drainage Panels, Type IV: ASTM C578, 25 psi (173 kPa) minimum compressive strength; extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven-geotextile filter fabric.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- C. Unfaced, Wall-Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation; fabricated with shiplapped or channel edges and with one side having grooved drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- D. Geotextile-Faced, Wall-Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; extruded-polystyrene board insulation, fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven-geotextile filter fabric.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- E. Unfaced, Plaza-Deck, Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- F. Geotextile-Faced, Plaza-Deck, Insulation Drainage Panels, Type VI: ASTM C578, 40 psi (276 kPa) minimum compressive strength; extruded-polystyrene board insulation, fabricated with tongue-and-groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven-geotextile filter fabric.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- G. Unfaced, Plaza-Deck, Insulation Drainage Panels, Type VII: ASTM C578, 60 psi (414 kPa) minimum compressive strength; unfaced extruded-polystyrene board insulation, fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- H. Geotextile-Faced, Plaza-Deck, Insulation Drainage Panels, Type VII: ASTM C578, 60 psi (414 kPa) minimum compressive strength; extruded-polystyrene board insulation, fabricated with tongue-and-

groove edges, with one side having grooved drainage channels, and faced with manufacturer's standard, nonwoven-geotextile filter fabric.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

- I. Mortar-Faced, Extruded-Polystyrene Board Insulation: ASTM C578, Type VI, 1.8 lb/cu. ft. (29 kg/cu. m) minimum density, 40 psi (276 kPa) minimum compressive strength, with tongue-and-groove edges on long dimension, and latex-modified cement mortar topping, **[3/8 inch (9 mm) thick, 4.5 lb/sq. ft. (19.5 kg/sq. m)] [15/16 inch (23 mm) thick, 11 lb/sq. ft. (53.7 kg/sq. m)]**.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2.12 ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Conductive Medium: Electrically conductive material specifically designed to enable ELD testing procedures as approved in writing by waterproofing membrane manufacturer.

1. Conductive medium to be located directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.

- B. Moisture-Monitoring System: Permanently embedded, continuously monitored moisture-detection system.

1. Sensors measuring moisture content to be placed within waterproofing system and connected to a monitoring program, with a notification indicating location of breach.

2.13 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: **[Brick] [Concrete] [Asphalt-block]** <Insert type> pavers specified in Section 321400 "Unit Paving."

- B. Stone Plaza-Deck Pavers: **[Granite] [Limestone] [Marble] [Quartz-based stone] [Slate] [Travertine]** <Insert type> pavers specified in Section 321400 "Unit Paving."

- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, **[square edged] [with top edges beveled 3/16 inch (5 mm)]**, manufactured for use as plaza-deck pavers; **[7500 psi (52 MPa)] [6500 psi (45 MPa)]** <Insert value> minimum compressive strength when tested in accordance with ASTM C140/C140M; absorption not greater than 5 percent when tested in accordance with ASTM C140/C140M; and no breakage and maximum 1 percent mass loss, freeze-thaw resistance, when tested in accordance with ASTM C67/C67M.

1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2. Thickness: **[2 inches (50 mm)] [2-3/8 inches (60 mm)]** <Insert dimension>.

3. Face Size: **[12 inches (305 mm) square] [12 by 24 inches (305 by 610 mm)] [18 inches (457 mm) square] [24 inches (610 mm) square] [As indicated]** <Insert dimension(s) and shape>.

4. Color and Texture: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range]** <Insert requirement>.

5. Provide pavers with holes or slots to permit rain flowing across plaza to drain through grate into roof drains.

- D. Plaza-Deck Paver Metal Straps: Securement strapping fabricated from stainless steel, a minimum of 3 inches (75 mm) wide by 0.031 inch (0.8 mm) thick with stainless steel anchors.
- E. Paver Pedestals: Paver-support assembly, **[standard with paver manufacturer] [or] [as named below]**, including **[fixed-height] [adjustable or stackable]** pedestals, shims, and spacer tabs for joint spacing of **[1/8 inch (3.2 mm)] [3/16 inch (5 mm)] [1/8 to 3/16 inch (3.2 to 5 mm)]**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - 2. Fill: As recommended in writing by pedestal manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that concrete has cured and aged for minimum time period as recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits as recommended in writing by waterproofing manufacturer. Test for capillary moisture by plastic sheet method in accordance with ASTM D4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with waterproofing manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate in accordance with ASTM D4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces in accordance with ASTM D4258.
- E. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, holes, and other voids.
- F. Coordinate with Owner for impact to air-intake equipment in the vicinity of the Work. Cover or filter air-intake louvers before proceeding with work that could affect indoor air quality or that could activate smoke detectors in the ductwork.

3.3 PREPARATION AT TERMINATIONS, PENETRATIONS, AND CORNERS

- A. Prepare surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, sleeves, and corners in accordance with waterproofing manufacturer's written instructions and to recommendations in **[ASTM C898/C898M]** **[and]** **[ASTM C1471/C1471M]**.

3.4 TREATMENT OF JOINTS AND CRACKS

- A. Prepare, treat, rout, and fill joints and cracks in substrate in accordance with waterproofing manufacturer's written instructions and recommendations in **[ASTM C898/C898M]** **[and]** **[ASTM C1471/C1471M]**. Before coating surfaces, remove dust and dirt from joints and cracks in accordance with ASTM D4258.
 - 1. Comply with ASTM C1193 for joint-sealant installation.
 - 2. Apply bond breaker on sealant surface, beneath preparation strip.
 - 3. Prime substrate along each side of joint and apply a single thickness of preparation strip at least 6 inches (150 mm) wide along each side of joint. Apply waterproofing in two separate applications and embed a joint-reinforcing strip in first preparation coat.
- B. Install sheet flashing and bond to deck and wall substrates where required in accordance with waterproofing manufacturer's written instructions.
 - 1. Extend sheet flashings for **[4 inches (100 mm)]** **<Insert dimension>** onto perpendicular surfaces and items penetrating substrate.

3.5 INSTALLATION OF ELECTRONIC LEAK-DETECTION (ELD) MATERIALS

- A. Install conductive medium directly under waterproofing membrane in accordance with ASTM D7877 and ASTM D8231.
- B. Install sensors, connections, and accessory items required for complete continuously monitored moisture-detection system in accordance with waterproofing manufacturer's written installation instructions.

3.6 INSTALLATION OF COLD FLUID-APPLIED WATERPROOFING

- A. General: Apply waterproofing in accordance with manufacturer's written instructions and to recommendations in **[ASTM C898/C898M]** **[and]** **[ASTM C1471/C1471M]**.
- B. Start installing waterproofing in presence of manufacturer's technical representative.
- C. Apply primer over prepared substrate at manufacturer's recommended rate and allow it to dry.
- D. Unreinforced Waterproofing Membrane Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.
 - 1. Apply one or more coats of waterproofing to obtain a seamless membrane free of entrapped gases and pinholes, with a minimum dry film thickness of **[60 mils (1.5 mm)]** **[90 mils (2.25 mm)]** **[120 mils (3 mm)]** **<Insert dimension>**.
 - 2. Apply waterproofing to prepared wall terminations and vertical surfaces.

3. Verify manufacturer's recommended wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).
- E. Reinforced Waterproofing Membrane Applications: Mix materials and apply waterproofing by roller, notched squeegee, trowel, or other suitable application method.
 1. Apply first coat of waterproofing, embed membrane-reinforcing fabric, and apply second coat of waterproofing to completely saturate reinforcing fabric and to obtain a seamless reinforced membrane free of entrapped gases and pinholes, with an average dry film total thickness of **[70 mils (1.8 mm)] [80 mils (2 mm)] [90 mils (2.3 mm)] [120 mils (3 mm)] <Insert dimension>**.
 2. Apply reinforced waterproofing to prepared wall terminations and vertical surfaces.
 3. Verify manufacturer's recommended wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).
- F. Cure waterproofing, taking care to prevent contamination and damage to membrane.

3.7 INSTALLATION OF PROTECTION COURSE

- A. Cover waterproofing with protection course with butted joints before membrane is subject to **[backfilling] [construction or vehicular traffic]**.
 1. For horizontal applications, install protection course loose laid over fully cured membrane.
 2. For vertical applications, set protection course in nominally cured membrane, which will act as an adhesive. If membrane cures before application of protection course, use adhesive.

3.8 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels in accordance with waterproofing manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing.
- B. Molded-Sheet Collector-Panel System: Install in accordance with waterproofing manufacturer's written instructions. Connect to piped subdrainage system specified in Section 334600 "Subdrainage."

3.9 INSTALLATION OF INSULATION DRAINAGE PANELS

- A. Install insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
- B. Ensure that drainage channels are aligned and free of obstructions.
- C. On vertical surfaces, set insulation drainage panels in adhesive or tape applied in accordance with manufacturer's written instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panels in accordance with manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.10 INSTALLATION OF PLAZA-DECK PAVERS

- A. Install pavers in accordance with manufacturer's written instructions.

- B. Install paver pedestals and accessories to required elevations. Adjust for final level and slope of paved surface.
- C. **[Loosely lay pavers on pedestals] [Seat pavers on pedestals and install bolted plate in accordance with manufacturer's written installation instructions]**, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paver assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- D. Install pavers to vary no more than 1/16 inch (1.6 mm) in elevation between adjacent pavers and no more than 1/16 inch (1.6 mm) from surface plane elevation of individual paver.
- E. Limit variation in paver installation to within **[1/4 inch in 10 ft. (6.4 mm in 3 m)] <Insert dimensions>** of surface plane in any direction; noncumulative.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections:
 - 1. Testing agency to verify thickness of waterproofing during application for each **[600 sq. ft. (56 sq. m)] <Insert dimension>** of installed waterproofing or part thereof.
- B. Perform the following tests before overlying construction is placed:
 - 1. ELD Testing: Testing agency surveys entire horizontal waterproofed area and flashings to locate discontinuities in the system assembly using ELD in accordance with ASTM D7877 and ASTM D8231.
 - a. After testing, repair areas of discontinuities, repeat tests, and make further repairs until waterproofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - b. Testing agency to prepare survey report indicating locations of initial discontinuities, if any.
 - 2. Flood Testing: Flood test each completed horizontal waterproofed area for leaks, in accordance with recommendations in ASTM D5957. Install temporary containment assemblies, plug, or dam drains, and flood with potable water.
 - a. Flood to an average depth of **[2-1/2 inches (63 mm)] <Insert depth>** with a minimum depth of **[1 inch (25 mm)] <Insert depth>** and not exceeding a depth of **[4 inches (100 mm)] <Insert depth>**. Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - b. Flood each area for **[24] [48] [72]** hours.
 - c. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing and flashing installations are watertight.
 - 1) Cost of retesting is the responsibility of Contractor.
 - d. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.

- C. Manufacturer's Field Service: Engage a **[full-time]** site representative qualified by waterproofing system manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components and to furnish daily reports to Architect.
 - 1. Final Inspection: Arrange for waterproofing system manufacturer's technical personnel to inspect system installation on completion, in presence of Architect, and to prepare inspection report.
 - 2. Notify Architect **and Owner** 48 hours in advance of date and time of inspection.
 - 3. Repair or remove and replace components of waterproofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional Tests and Inspections:
 - 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.
 - 2. Waterproofing system will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.12 PROTECTION, REPAIR, AND CLEANING

- A. Protect waterproofing system from damage and wear during remainder of construction period.
- B. Protect installed **[protection course]** **[drainage panels]** from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where material is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Correct deficiencies in or remove waterproofing system that does not comply with requirements, repair substrates, and repair or reinstall waterproofing system to a condition free of damage and deterioration at time of Substantial Completion and in accordance with warranty requirements.
- D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 07 14 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 16 13 00 - POLYMER MODIFIED CEMENT WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Prepackaged, polymer-modified cement waterproofing.
2. Field-mixed, polymer-modified cement waterproofing.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for [**concrete slabs serving as protective topping for waterproofing and**]the finishing of concrete walls and slabs to receive waterproofing.
2. Section 099726 "Cementitious Coatings" for polymer-modified cementitious coatings used primarily for decorative purposes.

1.2 DEFINITIONS

- A. Compatible: Material that will not adversely affect adjacent materials, is chemically compatible with adjacent materials, and where required for bond, achieves adhesive compatibility with adjacent materials.
- B. Chemically Compatible: Material that will not break down, deteriorate, degrade, or prematurely fail when in contact with another material. Material that will not cause chemical breakdown, deterioration, degradation, staining, or premature failure of another material.
- C. Adhesive Compatibility: Material that will develop bond strength or provide a suitable surface for another material to develop bond strength, complying with specified performance requirements when in contact with another material.

1.3 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation Work, including other waterproofing systems.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**]<Insert location>.
 1. Review waterproofing requirements including, but not limited to, the following:
 - a. Minimum concrete curing period.
 - b. Forecasted weather conditions.
 - c. Repairs.
 - d. Field quality control.
 - e. <Insert agenda items>.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and installation instructions.
- B. Samples for Initial Selection: For each type of exposed product.
 - 1. Include Samples of available color selection.
- C. Samples for Verification: For each type of exposed waterproofing indicated, in manufacturer's standard sizes.
- D. Sustainable Design Submittals:
 - 1. Product Data: For waterproofing, providing information for testing in compliance with ASHRAE 160-2016.2009.
 - 2. Product Data: For waterproofing, providing information for testing in compliance with CCR, Title 24, Part 2, Section 1202 and Ch. 14.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Statement: For Applicator.
- B. Product Test Reports: For each product formulation, for tests performed by manufacturer and witnessed by a qualified testing agency.
- C. Field quality-control reports.

1.7 QUALITY ASSURANCE

- A. Applicator Qualifications: Entity that employs applicators and supervisors who are trained[**and approved**] by waterproofing manufacturer in applying polymer-modified cement waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

1.8 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Build mockup [**as indicated on Drawings**]**<Insert mockup requirements>**.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver packaged waterproofing materials in original undamaged containers, with manufacturer's labels

and seals intact.

- B. Take necessary precautions to keep products clean, dry, and free of damage.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit polymer-modified cement waterproofing to be applied in accordance with manufacturer's written instructions.
- B. Proceed with waterproofing work only after installation of pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
- C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at **40 deg F (4.4 deg C)** or above for at least 48 hours before, during work, and cure period, and space is well ventilated and kept free of water.

PART 2 - PRODUCTS

2.1 PREPACKAGED, POLYMER-MODIFIED CEMENT WATERPROOFING

- A. Negative-Side, Polymer-Modified Cement Waterproofing: Manufacturer's proprietary blend of dry cementitious and other ingredients for mixing with **[water][or][polymer admixture]** to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists negative-side hydrostatic pressure, and has properties complying with or exceeding the criteria specified below.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Anti-Hydro International, Inc]**
 - b. **[AQUAFIN, Inc]**
 - c. **[ChemMasters, Inc]**
 - d. **[EDCO Products Inc.]**
 - e. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
 - f. **[Five Star Products, Inc.]**
 - g. **[Gemite Products Inc., a W.R. Meadows company]**
 - h. **[International Chem-Crete, Inc.]**
 - i. **[Master Builders Solutions]**
 - j. **[Metalcrete Industries]**
 - k. **[Sakrete; CRH Americas, Oldcastle APG]**
 - l. **[Sika Corporation]**
 - m. **[SpecChem, LLC]**
 - n. **[Specco Industries, Inc]**
 - o. **[United Gilsonite Laboratories (UGL)]**
 - p. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. **[Anti-Hydro International, Inc]**
 - b. **[AQUAFIN, Inc]**
 - c. **[ChemMasters, Inc]**
 - d. **[EDCO Products Inc.]**
 - e. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
 - f. **[Five Star Products, Inc.]**
 - g. **[Gemite Products Inc., a W.R. Meadows company]**
 - h. **[International Chem-Crete, Inc.]**
 - i. **[Master Builders Solutions]**
 - j. **[Metalcrete Industries]**
 - k. **[Sakrete; CRH Americas, Oldcastle APG]**
 - l. **[Sika Corporation]**
 - m. **[SpecChem, LLC]**
 - n. **[Specco Industries, Inc]**
 - o. **[United Gilsonite Laboratories (UGL)]**
 - p. **<Insert manufacturer's name>**
3. Water Permeability: Maximum **[zero for water at 30 ft. (9 m)]<Insert requirement>** when tested in accordance with COE CRD-C 48.
 4. Compressive Strength: Minimum **[4000 psi (27.6 MPa)]<Insert value>** at 28 days when tested in accordance with ASTM C109/C109M.
 5. Flexural Strength: Minimum **[710 psi (4.8 MPa)]<Insert value>** at 28 days when tested in accordance with ASTM C348.
 6. Potable Water Containment: Products of this Section must be certified to NSF 61 for use with potable water.
 7. Color: **[White][Gray][Match Architect's samples][As selected by Architect from full range][As indicated in a color schedule]<Insert color>**.
 8. VOC Content: **[100]** g/L or less.
 9. Low-Emitting Materials: Verify interior coatings comply with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 10. VOC Content: **[100]** g/L or less.
 11. Low-Emitting Materials: Verify VOC emissions of interior coatings comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 12. VOC Emissions: Verify interior coatings contain no more than half of the chronic REL of VOCs when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.
- B. Positive-Side, Polymer-Modified Cement Waterproofing: Manufacturer's proprietary blend of dry cementitious and other ingredients for mixing with **[water][or][polymer admixture]** to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists positive-side hydrostatic pressure, and has properties complying with or exceeding the criteria specified below.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [Anti-Hydro International, Inc]
 - b. [AQUAFIN, Inc]
 - c. [Conproco Corporation]
 - d. [Damtite Waterproofing, Inc.]
 - e. [EDCO Products Inc.]
 - f. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - g. [Five Star Products, Inc.]
 - h. [Gemite Products Inc., a W.R. Meadows company]
 - i. [International Chem-Crete, Inc.]
 - j. [Master Builders Solutions]
 - k. [Metalcrete Industries]
 - l. [Sakrete; CRH Americas, Oldcastle APG]
 - m. [Sika Corporation]
 - n. [SpecChem, LLC]
 - o. [Specco Industries, Inc]
 - p. [United Gilsonite Laboratories (UGL)]
 - q. [Wall Firma, Inc]
 - r. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Anti-Hydro International, Inc]
 - b. [AQUAFIN, Inc]
 - c. [Conproco Corporation]
 - d. [Damtite Waterproofing, Inc.]
 - e. [EDCO Products Inc.]
 - f. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - g. [Five Star Products, Inc.]
 - h. [Gemite Products Inc., a W.R. Meadows company]
 - i. [International Chem-Crete, Inc.]
 - j. [Master Builders Solutions]
 - k. [Metalcrete Industries]
 - l. [Sakrete; CRH Americas, Oldcastle APG]
 - m. [Sika Corporation]
 - n. [SpecChem, LLC]
 - o. [Specco Industries, Inc]
 - p. [United Gilsonite Laboratories (UGL)]
 - q. [Wall Firma, Inc]
 - r. <Insert manufacturer's name>
3. Water Permeability: Maximum [zero for water at 30 ft. (9 m)]<Insert requirement> when tested in accordance with COE CRD-C 48.
4. Compressive Strength: Minimum [4000 psi (27.6 MPa)]<Insert value> at 28 days when tested in accordance with ASTM C109/C109M.
5. Flexural Strength: Minimum [710 psi (4.8 MPa)]<Insert value> at 28 days when tested in accordance with ASTM C348.
6. Color: [White][Gray][Match Architect's samples][As selected by Architect from full range][As indicated in a color schedule]<Insert color>.

2.2 FIELD-MIXED, POLYMER-MODIFIED CEMENT WATERPROOFING

- A. Admixture for Field Mixing: Manufacturer's standard polymer admixture for mixing with portland cement and sand to produce a waterproof coating that is suitable for vertical and horizontal applications below

or above grade, is breathable, resists **[positive][negative]**-side hydrostatic pressure and has properties complying with or exceeding the criteria specified below.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Anti-Hydro International, Inc]**
 - b. **[United Gilsonite Laboratories (UGL)]**
 - c. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Anti-Hydro International, Inc]**
 - b. **[United Gilsonite Laboratories (UGL)]**
 - c. **<Insert manufacturer's name>**
3. Water Permeability: Maximum **[zero for water at 30 ft. (9 m)]<Insert requirement>** when tested in accordance with COE CRD-C 48.
4. Compressive Strength: Minimum **[4000 psi (27.6 MPa)]<Insert value>** at 28 days when tested in accordance with ASTM C109/C109M.
5. Flexural Strength: Minimum **[710 psi (4.8 MPa)]<Insert value>** at 28 days when tested in accordance with ASTM C348.
6. VOC Content: **[100]** g/L or less.
7. Low-Emitting Materials: Verify interior coatings comply with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
8. VOC Content: **[100]** g/L or less.
9. Low-Emitting Materials: Verify VOC emissions of interior coatings comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
10. VOC Emissions: Verify interior coatings contain no more than half of the chronic REL of VOCs when tested in accordance with the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.

2.3 ACCESSORY MATERIALS

- A. General: Accessory materials as recommended in writing by waterproofing manufacturer for intended use.
- B. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended in writing by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections, and compatible with substrate and other materials indicated.
- C. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended in writing by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to

vehicular traffic); and compatible with substrate and other materials indicated.

- D. Portland Cement: ASTM C150/C150M, Type I.
- E. Slurry-Coat Sand: ASTM C144.
- F. Trowel-Coat Sand: ASTM C33/C33M, fine aggregate.
- G. Water: Potable.

2.4 MIXES

- A. Prepackaged, Polymer-Modified Cement Waterproofing: Add prepackaged dry ingredients to mixing liquid in accordance with manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency.
- B. Field-Mixed, Polymer-Modified Cement Waterproofing: Add polymer admixture to portland cement and sand in accordance with manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Confirm water stops and other primary joint seals have been installed in concrete joints.
- C. Confirm waterproofing thickness to be applied to substrate face locations will not interfere with required operating and service clearances for elevators and other equipment to be installed within pits.
- D. Proceed with application only after unsatisfactory conditions have been corrected.
- E. Notify Architect in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions.
- B. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[**to confine spraying operation and**] to ensure adequate ambient temperatures and ventilation conditions for application.
- C. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- D. Stop active water leaks with plugging compound.
- E. Repair damaged or unsatisfactory substrate with patching compound.

1. At holes and cracks **1/16 inch (1.6 mm)** wide or larger in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and minimum **1 inch (25 mm)** deep. Fill reveal with patching compound flush with surface.
- F. Surface Preparation: Remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
1. Clean concrete surfaces in accordance with ASTM D4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic acid solution in accordance with ASTM D4260.
 - b. Smooth-Formed and Trowel-Finished Concrete: Prepare by mechanical abrading or abrasive-blast cleaning in accordance with ASTM D4259.
 2. Clean concrete unit masonry surfaces in accordance with ASTM D4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of **1/16 inch (1.6 mm)**.
 3. Clean clay masonry surfaces in accordance with ASTM D5703.
 4. Concrete Joints: Clean reveals.

3.3 APPLICATION OF POLYMER-MODIFIED CEMENT WATERPROOFING

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
1. Saturate surface with water[**for several hours**] and maintain damp condition until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces, and extend waterproofing onto adjacent surfaces as follows:
 - a. Onto columns integral with treated walls.
 - b. Onto interior nontreated walls intersecting exterior treated walls, for a distance of **[24 inches (600 mm) for cast-in-place concrete][and][48 inches (1200 mm) for masonry]**.
 - c. Onto exterior walls and onto both exterior and interior columns, for a height of **12 inches (300 mm)**, where floors, but not walls, are treated.
 - d. Onto every substrate in areas indicated for treatment, including **[pipe trenches][pipe chases][pits][sumps]<Insert area>[and][similar offsets and features]**.
 3. Number of Coats: **[Number required for specified water permeability][Two][Three]<Insert number>**.
 - a. Coating Thickness: Maximum application thickness of **[47 mils (1.2 mm)][60 mils (1.5 mm)]<Insert value>** per coat for total thickness **[as required for specified water permeability][of 100 mils (2.5 mm)][of 120 mils (3.0 mm)]<Insert requirement>**.
 - b. Apply first coat as a slurry with brush or roller, and apply subsequent coats with brush, roller, spray, or trowel.
 - c. Vigorously work first coat onto the substrate, forcing the material into surface voids. Apply each subsequent coat into full contact with previous coat.
 - d. Allow manufacturer's recommended time between coats. Dampen surface between coats.

- B. Final Coat Finish: [**Smooth troweled**][**Brushed**][**Textured**]<Insert requirement>.
- C. Curing:
 - 1. Air-cure waterproofing for not less than [**five**]<Insert number> days immediately after application and prior to being placed in service.
 - 2. Moist-cure waterproofing for not less than [**three**]<Insert number> days immediately after application has set, followed by air drying prior to being placed in service unless otherwise recommended in writing by manufacturer.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed application of waterproofing.
- B. Prepare test and inspection reports.

3.5 PROTECTION AND CLEANING

- A. Protect surfaces from hot, dry, and windy weather conditions. Prevent rapid drying through manufacturer-approved methods.

END OF SECTION 07 16 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 16 16 00 - CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Crystalline waterproofing.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for concrete slabs serving as protective topping for waterproofing and the finishing of concrete walls and slabs to receive waterproofing.

1.2 DEFINITIONS

- A. Compatible: Material that will not adversely affect adjacent materials, is chemically compatible with adjacent materials, and where required for bond, achieves adhesive compatibility with adjacent materials.
- B. Chemically Compatible: Material that will not break down, deteriorate, degrade, or prematurely fail when in contact with another material. Material that will not cause chemical breakdown, deterioration, degradation, staining, or premature failure of another material.
- C. Adhesive Compatibility: Material that will develop bond strength or provide a suitable surface for another material to develop bond strength, complying with specified performance requirements when in contact with another material.

1.3 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation Work, including other waterproofing systems.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1. Review waterproofing requirements including, but not limited to, the following:
 - a. Minimum concrete curing period.
 - b. Forecasted weather conditions.
 - c. Repairs.
 - d. Field quality control.
 - e. **<Insert agenda items>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and installation instructions.
- B. Sustainable Design Submittals:
 - 1. Product Data: For waterproofing, providing information for testing in compliance with ASHRAE 160-2016.2009.
 - 2. Product Data: For waterproofing, providing information for testing in compliance with CCR, Title 24, Part 2, Section 1202 and Ch. 14.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Statement: For **[Applicator][and][testing agency]**.
- B. Product Test Reports: For each product formulation, for tests performed by manufacturer and witnessed by a qualified testing agency.
- C. Field quality-control reports.
- D. Sample warranties.

1.7 QUALITY ASSURANCE

- A. Applicator Qualifications: Entity that employs applicators and supervisors who are trained[**and approved**] by waterproofing manufacturer in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

1.8 MOCKUPS

- A. Build mockups to set quality standards for materials and execution.
 - 1. Build mockup [**as indicated on Drawings**]**<Insert mockup requirements>**.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver packaged waterproofing materials in original undamaged containers, with manufacturer's labels and seals intact.
- B. Store materials in dry environment at a temperature above **45 degrees F (7 degrees C)**.
- C. Do not use materials stored for more than 24 months from date of manufacture.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit crystalline waterproofing to be applied in accordance with manufacturer's written instructions and warranty requirements.
- B. Proceed with waterproofing work only after installation of pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

1.11 WARRANTY

- A. Manufacturer's Material Warranty: Manufacturer agrees to replace waterproofing that fails to remain watertight within specified warranty period.
 - 1. Warranty includes replacement of waterproofing system.
 - 2. Warranty Period: **[Five][Ten]<Insert number>** years from date of Substantial Completion.
- B. Applicator's Special Warranty: Submit warranty signed by Applicator, to replace waterproofing that fails to remain watertight within specified warranty period covering Work of this Section.
 - 1. Warranty includes leak remediation, and coverage for failure to meet specified requirements, including defects caused by faulty workmanship.
 - 2. Warranty Period: **[Five]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WATERPROOFING MATERIALS

- A. Crystalline Waterproofing: Prepackaged, **[gray][white]**-colored proprietary blend of portland cement, specially treated sand, and active chemicals that, when mixed with water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; with properties complying with or exceeding the criteria specified below.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Anti-Hydro International, Inc]**
 - b. **[AQUAFIN, Inc]**
 - c. **[ChemMasters, Inc]**
 - d. **[Conproco Corporation]**
 - e. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
 - f. **[Gemite Products Inc., a W.R. Meadows company]**
 - g. **[International Chem-Crete, Inc.]**
 - h. **[IPA Systems, Inc.]**
 - i. **[KOSTER American Corporation]**
 - j. **[Kryton International, Inc.]**
 - k. **[Master Builders Solutions]**

- l. **[Penetron USA, Inc.]**
 - m. **[Sika Corporation]**
 - n. **[Tremco Incorporated]**
 - o. **[Xypex Chemical Corporation]**
 - p. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Anti-Hydro International, Inc]**
 - b. **[AQUAFIN, Inc]**
 - c. **[ChemMasters, Inc]**
 - d. **[Conproco Corporation]**
 - e. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
 - f. **[Gemite Products Inc., a W.R. Meadows company]**
 - g. **[International Chem-Crete, Inc.]**
 - h. **[IPA Systems, Inc.]**
 - i. **[KOSTER American Corporation]**
 - j. **[Kryton International, Inc.]**
 - k. **[Master Builders Solutions]**
 - l. **[Penetron USA, Inc.]**
 - m. **[Sika Corporation]**
 - n. **[Tremco Incorporated]**
 - o. **[Xypex Chemical Corporation]**
 - p. **<Insert manufacturer's name>**
3. Water Permeability: Maximum **[zero for water at 30 ft. (9 m)]<Insert requirement>** when tested in accordance with COE CRD-C 48.
 4. Compressive Strength: Minimum **[4000 psi (27.6 MPa)]<Insert value>** at 28 days when tested in accordance with ASTM C109/C109M.
 5. Self-Sealing: Autogenous crack sealing of treated concrete for cracks with width of **0.02 inch (0.5 mm)** or greater when subjected to hydrostatic pressure of **65 psi (0.44 MPa)**.
 6. Sulfate Resistance: The waterproofing treatment must improve concrete resistance to sulfates by reducing permeability without affecting compressive strength; performance to be verified by independent testing.
 7. Potable Water Containment: Products of this Section must be certified to NSF 61 for use with potable water.

2.2 ACCESSORY MATERIALS

- A. General: Accessory materials as recommended in writing by waterproofing manufacturer for intended use.
- B. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended in writing by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; and compatible with substrate and other materials indicated.
- C. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended in writing by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); and compatible with substrate and other materials indicated.
- D. Water: Potable.

2.3 MIXES

- A. Crystalline Waterproofing: Add prepackaged dry ingredients to water in accordance with manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Proceed with application only after unsatisfactory conditions have been corrected.
- C. Notify Architect in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions.
- B. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[**to confine spraying operation and**] to ensure adequate ambient temperatures and ventilation conditions for application.
- C. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- D. Stop active water leaks with plugging compound.
- E. Repair damaged or unsatisfactory substrate with patching compound.
 - 1. At holes and cracks **1/16 inch (1.6 mm)** wide or larger in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and minimum **1 inch (25 mm)** deep. Fill reveal with patching compound flush with surface.
- F. Surface Preparation: Remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
 - 1. Clean concrete surfaces in accordance with ASTM D4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic acid solution in accordance with ASTM D4260.
 - b. Smooth-Formed and Trowel-Finished Concrete: Prepare by mechanical abrading or abrasive-blast cleaning in accordance with ASTM D4259.
 - 2. Clean concrete unit masonry surfaces in accordance with ASTM D4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of **1/16 inch (1.6 mm)**.

3. Concrete Joints: Clean reveals.

3.3 APPLICATION OF CRYSTALLINE WATERPROOFING

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
 1. Saturate surface with water for several hours and maintain damp condition until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces, and extend waterproofing onto adjacent surfaces as follows:
 - a. Onto columns integral with treated walls.
 - b. Onto interior nontreated walls intersecting exterior treated walls, for a distance of **[24 inches (600 mm) for cast-in-place concrete][and][48 inches (1200 mm) for masonry]**.
 - c. Onto exterior walls and onto both exterior and interior columns, for a height of **12 inches (300 mm)**, where floors, but not walls, are treated.
 - d. Onto every substrate in areas indicated for treatment, including **[pipe trenches][pipe chases][pits][sumps]<Insert area>[and][similar offsets and features]**.
 3. Number of Coats: **[Number required for specified water permeability][Two][Three]<Insert number>**.
 4. Application Method: Apply to ensure that each coat fills voids and is in full contact with substrate or previous coat.
 5. Dampen surface between coats.
- B. Final Coat Finish: **[Smooth][Brushed][Spray textured]**.
- C. Curing: Moist-cure waterproofing for **[three]<Insert number>** days immediately after final coat has set, followed by air drying, unless otherwise recommended in writing by manufacturer.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed application of waterproofing.
- B. Prepare test and inspection reports.

END OF SECTION 07 16 16 00

SECTION 07 16 19 00 - METAL OXIDE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal-oxide waterproofing.

B. Related Requirements:

1. Section 031000 "Concrete Forming and Accessories" for forms and waterstops.
2. Section 033000 "Cast-in-Place Concrete" for concrete slabs serving as protective topping for waterproofing and the finishing of concrete walls and slabs to receive waterproofing.
3. Section 042000 "Unit Masonry" for cleaning of unit masonry walls to receive waterproofing.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 COORDINATION

- A. Coordinate Work under this Section with adjacent concrete foundation work, including fill[, **other waterproofing systems**] [, **underslab vapor retarders**] [, **underslab insulation**] [**and**] [**subdrainage systems**].

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** **<Insert location>**.

1. Review waterproofing requirements including, but not limited to, the following:
 - a. Minimum concrete curing period.
 - b. Forecasted weather conditions.
 - c. Repairs.
 - d. Field quality control.
 - e. **<Insert agenda items>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, and installation instructions.

- B. Sustainable Design Submittals:

1. <Double click to insert sustainable design text for moisture control>

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Statements: For Applicator[**and testing agency**].
- B. Manufacturer Certificates: For each type of waterproofing, patching, and plugging material.
- C. Product Test Reports: For tests performed by manufacturer and witnessed by a qualified testing agency.
 - 1. Iron content of metallic waterproofing.
 - 2. Oxidizing agent content of metallic waterproofing.
- D. Field quality control reports.

1.6 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm that employs applicators and supervisors who are trained and **[certified] [approved]** by waterproofing manufacturer.

1.7 MOCKUPS

- A. Build mockups to verify selections made under submittals and to set quality standards for application.
 - 1. Build mockup of typical **[vertical] [and] [horizontal]** surfaces[**as shown on Drawings**].
 - a. Size: **[100 sq. ft. (9.29 sq. m) in size] <Insert size>**.
 - 2. Visually and physically examined for bonding and loose materials by waterproofing material manufacturer.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver packaged waterproofing materials in original undamaged containers, with manufacturer's labels and seals intact.
- B. Store in dry locations, at the temperature recommended in writing by the manufacturer, with adequate ventilation and handle in a manner to prevent damage or contamination.
- C. Remove and replace materials that cannot be applied within their stated shelf life.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit metal-oxide waterproofing to be performed in accordance with manufacturer's written instructions and warranty requirements.

- B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
- C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

PART 2 - PRODUCTS

2.1 WATERPROOFING MATERIALS

- A. Metal-Oxide Waterproofing: A product specifically formulated for waterproofing concrete and masonry substrates and containing pulverized iron and a chemical oxidizing agent to cause the iron particles to oxidize and grow in size in the presence of water.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
 - 2. **<Insert properties>**.

2.2 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by metal-oxide waterproofing manufacturer for intended use and compatibility with one another and with waterproofing.
- B. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended in writing by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; and compatible with substrate and other materials indicated.
 - 1. **<Insert manufacturers or products>**.
- C. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended in writing by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); and compatible with substrate and other materials indicated.
 - 1. **<Insert manufacturers or products>**.
- D. Portland Cement: ASTM C150/C150M, Type I.
- E. Sand: ASTM C144.
- F. Aggregate for Protective Coat: ASTM C33/33M.
- G. Water: Potable.
- H. Sealant: Polyurethane foam.

2.3 MIXES

- A. Metal-Oxide Coats: Add metal-oxide waterproofing compound and other mix components, if any, to water in accordance with manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency for each coat.
- B. Measure, batch, and mix portland cement and sand in the proportion of [1:2-1/2] <Insert proportion> and water. Blend together with mechanical mixer to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Confirm water stops and other primary joint seals have been installed in concrete joints.
- C. Proceed with application only after unsatisfactory conditions have been corrected.
- D. Notify Architect in writing of active leaks or defects that would affect system performance.
- E. Confirm waterproofing thickness to be applied to substrate face locations will not interfere with required operating and service clearances for elevators and other equipment installed within pits.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions.
- B. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to ensure adequate ambient temperatures and ventilation conditions for application.
- C. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- D. Stop active water leaks with plugging compound.
- E. Repair damaged or unsatisfactory substrate with patching compound.
 - 1. At holes and cracks 1/16 inch (1.6 mm) wide or larger in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and minimum 1 inch (25 mm) deep. Fill reveal with patching compound flush with surface.
- F. Surface Preparation: Remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
 - 1. Clean concrete surfaces in accordance with ASTM D4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic acid solution in accordance with ASTM D4260.

- b. Smooth-Formed and Trowel-Finished Concrete: Prepare by mechanical abrading or abrasive-blast cleaning in accordance with ASTM D4259.
2. Clean concrete unit masonry surfaces in accordance with ASTM D4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of 1/16 inch (1.6 mm).
3. Clean clay masonry surfaces in accordance with ASTM D5703.
4. Concrete Joints: Clean reveals.

3.3 APPLICATION OF METAL-OXIDE WATERPROOFING

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
 1. Saturate surface with water and maintain damp condition in accordance with manufacturer's written instructions until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces, and extend waterproofing onto adjacent surfaces as follows:
 - a. Onto columns integral with treated walls.
 - b. Onto interior nontreated walls intersecting exterior treated walls, for a distance of **[24 inches (600 mm) for cast-in-place concrete] [and] [48 inches (1200 mm) for masonry]**.
 - c. Onto exterior walls and onto both exterior and interior columns, for a height of 12 inches (300 mm), where floors, but not walls, are treated.
 - d. Onto every substrate in areas indicated for treatment, including **[pipe trenches] [, pipe chases] [, pits] [, sumps] <Insert area> [, and similar offsets and features]**.
 3. Number of Metal-Oxide Coats: Applying two or more coats required for specified water permeability.
 4. Application Method: Brush apply the waterproofing, vigorously working first coat onto the substrate and forcing the material into surface voids. Brush each subsequent coat into full contact with previous coat.
 5. Dampen surface between coats.
 6. Allow each coat to set for maximum 24 hours between coats.
- B. Wall and Columns Protection Coat: Immediately after metal-oxide coats have set, apply protection coat on walls and columns to a minimum thickness of **[1/8 inch (3 mm)] <Insert thickness>**.
 1. Finish: **[Smooth] [Brushed] [Textured] <Insert finish>**.
- C. Floors Protective Topping: Immediately after metal-oxide coats have set, apply floor topping to a thickness of **[1 inch (25 mm)] [1-1/2 inches (38 mm)] <Insert thickness>**.
 1. Finish: **[Smooth] [Brushed] <Insert finish>**.
- D. Curing: Moist-cure waterproofing for **[three] <Insert number>** days immediately after installation has set, followed by air drying prior to being placed in service, unless otherwise recommended in writing by manufacturer.

07 - Thermal And Moisture Protection

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed application of waterproofing.
- B. Prepare test and inspection reports.

END OF SECTION 07 16 19 00

SECTION 07 17 00 00 - BENTONITE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Geotextile/bentonite sheets.
2. Composite bentonite membrane.
3. Protection course.
4. Molded-sheet drainage panels.
5. Insulation drainage panels.

B. Related Requirements:

1. Section 031000 "Concrete Forming and Accessories" for forms and waterstops.
2. Section 072100 "Thermal Insulation" for below-grade foundation insulation.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
4. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for exterior-wall expansion-joint assemblies that interface with waterproofing.
5. Section 312000 "Earth Moving" for excavating and backfilling.
6. Section 315000 "Excavation Support and Protection" for permanent below-grade support systems that receive blindside waterproofing.

1.2 DEFINITIONS

- A. Compatible: Material that will not adversely affect adjacent materials, is chemically compatible with adjacent materials, and where required for bond, achieves adhesive compatibility with adjacent materials.
- B. Chemical Compatibility: Material that will not break down, deteriorate, degrade, or prematurely fail when in contact with another material. Material that will not cause chemical breakdown, deterioration, degradation, staining, or premature failure of another material.

1.3 COORDINATION

- A. Coordinate the Work of this Section with adjacent concrete foundation work, including fill[, **other waterproofing systems**] [, **under-slab vapor retarders**] [, **under-slab insulation**] [and] [**subdrainage systems**].
- B. Coordinate requirements for concrete formwork to provide suitable substrate for waterproofing and to minimize penetrations through waterproofing.
- C. Coordinate formwork and form bracing requirements for blindside sheet waterproofing. Coordinate restrictions on use of form ties and other components as necessary to eliminate or minimize penetrations through blindside sheet waterproofing.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

1.5 ACTION SUBMITTALS

- A. Product Data:
 - 1. For each type of product.
 - a. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 - b. Include manufacturer's written installation instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, air barrier, and other termination conditions.
- C. Samples: For each of the following products, in sizes indicated:
 - 1. Waterproofing: 6 inches (150 mm) square.
 - 2. Protection Course: 6 inches (150 mm) square.
 - 3. Molded-Sheet Drainage Panels: 6 inches (150 mm) square.
 - 4. Insulation Drainage Panels: 6 inches (150 mm) square.
- D. Sustainable Design Submittals:
 - 1. <Double click to insert sustainable design text for moisture control>

1.6 INFORMATIONAL SUBMITTALS

- A. Manufacturer Certificates: For each type of waterproofing material.
- B. Preconstruction Test Reports: For water samples taken at Project site along with recommendations resulting from these tests.
- C. Field quality control reports.
- D. Sample warranties.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that employs installers and supervisors who are trained and **[certified]** **[approved]** by waterproofing manufacturer.

1.8 MOCKUPS

- A. Build mockups to verify selections made under samples and set quality standards for application.

1. Build mockup of installation on typical **[vertical]** **[and]** **[horizontal]** surfaces **[as indicated on Drawings]**.
 - a. Size: **[10 sq. ft. (0.9 sq. m) in size]** **<Insert description>**.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in factory-sealed and -labeled packaging. Handle and store following manufacturer's instructions, recommendations, and material safety data sheets. Protect from construction operation-related damage and damage from weather, excessive temperatures, and prolonged sunlight.
- B. Do not double-stack pallets during shipping or storage. Protect waterproofing materials from moisture, excessive temperatures, and sources of ignition. Provide cover, top, and all sides, for materials stored on-site, allowing for adequate ventilation.
- C. Remove damaged material from site and dispose of in accordance with applicable regulations.

1.10 PRECONSTRUCTION TESTING

- A. Preconstruction Testing: Engage a qualified testing agency to perform preconstruction testing on ground water.
 1. Obtain water samples from Project site at approximate locations where waterproofing will be installed and test for acids, alkalis, brine, or other contaminants that may inhibit performance of waterproofing materials.
 2. Comply with waterproofing manufacturer's written instructions for testing.

1.11 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit bentonite waterproofing to be installed in accordance with manufacturer's written instructions and warranty requirements.
 1. Do not apply waterproofing materials to surfaces where ice or frost is visible. Do not apply bentonite waterproofing materials in areas with standing water.
 2. Do not place bentonite clay products in panel or composite form on damp surfaces unless such practice is approved in writing by manufacturer.

1.12 WARRANTY

- A. Special Warranty: Manufacturer **[and Installer]** agree(s) to repair or replace components of bentonite waterproofing system that fail in materials or workmanship within specified warranty period.
 1. Warranty Period: **[Five]** **[10]** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain bentonite waterproofing system from single source from single manufacturer. Obtain accessory products used with bentonite waterproofing, including waterstops specified in Section 033000 "Cast-in-Place Concrete" from sources acceptable to bentonite waterproofing manufacturer.

2.2 GEOTEXTILE/BENTONITE SHEETS

- A. Geotextile/Bentonite Sheet: Minimum of 1.10 lb/sq. ft. (5.37 kg/sq. m) of granular sodium bentonite between two layers of polypropylene geotextile fabric, one woven and one nonwoven, needle punched.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Grab Tensile Strength: **[95 lbf (422 N)]** **<Insert value>** in accordance with ASTM D4632.
3. Puncture Resistance: 100 lbf (445 N) in accordance with ASTM D4833.

- B. Contaminant-Resistant Geotextile/Bentonite Sheet: Minimum of 1.10 lb/sq. ft. (5.37 kg/sq. m) of contaminant-resistant granular sodium bentonite, specially formulated for use in saltwater or contaminated ground water, between two layers of polypropylene geotextile fabric, one woven and one nonwoven, needle punched.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Grab Tensile Strength: **[95 lbf (422 N)]** **<Insert value>** in accordance with ASTM D4632.
3. Puncture Resistance: 100 lbf (445 N) in accordance with ASTM D4833.

- C. Polyethylene-Lined Geotextile/Bentonite Sheet: Minimum of 1.0 lb/sq. ft. (4.8 kg/sq. m) of granular sodium bentonite between two layers of geotextile fabric.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Grab Tensile Strength: 95 lbf (422 N) in accordance with ASTM D4632.
3. Puncture Resistance: 100 lbf (445 N) in accordance with ASTM D4833.
4. Vapor Permeance: 0.03 perm (0.172 ng/Pa x s x sq. m) in accordance with ASTM E96/E96M.

- D. Contaminant-Resistant Polyethylene-Lined Geotextile/Bentonite Sheet: Minimum of 1.0 lb/sq. ft. (4.8 kg/sq. m) of contaminant-resistant granular sodium bentonite clay granules, specially formulated for use in saltwater or contaminated ground water, between two layers of geotextile fabric.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Grab Tensile Strength: 120 lbf (530 N) in accordance with ASTM D4632.
3. Puncture Resistance: 140 lbf (620 N) in accordance with ASTM D4833.
4. Vapor Permeance: 0.03 perm (0.172 ng/Pa x s x sq. m) in accordance with ASTM E96/E96M.

2.3 COMPOSITE BENTONITE MEMBRANE

- A. Composite Bentonite Membrane: Manufacturer's standard membrane consisting of a geomembrane liner bonded to a layer of bentonite.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Puncture Resistance: 155 lbf (689 N) in accordance with ASTM E154.
3. Vapor Permeance: 0.03 perm (0.172 ng/Pa x s x sq. m) in accordance with ASTM E96/E96M.

- B. Composite Bentonite Membrane with Protective Facing: Manufacturer's standard membrane consisting of geomembrane liner bonded to a layer of bentonite clay granules with a spun polypropylene facing.
 - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 - 2. Puncture Resistance: 155 lbf (689 N) in accordance with ASTM E154.
 - 3. Vapor Permeance: 0.03 perm (0.172 ng/Pa x s x sq. m) in accordance with ASTM E96/E96M.
- C. Contaminant-Resistant Composite Bentonite Membrane: Manufacturer's standard membrane consisting of polyethylene geomembrane bonded to a layer of bentonite.
 - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
 - 2. Puncture Resistance: 112 lbf (498 N) in accordance with ASTM E154.
 - 3. Vapor Permeance: 0.03 perm (0.172 ng/Pa x s x sq. m) in accordance with ASTM E96/E96M.

2.4 ACCESSORY WATERPROOFING SYSTEM MATERIALS

- A. General: Accessory materials as recommended in writing by bentonite waterproofing manufacturer for intended use and compatibility with one another and with waterproofing.
- B. Granular Bentonite: Sodium bentonite clay containing a minimum of 90 percent montmorillonite (hydrated aluminum silicate), with a minimum of 90 percent passing a No. 20 (0.85 mm) sieve.
- C. Bentonite Mastic: Bentonite compound of trowelable consistency, specifically formulated for application at joints and penetrations.
- D. Bentonite Tubes: Manufacturer's standard 2-inch- (50-mm-) diameter, water-soluble tube containing approximately 1.5 lb/ft. (2.2 kg/m) of granular bentonite; hermetically sealed; designed specifically for placing on wall footings at line of joint with exterior base of wall.
- E. Metal Termination Bars: Manufacturer's standard aluminum or stainless steel bars with upper flange to receive sealant.
- F. Plastic Protection Sheet: Polyethylene sheeting in accordance with ASTM D4397; thickness as recommended in writing by waterproofing manufacturer to suit application but at least 6 mils (0.15 mm) thick.
- G. Cement Grout Patching Material: Grout mix compatible with substrate being patched and recommended in writing by waterproofing manufacturer.
- H. Masonry Fasteners: Case-hardened nails or hardened-steel, powder-actuated fasteners. Depending on manufacturer's written requirements, provide 1/2- or 1-inch- (13- or 25-mm-) diameter washers under fastener heads.
- I. Sealants: As recommended in writing by waterproofing manufacturer. Comply with requirements specified in Section 079200 "Joint Sealants."
- J. Tapes: Waterproofing manufacturer's recommended waterproof tape for joints between sheets, membranes, or panels.
- K. Adhesive: Waterproofing manufacturer's water-based adhesive used to secure waterproofing to both vertical and horizontal surfaces.

2.5 PROTECTION COURSE

- A. Protection course material of type and thickness as recommended in writing by waterproofing manufacturer for each Project condition.

2.6 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel acceptable to dampproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side of the core, with or without a polymeric film bonded to the other side; and with a vertical flow rate through the core of **[9 to 21 gpm per ft. (112 to 261 L/min. per m)] <Insert value>**.
 - 1. <Double click here to find, evaluate, and insert list of manufacturers and products.>

2.7 INSULATION DRAINAGE PANELS

- A. Insulation Drainage Panels:
 - 1. Comply with Section 072100 "Thermal Insulation" for insulation drainage panels.
 - 2. Unfaced or geotextile-faced, extruded-polystyrene board insulation in accordance with ASTM C578, Type IV, 25 psi (173 kPa), or Type VI, 40 psi (276 kPa), minimum compressive strength; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
 - 3. <Double click here to find, evaluate, and insert list of manufacturers and products.>

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate preparations and other conditions affecting performance of bentonite waterproofing.
- B. Examine bentonite materials before installation. Reject materials that have been prematurely exposed to moisture.
- C. Verify that substrate is complete and that work that will penetrate waterproofing is complete and rigidly installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean, prepare, and treat substrates in accordance with manufacturer's written instructions.
- B. Formed Concrete Surfaces: Remove fins and projections. Fill voids, rock pockets, form-tie holes, and other defects with bentonite mastic or cement grout patching material in accordance with manufacturer's written instructions.

- C. Horizontal Concrete Surfaces: Remove debris, standing water, oily substances, mud, and similar substances that could impair the bonding ability of concrete or the effectiveness of waterproofing. Fill voids, cracks greater than 1/8 inch (3 mm), honeycomb areas, and other defects with bentonite mastic or cement grout patching material in accordance with manufacturer's written instructions.
- D. Excavation Support and Protection System: If water is seeping, use plastic protection sheets or other suitable means to prevent wetting the bentonite waterproofing. Fill minor gaps and spaces 1/8 inch (3 mm) wide or wider with wood, metal, concrete, or other appropriate filling material. Cover or fill large voids and crevices with cement mortar in accordance with manufacturer's written instructions.

3.3 INSTALLATION, GENERAL

- A. Prepare substrates, voids, cracks, and cavities; and install waterproofing and accessories in accordance with manufacturer's written instructions.
 - 1. Before installing, verify the correct side of waterproofing that faces substrate surface.
 - 2. Apply granular bentonite around penetrations in horizontal surfaces and changes in plane in accordance with manufacturer's details in preparation for bentonite tubes and mastic.
 - 3. Apply bentonite tubes, bentonite mastic, or both at changes of plane, construction joints in substrate, projections, and penetrations.
 - 4. Prime concrete substrates. Primer may be omitted on concrete surfaces that comply with manufacturer's written requirements for dryness, surface texture, and freedom from imperfections.
- B. Apply bentonite tubes continuously on footing against base of wall to be waterproofed.
- C. Protect waterproofing from damage and wetting before and during subsequent construction operations. Repair punctures, tears, and cuts.
- D. Install protection course before backfilling or placing overburden when recommended in writing by waterproofing manufacturer.

3.4 INSTALLATION OF GEOTEXTILE/BENTONITE SHEETS

- A. Install a continuous layer of waterproofing sheets directly against surface to be waterproofed. Lap ends and edges a minimum of 4 inches (100 mm) on horizontal and vertical substrates unless otherwise indicated. Stagger end joints between sheets a minimum of 24 inches (600 mm). Fasten seams by stapling to adjacent sheet or nailing to substrate.
- B. Below Structural Slabs-on-Grade: Place waterproofing sheets on compacted substrate with ends and edges lapped and stapled.
 - 1. Install a layer of waterproofing sheets under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms.
- C. Concrete Walls: Starting at bottom of wall, apply waterproofing sheets horizontally against wall. Secure with masonry fasteners spaced in accordance with manufacturer's written instructions. Extend to bottom of footing, grade beam, or wall, and secure.
- D. Termination at Grade:

1. Extend waterproofing sheets to within **[12 inches (300 mm)]** <Insert dimension> of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
 2. Fasten top edge of waterproofing sheets to wall and protect top edge with sheet metal counterflashing. Cover waterproofing with a lapped course of plastic protection sheets if backfilling does not proceed immediately.
- E. Excavation Support and Protection (Permanent Shoring): Encase tieback heads, rods, nuts, and plates in accordance with waterproofing manufacturer's written instructions for each configuration.
1. Install a layer of waterproofing sheets, with ends and edges lapped and nailed to shoring. Cover waterproofing with plastic protection sheets if needed for protection from precipitation; remove plastic sheets before placing concrete.
 2. Inspect and repair waterproofing after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.

3.5 INSTALLATION OF COMPOSITE BENTONITE MEMBRANE

- A. Install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of 4 inches (100 mm) unless otherwise indicated. Stagger end joints between membranes a minimum of 24 inches (600 mm). Seal joints with permanent seam tape or heat-welded for gas barrier.
- B. Below Structural Slabs-on-Grade: Apply waterproofing membrane with polyethylene side down, and staple ends and edges.
1. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms.
 2. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
- C. Slabs: Starting at lowest point, install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of 4 inches (100 mm).
- D. Concrete Walls: Apply mastic to form continuous 3/4-inch (19-mm) cant or fillet at intersection of footings and walls.
1. Starting at lowest point, install a layer of waterproofing membrane horizontally, extending a minimum of 6 inches (150 mm) onto the footing. Lap membrane ends and edges a minimum of 2 inches (50 mm).
 2. Secure membrane to wall.
 3. Apply mastic to form continuous 3/4-inch (19-mm) layer around penetrations.
 4. Termination at Grade: Extend waterproofing membrane to within **[12 inches (300 mm)]** <Insert dimension> of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
- E. Excavation Support and Protection (Permanent Shoring): Cut, clean, and treat tiebacks and similar projections. Encase tieback heads, rods, nuts, and plates in accordance with waterproofing manufacturer's written instructions for each configuration. If water is present, cover shoring and lagging with plastic protection sheets; remove plastic sheets before placing concrete.
1. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped minimum of 4 inches (100 mm) and nailed to shoring.
 2. Inspect and repair waterproofing membrane after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.

- F. Horizontal Roofs, Plazas, and between Slabs: Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped a minimum of 3 inches (75 mm).
 - 1. Apply mastic to form continuous 3/4-inch (19-mm) cant or fillet at intersection of horizontal and vertical substrates. Extend waterproofing membrane to top of curb or to a minimum of 6 inches (150 mm) above plane of waterproofing; secure with manufacturer's recommended tape.
 - 2. Clean overlap area and apply waterproof tape, rolling the exposed edge to seal to membrane below.
 - 3. Turn edges up and seal to vertical surfaces.

3.6 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels in accordance with manufacturer's written instructions. Use adhesives or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install protection course before installing drainage panels.

3.7 INSTALLATION OF INSULATION DRAINAGE PANELS

- A. Install over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.
- B. Ensure that drainage channels are aligned and free of obstructions.
- C. On vertical surfaces, set insulation units in adhesive or tape applied in accordance with manufacturer's written instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panels in accordance with manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.8 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service:
 - 1. Engage a factory-authorized service representative to test and inspect completed waterproofing installation before covering with other construction and provide written report stating that installation complies with manufacturer's written instructions.
 - a. Remove and replace applications of bentonite waterproofing where inspection indicates that it does not comply with specified requirements.
 - 2. Engage a **[full-time]** site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components and to furnish daily reports to Architect.
- B. Waterproofing will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.9 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Correct deficiencies in waterproofing or remove waterproofing that does not comply with requirements; repair substrates and reapply waterproofing.

END OF SECTION 07 17 00 00

07 - Thermal And Moisture Protection

Task	Specification	Specification Description
07 17 13 00	07 17 00 00	Bentonite Waterproofing

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 18 00 00 - TRAFFIC COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Traffic coatings and pavement markings for the following applications:
 - 1. Pedestrian traffic.
 - 2. Vehicular traffic.
 - 3. Equipment-room floor.
- B. Related Requirements:
 - 1. Section 071900 "Water Repellents" for penetrating and film-forming water repellents applied on traffic-bearing surfaces.
 - 2. Section 096723 "Resinous Flooring" for fluid-applied, [**decorative**][**general-use commercial**][**general-use industrial**][**high-performance**] resinous flooring that does not serve as a waterproofing membrane with integral wearing surface.
 - 3. Section 096766 "Fluid-Applied Athletic Flooring" for fluid-applied, resinous flooring for athletic activity areas.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**]<Insert location>.

1.3 ACTION SUBMITTALS

- A. Product Data: Traffic coatings and pavement markings for the following applications:
 - 1. Pedestrian traffic.
 - 2. Vehicular traffic.
 - 3. Equipment-room floor.
- B. Product Data Submittals: For each product.
 - 1. Include installation instructions and details, material descriptions, dry- or wet-film thickness requirements, and finish.
- C. Sustainable Design Submittals:
 - 1. Product Data: For coatings, indicating VOC content.
 - 2. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.
 - 3. Product Test Reports: For traffic coatings, documentation indicating the Solar Reflectance properties.
- D. Shop Drawings: For traffic coatings.
 - 1. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other

- termination conditions that are not included in manufacturer's product data.
2. Include plans showing layout of pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

- E. Samples for Initial Selection: For each type of exposed finish.
- F. Samples for Verification: For each type of exposed finish, prepared on rigid backing.
 1. Provide stepped Samples on backing to illustrate buildup of traffic coatings.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of traffic coating.
- C. Field quality-control reports.
- D. Sample Warranty: For manufacturer's warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For traffic coatings to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to set quality standards for materials and execution.
 1. Build mockup for each traffic coating and substrate to receive traffic coatings.
 2. Size: [200 sq. ft. (18.5 sq. m)]<Insert dimension> of each substrate to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below **40 deg F (5 deg C)**, when relative humidity exceeds 85 percent, or when temperatures are less than **5 deg F (3 deg C)** above dew point.
 1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.

- B. Do not install traffic coating until items that penetrate membrane have been installed.
- C. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of **[40 deg F (4.4 deg C) for oil-based materials][50 deg F (10 deg C) for water-based materials]**, and not exceeding **95 deg F (35 deg C)**.

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace traffic coating that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Adhesive or cohesive failures.
 - b. Abrasion or tearing failures.
 - c. Surface crazing or spalling.
 - d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
 - 2. Warranty Period: **[Five]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain traffic coatings from single source from single manufacturer.
- B. Obtain primary traffic-coating materials, including primers, from traffic-coating manufacturer. Obtain accessory materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of types and from sources recommended in writing by primary material manufacturer.
- C. Obtain pavement-marking paint from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Material Compatibility: Provide primers; base coat, intermediate coat, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

2.3 TRAFFIC COATINGS

- A. Traffic Coating : Manufacturer's standard, traffic-bearing, seamless, high-solids-content, cold liquid-applied, elastomeric, water-resistant membrane system with integral wearing surface for **[pedestrian traffic][vehicular traffic][and][equipment-room floor]<Insert requirement>** service condition; according to ASTM C957/C957M.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [Advanced Polymer Technology Corp.]
 - b. [Crossfield Products Corp]
 - c. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - d. [Gaco; Holcim Building Envelope]
 - e. [GCP Applied Technologies Inc.]
 - f. [H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]
 - g. [Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]
 - h. [Insl-X Products; Benjamin Moore & Co.]
 - i. [Key Resin Company]
 - j. [LymTal International, Inc.]
 - k. [Master Builders Solutions]
 - l. [Neogard; Hempel Group]
 - m. [Pacific Polymers; a Holcim brand]
 - n. [Pecora Corporation]
 - o. [POLY-CARB; Olin Corporation]
 - p. [Polycoat Products]
 - q. [PPG Paints; PPG Industries, Inc.]
 - r. [Sherwin-Williams Company (The)]
 - s. [Soprema, Inc.]
 - t. [Tremco Incorporated]
 - u. [Urethane Polymers International, Inc. (UPI)]
 - v. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
- a. [Advanced Polymer Technology Corp.]
 - b. [Crossfield Products Corp]
 - c. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - d. [Gaco; Holcim Building Envelope]
 - e. [GCP Applied Technologies Inc.]
 - f. [H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]
 - g. [Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]
 - h. [Insl-X Products; Benjamin Moore & Co.]
 - i. [Key Resin Company]
 - j. [LymTal International, Inc.]
 - k. [Master Builders Solutions]
 - l. [Neogard; Hempel Group]
 - m. [Pacific Polymers; a Holcim brand]
 - n. [Pecora Corporation]
 - o. [POLY-CARB; Olin Corporation]
 - p. [Polycoat Products]
 - q. [PPG Paints; PPG Industries, Inc.]
 - r. [Sherwin-Williams Company (The)]
 - s. [Soprema, Inc.]
 - t. [Tremco Incorporated]
 - u. [Urethane Polymers International, Inc. (UPI)]
 - v. <Insert manufacturer's name>
- B. Primer: Liquid primer as recommended in writing for substrate and conditions by traffic-coating manufacturer.

1. Material: **[Epoxy][Polyurethane]**.
- C. Preparatory and Base Coats: **[Polyurethane][Aromatic urethane][Aliphatic urethane][or][epoxy]**.
1. Thicknesses: Minimum **[dry-][or][wet-]**film thickness **[as recommended in writing by manufacturer for substrate and service conditions indicated]<Insert thickness>**.
- D. Intermediate Coat: **[Polyurethane][Aromatic urethane][Aliphatic urethane][or][epoxy]**.
1. Thicknesses: Minimum **[dry-][or][wet-]**film thickness **[as recommended in writing by manufacturer for substrate and service conditions indicated]<Insert thickness>**, measured excluding aggregate.
 2. Aggregate Content: **[As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated][Not less than 8 to 10 lb/100 sq. ft. (3.9 to 4.9 kg/10 sq. m)][To refusal]<Insert requirement>**.
- E. Topcoat: **[Polyurethane][Aromatic urethane][Aliphatic urethane][Aromatic urethane with UV inhibitors][or][epoxy]**.
1. Thicknesses: Minimum **[dry-][or][wet-]**film thickness **[as recommended in writing by manufacturer for substrate and service conditions indicated]<Insert thickness>**, measured excluding aggregate.
 2. Aggregate Content: **[As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated][As required to achieve slip-resistant finish][8 to 10 lb/100 sq. ft. (3.9 to 4.9 kg/10 sq. m)][To refusal]<Insert requirement>**.
 3. Color: **[As selected by Architect from manufacturer's full range][Match Architect's sample]<Insert color>**.
- F. Aggregate: **[Manufacturer's standard aggregate for each use indicated][Uniformly graded, washed silicon carbide sand][Uniformly graded, washed silica sand][Uniformly graded, washed flint shot silica][Walnut shell granules][or][Aluminum-oxide grit]<Insert aggregate>** of particle sizes, shape, and minimum hardness recommended in writing by traffic-coating manufacturer.
- G. Fire-Test-Response Characteristics: Provide traffic-coating materials with the fire-test-response characteristics as determined by testing identical products according to test method below for deck type and slopes indicated by an independent testing and inspecting agency that is acceptable to authorities having jurisdiction.
1. **[Class A][Class B][Class C]** roof covering according to ASTM E108.
 2. **<Insert test requirement>**.
- H. Energy Star Listing: Provide traffic coating that is listed on the DOE's Energy Star "Roof Products Qualified Product List" for low-slope roof products.
- I. Energy Performance: Provide traffic coating with an initial Solar Reflectance Index of **[not less than 0.70]<Insert value>** and emissivity of **[not less than 0.75]<Insert value>** when tested according to CRRC-1.
- J. VOC Content, LEED 2009: **[250]<Insert value>** g/L or less.
- K. Low-Emitting Materials, LEED 2009: Interior coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- L. VOC Content, LEED v4: **[100]<Insert value>** g/L or less.

- M. Low-Emitting Materials, LEED v4: Interior coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- N. VOC Content: **[100]<Insert value>** g/L or less.
- O. Low-Emitting Materials: VOC emissions of interior coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
- P. VOC Content: **[100]<Insert value>** g/L or less.
- Q. Low-Emitting Materials: Interior coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- R. VOC Emissions: Interior coatings shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.4 ACCESSORY MATERIALS

- A. Joint Sealants: **[As specified in Section 079200 "Joint Sealants."][ASTM C920.]<Insert requirement.>**
- B. Sheet Flashing: Nonstaining **[sheet material recommended in writing by traffic-coating manufacturer][, uncured neoprene sheet][, cured neoprene sheet]<Insert material>**.
 - 1. Thickness: Minimum **[60 mils (1.5 mm)][50 mils (1.3 mm)]<Insert value>**.
- C. Adhesive: Contact adhesive recommended in writing by traffic-coating manufacturer.
- D. Reinforcing Strip: Fiberglass mesh recommended in writing by traffic-coating manufacturer.

2.5 PAVEMENT MARKINGS

- A. Pavement-Marking Paint Specified Elsewhere: Comply with Section 321723 "Pavement Markings."
- B. Pavement-Marking Paint:
 - 1. Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, **[Type N][Type F][Type S]**; colors complying with FS TT-P-1952.
 - 2. MPI #32 Alkyd Traffic Marking Paint.
 - 3. Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, Type II, with drying time of less than **[three][45]** minutes.
 - 4. MPI #97 Latex Traffic Marking Paint.
 - 5. Color: **[White][Yellow][Blue][As indicated]<Insert color>**.

- C. Glass Beads: [AASHTO M 247, Type 1][FS TT-B-1325, Type 1A].
- D. VOC Content: [150]<Insert value> g/L or less.
- E. Low-Emitting Materials: Interior paints shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. VOC Content: [100]<Insert value> g/L or less.
- G. Low-Emitting Materials: Interior paints shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- H. VOC Content: [100]<Insert value> g/L or less.
- I. Low-Emitting Materials: VOC emissions of interior paints shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
- J. VOC Content: [100]<Insert value> g/L or less.
- K. Low-Emitting Materials: Interior paints shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- L. VOC Emissions: Interior paints shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, surface smoothness, and other conditions affecting performance of traffic-coating work.
- B. Verify that substrates are visibly dry and free of moisture.
 - 1. Test for moisture according to ASTM D4263.
 - 2. Test for moisture content by [measuring with an electronic moisture meter][method recommended in writing by traffic-coating manufacturer]<Insert test method>.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of traffic-coating work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Begin coating application only after substrate construction and penetrating work have been

- completed.
2. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry.
3. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Clean and prepare substrates according to ASTM C1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.
- B. Priming: Unless manufacturer recommends in writing against priming, prime substrates according to manufacturer's written instructions.
 1. Limit priming to areas that will be covered by traffic-coating material on same day. Reprime areas exposed for more time than recommended by manufacturer.
- C. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.
- D. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.
- E. Concrete Substrates: **[Mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D4259.]**Do not acid etch.
 1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 2. Remove concrete fins, ridges, and other projections.
 3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
 4. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D4258.

3.3 TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C1127 and manufacturer's written instructions.
- B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
- C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.
- D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.4 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D4258.

1. Comply with recommendations in ASTM C1193 for joint-sealant installation.
- B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.5 INSTALLATION OF TRAFFIC COATINGS

- A. Apply traffic coating according to ASTM C1127 and manufacturer's written instructions.
- B. Apply coats of specified compositions for each type of traffic coating at locations as indicated on Drawings.
- C. Start traffic-coating application in presence of manufacturer's technical representative.
- D. Verify that wet-film thickness of each coat complies with requirements every [100 sq. ft. (9 sq. m)]<Insert dimension>.
- E. Uniformly broadcast and embed aggregate in each coat indicated to receive aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.
- F. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.
- G. Cure traffic coatings. Prevent contamination and damage during coating application and curing.

3.6 INSTALLATION OF PAVEMENT MARKINGS

- A. Do not apply pavement-marking paint for striping and other markings until layout, colors, and placement have been verified with Architect and traffic coating has cured.
- B. Sweep and clean surface to eliminate loose material and dust.
- C. Apply pavement-marking paint with mechanical equipment to produce markings of dimensions indicated with uniform straight edges. Apply at manufacturer's recommended rates for a minimum wet-film thickness of 15-mils (0.4-mm).
 1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
 2. Broadcast glass beads uniformly into wet pavement-marking paint at a rate of 6 lb/gal. (0.72 kg/L).

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: [Owner will engage][Engage] a qualified testing agency to perform the following field tests and inspections:
 1. Materials Testing:
 - a. Samples of material delivered to Project site are to be taken, identified, sealed, and certified in presence of [Owner and]Contractor.
 - b. Testing agency must perform tests for characteristics specified, using applicable

referenced testing procedures.

- c. Testing agency must verify thickness of coatings during traffic-coating application for each [600 sq. ft. (56 sq. m)]<Insert dimension> of installed traffic coating or part thereof.

2. Electronic Leak-Detection Testing:

- a. Testing agency must test [each deck area][each deck area indicated for testing on Drawings]<Insert area to be tested> for leaks using an electronic leak-detection method that locates discontinuities in the traffic-coating membrane.
- b. Testing agency must perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
- c. Testing agency must create a conductive electronic field over the area of traffic coating to be tested and electronically determine locations of discontinuities or leaks, if any, in the traffic coating.
- d. Testing agency must provide survey report indicating locations of discontinuities, if any.

- B. Final Traffic-Coating Inspection: Arrange for traffic-coating manufacturer's technical personnel to inspect membrane installation on completion.

1. Notify Architect or Owner 48 hours in advance of date and time of inspection.

- C. Waterproofing will be considered defective if it does not pass tests and inspections.

- D. Prepare test and inspection reports.

3.8 PROTECTING AND CLEANING

- A. Protect traffic coatings from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 18 00 00

07 - Thermal And Moisture Protection

Task	Specification	Specification Description
07 18 13 00	07 18 00 00	Traffic Coatings
07 18 16 00	07 18 00 00	Traffic Coatings

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 19 00 00 - WATER REPELLENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Penetrating water repellents.
2. Film-forming water repellents.
3. MPI-approved water repellents.

B. Related Requirements:

1. Section 030130 "Maintenance of Cast-in-Place Concrete" for high-build penetrating polymer sealers for exterior traffic surfaces.
2. Section 042000 "Unit Masonry" for integral water-repellent admixture for unit masonry assemblies.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's standard colors.
3. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.
4. Include printout of current "MPI Approved Products List" for each product category specified in Part 2 that specifies water repellents approved by MPI, with the proposed product highlighted.

- B. Samples: For each type[**and color**] of water repellent and substrate indicated, **12 by 12 inches (300 by 300 mm)** in size, with specified water-repellent treatment applied to half of each Sample.

C. Sustainable Design Submittals:

1. Product Data: For paints and coatings, indicating VOC content.
2. Environmental Product Declaration (EPD): For each product.
3. Health Product Declaration (HPD): For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
5. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Applicator][testing agency]**.

- B. Product Certificates: For each type of water repellent.
- C. Preconstruction Test Reports: For water-repellent-treated substrates.
- D. Sample Warranty: For special warranty.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.
- B. MPI Standards: Comply with MPI standards indicated and provide water repellents listed in its "MPI Approved Products List."

1.6 MOCKUPS

- A. Prepare mockups of each required water repellent on each type of substrate required to demonstrate aesthetic effects[, **for preconstruction testing**,] and to set quality standards for materials and execution.
 - 1. Locate mockups [**where indicated on Drawings**][**on masonry sample panels**][**on existing surfaces where directed by Architect**][**in locations that enable viewing under same conditions as the completed Work**]**<Insert requirement>**.
 - a. Size: [**10 sq. ft. (0.93 sq. m)**][**25 sq. ft. (2.3 sq. m)**]**<Insert size>** each.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing: Engage a qualified testing agency to perform preconstruction testing of water repellents on [**field mockups**][**manufacturer's standard substrate assemblies**][**on existing substrate assemblies**].
 - 1. In addition to verifying performance requirements, use mockups to verify manufacturer's written instructions for application procedure and optimum rates of product application to substrates.
 - 2. Propose changes to materials and methods to suit Project.
 - 3. Notify Architect [**seven**]**<Insert number>** days in advance of the dates and times when mockups will be tested.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than **35 deg F (2 deg C)** and not more than **110 deg F (44 deg C)**, in accordance with manufacturer's written instructions.
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

3. Protect materials from direct sunlight.
4. **<Insert requirements>**.

1.9 FIELD CONDITIONS

- A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied in accordance with manufacturers' written instructions and warranty requirements:
 1. Concrete surfaces and mortar have cured for not less than 28 days.
 2. Building has been closed in for not less than 30 days before treating wall assemblies.
 3. Ambient temperature is above **40 deg F (4.4 deg C)** and below **100 deg F (37.8 deg C)** and will remain so for 24 hours.
 4. Substrate is not frozen and substrate-surface temperature is above **40 deg F (4.4 deg C)** and below **100 deg F (37.8 deg C)**.
 5. Rain or snow is not predicted within 24 hours.
 6. Not less than **[24 hours][seven days]** have passed since surfaces were last wet.
 7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.
 8. **<Insert restriction>**.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which **[manufacturer][and][Applicator]** agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period.
 1. Warranty Period: **[Two][Five]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Water repellents must meet the following performance requirements as determined by **[preconstruction]** testing on **[manufacturer's standard]** substrates representing those indicated for this Project.
- B. Water Absorption: Minimum **[80][90]<Insert number>** percent reduction of water absorption after 24 hours for treated compared to untreated specimens when tested in accordance with the following:
 1. Cast-in-Place Concrete: ASTM C642.
 2. Precast Concrete: ASTM C642.
 3. Cast Stone: ASTM C1195.
 4. Concrete Masonry Units: ASTM C140/C140M.
 5. Clay Brick: ASTM C67/C67M.
 6. Natural Stone: ASTM C97/C97M.
 7. Portland Cement Plaster (Stucco): ASTM D6532.
- C. Water-Vapor Transmission: Comply with one or both of the following:
 1. Maximum **[10]<Insert number>** percent reduction in water-vapor transmission of treated

- compared to untreated specimens, in accordance with ASTM E96/E96M.
2. Minimum **[80]<Insert number>** percent water-vapor transmission of treated compared to untreated specimens, in accordance with ASTM D1653.
 - D. Water Penetration and Leakage through Masonry: Minimum **[90]<Insert number>** percent reduction in leakage rate of treated compared to untreated specimens, in accordance with ASTM E514/E514M.
 - E. Durability: Maximum **[5]<Insert number>** percent loss of water-repellent performance after 2500 hours of weathering in accordance with ASTM G154 compared to water-repellent-treated specimens before weathering.

2.2 PENETRATING WATER REPELLENTS

- A. Penetrating Low-VOC Silane Water Repellent: Clear, containing **[20][40][100]<Insert number>** percent or more active content of **[modified]**silane; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Advanced Chemical Technologies, Inc]**
- b. **[Chemical Products Industries, Inc]**
- c. **[ChemMasters, Inc]**
- d. **[Concrete Sealers USA]**
- e. **[Dayton Superior Corporation]**
- f. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
- g. **[Evonik Corporation]**
- h. **[Foxfire Enterprises, Inc.]**
- i. **[Ghostshield]**
- j. **[LymTal International, Inc.]**
- k. **[Master Builders Solutions]**
- l. **[Nox-Crete Products Group]**
- m. **[Pecora Corporation]**
- n. **[PPG Paints; PPG Industries, Inc.]**
- o. **[Price Research, Ltd. dba Charles Paint Research]**
- p. **[PROSOCO, Inc]**
- q. **[Specco Industries, Inc]**
- r. **[Textured Coatings of America, Inc]**
- s. **[Tnemec Company, Inc.]**
- t. **[W. R. Meadows, Inc]**
- u. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Advanced Chemical Technologies, Inc]**
- b. **[Chemical Products Industries, Inc]**
- c. **[ChemMasters, Inc]**
- d. **[Concrete Sealers USA]**
- e. **[Dayton Superior Corporation]**
- f. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**

- g. [Evonik Corporation]
 - h. [Foxfire Enterprises, Inc.]
 - i. [Ghostshield]
 - j. [LymTal International, Inc.]
 - k. [Master Builders Solutions]
 - l. [Nox-Crete Products Group]
 - m. [Pecora Corporation]
 - n. [PPG Paints; PPG Industries, Inc.]
 - o. [Price Research, Ltd. dba Charles Paint Research]
 - p. [PROSOCO, Inc.]
 - q. [Specco Industries, Inc]
 - r. [Textured Coatings of America, Inc]
 - s. [Tnemec Company, Inc.]
 - t. [W. R. Meadows, Inc]
 - u. <Insert manufacturer's name>
- B. Penetrating Silane Water Repellent: Clear, containing [20][40][100]<Insert number> percent or more active content of [modified]silane; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 600 g/L or less of VOCs.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
- a. [Advanced Chemical Technologies, Inc]
 - b. [Chemical Products Industries, Inc]
 - c. [ChemMasters, Inc]
 - d. [Dayton Superior Corporation]
 - e. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - f. [Evonik Corporation]

- dd. [Wacker Chemical Corporation]
- ee. <Insert manufacturer's name>

F. Penetrating Silane/Siloxane-Blend Water Repellent: Clear, containing [10][12]<Insert number> percent or more active content of silane and siloxane blend with 600 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Advanced Chemical Technologies, Inc]
 - b. [Chemical Products Industries, Inc]
 - c. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - d. [Fabrikem Manufacturing Ltd.]
 - e. [Fox Industries, Inc.]
 - f. [Karnak Corporation]
 - g. [Kryton International, Inc.]
 - h. [Laticrete International, Inc.]
 - i. [LymTal International, Inc.]
 - j. [Master Builders Solutions]
 - k. [OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]
 - l. [Pecora Corporation]
 - m. [PPG Paints; PPG Industries, Inc.]
 - n. [Price Research, Ltd. dba Charles Paint Research]
 - o. [PROSOCO, Inc]
 - p. [RainGuard Professional]
 - q. [SaverSystems]
 - r. [Sika Corporation]
 - s. [TK Products Construction Coatings, a Fenix Group SPC Company]
 - t. [Tnemec Company, Inc.]
 - u. [Wacker Chemical Corporation]
 - v. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Advanced Chemical Technologies, Inc]
 - b. [Chemical Products Industries, Inc]
 - c. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - d. [Fabrikem Manufacturing Ltd.]
 - e. [Fox Industries, Inc.]
 - f. [Karnak Corporation]

- g. [Kryton International, Inc.]
- h. [Laticrete International, Inc.]
- i. [LymTal International, Inc.]
- j. [Master Builders Solutions]
- k. [OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]
- l. [Pecora Corporation]
- m. [PPG Paints; PPG Industries, Inc.]
- n. [Price Research, Ltd. dba Charles Paint Research]
- o. [PROSOCO, Inc]
- p. [RainGuard Professional]
- q. [SaverSystems]
- r. [Sika Corporation]
- s. [TK Products Construction Coatings, a Fenix Group SPC Company]
- t. [Tnemec Company, Inc.]
- u. [Wacker Chemical Corporation]
- v. <Insert manufacturer's name>

G. Penetrating Low-VOC Siliconate Water Repellent: Clear, methyl siliconate water repellent with 400 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Concrete Sealers USA]
- b. [Ghostshield]
- c. [Moxie International]
- d. [PROSOCO, Inc]
- e. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Concrete Sealers USA]
- b. [Ghostshield]
- c. [Moxie International]
- d. [PROSOCO, Inc]
- e. <Insert manufacturer's name>

H. Penetrating Water and Oil Repellent: Clear, oleophobic water repellent; with 400 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. [Advanced Chemical Technologies, Inc]
- b. [Chemical Products Industries, Inc]
- c. [ChemMasters, Inc]
- d. [Concrete Sealers USA]
- e. [Evonik Corporation]
- f. [Ghostshield]
- g. [Laticrete International, Inc.]

- h. **[Master Builders Solutions]**
 - i. **[PROSOCO, Inc]**
 - j. **[TK Products Construction Coatings, a Fenix Group SPC Company]**
 - k. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Advanced Chemical Technologies, Inc]**
 - b. **[Chemical Products Industries, Inc]**
 - c. **[ChemMasters, Inc]**
 - d. **[Concrete Sealers USA]**
 - e. **[Evonik Corporation]**
 - f. **[Ghostshield]**
 - g. **[Laticrete International, Inc.]**
 - h. **[Master Builders Solutions]**
 - i. **[PROSOCO, Inc]**
 - j. **[TK Products Construction Coatings, a Fenix Group SPC Company]**
 - k. **<Insert manufacturer's name>**
- I. Penetrating Water Repellent and Corrosion Inhibitor: Clear, containing **[100]<Insert number>** percent or more active content of modified **[silane][siloxane]** water repellent and corrosion inhibitor, with 400 g/L or less of VOCs.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Advanced Chemical Technologies, Inc]**
 - b. **[ChemMasters, Inc]**
 - c. **[Ghostshield]**
 - d. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Advanced Chemical Technologies, Inc]**
 - b. **[ChemMasters, Inc]**
 - c. **[Ghostshield]**
 - d. **<Insert manufacturer's name>**
- J. Penetrating Water Repellent for Calcareous Stone: Clear, modified silane with ethyl silicate, specially formulated for limestone and marble.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Advanced Chemical Technologies, Inc]**
 - b. **[Evonik Corporation]**
 - c. **[PROSOCO, Inc]**
 - d. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Advanced Chemical Technologies, Inc]**
- b. **[Evonik Corporation]**
- c. **[PROSOCO, Inc]**
- d. **<Insert manufacturer's name>**

- K. Penetrating Water Repellent Concentrate: Concentrated **[siloxane][silane]**, for field dilution.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Chemical Products Industries, Inc]**
- b. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
- c. **[Evonik Corporation]**
- d. **[LymTal International, Inc.]**
- e. **[PPG Paints; PPG Industries, Inc.]**
- f. **[PROSOCO, Inc]**
- g. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Chemical Products Industries, Inc]**
- b. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
- c. **[Evonik Corporation]**
- d. **[LymTal International, Inc.]**
- e. **[PPG Paints; PPG Industries, Inc.]**
- f. **[PROSOCO, Inc]**
- g. **<Insert manufacturer's name>**

2.3 FILM-FORMING WATER REPELLENTS

- A. Film-Forming Low-VOC Silicone Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; in a solvent- or waterborne solution containing not less than 3 and up to 7 percent solids by weight; and with 400 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. **[Professional Products of Kansas, Inc.]**
- b. **[Specco Industries, Inc]**
- c. **[United Gilsonite Laboratories (UGL)]**
- d. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the

following:

- a. **[Professional Products of Kansas, Inc.]**
 - b. **[Specco Industries, Inc]**
 - c. **[United Gilsonite Laboratories (UGL)]**
 - d. **<Insert manufacturer's name>**
- B. Film-Forming Silicone Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; in a solvent- or waterborne solution containing not less than 3 and up to 7 percent solids by weight; and with 600 g/L or less of VOCs.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Professional Products of Kansas, Inc.]**
 - b. **[Specco Industries, Inc]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Professional Products of Kansas, Inc.]**
 - b. **[Specco Industries, Inc]**
 - c. **<Insert manufacturer's name>**
- C. Film-Forming Water Repellent for Masonry: **[Clear][Pigmented]**, consisting of resins, acrylics, polymers, with 600 g/L or less of VOCs; for masonry block or brick.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]**
 - b. **[PPG Paints; PPG Industries, Inc.]**
 - c. **[SaverSystems]**
 - d. **[Textured Coatings of America, Inc]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]**
 - b. **[PPG Paints; PPG Industries, Inc.]**
 - c. **[SaverSystems]**
 - d. **[Textured Coatings of America, Inc]**
 - e. **<Insert manufacturer's name>**
 3. Color: **[As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range]<Insert color>**.
- D. Film-Forming Low-VOC Modified Acrylic Water Repellent: **[Clear][Pigmented]**, breathing coating of

acrylic resin, which may be enhanced with silane and siloxane resins; in a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 400 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Ghostshield]**
 - b. **[H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]**
 - c. **[Nox-Crete Products Group]**
 - d. **[OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]**
 - e. **[PPG Paints; PPG Industries, Inc.]**
 - f. **[Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]**
 - g. **[Specco Industries, Inc]**
 - h. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Ghostshield]**
 - b. **[H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]**
 - c. **[Nox-Crete Products Group]**
 - d. **[OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]**
 - e. **[PPG Paints; PPG Industries, Inc.]**
 - f. **[Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]**
 - g. **[Specco Industries, Inc]**
 - h. **<Insert manufacturer's name>**
3. Color: **[As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range]<Insert color>**.

E. Film-Forming Modified Acrylic Water Repellent: **[Clear][Pigmented]**, breathing coating of acrylic resins, which may be enhanced silane and siloxane resins; in a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 600 g/L or less of VOCs.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]**
 - b. **[Nox-Crete Products Group]**
 - c. **[OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]**
 - d. **[PPG Paints; PPG Industries, Inc.]**
 - e. **[Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]**
 - f. **[Specco Industries, Inc]**
 - g. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. [H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.]
 - b. [Nox-Crete Products Group]
 - c. [OKON; a Rust-Oleum brand; a subsidiary of RPM International, Inc.]
 - d. [PPG Paints; PPG Industries, Inc.]
 - e. [Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]
 - f. [Specco Industries, Inc]
 - g. <Insert manufacturer's name>
3. Color: [As indicated by manufacturer's designations][Match Architect's samples][As selected by Architect from manufacturer's full range]<Insert color>.

2.4 MPI-APPROVED WATER REPELLENTS

- A. Water Repellent, Clear (Paintable); MPI #34: Penetrating, clear water-repellent coating, for use on interior or exterior masonry, brick, and concrete surfaces, and that can be recoated with conventional paints.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Cloverdale Paint]
 - b. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - c. [PPG Paints; PPG Industries, Inc.]
 - d. [Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]
 - e. [United Gilsonite Laboratories (UGL)]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Cloverdale Paint]
 - b. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]
 - c. [PPG Paints; PPG Industries, Inc.]
 - d. [Rust-Oleum Corporation; a subsidiary of RPM International, Inc.]
 - e. [United Gilsonite Laboratories (UGL)]
 - f. <Insert manufacturer's name>
 3. VOC Content: [600 g/L or less][400 g/L or less][150 g/L or less][Less than 51 g/L]<Insert limit>.
 4. MPI Green Performance Standard: [GPS-1][GPS-2].
- B. Water Repellent, Clear (Not Paintable); MPI #117: Penetrating, silicone-oil type, clear water-repellent for interior or exterior masonry block or brick, not intended for recoating.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Behr Paint Company (Behr Process LLC)]
 - b. [Benjamin Moore & Co.]
 - c. [Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]

- d. **[Sherwin-Williams Company (The)]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
- a. **[Behr Paint Company (Behr Process LLC)]**
 - b. **[Benjamin Moore & Co.]**
 - c. **[Euclid Chemical Company (The); a subsidiary of RPM International, Inc.]**
 - d. **[Sherwin-Williams Company (The)]**
 - e. **<Insert manufacturer's name>**
3. VOC Content: **[600 g/L or less][350 g/L or less][200 g/L or less][Less than 51 g/L]<Insert limit>**.
4. MPI Green Performance Standard: **[GPS-1][GPS-2]**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.
 - 1. Verify that surfaces are clean and dry in accordance with water-repellent manufacturer's requirements. Check moisture content in **[three]<Insert number>** representative locations by method recommended by manufacturer.
 - 2. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
 - 3. Verify that required repairs are complete, cured, and dry before applying water repellent.
- B. Test pH level in accordance with water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. New Construction and Repairs: Allow concrete and other cementitious materials to age before application of water repellent, in accordance with repellent manufacturer's written instructions.
- B. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product in accordance with water-repellent manufacturer's written instructions **[and as follows:]**[.].
 - 1. Concrete-Based Substrates: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents on **[cast-in-place concrete][precast concrete][cast stone][and][concrete masonry unit]** substrate **[in accordance with ASTM E1857]<Insert requirement>**.
 - 2. Clay Brick Masonry Substrate: **[ASTM D5703.]****[Section 040110 "Masonry Cleaning."]**
 - 3. Natural Stone Substrate: **[ASTM C1515.]****[ASTM D5107.]****[Section 040110 "Masonry Cleaning."]**

4. Portland Cement Plaster (Stucco) Substrate: **[ASTM E1857]<Insert requirement>**.
- C. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.
- D. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.
- E. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.
1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION OF WATER REPELLENTS

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.
- B. Apply coating of water repellent on surfaces to be treated using **[15 psi (103 kPa) pressure spray with a fan-type spray nozzle][roller][or][brush]<Insert requirement>** to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.
 1. At Contractor's option, first application of water repellent may be completed before installing **[precast concrete][and][cast stone]** units. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto adjacent joint surfaces. Remove masking after repellent has cured.
- C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 FIELD QUALITY CONTROL

- A. Testing of Water-Repellent Material: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when water repellent is being applied:
 1. Owner may engage the services of a qualified testing agency to sample water-repellent material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will perform tests for compliance of water-repellent material with product requirements.
 3. Owner may direct Contractor to stop applying water repellents if test results show material being used does not comply with product requirements. Contractor to remove noncomplying material from Project site, pay for testing, and correct deficiency of surfaces treated with rejected materials, as approved by Architect. **<Insert additional requirements to suit Project>**.
- B. Coverage Test: In the presence of Architect, hose down a dry, repellent-treated surface to verify

complete and uniform product application. A change in surface color will indicate incomplete application.

1. Notify Architect [**seven**]**<Insert number>** days in advance of the dates and times when surfaces will be tested.
2. Reapply water repellent until coverage test indicates complete coverage.

3.5 CLEANING

- A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application, in accordance with manufacturer's written cleaning instructions, as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Architect.

END OF SECTION 07 19 00 00

07 - Thermal And Moisture Protection

Task	Specification	Specification Description
07 19 13 00	07 19 00 00	Water Repellents
07 19 16 00	07 19 00 00	Water Repellents

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 21 00 00 - THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Extruded polystyrene foam-plastic board insulation.
2. Molded (expanded) polystyrene foam-plastic board insulation.
3. Graphite-polystyrene foam-plastic board insulation.
4. Polyisocyanurate foam-plastic board insulation.
5. Glass-fiber blanket insulation.
6. Glass-fiber board insulation.
7. Mineral-wool blanket insulation.
8. Mineral-wool board insulation.
9. Loose-fill insulation.
10. Spray-applied cellulosic insulation.
11. Cellular-glass insulation.
12. Reflective insulation and radiant barriers.
13. Rigid vacuum insulation.
14. Glass-wool vacuum insulation.

B. Related Requirements:

1. Section 042000 "Unit Masonry" for insulation installed in masonry cells.
2. Section 061600 "Sheathing" for foam-plastic board sheathing installed directly over wood or steel framing.
3. **[Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"]** for insulated drainage panels installed with plaza deck insulation.
4. Section 072119 "Foamed-in-Place Insulation" for spray-applied polyurethane foam insulation.
5. **[Section 070150.19 "Preparation for Reroofing"] [Section 075113 "Built-up Asphalt Roofing"] [Section 075116 "Built-up Coal Tar Roofing"] [Section 075213 "Atactic-Polypropylene (APP) Modified Bituminous Membrane Roofing"] [Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"] [Section 075316 "Chlorosulfonate-Polyethylene (CSPE) Roofing"] [Section 075323 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing"] [Section 075416 "Ketone Ethylene Ester (KEE) Roofing"] [Section 075419 "Polyvinyl-Chloride (PVC) Roofing"] [Section 075423 "Thermoplastic-Polyolefin (TPO) Roofing"] [Section 075552.13 "Atactic-Polypropylene (APP) Modified Bituminous Protected Membrane Roofing"] [Section 075552.16 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Protected Membrane Roofing"] [Section 075556 "Fluid-Applied Protected Membrane Roofing"] [and] [Section 075700 "Coated Foamed Roofing"]** for insulation specified as part of roofing construction.
6. **[Section 092300 "Gypsum Plastering"] [Section 092400 "Portland Cement Plastering"] [Section 092613 "Gypsum Veneer Plastering"] [Section 092900 "Gypsum Board"]** for sound attenuation blanket used as acoustic insulation.

1.2 ACTION SUBMITTALS

- ##### A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating percentage of postconsumer and preconsumer recycled content and cost.
2. Environmental Product Declaration: For each product.
3. Health Product Declaration: For each product.
4. Environmental Product Declaration: For each product.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.
7. Third-Party Certifications: For each product.
8. Third-Party Certified Life Cycle Assessment: For each product.
9. Health Product Declaration (HPD): Provide documentation indicating that manufacturer has screened and publicly provided ingredient disclosure to 1000 ppm, and has developed an action plan to mitigate known hazards.
10. Product Data: For adhesives, indicating VOC content.
11. Laboratory Test Reports: For insulation, indicating compliance with the VOC emissions evaluation.
12. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.

1.3 INFORMATIONAL SUBMITTALS

- A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
1. For blown-in or sprayed fiberglass and cellulosic-fiber loose-fill insulation, indicate initial installed thickness, settled thickness, settled R-value, installed density, coverage area, and number of bags installed.
 2. Sign, date, and post the certification in a conspicuous location on Project site.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Research Reports: For foam-plastic insulation, from ICC-ES.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes less than **[Class A, 25 and 450][Class B, 75 and 450][Class C, 200 and 450]** when tested in accordance with ASTM E84.
- B. Fire-Resistance Ratings: Comply with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.
- C. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
- D. Labeling: Provide identification of mark indicating R-value of each piece of insulation **12 inches (305 mm)** and wider in width.
- E. Thermal-Resistance Value (R-Value): **[R-value as indicated on Drawings][R-value as indicated below]<Insert R-value>** in accordance with ASTM C518.
 - 1. R-Value at **<Insert location>**: **<Insert R-value>**.
- F. Verify insulation complies with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- G. Verify insulation complies with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less, except for insulation manufactured without formaldehyde.
- H. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 - 1. Verify adhesives have a VOC content of **[70]<Insert number>** g/L or less.
 - 2. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 - 4. Verify adhesive complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.

2.2 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (XPS)

- A. Extruded Polystyrene Board Insulation, Type X : ASTM C578, Type X, **15 psi (104 kPa)** minimum compressive strength; unfaced.

-
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[DiversiFoam Products]**
 - b. **[DuPont de Nemours, Inc.]**
 - c. **[MBCI; Cornerstone Building Brands]**
 - d. **[Owens Corning]**
 - e. **[The Dow Chemical Company]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[DiversiFoam Products]**
 - b. **[DuPont de Nemours, Inc.]**
 - c. **[MBCI; Cornerstone Building Brands]**
 - d. **[Owens Corning]**
 - e. **[The Dow Chemical Company]**
 - f. **<Insert manufacturer's name>**
- B. Extruded Polystyrene Board Insulation, Type IV : ASTM C578, Type IV, **25 psi (173 kPa)** minimum compressive strength; unfaced.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[DiversiFoam Products]**
 - b. **[DuPont de Nemours, Inc.]**
 - c. **[Kingspan Insulation LLC]**
 - d. **[Owens Corning]**
 - e. **[The Dow Chemical Company]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[DiversiFoam Products]**
 - b. **[DuPont de Nemours, Inc.]**
 - c. **[Kingspan Insulation LLC]**
 - d. **[Owens Corning]**
 - e. **[The Dow Chemical Company]**
 - f. **<Insert manufacturer's name>**
- C. Extruded Polystyrene Board Insulation, Type IV, Drainage Panels : ASTM C578, Type IV, **25 psi (173 kPa)** minimum compressive strength; unfaced.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

- a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Owens Corning]
 - d. [The Dow Chemical Company]
 - e. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Owens Corning]
 - d. [The Dow Chemical Company]
 - e. <Insert manufacturer's name>
- D. Extruded Polystyrene Board Insulation, Type VI : ASTM C578, Type VI, **40 psi (276 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
- E. Extruded Polystyrene Board Insulation, Type VI, Drainage Panels : ASTM C578, Type VI, **40 psi (276 kPa)** minimum compressive strength; unfaced.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Owens Corning]
 - d. [The Dow Chemical Company]

- e. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Owens Corning]
 - d. [The Dow Chemical Company]
 - e. <Insert manufacturer's name>
- F. Extruded Polystyrene Board Insulation, Type VII : ASTM C578, Type VII, **60 psi (414 kPa)** minimum compressive strength.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Kingspan Insulation LLC]
 - d. [Owens Corning]
 - e. [The Dow Chemical Company]
 - f. <Insert manufacturer's name>
- G. Extruded Polystyrene Board Insulation, Type VII, Drainage Panels : ASTM C578, Type VII, **60 psi (414 kPa)** minimum compressive strength.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [DiversiFoam Products]
 - b. [DuPont de Nemours, Inc.]
 - c. [Owens Corning]
 - d. [The Dow Chemical Company]
 - e. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[DiversiFoam Products]**
 - b. **[DuPont de Nemours, Inc.]**
 - c. **[Owens Corning]**
 - d. **[The Dow Chemical Company]**
 - e. **<Insert manufacturer's name>**
- H. Extruded Polystyrene Board Insulation, Type V : ASTM C578, Type V, **100 psi (690 kPa)** minimum compressive strength.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[DuPont de Nemours, Inc.]**
 - b. **[Owens Corning]**
 - c. **[The Dow Chemical Company]**
 - d. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[DuPont de Nemours, Inc.]**
 - b. **[Owens Corning]**
 - c. **[The Dow Chemical Company]**
 - d. **<Insert manufacturer's name>**
- 2.3 MOLDED (EXPANDED) POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (EPS)
- A. Molded (Expanded) Polystyrene Board Insulation, Type I : ASTM C578, Type I, **10 psi (69 kPa)** minimum compressive strength.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**

- B. Molded (Expanded) Polystyrene Board Insulation, Type IV, Faced : ASTM C578, Type IV, **25 psi (173 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
- C. Molded (Expanded) Polystyrene Board Insulation, Type VI, Faced : ASTM C578, Type VI, **40 psi (276 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
- D. Molded (Expanded) Polystyrene Board Insulation, Type VII, Faced : ASTM C578, Type VII, **60 psi (414 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
- E. Molded (Expanded) Polystyrene Board Insulation, Type VIII : ASTM C578, Type VIII, **13 psi (90 kPa)**

minimum compressive strength.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[DiversiFoam Products]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[DiversiFoam Products]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
- F. Molded (Expanded) Polystyrene Board Insulation, Type II : ASTM C578, Type II, **15 psi (104 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**
- G. Molded (Expanded) Polystyrene Board Insulation, Type IX : ASTM C578, Type IX, **25 psi (173 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**

-
- a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[DiversiFoam Products]**
 - d. **[Insulfoam; a Carlisle Company]**
 - e. **[Plymouth Foam, an Altor Solutions Company]**
 - f. **<Insert manufacturer's name>**
- H. Molded (Expanded) Polystyrene Board Insulation, Type X, Faced : ASTM C578, Type X, **15 psi (104 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Insulfoam; a Carlisle Company]**
 - b. **<Insert manufacturer's name>**
- I. Molded (Expanded) Polystyrene Board Insulation, Type XIV : ASTM C578, Type XIV, **40 psi (276 kPa)** minimum compressive strength.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Alleguard (formerly Amvic Building System)]**

- b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
- J. Molded (Expanded) Polystyrene Board Insulation, Type XV : ASTM C578, Type XV, **60 psi (414 kPa)** minimum compressive strength.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[Insulfoam; a Carlisle Company]**
 - d. **[Plymouth Foam, an Altor Solutions Company]**
 - e. **<Insert manufacturer's name>**
- 2.4 GRAPHITE-POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (GPS)
- A. Graphite-Polystyrene Foam-Plastic Board Insulation, Type I : ASTM C578, Type I, **10 psi (69 kPa)** minimum compressive strength; **4-perm (230-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Alleguard (formerly Amvic Building System)]**
 - b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - c. **[BASF]**
 - d. **[LOGIX Brands Ltd.]**
 - e. **[Opco, Inc.]**
 - f. **[Perma R Products, Inc.]**
 - g. **[Polar Industries, Inc.]**
 - h. **[Progressive Foam Technologies, Inc.]**
 - i. **[StarRFoam]**
 - j. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[Alleguard (formerly Amvic Building System)]**
- b. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
- c. **[BASF]**
- d. **[LOGIX Brands Ltd.]**
- e. **[Opco, Inc.]**
- f. **[Perma R Products, Inc.]**
- g. **[Polar Industries, Inc.]**
- h. **[Progressive Foam Technologies, Inc.]**
- i. **[StarRFoam]**
- j. **<Insert manufacturer's name>**

B. Graphite-Polystyrene Foam-Plastic Board Insulation, Type I, Faced : ASTM C578, Type I, **10 psi (69 kPa)** minimum compressive strength; **4-perm (230-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Insulfoam; a Carlisle Company]**
 - c. **[LOGIX Brands Ltd.]**
 - d. **[Progressive Foam Technologies, Inc.]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[Insulfoam; a Carlisle Company]**
 - c. **[LOGIX Brands Ltd.]**
 - d. **[Progressive Foam Technologies, Inc.]**
 - e. **<Insert manufacturer's name>**

C. Graphite-Polystyrene Foam-Plastic Board Insulation, Type VIII : ASTM C578, Type VIII, **13 psi (90 kPa)** minimum compressive strength; **3.1-perm (178-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[BASF]**
 - b. **[Opco, Inc.]**
 - c. **[Perma R Products, Inc.]**
 - d. **[Polar Industries, Inc.]**
 - e. **[StarRFoam]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. [BASF]
 - b. [Opco, Inc.]
 - c. [Perma R Products, Inc.]
 - d. [Polar Industries, Inc.]
 - e. [StarRFoam]
 - f. <Insert manufacturer's name>
- D. Graphite-Polystyrene Foam-Plastic Board Insulation, Type VIII, Faced : ASTM C578, Type VIII, **13 psi (90 kPa)** minimum compressive strength; **3.1-perm (178-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Perma R Products, Inc.]
 - c. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [Perma R Products, Inc.]
 - c. <Insert manufacturer's name>
- E. Graphite-Polystyrene Foam-Plastic Board Insulation, Type II : ASTM C578, Type II, **15 psi (104 kPa)** minimum compressive strength; **3.1-perm (178-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [BASF]
 - c. [Opco, Inc.]
 - d. [Polar Industries, Inc.]
 - e. [StarRFoam]
 - f. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. [Atlas Molded Products, a division of Atlas Roofing Corporation]
 - b. [BASF]
 - c. [Opco, Inc.]
 - d. [Polar Industries, Inc.]
 - e. [StarRFoam]
 - f. <Insert manufacturer's name>
- F. Graphite-Polystyrene Foam-Plastic Board Insulation, Type IX : ASTM C578, Type IX, **25 psi (173 kPa)**

minimum compressive strength; **2.5-perm (144-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[BASF]**
 - c. **[Perma R Products, Inc.]**
 - d. **[Polar Industries, Inc.]**
 - e. **[StarRFoam]**
 - f. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[BASF]**
 - c. **[Perma R Products, Inc.]**
 - d. **[Polar Industries, Inc.]**
 - e. **[StarRFoam]**
 - f. **<Insert manufacturer's name>**

G. Graphite-Polystyrene Foam-Plastic Board Insulation, Type IX, Faced : ASTM C578, Type IX, **25 psi (173 kPa)** minimum compressive strength; **2.5-perm (144-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[LOGIX Brands Ltd.]**
 - c. **[Perma R Products, Inc.]**
 - d. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Atlas Molded Products, a division of Atlas Roofing Corporation]**
 - b. **[LOGIX Brands Ltd.]**
 - c. **[Perma R Products, Inc.]**
 - d. **<Insert manufacturer's name>**

H. Graphite-Polystyrene Foam-Plastic Board Insulation, Type XI : **5 psi (35 kPa)** minimum compressive strength; maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M; R4.5 minimum stable R-value at **1-inch (25.4-mm)** thickness per ASTM C518.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

- a. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. <Insert manufacturer's name>
- I. Graphite-Polystyrene Foam-Plastic Board Insulation, Type XIV : ASTM C578, Type XIV, **40 psi (276 kPa)** minimum compressive strength; **2.5-perm (144-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [BASF]
 - b. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [BASF]
 - b. <Insert manufacturer's name>
- J. Graphite-Polystyrene Foam-Plastic Board Insulation, Type XV : ASTM C578, Type XV, **60 psi (414 kPa)** minimum compressive strength; **2.5-perm (144-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [BASF]
 - b. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [BASF]
 - b. <Insert manufacturer's name>
- K. Graphite-Polystyrene Foam-Plastic Board Insulation, Type X, Faced : ASTM C578, Type X, **15 psi (104 kPa)** minimum compressive strength; **1.1-perm (63-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.
 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the

following]:

a. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

a. <Insert manufacturer's name>

- L. Graphite-Polystyrene Foam-Plastic Board Insulation, Type IV, Faced : ASTM C578, Type IV, **25 psi (173 kPa)** minimum compressive strength; **1.1-perm (63-ng/Pa x s x sq. m)** maximum vapor permeance at **1-inch (25.4-mm)** thickness per ASTM E96/E96M.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [Insulfoam; a Carlisle Company]

b. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

a. [Insulfoam; a Carlisle Company]

b. <Insert manufacturer's name>

2.5 POLYISOCYANURATE FOAM-PLASTIC BOARD INSULATION

- A. Polyisocyanurate Board Insulation, Foil Faced : ASTM C1289, foil faced, Type I, Class 1 or 2.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [Atlas Molded Products, a division of Atlas Roofing Corporation]

b. [Atlas Polyiso Roof and Wall Insulation]

c. [Carlisle Coatings & Waterproofing Inc]

d. [DuPont de Nemours, Inc.]

e. [Elevate; Holcim Building Envelope]

f. [Hunter Panels; a Carlisle company]

g. [Johns Manville; a Berkshire Hathaway company]

h. [Rmax, A Business Unit of Sika Corporation]

i. [The Dow Chemical Company]

j. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

a. [Atlas Molded Products, a division of Atlas Roofing Corporation]

- b. [Atlas Polyiso Roof and Wall Insulation]
 - c. [Carlisle Coatings & Waterproofing Inc]
 - d. [DuPont de Nemours, Inc.]
 - e. [Elevate; Holcim Building Envelope]
 - f. [Hunter Panels; a Carlisle company]
 - g. [Johns Manville; a Berkshire Hathaway company]
 - h. [Rmax, A Business Unit of Sika Corporation]
 - i. [The Dow Chemical Company]
 - j. <Insert manufacturer's name>
- B. Polyisocyanurate Board Insulation, Glass-Fiber-Mat Faced : ASTM C1289, glass-fiber-mat faced, Type II, Class 2.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [Atlas Polyiso Roof and Wall Insulation]
 - b. [Carlisle Coatings & Waterproofing Inc]
 - c. [Elevate; Holcim Building Envelope]
 - d. [Hunter Panels; a Carlisle company]
 - e. [Johns Manville; a Berkshire Hathaway company]
 - f. [Rmax, A Business Unit of Sika Corporation]
 - g. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Atlas Polyiso Roof and Wall Insulation]
 - b. [Carlisle Coatings & Waterproofing Inc]
 - c. [Elevate; Holcim Building Envelope]
 - d. [Hunter Panels; a Carlisle company]
 - e. [Johns Manville; a Berkshire Hathaway company]
 - f. [Rmax, A Business Unit of Sika Corporation]
 - g. <Insert manufacturer's name>
- 2.6 GLASS-FIBER BLANKET INSULATION
- A. Glass-Fiber Blanket Insulation, Unfaced : ASTM C665, Type I; passing ASTM E136 for combustion characteristics.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. [CertainTeed; SAINT-GOBAIN]
 - b. [Johns Manville; a Berkshire Hathaway company]
 - c. [Knauf Insulation]
 - d. [Owens Corning]
 - e. <Insert manufacturer's name>
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert

manufacturer's name; product name or designation> or comparable product by one of the following:

- a. **[CertainTeed; SAINT-GOBAIN]**
- b. **[Johns Manville; a Berkshire Hathaway company]**
- c. **[Knauf Insulation]**
- d. **[Owens Corning]**
- e. **<Insert manufacturer's name>**

B. Glass-Fiber Blanket Insulation, Polypropylene-Scrim-Kraft Faced : ASTM C665, Type II (nonreflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier).

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[CertainTeed; SAINT-GOBAIN]**
- b. **[Johns Manville; a Berkshire Hathaway company]**
- c. **[Knauf Insulation]**
- d. **[Owens Corning]**
- e. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[CertainTeed; SAINT-GOBAIN]**
- b. **[Johns Manville; a Berkshire Hathaway company]**
- c. **[Knauf Insulation]**
- d. **[Owens Corning]**
- e. **<Insert manufacturer's name>**

C. Glass-Fiber Blanket Insulation, Kraft Faced : ASTM C665, Type II (nonreflective faced), Class C (faced surface not rated for flame propagation); Category 1 (membrane is a vapor barrier).

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[CertainTeed; SAINT-GOBAIN]**
- b. **[Johns Manville; a Berkshire Hathaway company]**
- c. **[Knauf Insulation]**
- d. **[Owens Corning]**
- e. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- a. **[CertainTeed; SAINT-GOBAIN]**
- b. **[Johns Manville; a Berkshire Hathaway company]**
- c. **[Knauf Insulation]**

- d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
- D. Glass-Fiber Blanket Insulation, Reinforced-Foil Faced : ASTM C665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
- E. Glass-Fiber Blanket Insulation, Foil Faced : ASTM C665, Type III (reflective faced), Class B (faced surface with a flame-propagation resistance of 0.12 W/sq. cm); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**

2.7 GLASS-FIBER BOARD INSULATION

- A. Glass-Fiber Board Insulation, Unfaced : ASTM C612, Type IA; unfaced[, **passing ASTM E136 for combustion characteristics**].
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 3. Nominal Density: **[2.25 lb/cu. ft. (36 kg/cu. m)][3 lb/cu. ft. (48 kg/cu. m)][4.25 lb/cu. ft. (68 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)]<Insert value>**.
- B. Glass-Fiber Board Insulation, Faced : ASTM C612, Type IA; faced on one side with foil-scrim-kraft or foil-scrim-polyethylene vapor retarder.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[CertainTeed; SAINT-GOBAIN]**
 - b. **[Johns Manville; a Berkshire Hathaway company]**
 - c. **[Knauf Insulation]**
 - d. **[Owens Corning]**
 - e. **<Insert manufacturer's name>**
 3. Nominal Density: **[2.25 lb/cu. ft. (36 kg/cu. m)][3 lb/cu. ft. (48 kg/cu. m)][4.25 lb/cu. ft. (68 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)]<Insert value>**.

2.8 MINERAL-WOOL BLANKET INSULATION

- A. Mineral-Wool Blanket Insulation, Unfaced : ASTM C665, Type I (blankets without membrane facing); consisting of fibers; complying with ASTM E136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **<Insert manufacturer's name>**
- B. Mineral-Wool Blanket Insulation, Reinforced-Foil Faced : ASTM C665, Type III (reflective faced); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **<Insert manufacturer's name>**

2.9 MINERAL-WOOL BOARD INSULATION

- A. Mineral-Wool Board Insulation, Types IA and IB, Unfaced : ASTM C612, Types IA and IB; passing ASTM E136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. [Johns Manville; a Berkshire Hathaway company]
 - b. [Owens Corning]
 - c. [ROCKWOOL]
 - d. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Johns Manville; a Berkshire Hathaway company]
 - b. [Owens Corning]
 - c. [ROCKWOOL]
 - d. <Insert manufacturer's name>
 3. Nominal Density: [1.6 lb/cu. ft. (26 kg/cu. m)][2.25 lb/cu. ft. (36 kg/cu. m)][3 lb/cu. ft. (48 kg/cu. m)][4 lb/cu. ft. (64 kg/cu. m)][4.3 lb/cu. ft. (69 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)]<Insert value>.
- B. Mineral-Wool Board Insulation, Types IA and IB, Faced : ASTM C612, Types IA and IB; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Johns Manville; a Berkshire Hathaway company]
 - b. [Owens Corning]
 - c. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Johns Manville; a Berkshire Hathaway company]
 - b. [Owens Corning]
 - c. <Insert manufacturer's name>
 3. Nominal Density: [1.6 lb/cu. ft. (26 kg/cu. m)][2.25 lb/cu. ft. (36 kg/cu. m)][3 lb/cu. ft. (48 kg/cu. m)][4 lb/cu. ft. (64 kg/cu. m)][4.3 lb/cu. ft. (69 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)]<Insert value>.
- C. Mineral-Wool Board Insulation, Type II, Unfaced : ASTM C612, Type II; passing ASTM E136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Johns Manville; a Berkshire Hathaway company]
 - b. [Owens Corning]
 - c. [ROCKWOOL]
 - d. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **<Insert manufacturer's name>**
 3. Nominal Density: **[4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)]<Insert value>**.
- D. Mineral-Wool Board Insulation, Type II, Faced : ASTM C612, Type II; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[Specialty Products & Insulation (SPI)]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[Specialty Products & Insulation (SPI)]**
 - d. **<Insert manufacturer's name>**
 3. Nominal Density: **[4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)]<Insert value>**.
- E. Mineral-Wool Board Insulation, Type III, Unfaced : ASTM C612, Type III; passing ASTM E136 for combustion characteristics.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**

- c. **[ROCKWOOL]**
- d. **<Insert manufacturer's name>**

- 3. Nominal Density: **[4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)][10 lb/cu. ft. (160 kg/cu. m)]<Insert value>**.

F. Mineral-Wool Board Insulation, Type III, Faced : ASTM C612, Type III; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder.

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **[Specialty Products & Insulation (SPI)]**
 - e. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Johns Manville; a Berkshire Hathaway company]**
 - b. **[Owens Corning]**
 - c. **[ROCKWOOL]**
 - d. **[Specialty Products & Insulation (SPI)]**
 - e. **<Insert manufacturer's name>**
- 3. Nominal Density: **[4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)][10 lb/cu. ft. (160 kg/cu. m)]<Insert value>**.

G. Mineral-Wool Board Insulation, Type IVA : ASTM C612, Type IVA; **[unfaced][with black mat facer]<Insert facer material>**.

- 1. Nominal Density: **[4 lb/cu. ft. (64 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)][10 lb/cu. ft. (160 kg/cu. m)][11 lb/cu. ft. (176 kg/cu. m)][12 lb/cu. ft. (192 kg/cu. m)]<Insert value>**.

H. Mineral-Wool Board Insulation, Type IVB : ASTM C612, Type IVB; **[unfaced][with black mat facer]<Insert facer material>**.

- 1. Nominal Density: **[4.3 lb/cu. ft. (69 kg/cu. m)][6 lb/cu. ft. (96 kg/cu. m)][8 lb/cu. ft. (128 kg/cu. m)][10 lb/cu. ft. (160 kg/cu. m)][11 lb/cu. ft. (176 kg/cu. m)][12 lb/cu. ft. (192 kg/cu. m)][6.2 lb/cu. ft. (99 kg/cu. m) outer layer and 3.8 lb/cu. ft. (61 kg/cu. m) inner layer]<Insert value>**.

2.10 LOOSE-FILL INSULATION

A. Cellulosic-Fiber Loose-Fill Insulation : ASTM C739, chemically treated for flame-resistance, processing, and handling characteristics. **[Type I for pneumatic application][or][Type II for poured application]**.

- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Greenfiber, LLC]
- b. [Hamilton Manufacturing, Inc. (HMI)]
- c. [Nu-Wool Co., Inc.]
- d. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Greenfiber, LLC]
- b. [Hamilton Manufacturing, Inc. (HMI)]
- c. [Nu-Wool Co., Inc.]
- d. <Insert manufacturer's name>

- B. Glass-Fiber Loose-Fill Insulation : ASTM C764, [Type I for pneumatic application][or][Type II for poured application].

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [CertainTeed; SAINT-GOBAIN]
- b. [Johns Manville; a Berkshire Hathaway company]
- c. [Knauf Insulation]
- d. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [CertainTeed; SAINT-GOBAIN]
- b. [Johns Manville; a Berkshire Hathaway company]
- c. [Knauf Insulation]
- d. <Insert manufacturer's name>

- C. Mineral-Fiber Loose-Fill Insulation : ASTM C764, [Type I for pneumatic application][or][Type II for poured application].

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. [Knauf Insulation]
- b. [Owens Corning]
- c. <Insert manufacturer's name>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

- a. [Knauf Insulation]
- b. [Owens Corning]
- c. <Insert manufacturer's name>

2.11 SPRAY-APPLIED CELLULOSIC INSULATION

- A. Self-Supported, Spray-Applied Cellulosic Insulation : ASTM C1149, [Type I (materials applied with liquid adhesive; suitable for either exposed or enclosed applications),][Type II (materials containing a dry adhesive activated by water during installation; intended only for enclosed or covered applications),][Type III (materials containing an adhesive mixed with water during application; intended for application on attic floors),] chemically treated for flame-resistance, processing, and handling characteristics.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Greenfiber, LLC]
 - b. [Hamilton Manufacturing, Inc. (HMI)]
 - c. [International Cellulose Corp.]
 - d. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Greenfiber, LLC]
 - b. [Hamilton Manufacturing, Inc. (HMI)]
 - c. [International Cellulose Corp.]
 - d. <Insert manufacturer's name>

2.12 CELLULAR-GLASS INSULATION

- A. Cellular-Glass Insulation : Type V, ASTM C1902, structural insulating block with compressive strength of minimum **304 psi (2096 kPa)**, per ASTM D1621.
1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Owens Corning]
 - b. <Insert manufacturer's name>
 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Owens Corning]
 - b. <Insert manufacturer's name>

2.13 REFLECTIVE INSULATION AND RADIANT BARRIERS

- A. Reflective Insulation : ASTM C1224, with one or more low-emittance surfaces with emittance value of 0.1 or less as measured per ASTM C1371.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Covertex Flexible Packaging; division of Balcan Plastics]**
 - b. **[Fi-Foil Company, Inc.]**
 - c. **[Innovative Energy, Inc]**
 - d. **[Innovative Insulation, Inc.]**
 - e. **[ISI Building Products]**
 - f. **[Reflectix Inc.]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Covertex Flexible Packaging; division of Balcan Plastics]**
 - b. **[Fi-Foil Company, Inc.]**
 - c. **[Innovative Energy, Inc]**
 - d. **[Innovative Insulation, Inc.]**
 - e. **[ISI Building Products]**
 - f. **[Reflectix Inc.]**
 - g. **<Insert manufacturer's name>**
 3. Construction: **[Surfaces separated with internal expanders][Surfaces separated by single-layer polyethylene bubble film][Surfaces separated by double-layer polyethylene bubble film]<Insert construction>**.
 4. Water-Vapor Transmission: **[1 perm, maximum][5 perms or greater]**.
- B. Sheet Radiant Barriers : ASTM C1313/C1313M with at least one surface with emittance value of 0.1 or less as measured per ASTM C1371.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Covertex Flexible Packaging; division of Balcan Plastics]**
 - b. **[Fi-Foil Company, Inc.]**
 - c. **[Innovative Energy, Inc]**
 - d. **[Innovative Insulation, Inc.]**
 - e. **[ISI Building Products]**
 - f. **[Reflectix Inc.]**
 - g. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Covertex Flexible Packaging; division of Balcan Plastics]**

- b. [Fi-Foil Company, Inc.]
 - c. [Innovative Energy, Inc]
 - d. [Innovative Insulation, Inc.]
 - e. [ISI Building Products]
 - f. [Reflectix Inc.]
 - g. <Insert manufacturer's name>
- 3. Construction: [Foil on one side of substrate][Foil on both sides of substrate][Vacuum metallizing on substrate].
 - 4. Tear Resistance: <Insert value>.
 - 5. Water-Vapor Transmission: [1 perm, maximum][5 perms or greater].
 - 6. Sheet Width: <Insert width>.

C. Interior Radiation Control Coating System : Silver-colored, low-emissivity, [solvent][water]-based coating; with a surface emittance value of 0.25 or less as measured per ASTM C1371.

- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [SOLEC Solar Energy Corporation]
 - b. [STS Coatings, Inc.]
 - c. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [SOLEC Solar Energy Corporation]
 - b. [STS Coatings, Inc.]
 - c. <Insert manufacturer's name>

2.14 RIGID VACUUM INSULATION (VIP)

A. Rigid Vacuum Insulation Panel, Foil Faced : A microporous, insulated core heat-sealed under vacuum and encased in metal film.

- 1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Kingspan Insulation LLC]
 - b. [Panasonic Industrial]
 - c. <Insert manufacturer's name>
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Kingspan Insulation LLC]
 - b. [Panasonic Industrial]
 - c. <Insert manufacturer's name>

2.15 GLASS-WOOL VACUUM INSULATION (VIP)

- A. Glass-Wool Vacuum Insulation Panel, Foil Faced : ASTM C1484, foil faced; Class A fire-rated in accordance with ASTM E84.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Panasonic Industrial Devices Sales Company of America; division of Panasonic Corporation of America]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Panasonic Industrial Devices Sales Company of America; division of Panasonic Corporation of America]**
 - b. **<Insert manufacturer's name>**

2.16 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
 3. Plate: Perforated, galvanized carbon-steel sheet, **0.030 inch (0.762 mm)** thick by **2 inches (50 mm)** square.
 4. Spindle: Copper-coated, low-carbon steel; fully annealed; **0.105 inch (2.67 mm)** in diameter; length to suit depth of insulation.
- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**

following]:

- a. **[Gemco]**
 - b. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Gemco]**
 - b. **<Insert manufacturer's name>**
 3. Angle: Formed from **0.030-inch- (0.762-mm-)** thick, perforated, galvanized carbon-steel sheet with each leg **2 inches (50 mm)** square.
 4. Spindle: Copper-coated, low-carbon steel; fully annealed; **0.105 inch (2.67 mm)** in diameter; length to suit depth of insulation.
- C. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch- (0.41-mm-)** thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than **1-1/2 inches (38 mm)** square or in diameter.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
 3. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Attic spaces.
 - d. **<Insert location>**.
- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain airspace of **[1 inch (25 mm)][2 inches (50 mm)][3 inches (76 mm)]** between face of insulation and substrate to which anchor is attached.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

- a. **[Gemco]**
 - b. **<Insert manufacturer's name>**
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Gemco]**
 - b. **<Insert manufacturer's name>**
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AGM Industries, Inc]**
 - b. **[Gemco]**
 - c. **<Insert manufacturer's name>**
- F. Insulation Fastener Accessories: Provide double-pointed weld pins, lagging pins, quilting pins, duct liner pins, insulation hangers, specialty washers, special caps, j-hooks, capacitor discharge annular weld pins, capacitor discharge acoustical lagging pins, and other accessory materials that are recommended in writing by insulation fastener manufacturer to produce complete insulation supports.

2.17 ACCESSORIES

- A. Insulation for Miscellaneous Voids:
 - 1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.
 - 2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
 - 3. Polyurethane Pour-In-Place Insulation: Closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84, specifically formulated for pour-in-place applications.
 - a. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - 1) **[Huntsman Building Solutions]**
 - 2) **<Insert manufacturer's name>**

- b. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

- 1) **[Huntsman Building Solutions]**
- 2) **<Insert manufacturer's name>**

B. Miscellaneous Application Accessories:

1. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.
2. Crack Sealer: Closed-cell insulating foam in aerosol dispenser recommended in writing by insulation manufacturer for filling gaps in board insulation.
3. Curtain-Wall Insulation Clips: Z-shaped galvanized steel as recommended in writing by insulation manufacturer.
4. Eave Ventilation Troughs: Preformed, rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide ventilation between insulated attic spaces and vented eaves.
5. Detailing Foam Insulation for Voids: Urethane foam complying with AAMA 812, low expansion pressure suitable for filling insulation gaps and voids adjacent to openings to protect against water, air, and sound intrusion.
6. Tapes for Reflective Insulation and Barriers:
 - a. Aluminum-foil tape for repairs or splicing material.
 - b. Double-sided tape for adhering to metal framing or overlapping material.
 - c. Reinforced-foil tape for sealing tears or cuts in sheet vapor barrier.
7. Clip-and-Pin Components:
 - a. Beam/Bar Joist Clips: For beams, bar joists, and Z-type purlins.
 - b. C-Purlin Clips: For C-type purlins.
 - c. Angle Clips: For sidewalks and floors.
 - d. Tube Clips: For wood beams and metal tubular framing.
 - e. Locking Washers: Aluminum; white to match reflective bubble insulation facing colors.
8. Wire Mesh Lath Support for Insulation: ASTM C1032.
 - a. Material: Woven wire lath **1-1/2-inch (38-mm)** hexagonal-shaped mesh with minimum **0.0510-inch- (1.3-mm-)** diameter, galvanized-steel wire.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or those that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products, applications and

applicable codes.

- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
- D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 INSTALLATION OF SLAB INSULATION

- A. On vertical slab edge and foundation surfaces, set insulation units using manufacturer's recommended adhesive in accordance with manufacturer's written instructions.
 - 1. If not otherwise indicated, extend insulation a minimum of **[24 inches (610 mm)][36 inches (915 mm)]<Insert dimension>** below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units in accordance with manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
 - 1. If not otherwise indicated, extend insulation a minimum of **[24 inches (610 mm)][36 inches (915 mm)]<Insert dimension>** in from exterior walls.

3.4 INSTALLATION OF FOUNDATION WALL INSULATION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
 - 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive in accordance with anchor manufacturer's written instructions.
 - 2. Space anchors in accordance with insulation manufacturer's written instructions for insulation type, thickness, and application.
 - 3. Apply insulation standoffs to each spindle to create cavity width indicated on Drawings between concrete substrate and insulation.
 - 4. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation.
 - 5. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.
- C. Adhesive Installation: Install with adhesive or press into tacky waterproofing or dampproofing in accordance with manufacturer's written instructions.

3.5 INSTALLATION OF CAVITY-WALL INSULATION

- A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately **24 inches (610 mm)** o.c. both ways on inside face and as recommended in writing by manufacturer.
1. Fit courses of insulation between[**wall ties and other**] obstructions, with edges butted tightly in both directions, and with faces flush.
 2. Press units firmly against inside substrates.
 3. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 042000 "Unit Masonry."
- B. Cellular-Glass Structural Insulating Blocks:
1. Verify manufacturer-recommended cure time for air and water barrier system and waterproofing before installing structural insulating block.
 2. Install a single layer of cellular-glass structural insulating block with facers on top and bottom surfaces fully embedded into mortar set on brick ledge in accordance with manufacturer's written instructions.
 3. Install cellular-glass structural insulating block maximum sizes to minimize joints.
 4. Locate joints square to framing members. Do not cantilever cellular-glass structural insulating block.
 5. Butt joints of cellular-glass structural insulating block with no gaps or mortar between joints.
 6. Insulation board edges are to be butted together tightly and fit around openings and penetrations. Install square edges to fit square and tight.
 7. Extend insulation in single course to cover entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Do not drill.
- C. Mineral-Wool Board Insulation: Install insulation fasteners **4 inches (100 mm)** from each corner of board insulation, at center of board, and as recommended by manufacturer.
1. Fit courses of insulation between[**masonry wall ties and other**] obstructions, with edges butted tightly in both directions, and with faces flush.
 2. Press units firmly against inside substrates.

3.6 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

- A. Blanket Insulation: Install in cavities formed by framing members in accordance with the following requirements:
1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 3. Maintain **3-inch (76-mm)** clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. Attics: Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
 5. For metal-framed wall cavities where cavity heights exceed **96 inches (2438 mm)**, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 6. Where glass-fiber blankets are indicated for sound attenuation above ceilings, install unfaced blanket insulation over ceiling area in thickness indicated. Where partitions occur, extend insulation up either side of partition.
 7. For wood-framed construction, install blankets in accordance with ASTM C1320 and as follows:

- a. With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.
 - 8. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
 - a. Exterior Walls: Set units with facing placed toward **[exterior of construction][interior of construction][as indicated on Drawings]**.
 - b. Interior Walls: Set units with facing placed **[as indicated on Drawings][toward areas of high humidity]<Insert location>**.
 - B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
 - 1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately **2.5 lb/cu. ft. (40 kg/cu. m)**.
 - 2. Detailing Foam Insulation for Voids: Apply in accordance with manufacturer's written instructions.
 - C. Loose-Fill Insulation: Apply in accordance with ASTM C1015 and manufacturer's written instructions.
 - 1. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively.
 - 2. For cellulosic-fiber loose-fill insulation, comply with CIMA's Technical Bulletin #2, "Standard Practice for Installing Cellulose Building Insulation."
 - D. Spray-Applied Cellulosic Insulation: Apply spray-applied insulation in accordance with manufacturer's written instructions.
 - 1. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked.
 - 2. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.
- 3.7 INSTALLATION OF BOARD INSULATION
- A. Install board insulation in accordance with manufacturer's written instructions per project applications and conditions.
- 3.8 INSTALLATION OF REFLECTIVE AND RADIANT BARRIERS INSULATION
- A. Install sheet reflective insulation in accordance with ASTM C727.
 - B. Install sheet radiant barriers in accordance with ASTM C1744.
 - C. Install interior radiation control coating system in accordance with ASTM C1321.
- 3.9 INSTALLATION OF VACUUM INSULATION
- A. Install vacuum insulation panels in accordance with manufacturer's written instructions.

07 - Thermal And Moisture Protection

3.10 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 21 19 00 - FOAMED-IN-PLACE INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Closed-cell spray polyurethane foam insulation.
2. Open-cell spray polyurethane foam insulation.

B. Related Requirements:

1. Section 072100 "Thermal Insulation" for foam-plastic board insulation.
2. Section 075700 "Coated Foamed Roofing" for spray polyurethane foam insulation used for roofing applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.
2. Manufacturer Inventory: Provide manufacturer's ingredient inventory.
3. Health Product Declaration (HPD): Provide documentation confirming product compliance with one of the following:
 - a. Inventory or HPD to at least 0.01 percent by weight, with at least 95 percent assessed using GreenScreen Benchmark assessment.
 - b. Cradle to Cradle v3 certification with minimum Silver level of Material Health.
 - c. Living Product Challenge certification indicating achievement of Imperative 09, "Transparent Material Health."
4. Product Data: For insulation, indicating that R-values comply with tables in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air Conditioning.
5. Laboratory Test Reports: For insulation, indicating compliance with the VOC emissions evaluation.
6. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality control reports.

B. Qualification Statements: For Installer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 CLOSED-CELL SPRAY POLYURETHANE FOAM INSULATION

- A. Closed-Cell Spray Polyurethane Foam: ASTM C1029.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[AMBIT Polyurethane]**
 - b. **[Carlisle Spray Foam Insulation]**
 - c. **[ENVERGE]**
 - d. **[Gaco; Holcim Building Envelope]**
 - e. **[Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]**
 - f. **[Huntsman Building Solutions]**
 - g. **[Johns Manville; a Berkshire Hathaway company]**
 - h. **[NCFI Polyurethanes; a division of Barnhardt Manufacturing Company]**
 - i. **[Quadrant Performance Materials]**
 - j. **[SWD Urethane Company]**
 - k. **[Thermoseal USA]**
 - l. **[Volatile Free, Inc.]**
 - m. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AMBIT Polyurethane]**
 - b. **[Carlisle Spray Foam Insulation]**
 - c. **[ENVERGE]**
 - d. **[Gaco; Holcim Building Envelope]**
 - e. **[Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]**
 - f. **[Huntsman Building Solutions]**
 - g. **[Johns Manville; a Berkshire Hathaway company]**
 - h. **[NCFI Polyurethanes; a division of Barnhardt Manufacturing Company]**
 - i. **[Quadrant Performance Materials]**
 - j. **[SWD Urethane Company]**
 - k. **[Thermoseal USA]**
 - l. **[Volatile Free, Inc.]**
 - m. **<Insert manufacturer's name>**
3. Type and Minimum Compressive Strength:
 - a. Type II, minimum density of **[1.5 lb/cu. ft. (24 kg/cu. m)]<Insert density>** and minimum aged R-value at 1-inch (25.4-mm) thickness of **6.2 deg F x h x sq. ft./Btu at 75 deg F**

(43 K x sq. m/W at 24 deg C).

4. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25][75]<Insert value>** or less.
 - b. Smoke-Developed Index: **[450]<Insert value>** or less.
 - c. Fire-Propagation Characteristics: Passes **[NFPA 285][and][NFPA 276]** testing as part of an approved assembly.
5. Fire-Safety Barriers: Approved assembly as **[thermal barrier][and][ignition barrier]** with accessory components.

2.2 OPEN-CELL SPRAY POLYURETHANE FOAM INSULATION

- A. Open-Cell Spray Polyurethane Foam: Spray-applied polyurethane foam using water as a blowing agent.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[AMBIT Polyurethane]**
 - b. **[Carlisle Spray Foam Insulation]**
 - c. **[ENVERGE]**
 - d. **[Gaco; Holcim Building Envelope]**
 - e. **[General Coatings Manufacturing Corp.]**
 - f. **[Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]**
 - g. **[Huntsman Building Solutions]**
 - h. **[Johns Manville; a Berkshire Hathaway company]**
 - i. **[NCFI Polyurethanes; a division of Barnhardt Manufacturing Company]**
 - j. **[Quadrant Performance Materials]**
 - k. **[SWD Urethane Company]**
 - l. **[Thermoseal USA]**
 - m. **[UPC; a General Coatings Manufacturing Corp. brand]**
 - n. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[AMBIT Polyurethane]**
 - b. **[Carlisle Spray Foam Insulation]**
 - c. **[ENVERGE]**
 - d. **[Gaco; Holcim Building Envelope]**
 - e. **[General Coatings Manufacturing Corp.]**
 - f. **[Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings & Waterproofing Inc. brands)]**
 - g. **[Huntsman Building Solutions]**
 - h. **[Johns Manville; a Berkshire Hathaway company]**
 - i. **[NCFI Polyurethanes; a division of Barnhardt Manufacturing Company]**
 - j. **[Quadrant Performance Materials]**
 - k. **[SWD Urethane Company]**
 - l. **[Thermoseal USA]**

- m. **[UPC; a General Coatings Manufacturing Corp. brand]**
 - n. **<Insert manufacturer's name>**
3. Type and Minimum Compressive Strength:
- a. Minimum density of **[0.4 lb/cu. ft. (6.4 kg/cu. m)]<Insert density>** and minimum aged R-value at **1-inch (25.4-mm)** thickness of **3.4 deg F x h x sq. ft./Btu at 75 deg F (24 K x sq. m/W at 24 deg C)**.
4. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- a. Flame-Spread Index: **[25][75]<Insert value>** or less.
 - b. Smoke-Developed Index: **[450]<Insert value>** or less.
5. Fire-Propagation Characteristics: Passes **[NFPA 285][and][NFPA 276]** testing as part of an approved assembly.
6. Fire-Safety Barriers: Approved assembly as **[thermal barrier][and][ignition barrier]** with accessory components.

2.3 ACCESSORIES

- A. Prescriptive Thermal Barriers: Building-code-approved materials.
- 1. Gypsum Board: **1/2-inch (12.7-mm)** minimum thickness.
 - 2. Wood Structural Panels: **23/32-inch (18.2-mm)** thickness.
 - 3. Plywood: Nominal **1/2-inch (12.7-mm)** minimum thickness.
 - 4. Heavy timber in accordance with the IBC.
- B. Alternate Thermal Barriers: Assembly consisting of foam insulation with applied fire-protective intumescent coating.
- 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Flame Control Coatings, a brand of Seal for Life Industries]**
 - b. **[Flame Control Coatings, LLC]**
 - c. **[International Fireproof Technology Inc]**
 - d. **[No-Burn, Inc.]**
 - e. **[TPR2 Corporation]**
 - f. **<Insert manufacturer's name>**
 - 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Flame Control Coatings, a brand of Seal for Life Industries]**
 - b. **[Flame Control Coatings, LLC]**
 - c. **[International Fireproof Technology Inc]**
 - d. **[No-Burn, Inc.]**
 - e. **[TPR2 Corporation]**
 - f. **<Insert manufacturer's name>**

3. Fire-Performance Requirements: Materials as an equivalent assembly must pass the following fire test:
 - a. NFPA 286 Fire Integrity Test: Ensures material remains in place for 15 minutes during specified large-scale fire tests. This could include UL 1715, UL 1040 or FM 4880.
 4. Components:
 - a. Primer: Material recommended by insulation manufacturer where required for adhesion of insulation to substrates.
 - b. Fire-Protective Intumescent Coatings: Coating formulated for application over polyurethane foam plastics in thicknesses listed in compliance with the ICC-ES report.
 - c. **<Insert component>**.
- C. Equivalent Thermal Barriers: Assembly consisting of foam insulation with applied fire-protective intumescent coating.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Firestable Insulation Company]**
 - b. **[International Cellulose Corp.]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Firestable Insulation Company]**
 - b. **[International Cellulose Corp.]**
 - c. **<Insert manufacturer's name>**
 3. Fire-Performance Requirements: Material or equivalent assembly is in compliance with the following two fire tests:
 - a. ASTM E119 Temperature Transmission Fire Test: Average temperature rise of the unexposed surface less than **250 deg F (120 deg C)** after 15 minutes of fire exposure in accordance with ASTM E119 or UL 263.
 - b. NFPA 286 Fire Integrity Test: Ensures material remain in place for 15 minutes during specified large-scale fire tests such as NFPA 286.
 - c. NFPA 275: Combination of both ASTM E119 and NFPA 275 fire tests.
 4. Components:
 - a. Primer: Material recommended by insulation manufacturer where required for adhesion of insulation to substrates.
 - b. Fire-Protective Intumescent Coatings: Coating formulated for application over polyurethane foam plastics in thicknesses listed in compliance with the ICC-ES report.
 - c. **<Insert component>**.
- D. Prescriptive Ignition Barriers: Building-code-approved materials.
1. Mineral-Fiber Insulation: **1-1/2-inch (38-mm)** minimum thickness.
 2. Wood Structural Panel or Hardboard: **1/4-inch (6-mm)** minimum thickness.

3. Particleboard: **0.325-inch (9.5-mm)** minimum thickness.
 4. Gypsum Wallboard: **0.325-inch (9.5-mm)** minimum thickness.
 5. Corrosion-Resistant Steel: **0.016-inch (0.4-mm)** base metal thickness.
 6. Cellulose Insulation: **1-1/2-inch (38-mm)** minimum thickness, self-supported spray-applied; for attic spaces only.
- E. Alternative Ignition Barriers: Assembly consisting of foam insulation with applied fire-protective intumescent coating.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[ENVERGE]**
 - b. **[Flame Seal Products, Inc.]**
 - c. **[No-Burn, Inc.]**
 - d. **[TPR2 Corporation]**
 - e. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ENVERGE]**
 - b. **[Flame Seal Products, Inc.]**
 - c. **[No-Burn, Inc.]**
 - d. **[TPR2 Corporation]**
 - e. **<Insert manufacturer's name>**
 3. Fire-Performance Requirements:
 - a. Fire-protective coating formulated for application over polyurethane foam plastics, compatible with insulation, and in compliance with ICC-ES AC377, Appendix X.
 - b. ASTM E970 radiant heat flux test.
 4. Components:
 - a. Fire-Protective Intumescent Coatings: Coating formulated for application over polyurethane foam plastics in thicknesses listed in compliance with the ICC-ES report.
 - b. **<Insert component>**.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Verify that substrates are clean, dry, and free of substances that are harmful to insulation.
- B. Priming: Prime substrates where recommended by insulation manufacturer. Apply primer to comply with insulation manufacturer's written instructions. Confine primers to areas to be insulated; do not allow spillage or migration onto adjoining surfaces.

3.2 INSTALLATION OF FOAMED-IN-PLACE INSULATION

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Spray insulation to envelop entire area to be insulated and fill voids.
- C. Apply in multiple passes to not exceed maximum thicknesses recommended by manufacturer. Do not spray into rising foam.
- D. Framed Construction: Install into cavities formed by framing members to achieve thickness indicated on Drawings.
- E. Cavity Walls: Install into cavities to **[thickness indicated on Drawings][fully fill void]**.
- F. Miscellaneous Voids: Apply according to manufacturer's written instructions.
- G. Install **[thermal][ignition]** barrier material.
 - 1. Do not cover insulation prior to any required spray foam insulation inspections.
- H. Apply barrier coatings in accordance with manufacturer's written instructions and to comply with requirements for listing and labeling for fire-propagation characteristics and surface-burning characteristics specified.
 - 1. Use equipment and techniques best suited for substrate and type of material applied as recommended by coating manufacturer.
 - 2. Apply coatings to prepared surfaces as soon as practical after preparation and before subsequent surface soiling or deterioration.
 - 3. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Produce sharp lines and color breaks.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect spray foam insulation installation, including accessories. Report results in writing.

3.4 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.

SECTION 07 24 13 00 - POLYMER-BASED EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Polymer-based exterior insulation and finish system (EIFS).
 - 1. EIFS-clad barrier-wall assemblies that are field applied over substrate.
 - 2. Prefabricated panels consisting of EIFS-clad barrier-wall assemblies that are shop applied over sheathing on metal framing.
- B. Related Requirements:
 - 1. Section 072419 "Water-Drainage Exterior Insulation and Finish System (EIFS)" for EIFS-clad drainage-wall assemblies.
 - 2. Section 072600 "Vapor Retarders" for wall sheet vapor retarders.
 - 3. Section 072713 "Modified Bituminous Sheet Air Barriers" for self-adhering sheet air barriers composed of bituminous materials applied over sheathing behind mechanically fastened EIFS.
 - 4. Section 072715 "Nonbituminous Self-Adhering Sheet Air Barriers" for self-adhering sheet air barriers composed of nonbituminous polymers applied over sheathing behind mechanically fastened EIFS.
 - 5. Section 072726 "Fluid-Applied Membrane Air Barriers" for fluid-applied, synthetic polymer air barriers applied over sheathing behind EIFS-clad wall assemblies.
- C. Products furnished, but not installed, under this Section include connections and other attachment devices for prefabricated panels to be **[cast in concrete][embedded in masonry assemblies]**.

1.2 DEFINITIONS

- A. Definitions in ASTM E2110 apply to Work of this Section.
- B. EIFS: Exterior insulation and finish system(s).
- C. IBC: International Building Code.
- D. Polymer-Based Exterior Insulation and Finish System: Class PB EIFS, as defined in ASTM E2568.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each EIFS component, trim, and accessory.
- B. Sustainable Design Submittals:

1. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.
 2. Manufacturer Inventory: Provide manufacturer's ingredient inventory.
 3. Health Product Declaration (HPD): Provide documentation confirming product compliance with one of the following:
 - a. Inventory or HPD to at least 0.01 percent by weight, with at least 95 percent assessed using GreenScreen Benchmark assessment.
 - b. Cradle to Cradle v3 certification with minimum Silver level of Material Health.
 - c. Living Product Challenge certification indicating achievement of Imperative 09, "Transparent Material Health."
 4. Product Data: For insulation, indicating that R-values comply with tables in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air Conditioning."
 5. Laboratory Test Reports: For Insulation, indicating compliance with requirements for low-emitting materials.
 6. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
 7. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
 8. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
- C. Health Product Declaration (HPD): Provide documentation indicating that manufacturer has screened and publicly provided ingredient disclosure to 1000 ppm, and has developed an action plan to mitigate known hazards.
- D. Shop Drawings: For prefabricated EIFS panels.
1. Include plans, elevations, sections, details of components including build-outs, details of penetrations and terminations, flashing details, joint locations and configurations, lifting points, fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
- E. Panel Schedule: For prefabricated panel fabrication.
- F. Samples: For each exposed product and for each color and texture specified, **[8 inches (200 mm) square]<Insert dimension and shape>** in size.
- G. Samples for Initial Selection: For each type of finish-coat color and texture indicated.
1. Include similar Samples of exposed accessories involving color selection.
- H. Samples for Verification: **24-inch- (600-mm-)** square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work, including **[custom trim, each profile],[and][an aesthetic reveal]**.
1. Include **[exposed trim and accessory]<Insert item>** Samples to verify color selected.
 2. Include a typical control joint filled with sealant of color selected, as specified in Section 079200 "Joint Sealants."
- I. Delegated Design Submittal: For prefabricated EIFS panels.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer][fabricator/erector]**.
- B. Manufacturer Certificates: Signed by EIFS manufacturer, certifying the following:
 - 1. EIFS substrate is acceptable to EIFS manufacturer.
 - 2. Accessory products installed with EIFS, including **[joint sealants,][flashing,][water-resistant barriers,][trim,]<Insert accessory>** whether or not furnished by EIFS manufacturer and whether or not specified in this Section, are acceptable to EIFS manufacturer.
- C. Product Certificates: For **[cementitious materials and aggregates and for]** insulation, from manufacturer.
- D. Product Test Reports: For each EIFS assembly and component, for tests performed by a qualified testing agency.
- E. Field quality-control reports.
- F. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For EIFS to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: **[An installer who is certified in writing by AWCI International as qualified to install Class PB EIFS using trained workers]<Insert requirements>**.
- B. Fabricator/Erector Qualifications: Certified in writing by EIFS manufacturer as qualified to fabricate and erect manufacturer's prefabricated panel system using skilled and trained workers.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, to set quality standards for materials and execution, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
- B. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.

1. Stack insulation board flat and off the ground.
2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1. Proceed with installation of adhesives or coatings only when ambient temperatures have remained, or are forecast to remain, above **40 deg F (4.4 deg C)** for a minimum of 24 hours before, during, and after application. Do not apply EIFS adhesives or coatings during rainfall.

1.10 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of EIFS that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Bond integrity and weathertightness.
 - b. Deterioration of EIFS finishes and other EIFS materials beyond normal weathering.
2. Warranty coverage includes the following EIFS components:
 - a. EIFS finish, including base coats, finish coats, and reinforcing mesh.
 - b. Insulation installed as part of EIFS[, **including buildouts**].
 - c. Insulation adhesive[**and mechanical fasteners**].
 - d. EIFS accessories, including trim components and flashing.
3. Warranty Period: [**Five**][**10**]**<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 POLYMER-BASED EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

- A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Corev America, Inc**]
2. [**Dryvit Systems, Inc.**]
3. [**Dryvit, part of Tremco CPG**]
4. [**Finestone, a Sika brand**]
5. [**Master Wall Inc.**]
6. [**Omega Products International, Inc.**]

7. [Parex, a Sika brand]
8. [Senergy; a SIKA brand]
9. [Sto Corp.]
10. [Stuc-O-Flex International, Inc.]
11. [Total Wall, Inc.]
12. <Insert manufacturer's name>

- B. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:

1. [Corev America, Inc]
2. [Dryvit Systems, Inc.]
3. [Dryvit, part of Tremco CPG]
4. [Finestone, a Sika brand]
5. [Master Wall Inc.]
6. [Omega Products International, Inc.]
7. [Parex, a Sika brand]
8. [Senergy; a SIKA brand]
9. [Sto Corp.]
10. [Stuc-O-Flex International, Inc.]
11. [Total Wall, Inc.]
12. <Insert manufacturer's name>

- C. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as tested and compatible with EIFS components.

2.2 PERFORMANCE REQUIREMENTS

- A. EIFS Performance: Comply with ASTM E2568 and with the following:

1. Weathertightness: Resistant to water penetration from exterior.
2. System Fire Performance: [**Fire-resistance rating of wall assembly**][**Full-scale multistory fire test**].
3. Structural Performance of Assembly and Components:
 - a. Wind Loads:
 - 1) Uniform pressure of <Insert lbf/sq. ft. (Pa)>, acting inward or outward.
 - 2) Uniform pressure as indicated on Drawings.
4. Impact Performance: ASTM E2568, [**Standard**][**Medium**][**High**][**Ultra High**] impact resistance[**unless otherwise indicated**].
5. Abrasion Resistance of Finish Coat: Sample consisting of **1-inch- (25.4-mm-)** thick EIFS mounted on **1/2-inch- (12.7-mm-)** thick gypsum board; cured for a minimum of 28 days and shows no cracking, checking, or loss of film integrity after exposure to **528 quarts (500 L)** of sand when tested in accordance with ASTM D968, Method A.
6. Mildew Resistance of Finish Coat: Sample applied to **2-by-2-inch (50.8-by-50.8-mm)** clean glass substrate; cured for 28 days and shows no growth when tested in accordance with ASTM D3273 and evaluated in accordance with ASTM D3274.

- B. Performance of Prefabricated Panels: EIFS to be designed as follows and withstand the structural performance indicated for Class PB EIFS and thermal movement limits indicated below without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design prefabricated panels, including comprehensive engineering analysis, using performance requirements and design criteria indicated.
2. Structural Performance: EIFS must withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated in accordance with [ASCE/SEI 7]<Insert requirement>:
 - a. Wind Loads:
 - 1) Uniform pressure of <Insert lbf/sq. ft. (Pa)>, acting inward or outward.
 - 2) Uniform pressure as indicated on Drawings.
3. Deflection Limits: Design prefabricated panels to withstand design loads without deflections greater than [1/240]<Insert deflection limits>.
4. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change: [100 deg F (55 deg C)]<Insert temperature change>.

2.3 EIFS MATERIALS

- A. Prefabricated Panels: Comply with requirements in Section 054000 "Cold-Formed Metal Framing" for metal framing supporting sheathing beneath EIFS and Section 061600 "Sheathing" for sheathing and sheathing joint treatment.
- B. Flexible-Membrane Flashing: Cold-applied, self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.
- C. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; compatible with substrate and complying with [one of] the following:
 1. Job-mixed formulation of portland cement, complying with ASTM C150/C150M, Type I, and polymer-based adhesive specified for base coat.
 2. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers specified for base coat.
 3. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.
 4. Adhesives shall have a VOC content of [50]<Insert value> g/L or less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

9. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. Molded, (Expanded) Rigid Cellular Polystyrene Board Insulation: Comply with ASTM E2430/E2430M, unless otherwise noted, and the following:
1. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, in accordance with ASTM E84.
 2. Dimensions: Provide insulation boards of not more than **24 by 48 inches (610 by 1219 mm)**, with thickness indicated on Drawings.
 3. Foam Buildouts: Provide with profiles and dimensions indicated on Drawings.
- E. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multi-end strands with retained mesh tensile strength of not less than **120 lbf/in. (21 dN/cm)** in accordance with ASTM E2098/E2098M and the following:
1. Reinforcing Mesh for EIFS, General: Not less than weight required to comply with impact-performance level specified in "Performance Requirements" Article.
 2. Strip-Reinforcing Mesh: Not less than **[3.75 oz./sq. yd. (127 g/sq. m)]****[As recommended by EIFS manufacturer]<Insert weight>**.
 3. Detail-Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)]****[As recommended by EIFS manufacturer]<Insert weight>**.
 4. Corner-Reinforcing Mesh: Not less than **[7.2 oz./sq. yd. (244 g/sq. m)]****[As recommended by EIFS manufacturer]<Insert weight>**.
- F. Base Coat: EIFS manufacturer's standard mixture complying with **[one of]** the following:
1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
 3. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
 4. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.
 5. Adhesives shall have a VOC content of **[50]<Insert value> g/L** or less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 9. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 10. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical

Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

- G. Water-Resistant Base Coat: EIFS manufacturer's standard waterproof formulation complying with[**one of**] the following:
1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
 3. Adhesives shall have a VOC content of [50]<Insert value> g/L or less.
 4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- H. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners, consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; designed to resist Project's design loads; capable of pulling fastener head below surface of insulation board; and complying with the following:
1. For attachment to steel studs from **0.033 to 0.112 inch (0.84 to 2.84 mm)** in thickness, provide steel drill screws complying with ASTM C954.
 2. For attachment to light-gage steel framing members not less than **0.0179 inch (0.45 mm)** in thickness, provide steel drill screws complying with ASTM C1002.
 3. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C1002, Type W.
 4. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
 5. For attachment to <Insert substrate>, provide manufacturer's standard fasteners suitable for substrate.
- I. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.
1. VOC Content: [250]<Insert value> g/L or less.
 2. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the

- California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. VOC Content: **[100]<Insert value>** g/L or less.
 4. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. VOC Content: **[100]<Insert value>** g/L or less.
 6. Low-Emitting Materials: VOC emissions of coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 7. VOC Content: **[100]<Insert value>** g/L or less.
 8. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 9. VOC Emissions: Coatings shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- J. Finish Coat: EIFS manufacturer's **[standard acrylic-based coating][standard acrylic-based coating with enhanced mildew resistance][siliconized acrylic-based coating][elastomeric coating]<Insert coating>** complying with the following:
1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
 2. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
 - a. Aggregate: Marble chips of size and color **[as indicated by manufacturer's designations][to match Architect's sample][as selected by Architect from manufacturer's full range of industry colors and color densities]**.
 3. Colors: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
 4. Textures: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
- K. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
- L. Water: Potable.
- M. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D1784 and ASTM C1063.
1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
 2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation, with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
 3. Expansion Joint: Closed-cell polyethylene backer rod and elastomeric sealant, **3/4-inch (19-mm)**

**Polymer-Based Exterior Insulation And Finish System
(EIFS)**

minimum.

4. Windowsill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
5. Parapet Cap Flashing: Type for both flashing and covering parapet top, with design complying with ASTM C1397[**and ANSI/SPRI/FM 4435/ES-1**].

2.4 MIXING

- A. Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials, except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

2.5 PANEL FABRICATION

- A. Panel Framing: Fabricate panel framing to comply with requirements in Section 054000 "Cold-Formed Metal Framing."
 1. Connect panel framing by welding unless otherwise indicated.
 2. Connections: Provide connections capable of adjustment, complying with erection tolerance requirements, to anchor panels to structure.
- B. Sheathing: Install on metal framing to comply with requirements in Section 061600 "Sheathing."
- C. EIFS Application: Apply EIFS to sheathed metal-framed panels to comply with requirements in "Substrate Protection Application," "Trim Installation," "Insulation Installation," "Base-Coat Application," and "Finish-Coat Application" articles and as follows:
 1. Wrap base coat and reinforcing mesh at edges of panels, and extend coverage not less than **[4 inches (100 mm) over backs of panels][full thickness to cover edges of metal framing]** unless otherwise indicated.
 2. Continue finish coat around corners at edges of panels unless otherwise indicated, and extend to location indicated for sealant application. Do not extend finish coat over surfaces where sealant is applied.
 3. Continue finish coat around corners at edges of panels, and extend over edges to cover base coat unless otherwise indicated.
- D. Panel Fabrication Tolerances: Comply with the following:
 1. Overall Height and Width: Plus or minus **[1/8 inch (3 mm)]<Insert dimension>**.
 2. Cumulative Height and Width over Length of Building: Not more than **[3/8 inch (10 mm)]<Insert dimension>**.
 3. Openings within One Unit: Plus or minus **[1/8 inch (3 mm)]<Insert dimension>** for window and door frames.
 4. Out of Square: Plus or minus **[1/8 inch (3 mm)]<Insert dimension>**.
 5. Locations of Reveals and Architectural Features: Plus or minus **[1/8 inch (3 mm)]<Insert dimension>**.
 6. Thickness: Plus or minus **[1/16 inch (1.5 mm)]<Insert dimension>**.
 7. Flatness: Not more than **[1/8 inch in 8 feet (3 mm in 2.5 m)]<Insert dimensions>** across face of panel.

2.6 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform shop tests and inspections indicated below and to prepare test reports:
1. Shop welds are subject to testing and inspection.
 2. Testing and inspecting agency will interpret tests and report whether tested Work complies with or deviates from requirements.
 3. Correct deficiencies in or replace EIFS prefabricated panels that test reports and inspections indicate do not comply with requirements.
 4. Additional testing and inspection, at Contractor's expense, will be performed to determine compliance of corrected Work with requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
1. Begin coating application only after surfaces are dry.
 2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
- B. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind EIFS and deterioration of substrates.
- C. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.
1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by EIFS manufacturer.

3.3 INSTALLATION OF EIFS, GENERAL

- A. Comply with ASTM C1397, ASTM E2511, and EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate.

3.4 APPLICATION OF SUBSTRATE PROTECTION

- A. Flexible-Membrane Flashing: Apply and lap to shed water; seal at openings, penetrations, and terminations. Prime substrates with flashing primer if required and install flashing.

3.5 INSTALLATION OF TRIM

- A. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, **[at windowsills,]** and elsewhere as indicated. Coordinate with installation of insulation.
 - 1. Drip Screed/Track: Use at bottom edges of EIFS unless otherwise indicated.
 - 2. Windowsill Flashing: Use at windows unless otherwise indicated.
 - 3. Expansion Joint: Use where indicated on Drawings.
 - 4. Casing Bead: Use at other locations.
 - 5. Parapet Cap Flashing: Use where indicated on Drawings.
 - 6. **<Insert trim and requirements>.**

3.6 INSTALLATION OF INSULATION

- A. Board Insulation: **[Adhesively][Mechanically][Adhesively and mechanically]** attach insulation to substrate in compliance with ASTM C1397 and the following:
 - 1. Sheathing: Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to substrate. Apply adhesive to a thickness of not less than **1/4 inch (6.4 mm)** for factory mixed and not less than **3/8 inch (10 mm)** for field mixed, measured from surface of insulation before placement.
 - 2. Concrete or Masonry: Apply adhesive by ribbon-and-dab method.
 - 3. Press and slide insulation into place. Apply pressure over entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
 - 4. Allow adhered insulation to remain undisturbed for not less than 24 hours, before **[installing mechanical fasteners,]** beginning rasping and sanding insulation or before applying base coat and reinforcing mesh.
 - 5. Mechanically attach insulation to substrate. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
 - a. Steel Framing: **5/16 inch (8 mm).**
 - b. Wood Framing: **1 inch (25 mm).**
 - c. Concrete and Masonry: **1 inch (25 mm).**
 - 6. Apply insulation over dry substrates in courses, with long edges of boards oriented horizontally.
 - 7. Begin first course of insulation from a level base line and work upward.
 - 8. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
 - 9. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints, so no piece of insulation is less than **12 inches (300 mm)** wide or **6 inches (150 mm)** high. Offset joints not less than **6 inches (150 mm)** from corners of window and door openings **[and not less than 4 inches (100 mm) from aesthetic reveals].**
 - a. Adhesive Attachment: Offset joints of insulation not less than **6 inches (150 mm)** from horizontal and **4 inches (100 mm)** from vertical joints in sheathing.
 - b. Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.

10. Interlock ends at internal and external corners.
11. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than **1/16 inch (1.6 mm)** occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
12. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
13. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than **1/32 inch (0.8 mm)** **1/16 inch (1.6 mm)** from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than **1/16 inch (1.6 mm)**. Prevent airborne dispersal and immediately collect insulation raspings or sandings.
14. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than **3/4 inch (19 mm)**.
15. Install foam buildouts and attach to structural substrate by **[adhesive][mechanical fastening][adhesive and mechanical fastening]**.
16. Interrupt insulation for expansion joints where indicated.
17. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
18. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.
19. Before installing insulation and before applying field-applied reinforcing mesh, fully wrap board edges. Cover edges of board and extend encapsulating mesh not less than **2-1/2 inches (64 mm)** over front and back face unless otherwise indicated on Drawings.
20. Treat exposed edges of insulation as follows:
 - a. Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
 - b. Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
 - c. At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
21. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and EIFS lamina.

B. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:

1. At expansion joints in substrates behind EIFS.
2. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
3. At floor lines in multilevel wood-framed construction.
4. Where wall height or building shape changes.
5. Where EIFS manufacturer requires joints in long continuous elevations.
6. Where panels abut one another.

3.7 APPLICATION OF BASE COAT

- A. Water-Resistant Base Coat: Apply full-thickness coverage **[to exposed insulation and]** to exposed surfaces of **[sloped shapes][window sills][parapets][foam buildouts]<Insert location>** and to other surfaces indicated on Drawings.
- B. Base Coat: Apply full coverage to exposed insulation **[and foam buildouts]** with not less than **1/16-inch**

**Polymer-Based Exterior Insulation And Finish System
(EIFS)**

(1.6-mm)]<Insert dimension> dry-coat thickness.

- C. Reinforcing Mesh: Embed reinforcing mesh in wet base coat to produce wrinkle-free installation with mesh continuous at corners, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C1397. Do not lap reinforcing mesh within **8 inches (200 mm)** of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are invisible.
- D. Double-Layer Reinforcing-Mesh Application: Where indicated or required, apply second base coat and second layer of reinforcing mesh, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C1397 in same manner as first application. Do not apply until first base coat has cured.
- E. Additional Reinforcing Mesh: Apply strip-reinforcing mesh around openings, extending **4 inches (100 mm)** beyond perimeter. Apply additional **9-by-12-inch (230-by-300-mm)** strip-reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply **8-inch- (200-mm-)** wide, strip-reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than **4 inches (100 mm)** on each side of corners.
 - 1. At aesthetic reveals, apply strip-reinforcing mesh not less than **8 inches (200 mm)** wide.
 - 2. Embed strip-reinforcing mesh in base coat before applying first layer of reinforcing mesh.
- F. Foam Buildouts: Fully embed reinforcing mesh in base coat.
- G. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application, except without reinforcing mesh. Do not apply until first base coat has cured.

3.8 APPLICATION OF FINISH COAT

- A. Primer: Apply over dry base coat.
- B. Finish Coat: Apply full-thickness coverage over dry **[primed]** base coat, maintaining a wet edge at all times for uniform appearance, to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
 - 1. Embed aggregate in finish coat to produce a uniform applied-aggregate finish of color and texture matching approved sample.
- C. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

3.9 INSTALLATION OF PREFABRICATED PANELS

- A. General: Install panels according to Shop Drawings. Install **[by welding metal framing to structural-steel frame][by welding to steel-weld plates anchored in concrete]<Insert requirements>** to comply with requirements in Section 054000 "Cold-Formed Metal Framing" unless otherwise indicated.
 - 1. Lift panels only as indicated on Shop Drawings.
 - 2. Do not warp or stress panels by forcing alignment.
 - 3. Adjust connections to align panels and maintain correct and uniform joint widths.
 - 4. Install bracing as panels are erected. Weld securely to panel framing and to structure.

- B. Erection Tolerances: Install panels level, plumb, and true to line with no variation in plane or alignment exceeding **1/16 inch (1.6 mm)** and no variation in position exceeding **1/8 inch (3 mm)**.
 - 1. Maintain clearance between panels required for installing joint sealants.

3.10 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. As stipulated in Ch. 17 of the IBC.
 - 2. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.
- C. EIFS Tests and Inspections: In accordance with ASTM E2568 **<Insert tests and inspections>**.
- D. Prefabricated Panels: Test and inspect field welds.
- E. EIFS will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

3.11 CLEANING AND PROTECTION

- A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

END OF SECTION 07 24 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 24 13 00A - WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Water-drainage exterior insulation and finish system (EIFS).
 - 1. EIFS-clad drainage-wall assemblies that are field applied over substrate.
 - 2. Water-resistive barrier coatings.
- B. Related Requirements:
 - 1. Section 072413 "Polymer-Based Exterior Insulation and Finish System (EIFS)" for EIFS-clad barrier-wall assemblies.
 - 2. Section 072500 "Weather Barriers" for water-resistant building paper or building wrap and flexible flashings installed over sheathing behind mechanically fastened EIFS.
 - 3. Section 072600 "Vapor Retarders" for wall sheet vapor retarders.
 - 4. Section 072713 "Modified Bituminous Sheet Air Barriers" for self-adhering sheet air barriers composed of bituminous materials applied over sheathing behind mechanically fastened EIFS.
 - 5. Section 072715 "Nonbituminous Self-Adhering Sheet Air Barriers" for self-adhering sheet air barriers composed of nonbituminous polymers applied over sheathing behind mechanically fastened EIFS.
 - 6. Section 072726 "Fluid-Applied Membrane Air Barriers" for fluid-applied, synthetic polymer air barriers applied over sheathing behind EIFS-clad wall assemblies.

1.2 DEFINITIONS

- A. Definitions in ASTM E2110 apply to Work of this Section.
- B. EIFS: Exterior insulation and finish system(s).
- C. IBC: International Building Code.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each EIFS component, trim, and accessory[, **including water-resistive barrier coatings**].
- B. Sustainable Design Submittals:
 - 1. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.
 - 2. Manufacturer Inventory: Provide manufacturer's ingredient inventory.
 - 3. Product Data: For insulation, indicating that R-values comply with tables in ASHRAE/IES 90.1,

Section 6 - "Heating, Ventilating, and Air Conditioning."

4. Laboratory Test Reports: For Insulation, indicating compliance with requirements for low-emitting materials.
5. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
6. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
7. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.
8. Health Product Declaration (HPD): Provide documentation confirming product compliance with one of the following:

- a. Inventory or HPD to at least 0.01 percent by weight, with at least 95 percent assessed using GreenScreen Benchmark assessment.
- b. Cradle to Cradle v3 certification with minimum Silver level of Material Health.
- c. Living Product Challenge certification indicating achievement of Imperative 09, "Transparent Material Health."

- C. Health Product Declaration (HPD): Provide documentation indicating that manufacturer has screened and publicly provided ingredient disclosure to 1000 ppm, and has developed an action plan to mitigate known hazards.

- D. Shop Drawings:

1. Include details for EIFS buildouts.
2. Include details for parapet cap flashing.

- E. Samples: For each exposed product and for each color and texture specified, **[8 inches (200 mm) square]<Insert dimension and shape>** in size.

- F. Samples for Initial Selection: For each type of finish-coat color and texture indicated.

1. Include similar Samples of exposed accessories involving color selection.

- G. Samples for Verification: **24-inch- (600-mm-)** square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work, including **[custom trim, each profile,][and][an aesthetic reveal]**.

1. Include **[exposed trim and accessory]<Insert item>** Samples to verify color selected.
2. Include a typical control joint filled with sealant of color selected, as specified in Section 079200 "Joint Sealants."

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

- B. Manufacturer Certificates: Signed by EIFS manufacturer, certifying the following:

1. EIFS complies with requirements.
2. Substrates to which EIFS is indicated to be attached are acceptable to EIFS manufacturer.
3. Accessory products installed with EIFS, including **[joint sealants,][flashing,][water-resistive barrier coatings,][trim,]<Insert accessory>** whether or not furnished by EIFS manufacturer and

whether or not specified in this Section, are acceptable to EIFS manufacturer.

- C. Product Certificates: For[**cementitious materials and aggregates and for**] insulation and joint sealant, from manufacturer.
- D. Product Test Reports: For each EIFS assembly and component, [**and for water-resistive barrier coatings,**]for tests performed by a qualified testing agency.
- E. Field quality-control reports.
- F. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For EIFS to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: [**An installer who is certified in writing by AWCI International as qualified to install Class PB EIFS using trained workers**]<Insert requirements>.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, to set quality standards for materials and execution, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
- B. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
 - 1. Stack insulation board flat and off the ground.
 - 2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
 - 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1. Proceed with installation of adhesives or coatings only when ambient temperatures have remained, or are forecast to remain, above **40 deg F (4.4 deg C)** for a minimum of 24 hours before, during, and after application. Do not apply EIFS adhesives or coatings during rainfall.

1.10 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of EIFS-clad drainage-wall assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Bond integrity and weathertightness.
 - b. Deterioration of EIFS finishes and other EIFS materials beyond normal weathering.
2. Warranty coverage includes the following components of EIFS-clad drainage-wall assemblies:
 - a. EIFS finish, including base coats, finish coats, and reinforcing mesh.
 - b. Insulation installed as part of EIFS[**including foam buildouts**].
 - c. Insulation adhesive[**and mechanical fasteners**].
 - d. EIFS accessories, including trim components and flashing.
 - e. Water-resistive barrier coatings.
 - f. EIFS drainage components.
3. Warranty Period: **[Five][10]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

- A. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 1. **[Corev America, Inc]**
 2. **[Decoplast; Greenmaker Industries]**
 3. **[Dryvit Systems, Inc.]**
 4. **[Finestone, a Sika brand]**
 5. **[H.B. Fuller Construction Products Inc. / TEC]**
 6. **[Master Builders Solutions]**
 7. **[Master Wall Inc.]**
 8. **[Omega Products International, Inc.]**
 9. **[Parex, a Sika brand]**
 10. **[Pleko Systems International]**
 11. **[Senergy; a SIKA brand]**
 12. **[Sika Corporation]**
 13. **[Sto Corp.]**
 14. **[Stuc-O-Flex International, Inc.]**
 15. **[Total Wall, Inc.]**
 16. **<Insert manufacturer's name>**

- B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
1. [Corev America, Inc]
 2. [Decoplast; Greenmaker Industries]
 3. [Dryvit Systems, Inc.]
 4. [Finestone, a Sika brand]
 5. [H.B. Fuller Construction Products Inc. / TEC]
 6. [Master Builders Solutions]
 7. [Master Wall Inc.]
 8. [Omega Products International, Inc.]
 9. [Parex, a Sika brand]
 10. [Pleko Systems International]
 11. [Senergy; a SIKA brand]
 12. [Sika Corporation]
 13. [Sto Corp.]
 14. [Stuc-O-Flex International, Inc.]
 15. [Total Wall, Inc.]
 16. **<Insert manufacturer's name>**
- C. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with EIFS components.

2.2 PERFORMANCE REQUIREMENTS

- A. EIFS Performance: Comply with ASTM E2568 and with the following:
1. Weathertightness: Resistant to uncontrolled water penetration from exterior, with a means to drain water entering EIFS to the exterior.
 2. System Fire Performance: **[Fire-resistance rating of wall assembly][Full-scale multistory fire test]**.
 3. Structural Performance of Assembly and Components:
 - a. Wind Loads:
 - 1) Uniform pressure of **<Insert lbf/sq. ft. (Pa)>**, acting inward or outward.
 - 2) Uniform pressure as indicated on Drawings.
 4. Impact Performance: ASTM E2568, **[Standard][Medium][High][Ultra High]** impact resistance**[unless otherwise indicated]**.
 5. Abrasion Resistance of Finish Coat: Sample consisting of **1-inch- (25.4-mm-)** thick EIFS mounted on **1/2-inch- (12.7-mm-)** thick gypsum board; cured for a minimum of 28 days and shows no cracking, checking, or loss of film integrity after exposure to **528 quarts (500 L)** of sand when tested in accordance with ASTM D968, Method A.
 6. Mildew Resistance of Finish Coat: Sample applied to **2-by-2-inch (50.8-by-50.8-mm)** clean glass substrate; cured for 28 days and shows no growth when tested in accordance with ASTM D3273 and evaluated in accordance with ASTM D3274.
 7. Drainage Efficiency: 90 percent average minimum when tested in accordance with ASTM E2273.

2.3 EIFS MATERIALS

- A. Water-Resistive Barrier Coating: EIFS manufacturer's standard formulation and accessories for use as water-resistive barrier coating; compatible with substrate.

1. Water-Resistance: Comply with physical and performance criteria of ASTM E2570/E2570M.
 2. VOC Content: **[250]<Insert value>** g/L or less.
 3. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 4. VOC Content: **[100]<Insert value>** g/L or less.
 5. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. VOC Content: **[100]<Insert value>** g/L or less.
 7. Low-Emitting Materials: VOC emissions of coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. VOC Content: **[100]<Insert value>** g/L or less.
 9. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 10. VOC Emissions: Coatings shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- B. Flexible-Membrane Flashing: Cold-applied, self-adhering, self-healing, rubberized-asphalt, and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.
- C. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; **[specifically formulated to be applied to back side of insulation in a manner that creates open vertical channels designed to serve as an integral part of the water-drainage system of the EIFS-clad drainage-wall assembly];** compatible with substrate; and complying with **[one of]** the following:
1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, and polymer-based adhesive specified for base coat.
 2. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers specified for base coat.
 3. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.
 4. Adhesives shall have a VOC content of **[50]<Insert value>** g/L or less.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

9. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- D. Drainage Mat: **[Three-dimensional, nonwoven, entangled filament, nylon or plastic][Woven or fused, self-furring, PVC mesh lath]<Insert type>** mat designed to drain incidental moisture by gravity; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer, with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate.
- E. Molded, (Expanded) Rigid Cellular Polystyrene Board Insulation: Comply with ASTM E2430/E2430M, unless otherwise noted, and the following:
 1. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, in accordance with ASTM E84.
 2. Dimensions: Provide insulation boards of not more than **24 by 48 inches (610 by 1219 mm)**, with thickness indicated on Drawings.
 3. Channeled Board Insulation: EIFS manufacturer's standard factory-fabricated profile with linear, vertical-drainage channels, slots, or waves on the back side of board.
 4. Foam Buildouts: Provide with profiles and dimensions indicated on Drawings.
- F. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than **120 lbf/in. (21 dN/cm)** in accordance with ASTM E2098/E2098M and the following:
 1. Reinforcing Mesh for EIFS, General: Not less than weight required to comply with impact-performance level specified in "Performance Requirements" Article.
 2. Strip-Reinforcing Mesh: Not less than **[3.75 oz./sq. yd. (127 g/sq. m)][As recommended by EIFS manufacturer]<Insert weight>**.
 3. Detail-Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)][As recommended by EIFS manufacturer]<Insert weight>**.
 4. Corner-Reinforcing Mesh: Not less than **[7.2 oz./sq. yd. (244 g/sq. m)][As recommended by EIFS manufacturer]<Insert weight>**.
- G. Base Coat: EIFS manufacturer's standard mixture complying with **[one of]** the following:
 1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
 3. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
 4. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.
 5. Adhesives shall have a VOC content of **[50]<Insert value> g/L** or less.
 6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical

Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.

9. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
10. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

H. Water-Resistant Base Coat: EIFS manufacturer's standard water-resistant formulation complying with[**one of**] the following:

1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
3. Adhesives shall have a VOC content of **[50]<Insert value>** g/L or less.
4. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
6. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
7. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
8. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.

I. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners, consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; designed to resist Project's design loads; capable of pulling fastener head below surface of insulation board; and complying with the following:

1. For attachment to steel studs from **0.033 to 0.112 inch (0.84 to 2.84 mm)** in thickness, provide steel drill screws complying with ASTM C954.
2. For attachment to light-gage steel framing members not less than **0.0179 inch (0.45 mm)** in thickness, provide steel drill screws complying with ASTM C1002.
3. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C1002, Type W.
4. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
5. For attachment to **<Insert substrate>**, provide manufacturer's standard fasteners suitable for

substrate.

- J. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.
1. VOC Content: **[250]<Insert value>** g/L or less.
 2. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 3. VOC Content: **[100]<Insert value>** g/L or less.
 4. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. VOC Content: **[100]<Insert value>** g/L or less.
 6. Low-Emitting Materials: VOC emissions of coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
 7. VOC Content: **[100]<Insert value>** g/L or less.
 8. Low-Emitting Materials: Coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 9. VOC Emissions: Coatings shall contain no more than half of the chronic REL of VOCs when tested according to the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde shall not exceed 9 mcg/cu. m.
- K. Finish Coat: EIFS manufacturer's **[standard acrylic-based coating][standard acrylic-based coating with enhanced mildew resistance][siliconized acrylic-based coating][elastomeric coating]<Insert coating>** complying with the following:
1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
 2. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
 - a. Aggregate: Marble chips of size and color **[as indicated by manufacturer's designations][to match Architect's sample][as selected by Architect from manufacturer's full range]**.
 3. Colors: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
 4. Textures: **[As indicated by manufacturer's designations][Match Architect's sample][As selected by Architect from manufacturer's full range]**.
- L. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
- M. Water: Potable.
- N. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D1784, manufacturer's standard cell class for use intended, and ASTM C1063.

1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
3. Weep Screed/Track: Prefabricated, one-piece type for attachment behind insulation with perforated face leg[**extended to form a drip**] and weep holes in track bottom, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg; designed to drain incidental moisture that gets into wall construction to the exterior at terminations of EIFS with drainage.
4. Expansion Joint: Closed-cell polyethylene backer rod and elastomeric sealant **3/4-inch- (19-mm-)** minimum.
5. Windowsill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
6. Parapet Cap Flashing: Type for both flashing and covering parapet top, with design complying with ASTM C1397[**and ANSI/SPRI/FM 4435/ES-1**].

2.4 MIXING

- A. Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials, except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
 1. Begin coating application only after surfaces are dry.
 2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
- B. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of EIFS and deterioration of substrates.
- C. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum

bond between substrate and adhesive for insulation.

1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by EIFS manufacturer.

3.3 INSTALLATION OF EIFS, GENERAL

- A. Comply with ASTM C1397, ASTM E2511, and EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.

3.4 APPLICATION OF SUBSTRATE PROTECTION

- A. Water-Resistive Barrier Coating: Apply over [**sheathing**]**<Insert substrate>** to provide a water-resistive barrier.
 1. Tape and seal joints, exposed edges, terminations, and inside and outside corners of sheathing unless otherwise indicated by EIFS manufacturer's written instructions.
- B. Flexible-Membrane Flashing: Install over water-resistive barrier coating, applied and lapped to shed water; seal at openings, penetrations, and terminations. Prime substrates with flashing primer if required and install flashing.

3.5 INSTALLATION OF TRIM

- A. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, [**at windowsills,**] and elsewhere as indicated. Coordinate with installation of insulation.
 1. Weep Screed/Track: Use at bottom termination edges, at window and door heads, [**and at floor line expansion joints**] of water-drainage EIFS unless otherwise indicated.
 2. Windowsill Flashing: Use at windows unless otherwise indicated.
 3. Expansion Joint: Use where indicated on Drawings.
 4. Casing Bead: Use at other locations.
 5. Parapet Cap Flashing: Use where indicated on Drawings.
 6. **<Insert trim and requirements>**.

3.6 INSTALLATION OF DRAINAGE MAT

- A. Drainage Mat: Apply wrinkle free, continuously, with edges [**butted**]**[overlapped]** and mechanically secured with fasteners over water-resistive barrier coating.

3.7 INSTALLATION OF INSULATION

- A. Board Insulation: [**Adhesively**]**[Mechanically]****[Adhesively and mechanically]** attach insulation to substrate in compliance with ASTM C1397 and the following:
 1. Apply adhesive to insulation by notched-trowel method, with notches oriented vertically to produce drainage channels that remain functional after the insulation is adhered to substrate.
 2. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the

- entire surface of drainage mat with adhesive once insulation is adhered to drainage mat.
3. Apply adhesive to ridges on back of channeled insulation by notched-trowel method in a manner that results in full adhesive contact over the entire surface of ridges, leaving channels free of adhesive once insulation is adhered to substrate.
4. Press and slide insulation into place. Apply pressure over entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
5. Allow adhered insulation to remain undisturbed for not less than 24 hours, before[**installing mechanical fasteners,**] beginning rasping and sanding insulation or applying base coat and reinforcing mesh.
6. Mechanically attach insulation to substrate. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
 - a. Steel Framing: **5/16 inch (8 mm).**
 - b. Wood Framing: **1 inch (25 mm).**
 - c. Concrete and Masonry: **1 inch (25 mm).**
7. Apply insulation over substrates in courses with long edges of boards oriented horizontally.
8. Begin first course of insulation from a level base line and work upward.
9. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
10. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints, so no piece of insulation is less than **12 inches (300 mm)** wide or **6 inches (150 mm)** high. Offset joints not less than **6 inches (150 mm)** from corners of window and door openings[**and not less than 4 inches (100 mm) from aesthetic reveals**].
 - a. Adhesive Attachment: Offset joints of insulation not less than **6 inches (150 mm)** from horizontal and **4 inches (100 mm)** from vertical joints in sheathing.
 - b. Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.
11. Apply channeled insulation, with drainage channels aligned vertically.
12. Interlock ends at internal and external corners.
13. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than **1/16 inch (1.6 mm)** occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
14. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
15. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than [**1/32 inch (0.8 mm)**][**1/16 inch (1.6 mm)**] from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than **1/16 inch (1.6 mm)**. Prevent airborne dispersal and immediately collect insulation raspings or sandings.
16. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than **3/4 inch (19 mm)**.
17. Install foam buildouts and attach to structural substrate by [**adhesive**][**mechanical fastening**][**adhesive and mechanical fastening**].
18. Interrupt insulation for expansion joints where indicated.
19. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
20. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.
21. Before installing insulation and before applying field-applied reinforcing mesh, fully wrap board

- edges. Cover edges of board and extend encapsulating mesh not less than **2-1/2 inches (64 mm)** over front and back face unless otherwise indicated on Drawings.
22. Treat exposed edges of insulation as follows:
- Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
 - Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
 - At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
23. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and water-resistive barrier coating.
- B. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:
- At expansion joints in substrates behind EIFS.
 - Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
 - At floor lines in multilevel wood-framed construction.
 - Where wall height or building shape changes.
 - Where EIFS manufacturer requires joints in long continuous elevations.

3.8 APPLICATION OF BASE COAT

- A. Water-Resistant Base Coat: Apply full-thickness coverage [**to exposed insulation and**] to exposed surfaces of [**sloped shapes**][**window sills**][**parapets**][**foam build-outs**]<Insert location> and to other surfaces indicated on Drawings.
- B. Base Coat: Apply full coverage to exposed insulation [**and foam build-outs**]with not less than [**1/16-inch (1.6-mm)**]<Insert dimension> dry-coat thickness.
- C. Reinforcing Mesh: Embed reinforcing mesh in wet base coat to produce wrinkle-free installation with mesh continuous at corners, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C1397. Do not lap reinforcing mesh within **8 inches (200 mm)** of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are invisible.
- D. Double-Layer Reinforcing-Mesh Application: Where indicated or required, apply second base coat and second layer of reinforcing mesh, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C1397 in same manner as first application. Do not apply until first base coat has cured.
- E. Additional Reinforcing Mesh: Apply strip-reinforcing mesh around openings, extending **4 inches (100 mm)** beyond perimeter. Apply additional **9-by-12-inch (230-by-300-mm)** strip-reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply **8-inch- (200-mm-)** wide, strip-reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than **4 inches (100 mm)** on each side of corners.
- At aesthetic reveals, apply strip-reinforcing mesh not less than **8 inches (200 mm)** wide.
 - Embed strip-reinforcing mesh in base coat before applying first layer of reinforcing mesh.
- F. Foam Buildouts: Fully embed reinforcing mesh in base coat.

- G. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application, except without reinforcing mesh. Do not apply until first base coat has cured.

3.9 APPLICATION OF FINISH COAT

- A. Primer: Apply over dry base coat.
- B. Finish Coat: Apply full-thickness coverage over dry **[primed]** base coat, maintaining a wet edge at all times for uniform appearance, to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
 - 1. Embed aggregate in finish coat to produce a uniform applied-aggregate finish of color and texture matching approved sample.
- C. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

3.10 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Water-resistive barrier coatings applied over sheathing.
 - 2. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage][Engage]** a qualified testing agency to perform tests and inspections.
- C. EIFS Tests and Inspections: In accordance with ASTM E2359/E2359M **<Insert tests and inspections>**.
- D. EIFS will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.11 CLEANING AND PROTECTION

- A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

END OF SECTION 07 24 13 00A

SECTION 07 25 00 00 - WEATHER BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Weather barrier types.
2. Accessory materials.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Show details of **[building paper][building wrap][drainage wrap]** at terminations, openings, and penetrations. Show details of flexible flashing applications.

C. Sustainable Design Submittals:

1. Environmental Product Declaration (EPD): For each product.
2. Health Product Declaration (HPD): For each product.
3. Environmental Product Declaration (EPD): For each product.
4. Health Product Declaration (HPD): For each product.
5. Environmental Product Declaration (EPD): For each product.
6. Environmental Product Declaration (EPD): For each product.
7. Environmental Product Declaration (EPD): For each product.
8. Third-Party Certifications: For each product.
9. Third-Party-Certified Life-Cycle Assessment: For each product.
10. Health Product Declaration (HPD): For each product.
11. Health Product Declaration (HPD): Provide HPD.

1.3 INFORMATIONAL SUBMITTALS

A. Material Test Reports: For weather barrier, by a qualified testing agency.

B. Product Test Reports: For weather barrier, for tests performed by **[a qualified testing agency][manufacturer and witnessed by a qualified testing agency]**.

C. Research Reports: For weather barrier, from **[an agency acceptable to authorities having jurisdiction][ICC-ES]<Insert evaluation agency>** showing compliance with **<Insert requirement>**.

D. Evaluation Reports: Report Type: **[Water-resistive barrier][and][flexible flashing]**, from ICC-ES.

E. Source Quality Control Reports: For weather barriers.

F. Field Quality Control Reports: For weather barriers.

G. Qualification Statements: For Installer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: **[Fabricator of products][Entity that employs installers and supervisors who are trained and approved by manufacturer][Authorized representative who is trained and approved by manufacturer].**
- B. Specialist Qualifications: **<Insert Section-related qualifications>.**

1.5 MOCKUPS

- A. Build mockups **[to verify selections made under Sample submittals][to demonstrate aesthetic effects][to set quality standards for materials and execution][to set quality standards for fabrication and installation][and][for preconstruction testing].**
 - 1. Build mockup **[as indicated on Drawings]<Insert mockup requirements>.**
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver weather barrier materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

1.7 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit weather barrier materials to be installed in accordance with manufacturer's written installation instructions and warranty requirements.

1.8 WARRANTY

- A. Warranty Period: **[10][15][20]<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WEATHER BARRIER TYPES

- A. Building Paper:
 - 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Henry, a Carlisle Company (formerly Henry Company and Carlisle Coatings &**

- 07 25 00 00 - 3**

(Procedure A).

6. Air Permeance: Not more than [0.001 cfm/sq. ft. at 1.57 lbf/sq. ft. (0.005 L/s x sq. m at 75 Pa)][0.004 cfm/sq. ft. at 1.57 lbf/sq. ft. (0.02 L/s x sq. m at 75 Pa)] when tested in accordance with ASTM E2178.
7. Allowable UV Exposure Time: Not more than [120][180][270]<Insert number> days.
8. Flame Propagation Test: Materials and construction to be as tested in accordance with NFPA 285.

C. Drainage Wrap: Dimensional water-resistive barrier that also creates a drainage plane; with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, when tested in accordance with ASTM E84; and acceptable to authorities having jurisdiction.

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
 - a. [Alpha ProTech]
 - b. [Barricade Building Products]
 - c. [Benjamin Obdyke Incorporated]
 - d. [DuPont de Nemours, Inc.]
 - e. [Kingspan Insulation LLC]
 - f. <Insert manufacturer's name>
2. Basis-of-Design Product: Subject to compliance with requirements, provide <Insert manufacturer's name; product name or designation> or comparable product by one of the following:
 - a. [Alpha ProTech]
 - b. [Barricade Building Products]
 - c. [Benjamin Obdyke Incorporated]
 - d. [DuPont de Nemours, Inc.]
 - e. [Kingspan Insulation LLC]
 - f. <Insert manufacturer's name>
3. Drainage Wrap Materials: [Type I, ASTM E2556/E2556M][Type I, ASTM E1677][Type II, ASTM E2556/E2556M][ICC-ES AC38].
4. Composition Type: [Nonperforated][Nonwoven polyolefin with nondirectional drainage pattern].
5. Water-Vapor Permeance: Minimum [55 perms (3147 ng/Pa x s x sq. m)][35 perms (2002 ng/Pa x s x sq. m)][15 perms (858 ng/Pa x s x sq. m)][5 perms (286 ng/Pa x s x sq. m)]<Insert value> in accordance with ASTM E96/E96M, Desiccant Method (Procedure A).
6. Air Permeance: Maximum [0.004 cfm/sq. ft. at 0.3 inch wg (0.02 L/s x sq. m at 75 Pa)]<Insert value> when tested in accordance with ASTM E2178.
7. Drainage: Not less than [90][95][98]<Insert number> percent when tested in accordance with ASTM E2273.
8. Allowable UV Exposure Time: Not more than [120][180]<Insert number> days.

2.2 ACCESSORY MATERIALS

- A. Requirement: Provide primers, fasteners, seam tapes, flashing, transition strips, termination strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory

materials that are recommended in writing by weather barrier manufacturer to produce a complete weather barrier assembly and that are compatible with primary weather barrier material and adjacent construction to which they may seal.

- B. Drainage Mat: Free-draining, polymer-strand mesh sheets or strips materials to provide a continuous open space behind exterior cladding.
1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:**
 - a. **[Advanced Building Products Inc.]**
 - b. **[CavClear; a division of Archovations, Inc.]**
 - c. **[Dorken Systems Inc.]**
 - d. **[DuPont de Nemours, Inc.]**
 - e. **[Keene Building Products]**
 - f. **[Mortar Net Solutions]**
 - g. **[Stuc-O-Flex International, Inc.]**
 - h. **[Wire-Bond]**
 - i. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Advanced Building Products Inc.]**
 - b. **[CavClear; a division of Archovations, Inc.]**
 - c. **[Dorken Systems Inc.]**
 - d. **[DuPont de Nemours, Inc.]**
 - e. **[Keene Building Products]**
 - f. **[Mortar Net Solutions]**
 - g. **[Stuc-O-Flex International, Inc.]**
 - h. **[Wire-Bond]**
 - i. **<Insert manufacturer's name>**
 3. Drainage Mat Size: Thickness not less than **[full depth of cavity][3/4 inch (19 mm)][1 inch (25 mm)][1-1/2 inches (38 mm)][2 inches (51 mm)]<Insert thickness>** and installed to full height of cavity, **[with additional strips 4 inches (102 mm) high above flashing locations and thick enough to fill entire depth of cavity]** to maintain a continuous open space behind exterior cladding.
 4. Location: **[Underneath siding][Behind portland cement plaster][Behind adhered masonry veneer][As indicated on Drawings]<Insert component>**.
- C. Drainage Accessories:
1. Component: **[Furring strips]<Insert component>** installed between water-resistive barrier and exterior cladding to create a continuous open space behind exterior cladding.

PART 3 - EXECUTION

3.1 INSTALLATION OF WEATHER BARRIERS

- A. Weather Barriers:

07 - Thermal And Moisture Protection

1. Building Paper: Comply with manufacturer's written instructions and warranty requirements.
 2. Building Wrap or Drainage Wrap: Comply with manufacturer's written instructions and warranty requirements.
 3. Drainage Material: Comply with manufacturer's written instructions.
- B. Install weather barrier accessories for a complete installation with weather barriers in accordance with manufacturer's written instructions.

END OF SECTION 07 25 00 00

SECTION 07 26 00 00 - VAPOR RETARDERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Polyethylene vapor retarders.
2. Reinforced-polyethylene vapor retarders.
3. Fire-retardant, reinforced-polyethylene vapor retarders.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for under-slab vapor retarders.
2. Section 072100 "Thermal Insulation" for vapor retarders integral with insulation products.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Polyethylene vapor retarders.
2. Reinforced-polyethylene vapor retarders.
3. Fire-retardant, reinforced-polyethylene vapor retarders.

1.3 INFORMATIONAL SUBMITTALS

- ##### A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.1 POLYETHYLENE VAPOR RETARDERS

- ##### A. Polyethylene Vapor Retarders: ASTM D4397, [6-mil- (0.15-mm-)][10-mil- (0.25-mm-)] thick sheet, with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).

2.2 REINFORCED-POLYETHYLENE VAPOR RETARDERS

- ##### A. Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than [20 lb/1000 sq. ft. (9 kg/100 sq. m)]<Insert weight>, with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).

1. Manufacturers: Subject to compliance with requirements, [provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

- a. **[ISI Building Products]**
 - b. **[Reef Industries, Inc.]**
 - c. **[Viaflex]**
 - d. **[W. R. Meadows, Inc]**
 - e. **<Insert manufacturer's name>**
2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[ISI Building Products]**
 - b. **[Reef Industries, Inc.]**
 - c. **[Viaflex]**
 - d. **[W. R. Meadows, Inc]**
 - e. **<Insert manufacturer's name>**

2.3 FIRE-RETARDANT, REINFORCED-POLYETHYLENE VAPOR RETARDERS

- A. Fire-Retardant, Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nonwoven grid of nylon cord or polyester scrim and weighing not less than **[20 lb/1000 sq. ft. (9 kg/100 sq. m)]<Insert weight>**, with maximum permeance rating of **0.1 perm (5.7 ng/Pa x s x sq. m)**.
 1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **[Reef Industries, Inc.]**
 - b. **[Viaflex]**
 - c. **<Insert manufacturer's name>**
 2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:
 - a. **[Reef Industries, Inc.]**
 - b. **[Viaflex]**
 - c. **<Insert manufacturer's name>**
 3. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of **[75 and 200]<Insert values>**, respectively, per ASTM E84.

2.4 ACCESSORIES

- A. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
- B. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.
- C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.2 INSTALLATION OF VAPOR RETARDERS ON FRAMING

- A. Place vapor retarders on side of construction indicated on Drawings.
- B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
- C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.
- D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.
- E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.3 INSTALLATION OF VAPOR RETARDERS IN CRAWL SPACES

- A. Install vapor retarders over prepared grade. Lap joints a minimum of **12 inches (305 mm)** and seal with manufacturer's recommended tape. Install second layer over pathways to equipment.
- B. Extend vapor retarder over footings and seal to foundation wall or grade beam with manufacturer's recommended tape.
 - 1. Extend vapor retarder vertically minimum **[16 inches (406 mm)][24 inches (610 mm)]<Insert dimension>** above top of footing.
- C. Seal around penetrations such as utilities and columns in order to create a monolithic, airtight membrane at grade surface, perimeter, and all vertical penetrations.

3.4 PROTECTION

- A. Protect vapor retarders from damage until concealed by permanent construction.

SECTION 07 27 00 00 - NONBITUMINOUS SELF-ADHERING SHEET AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Self-adhering air barrier.
 - 1. Vapor-retarding nonbituminous sheet.
 - 2. Vapor-permeable nonbituminous sheet.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 072500 "Weather Barriers" for weather barriers, including **[building paper][flexible flashing][and][building wraps with air-barrier properties]**.

1.2 DEFINITIONS

- A. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- B. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.
- C. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]<Insert location>**.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.4 ACTION SUBMITTALS

- A. Product Data: Self-adhering air barrier. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; and tested physical and performance properties of products.
 - 1. Vapor-retarding nonbituminous sheet.
 - 2. Vapor-permeable nonbituminous sheet.
- B. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to Project conditions.
 - 2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

3. Include details of interfaces with other materials that form part of air barrier.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. **[Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.]**
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.
- D. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 1. Installer to be licensed by ABAA in accordance with ABAA's Quality Assurance Program and to employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution **[and for preconstruction testing]**.
 1. Build integrated mockups of exterior wall assembly **[as indicated on Drawings]**, **150 sq. ft. (14 sq. m)]<Insert requirement>**, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane[, **building corner condition,**][**and**][**foundation wall intersection**].
 - c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage][Engage]** a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies to comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.

1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage in accordance with **[ASTM E1186, chamber pressurization or depressurization with smoke tracers][ASTM E1186, chamber depressurization with detection liquids]<Insert requirement>**.
2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate in accordance with **[ASTM E783][or][ASTM E2357]**.
3. Adhesion Testing: Mockups will be tested for required air-barrier adhesion to substrate in accordance with ASTM D4541.
4. Notify Architect **[seven]<Insert number>** days in advance of the dates and times when mockups will be tested.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS
