## **Project Owner's Certification**

This Mojave River Watershed Water Quality Management Plan (WQMP) has been prepared for County of San Bernardino by Michael Baker International. The WQMP is intended to comply with the requirements of the County of San Bernardino and the Phase II Small MS4 General Permit for the Mojave River Watershed. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the Phase II Small MS4 Permit and the intent of San Bernardino County (unincorporated areas of Phelan, Oak Hills, Spring Valley Lake and Victorville) and the incorporated cities of Hesperia and Victorville and the Town of Apple Valley. Once the undersigned transfers its interest in the property, its successors in interest and the city/county/town shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

# Section I – Introduction

This WQMP template has been prepared specifically for the Phase II Small MS4 General Permit in the Mojave River Watershed. This location is within the jurisdiction of the Lahontan Regional Water Quality Control Board (LRWQCB). This document should not be confused with the WQMP template for the Santa Ana Phase I area of San Bernardino County.

WQMP preparers must refer to the MS4 Permit for the Mojave Watershed WQMP template and Technical Guidance (TGD) document found at: <a href="http://cms.sbcounty.gov/dpw/Land/NPDES.aspx">http://cms.sbcounty.gov/dpw/Land/NPDES.aspx</a> to find pertinent arid region and Mojave River Watershed specific references and requirements.

# Section 1 Discretionary Permit(s)

Form 1-1 Project Information						
Project Na	Project Name Barstow Parking Lot Expansion					
Project Ow	ner Contact Name:	Dani Fox C/O Cou	nty of San Be	ernardino		
Mailing Address:	385 N Arrowhead Avenu San Bernardino CA 9241	•	E-mail Address:	Dani.Fox@res.sbcounty.go v	Telephone:	909-387-5000
Permit/Ap	olication Number(s):	TBD		Tract/Parcel Map Number(s):	APN 0182-04	1-37
Additional Comments	Information/ :					
Description	The approximately 1.09 acre site is currently residential/vacant land. There are five structures onsite associated with the existing residence including the main house, wash house, two sheds, and cabin. The surrounding areas are residential and commercial, including existing single-family homes to the north, the Barstow Headstart facility and commercial uses to the east, and commercial uses to the south and west. The project disturbance will be about 0.55 acres for the construction of a parking lot to serve the existing Barstow Headstart facility, which currently has nine parking stalls. Due to the limited number of parking stalls, vehicles queue in Main Street during peak times in the morning and afternoon. The proposed parking lot proposes the development of 40 parking stalls including, 2 ADA-accessible and 1 electric vehicle stall. These stalls would be to support the existing operations of the Barstow Headstart facility, and alleviate queuing issues in Main Street during peak hours. The existing residence/outbuildings onsite would be demolished prior to construction of the parking lot. Proposed impervious percentage is 85% that includes parking and concerete flatwork. The sitehas mild slopes generally draining southeast to northwest direction. DA 1 area of 0.55 acres will produce a Design Capture Volume (DCV) of about 1,187 cubic feet. Retention basin is proposed in the northwest corn of the site to store the DCV. Provide volume of 1,195 cubic feet is more the DCV required.					esidential and v Headstart and west. The g lot to serve the fue to the limited the morning arking stalls e to support the ssues in Main be demolished 85% that training sign Capture northwest corner

Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	n/a

# Section 2 Project Description

# 2.1 Project Information

The WQMP shall provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

# 2.1.1 Project Sizing Categorization

If the Project is greater than 5,000 square feet, and not on the excluded list as found on Section 1.4 of the TGD, the Project is a Regulated Development Project.

If the Project is creating and/or replacing greater than 2,500 square feet but less than 5,000 square feet of impervious surface area, then it is considered a Site Design Only project. This criterion is applicable to all development types including detached single family homes that create and/or replace greater than 2,500 square feet of impervious area and are not part of a larger plan of development.

Form 2.1-1 Description of Proposed Project								
1 Regulated Developm	ent Proje	ct Catego	ry (Select all that apply):					
involving the creation of 5,000 develop ft² or more of impervious addition surface collectively over entire site surface		#2 Significant redevelopment involving the addition or replacement of 5,000 ft <sup>2</sup> or more of impervious surface on an already developed site		#3 Road Project – any road, sidewalk, or bicycle lane project that creates greater than 5,000 square feet of contiguous impervious surface		#4 LUPs – linear underground/overhead projects that has a discrete location with 5,000 sq. ft. or more new constructed impervious surface		
Site Design Only (Project Total Square Feet > 2,500 but < 5,000 sq.ft.) Will require source control Site Design Measures. Use the "PCMP" Template. Do not use this WQMP Template.								
Project Area (ft2):	(ft2): 23,971 3		3 Number of Dwelling Units:		0	4 SIC Code:		3462
Is Project going to be phased? Yes No If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.								

# 2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management
Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:
County of San Bernardino will be responisble for maintenance of onsite BMPs.

## 2.3 Potential Stormwater Pollutants

Best Management Practices (BMP) measures for pollutant generating activities and sources shall be designed consistent with recommendations from the CASQA Stormwater BMP Handbook for New Development and Redevelopment (or an equivalent manual). Pollutant generating activities must be considered when determining the overall pollutants of concern for the Project as presented in Form 2.3-1.

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-2 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern						
Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments			
Pathogens (Bacterial / Virus)	E 🖂	Z				
Nutrients - Phosphorous	E 🖾	N 🗌

Metals	E 🖂	и				
Oil and Grease	E 🖂	N 🗌				
Trash/Debris	E 🖂	N 🗌				
Pesticides / Herbicides	E 🖂	N 🗌				
Organic Compounds	E 🖂	N 🗌				
Other:	E 🗌	N 🗌				
Other:	E 🗌	N 🗌				
Other:	E 🗌	N 🗌				

# Section 3 Site and Watershed Description

Describe the project site conditions that will facilitate the selection of BMPs through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed Drainage Management Areas (DMAs)) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet. A map presenting the DMAs must be included as an appendix to the WQMP document.

Form 3-1 Site Location and Hydrologic Features						
Site coordinates take GPS measurement at approximate center of site		Latitude 34.89629	Longitude 117.04108	Thomas Bros Map page n/a

# Section 4 Best Management Practices (BMP)

# 4.1 Source Control BMPs and Site Design BMP Measures

The information and data in this section are required for both Regulated Development and Site Design Only Projects. Source Control BMPs and Site Design BMP Measures are the basis of site-specific pollution management.

#### 4.1.1 Source Control BMPs

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

The identified list of source control BMPs correspond to the CASQA Stormwater BMP Handbook for New Development and Redevelopment.

	Form 4	.1-1 No	n-Struc	tural Source Control BMPs
	Name	Che	ck One	Describe BMP Implementation OR,
Identifier	Name	Included	Not Applicable	if not applicable, state reason
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs			Property owner will familiarize him/herself with the educational materials in  Attachment "E" and the contents of the WQMP.
N2	Activity Restrictions			No outdoor work areas, processing, storage or wash area.
N3	Landscape Management BMPs			Irrigation must be consistent with City's Water Conservation Ordinance. Fertilizer and pesticide usage will be consistent with County Management Guidelines for Use of Fertilizers and Pesticides.
N4	BMP Maintenance			BMP maintenance, implementation schedules, and responsible parties are included with each specific BMP narrative.
N5	Title 22 CCR Compliance (How development will comply)		$\boxtimes$	No hazardous wastes onsite.
N6	Local Water Quality Ordinances		$\boxtimes$	Local agency does not have additional water quality ordinances.
N7	Spill Contingency Plan	$\boxtimes$		Owner/tenant will have a spill contingency plan based on individual site needs.
N8	Underground Storage Tank Compliance		$\boxtimes$	No USTs onsite.
N9	Hazardous Materials Disclosure Compliance			No hazardous materials onsite.

	Form 4	.1-1 No	on-Struct	tural Source Control BMPs
lala matifi a m	Nome	Che	ck One	Describe BMP Implementation OR,
Identifier	Name	Included	Not Applicable	if not applicable, state reason
N10	Uniform Fire Code Implementation			Owner will comply with Article 80 of the Uniform Fire Code enforced by the fire protection agency.
N11	Litter/Debris Control Program			Contract with the landscape maintenance firm to provide this service during regularly schedule maintenance.
N12	Employee Training			The owner will ensure that tenants are also familiar with onsite BMPs and necessary maintenance required of the tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. Owner will check with City and County at least once a year to obtain new or updated educational materials and provide these materials to tenants. Employees shall be trained to clean up spills and participate in ongoing maintenance. The WQMP requires annual employee training and new hires within 2 months.
N13	Housekeeping of Loading Docks			No loading docs
N14	Catch Basin Inspection Program			Monthly inspection by property owner's designee. Vacuum when sediment or trash becomes 2-inches deep and dispose of properly.
N15	Vacuum Sweeping of Private Streets and Parking Lots			All landscape maintenance contractors will be required to sweep up all landscape cuttings, mowings and fertilizer materials off paved areas weekly and dispose of properly. Parking areas and drive ways will be swept monthly by sweeping contractor.
N16	Other Non-structural Measures for Public Agency Projects		$\boxtimes$	Not a public agency project.
N17	Comply with all other applicable NPDES permits	$\boxtimes$		Will comply with Construction General Permit.

	Form 4.1	-2 Stru	ctural S	ource Control BMPs
		Chec	ck One	Describe BMP Implementation OR,
Identifier	Name	Included	Not Applicable	If not applicable, state reason
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)			"No Dumping – Drains to River" stencils will be applied. Legibility of stencil will be maintained on a yearly basis.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)		$\boxtimes$	No outdoor material storage areas onsite.
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	$\boxtimes$		Paved with an impervious surface, designed not to allow run-on from adjoining areas, designed to divert drainage from adjoining roofs and pavements diverted around the area, screened or walled to prevent off-site transport of trash. Provide solid roof or awning to prevent direct contact with rainfall.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)			Irrigation systems shall include reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. Timers will be used to avoid over watering and watering cycles and duration shall be adjusted seasonally by the landscape maintenance contractor. The landscaping areas will be grouped with plants that have similar water requirements. Native or drought tolerant species shall also be used where appropriate to reduce excess irrigation runoff and promote surface filtration.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement			Landscaped areas will be suppressed in order to increase retention of stormwater/irrigation water and promote infiltration.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)			Not applicable, No slopes or channels will require energy dissipation.
<b>S</b> 7	Covered dock areas (CASQA New Development BMP Handbook SD-31)			Finished goods being loaded and unloaded at the docks does not have the potential to contribute to stormwater pollution. No direct connections will be made to a MS4.
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)		$\boxtimes$	Not applicable, no maintenance bay is being proposed.

S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)			Not applicable, no vehicle wash areas being proposed.
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)			Not applicable, no outdoor processing areas are being proposed.
	Form 4.1	-2 Stru	ctural S	ource Control BMPs
		Chec	ck One	Describe BMP Implementation OR,
Identifier	Name	Included	Not Applicable	If not applicable, state reason
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)			Not applicable, no equipment wash areas are being proposed.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)			Not applicable, no fueling areas are being proposed.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)			Not applicable, no hillside landscaping is being proposed.
S14	Wash water control for food preparation areas			Not applicable, no food preparation areas are being proposed.
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)			Not applicable, no community car wash is being proposed.

## 4.1.2 Site Design BMPs

As part of the planning phase of a project, the site design practices associated with new LID requirements in the Phase II Small MS4 Permit must be considered. Site design BMP measures can result in smaller Design Capture Volume (DCV) to be managed by both LID and hydromodification control BMPs by reducing runoff generation.

As is stated in the Permit, it is necessary to evaluate site conditions such as soil type(s), existing vegetation and flow paths will influence the overall site design.

Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Site Design Practices Checklist
Site Design Practices If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets
Minimize impervious areas: Yes No X
Explanation: Site is prposing parking, walkways and driveway and access road which will increase impervious areas
Maximize natural infiltration capacity; Including improvement and maintenance of soil: Yes 🔀 No 🗌
Explanation: A retention basin as infiltation BMP is proposed to maximize natural infiltration
Preserve existing drainage patterns and time of concentration: Yes 🔀 No 🗌
Explanation: Site will be designed to maintain the pre-development drainage patterns as much as possible
Disconnect impervious areas. Including rerouting of rooftop drainage pipes to drain stormwater to storage or infiltration BMPs instead of to storm drain : Yes $\square$ No $\boxtimes$
Explanation: No roofs are proposed.
Use of Porous Pavement.: Yes No X Explanation: Porous pavement is not proposed for the site.
Protect existing vegetation and sensitive areas: Yes 🗌 No 🔀
Explanation: The existing site contains little to no vegetation to protect.
Re-vegetate disturbed areas. Including planting and preservation of drought tolerant vegetation. : Yes 🔀 No 🗌
Explanation: Landscaping with local drought tolerant plant species will be provided where applicable in the development.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes $oxtimes$ No $oxtimes$
Explanation: Infiltration basin proposed will minimize unnecessary compaction.

Utilize naturalized/rock-lined drainage swales in place of underground piping or imperviously lined swales: Yes  No Explanation: The existing site does not utilize the vegetated drainage swales
Stake off areas that will be used for landscaping to minimize compaction during construction : Yes  No  Explanation: Efforts will be made to reduce compaction in landscape areas
Use of Rain Barrels and Cisterns, Including the use of on-site water collection systems.: Yes No Explanation: Rain Barrels and Cisters are not used
Stream Setbacks. Includes a specified distance from an adjacent steam: : Yes \(\sum \) No \(\sum \) Explanation: No adjacent stream exist near the site

It is noted that, in the Phase II Small MS4 Permit, site design elements for green roofs and vegetative swales are required. Due to the local climatology in the Mojave River Watershed, proactive measures are taken to maximize the amount of drought tolerant vegetation. It is not practical in this region to have green roofs or vegetative swales. As part of site design the project proponent should utilize locally recommended vegetation types for landscaping. Typical landscaping recommendations are found in following local references:

## 4.2 Treatment BMPs

After implementation and design of both Source Control BMPs and Site Design BMP measures, any remaining runoff from impervious DMAs must be directed to one or more on-site, treatment BMPs (LID or biotreatment) designed to infiltrate, evaportranspire, and/or bioretain the amount of runoff specified in Permit Section E.12.e (ii)(c) Numeric Sizing Criteria for Storm Water Retention and Treatment.

## 4.2.1 Project Specific Hydrology Characterization

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in Section E.12.e.ii.c and Section E.12.f of the Phase II Small MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection from hydromodification.

If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.

It is noted that in the Phase II Small MS4 Permit jurisdictions, the LID BMP Design Capture Volume criteria is based on the 2-year rain event. The hydromodification performance criterion is based on the 10-year rain event.

Methods applied in the following forms include:

• For LID BMP Design Capture Volume (DCV), San Bernardino County requires use of the P<sub>6</sub> method (Form 4.2-1) For pre- and post-development hydrologic calculation, San Bernardino County requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi²), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for hydromodification performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

## 4.3 BMP Selection and Sizing

Complete the following forms for each project site DA to document that the proposed treatment (LID/Bioretention) BMPs conform to the project DCV developed to meet performance criteria specified in the Phase II Small MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the Phase II Small MS4 Permit (see Section 5.3 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design Measures (Form 4.3-2)
- Retention and Infiltration BMPs (Form 4.3-3) or
- Biotreatment BMPs (Form 4.3-4).

Please note that the selected BMPs may also be used as dual purpose for on-site, hydromodification mitigation and management.

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Form 4.3-2 to determine the feasibility of applicable Site Design BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable Site Design BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of site design, retention and/or infiltration BMPs is unable to mitigate the entire DCV, then the remainder of the volume-based performance criteria that cannot be achieved with site design, retention and/or infiltration BMPs must be managed through biotreatment BMPs. If biotreatment BMPs are used, then they must be sized to provide equivalent effectiveness based on Template Section 4.3.4.

## 4.3.1 Exceptions to Requirements for Bioretention Facilities

Contingent on a demonstration that use of bioretention or a facility of equivalent effectiveness is infeasible, other types of biotreatment or media filters (such as tree-box-type biofilters or in-vault media filters) may be used for the following categories of Regulated Projects:

- 1) Projects creating or replacing an acre or less of impervious area, and located in a designated pedestrianoriented commercial district (i.e., smart growth projects), and having at least 85% of the entire project site covered by permanent structures;
- 2) Facilities receiving runoff solely from existing (pre-project) impervious areas; and
- 3) Historic sites, structures or landscapes that cannot alter their original configuration in order to maintain their historic integrity.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)
Feasibility Criterion – Complete evaluation for each DA on the Project Site
¹ Would infiltration BMP pose significant risk for groundwater related concerns?  Yes □ No ☒  Refer to Section 5.3.2.1 of the TGD for WQMP
If Yes, Provide basis: (attach)
<ul> <li>² Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes □ No ☑ (Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):</li> <li>The location is less than 50 feet away from slopes steeper than 15 percent</li> <li>The location is less than ten feet from building foundations or an alternative setback.</li> <li>A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.</li> </ul>
If Yes, Provide basis: (attach)
³ Would infiltration of runoff on a Project site violate downstream water rights?  Yes ☐ No ☒
If Yes, Provide basis: (attach)
<sup>4</sup> Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils?  Yes ☐ No ☒
If Yes, Provide basis: (attach)
<sup>5</sup> Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)?  Yes ☐ No ☑
If Yes, Provide basis: (attach)
<sup>6</sup> Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses?  Yes □ No ☑  See Section 3.5 of the TGD for WQMP and WAP
If Yes, Provide basis: (attach)
<sup>7</sup> Any answer from Item 1 through Item 3 is "Yes":  If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Selection and Evaluation of Biotreatment BMP.  If no, then proceed to Item 8 below.
<sup>8</sup> Any answer from Item 4 through Item 6 is "Yes":  If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Site Design BMP.  If no, then proceed to Item 9, below.
<sup>9</sup> All answers to Item 1 through Item 6 are "No": Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP. Proceed to Form 4.3-2, Site Design BMPs.

## 4.3.2 Site Design BMP

Section E.12.e. of the Small Phase II MS4 Permit emphasizes the use of LID preventative measures; and the use of Site Design Measures reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable Site Design Measures shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that

either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of Site Design BMPs. If a project cannot feasibly meet BMP sizing requirements or cannot fully address hydromodification, feasibility of all applicable Site Design BMPs must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design BMP. Refer to Section 5.4 in the TGD for more detailed guidance.

Form 4.3-2 Site Design BMPs (DA 1)

Runoff volume retention from street tree BMPs (ft³):	V <sub>retention</sub> = Sum of Ite	em 17 for all BMPs				
19 Total Retention Volume from Site Design BMPs: Sur	m of Items 5, 13 and 18					

#### 4.3.3 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix C of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

## 4.3.3.1 Allowed Variations for Special Site Conditions

The bioretention system design parameters of this Section may be adjusted for the following special site conditions:

- 1) Facilities located within 10 feet of structures or other potential geotechnical hazards established by the geotechnical expert for the project may incorporate an impervious cutoff wall between the bioretention facility and the structure or other geotechnical hazard.
- 2) Facilities with documented high concentrations of pollutants in underlying soil or groundwater, facilities located where infiltration could contribute to a geotechnical hazard, and facilities located on elevated plazas or other structures may incorporate an impervious liner and may locate the underdrain discharge at the bottom of the subsurface drainage/storage layer (this configuration is commonly known as a "flow-through planter").
- 3) Facilities located in areas of high groundwater, highly infiltrative soils or where connection of underdrain to a surface drain or to a subsurface storm drain are infeasible, may omit the underdrain.
- 4) Facilities serving high-risk areas such as fueling stations, truck stops, auto repairs, and heavy industrial sites may be required to provide adequate pretreatment to address pollutants of concern unless these high-risk areas are isolated from storm water runoff or bioretention areas with no chance of spill migration.

18 Is full LID DCV retained onsite with combination of hydrologic source control and LID retention/infiltration BMPs? Yes No If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.						

#### 4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-4 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV. Biotreatment computations are included as follows:

- Use Form 4.3-5 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-6 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-7 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

7 Cross sectional area (ft²) A = (Item 5 * Item 2) + (Item 6 * Item 2^2)						
Water quality flow velocity (ft/sec)  V = Form 4.3-5   Item 6 / Item 7						
9 Hydraulic residence time (min) Pollutant specific, see Table 5-6 of the TGD for WQMP for reference to BMP design details						
10 Length of flow based BMP (ft) L = Item 8 * Item 9 * 60						
11 Water surface area at water quality flow depth (ft <sup>2</sup> ) $SA_{top} = (Item 5 + (2 * Item 2 * Item 6)) * Item 10$						

### **4.3.5** Conformance Summary

Complete Form 4.3-8 to demonstrate how on-site LID DCV is met with proposed site design, infiltration, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-8 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)
Total LID DCV for the Project DA-1 (ft³): 1,187 Copy Item 7 in Form 4.2-1
2 On-site retention with site design BMP (ft <sup>3</sup> ): 0 Copy Item18 in Form 4.3-2
On-site retention with LID infiltration BMP (ft³): 1,195 Copy Item 16 in Form 4.3-3
4 On-site biotreatment with volume based biotreatment BMP (ft³): 0 Copy Item 3 in Form 4.3-4
<sup>5</sup> Flow capacity provided by flow based biotreatment BMP (cfs): 0 Copy Item 6 in Form 4.3-4
<ul> <li>6 LID BMP performance criteria are achieved if answer to any of the following is "Yes":</li> <li>• Full retention of LID DCV with site design or infiltration BMP: Yes No</li></ul>
<sup>7</sup> If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:
<ul> <li>Combination of Site Design, retention and infiltration, , and biotreatment BMPs provide less than full LID DCV capture:</li></ul>
following Phase II Small MS4 General Permit 2013-0001-DWQ 55 February 5, 2013 measures of equivalent effectiveness are demonstrated:  1) Equal or greater amount of runoff infiltrated or evapotranspired;  2) Equal or lower pollutant concentrations in runoff that is discharged after biotreatment;  3) Equal or greater protection against shock loadings and spills;  4) Equal or greater accessibility and ease of inspection and maintenance.

### 4.3.6 Hydromodification Control BMP

Use Form 4.3-9 to compute the remaining runoff volume retention, after Site Design BMPs are implemented, needed to address hydromodification, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential hydromodification. Describe the proposed hydromodification treatment control BMP. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-9 Hydromodification Control BMPs (DA 1)				
1 Volume reduction needed for hydromodification performance criteria  (Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item	. ,	On-site retention with site design and infiltration, BMP (ft³): Sum of Form 4.3-8 Items 2, 3, and 4. Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving hydromodification volume reduction		
Remaining volume for hydromodification volume capture (ft³): - Item 1 – Item 2	<sup>4</sup> Volum	e capture provided by incorporating additional on-site BMPs (ft³): -		
<ul> <li>Demonstrate increase in time BMP  </li> <li>Increase time of concentration</li> </ul>	a is achieve of concer n by prese	Yes No No No No No No. No. No. No. No. No.		
	a is achieve	es No		

### 4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance.

Alternative Designs — Facilities, or a combination of facilities, of a different design than in Permit Section E.12.e.(ii)(f) may be permitted if all of the following measures of equivalent effectiveness are demonstrated:

- 1) Equal or greater amount of runoff infiltrated or evapotranspired;
- 2) Equal or lower pollutant concentrations in runoff that is discharged after biotreatment;
- 3) Equal or greater protection against shock loadings and spills;
- 4) Equal or greater accessibility and ease of inspection and maintenance.

The Project Proponent will need to obtain written approval for an alternative design from the Lahontan Regional Water Board Executive Officer (see Section 6 of the TGD for WQMP).

### Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMPs included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and a Maintenance Agreement. The Maintenance Agreement must also be attached to the WQMP.

Note that at time of Project construction completion, the Maintenance Agreement must be completed, signed, notarized and submitted to the County Stormwater Department

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)				
ВМР	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities	
Infiltratio n BMP	County of San Bernardino	Debris and Trash Removal. See maintenance of infiltration basins in the Appendix.	Ongoing, before storm season, after rain event, annual	

Vater Quality Manag		

### Section 6 WQMP Attachments

### 6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

### 6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

### 6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

### 6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction C,C&R's & Lease Agreements

Attachment A: Educational Material

What you should know for...

## DITOOR CLEANING

### 

## or disposal of washwater

- Sidewalk, plaza or parking lot cleaning
  - Vehicle washing or detailing
    - Building exterior cleaning
- Waterproofing
- Equipment cleaning or degreasing

# Do you know . . . where the water should go?

sewers and storm drains. The storm drain system is designed to prevent flooding by carrying excess rainwater away from streets...it's not designed to be a waste disposal system. Since the storm drain system does not provide for water treatment, it often serves the unintended function of transporting pollutants

directly to our waterways.

Riverside County has two drainage systems - sanitary

connected to a treatment plant - they flow directly to our local streams, rivers and lakes. Unlike sanitary sewers, storm drains are not

of other materials washed off buildings, sidewalks, Soaps, degreasers, automotive fluids, litter, and a host pollute our waterways.

cleaning projects often transport harmful

Non-stormwafer discharges such as washwater generated from outdoor pollutants into storm drains and our local

waterways. Polluted runoff contaminates local waterways and poses a threat to

groundwater resources.

## The Cities and County of Riverside

# StormWater/GleanWater Protection Program

Since preventing pollution is much easier, and less costly than cleaning up "after the fact," the Cities and County of Riverside StormWater/CleanWater Protection Program informs residents and businesses of pollution prevention activities such as those described in this pamphlet. The Cities and County of Riverside have adopted ordinances for stormwater management and discharge control. In accordance with state and federal law, these local stormwater ordinances prohibit the discharge of wastes into the storm drain system or local surface waters. This includes non-stormwater discharges containing oil, grease, detergents, degreasers, trash, or other waste materials

PLEASE NOTE: The discharge of pollutants into the street, gutters, storm drain system, or waterways - without a Regional Water Quality Control Board permit or waiver - is strictly prohibited by local ordinances and state and federal law

# **Use These Guidelines For Outdoor Cleaning Activities and Washwater Disposal** Help Protect Our Waterways!

**DO ...** Dispose of **small amounts** of **washwater from cleaning building exteriors**, **sidewalks**, **or plazas** onto landscaped or unpaved surfaces provided you have the owner's permission and the discharge will not cause flooding or nuisance problems, or flow into a storm drain.

**DO NOT...** Discharge **large amounts** of these types of washwater onto landscaped areas or soil where water may run to a street or storm drain. Wastewater from exterior cleaning may be pumped to a sewer line with specific permission from the local sewering agency.

LO . . . . Check with your local sewering agency's policies and requirements concerning waste water disposal. Water from many outdoor cleaning activities may be acceptable for disposal to the sewer system. See the list on the back of this flyer for phone numbers of the sewering agencies in your area.

**DO NOT** ... Pour hazardous wastes or toxic materials into the storm drain or sewer system ... properly dispose of it instead. When in doubt, contact the local sewering agency! The agency will tell you what types of liquid wastes can be accepted.

from clean vehicles may be discharged to a street or storm drain. Washwater from sidewalk, plaza, and building surface cleaning may go into a street or storm drain if ALL of the following conditions are met:

- ) The surface being washed is free of residual oil stains, debris and similar pollutants by using dry cleanup methods (sweeping, and cleaning any oil or chemical spills with rags or other absorbent materials before using water).
- Washing is done with water only no soap or other cleaning materials.
   You have not used the water to remove paint from surfaces during
- DO NOT . . . Dispose of water containing soap or any other type of cleaning agent into a storm drain or water body. This is a direct violation of state and/or local regulations. Because wastewater from cleaning parking areas or roadways normally contains metallic brake pad dust, oil and other automotive fluids, it should never be discharged to a street, gutter, or storm drain.

washwater to landscaped or dirt areas. Note: Be aware that soapy washwater to landscaped or dirt areas. Note: Be aware that soapy washwater may adversely affect landscaping; consult with the property owner. Residual washwater may remain on paved surfaces to evaporate; sweep up any remaining residue. If there is sufficient water volume to reach the storm drain, collect the runoff and obtain permission to pump it into the sanitary sewer. Follow local sewering agency's requirements for disposal.

**DO NOT...** Dispose of left over cleaning agents into the gutter, storm drain or sanitary sewer.

# Regarding Cleaning Agents:

If you must use soap, use biodegradable/phosphate free cleaners. Avoid use of petroleum based cleaning products. Although the use of nontoxic cleaning products is strongly encouraged,  $\underline{do}$  understand that these products can still degrade water quality and, therefore, the discharge of these products into

**Note:** When cleaning surfaces with a high pressure washer or steam cleaning methods, additional precautions should be taken to prevent the discharge of pollutants into the storm drain system. These two methods of surface cleaning, as compared to the use of a low pressure hose, can remove additional materials that can contaminate local waterways.

### OTHER TIPS TO HELP PROTECT OUR WATER...

### SCREENING WASH WATER

A thorough dry cleanup before washing (without soap) surfaces such as building exteriors and decks without loose paint, sidewalks, or plaza areas, should be sufficient to protect storm drains. However, if any debris (solids) could enter storm drains or remain in the gutter or street after cleaning, washwater should first pass through a "20 mesh" or finer screen to catch the solid material, which should then be disposed of in the trash.

### DRAIN INLET PROTECTION/ CONTAINING & COLLECTING

- WASH WATER
- Sand bags can be used to create a barrier around storm drain inlets.
- Plugs or rubber mats can be used to temporarily seal storm drain openings.
- You can also use vacuum booms, containment pads, or temporary berms to keep wash water away from the street, gutter, or storm drain.

## EQUIPMENT AND SUPPLIES

Special materials such as absorbents, storm drain plugs and seals, small sump pumps, and vacuum booms are available from many vendors. For more information check catalogs such as New Pig (800-468-4647), Lab Safety Supply (800-356-0783), C&H (800-558-9966), and W.W. Grainger (800-994-9174); or call the Cleaning Equipment Trade Association (800-441-0111) or the Power Washers of North America (800-393-PWNA).
